OF

## GREEK AND ROMAN GEOGRAPHY.

## IABADIUS,

LABA'DIUS ('lakaōiov $\nu \hat{\eta} \sigma o s$, Ptol. vii. 2. § 29, viii. $27 . \$ 10$ ), an island off the lower half of the Golden Chersonesus. It is said by Ptolemy to mean the "Island of Barley," to have been very fertile in grain and gold, and to have had a metropolis called Abgyne. There can he little donbt that it is the same as the present Java, which also signifies "barley." Hamboldt, on the other hand, considers it to be $S u$ matra (Kritische Unters. i. p. 64); and Mannert, the small island of Banca, on the SE. side of Sumatra.
[V.]
 a stream on the east of Jordan, mentioned first in the history of Jacob (Gen. xxxii. 22). It formed, according to Joseplus, the northern border of the Amorites, whose country he describes as isolated by the Jordan on the west, the Arnon on the south, and the Jabbuk on the north. (Ant. iv. 5. § 2.) He further describes it as the division betwcen the dominions of Sihon, king of the Amorites, and Og , whom he calls king of Galadene and Ganlonitis (§ 3)-the Bashan of Scripture. In the division of the land among the tribes, the river Jabbok was assigned as the northern limit of Gad and Renhen. (Deut. iii. 16.) To the north of the river, in the country of Bashan, the half tribe of Manasseb had their possession ( 13,14 .) [Ammonitae; Amonites.] It is correctly placed by Ensehins (Onomast. s. v.) between Ammon, or Philadelphia, and Gerasa (Gerash) ; to which S. Jerome adds, with equal truth, that it is 4 miles from the latter. It flows into the Jordan. It is now called El-Zerka, and "divides the district of Moerad from the conntry called ElBelka." (Burckhardt's Syria, p. 347.) It was crossed in its upper part by Irby and Mangles, an hour and twenty misutes (exactly 4 miles) SW . of Gerash, on their way to Es-Szalt. (Travels, p. 319, comp. p. 475. )
[G. W.]
JABESH ('Iábers, LXX.; 'Iábns, 'Iab́acá, 'IaGuros, Joseph.), a city of Gilead, the inhabitants of which were exterminated, during the early times of the Judges (see xx. 28), for not having joined in the national leagne against the men of Gibeah (xxi. $9, \$ \mathrm{c}$.$) . Three centuries later, it was besieged by the$ Ammonite king, Nahash, when the hard terms offered to the inhabitants by the invaders roused the indignation of Saul, and resulted in the relief of the town and the rout of the Ammonites. (1 Sam. xi.) It was probably in reqnital for this deliverance that the inhabitants of Jabesh-Gilead, baving heard of the indignity offered to the bodies of Saul and his sons
vOL. 11.

## JACCETANI.

after the battle of Gilboa, " arose, and went all night, and took the body of Saul, and the bodies of his sons, from the wall of Beth-shan, and came to Jabesh and burnt them there; and they took their bones and buried them under a tree at Jabesh, and fasted seven days." (1 Sam. xxxi. 11-13; 2 Sam. ii. 4-7.) It was situated, according to Eusebins, in the hills, 6 miles from Pella, on the road to Gerash; and its site was marked in his time by a large village (s.vv. 'Apı $\sigma \dot{\omega} \theta$ and 'Iá ${ }^{\prime}$ as). The writer was unsuccessfal in his endeavours to recover its site in 1842 ; but a tradition of the city is still retained in the name of the valley that runs into the plain of the Jordan, one hour and a quarter south of Wady Mus, in which Pella is situated. This valley is still called Wady Yabes, and the ruins of the city donlitless cxist, and will prubably be recovered in the mountains in the vicinity of this valley.
[G. W.]
JabNEH. [Iamma.]
Jacca. [Jaceetani; Vascones.]
JACCETA'NI ('Iakкetavoi), the most important of the small trihes at the S. foot of the Pyrences, in Hispania Tarraconensis, E. of the Viscones, and N. of the Ilengetes. Their country, Jaccetania (Ianketavia), lay in the N. of Arragon, below the central portion of the Pyrenaean chain, whence it extended tuwards the Iberus as far as the neighbourhood of Ilerda and Osca; and it formed a jart of the theatre of war in the contests between Sirrtorius and Pompey, and between Julius Caesar and Pompey's legates, Afranius and Petreius, (Strah. iii. p. 161 ; Caes. B. C. i. 60 : concerning the reading, see Lacetanı; Ptol. ii. 6. § 72.) None of their cities were of any consequence. The capital, Jacca (Jaca, in Biscaya), from which they derived their name, belonged, in the time of Ptolemy, to the VisCones, among whom indeed Pliny appears to include the Jaccetani altogether (iii. 3. s. 4). Their other cities, as enumerated by Ptolemy, and identified, though with no great certainty, by Ukert (vol, ii. pt. 1. p. 425), are the following: -Iespus ( $\mathrm{I} \in \sigma \pi \dot{o}{ }^{\circ}$, Igualeda); Clerest's (Kepeoós, S. Columba de Ceralto) ; Anales ('Avásis, Tarrega) ; Bacasis (Baкa.is, Manresa, the district ronnd which is still called Bages) ; Telobis (Tinobis, Martorell); Ascermis ('Aaceppís, Sagarra) ; Udura (oúסoupa, Cardona); Lissa or Less ( $\Lambda$ í $\sigma \alpha$, near Mran-
 Cinva (Kivva, near Guisona), perbaps the same place as the Scissum of Livy ( $x x i .60$, where the MISS. have Scissis, Stissum, Sisa), and the Cissa of

13

## LALYSUS.

Polybins (iii. 76: coins, ap. Sestini, pp. 132, 163; Num, Goth.).

1A'DERA ('Iádepa, Ptol. iii. 16. § 10 ; 'Iá $\delta a \rho a$, Nicet. p. 348 : ladera, Plin. iii. 26 ; Iader, Pomp. Mela, ii. 3. § 13 ; Peut. Tab.: (ieog. Rav.; on the orthography of the name sec Tzchucke, ad Melam, l. c. val. ii. pt. 2. p. 275 : Eth. Iadertimus, Hirt. B. A. 42 : Zara), the capital of Liburnia in Mllyricum. Under Augustus it was made a lioman colong. (" Parens coloniae," Inser. ap. Farlati, Iltyp. Sacr., vol. v. p. 3 ; comp. I'tol. l. c.) Atterwards it bore the name of Drodora. and paid a tribute of $1 t 0$ pieces of gold to the Fastern emperors (Const. Porph. de Adm. Imp. 30), until it was handed over, in the reign of Basil the Macedonian, to the Slavonic princes. Zara, the modern capital of Dalmatia, and well known for the famons siege it stood against the conbined French and Venetians, at the beginsing of the Fourth Crusade (Gibbon, c. lx. ; Wilken, die Krenzz. vol. v. P. 167), stands ppon the site of ladera. Little remains of the ancient city; the sea-gate called Porta di San Chrysogono is Roman, but it seems likely that it has been bronght from Acnona. The gate is a single arch with a Corinthian pilaster at each side supporting an entablature.

Ecklel (vol. ii. p. 152) doubts the evidence of any coins of ladera, thongh some bave been attributed to it by other writers on numismatics. (Sir G. Wilkinson, Dalmatia and Montenegro, vol. i, p. 78; J. F. Neigebaur, Die Sulslaven, pp. 181191.)
[E. B. J.]
IADO'NT, a people in the extreme NW. of Hispmia Tarraconensis, mentioned ooly by Pliny, who places them nest to the Arrotrebae. (Plin, iv. 20. 5. 34)
[P. S.]
IAETA or IETAE (lecai, Steph. B.: Eth. 'Ietaios, Id.; but Diodurns bas 'Iatrivos, and this is confirmed hy coins, the legend of which is aniformly 'laitivav, Eckhel, vol. i. p. 216: in Latin, Cicero has Ietini, but Pliny letenses), a town of the interior of Sicily, in the NW. of the island, not very far from Panormus. It was mentioned by Pbilistus (ap. Steph. B. s.v.) as a fortress, and it is called by Tbucydides also (if the reading 'lecás be admitted, in vii. 2) a tortress of the Siculians ( $\tau \epsilon \hat{i} \chi 0 s$ т $\bar{\omega} \nu \mathbf{\Sigma} u c \in \lambda \hat{\omega} \nu$ ), which was taken by Gylippas on bis march from Himera through the interior of the island towards Syracnse. It first appears as an independent city in the time of Pyrrhas, and was attacked by that monarch on account of its strong position and the advantages it offered for coperations against Panormns; but the inhabitants readily capitnlated. (Diod. xxii, 10, p. 498.) In the First Punic War it was occupie. by a Carthaginian garrison, but after the fall of Panormus drove ont these troops and opened its gates to the Romans. (1d. xxiii. 18, p. 505.) Lider the Foman government it appears as a municipal tuwn, but not one of much importance. The Ietini are only noticed in passing by Cicero among the towns whose lands had been atterly ruined by the exactions of Verres; and the letenses are enumerated by Pliny among the "pupuli stipendiarii" of the interior of Sicily. (Cic. berr. iii. 43; 1'lin. iii. 8. s. 14.) Many MISS, of Cicero read Letini, and it is probatile that the Aijtov of Ptolemy (iii. 4. § 15) is only a corruption of the same name.

The position of Iacta is very olscurely intimated. but it appears frum Diodorus that it was not very remote from Panormus, and that its site was one of great natural strength. Silins ltalicus also alludes to its elevated sitaation (" celsus Jetas," xiv, 271).

Fazello assures us that there was a mediacval fortress called luto on the summit of a lofty mountain, abont 15 miles from Palermo, and 12 N. of Eintella, which was destroyed biy Frederic 11. at the same time with the latter city; and this he supposes, probably cnough, to be the site of laeta. He says the monntain was still callerl Monte di Iato, though more commonly known as Monte di S. Cosmano. from a clurch on its summit. (Fazell. x. p. 471; Amic. Lex. Top. Sic. vol. ii. p. 291.) The spot is not marked on any molern map, and does not appear to have been risited by any recent travellers. The position thus assimed to Iaeta agrees well with the statements of Dindorus, but is wholly irreconcilable with the admission of 'Itcás into the text of Tbucydides (vii. 2): this reading, however, is a mere conjecture (sce Armold's wote), and must probably be discarded as untenable.
[E. H. B.]

## COIN OF IAETA.

JAEZER ('IaS'rp, LXX. ; 'IaŠrip and 'A $\sigma \omega^{\prime} \rho_{y}$ Enseb.), a city of Gilead, assigned to the tribe of Gad by Muses. In Numbers (xxxii. 1), "the land of Jazer" is mentioned as contiguous to "the land of Gilead, and suited to cattle." In Jeremiah (skiii. 32), "the sea of Jazer" (ccurs in some versions, as in the English; but Reland (s.v. p. 825) justly remarks, that this is not certain, as the passage may be pointel after the word "sea," and "Jazer," as a vocative, commence the following clause. But as "the laod of Jazer" is used for the country south of Gilead, so the Dead Sea may be designated "the sea of Jazer." Eusebius (Onomast. s. v. 'A $\sigma \omega{ }^{\prime}$ ) piacts it 8 miles west of Philadelphia or Ammon; and elsewhere (s.v. 'la $\overline{t h}$ ), 10 miles wost of Philadelphia, and 15 from Esbod (Heshbon). He adds, that a large river takes its rise there, which runs into the Jordan. In a situation nearly corresponding with this, between Szale and Esbus, Burckhardt passed some ruins namel Soyr, where a valley named 1Fady Szyr takes its rise and runs into the Jordan. This is donbtless the molera representative of the ancient Jazer. 'In two hours and a half (from Szalt) we passed. on our right, the Wady Szyr, which has its sontce near the road, and falls into the Jurian. Above tho source, on the declivity of the valley, are the ruins called Szyr." (Syria, p. 364.) It is probably identical with the $\mathrm{\Gamma} \dot{\alpha} \zeta$ wpos of P'tolemy which be reckons among the cities of Palestine on the east of the Jordan (v. 16).
[G. W.]
IALYSUS ( $1 \dot{\lambda} \lambda v \sigma o s, ~ ' 1 \dot{\lambda} \lambda \nu \sigma \sigma o s$, or $1 \dot{\eta} \lambda \nu \sigma \sigma o s: ~$ Eth. 'làiogaos), one of the three ancient Doric cities in the island of Whodes, and one of the six towns constituting the Doric hexapolis. It was situated only six stadia to the south-west of the city of likoles, and it would seem that the rise of the latter city was the canse of the decay of Jalysus; for in the time of Strabo (xir. p. 655) it existed only as a village. I'liny (v. 36 ) did not consider it as an independent place at all, but imagined that lalysns was the ancient name of Rhodes. Orjchoma, the citadel, was sitnatel above lalysus, and still existed in the time of Strabo. It is supposed by some that

Orychoma was the same as the fort Achaia, which is said to lave been the first settlement of the Heliadae in the island (Diod. Sic. v. 57; Athen. riii. p. 360); at any rate, Achaia was situated in the territory of lalysus, which bore the name Ialssia. (Comp. Hom. Il. ii. 656 ; Pind. Ol. vii. 106 ; Herod. ii. 182 ; Thacyd. viii. 44 ; Ptol. v. $2 . \S 34$; Steph. B. s. v.; Scylax, Peripl. p. 81 ; Dionys. Perieg. 504 ; Ov. Met. vii. 365 ; Pomp. Mela, ii. 7.) The site of ancient lalysus is still occupied by a village bearing the name Ialiso, about which a few ancient remains are found. (Ross, Reisen auf den Griech. Inseln, vol. iii. p. 98.)
[L. S.]
IAMISSA. [Thamesis.]
IAMNA, IAMNO. [BALEARES, p. $374, \mathrm{~h}$ ]
IANNIA ('IaEvn's, LXX.; 'lá $\mu \nu a,{ }^{\prime} \mathrm{l} \dot{\mu} \mu \nu \in[a$ 'Ie $\left.\mu v a \alpha^{\prime}\right)$, a city of the Philistines, assigned to the tribe of Judah in the LXX. of Joshna sv. 45 ( $\Gamma \dot{e} \mu \nu a$ ) ; but omitted in the Hebrew, which only mentions it in 2 Chron. xxvi. 6 (Jabyer in the English version), as one of the cities of the Philistines taken and destroyed by king Uzziall. - It is celebrated by Philo Judaeus as the place where the first occasion was given to the Jewish revolt under Caligula, and to his impious attempt to profane the temple at Jerusalem. His account is as follows:In the city of Iamnia, one of the most populous of Judaea, a small Gentile population had established itself among the more numerous Jens, to whom they occasioned no little annoyance by the wanton violation of their cherished custorns. An unprincipled government officer, named Capito, who had been sent to Palestine to collect the tribute, anxious to pre-occupy the emperor with accusations against the Jews before their well-grounded complaints of his boundless extortion conld reach the capital, ordered an altar of mud to be raised in the town for the dejfication of the emperor. The Jews, as he had anticipated, indignant at the profanation of the Holy Land, assembled in a body, and demolished the sltar. On hearing this, the emperor, incensed already at what had lately occurred in Egypt, resolved to resent tbis iosult by the erection of an equestrian statue of himself in the Holy of Holies. (Philo, de Legat. ad Caium, Op, vol. ii. p. 573.) With respect to its site, it is assigned by Josephns to that part of the tribe of Judah occupied by the children of Dan (Ant. v. 1. $\S 22$ ) ; and he reckons it as an inland city. (Ant. siv. 4. § 4, B. J. i. 7. § 7.) Thus, likewise, in the 1st book of Maccabees ( $x .69,71$ ), it is spoken of as situated in the plain country ; but the author of the 2nd book speaks of the harbour and fleet of the Iamnites, which were fired by Judas Maccabaens; when the light of the conflagration was seen at Jerusalem, 240 stadia distant. The apparent discrepancy may, however, be reconciled by the notices of the classical geographers, who make frequent mention of this town. Thus Pliny expressly says, " Iamnes duae: altera intus," and places them between Azotus and Jopps (v. 12); and Ptolemy, having mentioned 'Ia $\mu \nu \eta \tau \bar{\omega} \nu$, "the port of the Jamnites," as a maritime town between Joppa and Azotus, afterwards enumerates lamnia among the cities of Judaer. From all which it is erident that Iamnia had its Majuma, or naval arsenal, as Gaza, Azotus, and Ascalon also had. (Le Quien, Oriens Christ. vol. iii. col. 587, and 622.) The Itinerary of Antoninns places it 36 M. P. from Gaza, and 12 N. P. from Diospolis (or Lydda); and Eusebins (Onom. 8.v. 'Iáuveia) places it between Diospolis and Azotus. Its site is still marked by ruins which
retain the ancient name Yebna, sitnated on a small eminence on the west side of II'ady Rûbin, an hour distant from the sea. (Irby and Mlangles, Traecls, p. 182.) "The ruins of a Roman bridge," which they noticed, spanning the Nalr-el-Rübin between Yebna and the sea, was doubtless built for the purpose of facilitating traffic between the town and its sea-port.
[G. W.]
IAMPHORINA, the capital of the Maedi, in Macedonia, which was taken n. c. 211 by Philip, son of Demetrins. (Liv. xxvi. 25.) It is probably represented by I'rania or Ivorina, in the apper valiey of the Morara, (Leake, Northern Greece, vol. iii. p. 473.)
[E. B. J.]
langacalca'ni [Matretavia.]
JANUARIA (Iavouapia ǩkpa), a promontory on the coast of Cilicia, near Serrepolis, between Matlus and Aegaea. (Stadiusne. $\S \S$ 149, 150.) It is now called Karadash.
[L. S.]
IA'PIS (Ianis), a small stream which formed the boundary between Megaris and the territury of Elensis. [Attica, p. 323, a.]

IA'PODES, LA'PYDES ('Iánoঠes, Strab. iii. p. 207, vii. p. 313 ; 'Iánudes, Ptol. ii. 16. § 8 ; Liv. xbii. 5 ; Virg. Georg. iii. 475 ; Tibull. iv. 1. 108), an Hlyrian people to the N. of Dalmatia, and E. of Liburnia, who occupied Iapydia (Plin, iii. 19), or the present military frontier of Croatia, comprised between the rivers Kulpa and Korana to the N. and E., anc the Jelebich range to the S.

In the interior, their territory was spread rlong Mons Alnius (Velika), which forms the extremity of the great Alpine chain, and rises to a great elevation; on the other side of the mountain they reached towards the Danube, and the contines of Pannonia. They followed the custom of the wild Thracian tribes in tattooing themselves, and were armed in the Keltic fashion, Jiving in their poor country (like the Morlacchi of the present day) chiefly on zea and millet. (Strab. vii. p. 315.)

In n. c. 129, the consul C. Sempronius Tuditanus carried on war against this people, at first unsuccessfully, but afterwards gained a victory over them, chiefly by the military skill of his legate, $D_{i}$ Junios Brutus, for which he was allowed to celebrate a triumph at Rome (Appian, B. C. i. 19, Illyr. 10 ; Liv. Epit. lix. ; Fasti Copit.) They had a"foedus" with Rome (Cic. pro Balb. 14), but were in B. C. 34 finally subdued by Octarianus, after an obstinate defence, in which Metulum, their principal town was taken (Strab. l. c. ; Appian, Illyr. l. c.).

Metulum (Metoīdov), their capital, was sitated on the river Colapts (Kulpa) to the N., on the frontier of Pannonia (Appian, l. c), and has been identified with Möttling or Metlika on the Kulpa. The Antonine Itinerary has the following places on the road from Scnia (Zeugg) to Siscia (Sissek) :Avendone (comp. Peut. Tab. ; Abendo, Geng.
 Strab. iv. p. 207, vii. p. 314.); Akuriem (Arypinm, Peut. Tab.; Parupium, Geog. Rar.; 'Apourìvol, App. Illyr. 16., perhaps the same as the 'Ароиккia of Ptolemy, ii. 16. §9), now Ottochatz. At Bibitar, which should be read Bivium (Wesseling, od loc.), the road divided, taking a direction towards Pannonia, which the Itinerary follows, and also towards Dilmatia, which is given in the Pentinger Table.

Neigebaar (Die Sudslaven, pp. 224-235) has identified from a local antiquary the following sites of the Table :

Epidotica (Cselle) ; Aucus (Chauke) ; Au-
sascatho (Jissuch, near Codbina); Cersimetae (Grarhutz).
[E. B. J.]
1APY'(ilA ('latuyia), was tho name given by the Grecks to the SL. portion of Italy, bonlering on the Adriatic Sea, hut the term was used with considerable ragueness, being sometimes restricted to the extreme SE. puint er peninsula, called also Messapia, and by the Romans Calabria; at other times extended so as to include the whole of what the Romans termed Apulia. Thus Scylax describes the whole coast from Lucania to the promontury of Drion (Mt, Garganus) as comprised in lapygia, and evea includes under that appellation the cities of Detajontum and Heraclea on the gulf of Tarentum, which are osually assigned to Lucania. IIence he states that their coast-line extended for a space of six days and nights' voyage. (Scyl. § 14. p. 5.) Pulybius at a later period used the name in an equally extended sense, so as to inelude the whole of Apulia (iii. 88), as well as the Messapian peniusula; but he elsewhere appears to use the name of lapygians as eqnivalent to the Roman term Apulians, and distinguishes them from the Messapians (ii. 24). This is, however, certainly contrary to the usnge of earlier Greek writers. Herodotus distinctly applies the term of lapygia to the peninsula, and calls the Messapiaos an lapygian tribe; though he evidently did not limit it to this portion of ltaly, and must bave extended it, at all events, to the land of the Peucetians, if not of the Daunians also. (Herod. iv. 99, vii. 170.) Aristutle also clearly identifics the lapygians with the Messapians (Pol. v. 3 ), though the limits within which be applies the name of Lapygia ( lb. vii. 10) cannot be defined. Indeed, the name of the lapygian promontory (i) Guxpa in Iamvyia), universally given to the headland which formed the extreme point of the peninsula, sufficiently proves that this was considered to helong to lapegtia. Strabo confines the term of lapygia to the peninsula, and says that it was called hy some Lapygia, by others Messapia or Calabria. (Strab. vi. pp. 281, 282.) Appian and Dionysius Pericgetes, on the contrary, fullow Polybius in applying the name of lapygia to the Roman Apulia, and tbe latter expressly says that the lapygian tribes extended as far as Hyrium on the N. side of Mit. Garganus. (Appian, Ann. 45; Dinnys. Yer. 379.) Ptolemy, as untal, fulluws the Roman writers, and adopts the names then in nse for the divisions of this part of Italy: hence he ignores altogether the name of Iapygia, which is not found in any Roman writer as a geographical appellation; though the Latin poets, as usual, adopted it from the Greeks. (Virg. Aen. xi. 247; Ovid, Mel. xv. 703.)

We lave no clue to the origin or meaning of the name of lapygians, which was undoubtedly given to the prople (Laryges, 'Iánuyes) before it was applied to the conntry which they inhabited. Niebulir (vol. i. p. 146) considers it as etymulugically connected with the Latin Apulus, but this is very doubtful. The name appeans to have been a general one, including severa! tribes or mations, among which were the Messapians, Sallentiui, and P'eucetians: hence IIerodotus calls the Messapians, Iapygians ('In'ruyes Meбनamuor, vii. 170); and the two names are frequently interchanged. The Greek mythographers, as usual, derived the name from a liero, lapyx, whom they represented as a som of Lycaon, a descent prohably intended to indicate the Jelasgic origin of the lapygians. (Anton. Liberal. 31 ; Plin. iii. II.s. I6.) For a further account of
the national affinities of tho different tribes in this part of ltaly, as well as for a description of its physical geograply, see the articles Artina and Ciladri.A.
[E. II. B.]
1AP' ${ }^{\prime \prime}$ GILM PROMONTORILM ("Aкpa 'Iamvría: Capo Sta. Maria di Leuca), a headland which forms the extreme SE. point of lialy, as well as the extremity of the long peninsula or promontory that divides the golf of Tarentum from the Adriatic sea. It is this long projecting strip of land, commonly termed the heel of Italy, and designated hy the Romans as Calabria, that was usually terned by the Greeks Iapygia, wheoce the name of the promontory in question. The latter is well described by Strabo as a rocky point extending far out to sest towards the SE., but inclining a little towards the Lacinian promontory, which rises opposite to it, and together with it encloses the gulf of Tarentum. He states the interval between these two headlands, and consequently the width of the Tareutive gulf, at its entrance, at about 700 stadia ( 70 G . miles), which lightly exceeds the truth. I'liny calls the same distance 100 II. P. or 800 stadia; but the real distance does not exceed 66 G . ıniles or 660 stadia. (Strab. vi. pp. 258, 281; Plin. iii. 11. s. 16; I'tol. iii. 1. § 13 ; Polyb. x. 1.)

The same point was also net unfrequently fermed the Salentine promontory (Prosiostoriom Salenтiscm, Mel. ii. 4. § 8 ; Ptol. l. c.), from the people of that name who inbabited the country immediately adjoining. Saliust applies the same name to the whole of the Calabrian or Messapian peninstila. (Sall, ap, Serv, ad Aen. iii. 400.) Its modern name is derived from the ancient cburch of Sta. Maria di Leuca, situated close to the beadland, aod which has preserved the name of the ancient town and port of Leuca; the latter was situated immediately on the W. of the promontory, and afforded tolerable shefter for vessels. [Lecca.] Hence we find the Athenian fleet, in n. C. 415 , on its way to Sicily, touching at the Japygian promontory after crossing from Coreyra (Thuc. vi. 30,44 ); and there can be no doubt that this was the costomary ceurse in proceeding from Greece to Sicily.
[E. H. B.]
1A'RDANUS ('Iáposavos), a river on the N. coast of Crete, near the banks of which the Cydonians dwelt. (IIom. Od. iii. 292.) It is identified with the rapid stream of the Platania, which rises in the White Mountains, and, after flowing between the Rhizite villages of Theriso and Laki or Lakus, runs tbrough a valley formed by low hills, and filled with lofty platanes; from which it oltains its name. The river of Plataniii falls into the sea, nearly opposite the islet of Haghios Theodkoros, where there is rood anchorage. (Pashley, Trav. wol, ii. p. 22 : 11 öck, Kreta, vol. i. pp. 23, 384.)
[E. B. J.]
IARDANUS, a river of Elis. [Pheia.]
JARZETHA. [Linya.]
lASI. [lasmi.]
JASO'NIUM (láóvov Ptol, vi. 10. §3), a town in Margianta, at the junction of the Margus (Jurghdib) and some small streams which flow into it. (Cf. also Anmian. xxiii. 6.)
[V.]
JASONHCM ( тठ Iaのל́vov, Ptol. тi. 2. §4; Strab. xi. p. 526), a mountain in Media, which extended in a NW. direction from the M. Parachoatras (M. Etwend), forming the connecting link between the Taurus and the outlying spurs of the Antitaurus. It is placed by Ptoleny between the Orontes and the Coromus.
[V.]
JASO'NIUM ('Iacuivion), a promontory on the Microsoft ${ }^{\circledR}$
ceast of Pontus, 130 stadia to the north-east of Polemonium; it is the most projecting cape on that cuast, and forms the terminating point of the cbain of Mount Paryadres. It was believed to have received its name from the fact that Jason had landed there. (Strab. xii. p. 548; Arrian, Peripl. p. 17; Anonym. Peripl. p. 11 ; Ptol. v. $6 . \S 4$; Xenoph. Anab. vi, 2. § I, who calls it 'Iaqovia àkти́.) It still bears the name Jasoon, thongh it is more commonly called Cape Bona or Vona, from a town of the same name. (Hamilton, Researches, vol. i. p. 269.) The Asineia, called a Greek acropolis by Scylax (p.33), is probably no other than the Jasonium.
[L. S.]
lAsPIS [Contestania.]
1ASSII (tanatot), mentioned by Ptolemy as a population of Upper Pannouia (ii. 14. § 2). Pliny's torin of the name (iii. 25) is Iasi. He places them on the Drave.
[R. G. L.]
 'Ia $\alpha \sigma \varepsilon \dot{s}$ ), a town of Caria, sitaited on a small i.land close to the north cuast of the Iasian bay, which derives its name from lassus. The town is said to have been founded at an unknown period by Argive colonists ; but as they bad sustained severe losses in a war with the native Carians, they invited the son of Neleus, who had previously fonnded Miletus, to come to their assistance. The town appears on that occasion to have received additional settlers. (Polyb. xvi. 12.) The town, which appears to have occupied the whole of the little island, bad only ten stadia in circumference; but it nevertheless acquired great wealth (Thucrd. viii. 28), from its fisheries and trade in fish (Strab. xiv. p. 658). After the Sicilian expedition of the Athenians, during the Peloponnesian war, Jassus was attacked by the Lacedaemonians and their allies; it was governed at the time by Amorges, a Persian chief, who had revolted from Darius. It was taken by the Lacedaemonians, who eaptured Amorges, and delivered him up to Tissaphernes. The town itself was destroyed on that occasion; but must have been rebuilt, for we afterwards find it besieged by the last Philip of Macedonia, who, however, was compelled by the Romans to restore it to Ptolerny of Egypt. (Polyb. xvii. 2; Liv. xxxii. 33; comp. Ptol. v. $2 . \$ 9$; Plin. v. 29 ; Stad. Mor. Magn. §§ 274, 275; Hierocl, p. 689.) The mountains in the neighbourhood of lassus furnished a beautiful kind of marble, of a blood-red and livid white colour, which was used by the ancients for ornamental purposes. (Paul. Silent. Ecphr. S. Soph. ii. 213.) Near the town was a sanctuary of Hestias, with a statue of the goddess, which, though standing in the open air, was believed never to be touched by the rain. (Polyb. xvi. 12.) The same story is related, by Strabo, of a temple of Artemis in the same neighbonrhood. Inssus, as a celebratel fishing place, is alluded to by Athenaens (iii. p. 105, xiii. p. 606). The place is still existing, under the name of Askem or Asyin Kalessi. Chandler (Travels in As. Min. p. 226) relates that the island on which the town was built is now united to the main-

CUIN OF LIASES 1 N CAMLA.
land by a small isthmus. Part of the city walls still exist, and are of a regular, solid, and handsome structure. In the side of the rock a theatre with many rows of seats still remains, and several inscriptions and coins have been fonnd there. (Comp. Spon and Wheler, Joyages, vol. i. p. 361.)

A second town of the name of lassus existed in Cappadocia or Armenia Minor (Ptol, v. 7. § 6), on the north-east of Zuropassus.
[L. S.]
IASTAE (Iâ $\sigma \tau a$, Ptol. vi, 12), a Scythian tribe, whose pasition mnst be songht for in the neighbourhood of the river lastus.
[E. B. J.]
IASTUS ("la $\sigma \tau 0 s$ ), a river which, according to Ptolemy (vi. 12), was, like the Polytimetus (Kohil), an affluent of the Caspian basin, and should in fact be considered as such in the sense given to a denomination which at that time embraced a vast and com plicated bydraulic system. [Jaxintes.] Von Humboldt (Asie Centrale, vol, ii. p. 263) has identified it with the Kizil-Deria, the dry bed of which may he traced on the barren wastes of Ki-il Koum in W. Turkistan. It is no unusual circumstance in the sandy steppes of N. Asia for rivers to change their course, or even entirely to disappear. Thus the Kizil-Derit, which was known to gengraphers till the commencement of this century, no longer exists. (Comp. Levchine, Hordes et Steppes des Kirghiz Kazals, p. 456.)
[E. B. J.]
IASTUS, a river mentioned by Ptolemy (vi. 14. §2) as falling into the Caspian between the Jaik and the Oxus. It is only safe to call it one of the numerous rivers of Independent Tartary. [P. G. L.]
lasus. [Oevs.]
IA'TII (Iátat, Ptol. vi. I2. §4), a people in the northern part of Sogdiana. They are also mentioned by lliny (vi. 16. s. 18); but nothing certain is known of their real position.
[V.]
1ATINUD (1átıov), according to Ptolemy (ii. 8. § 15) the city of the Meldi, a people of Gallia Lngdunensis. It is supposed to be the same place as the Fixtuinum of the Table [Fixtuixem], and to be represented by the town of Meatux on the Marne. Walckenaer, who trusts more to the accuracy of the distances in the Table than we safely can do, says that the place Fixtuinum lias not in the Table the usual mark which designates a capital town, and that the measures do not carry the position of Fixtuinum as far as Meaux, but only as far as Montbout. He conjectures that the word Fixtuinum may be a corruption of Fines latinorum, and accordingly must be a place on the boundary of the little community of tbe Meldi. This conjecture might be grod, if the name of the people was latini, and not Meldi.
[G. L.]

## JATRIPPA. [LATHmpra.]

IATRA or IATRUDI (Iatpóv), a town in Moesia, situated at the point where the river fatrus or lantrus empties itself inte the Danube, a fer miles to the east of Ad Novas. (Procop. de Aed. iv. 7 ; Theophylact. vii. 2 : Notit. $\operatorname{Imp}$. 29, where it is erroneously called Latra; Geogr. Rav.. iv. 7, where, as in the Peut. Tab., it bears the name Laton.) [L. S.]
latrus (in the Peut. Tab. Inntits), a river traversing the central part of Moesia, It has its sources in Mount Haemus, and, having in its course to the north received the waters of several tributaries, falls into the Danube close by the town of latra. (Plin. iii. 29, where the common reading is leterus: Jornand. Get. 18; Gengr. Rav. iv. 7.) It is probably the same as the Athrys ("A⿴pus) mentioned by Herodotus (iv. 49). Its modern name is Iantra. [L.S.]

JAXARTES, IAXARTES ( $\delta$ 'lakáprns), the river of Central Asia which now bears the name of Syr-Daria, or Yellow River (Daria is the generic Tartar name for all rivers, and Syr=" yellow "), and which, watering the barren steppes of the Kirghiz-Cossacks, was known to the civilised world in the most remote ages.

The exploits of Cyrus and Alexander the Great have inscribed its name in history many centuries before our aera. If we are to believe the traditionary statements about Cyras, the left bank of this river formed the N. limit of the vast dominion of that conqueror, who built a town, deriving its name from the founder [Cyreschata], npon its banks; and it was upon the right bank that he loit his life in battle with Tomyris, Queen of the Massagetae. Herodotus (i. 201-216), who is the authority for this statement, was sware of the existence of the Syr-Daria; and although the name Jaxartes, which was a denomination adopted by the Greeks and followed by the Romans, does not appear in his history, yet the Araxes of Herodotus can be no other than the actual Syr, because there is no other great river in the country of the Massagetae. Much has been written upon the inysterious river called Araxes by Herodotus; M. De Guignes, Fosse, and Gatterer, suppose that it is the same as the Oxns or AmouDaria; M. De la Nauze sees in it the Araxes of Armenia ; while Bayer, St. Croix, and Larcber, conceive that under this name the Volga is to be understond. The true solution of the enigma seems to be that which has been suggested by D Anville, that the Araxes is an appellative common to the Amor, the Armenian Aras, the Volga, and the Syr. (Comp. Araxes, p. 188 ; Mem. de l.Acad. des Inser. vol. xxxvi. pp. 69-85; Heeren, Asiat. Nations, vol. ii. p. 19, trans.) From this it may be concluded, that Herodotus had some vague acquaintance with the Syr, though lie did not know it by name, but confonnded it with the Araxes; nor was Anstotle more successful, as the Syr, the Volga, and the Don, have been recognised in the description of the Arases given in bis Meteorolugics (i. 13. § 15), which, it must be recollected, was written before Alexander's expedition to lndia. (Comp. Ideler, Meteorolugia Vel. Graecor. et Rom. ad L. c., Berol, 1832; St. Croix, Examen Critique des IIist. d Alex. p. 703.)

A centary after Herodotus, the pbysical geograplyy of this river-basin became well known to the Greeks, from the expedition of Alexander to Bactria and Sugdiana. In n. c. 329, Alexander reached the Jaxaites, and, after destroying the seved towns or fortresses upon that river the foundation of which was ascribed to Cyrus, founded a city, bearing his own name, upon its banks, Alexasdneia Utrisi.l (Khojentl). (Q. Curt. vii. 6; Arrian, Anab. iv. 1. §. 3.)

After the Macedonian conquest, the Syr is found in all the ancient geographers under the form Jasartes: while the country to the N . of it bore the general name of Scythis, the tracts between the Syr and Amou were called Transoxiana. The Jaxartes is not properly a Greek word, it was borrowed by the Greeks from the Barbarians, by whom, as Arrian (Anab, iii. 30. § 13) asserts, it was called Orxantes (Opgavinj). Various etymulogies of this name have been given (St. Croix, Examen Critique des IIist, d Alex. § 6), but they are two uncertain to be relied on: but whatever be the derivation of the word, certain it is that the Syr appears in all
ancient writers under the name Jiaxartes, Some, indeed, confounded the Jaxartes and the Tanais, and that parposely, as will be seen bereafter. A few have confounded it with the Oxus; while all, witbout execption, were of opinion that both the Jaxartes and the Oxus discharged their waters into the Caspian, and not into the Sea of Aral. It seems, at first sigbt, curious, to those who know, the true position of these rivers, that the Greeks, in describing their course, and determining the distance of their respective "embonchures," sbould have taken the Sea of Aral for the Caspian, and that their mistake should have heen repeated up to very receat times. Von Humboldt (Asie Centrale, vol. ii. pp. 162297 ) - to whose extensive inquiry we owe an invaluable digest of the views entertained respecting the geography of the Caspian and Oxus by classical, Arabian, and European writers and travellers, along with the latest investigations of Russian scientific and military men - arrives at these conclusions respecting the ancient junction of the Aral, Oxus, and Caspian:

1st. That, at a period before the historical era, but nearly approaching to those revolutions which preceded it, the great depression of Central Asia the concavity of Turan - may have been one large interior sea, connected on the one haad with the Euxine, on the other hand, by channels more or less broad, with the Icy Sea, and the Balkash and its adjoining lakes.

2nd. That, probably in the time of Herodotas, and eren so late as the Macedonian invasion, the Aral was merely a bay or gulf of the Caspian, connected with it by a lateral prolongation, into which the Osns flowed.

3rd. That, by the preponderance of eraporation over the supply of water by the rivers, or by diluvial deposits, or by Plutonic convulsions, the Aral and Caspian were separated, and a bifurcation of the Oxus developed,-one portion of its waters continuing its course to the Caspian, the other terminating in the Aral.

4 th. That the contiaued preponderance of evaporation has cansed the channel communicating with the Caspian to dry up.

At present it must be allowed that, in the ahsence of more data, the existence of this great Aralo-Caspian basin within the "historic period," must be a mont point; though the geological appearances prove by the equable distribution of the same peculiar organic remains, that the tract between the Aral and the Caspian was once the bed of an united and continuous sea, and that the Caspian of the present day is the small residue of the once mighty AraluCaspian Sea.

Strabo (xi. pp. 507-517) was acquainted with the true position of this river, and lias exposed the errors committed by the historians of Alexander (p. 508), who confounded the mountains of the Paropamisus - or Paropanisns, as all the good DISS. of Ptoleny read (Asic Centrale, vol. i. pp. 114-118) - with the Cancasus, and the Jaxartes with the Tanaïs. All this was jmagined with a view of exalling the glory of Alexander, so that the great conqueror might be supposed, after subjugating Asia, to lave arrived at the Don and the Caucasus, the scene of the legend where Hercules unbound the clasins of the fire-bringing Titan.
The Jaxartes, according to Strabo (p.510), took its rise in the mountains of India, and he determines it as the frontier between Sogdiana and the nomad Scy-
thians (pp. 514, 517), the principal tribes of which were the Sacae, Dahae, and Massagetae, and adds (p. 518) that its "embouchure " was, according to Patrocles, 80 parasangs from the month of the Oxus. Pliny (vi. 18) says that the Scythians called it "Silis," probably a form of the name Syr, which it now hears, and that Alexander and his soldiers thought that it was the Tanails. It has been conjectured that the Alani, in whose language the word tan (Tan-aïs, Dan, Don) signified a river, may hare brought this appellative first to the E., and then to the W. of the Aralo-Caspian hasin, in their migrations, and thus have contributed to confirm an error so flattering to the vanity of the Macedonian conquerors. (Asie Centrale, vol. ii. Pp. 254, 291; comp, Schafarik, Slav, Alt. vol. i. p. 500.) Pomponius Mela (iii. 5. § 6) merely states that it watered the rast conntries of Scythia and Sogdiana, and discharged itself into that E. portion of the Caspian which was called Scythicus Sinus.

Arrian, in recounting the capture of Cyropolis (Anab. iv. 3. § 4), has mentioned the curious tact, that the Macedonian army entered the town by the dried-np bed of the river; these desiccations are not rare in the sandy steppes of Central Asia, - as for instance, in the sudden drying up of one of the arms of the Jaxartes, known under the name of Tanghi-Daria, the account of which was first brought to Europe in 1820. (Comp. Journ. Geog. Soc. vol. xiv. pp. 333-335.)

Ptolemy (vi. 12. § 1) has fixed mathematically the sources, as weli as the "embonchnre," of the Jaxartes. According to him the river rises in lat. $43^{\circ}$ and long. $125^{\circ}$, in the mountain district of the
 throws itself into the Caspian in lat. $48^{\circ}$ and long. $97^{\circ}$, carrying with it the waters of many affluents, the principal of which are called, the one Bascatis (Baokatis, §3), and the other Demes ( $\Delta \hat{\eta} \mu \mathrm{os}, \S 3$ ). He describes it as watering three conntries, that of the "Sacae," "Sogdiana," and "Scythia intra Imanm." In the first of these, upon its right bank, were found the Comari (Kómapoi) and Cabatae (Kapátal, vi. 13. § 3) ; in the second, on the left bank, the Anieses ('Avié $\sigma e l s$ ) and Drepslani ( $\Delta \rho \in \psi /$ iavoi), who extended to the Oxus, the Tachori (Táxopol), and latil ('Íd́tol, vi. 12. § 4); in Scythia, on the N. bank of the Syr, lived the Jaxalitae (Jaḱáptai), a numerous people (vi. 14. § 10), and near the "embouchure," the Ariacae ('Aptákat, vi. 14. § 13). Ammianus Marcellinus (xxiii. 6. § 59), describing Central Asia, in the upper course of the Jaxartes which falls into the Caspian, speaks of two rivers, the Araxates and Dranss (prohably the Demus of Ptolemy), "qui per juga vallesque praecipites in campestrem planitiem decurrentes Oxiam nomine paludem efficiunt longe lateque diffusam." This is the first intimation, though very vague, as to the formation of the Sea of Aral, and requires a more detailed examination. [Oxia Palus.]

The ohscure Geographer of Ravenna, who lived, as it is believed, about the 7th century A. D., mentions the river Jaxartes in describing Hyrcania.

Those who wish to study the accounts given by mediaeval and modern travellers, will find much valuable information in the "Dissertation on the River Jaxartes" annexed to Levchine, IIordes et Steppes des Kirghiz-Kazaks, Paris, 1840. This same writer ( $\mathrm{pp}, 53-70$ ) bas descrihed the course of the SyrDaria, which has its source in the mountains of

Kackkar-Davan, a branch of the range called by the Chinese the "Monntains of Heaven," and, taking a NW. course through the sandy steppes of KizilKoum and Kara-Koum, unites its waters with those of the Sea of Aral, on its E. shores, at the gulf of Kamechlou-Bachi.
[E. B. J.]
 тa!, lxomatae, Amm. Marc. xxii. 8. § 31; Exematae, Val. Flace. Argonaut. vi. 144,569) a people who first appear in bistory during the reign of Satyrus 111., king of Bosporus, who waged war with Tirgatao, their queen. (Polyaen, viii. 55.) The ancients attrihute them to the Sarmatian stock. (Scymn. Fr. p. 140; Anon. Peripl. Eux. p. 2.) Pomponius Mela (i. 19. § 17) states that they were distinguisbed by the peculiarity of the women being as tried warriors as the men. Ptolemy (v. 9) has placed them between the Don and Volga, which agrees well with the position assigned to them by the authors mentioned above. In the second century of our era they disappear from bistory. Schafarik (Slav. Alt. vol. i. p. 340), who considers the Sarmatians to belong to the Mledian stock, connects them with the Median word " mat " = " people," as in the termination Sanromatae; but it is more probable that the Sarmatians were Slavonians.
[E. B. J.]
JA'ZYGES, IA'ZYGES ('la voyes, Steph. B. lazyx), a people belonging to the Sarmatian stock, whose original settlements were on the Palus Maeotis. (Ptol. iii. 5. § 19: Strab, vii. p. 306 ; Arrian, Anab. 1, 3; Amm, Marc. xxii. 8. § 31.) They were among the barbarian tribes armed by Mithridates (Appian, Mithr. 69); during the banishment of Ovid they were fonnd on the Danube, and in Bessarabia and Wallachia (Ep. ex Pont. i. 2, 79, iv. 7, 9, Trist. ii. 19. 1.) In A. D. 50 , either induced by the rich pastures of Hungary, or forced onwards from other causes, they no longer appear in their ancient seats, but in the plains between the Luwer Theiss and the mountains of Transylvania, from which they had driven out the Dacians. (Tac. Ann. xii. 29; Plin. iv. 12.) This migration, probably, did not extend to the whole of the tribe, as is implied in the surname "Metanastae;" henceforward history speaks of tire lazyges MetaNastae ('Iágyүes oi Metaváazai), who were the Sarmatians with whom the Romans so frequently came in collision. (Comp. Gibbon, c. xviii.) In the second century of our era, Ptolemy (iii. 7) assigns the Danube, the Theiss, and the Carpathians as the limits of this warlike tribe. and enumerates the following towns as belonging to them: - Uscenvm (Oйokevov); Bormanum or Gormanum (Bóppayoy, al. Tóf $\mu$ avo $)$; Abieta or Abinta ('Abinta, al. *abivta); Trissem (Tpiafóv); Candanem (Kávठávor); Parca (Пápka); Pesshem (Héoolov); and Partiscum (Партiokol). These towns were, it would scem, constracted not by the lazyges themselves, who lived in tents and waggons, hut by the former Slave inliahitants of Hungary; and this supposition is confirmed by the fact that the names are partly Keltic and partly Slavish. Mannert and Reichard (Forhiger, vol. iii. p. 1111) have guessed at the modern representatives of these places, but Schafarik (Slav. Alt. vol. i. p. 514) is of opinion that no conclusion can be safely drawn except as to the identity of Pesth with Pessium, and of Potisije with Partiscum.

The lazyges lived on good terms with their neighbours on the W., the German Quadi (Tac. Hist. iii. 5), with whom they united for the purpose of subju-
gating the pative Slaves and resisting the power of Rome．A portion of their territory was taken from them by Decebalns，which，after Trajan＇s Daccian congnests，was incorporated with the Roman do－ minions．（Diou Cass，xlviii．10，11．）1＇unouia and Moesia were constantly exposed to their inroads；but， A．D．171，they were at length driven from their last holds in the province，and pushed across the Danube，by M1．Aurefius．In mid－winter they re－ tarned in great numbers，and attempted to cross the frozen stream：the Romans eucountered them upon the ice，and inflictel a severe defeat．（Dion Cass． lxxi． $7,8,1$ f．）At a later periol，as the Roman Limpire lustened to its fall，it was constantly exposed to the attacks of these wild hordes，who，beaten one day，appeared the next，${ }^{\text {d }}$ dudering and laying waste whatever came in their way．（Amm．Mare svii．12， 13, xxis．6．）The word＂peace＂was unknown to them．（Flor．iv．12．）

They called themsplves＂Sarmatae Limigantes，＂ and were divided into two classes of freemen and slaves，＂Sarmatae Liberi，＂＂Sarmatae Servi．＂Ain－ mianus Mareellinus（xvii．13，§ 1）calls the subject class＂Limigantes＂（a word which has been falsely explained by＂Limitanci＂），and St．Jerome（Chron．） says that the raling Sarmatians had the title＂Arca－ garantes．＂By a carefal comparison of the accounts given by Dion Cassius，Ammianus，Jerome，and the writer of the Life of Constantine，it may be clearly made out that the Sarmatian lazyges，besides sub－ jugating the Getae in Dacia and on the Lower Danube， bal，by force of arms，enslaved a people distinct from the Getse，and living on tbe Theiss and at the foot of the Carpathians．Although the nations around them were called，both the ruling and the sabject race，Surmatians，yet the frpe Sarmatians were en－ tirely distinct from the servile population in language， customs，and mode of life．The Iazyges，wild，bold riders，scoured over the plains of tbe Danube and Theiss ralleys on their unbroken horses，while their only dwellings were the waggons drawn by oxen in which they carried their wives and children．The subject Sarmatians，on the other hand，had wooden houses and villages，such as those enumerated by I＇tolemy（l．c．）；they fonght more on foot than on borseback，and were daring seamen，all of which peculiaritics were eminently characteristic of the ancient Slaves．（Schafirik，vol．i．p．250．）

The Slaves often rose against their masters，who sought an alliance against them among the Victofali and Quadi．（Ammian．l．c．；Euseb．J＇it．Constant． iv，6．）The history of this obscare and remarkable warfare（A．D．334）is given by Gibbon（c．xviii．； comp．Le Bean，Bas Empire，vol．i．p． 337 ；Manso， Leben Constantins，p．195）．In A．D． $357-359$ a new war broke out，in which Constantius made a successful campaign，and received the title＂Sir－ maticus．＂（Gibbon，c．xis．；Le Bean，vol．ii．pp． 245－273．）In A．D．471 two of their leaders， Benga and Babaï，were defeated before Singilunum （Belgrade）by Theoworic the Ostrogoth．（Jornand． de Keb．Get．55；comjt．Gibbon，c，xxxix．；Le beau， vol．vii．p．44．）The hordes of the Iluns，（icppidae， and Goths broke the power of this wild people，whowe descendants，however，concealed themselves in the desert distriets of the Theiss till the arrival of the Magyars．

Another branch of the Sarmatian lazyges were settled behind the Carpathians in Podlochia，and were known in history at the end of the 10 th cen－ tery of our era；it is probable that they were among
the northern tribes ranquished by IIermanric in A ． $\mathrm{D}^{*}$ $3.32-3.30$ ，and that they were the same people as those mentioned by Jornandes（de Reb．Get．3）under the corrupt form Inaunxes．

There is a monograph on this sulject by Hennig （Comment de Rebus Iazygum is．Iazvingorum， Regiomont，1812）；a full and clear acconnt of the fortunes of these peoples will be found in the German translation of the very able work of Schat－ farik，the historian of the Slavish races．

In 1799 a golden dish was found with an in－ scription in Greck characters，now in the imperial cabinet of antiquities at Vienna，which has been re－ ferred to the lazyges．（Von Hammer，Osman． Gesch．vol．iii．p．726．）
［E．B．J．］
IBAN（＂IGav，Cedren，vol．ii．p．774），a city which Cedrenus（l．c．）describes as the metropolis of
 puка́⿱亠乂，

The name survives in the modern Jän．St． Martin，the historian of Armenia（Mim．sur l＇Ar－ menie，vol．i．p．117），says that，according to nativo traditions，Jdn is a very ancient city，the founda－ tion of which was attributed to Serniramis．Ituined in coarse of time，it was rebuilt by a king called Van， who lived a short time before the expedition of Alex－ ander the Great，and who gave it his name；but， having again fallen into decay，it was restored by Vagh－Arshag（Valarsases），brether to Arsases，and first king of Armenia of the race of the Arsasidae． In the middle of the 4 th centary after Christ it was captured by Sapor 11．（litter，Erdllonde，vol，ix．pp． 787， 981 ；Loudon Geog．Journal，vol，viii．p．66．） ［Antemita Buana．］
［E．B．J．］
IB1RR．［Iberus．］
IBERA，a city of Hispania Citerior，mentioned only by Livy，who gives no explicit account of its site，further than that it was near the Iberus（Ebro）， whence it took its name；but，from the connection of the narative，we may safely infer that it was not far from the sea．At the time referred to，namely， in the Second Punic War，it was the wealthiest city in those parts．（Liv，xxiii．28．）The manner in which Livy mentions it seems also to warrant the con－ clusion that it was still well known under Angustus． Two coins are extant，one with the epigraph mus． mibera julia on the one side，and ilbheavosia on the other；and the other with the head of $\mathrm{Ti}_{1-}$ berius on the obverse，and on the reverse the epi－ graph M．II．J．heercavoniA；whence it appears to bave been made a municipium by Julius，or by Augustus in his honomr，and to have been sitnated in the territory of the lesreconiss．The addition dekT，on the Jatter of these coins led Ilarduin to identify the place with Dertosa，the site of which， however，on the left bank of the river，dues not agree with the probable position of Thera．Florez sapposes the allusion to be to a treaty between Ibera and Dertoka．The ships with spread sails，on both coins，indicate its maritime site，which modern gengraphers seek on the S．side of the delta of tho Ebro，at S．Carlos de la Rapita，near Amposta． Its decay is easily accounted for by its lying out of the great high road，amidst the malaria of the river－ delta，and in a position where its port would be choked by the allavial deposits of the Ebro．It seems probable that the port is now represented by the Salinas，or lacoon，called Puerto de los Alfaques， which signifies I＇rer of the Jauss，i．c．of the river． （1＇lin．iii．3．s．4；Marluin，ad loc．；Marca，Hisp． ii．8；Florez，Med．de Esp，vol．ii．p．453；Sestini，
p. 160 ; Rasche, Lex. Num. s. v.; Eckhel, vol. i. pp. 50,51 ; Ukert, vol. ii. pt. 1. pp. 416, 417; Ford, Handbook of Spain, p. 210.)
[P.S.]
IBE'TIA (it 'IBmpia), the extensive tract of country which lies between the Euxine and Caspian seas, to the S. of the great chain of the Caucasus, and which, bounded on the W. by Colclis, on the E. by Albania, and the S . by Armenia, is watered by the river Cyrus (Kür). (Strab. xi. p. 499, comp. i. pp. 45, 69 ; Pomp. Mcl. iii. 5. \& 6 ; Plin. vi. 11 ; 1'tol. v. 11.) From these limits, it will be seen that the Iberia of the ancients corresponds very nearly with modern Georgia, or Grusia, as it is called by the Russians. Strabo (p. 500) describes it as being hemmed in by mountains, over which there were only four passes known. One of these crossed the Moschiciil Montes, which separated Iberia from Colchis, by the Colchian fortress SaraPANA (Scharapani), and is the modern road from Mingrelia into Georgia over Surram. Another, on the N., rises from the country of the Nomades in a steep ascent of three days' journey (along the valley of the Terek or Tergl); after which the road passes through the defile of the river Aragus, a journey of four days, where the pass is closed at the lower end by an impregnable wall. This, no doubt, is the pass of the celebrated Caucasian Gates [CAUcasilie Portae ], described by Pliny (vi. 12) as a prodigions work of nature, formed by nbrupt precipices, and having the interval closed by gates with iron bars. Beneath ran a river which emitted a strong smell("Subter medias (fores), amne diri odoris fluente," Plin. $l$. c.). It is identified with the great central road leading from the W. of Georgia by the pass of Dáriyel, so named from a fortress situated on a rock washed by the river Terek, and called by the Georgians Shevis Kari, or the Gate of Shevi. The third pass was from Albania, which at its commencement was ent through the rock, but afterwards went throngh a marsh formed by the river which descended from the Cancasus, and is the same as the strong defile now called Derbend or " narrow pass," from the chief city of Daghestan, which is at the extremity of the great arm which branches out from the Caucasus, and, by its position on a steep and almost inaccessible ridge, overhanging the Caspian sea, at once commands the coast-road and the Albanian Gates. The fourth pass, by which Pompeius and Canidius entered Iheria, led up from Armenia, and is referred to the high road from Erzrum, throngh Kars, to the N. [Aragus.]

The surface of the coontry is grently diversified with mountains, hills, plains, and valleys ; the best portion of this rich province is the basin of the $K \hat{u} r$, with the valleys of the Aragavi, Alazan, and other tributary streams. Strabo ( $\mathrm{p}, 499$ ) speaks of the numerous cities of Iberia, with their houses having tiled roofs, as well as some architectural pretensions. Besiles this, they had market-places rud other public bnildings.

The people of the Ineres or Inemi (iEmpes, Steph. B. s.v.) were somewhat more civilised than their neighbours in Colchis. According to Strabo (p. 500). they were divided into four castes :-
(1.) The royal horde, from which the chiefs, botls in peace and war, were taken. (2.) The priests, who acted also as arbitrators in their quarrels with the neighbouring trihes. (3.) Soldiers and husbandmen. (4.) The mass of the popolation, who were slaves to the king. The form of government was patriarchal. The people of the plain were peaceful,
ind cultivated the soil; while their dress was the same as that of the Armenians and Medes. The mountainecrs were more warlike, and resembled the Seythians and Sarmatians. As, during the time of Herodotus (iii. 9), Colchis was the N. limit of the Persian empire, the lberians were probably, in nane, subjects of that monarchy. Along with the otlier tribes between the Cospian and the Euxine, they acknowledged the supremacy of Mithridates. The Romans became acquainted with them in the cantpaigns of Lucullns and Pompeins. In B. c. 65 , the latter general commenced his march northwards in pursuit of Mithridates, and had to fight aguinst the lberians, whom he compelled to sue for peace. (Plut. Pomp. 34.) A. D. 35, when Tiberius set up Tiridates as a claimant to the Parthian throue, he induced the Iberian princes, Mithridates and his brother Plaraswanes, to invade Armenia; which they did, and subducd the country. (Tac. Ann, vi. 33 - 36 ; comp. Dict. of Biog. Pharasmanies.) In A. D. 115, when Armenin became a Roman province under Trajan, the king of the Iberians made a form of submitting limself to the emperor. (Eutrop. viii. 3 ; comp. Dion Cass. Ixix. 15 ; Spartian. Hadrian. 17.)

Under the reign of Constantine the Iberians were converted by a captire woman to Christianity, which has been preserved there, though mixed with superstition, down to the present times. One of the original sources for this story, which will be found in Neander (Allgemein Gesch. der Christl, Relig. vol. iii. pp. 234-236; comp. Milman, Hist. of Christianity, vol. ii. p. 480), is Rnfinus (x.10), from whom the Greek church historians (Sucrat. i. 20 ; Sozom. ii. 7 ; Theod. i. 24 ; Mos. Choren, ii. 83) have borrowed it. In A. D. $365-378$, by the ignominious treaty of Jovian, the Romans renounced the sovereignty and allinnce of Armenia and Heria. Sapor, after suljugating Armenia, marclıed against Sanromaces, who was king of Jheria by the permission of the emperors, and, after expelling him, reduced Jberia to the state of a Persidn province. (Amm. Mare, $\mathbf{x x r i i} .12$; Gibbon, c. $\mathbf{x x v}$; Le Bean, Bas Empire, vol, iii. p. 357.)

During the wars between the Roman emperors and the Sassanian princes, the Iberinn Gates had come into the possession of a prince of the Hyns, who offered this important pass to Anastasius; but when the emperor built Darus, with the object of keeping the Persians in check, Cobades, or Kubad, seized upon the defiles of the Caucasus, and fortified them, thongh less as a precaution against the Romans than against the Huns and other northern barbarians. (Procop. B. P. j. 10 ; Gibbon, c. xl. ; Le Beau, vol. vi. pp. 269, 442, vol. vii. p. 398.) For a curious history of this pass, and its identification with the fabled wall of Gog and Magog, see Humboldt, A sie Centrale, vol, ii. pp. 93-104; Eichwald, Peripl. des Cusp. Meeres, vol, i. pp. 128-132. On the decline of the Persian power, the Iberian frontier was the scene of the operations of the emperors Manrice and Heraclius. lberia is now a province of Russia.

The Georgians, who do not belong to the IndoEnropean fainily of nations, are the same race as the ancient Iberians. By the Armenian writers they are still called Virk, a name of perhaps the same original as "Innpes. They call themselves Kartli, and derive their origin, according to their national traditions, from an eponymous ancestor, Kartlos, Like the Armenians, with whom, however, there is

## 1CARUS, ICARLA.

no affinity either in language or descent, they have an old version of the Bible into thcir language. The structure of this latuguage has been studied by Adelung (Mithridat. vol. i. pp. 430, foll.) and other modern philologers, among whom may he mentioned Brosset, the author of several learned memoirs on the Georgian grammar and language: Klaproth, also, has given a long vocabulary of it, in his . Asia Polyglotta.

Armeuian writers have supplied historical memoirs to Georgia, though it has not been entirely wanting in domestic ehronicles. These curious records, which have much the style and appearance of the half-legendary monkish histories of other countries, are supposed to be founded on substantial truth. One of the most important works on Georgian history is the memorials of the celebrated Orpelian family, which have been published by St. Martin, with a translation. Some account of these, along with a short sketch of the History of the Georgians and their literature, will be found in Prichard (Physical Hist. of Mankind, vol. iv. pp. 261-276). Dubois de Montpéreux (1'oyage autour du Caucase, vol. ii. pp. 8-169) has given an outline of the bistory of Georgia, from native sources; and the maps in the magnificent Atlas that accompanies his work will be found of great service.
[E.B.J.]
IBE'RIA INDIAE (I'mpia, Peripl. M. E. p. 24, ed. Hudson), a district placed by the author of the Periplus between Larica nod the Scythians. It was doubtless peopled hy some of the Scythian tribes, who gradually made their descent to the S . and SE. part of Scinde, and founded the Indo-Scythic empire, on the overtlurow of the Greek kings of Bactria, about u.c. 136. The pame would seem to imply that the population who occupied this district had come from the Caucasus.

1BERICUM MARE. [Hispanum Mare.]
1BE'RES, IBE'R1, IBF'R1A. [Hispania.]
IBERINGAE (IG $\rho \rho / \gamma \gamma a$, Ptol. vii. 2. § 18), a people placed by Ptolemy between the Bepyrrhus Mons (Naruka M(ts.?) and the Montes Damassi, in India extra Gaugem, near the Brahmaputra. [V.]

IBERUS' ("I $\eta \eta \rho$, gen. - $\eta \rho o s$, and "IB\#pos; in Mss. often Iliberos: Ebro), one of the chief rivers of Spain, the basin of which ineludes the NE. portion of the peninsula, between the great mountain chains of the Pyrenees and Idubeda. [Hispanli.] It rises in the mountains of the Cantabri, not far from the middle of the chain, near the city of Juliobriga (the source lies 12 miles W. of Reyñosa), and, flowing with a nearly unifurm direction to the SE., after a course of 450 MI . P. (340 miles), falls into the Nediterranean, in $40^{\circ} 42^{\prime} \mathrm{N}$. lat., and $0^{\circ} 50^{\prime} \mathrm{E}$. long., forming a considerable delta at its mouth. It was navigable for 260 NI . P. from the town of Varia (1'area, in Burgos). Its chief tributaries were:-on the left, the Siconts (Segre) and the Gabincus (Gallego), and oo the right the Salo (Xulon). It was loig the boundary of the two Spains [Hispanis], whence perhaps arose the error of Appian (Hisp 6), who makes it divide the peniusula iuto two equal parts. There are some other errors not worthy of notice. The origin of the name is disputed. Dismissing derivations from the Phoenician, the question seems to depend very much on whether the lberians derived their name from the river, as was the belief of the ancicut writers, or whether the river took its name from the people, as W. von Humboldt contends. If the former was the case, and if Nicbubr's riew is correct, that the popu-
lation of NE. Spain was origins)ly Celtic [Hıs1'aNIA ], a natural etymology is at ouce found in the Celtic aber, i. e. water. (Polyb. ii. 13, iii. 34, 40, et alib.; Seyl. p.1; Strab. iii. pp. 156, et seq.; Steph. B. s. v.; Dela, ii. 6. §5; Caes. B. C. i. 60 ; Liv. xxi. 5, 19, 22, \&ec.; llin. iii. 3. s. 4, iv. 20. a. 34 ; Luean. iv. 23; Cato, Orig. V11. ap. Nonius, s. v. Pisculentus.)

IBETTES. [Samos.]
IBES, a town in the SE. of Hispania Citerior, mentioned by Livy (xxviii. 21, where the MSS, vary in the reading), is perbaps the modern $I b i, \mathrm{NF}$. of Valencia. (Coins, ap. Sestioi, p. 156 ; Lahorde, Itin. vol. i. p. 293.)
[P. S.]
IBLO'NES, VIBIO'NES ('1Gióves, al. Oúısióves, Ptol. iii. 5. § 23), a Slavonian people of Sarmatia Europaea, whom Schafarik (Slav. Alt. vol. i. p. 213) looks for in the neighbourhood of a river Iva-IvizaIvinka, of which there are several in Kussia deriving their name from "iwa" = "Salix Albs," or the common white willow.
[E. B. J.]
1BLIODURUM, is Gallia Belgica, is placed by the Antonine Itin. on the road between Virodunum ( ${ }^{*} e r-$ dun) and Divodurum (Metz). The termination (durum) implies that it is on a stream. The whole distance in the Itin. between Verdun and Metz is 23 Gallic leagues, or $34 \frac{1}{2}$ M. P., which is less than even the direet distanee between Verdun and Metz. There is, therefore, an error in the numbers in the Itin. somewhere between Virodusum and Divodurum, which D'Anville corrects in his usual way. The site of Ibliodurum is supposed to be on the Iron, at a place ahoot two leagues above its junction with the Orne, a branch of the Mosel, and on the line of an old road.

ICA'RIUM MARE. [Icaru's; Aegaeum

## Mare.]

I'CARUS, I'CARIA ('lкapos, 'lкapia: Nikaria), an island of the Aegean, to the west of Samos, according to Strabo (x. p. 480, xiv. 639), 80 stadia from Cape Ampelos, while Pliny (v. 23) makes the distauce 35 miles. The island is in reality a continuation of the range of hills traversing Samos from east to west, whence it is long and narrow, and extends from NE. to SW. Its length, according to Pliny, is 17 miles, and its circmmference, according to Strabo, 300 stadia. The island, which gave its name to the whole of the surrounding sea (Icarium Mare or Pelagus), derived its own name, according to tradition, from Icarus, the son of Daedalus, who was believed to have fallen into the sea near this island. (Ov. Met. viii. 195, foll.) The cape forming the easternmost point of the island was called Drepanum or Dracanum (Strab. xiv. pp. 637, 639; Hom. Hymn. xxxiv. 1; Diod. Sic. iii. 66 ; Plin. iv. 23 ; Steph. B. s. v. $\Delta$ pákovov), and near it was a small town of the same name. Further west, on the north coast, was the small town of IsTI (Clotor), with a tolerably good rosdstead; to the south of this was another little place, called Oexoe (Oivón, Strab. l. c.; Athen. i. p. 30.) According to some traditions, Dionysus was born on Cape Draconum (Theocrit. Idyll. xxvi. 33), and Artemis had a temple near Lsti, called Tauropolion. The island had received its first colonists from Miletus (Strab. siv. p. 635); but iu the time of Strabo it belonged to the Samians: it hal theu but few inhabitants, and was maiuly used by the Samians as pasture land for their flocks. (Strub. x. pp. 488, xiv. p. 639; Scylax, Pp. 22; Acschyl.Pers. 887 ; Thucyd. iii. 92, viii.

99 ; Ptol. v. 2. §30; P. Mela, ii. 7.) Modern writers derive the name of Icaria from the Ionic word кápa, a pasture (Hesych. s. v. Kúp), according to which it wuuld mean "the pasture land." In earlier times it is suid tu have been called Doliche (Plic. l.c.; Callim. Hymn. in Dian. 187), Macris (Plin. l. c.; Eustath. ad Dionys. Per. 530 ; Liv, xxvii. 13), aod Ichthyoessa (Plin. l. c.). Respectiug the present condition of the island, see Tournefort, loyage $d u L C$ vant, ii. lett. 9 . p. 94 ; and Ross, Reisen auf den Griech. Inseln, vol. ii. p. I64, fol.
[L. S.]

con of oenoe or oexae, ix icabus.
ICARUSA, a river the embouchare of which is on the E. coast of the Eusine, mentioned only by Pliny (yi. 5). Icarusa answers to the Ukrash river; and the town and river of Hieros is doubtless the Hieros Pontus (ífpos $\lambda_{t} \mu \nmid \nu$ ) of Arrian (Peripl. p. 19), which has heen identified with Sunjuk-kala. (Remell. Compar. Geog. rol. ii. p. 328.) [E. B. J.]

ICAUNUS or ICAUNA (Yonnc), in Gallia, a river which is a branch of the Sequana (Seine). Autesiodurum or Autessiodurum (Auxerre) is on the Fonne. The name Icaunus is only kouwn from inscriptions. D'Anville (Notice, g'c., s. v. Icauna) states, on the authority of the Abbe le Benf, that there was found on a stone on the modern wall of Auxerre the inscription dear icavil. He supposes that Icanni ought to he lcaunise, but without any good reason. He also adds that the name Icauna appears in a writiog of the fifth century. According to Ukert (Gallien. p. 145), who also cites Le Beuf, the inscription is "Deahus Ieauni." It is said that in the ninth century Auxerre was named Icauna, Hionra, Junia. (Millin, Voyage, i. p. 167, cited hy Ukert, Gallien, p. 474.) Icauna is as likely to be the Roman form of the original Celtic name as Icaunus.
[G. L.]
ICENI, in Britain. Tacitus is the only author who gives us the exact form Iceni. He mentions them twice.

First, they are defeated by the propraetor P. Ostorius, who, after fortifying the valleys of the Autona (Aufona) and Sabrina, reduces the Iceni, and then marcoes against the Cangi, a population sufficiently distant from Norfolk or Suffolk (the area of the Iceni) to be near the Irish Sea. (Ann, xii. 31, 32.) The difficulties that attend the geography of the campaign of Ostorius have becn indicated in the article Camclodunem. It is not from this passage that we fis the Iceni.

The second notice gives us the account of the great rebellion under Boadicea, wife nf Prasutagus. From this we infer that Camulodunam was not far from the Icenian area, and that the Trinobantes were a neighbouriog population. Perhaps we are justified in earryiog the lceni as far south as the frontiers of Essex and Herts. (Ann. xiv. 31-37.)

The real reason, however, for fixiog the Iceni lies in the assumption that they are the same as the Sinneoi of Ptolemy, whose town was Venta (Norwich or Cuistor); an assumption that is quite reasonable, since the Veata of Ptolemy's Simeni is men-
tioned in the Itinerary as the Venta Icenoram, and in contradistiaction to the Venta, Belgarum (Winchester).
[R. G. L.]
ICII ('IX), a river of Central Asia which only occurs in Menander of Byzantium (Hist. Legut. Barbarortun ad Romanos, p. 300, ed. Niehuhr, Bum, 1829), surnamed the "Protector"" and contemporary with the emperor Maurice, in the 6th century after Christ, to whom comparative geography is indebted for much curious information ahout the hasin of the Caspian and the rivers which discharge themselves into it on the E. Nielsobr has recognised, in the passage from Nlenander to which reference has been made, the first intimation of the knowledge of the existence of the lake of Aral, after the very Fague intimations of some among the authors of the classical period. Von Humboldt (Asic Centrale, rol. ii. p. 186) has identified the Ich with the Emba or Djem, winch rises in the monntain range $A i$ ruruk, not far from the sources of the $O r$, and, after traversing the sandy steppes of Saghiz and Bukoumbaï, falls into the Caspian at its NE. corner. (Comp. Levchine, Hordes et Steppes des KirghizKozaks, p. 65.)
[E. B. J.]
ICHANA ("I xava: Eth. 'I Xapivos), a city of Sicily, which, according to Stephanns of Byzantium, beld out for a long time against the arns of the Syracusans, whence be derives its name (from the verh i$\chi \alpha \nu \alpha \omega$, a form equisalent to $i \sigma \chi \alpha \nu \alpha \omega)$, but gives us no indication of the period to which this statement refers. The Icbanenses, however, are mentioned by Phiny (iii. 8. s. 14) among the stipendiary towns of the interior of sicily, though, according to Sillig (ad loc.), the true reading is Ipanenses. [Hippana.] In either case we have no clue to the position of the city, nad it is a mere random conjecture of Cluverius to give the name of Ichana to the ruins of a city which still remain at a place called Yindicari, a few miles N. of Cape Pachynum, and which were ideatificd (with still less probalility) by Fazello as those of Imachara. [Imachara.]
[E. H. B.]
ICHNAE ( ${ }^{\prime}$ I vou), a city of Bottiaca, in Macedonia, which Herodotus (vii. 123) couples with I'ella. (Leake, Travels in Northern Greece, vol. is. p. 582.)
[E. B. J.]
ICHNAE ("1 ${ }^{\text {voal }}$, Isid. Char. p. 3; Steph. B. s. v), a small fortified town, or castle, in Mlesopotamia, situated on the river Bilecha, which itself flowed into the Euphrates. It is said by Isidorus to have owed its origin to the Macedonians. There can be little doubt that it is the same place as is called in Dion Cassins "I $\chi$ naa (x1, 12), and in Plutarch ${ }^{\text {T}}{ }^{2} \sigma \chi^{\nu a 1}$ (Crass. c. 25). Accurding to the former writer, it was the place where Crassus overcame Talymenas: according to the latter, that to which the younger Crassus was persuaded to fly when woanded. Its exact position canoot be determined ; but it is clear that it was not far distnnt fron the inportant town of Carrhae.
[V.]
ICCIUS PORTLS. [ITICs.]
ICHTHYO'PHAGI (' $\chi \chi$ evoф́á $\gamma o t$, Diod. iii. 15, seq. ; Herod. iii. 19 ; Pausan. i. 33. § 4 ; Plin. vi. 30. s. 32), were one of the numerous tribes dwelling on each shore of the Red Sea which deriven their appellation from the principal article of their diet. Fish-euters, however, were not confined to this region: in the present day, sarages, whose ooly diet is fish cast ashore and cooked in the sun, are found on the coasts of New Helland. The Aethiopian Ichthyophagi, who appear to have been the most numerous of these
tribes, dwelt to the southward of the Regio Troglodytica. Of these, and other more inland races, concerning whose strange forms and modes of life curious tales are related by the Greek and Roman writers, a further account is given under TrogloDYTES.
[W. B. D.]
 кóл тos, Ptol. vi. 7. § 13), was a deeply embayed portion of the Persian gulf, in lat. $25^{\circ}$ ‥, situated between the headlands of the Sun and Asabe on thic eastern coast of Arabia. The inhabitants of its borders were of the same mixed race - Aethiopo-Arabian - with the Ichthyophagi of Aethiopia. The bay was studded with islands, of which the principal were Aradus, Tylos, and Tharos. [W. B. D.]

## ICHTHYS. [Elis, p. 817, b.]

ICIANI, in Britain, mentioned in the Itinerary as a station on the road from London to Carlisle (Luguballium). As more thanone of the stations on each side (Villa Faustini, Camboricum, \&c.) are uncertain, the locality of the Icini is uncertain also. Chesterford, Ickburg, and Thetford are suggested in the Momumenta Britannica.
[R. G. L.]
ICIDMAGUS, a town of Gallia Lugdunensis, is placed by the Table on a road between Revessiam (supposed to be St. Iaulian) and Aquae Segete. [Aquae Segete.] Ieidmagus is prohahly Issengeaux or Issinharns, which is SSW. of St. Eticnne, on the west side of the mountains, and in the basin of the Upper Laire. The resemblance of name is the chief reason for fixing on this site. [G. L.].

ICO'NII (1kóviot), as Alpine prople of Gallia. Strabo (p. 185) says: "Above the Cavares are the Vocontii, and Tricorii, and Iconii, and Peduli;" and again (p. 203): "Next to the Vocontii are the Siconii. and Tricorii, and after them the Medali (Medulli), who inhabit the highest summits." These $l$ coniii and Siconii are evidently the same people, and the sigma in the name Siconii scems to be mercly a repetition of the final sigma of the word Oiskorzıovs. The Peduli of the first passage, as some editions lave it, is also manifestly the name Medulli. The ascertained position of the Cavares on the east side of the Rhone, between the Durance and Isire, and that of the Vocontii east of the Carares, combined with Strabo's remark about the position of the Medulli, show that the Tricorii and the Iconii are between the Vocontii and the Mudulli, who were on the High Alps; and this is all that we know. [G. L.]

ICO'NIUM ('Hoóvon : Eth. 'Ikovicús: Cogni, Kunjah, or Koniyeh), was rosarded in the time of Xenophon (Anab. i. 2. § 19) as the easternmost town of Plorygia, while all later authorities deceribe it as the principal eity of Lycaonia. (Cic. ad Fam. iii. 6, 8, xv, 3.) strabo (sii. p. 568) calls it a $\pi 0-$ Aixnov, whence we must infer that it was then still a small place; but he adds that it was well peopled, and was situated in a fertile distriet of Dyeaonia. Pliny (v. 27), however, and the Acts of the Apostles. describe it as a very populous city, inlahited by Greeks and Jews. Hence it would appear that, within a short period, the place had greatly risen in importance. In Pliny's time the territory of Iconium formed a tetrarcly comprising 14 towns, of which Iconium was the enpital On coins belonging to the reign of the emperor Ciallienus, the town is called a Roman colony, which was, prolably, moly an assumed title, as no author speaks of it as a collony. Under the Byzantine emperors it was the metropolis of Lyenonia, and is frequently mentioned (Hierocl. p. 675 ); but it was wrested from them first by the

Saracens, and afterwards by the Turks, who made it the capital of an empire, the sovereigns of which took the title of Sultans of Iconium. Under the Turkish dominion, and during the perind of the Crusades, Iconimm acquired its greatest celebrity. It is still a large and populous town, and the residence of :t pash. The place contains some architectural remains and inseriptions, but thes appear almast all to belong to the Byzantinc period. (Comp. Anm. Mrre. xiv. 2 ; Steph. B. s. r. : l'tol. v. 6. § 16; Leake, Asia Minor, p. $4 \times$; Ilamilton, Rescarches, vol. ii. p. 205, fol. ; Wckhel, vol. iii. p. 31 ; Sestini, Gea. Num. p. 48.) The name Icnninm led the ancients to derive it from cikw, which gave rise to the fable that the city derived its name from an image of Medusa, brought thither by lerseus (Eustath. aud Dionys. Per. 856) ; hence Stephanus B. maintains that the name ought to be spelt Eikóviov, a form actually adopted by Eustathius and the Byzantiue writers, and also found on some coins. [L. S.]

1CORIGIUM. [Egorigicm.]
ICOS. [1cus.]
ICOSITA'NI. [ilich]
ICO'SIUM ('Ikóatov: Algier), a city on the const of Mauretania Caesariensis, E. of Caesarea, a colony under the Roman empire, and presented by Vespasian with the jus Latinum. (Itin. Ant. p. 15; Mela, i. 6. § 1 ; Plin. v. 2. s. 1 ; Ptol. iv. 2. § 6.) Its site, already well indicated by the numbers of Ptolemy, who places it $30^{\prime} \mathrm{W}$. of the mouth of the Savus, has been identified with certainty by inscriptions discovered by the French. (Pellissier, in the Exploration Scientifique de l-Algérie, vol. vi. p. 350.) Mny modern geographers, following Mannert, who was misled by a confusion in the numbers of the Itinerary, put this and all the neighbouring places too far west. [Comp. Iol.]
[P.S.]
ICTIMU'LI or VICTIMU'LI ('Iктоט́иоидои, Strab.), a people of Cisalpine Gaul, situated at the foot of the Alps, in the territory of Vercellae. They are mentioned by Strabo (v. p. 218), who speaks of a village of the lctimuli, where there were gold mines, which he seems to place in the neighbourhood of Vercellae; but the passage is so confused that it would leave us in doubt Pliny, however, who notices the gold mines of the Vietimuli among the most productive in Italy, distinctly places them "in agro Vercellensi." We laarn from him that they were at one time worked on so large a scale that a law was passed by the Roman censors prohibiting the employment in them of more than 5000 men at once. (1lin. xxxiii 4.s. 21.) Their site is not more precisely indicated by either of the above authors, hut the Geographer of Ravema mentions the "civitas, quae dicitur Victimula" as situated "near Eprredia, not far from the foot of the Alps" (Geogr. Lav. iv. 30) ; and a modern writer has traced the existence of the "Castellum Vietimula" during the middle agcs, and shown that it must bave been situated between Ierea and Biella on the banks of the Elvo. Traces of the ancient gold mines, which appear to have been worked during the middle ages, may be still observed in the neighbouring mountains. (Durandi, Alpi Graie e Peznine. pp. 110-112; Walckenaer, Giogr. des Gaules, vol. i. p. 16S.)
[F. II. B.]
1CT1S, in Britain, mentioned by Diodarus Siculus (r. 22) as an island lying off the coast of the tin districts, and, at low tides, becoming a peninsuln, whither the tin was conveyed in waggons. St. Michat's Mount is the suggested locality for letis

Probahly, however, there is a confusion between the Isle of Wight, the Isle of Portland, the Scilly lsles, and the isle just mentioned; since the name is suspiciously like lectis, the physical conditions being different. This viow is confirmed by the text of Pliny (iv. 30), who writes, "Timaens historicus a Britannia introrsus sex dierum navigatione abesse dicit insnlam Miction in qua candülum plumbum proveniat; ad eam Britannos vitilibns navigits corio circunsutis navigare."
[R. G. L.]
ICTODURUM, in Gallia. The Antonine Itin. places Caturiges (Chorges) on the road between Ebrodunum (Embrun) and Vapincum (Gap): and the Table adds Ictodurum between Caturigomagus, which is also Chorges, and Vapincum. We may infer from the name that lctodurum is some stream between Chorges and Gap; and the Table places it half-way. The road distance is more than the direct line. By following the road from eitlier of these places towards the other till we come to the stream, we sliall ascertain its position. D'Aliville names the small stream the Vence; and Walckenaer names the site of lctodurum, La Bastide Vieille.
[G. L.]
ICULISMA, a place in Gallia, mentioned by Ansonius (Ep. xv. 22) as a retired and lonely spot where his friend Tetradius, to whom be addresses this poetical epistle, was at one time engaged in teaching: -
" Quondam docendi munere adstrictum gravi lculisma cum te absconderet."

It is assumed to be the place called Civitas Ecolismensium in the Notitia Prov, Gall., which is Angorsleme, in the Frencb department of Charente, on the river Charente.
[G.L.]
ICUS ("Inоs: Eth. "Iкоя), one of the group of islauds off the coast of Maguesia in Thessaly, lay near Peparethus, and was colonised at the same time by the Cnossians of Crete. (Seymn. Chius, 582 ; Strah. ix. p. 436 ; Appian, B. C. v. 7.) The fleet of Attalus and the Rhodians sailed past Scyrus to leus. (Liv. xxxi. 45.) Phanodemas wrote an account of this insignificant island. (Steph. B. s.v.) It is now called Sarakino. (Leake, Northern Greece, vol. iii. p. 312.)
 range of monntains of Plarygia, belonging to the system of Mount Taurns. It traverses western Mysia in many branches, whence it was compared by the ancients to the scolopendra or milliped (Strab. xiii. p. 583), its main branch extending from the southeast to the north-west; it is of considerable height, the highest point, ealled Gargarus or Gargaron, rising about 4650 feet above the level of the sea. The greater part is covered with wood, and contains the sources of innumerable streans and many rivers, whence Homer (Il. viii. 47) calls the monntain roגvriסag. In the Homeric poems it is also described as rich in wild beasts. (Comp. Strab. xiii. pp. 602,604 ; Hom. 1l. ii. 824 , vi. 283, viii. 170, xi. 153, 196 ; Athen. xv. 8; Hor. Od. iii. 20. 15 ; Ptol. v. 2. § 13 ; Plin. v. 32.) The highlands about Zeleia formed the northern extremity of Nount Ida, while Lectum formed its extreme point in the south-west. Two other subordinate ranges, parling from the principal summit, the one at Cape Rhoeteum, the other at Sigeum, may be said to enclose the territory of Troy in a crescent ; while another central ridge between the two, separating the valley of the Scamander from that of the Simois, gave to
the whole the form of the Gireek letter $\epsilon$. (Demetr. ap. Strab. xiil. p. 597.) The principal rivers of which the sources are in Mount Ida, are the Simois, Suanander, Granicus, Aesepus, Rhodins, Caresus, and others. (Hom. Il. xii. 20, foll.) The highest peak, Gargarus, affords an extensive view over the Hellespont, Propontis, and the whole surrounding country. Besides Gargarns, three other high peaks of Ida are mentioned: viz. Cotylus, about 3500 fect high, and about 150 stadia above Scepsis; I'ytua; and Dicte. (Strab. xiii. p. 472.) Timosthenes (ap).
 606) mention a mountain belonging to the ranue of Ida, near Antandrus, which bore the name of Alexandria, where Paris (Alexander) was believed to have pronounced his judgment as to the beauty of the three goddesses. (Comp. Clarke's Travels, ii. p. 134; Hunt's Journal in Walpele's Turkey, i. p. 120; Cramer's Asia Minor, i. 120.) [L. S.]
11) A ( ${ }^{\prime} 1 \delta \eta$, Ptol. iii. 17. \& 9 : Pomp. Nela, ii. 7. § 12 ; Plin. iv. 12, xvi. 33 ; Virg. Aen. iii. 105; Solin. ii.; Avien. 676; Prisc. 528), the central and loitiest point of the mountain range which traverses the island of Crete thronghout the whole length from W. to E. In the middle of the jsland, where it is broadest (Strab. x. pp. 472, 475, 478), Mt. Ida lifts its head covered with snow. (Theophrast. $I I . P$. iv, 1.) The lofty sunmits terminate in three peaks, and, like the main chain of which it is the nuclens, the offhoots to the N. slope gradually towards the sea, enclosing fertile plains and valleys, and form by their projections the namerous bays and gulfs with which the coast is indented. Mt. Ida, now called Psiloriti, sinks down rapidly towards the SE . into the extensive plain watered hy the Lethaens. This side of the mountain, which looks down npon the plain of Mesara, is covered with cypresses (comp. Theophrast. de Ient. P. 405; Dion. Perieg. 503; Eustath. ad. loc.), pines, and junipers. Mt. Ha was the locality assigned for the legends connected with the history of Zens, and there was a cavern in its slopes sacred to that deity. (Diod. Sic. v. 70.)

The Cretan Ida, like its Trojan namesake, was connected with the working of iron, and the Idacan Dactyls, the legendary discoverers of metallorgy, are assigned sometimes to the one and sometimes to the other. Wood was essential to the operations of smelting and forging; and the word Ida, an appellative for any wood-covered mountain, was used perhaps, like the German berg, at once for a mountain and a mining work. (Kenrick, Aegypt of IFerodotus, p. 278 ; Höck, Kreta, vol. i. p. 4.) [E. B. J.]

I'DACUS ( ${ }^{2}$ I $\alpha$ anos), a town of the Thracian Chersonese, mentioned by Thncydides (viii. 104) in his account of the manoeuvres before the battle of Cynossema, and not far from Arrhiana. Althongh nothing whatever is known of theso places, yet, as the Athenians were sailing in the direction of the Propontis from the Aegaean, it would appear that Idacus was nearest the Aegaean, and Arrhiana further up the Hellespont, towards Sestus and the Propontis. (Arnold, ad loc.)
[E. B. J.]
 Steph. B.; Plin, v. 31), a town in Cyprus, adjoining to which was a forest sacred to Aphrodite; the pce:s who connect this place with her worship, give no indications of the precise locality. (Theocr, $1 d$. xv. 100; Virg. Aen. i. 681, 692, x. 51; Catull. Pel. ot Thet. 96 ; Propert. ii. 13; Lucan, viii. 17.) Engel (Kypros, vol. i. p. 153) identifies it with Valin, de-

IDIMIUM.
scribed by Mariti (Fiaggi, vol. i. p. 204), sitnated to the south of Lencosia, at the foot of Monnt Olympus.
[E. B. J.]
IDIMIUM, a town in Lower Pannonia, on the cast of Sirmium, according to the Peut. Tab; ; in the Ravenna Geographer (iv. 19) it is called Idominimo. Its site must be looked for in the neighbourhood of Munricza.
$\left[\begin{array}{ll}\mathrm{L} & \mathrm{S} .\end{array}\right]$
110IMLS, a town of uncertain site in Upper Muesia, probably on the Morava in Sureia. (It. Ant. 134; Tab. Peut.)
[L. S.]
IDISTAVISUS CAMPUS, the famons battlefield where Germanicus, in A. D. I6, defeated Arminius. The name is mentioned only by Tacitus ( A nn . ii. 16), who describes it as a "canpus medius inter Visurgim et colles," and further says of it, that " ut ripae fluminis cedunt aut prominentia montium resistunt, insequaliter sinuatur. Pone tergum insurgebat silva, editis in altum ramis et pura humo inter arborum truncos." This plain between the river Heser and the bills has been the subject of much discussion among the modern historians of Germany, and various places have been at different times pointed out as answering the description of Tacitus' ldistavisus. It was formerly believed that it was the plain near Fegesack, below Bremen; more recent writers are pretty unanimous in believing that Germanicus went up the river Heser to a point beyond the modern town of Minden, and crossed it in the neighbourbood of Mausberge, whence the battle probably took place between Hausberge and Rinteln, not farfrom the Porta Vestphalica. (Ledebur, Land u. Volk der Bructerer, p. 288.) As to the name of the place, it used to be beliered that it had arisen out of a Roman asking a German what the place was, and the German answering, "It is a wiese" (it is a meadow) ; but Grimm (Deutsche Mythol. p. 372.2 nd edit.) has shown that the plain was probably called Idisiariso, that is, "the maiden's meadow" (from idisi, a maiden). [L.S.]

IDO'NLLE ('18оцє́vq, Ptol. iii. 13. § 39 ; ldomenia, Peut. Tab.), a town of Macedenia which the Tabular ltinerary places at 12 M. P. from Stena, the pass now called Demirkapi, or lron Gate, on the river Terchuiri. Sitalces, on his route from Thrace to Macedonia, erossed Mt. Cercine, leaving the Paeones on his right, and the Sinti and Maedi on hi. left, and descended upon the Axius at Idomene. (Thue. ii. 98.) It probably stond upon the right bank of the Axius, as it is included by Ptolemy (l. c.) in Emathia, and was near Doberus, neat to which it is named by llierocles among the towns of Consular Maredonia, under the Byzantine empire. (Leake. Nirth. Greece, vol. iii. p. 444.) [E. B. J.] 1DOMENE. [Argos Amphulochicim.]
LDRAE ("Iopai, Pıol, iii. 5. § 23), a people of Surmatia Europaca, whose position camnot be made ont from the indications given by l'tolemy. (Shafarik, Slav. Alt. vol, i. p. 213.) [E. B. .1.]
l'DRHAS ('Ibpuás), according to Stcphamus B. (s.v.), a won in Caria which had furmelly borne the name of Chryss ris. Iferndotus (v. I is) describes the river Marnyas as flowing from a distriet called Idrias: and it is onnjectured that Stratoticeia, frumded by Antiochus Siter, was brilt on the site of the ancient town of Jdrias, (Comp. Leake, Asia Minor. n. 235 ; see Lagoderia) [1.. S.]

IDI"BEDA ("t $\delta o u ̈ B=\delta a$, mis-pelt by Amathemerus 'Ivס̄oúba入ōa, ii. 9: Sierra de Oca and Sierra de Lorenzo), a great mountain clain of Hispania, ruming in a SE, direction from the mountains of

## IDUMAEA.

the Cantabri to the Mediterrancan, almost parallel to the F:bro, the basin of which it borders on the W. Strabo makes it also parallel to the Pyrenees, in conformity with his riew of the direction of that chain from N. to S. (Strab. iii. p. 161; Ptol, ii. 6. \$ 21.) Its chief offects were:- M. Caunus, near Bilbilis (Martial, i. 49, iv. 55), the Saltus MaNllaves (Liv. xl. 39 : probably the Sierra Molina), and, above all, M. Orospeda, which strikes off from it to the S . long before it reaches the sea, and which ought perhaps rather to be regarded as its principal prolongation than as a mere branch.
[P. S.]
IDUMAEA ('Iסovuaia), the name of the country inhabited by the descendants of Edom (or Esan), being. in fact, only the classical form of that ancient Semitic name. (loseph. Ant. ii. 1. § 1.) It is otherwise called Mount Keir. (Gen. xxxii. 3, xxxvi. 8; Deut. ii. 5 ; Joshua, xxiv. 4.) It lay between Mount Horeb and the southern border of Canaan (Deut. i. 2), extending apparently as far south as the Gulf of Akabet (Dent. ii. 2-8), as indeed its ports, Ezion-geber, and Eloth, are expressly assigned to the "land of Elom." (2 Cleron. viii. 17.) This country was inlabited in still more ancient times by the Horims (Deut. ii. 12, 22), and derived its more ancient name from their patriarch Seir (Gen. xxxvi. 20; comp. xir. 6), as is properly maintained by Reland, against the fanciful conjecture of Josephus and others. (Palaestina, pp. 68, 69.) The Jewish historian extends the mume Idumaca so far to the north as to comprehend under it great part of the south of Judaea; as when he says that the tribe of Simeon received as their inheritance that part of Idumaes which borders on Egypt and Arabia. (Ant. v.1. §22). He elsewhere calls Hebron the first city of Idnmaea, i. e. reckoning from the north. (B.J. iv. 9. § 7.) From his time the name Idumaes disappears from geographical descriptions, except as an historical appellation of the country that was then called Gebalene, or the southem desert ( $\dot{\eta}$ катдे $\mu \in \sigma \eta \mu-$ Spiav Ẻp $\bar{\eta} u$ os. Euseb. Ononx. s. v. Ai入д́u), or Arabia. The bistorical records of the Idmmacans, properly so called, are very scanty. Saul made war upon them; David sublued the whole country; and Solomon made Ezion-geber a naval station. (1 Sam. xiv. 47, 2 Sam. viii. 14; 1 Kings, xi. 15, ix. 26.) The Edomites, however, recovered their national independence under Joram, king of Judah (2 Kings, xiv. 7), and avenged themselves on the Jews in the cruelties which they practised at the capture of Jerusalem by Nebuchadnezzar. (Psalms, exxxrîi, 7.) It was probably during the Babylonish captivity that they extended themselves as far north as IIcbron, where they were attacked and subducd by Judas Maceabacus. (1 Maccab. v. 65-63; Joseph. Ant. xii. 8. § 6.) It was on this account that the whole of the south of Palestine, about Hebron, Gaza, and Filentheropolis (Beit Jebrin), came to be designated lilumaea. (Joseph. B. J. iv. $9 . \$ 7, c$. Apion, ii. 9 ; S. Jerom. Comment, in Obad. ver. 1.) Meanwhile, the ancient seats of the children of Edom had been invaded and occupied by another tribe, the Nabathacans, the descendauts of the Ishmaelite patriarch Nebaioth [Nabathayi], under whith name the country and its capital [I'zuna] berame famous among Greek and Roman geographers and historians, on which account their description of the district 15 more appropriately given under that head. St. Serome's brjef but accurate notice of its general features may here suffice:"Omnis australis regio ldumaeorum de Elenthero-
poli nsqne ad Petram et Ailam (haee est possessio E.au) in specubus habitatiunculas habet; et propter nimios calores solis, quia meridiana provincia est, subterrmeis tuguriis ptitur." (Comment. in Olad. v. 5,6 .) And again, writing of the same country, he say's that south of Tekoa " ultra nullus est viculus, ne agrestes quidem casae et furuorum similes, qnas Afri appellant mapalia. Tanta est eremi vastitas, quase usque ad Mare Rubrum Pensarumque et Aethiopum atque Indorum terminos dilatatur. Et quia humi arido atque arenoso nibil omnino trugum gignitur, cuncta sunt plena pastoribus, ut sterilitatem terrae compenset pecorum multitudine." (Prolog. ad A mosum.)
[G. W.]
IDUNUM, a town in the extreme soutb of Pannonia (Ptol. ii. 14. § 3), which, from inscriptions found on the spot, is identified with the modern Judenburg.

JEHOSHAPHAT, VALLEY OF. [JERUS.ALEM.]

1ENA, in Britain, mentioned by Ptolemy (ii. 3. § 2) as an estuary between the outlets of the rivers Alravannus and Dera to the south of the promontory of the Novantae (= II igton Bay). [R. G. L.]

## IERABRI'GA. [Arabrica.]

JERICHO ('Iepı $\chi^{(\omega},{ }^{\prime}$ I $\epsilon \rho \imath \chi 0 \hat{\jmath} s$, Strab.), a strongly fortified city of the Canaanites, miraculously taken hy Joshua, who utterly destroyed it, and probibited it from being rebuilt under pain of an anathema (Josh. ii. vi.), which was braved and incurred by Hiel of Bethel, five centuries afterwards, in the reign of Ahab, king of Israel. (1 Kings, xvi. 34.) It then became a school of the prophets. (2 Kings, ii. 4,5.) It lay in the border of Benjamin, to which tribe it was assigned (Josh. xviii. 12, 21), but was not far frorn the southern borders of Eptrain (xvi. 1). It is mentioned in the New Testanient in connection twith the wealthy revenue-farmer Zacchaeus, who resided there, and probably farmed the government dues of its rich and well cultivated plain. Josephus describes it as well situated, and fruitful in palms and balsam. (Ant. iv. 8. § 1, B.J. i. 6. §6.) He places the city 60 stadia from the Jordan, 150 from Jerusalem (B. J.iv. 8. § 3), the intervening country being a rocky desert. He accounts for the narrow limits of the tribe of Benjamin by the fact that Jericho was included in that tribe, the fertility of which far surpassed the richest soil in other parts of Palestine ( $\$ \S$ 21, 22). Its plain was 70 stadia long by 20 wide, irrigated by the waters of the fountain of Elisha, which possessed almost miraculous properties. (Ant. iv. 8. $\S \S 2,3$.) It was one of the eleven toparchies of Judaea. (B. J. iii. 2.) Its palm grove was granted by Antony to Cleopatra (i. 18. § 5), and the subsequent possession of this envied district by Hervd the Great, who first farmed the revenues fur Cleopatra, and then redeemed them (Ant. xiv. 4. §§ 1,2 ), prolubly gave occasion to the proverbial use of his name in Horace (Ep. ii. 2. 184): -
" cessare et ludere et ungi, Praeferat Herodis palmetis pinguibus."
It is mentioned by Strabo (xvi. p. 763) and Pliny (v. 14) in connection with its palm-trees and fountains. The former also alludes to the palace and its garden of halsam, the cultivation and collecting of which is more fully described by Pliny (xii. 25).
The palace was built by Herod the Great, as his own residence, and there it was that he died;
laving first confined in the bippodrome the most illustrious men of tbe country, with the intention that they should be massacred after his death, that there might be a general mourning throughout the country on that occurrence. (B. J. i. 33. § 6.) Josephus further mentions that Jericho was visited by Vespasian shortly before he quitted the country, where he left the tenth legion (B.J. iv. 8. § 1, 9. § I); but he does not mention its destruction by Titus on account of the perfidy of its inbabitants; a fact which is supplied by Euselius and St. Jerome. They add that a third city had been built in its stead; but that the ruins of both the former were still to be seen. (Onomast. s. v.) The existing ruins can only be referred to this latest city, which is frequently mentioned in the mediaeval pilgrimages. They stand on the skirts of the mountain conntry that shuts in the valley of the Jordan on the west, about three hours distant from the river. They are very extensive, but present nothing of interest. The waters of the fountain of Elisha, now 'Ain-es-Sultun, well answer to the glowing description of Josephos, and still fertilise the soil in its immediate neighbouriood. But the palms, balsam, sugar-canes, and roses, for which this Paradise was formerly celebrated, have all disappeared, and the modern Riha consists only of the tents of a Bedouin encampment. [G. W.]
IERNE, is a better form for the ancient name of Ireland than Hibernia, Ibernla, Ivernia, \&c., both as being nearer the present Gaelic name Eri, and as being the oldest form which occurs. It is the form found in Aristotle. It is also the form found in the poem attributed to Orpheus on the Argonautic expedition, which, spurious as it is, may nevertheless be as old as the time of Onomacritus (i. e. the reign of the first Darius): -

##  <br> (Orpheus, 1164, ed. Leipzig, 1764.)

Aristotle (de Mundo, c. 3) writes, that in the ocean beyond the Pillars of Hercules "are two islands, called Britannic, very large, Albion and Ierne, beyond the Celtae." In Diodorus Siculus (v, 32) the form is Iris; the island lris being ocenpied by Britons, who were cannibals. Strabo (ii. p. 107) makes Ierne the farthest voyage northwards from Celtica. It was too cold to be other than barely habitable, the parts beyond it being absolntely uninhabited. The reported distance from Celtica is 500 stadia. The same writer attributes cannibalism to the Irish; adding, however, that bis authority, which was probably the same as that of Didorus, was insufticient. The form in Pomponius Mela is Iverna. In Iverna the lusuriance of the herbage is so great as to cause the cattle who feed on it to burst, uniess occasionally taken off. Pliny's form is Hybernia (iv. 30). Solinus, whose forin is Hibernia, repeats the statement of Mela as to the pasture, and adds that no snakes are found there. Warlike beyond the rest of her sex, the Hibernian mother, on the birth of a male child, places the first morsel of food in his mouth with the point of a sword (c. 22). Avienus, probably from the similarity of the name to lepa, writes: -
"Ast in duobus in Sacram, sic insulam Dixere prisci, solibus cursus rata est. Hace inter undas multa cespitem jacit
Eanque late gens Hibernorum colit."
(Ora Mart. 109-113.)
Avienus's authorities were Carthaginian. More im-
portant than these scanty notices, and, indeed, more important than all the notices of Ircland put together, is the text of Ptolemy. In this anthor the details for Ireland (Loúpvia) are fuller, rather than scantier, than those for Great Britain. let, as Ireland was never reduced, or even explored by the Romanns, Lis anthorities must have been other than Latin. Along with this fact must he taken another, viz., that of the earliest notice of Ireland ('lépvn) being full as early as the earliest of Britain; earlier, if we attribnte the Argonantic poem to Onomacritus; earlier, too, if we suppose that Hanno was the authority of Avieans.

If nut loman, the anthorities for lerne must have been Greek, or Phoenician, - Greek from Marseilles, I'hoenician from either the mother-country or Carthage. The probabilities are in favoor of the latter. On the other hand, early as we may make the first voyage from Carthage (viâ Spain) to Ireland, we fiud no traces of any permanent oconpancy, or of any intermixture of blood. The name Ierne was native; though it need not necessarily have been taken from the Iernians themselves. It may been Iberian (Sjanish) as well. Some of the names in I'tolemy - a large proportion - are still current, e. g. Liboius, Semus, Obuea, Birgus, Eblana, Nagnatae, \&c., $=$ Liffy, Shannon, Avoca, Barrow, Dublin, Connought, \&c. Ptolemy gives us chietly the names of the lrish rivers and promontories, which, although along a sea-board so deeply indented as that of lieland aot always susceptible of accorate identification, are still remarkably true in the general outline. What is of more importance, inasmuch as it shows that his anthorities had gone inland, is the fact of seven towns being mentioned:-"The inland towns are these, Rhigia, Rhaeba, Laverns, Macolicam, Dunnm, another Rbigia, Turnis."

The populations are the Vennienii and Rlobogdii, in C"lster ; the Nagnatae, in Connaught; the Erdini and Erpeditani, between the Nagnatae and Vennicuii: the Uterni and Vodiae, in Wunster; and the Auteri, Gangani, the Veliborae (or Ellebri). between the Lterni and Nagnatac. This leaves Leinster for the Brigantes, Coriondi, Dlenapii, Canci, Blanii, Voluntii, and Darnii, the latter of whom may have been in C'lster. Besides the inland towns, there was a Menapia ( $\pi \delta \lambda / s$ ) and an Eblana ( $\pi \dot{\lambda} \lambda เ s$ ) on the cuast.

Tacitus merely states that Agricola meditated the contuest of Ireland, and that the Irish were not very different from the Britons:- "Ingenia, cultusque hominun haud multum a Britannia differunt." (Agric. 24.)

It is remarkable that on the eastern coast one Britivh aud two German names occur,-Brisantes, Cauci, and Menapii. It is more remarkable that two of these names are more or less associated on the continent. The Chanci lie north of the Munapii in (iurnany, though not directly. The inference from this is by no means easy. Accident is the last resuure to the ethnographical philologist; se that more than one writer has asspmed a colonisation. Suchs is fact is by no means improbable. It is not much more difficult for Germans to have been in Wexford in the second century than it was for Nurthmen to lave been so in the eighth, ninth, and tenth. On the other hand, the root $m-n-p$ seems to lave been Celtic. and to have beon a common, rather than a profer; name; siuce Pliny gives us the island Monapia Anglesea. No opinion is given as to the nature of these comseitences.

Of wone of the Irish tribes mentioned by Ptolemy
do we meet any separate substantive notice, a notice of their playing any part in history, or a notice of their having come in contact with any other nation. They appear only as details in the list of the populations of lemne. Neither do the Ierni appear cullectively in history. They lay beyond the pale of the classical (Homan or Greck) nations, jnst as did the tribes of Northern Germany and Siandinavia; and we know them only in their geograply, not in their history.

But they may have been tribes unmentioned by Ptolemy, which do appear in history ; or the names of Ptolemy may have been clanged. Ptolemy says nothing about any Scoti; but Claudian does. He also connects them with Ireland: -
${ }^{4}$ madnerunt Saxone fuso
Orcades; incalnit Pictoram sanguine Thnle
Scotorum cumnlos flevit glacialis Ierne."
(De Tert. Consul. Honorii, 72-74.)
Again: -
"totam quum Scotus Iernen
Movit."
(In Prim. Consul. Stilich. ii. 252.)
The extent to which the corrent opiaions as to the early history of the Gaels of scotland confirm the jueas suggested by the text of Clandian is considerel under Scots. At present it may be said that Scofi may eavily have been either a generic name for some of the tribes mentioned in detail by P'tolemy, or ehe a British instead of a Gaclic name. At any rate, the Scoti may easily have beea, in the time of I'tolemy, aa Irish population.

Two other names suggest a similar question, Belgae, and Attacotti. The claim of the latter to have been Irish is better than that of the former. The Attacotti occur in more than one Latin writer; the Belgae (Fir-bolgs) in the Irish annals on]ly. [See Artacotti, and Belgae of Bratannia.]

The etlinology of the ancient leme is ascertained by that of modern lreland. The present popplation belongs to the Gaelio branch of the Celtio stock; a pupulation which cannot be shown to have been introdaced within the historical period, whilst the stock of the time of Ptolemy cannot be slown to have been ejected. IIcnce, the inference that the population of Ierne consisted of the ancestors of the present lrish, is emiaently reasonable, - so reasonable that no objections lie against it. That Euglish and Scandinavian elements lave been introduced since, is well known. That Spanish (Iberic) and 'hoenioian elements may have been introduced in the ante-historical period, is likely; the extent to which it took place being doubtful. The most cantious investigators of Irish archacology have hesitated to pronounce any existing remains either Ploenician or Iberian. Neither are there any remains referable to pagan Rome.
[R. G. L.]
1ERNLS, in Ireland, mentioned by Ptolemy (ii. 2. §4) as the most sonthern of two rivers (the Iurus being the other) lying between the Senns (Whannon) and the Southern Promontory (Mizen $1 f(a d)=$ either the Kemmare or the Bantry Bay River:
[R. G. 1.]
JERUISALEAB, the ancient capital of Palustine, anc the seat of the Hebrew kingdom.

## 1. Namps.

The name by which this ancient capital is most fommonly known was not ite uriginal appllation, but ayparently compounded of two carlier names.

attached, perhaps, to twe neighhouring sites afterwards incorporated into one. The sacred narrative, by implication, and Josephus, explicitly, recognise from the first a distinction between the Upper and the Lower city, the memorial of which is supposed to he retained in the dual form of the ILebrew name a!?: The learned are divided in opinion as to whether the Sajem of Melchizedek is identical with Jerasalem. St. Jerome, who cites Josephus and a host of Christian authorities in favour of their identity, himself maintaining the opposite conclusion, says that extensive rnins of the palace of Melchizedek were shown in his day in the neighbourhood of Scythopolis, and makes the Salem of that patriarch identical with "Shalem, a city of Shechem" (Gen. xxxiii. 18); the same, no doubt, with the Salim near to Aenon (St. John, iii. 23), where a village of the same name still exists in the mountains east of Nablis. Certain, however, it is that Jerusalem is intended by this name in Psalm 1xxvi. 2, and the almost universal agreement of Jews and Christians in its identity with the city of Melchizedek is still further confirmed by the religions character which seems to have attached to its governor at the time of the coming in of the children of Israel, when we find it under the rule of Adonizedek, the exact equivalent to Melchizedek ("righteous Lord"). Regarding, then, the latter half of the name as representing the ancient Salem, we have to inquire into the origin of the former half, concerning which there is considerable diversity of opinion. Josephns has been nuderstood to derive it from the Greek word $i^{\prime} \in \rho \circ \mathrm{p}$, prefixed to Salem. In the obscure passage (Ant. vii. 3. §2) he is so understood by St. Jerome; but Isaac Vossins defends him from this imputation, which certainly would not raise his character as an etymologist. Lightfoot, after the Kabbies, and fullowed by Whiston, regards the former half of the name as an abbreviation of the latter part of the title Jehovah-jireh, which this place seems to bave received on occasion of Abraham offering up his son on one of the mountaias of "the land of Moriah." (Gen, xxii. 8, 14.) Feland, followed by Ranmer, adopts the root © yarash, and supposes the name to be compounded of U.ג? and sense, "hereditas," or " possessio hereditaria pacis." Lastly, Dr. Wells, followed by Dr. Lee, regards the former part of the componnd name as a modification of the name Jebus, "בו", one of the earlier names of the city, from which its Canaanitish inhabitants were designated Jebusites. Dr. Wells imagines that the I was changed into 7 , for the sake of euphony; Dr. Lee, for eaphemy, as Jebusalem wonld mean "the trampling down of peace"-a name of ill omen. Of these various interpretations, it may be said that Lightfoot's appears to have the highest authority; but that Reland's is otherwise the most satisfactory. Its other Scripture name, Sion, is merely an extension of the name of one particular quarter of the city to the whole. There is a further question among critics as to whether by the city Cadytis, mentioned in Herodotus, Jernsalem is intended. It is twice alluded to by the historian : once as a city of the Syrians of Palaestine, not much smaller than Sardis (iii. 5); again, as having been taken by Pharoah. Necho, king of Egypt, after his victory in Magdolum (ii. 159). The main objections urged against the identity of Cadytis and Jerusalem in these passages, are, that in the former passage

Herodotus is apparently confining his survey to the sea-border of Palasstine, and that the fact narrated in the second is not alluded to in the sacred narrative. But, on the other hand, there is no mention in sacred or profane history of any other city, maritime or inland, that could at all answer to the description of Cadytis in respect to its size: and the capture of Jerusalem by Necho after the battle of Megiddo, which is evidently corrupted by Herolotus into Magdolum, the name of a city on the frontier of Egypt towards lalaestine, with which he was more familiar, - though not expressly mentioned, is implied in Holy Scripture; for the deposition and deportation of Jehoahaz, and the substitution and subjugation of Jehoiakim, conld not have been effected, onless Necho had held possession of the capitai. (2 Kings, xxiv. 29-35; comp. 2 Chron. xxxvi. 3.) It may, thea, safely be concluded that Cadytis is Jerusalem; and it is remarkable that this earliest form of it classical name is nearly equivalent to the modern name by which alone it is now known to its native inhabitants. El-Khuds signifies "the Holy (city)," and this title appears to have been attached to it as early as the period of lsaiah (xlviii. 2, kii. 1), and is of frequent recurrence after the Captivity. (Nehem. xi. 1, 18 ; St. Matth. iv. 5, xxvii. 53.) Its pagan name Colonia Aelia Capitolina, like those imposed on many other ancient cities in Palaestine, never took any hold on the native popnlation of the country, nor, indeed, on the classical histerians or ecclesiastical writers. It probably existed only in state papers, and on coins, many of which are preserved to this day. (See the end of the article.)

## II. General Site.

Jerusalem was situated in the heart of the mountain district which commences at the sonth of the great plain of Esdraelon and is continued throaghout the whole of Sannaria and Judaea quite to the sonthern extremity of the Promised Land. It is almost equidistant from the Mediterranean and from the river Jordan, heing about thirty miles from each, and situated at an elevation of 2000 feet above the level of the Mediterranean. Its site is well defined by its circumjacent valleys.

Valleys. - (1) In the north-west quarter of the city is a shallow depression, ocenpied by an ancient pool. This is the head of the Valley of Hinnom, which from this point takes a southem course, confining the city on the western side, until it makes a sharp angle to the east, and forms the sonthern boundary of the city to its south-east quarter, where it is met by another considerable valley from the north, which mast next be described.
(2) At the distance of somewhat less than 1500 yards from the "upper pool" at the head of the Valley of Hinnom, are the "Tombs of the Kings," situated at the head of the Valley of Jehoshaphat, which runs at first in an eastern conrse at some distance north of the modern city, until, turning sharply to the south, it skirts the eastern side of the town, and meets the Valley of Hinnom at the sontheast angle, as already described, from whence they run off together in a southerly direction to the Dead Sea. Through this valley the brook Kedron is suppased once to have run; and, although no water has been known to flow through the valley within the annals of history, it is unquestionably entitled to the alias of the lallcy of the Kedron.

The space between the basin at the head of the Valley of Hinnom and the head of the Valley of

Jehoshaphat is occupied by a high rouky stheor swell of land, which attains its higbest elevataon at little without the north-west angle of the prewnt town. The city, then, occupied the termination of this hraad swell of land, being isulated, except on the north, by the two great ralleys already described, towards which the ground declined rapidly from all parts of the city. This rocky promontory is, however, broken hy one or two sabordinate valleys, and the declivity is nut aniform.
(3) There is, for example, another valley, very inferior in magnitude to those which encircle the city, bat of great importance in a topographical view, as being the main geographical feature mentioned by Josephns in his description of the city. This valley of the Tyropocon (cheese-makers) meets the Valley of 1 lianom at the Pool of Siluam, very near its junction with the Valley of Jehoshaphat, and can be distinctly traced throngh the city, along the west side of the Temple enclosure, to the Damascus gate, where it opens into a small plain. The level of this valley, ruaning as it dues throngh the midst of a city tbat has undergone such constant vicissitudes and such repeated destruction, has of conrse beea greatly raised by the desolations of so many generations, but is so marked a feature in modern as in former times, that it is singular it was not at once reccignised in the sttempt to re-distribute the ancient Jernsalem from the descriptions of Josephas. It would be ent of place to cater into the argaments for this and other ilfentibications in the topography of ancient Jerusalem; the cuaclusions only cas be stated, and the various hypotheses must be songht in the works referred to at the end of the article.

Hills. - Ancient Jernsatem, accordiag to Iosephus, occopied "two emineaces, which frented each other, and were divided by an intervening ravinc, at the briak of which the clomely-built houses terminated." This ravine is the Tyropoen, already referred te, and this division of the city. which the historias observes from the earliest period, is of the utmost inportance ia the topozraphy of Jerusalem. The two hills and the intermediate valley are more minntely described as follows: -
(1) The U'pper City.- "Of these eminences, that which had upen it the Upper City was by much the luftier, and in its length the straiter. This emineace, then, for its strength, ued to be called the stronghold by king David, .... bat by us it was called the Upper Azora.
(2) The Liver City.-"Theother eminence, which was called Acra, and which supported the Lower City, was in shape gibbous (áuфикuptes).
(3) The Temple Mount.-"Opposite to this latter wats a third eminence, which was naturally lower than Acra, and was once separated from it by anether broad ravine: but afterwards, in the times when the Asmonacans reigned, they filled up the ravine, wishing to juin the city to the Temple; and having levelled the summit of Acra, they made it lower, so that in this quarter also the Temple might be seen rising above other objects.

* But tho ravine called the Tyropoen (cheescmakers), which we meationed as iiividing the eminences of the Upper City and the Lower, reaches to Siloam; for so wo call the spring, buth sweet and abaodant. But oa their enter sides the two eminences of the city were henmed in within deep ravines, and, by reason of the precipices on either side, there was no approach to them from any quarter." (B. Juel. v. 4, 5.)
7.in, then, was the disposition of the ancient city, on whech a few remarks must be made befure we procecal to the new city. The two-fild division, which, as has been said, is recognised by Josephns from the first, is implied also in the sacred narrative, not only in the account of its capture by the Israelites, and subsequently by David, but in all such passages as mention the city of David or Motnt Sion as distinct from Salem and Jerusalem. (Corap. Josh. xv. 63; Julges, i. 8, $21 ; 2$ Sam. v. 6-9; Psalms, 1sxvi. 2, \&c.) The account given by Josephns of the taking of the city is this: that "the Israclites, having besieged it, after a time took the Lower City, but the Upper City was laard to be taken by reasun of the strength of its walls, and the nature of its pusiti n" (Aut. 又. 2. § 2); and, subsequently, that " Divid laid siege to Jerusalem, and took the Lower City Ly assanlt, while the citalel still held ont " (vii. 3. § 1). Having at length got possession of the Upper City also, "he eacircled the two within one wall, so as to form one body" (§ 2). This conld only be effected by taking in the interjaceat valley, which is apparently the purt called Mi. 1.
(t) But when in process of time the city overflowed its old boundaries, the hill Bezetha, or New City, was alded to the ancient hills, as is thns described by Joscphus:-" The city, being overabundant in populatiod, began gradually to creep beyond its off walls, and the people joining to the city the region which lay to the north of tbe temple and close to the bill (of Acru), advanced considerahly, so that eveu a fourth eminence was surroundel with habitations, viz. that which is called Bezetha, situated opposite to the Antonia, and divided from it by a deep ditch; for the gromad had been cut through mi parpose, that the fonndations of the Antonia might nut, by joining the eminence, be easy of approach, and of inferior height."

The Antonin, it is necessary here to add, in anticipation of a more detailed description, was a castle sitnated at the north-western angle of the euter enclosure of the Temple, occopying a precipitous reck 50 enbits high.

It is an interesting fact, and a convenient one to facilitate a description of the city, that the several parts of the ancient city are precisely coincident with the distinct quarters of modern Jerusalem: for that, 1st, the Armenian and Jetrish quarters, with the remainder of Mount Sion, now excluded froun the walls, composed the Upper City ; 2dly, the Mahommedan quarter corresponds exactly with the Lower City; 3dly, that the Haram-es-Sherif, or Noble Sanctuary, of the Moslems, occupies the Temple Moant: and 4thly, that the Haret (quarter) Bab-elHitta is the declivity of the hill Bezetha, which attains its greatest elevation to the north of the modern city wall, bat was entirely included within the wall of Agrippa, together with a considerable space to the north and west of the Lower City, inclading all the Christian quarter.

The several parts of the ancient city were enclesed by distinct walls, of which Jusephus gives a mionte description, which must be noticed in detail, as furnishing the fullest account we have of the city as it existed during the Ronam perind; a description which, as far as it relates to the Old city, will serve for the elacidation of the ante-Babylonish capital, - is it is clear, from the account of the rebnilding of the walls by Nehemialh (iii., vi.), that the now fortifications followed the course of the ancient enccinte.

## III. Wasles.

1. Epper City and Old Wall. - "Of the three walls, the old one was difficult to be taken, both on account of the ravines, and of the eminence above them on which it was situated. But, in addition to the advantage of the position, it was also stroncly huilt, as David and Solomon, and the kings after them, were very zealons ahont the work. Beginning towards the north, from the tower called Hippicus, and passing tbrough the place called Xystus, then joining the conncil chamber, it was united to the western cloister of the Temple. In the otber direction, towards the west, commencing from the same place, and extending through a place called Bethso to the gate of the Essenes, and then turniog towards the south above the fonntain Siloam, thence again bending toward the east to the Pool of Solomon, and running through a place which they called Ophla, it was joined to the eastern cloister of the Temple." To understand this description, it is only necessary to remark, that the walls are described, not by the direction in which they run, but by the quarter which they face; i.e. the wall "turning towards the sonth" is the south wall, and so with the others; so that the Hippic Tower cridently lay at the NIV. angle of the Upper City; and, as the position of this tower is of the first importance in the description of the city walls, it is a fortunate circumstance that we are able to fix its exact site.
(1) The Hippic Tover is mentioned in connection with two neighlouring towers on the same north wall, all built by Herod the Great, and connected with bis splendid palace that occupied the northwest angle of the Upper City. "These towers," says the historian, "surpassed all in the world in extent, beauty, and strength, and were dedicated to the memory of his brother, his friend, and his best loved wife.
"The Hippicus, named from his friend, was a square of 25 cuhits, and thirty hish, entirely solid. Above the part which was solid, and constructed with massive stones, was a reservoir for the rain-water, 20 cubits in depth; and abore this a house of two stories, 2.5 cabits high, divided into different apartments ; above which were battlements of 2 cubits, on a parapet of 3 cubits, making the whole beight 80 cubits.
(2) "The Tower Phusaelus, which was named from his brother, was 40 cubits square, and solid to the height of 40 cubits ; but above it was erected a cloister 10 cubits bigh, fortified with breastworks and ramparts; in the middle of the cloister was carried up another tower, divided into costly chamhers and a bath-room, so that the tower was in nothing inferiur to a palace. Its summit was adorned with parapets and battlements, more than the preceding. It was in all 90 cubits high, and resembled the tower of Pharus near Alexandria, but was of mach larger circumference.
(3) "The Tower Mariamne mas solid to the height of 30 cubits, and 20 culits square, having above a richer and more exquisitely ornamented dwelling. Its entire beight was 55 cnbits.
"Such in size were the three towers; but they looked much larger through the site which they occupied; for hoth the old wall itself, in the range of which they stood, was built upon a lofty eminence, and likewise a kind of crest of this eminence reared itself to the height of 30 cubits, on which the towers being situated received much additional clevation.

The towers were constructed of white marble, in blocks of 20 cubits long, 10 wide, and 5 deep, so exactly joined together that cach tower appeared to be one mass of rock."

Now, the modern citadel of Jerusalem occupies the NW. angle of Mount Sion, and its nurthern wall rises from a deep fosse, having towers at either angle, the bases of which are protected on the outside by massive masomry sloping upward from the fosse. The NW. tower, divided only by the trench from the Jaffa gate, is a square of 45 feet. The NE., commonly known as the Tower of David, is 70 feet 3 inches long, by 56 feet 4 inches broad. The sloping bulwark is 40 feet ligh from the botton of the treach; but this is much choked up with rulbish. To the tower part there is no known or vi-ible entrance, either from above or below, and no one knows of any room or space in it. The loner part of this platform is, indeed, the solid rock merely cut into shape, and faced with massive masonry, which rock rises to the leight of 42 foet. This rock is doubtless the crest of the hill described by Josephus as 30 cubits or 45 feet high. Now, if the diniensions of Hippicus and l'hasaelus, as already given, are compared with those of the modern towers on the north side of the citadel, we find that the diniensions of that at the NW, angle-three of whase sides are determined by the scarped rock on which it is basedso nearly agree with those of Hippicus, and the width of the NE. tower-also determined by the cut rock-so nearly with the square of Phasaelus, that there can be no difficulty is deciding upon their identity of position. Mlariamne las entirely disappeared.
"To these towers, sitnated on the north, was joined within -
(4) "The Royal Palace, surpassing all powers of description. It was entirely suriounded by a wall 30 cubits high, with decorated towers at equal intervals, and contained enormous banquetting halls, besides numerous chambers richly adorned. There were also many porticoes encircling one another, with different columns to each, surrounding gicen courts, planted with a variety of trees, having long avennes through them; and deep channels and reservoirs everywhere aronnd, filled with bronze stathes, through which the water flowed; and many towers of tame pidgeons about the fountains."

This magnificent palace, unless the description is exaggerated beyond all licence, must have occupied a larger space than the present fortress, and most probably its gardens extended along the western edge of Mount Sion as far as the present garden of the Armenian Convent ; and the decorated towers of this part of the wall, which was spared by the liomans when they levelled the remainder of the city, seem to have transmitted their name to modern times, as the west front of the city wall at this part is called Abroth Ghazzeh, i.e. The Towers of Gaza.
(5) As the Xystus is mentioned next to the Hippicus by Jusephus, in his description of the north wall of the Upper City, it may be well to proceed at once to that; deferring the consideration of the Gate Gemath, which obviously occurred between the two, until we come to the Second Wall. The Mystus is properly a covered portico attached to the Greek Gymnasium, which cormmonly had uncorered walks connected with it. (Dict. Ant. p. 580.) As the Jerusalem Xystus was a place where public meetings were occasionally convened (Brll. Jud. ii. 6. § 3), it must he understood to be a wide public
promenade, though not necessarily connected with a gymnasium, but perhaps rather with another pala c which occupied "this extremity of the Cpper City :" for the name was given also to a terracel walk with colonnades attached to Roman villas. (Vitrus. v. 11.)
(6) The IIouse of the Asmonacans was above the Xystas, and was apparently occopied as a palace by the lounger Agrippa; for, when he aldressed the multitude nssembled in the Xystus, he placed lins sister Berenice in the house of the Asmonacans, that she might be visible to them. (B.J. l. c.)
(7) The Cousenay. At the Xystus we are told a causevcay (ү'фора) joined the Temple to the Upper City, and one of the Temple gates opened on to this canseway. That the $\gamma$ éoupa was a canseway and not a bridge, is evident from the exprossion of $J_{0}$ sephus in another passage, where he says that the valley was interrupted or filled up, for the passage
 11. §5.). As the Tyropoeon divided the Upper from the Lower City, and the Temple Mount was attached to the Lower, it is obvious that the Tyropoeon is the valley here mentioned. This earthwall or embankment, was the work of solomon, and is the only monoment of that great king in Jerasalem that can be certainly said to bave escaped the ravages of time; for it exists to the present day. serving the same purpose to the Mahometans as formerly to the Jews: the approach to the Musk enclosure from the Bazanrs passes over this causeway, which is therefore the most frequented thoronghfare in the city. (Williams, Huly City, vol. it. 1p. 392 397, and note, pp. 601-607.)

It is highly probable that the Xystns was nothing else than the wide promenade over this mound, adorned with a covered cloister between the trees, with which the Rabbinical traditions assure us that Solomon's canseway was shaded. It is clear that the north wall of the Upper City must have crossed the valley by this causeway to the Gate Shallecheth, which is explained to mean the Gate of the Embankment. (1 Chron. xxvi. 16.)
(8) The Council-Chamber (Bou入í, Bou入єoтn$\rho(0 v)$ is the nest place mentioned on the northern line of wall, as the point where it joined the western portico of the Temple. And it is remarkable that the comesponding office in the murlem town occupies the same site; the Dehkemeh, or Council-Cbamber of the Judicial Divan, being now found immediately outside the Gate of the Chain, at the end of the causeway, corresponding in position to the Shallecheth of the Scriptures.

We have now tu trace the wall of the Upper City in the opposite direction fionl the same point, viz. the Hippic Tower at the XW. angle. The Jevin's noticed are comparatively few. " It first ran southward (i.c. with a western aspect), throngh a place called Bethso, to the fiate of the Eswenes; then, turning E., it ran (with a southern aspect) above the fountain of siloam; thence it bent northward, and ran (with an eastern aspect) to the Pol of Sulomon, and extonding as fir as a place called Ophla, was joined to the eastern cloister of the Temple."
ii. On the If est Front neither of the names which occur are found again in the notices of the city ; but Betliso may safely be assigned to the site of the garden of the Armeusian Convent, and the Giate of the Essenes may be fixed to a spot not verre far from the SW. comer of the modern city, a little to the W. of the Tomb of David, near which as re

7han whil che seems still to indieate the founda: 5 w of $t$, frocient city wall.
(2i. Alow the sonth face of the Upper City the 4. i wall may still be traced, partly by scarped rock and partly by fuandations of the ancient wall, which hatescried as a quarry for the repairs of the neighbouring buildings for many ages. Its course from this point to the Teinple is very difficult to determine, as the steep declivity to the Tyropueon would make it extremely inconvenient to carry the wall in a straight line, while, on the contrary, the absence of all notice of any deviation from a direct line in a description in which the angles are uniformly noted, would seem to imply that there was no sach deflec. tion in its course. As it is clear, bowever, that the Ypper City was entirely encompassed with a wall of its own, nowhere noticed by Josephus, except so far as it was coincident with the onter wall, it may be safely conjectured that this east wall of the Upper City followed the brow of the ridge from the southeast angle of the Hill Sion, along a line nearly coincident with the aqueduct; while the main wall continued its easterly course down the steep slope of Sion, across the ralley of the Tyropoenn, not far from its tnouth,-a little above the Pool of Siloam,and then up the ridge Ophel, antil it reached the brow of the eastern valley. It may serve to countenance this theory to observe, that in the acconnt of this wall in Nehemiah there is mention of "the stairs that go down from the city of David," by which stairs also the procession went ap when eucompassing the city wall. (iii. 15, xii. 37 .)
iv. The further course of the old wall to the eastern cloister of the Temple is eqnally obscure, as the several points specified in the description are not capable of identification by any other notices. These are the Pool of Solomon and a place called Ophla, in the description already cited, to which may be added, from an incidental notice, the Basilica of Grapte or Jonobazus, (B. J. v. 8. § 1.)

The Pool of Solomon bas been sometimes identified with the Fountain of the Virgin, from which the Pool of Siloam is sapplied, and sometimes with that very pool. Both solutions are unsatisfactory, for Siloam would scarcely be mentioned a second time in the same passage under another name, and the fonntain in question cannot, with any propricty, be called a pool.

The place called Ophla - in Scriptare Ophel is commonly supposed to be the sonthern spur of the Timple Monnt, a narrow rocky ridge extending down to Siluam. But it is more certain that it is used in a rentricted sense in this passige, than that it is ever extended to the whole ridge. (Lee IIoly City, vol. ii. p, 365, note 7.) It was apparently a large fortified building, to the sonth of the Temple, connected with an outlying tower (Nehem. iii. 27, 28 ), and probably situated near the southern extremity of the present area of the Mosk of Omar. And the masive angle of ancient masonry at the SE. corner of the enclosare, " in pending over the Valley of Jeboshaphat, which here actailly bends sonthwest round the comer, having a depth of abont 130 feet," may possib!y lave belonged to the "ontlying tower," as it presents that apparance within (11. C. vol. i1. pp. 311,317). It is clear, in any case, that the wall under consideration must have joined the eastern cloi-ter of the Temple somewhere to the north of this angle, as the bend in the valley indicated by Dr. Robinson would lave precluded the pussibility of a junction at this angle.
2. The Second Wall, and the Lower City. - The account of the second wall in Josephus, is very meagre. He merely says that it began at the Gate Gennath, a place in the old wall ; and, after encompassing the Lower City, had its termination at the Fortress Antonia."

There is here no clue to the position of the Gate Gennath. It is, however, quite certain that it was between the Hippic Tower and the Nystus: and the north-west angle of the Upper City was occupied by the extensive palace of Herod the Great, and its imposing towers stood on the north front of this old wall, where a rocky crest rose to the beight of 30 cubits, which would of course preclude the possililility of an exit from the city for some distance to the east of the tower. Other incidental notices make it clear that there was a considerable space hetween the third and the secund wall at their southern qqarter, comparatively free from buildings, and, consequently, a considerable part of the north wall of the Upper City unprotected by the second wall:-e. g. Cestius, having taken the outer wall, encamped within the New City, in front of the Royal Palace (B.J. ii. 19. §5); Titus attacked the outer wall in its southern part, "both because it was lower there than elsewhere, inasmuch ns this part of the New City was thinly inhabited, and afforded an easy passage to the third (or inmost) wall, through which Titus had hoped to take the Upper City" (v.6. § 2). Accordingly, when the legions had carried the outer and the second wall, a bank was raised against the northern wall of Sion at a pool called Amygdalon, and another about thirty cubits from it, at the bighpriest's monument." The Almond Pool is no doubt identical with the tank that still exists at no great distance from the modern fortress; and the monnment must, therefore, have been some 50 feet to the east of this, also in the angle formed by the north wall of the Upper City and tbe southern part of the second wall.

There is the head of an old archway still existing above a heap of ruins, at a puint about half way between the Hippic Tower and the north-west angle of Mount Sion, where a slight depression in that bill brings it nearly to a level with the declivity to the north. This would afford a good startingpoint for the second wall, traces of which may still be discovered in a line north of this, quite to the Damascus gate where are two chambers of ancient and very massive masonry, which appear to have flanked an old gate of the second wall at its weakest part, where it crossed the valley of the Tyropoeon. From this gate, the second wall prohably followed the line of the present city wall to a point near the Gate of Herod, now blocked up; whence it was carried along the hrow of the hill to the north-cast angle of the fortress Antoria, which occupied a considerable space on the north-west of the Temple area, in connection with which it will be described below.
3. The Third Wall, and the New City. - The third wall, which enclosed a very considerable space to the north of the old city, was the work of Herod Agrippa the Elder, and was only commenced about thirty years befure the destruction of Jernsalem, and never completed according to the original design, in consequence of the jealousy of the Roman government. The followiog is Josephus's account:"This third wall Agrippa drew round the soperadded city, which was all exposed. It commenced at the Tower Hippicus, from whence it extended to the northern quarter, as far as the Tower Psephinus;
then, passing opposite to the Monuments of Helena, and being produced through the Royal Caves, it bent, at the angular tower, by the monument called the Fuller's, and, joining the old wall, terminated at the valley of the Kedron." It was commenced with stones 20 cubits long and 10 wide, and was raised by the Jews to the height of 25 cubits, with the battlements.
(1) As the site of tie Hippic Tower has been already fixed, the first point to be noticed in this third wall is the Psephine Tozer, which, Josephus informs us, was the most wonderful part of this great work, situated at its north-west quarter, over against Hippicus, octagonal in form, 70 cubits in beight, commanding a view of Arabia towards the east, of the Mediterranean towards the west, and of the utmost limits of the Hebrew passessions. The site of this turver is still marked, by its massive foundations, at the spot indicated in the plan; and considerable remains of the wall that connected it with the Hippic Tower are to be traced alung the brow of the ridge that shuts in the upper part of the valley of Hiunom, and almost in a line with the modern wall. At the highest point of that ridge the octagonal ground-plan of the tower may be seen, and a large cistern in the midst of the ruins further confirms their identity, as we are informed that the tewers were furnished with reservoirs for the raiu water.
(2) The next point mentioned is the Monuments of Helena, which, we are ebsewhere told, were three pyramids, situated at a distance of 3 stadia from the city. (Aut. xx. 3. §3.) About a century later (A. D. 174) Pausanias speaks of the tomb of Helena, in the city of Solyma, as having a door so constructed as to open ly mechanical contrivance, at a certain hour, one day in the year. Being thus opened, it closes again of itself after a short interval; and, should you attempt to open it at another time, you would break the door before you could succeed. (Pans, viii. 16.) The pyramids are next mentioned by Eusebius (Hist. Eccles, ii. 12), as remarkable monumental pillars still shown in the suburbs of Jerusalem; and St. Jerome, a century later, testified that they still stood. (Eipist, ad Eustochium, Op. tom. iv. pars ii. p. 673 .) The latest notice is that of an Armenian writer in the 5th century, who describes the tomb as a remarkable monument before the gates of Jerusalem. (Hist.Armen. lib. ii. cap. 32.) Notwithstanding these repeated notices of the sepulcliral monuments of the queen of Adiabene, it is not now possible to fix their position with any degree of certainty, some archacologists assigning them to the Tombs of the Kings (Robinson, Bib. Res, vol. i. pp. 465, 535-538), others to the Tombs of the Dartyrs, about $\frac{3}{4}$ of a mile to the west of the former. (Schultz, Jerusalem, Pp. 63-67; De Sauley, tom. ii. pp. 326, 327.) A point halfway between these two monuments would seem to answer better to the incidental notices of the monuments, and they may with great probability be fixed to a rocky court on the right of the road to Aebi Samail, where there are several excavated tombs. O Opposite the Monuments of Helena was the Gate of the Women in the third wall, which is mentioned mure than once, and must have been between the Nablus road and the Psephine Tuwer.
(3) The Royal Cares is the nest point mentioned on the third wall. They are, doubtless, identical with the remarkable and extensive excavations still called the Tombs of the Kings, moot probably
the same which are elsewhere called the Monument of Herod, and, from the character of their decurations, may very well be ascribed to the Herolian period. M. de suuley has latcly added to our previous information concerxing them, and, by a kind of exhansting process, he endeavours to prove that they could lave been no other than the tombs of David and the early kings of Judah, which have always litherto hern flaced on Mount Sion, where the traditionary site is still guarded by the Mustems. (Foyage en Syrie, tom. ii. pp. 228-281.)
(4) The Fuller's monument is the last-mentiuned point on the new wall, and, $a^{-}$an angular tower occupied this site, the momment mast have been at the north-east ancle of the Now City; jrobably one of the inany rook graves cot in the perpendicular face of the Valley of Jehoshaphat, near cine of which Dr. Schalez has described the fumalations of a tower. (Jemsalem. pp. 38, 64.) The Monument of the Fuller probably gave its name to the Fuller's field, which is mentioned by the prophet lsaiah as the spot near which the Asiyrian army under Rahsbakeh encamped (xxsri. 2, vii. 3): and the taditionary site of the camp of the Assyrians, which we shall find mentioused by Jusephus, in his account of the siege, was certainly situated in this quarter. From this rorth-east angle the third wall followed the brow of the Valley of Jehosbaphat until it reached the wall of the Outer Temple at its north-east angle.

Having thins completed the circuit of the walls, as described by Josephns, and enleavoured to fis the variulas points mentioned in lis description (which fornishes the most numerous topographical notices now extant of ancient Jerusalem), we shall he in a condition tu understand the most important historical facts of its interenting and chequered history, when we have further taken a brief survey of the Ternple. But, first, a singular and perplexing discrepancy must be nuticed between the general and the detailed statements of the historian, as to the extent of the arcient city; for, while he state, the circuit of the entire city to be no more than 3.3 stadia, or 4 loman miles plus 1 stadimn, the specification of the measure of the wall of Acrippat alone gives, on the lowest computation, an excess of 12 stadia, or $1 \frac{1}{2}$ mile, orer that of the entire city ! - for it had 90 towes, 20 cubits wide, at intervals of 200 cabits. No satisfactery solution of this difficulty has yet been dircorered.

## 15. Tuf Temple Moest.

The Temple Moumt, called in Soripture the Mowntain of the Lord's llame, ami Alotihh (2 (Huon, iii. 1), is sitnated at the sumth cast of the city.and is easily itentifind with the sito of the bome of the Mak in modern Jermalem. It was orizinally a thisi hill of the Ofd Caty, over auainet Arra, but separated from it by a broad ravios, which, Joweser, was filled ap by the Asmonzean primec, so that these two hills hecaue one ant are compally so reakend $1 y$ the historisn (f3, J. v. 4.)

1. The Outer (:ane"--The Trepple, in the withet simification of the word (hoे itpors, comsisted of twe courts, one within the other, thonzh the finuer one is sometimes sublivided and dotributed into furr other court. The arca of the Onter Connt was in great part artifinial, for the natural level share on the summit of the mount being found too confiseld for the Tomple, with its surrounding chambers, courts, and cloisters, was gradnally increased hy mechanical expedionts. This exten ion wats com-
menced by Solomon, who raised from the depth of the castern valley a wall of enormous stones, brond tugether with lead, within which he raised a bank of earth to a level with the native rock. On this was erected a cloister, which, with its successors, always retained the name of "Solomon's Porch." (arod さòopuvos, St. John, x. 23; Acts, iii. 11, v. 12.) This process of enlarging the court by artificial embaukments was continued by successive kiugs; lout particularly by Herod the Greut, who, when he reconstructed the Temple Proper (vabs), enlarged the Outer Court to doable its former size, and adorned it with stately cloisters. (Anl. xy. 11. § 5.) Of these, the Royal Porch, on the south, was the most remarkable of all his magnificent works. It consisted of four rows of Corinthian columns, distributed into a central nave and lateral aisles; the aisles being 30 feet in width and 50 in height, and the nare half as wide again as the aisles, and domble their lieight, rising into a clerestory of unasually large proportions. The ether cloisters were double, and their total width only 30 cubits. To this Outer Court there were four gates on the west, towards the city, and one on each of the other sides; of which that on the cast is still remaining, commonly called the fiulden fiate.
2. The Inner Court. - The Inner Tomple (ífóv) was separated from the Outer by a stone wall ( $\phi \rho a \gamma-$ u's, sec Ephes, ii. 14) 3 culits in height, on which stood pillars at equal distances, with inscriptions, in Greek and Latin, prolibiting aliens from access. To this court there was an accent of fourteen steps, then a level space of 10 cobits, and then a further ascent of five steps to the gates, of which there were four on the north and sonth sides, and two on the east, but none on the west, where stond the Sanctuary (vaós).

The place of the Altar, in front of the valis, is determined with the utmust precision by the existence in the Sacred lowek of the Moslems, under their renerated dome, of the very cesspool and drain of the Jewish altar, which fumishes a key to the restoration of the whole Temple, the dimensions of which, in all its parts, are given in minute detail in the treatise called Middoth (i. e. measures), one of the very ancient documents contained in the Mishna. The drain communicating with this cesspool, through which the blood ran off into the Kedron, was at the south-west angle of the Altar; and there was a trap connected with this cave. 1 cubit square (commomly closed with a marble slab), through whech a man occasionally descensied to cleanse it and to clear obstructions. Both the drain and the trap are to he seen in the rock at this day.

The Altar wats 32 cubits square at its hase, but gradually contracted, so that its hearth was only 24 eubits square. It was 15 cubhits hiph, and had an avernt by an indined plane on the south side, 32 cubits long and 16 wide.

Between the Altar and the porch of the Temple was a space of 22 cubits, rising in a gentle ascent by stops to the vesti nle, the door of which was 4) culbit: high and 20 wide. The total length of the lluly Honse itself was only 100 cubits, and this was sublivided into three parts: the Pronaus 11, the sanctuary 40, the Iloly of Holies 20, allowing 29 cubits for the partition walls and a small chamber behind (i.e. west of) the Most Hely place. The total width of the huilding was 70 cubits; of which the Sanctuary unly oceupied 20, the remainder being distributed into .de chambers, in three stories, as-
simed to various uses. The Pronans was, however, 30 cubits wider, 15 on the north, and 15 on the south, giving it a total length of 100 culits, which, with a width of only 11 cubits, must bave presented the proportions of a Narthex in a Byzantine church. Its interior height was 90 cubits, and, while the chambers on the sides of the Temple rase only to the height of 60 cubits, there was an additional story of 40 cubits above the Sanctuary. also occupied by chambers, rising into a clerestory of the same eleration as the vestibule.

The front of the Temple was plated with gold, and reflected back the beams of the rising sun with dazzling effect; and, where it was not encrusted with gold. it was exceedingly white. Some of the stones of which it was constructed were 45 cubits long, 5 deep, aad 6 wide.

East of the Altar was the Court of the Priests, 135 cubits long and 11 wide; and, east of that ncain, was the Court of Israel, of the same dimensions. East of this was the Court of the Women, 135 cubits square, considerably below the level of the former, to which there was an ascent of 15 semicircular steps to the magnificent gates of Corinthian brass, 50 cubits in height, with doors of 40 cubits, so ponderous that they could with difficulty be shut by 20 men, the spontancons opening of which was one of the pertents of the appraching destruction of the Temple, mentioned by Jorephns (Bell. Jud. vi. 5. §3), and repeated by Tacitus (Hist. r. 13).

Thns moch must suffice for this most renerated seat of the llebrew worsbip from the age of Solomon uutil the final destruction of the Jewish polity. But, in order to complete the survey, it will be necessary to notice the Acropolis, which occapied the northwest angle of the Temple enclosure, and which was, says the historian, the fortress of the Temple, as the Temple was of the city. Its original name was Baris, until Herod the Great, having greatly enlarged and beautified it, changed its name to Antonia, in honour of his friend Mark Antony. It combined the streugth of a castle with the magnificence of a palace, and was like a city in extent,-comprebending within its walls not only spacious apartments, but courts and campiog gromnd for soldiers. It was sittated on an elevated rock, which was faced with slabs of smooth stone, upon which was raised a breastwork of 3 cubits high, within which was the bnilding, rising to a height of 40 cubits. It had turrets at its four corners, three of them 50 cubits high, but thint at the south-enst angle was 70 cubits, and commanded a vies of the whole femple. It commumicated with the northern and western cloisters of the Temple at the angle of the area, by flights of steps for the convenience of the garrison which usually occupied this commanding position; and it is a remarkable and interesting coincidence, that the site of the official residence of the Roman procurator and his guard is now occupied by the Seraiyah, or official residence of the Turkish Pasba and his guard: for there can be no question of the identity of the site, since the native reck here, as at Hippicus, still remains to attest the fidelity of the Jewish bistorian. The rock is here "cbi perpendicularly to an extent of 20 feet in sone parts; while within the area also, in the direction of the Mosk, a considerable portion of the rock bas been cut away " to the general level of the euclosure (Bartlett, Valks about Jerusulem, pp. 156, 174, 175); so that the Seraiyoh, or government hotuse, actually "rests upon a precipice of
rock which formerly swept down abruptly, and has obvionsly been cut away to form the level below, which also bears marks of having been scarped."

The furtress was protected towards Bezetha by an artificial fosse, so as to prevent its foundations from heing nssailed from that quarter. This fosse has only lately been filled in.

It is certain, from sereral passages, that the fortress Aatonia did not cover the whole of the northern front of the Temple area; and, as the second wall, that encircled the Lower City, ended at the fortress, it is clear that this wall could not have coincided with the modern wall at the north-east quarter of the modern city. It is demonstrable, from several allusions and historical notices, that there must have lieen a considerable space between the second and third wall on the northern front of the Temple area. (Williams, Holy City, vol. ii. pp. 348-353.)

## V. History.

The ancient history of Jerusalem may be conreniently divided into four periods. 1. The Canaaniti h, or Amorite. 2. The Hehrew, or AnteBahylonian. 3. The Jewisld, or I'ost-Babylonian. 4. The Roman, or classical.

1. Of these, the first may claim the fullest notice here, as the sonrces of information concerning it are much less geaerally known or read than tbose of the later periods, and anything that relates to the remote history of that venerable city cannot bnt be full of interest to the antiqnarian, no less than to the Cbristian student.

It has been said that the learned are divided in opinion as to the identity of the Salem of Melchizedek with the Jerusalem of Sacred History. The writer of a very learned and interesting Review of the Second Edition of the Holy City, which appreared in the Christian Remembrancer (vol. xviii. October, 1849), may be said to have demonstrated that identity by a close critical analysis of all the passages in which the circumstances are allnded to; and has further shown it to be bighly probable that this patriarch was identical, not with Shem, as has been sometimes supposed, but with Heber, the son of Pelog, from whom the land of Canaan lad obtained the name of the "land of the Hebrews" or Helerites, as carly as the days of Joseph's deportation to Egypt. (Gin, sl. 15.)

Bat the eluciation which the early history of Jerusalem receives from the monmments of Egypt is extremely important and raluable, as relating to a period which is passed over in silence by the sacred bistorian; and the e notices are well collected and arranged in the review referred to, beiag borrowed from Mr. Osburn's rery interesting work entitled Egypt, her Testimony to the Truth. After citing some monnments of Sethos, and Sesostris lis son, relating to the Jebusites, the writer procecds:" IVhat glimpses, thea, do we obtain, if any, of the existence of such a city as Jerusalem during the recorded period? Under that name, of course, we must not expect to find it; since esen in the days of Joshua and the Judges it is so called by anticipation. (Holy City, vol. i. p. 3, note.) But there is a city which stands forth with a very marked and yeculiar prominence in these wars of the kings of Egypt with the Jebusites, Amorites, and neighbouring nations. We meet with it first as a fortress of the Amorites. Sethos II. is eogaged in besieging it. It is situated on a bill, and strengthencd with two tiers of ratnparts. The inscription sets forth that it is in the
land of Amor, or the Anorite; and that the conqueror 'had made bare his right arm to overcome the chiefs of many walled citics.' This implies that the fort in question, the name of which is inscribed upon it, was the chief stronghotd of the nation. That name, when translated from the lieroglyphies into Coptic, and thence into Hebrew, is Chadash. The next notice of Chadash belongs to the reign of Sesostris, and connects it with the Jebusite pation. The Ammonites liad laid siege to the city, and a juint embassy of the Jebusites and Hittites, who were then tributary to Sesostris, entreat him to come to their aid. The Eeyptians having aceordingly snile 1 over the Dead Sea, met with another embassy, from the Zuzims, which gave further partienlars of the siege. The enemy bad seized on the fortified camps erected by the Egyptians to secure their hold over the country, and spread terror to the very walls of Chaulash. $\dot{A}$ great battle is fought on a mountain to the south of the city of Chalash. The inscription further describes Chadash as being in the land of Heth. What, then, do we gather from these combined notices? Plainly this, that Chadash was a city of the first inportance, buth in a military and civil point of view; the centre of interest to three or four of the most powerful of the Canannitish nations; in a word, their metropolis. We find it moreover placed, by one inseription, in the territory of the Amorites, by another in that of the Hittites, while it is obviously inbabited, at the same time, by the Jebusites. Now, omitting for the present the consideration of the Ifittites, this is the exact character and condition in which Jerusalem appears in Seripture at the time of Joshua's invasion. Its metropulitan character is evinced by the lead which Adoni-zedek, its kiog, takis in the confederacy of the Five Kings; its strength as a fortress, by the fact that it was not then even attempted by Joshua, nor ever taken for 400 years after. And while, as the royal city of Adoni-zedek, it is reckoned among the Amorite possessions, it is no less distinctly called Jebus (Josh. xv. 8, xviii. 28; Judg. i. 21, xix. 10) down to the days of David: the truth being, apparently, that the Amorite power having been extinFuished in the person of Adrni-zolek, the Jebusite thenceforth obtainel the asrmudency in the city whicb the two nations inlubited in common. Nor is there any difficulty in accounting, from Scripture, for the share assigned by the monuments to the Hittites in the possession of the city; for, as Mr. Osturn has observed, the tribes of the Amorites and Hittites appear. frmm Scripture, to have bordered npon each other. The city was probably, therefore, situated at a point where the possessiuns of the three tribes met. Can we, then, hesitate to illentify the Chadash of the hierorlyphics with the Káôvtıs of Herolotus, the El-Kuds of the Aralis, the Kiulathin of the Syrians, the 'Holy' City? The only sladow of an objection that appears to lie against it is, that, strictly speaking, the name should be not Chadash, but Kialash. But when it is considered that the name is a translation ont of Canaamitish into hiew, lyphics, thence into C'iptic, and thence neain into Hebres, and that the difference between $\boldsymbol{n}$-1t $\mathrm{d} \rho$ is, after all, but small, it is not ton mush to surquse that Kadesh is what is really intembed to be representeli. That Jerustiem should be known to the Cauaanites by such a name as this, denoting it 'the INoly.' will not seem unreasmable, if we bear in mind what has been noticed above with reference to the tithe Alonizedek; and the fact forms an interesting hak, con-
necting the Arabian and Syrian name for the city with its earlier nomenclature, and confirning the identity of Herodotus's Cadytis with Jerusalem, Mr. Osburn has only very doubtingly propounded ( $\mathrm{p} . \mathrm{6} 6$, note) the view we have undertaken to defend. He inclines to identify Chadash with the Hadashah, or Addasa, enomerated among the southernmost cities towards the burder of Edom, given to Judah (Josh. xv. 21) from among the Amorites' possessions. But it seems incredible that we should never hear again, in the history of Joshua's conquest, of so important a city as Chadash evidently was: besides, Hadashah seems to lie too far south. We presume Mr. Usburn will not be otherwise than pleased to find the more interesting view supported by any argumeots which had not occurred to him. And we have reserved one which we think Aristotle hinıself would allow to be of the nature of a $\tau \in \kappa \mu \dot{\gamma} p t o v$ or 'clinching argument.' It is a geographieal one. The paintings represeot Cbadash as surrounded ly a river or brook on three sides; and this river or brook runs into the Dead Sea, toward the northern part of it. Surely, nothing could more accurately describe the very remarkable conformation of Jerusalem; its enviropment on the east, south, and west, by the waters of the valleys of Jehoshaphat and Hionom, and their united course, after their junction, through the Wady Eo-Nâr into the north-west part of the Dead Sea. And there are some difficulties or peculiarities in the Seripture narrative respecting Jernsalem, which the monuments, thus interpreted, will be found to explain or illostrate. We have already alluded to its being in one place spoken of as an Amorite city, in another as the chief seat of the Jebusites. The LXX, were so pressed with this difficulty, that they adopted the rendering 'Jebusite' for 'Amorite' in the passage which makes Adoni-zedek an Amorite kiog. (Josh. x. 5.) The hieroglyphies clear up the difticnlty, and render the change of reading unnecessary. Again, there is a well-known ambiguity as to whether Jerusalem was situated in the tribe of Jndah or Benjanin; and the view commonly acquiesced in is, that, being in the borders of the two tribes, it was considered cummon to both. Pernaps the right of possession, or the apportionment, was never fully settled; though the Rabbies draw you the exact line through the very court of the Temple. But how, it may be asked, came such an element of confusion to be introduced into the original distribution of the Holy Land among the triles? The answer seems to be, that territory was, for convenience' sake, assigned, in some measure, according to existing divisions: thus, the Amurite and Hittite possessions, as a whole, fell to Judah; the Jebusite to Benjamin; and then all the uncertainty resulting from that joint occupancy of the city by the three natiuns, which is teatified to by the monuments, was necessarily introduced into the rival claims of the two tribes." (Christian Remembrancer, vol. xviii. pp. 457-459.)

The importance of the powerful Jebusite tilie, who are represented as having " more than one city or stronghold near the Dead Soa, and are engaged in a succession of wars witl the kings of Egypt in the neighbourhood of its shores;" whose rich garments of Babrlonish texture,-depicted in the hieroglyphies, - and musical instruments, and warlike accuutrements, testify to a higher degree of culture and civilisation than was fond among the neighbouring triber, with many of whom they were on terms of offensive and defensive alliance:-all this
nccounts for the firm hold with which they maintained their possession of their stronghoh, the capital of their tribe, for upwards of five centuries after the coming in of the children of Israel under Joshoa (cir. B. C. 1585); during which period, according to Josephans, they held uninterrupted and exclusive passession of the Upper City, while the Israelites (whether of the tribe of Judah or of Benjamin is uncertain) seem only to lave occupied the Lower City for a time, and then to have been expelled by the garrison of the Upper City. (Joseph. Ant. v. 2. $\$ \S 2,5,7$; comp. Judges, i. 8, 21, xix. 10-12.)
2. It was not until after David, having reigned seven years in Hebron, came into undisputed pnssession of the kingdom of Israel, that Jerusalem was fivally subjugated (cir. B. c. 1049) and the Jebusite garrison expelled. It was then promoted to the dignity of the capital of his kingdom, and the Cpper and Lower City were united and encircled by one wall. (1 Cliron. xi. 8; comp. Joseph. Ant. vii. 3. § 2.$)$

Under his son Solomon it became also the ecclesiastical head of the nation, and the Ark of the Covenant, and the Tabernacle of the Congregation, after having been long dissevered, met on the thresh-ing-floor of Araunah the Jebusite, on Mount Moriah. ( 1 Chron. xxi. 15:2 Chron. iii. 1.) Besides erecting the Temple, king Solomon further adorned the city with palaces and public bnildings. (1 Kings, vi. viii. 1-8.) The notices of the city from this period are very scanty. Threatened by Shishak, king of Egypt (i. c. 972), and again by the Arahians under Zerah (cir. 950), it was sacked by the combined Pluilistines and Arabs during the disastrous reign of Jehoram (884), and snbsequently by the Israelites, after their victory over Amaziah at Bethsliemesh (cir, B. c. 808). In the invasion of the confederate armies of Pekah of Israel and Rezin of Syria, during the reign of Ahaz, the capital barely escsped (cir. 730; comp. Isaiah, vii. 1-9, and 2 Kings, xvi. 5, with 2 Chron. xxviii. 5) : as it did in a still more remarkable manner in the following reign, when invested twice, as it wonld seem, by the generals of Sennacherib, king of Assyria (c. c. 713). The deportation of Manasseli to Babylon would seem to intimate that the city was captured by the Chaldeans as early as 650 ; but the fact is not recorded expressly in the sacred narrative. (2 Chron. xxxiii.) From this period its disasters thiekened apace. After the battle of Mugiddo it was taken hy Pharaolh Necho, king of Egypt (B. c. 609), who held it only about two years, when it passed, together with the whole country under the sway of the Chaldeans, and Jehoiakim and some of the princes of the blood royal were carried to Babylou, with part of the sacred vessels of the Temple. A futile attempt on the part of Jehoiakim to regain his independence atter his restoration, resulted in his death; and his son had only been seated on his tottering throne three months when Nebnchadnezzar ayrain besieged and took the city (598), and the king, with the royal family and principal officers of state, were carried to Babylon, Zedekiah having been appointed by the conqueror to the nominal dignity of king. Hiving held it nearly ten years, he revolted, when the city was a third time berieged by Nebuchadnezzar (в. c. 587 ). The Temple and all the buildings of Jerusalem were destroyed by fire, and its walls completely demolished.
2. As the eutire desolation of the city does nut
appear to have continned more than fifty jears, the "seventy years" must date from the first deportation; and its restoration was a gradual work, as the desolation had been. The first commission issued in favour of the Jews in the first year of Cyrus (8.C. 538) contemplated only the restoration of the Temple, which was protracted, in consequence of numerons vexations interroptions, for 120 years, - i. e. until the eighth year of Darius Nothus (b.c. 418). According to the most probable chronology it was his successor, Artaxerxes Mnemon, who issued the second commiseion to Ezra, in the seventh year of his reign, and a third to Nehemiah in his twentieth year (b. c. 385). It was only in virtue of the edict with which he was iutrusted, backed by the authority with which he was armed as the civil governor of Palaestine, that the restoration of the city was completed; and it has been before remarked that the account of the rebuilding of the walls clearly intimates that the limits of the restored city were identical with that of the preceding period: but the topographical notices are not sufficiently clear to euable us to determine with any degree of accuracy or certainty the exact line of the walls. (See the attempts of Schaltz, pp. $82-91$; and Willians, Memoir, 111-121.) Only fifty years after its restoration Jerusalem passed into the power of a nerr master (n. c. 332), when, according to Jusephus, the conqueror visited Jerusalem, after the subjugation of Gaza, and accorded to its inbabitants several important privileges (Josephus, Ant. xi. 8). On the death of Alexander, and the division of his conquests among his generals, it was the ill-fortune of Judaea to become the frontier province of the rival kingdoms of Egypt and Syria: and it was consequently seldom free from the miselies of war. Ptolemy Soter was the first to seize it,--by treachery, according to Josephus (n. c. 305), who adds that he ruled over it with violence. (Ant. xii. 1.) But the distinctions which be conferred upon such of its inhabitants as be carried into Egypt, and the privileges which he granted to their high priest, Simon the son of Onias, do not bear out this representation (Ecclus. 1. 1, 2.) But his successor, Ptolemy Philadelphus, far outdid him in Jiberality; and the embassy of his favourite minister Aristeas, in conjunction with Andreas, the chief of his borlygnard, to the chief priest Eleazar, furnishes us with an apparently authentic, and certainly genuine, account of the city in the middle of the thind century before the Cbristian era, of which an vutline may be here given. "It was situated in the midst of mouutains, on a lofty hill, whose crest was crowned with the magnificent Temple, girt with three walls, seventy cnbits high, of proportionate thickness and length corresponding to the extent of the building. . . . . The Temple had an eastern aspect: its spacions courts, pared thronghout with marble, covered immense reservoirs containing large supplies of water, which gushed ont by mechanical contrivance to wash away the blood of the numerous sacrifies offered there on the festivals. .... The foreigners viewed the Temple from a strong fortress on its north side, and describe the appearance which the city presented. . . . . It was of noderate extent, being about forty furlongs in circuit. . . . . . The dispasition of its towers resembled the arrangement of a theatre: some of the streets ran along the brow of the bill: others, lower down, but parallel to these, followed the course of the valley, and they were connected by cross streets. The city was huilt
on the sloping , ide of a hill, and the stin ${ }^{\text {a }}$, the fornished with raised paremente, along whel some of the passengers walked on hii_h, while others kept the lower [ath,-a precaution adoyted to serwre those, who were purified from the pollution which contact with anything unciean conld have uecasioned. . . . . . The place, tos, was weil adapted for mer:autile purnits, and ahounded in artificers of various crafts. Its market was supplied with spieery gold, and precious stones, by the Arabs, in whose neighbouring mountains there hard furmerly been mines of copper and iron, but the works had been abandoned durinz the Persian domination, in consequence of a representation to the govemment that they must prove ruinously expensive to the comatry. It was also richly furnished with all such articles as are iroported by sea, since it had commodious harbuurs-as Acalon, Joppa, Gaza, and I'tolemais, from ano of which it was far distant." (Aristeas, ap. Gallandie Biblioth. Fet. Put. tom, ii. pp. 805 , \&c.) The truthfulness of this deacription is not affected by the authorship; there is abundance of eridence, intertal and external, to prove that it was written by one who had actually vicitel the Jewish (apital during the times of the Ptolemics (cir. n.c. 250).

The Sclacidae of Asia were not lielind the PtoIomies in their favonrs to the Jews; and the peace and prosperity of the city suffered co material diminution, while it was handed about as a marriage dowry, or by the chances of war, between the rivals, until internal factions subjected it to the dominion of Antiochus Epiphanes, whose tyrianny crusbed for a time the civil and ecrlesiastical polity of the nation (n. c. 175). The Temple was stripped of its costly sacred veasels, the palaces burned, the city walls demolished, and an idol-altar raised on the very altar of the Temple, on which daily sacrifices of swine were offered. This tymany reatuled in a vizorous national revolution, whilh secured to the Jews a greater amount of independence than they had enjoyel subsequantiy to the eaptivity. This continnei, under the Asmonean princes, until the conquest of the country by the lomans: from which time, thansh nominally suhject to a mative prince, it was virtually a mere dependeney, and little wore than a provinee, of the Domatn empire. Onee arain before this the city was recaptured by Antionhus Siletes, during the reizn of Whan Hyrcanns (cir. 135), when the city walls, whith had beend reaturd ly Judas, were artain levelled with the gromen.
4. The eapture of the city by lompey is recordel by Strabo, and wat the first com-iderable event that fixed the attention of the ctocell writers on the city (b,C. 63). He ascriber the intervemtion of Pompey to the disputes of the brothem Hlyeams and Aisthbulus, the sons of Al-xanker Jomaens, whu first assumed recal power. He states that the conquetor levelled the fortifications when he had taken the city, which he dil by flime up an emormous fosse which defended the Temple on the nurth side. The particulw, of the sioge are more folly given by Josephrs, who states that lompey entered the Holy of Holise, hut ahatained from the sacred treasures of the $\mathrm{Ten}_{1}$ le, which were plundered hy Crassus on his way to Pirtha (m. c. 54). The struggle for power between Antironus, the sma of Aristolulus, and Yerul, the son of Antipater, 1ed to the sacking of the rity by the Parthims, whase ail had been sought by the former (is. c. \& 4 1). Nernt, having tcen appointed kin= by the serate, of $\because$
bever a pos win of his eapital after a long siege, In whin it he was assisted by Sosius, Anteny's Lifuteroen, and the Roman legionaries. Mention has him alrealy made of the palace in the Upper City and the fortress Autonia, erected, or enlarged and beautified, by Ilerod. He also undertook to restere the Temple to a state of magnificence that should rival the glory of Solomon's ; and a particular deecription is given of this work by the Jewish historian (Ant, xr. I1.) The erection of a theatre and circus, and the institution of quinquennial games in honour of the emperor, went far to conform his eity to a pagan capital. On the death of Herod and the hanishment of his son Archelaus, Judaca was redeced to a Roman province, within the praefecture of Syria, and sabject to in subordinate governor, to whom was intrusted the power of life and death. His ordinary residence at Jerusalem was the fortress Antonia; but Caesarea now shared with Jerusalem the dignity of a metropolis. Coponius was the first procurator (A. D. 7), under the pracfect Cyrenius. The only permanent monument left by the procurators is the aqneduct of Pentiuc Pilate (A. D. 26-36), constructed with the sacred Corban, which he seized for that parprese. This aquechuct still exist., and conveys the water from the Pools of Solomon to the Mlosk at Jerusalem (Holy City, vol. ii. pp. 498-50I). The particulars of the sigge by Titus, so fully detailed by Josephus, ean only be briefly alluded to. It occupied nearly 100,000 men little short of five months, having been commenced on the 14th of Janthicus (April), and terminated with the capture and conflagration of the ITper City on the 8 th of Gorpeius (September). "This is to be ace counted for by the fact tbat, not only did each of the three walls, but also the Fortress and Temple, reguire to be taken in detail, so that the operations involved five distinct sieges. The general's camp was established elose to the 1'sephine Tower, with one legion, the twelfth; the tenth was encamped near the semmit of Monnt Olivet: the fifth opjosite to the Hippic Tosser, two stadia distant from it. The first assault was made apparently between the towers Hippicus and Psphlinus, and the outer wall was carried on the fifteenth day of the the siege. This new wall of Agrippa was immediately demulihed, and Titus encamped within the New City, on the traditional caroping-ground of the Assyrius. Five days later, the second wall was carriol at its northem quarter, but the Romans were repuland, and only recaptured it after a stont resistance of three days. Fomr lanks were then raised,-two against Antonia, and two against the northern wall of the Upper City. After seventeen days of inceswant toil the Romans discovered that their banks had been undermined, and their engines ware destroveal hy fire. It was then resolved to surround the city with a wall, so as to form a complete blockacie. The line of circumvallation, 39 furlones in eirenit, with thirteen redoubts equal to an additional 10 furlongs, was completed in three days. Four fresh banks were raised in twenty-one days, and the Antonia was carricd two montha atter the occupation of the Lower City. Another month elapsed before they could succeed in gaining the Inver Sanctuary, when the Temple was accidentally fired by the Ruman soldiers. The Upper City still held out. Two bankx were pext raised ugainst its eastern wull over against the T'mple. This occupied eighteen days; mul the l'puer City was at length carries, a month after the inner Sanetuary.

This memorable siege has been thought worthy of special mention hy Tacitus, and his lively abridgment, as it wonld appear, of Josephns's detailed narrative, mast have served to raise bis countrymen's ideas, both of the military prowess and of the powers of endurance of the Jews.

The city was wholly demolished except the three towers Hippiens, Phasaelus, and Mariamne, and so much of the western wall as would serve to protect the legion left there to garrison the place, and prevent any fresh insmrreetionary movements anoong the Jews, who soon returned and occupied the ruins. The palace of Herod on Mount Sion wats probally converted into a barrack for their accommodation, as it had been hefore used for the same purpose. (Bell. Jud. vii. 1. § 1, ii. 15. § 5, 17. §§ 8, 9.)

Sixty years after its destruction, Jerusalem was risited by the emperor Iladrian, who then conceised the idea of rebuilding the city, and left his friend and kinsman Aquila there to superintend the work, A. D. 130. (Epiphanius, de Pond. et Mens. §今s 14, 15.) He had intended to colonise it with Roman veterans, but his project was defeated or suspended by the ontbreak of the revolt headed by Barcochehas, his son Rufus, and his graudson Romulus. The insurgents first occupied the capital, and attempted to rebuild the Temple : they were speedily dislodged, and then held out in Bethar for nearly three years. [Buthar.] On the suppression of the revalt, the building of the city was proceeded with, and luxurious palaces, a theatre, and temples, with other public buildings, fitted it for a Roman population. The Chronicon Alesandrinum men-

 A temple of Jupiter Capitolims, from whom the city derived its new name, occupied the site of the Temple, and a tetrastyle fane of Venus was raised over the site of the Holy Sepnlchre. The ruined Temple and city furnished materials for these buildings. The eity was divided into seven quarters (ä $\mu \emptyset 0 \bar{\alpha}$ ), each of which had its own warden ( $\dot{\alpha} \mu \phi 0-$ ód $p \chi \eta \mathrm{p}$ ). Part of Mount Sion was excluded from the city, as at present. and was "ploughed as a field." (Micah, iii. 12; St. Jerome, Comment. in loc.; Itinerarium Hierosol. p. 592, ed. Wesseling.) The history of Aelia Capitolina has been mado the subject of distinct treatises by C. E. Deyling, "Aeliae Capitolinae Origines et Historia" (appended to his father's Observationes Sacrae, vol. v. p. 433, \&c.), and by Dr. Miinter, late Bishop of Copenhagen (translated by W. Wadden Turner, and published in Dr. Rohinson's Bibliotheca Sacra, p. 393, \&c.), who have collected all the scattered notices of it as a pagan city. Its coins also belong to this period, and extend from the reign of Hadrian to Severus. One of the former emperor (mip. caes. traian. madrants, Afg., which exhibits Jupiter in a tetrastyle temple, with the legend col Ael. car.) confirms the account of Dion Cassins (Ixix. 12), that a temple to Jupiter was erected on the site of God's temple (Eckhel, Doct. Num. I'et. pars i. tom. iii. p. 443); while one of Autoninus (Axrowinvs. Avg. 11Vs, P. P. TK. P. cos. ni., representing Venus in a similar temple, with the legend C. A. C. or Col. AEL. car.) no less distinctly confirms the Christian tradition that a shrine of Venus was erected over the Sepulchre of our Lord. (Vaillant, Numismata Aerea Jmperat. in Col. pt. i. p. 239 ; Eckhel, l. c. p. 443.)

Under the emperor Constantine, Jerusatem, which
had already become a favourite place of pilgrimage to the Clristians, was furnished with new attractions by that emperor and his mother, and the erection of the Martyry of the Resurrection inaugurated a nev aera of the Holy City, which now recovered its ancient name, after it had apparently fallen into complete oblivion amung the government officers in Palaestine itself. (Euseh. de Mart. Palaest. cap. ii.) The erection of his church was commenced the year after the Conncil of Nicaca, and occupied ten years. It was dedicated on the tricennalia of the emperor, A. D. 336. (Euseb. 1 ita Constantini, iii. 30-40, iv. $40-47$.) Under the emperor Julian, the city again berame an object of interest to the pagans, and the account of the defeat of Jolian's attempt to rebuild the Temple is preserved by Ammianus Marcellinus, an unexceptional witness ( $x$ siii 1: all the historical notices are collected by Bishop Warburton, in his work on the subject, entitled Jolian.) In 451, the see of Jerusalem was erected into a patriarchate; and its subsequent history is chiefly oceupied with the couflicting opinions of its incumbents on the subject of the beresies which troubled the church at that period. In the following centary (cir. 532) the emperor Justinian emnlated the zeal of his predecessar Constantine by the erection of churches and hospitals at Jerusalem, a complete account of which bas been left by Procopius. (De Aedificiis Justin ani, v. 6.) In A. D. 61.4, the city with all its sacred places was desolated by the Persinns under Chosroes II., when, according to the contemporary recurds, 90,000 Christians, of both seses and of all ages, fell victims to the relentless fury of the Jews, who, to the number of 26,000 , had followed the Persians from Galilee to Jerusalem to gratify their hereditary malice by the massacre of the Christians. The cburches were immediately restored by Modestus; and the city was visited ly Heraclius (A. D, 629) after his defeat of the Persians. Five years later (A. D. 634) it was invested by the Saracens, and, after a defence of four months, capitulated to the kbalif Omar in person; since wbich time it has followed the vieissitudes of the various dynasties that have swayed the destinies of Western Asia.

It remains to add a few words concerning the modern city and its environs.

## V. The Modern City.

El-Kods, the modern representative of its most ancient name Kadeshaib, or Cadytis, "is surrounded by a high and strong cnt-stone wall, bnilt on the solid rock, loop-holed throughont, varying from 25 to 60 feet in height, having no ditelh." It was built by the sultan Snliman (A. D. 1542), as is declared by many inscriptions on the wall and gates. It is in circuit about $2 \frac{1}{2}$ miles, and has four gates facing the four cardinal points. 1. The Jaffa Gate, on the west, ealled by the natives Bab-el-Hallil, i.e. the Hebron Gate. 2. The Damascus Gate, on the north, Bab-cl-'Amîd, the Gate of the Column. 3. The St. Stephen's Gate, on the east, Bab-SittiNiryam, St. Mary's Gate. 4. The Sion Gate, nn the south, Bab-en-Nebi Dâd, the Gate of the Prophet David. A fifth gate, on the sonth, near the mouth of the Tyropseon, is sometimes opened to facilitate the introdnction of the water from a neighhouring well. A line drawn from the Jaffia Gate to the Mook, along the course of the old wall, and another, entting this at right angles, drawn from the Sion to the Damascas Gate, could divide the
city into the four quarters by which it is in ually distinguished.

These four quarters are:-(1) The Armenian Quarter at the SIW:- (2) the Jew's Quarter at the SF:,-both these being on Mount sion ; (3) the Christian Quarter at the NW.; (t) the Mahometum Quarter, vecupying the remainder of the eity on the west and morth of the great 1laram-es-Shemif, the noble Sunctuary, which represents the aucient Temple area. The Mow, which oectapies the grankest and onee most vencrated spot in the world, is, in its architectural design and proportions, as it was formerly in its details, worthy of its sitc. It was built for Abd-cl Melik Ihn-Marwan, of the house of Onniyah, the tenth khalif. It was commencel in A. 1. 688, and completed in three years, and when the vicissitudes it has undergone within a space of nearly 1200 years are cunsidered, it is perliaps rather a matter of astemishment that the fabric should have been preserved so entire than that the adormment should exhibit in parts marks of ruinous decay.

The Church of Jnstinian, - now thie Musk ElAksa, - to the south of the same area, is also a conspicuous object in the modern city; and the Chureh of the Huly Sepulchre, with its appendages, oceupies a consi lerable space to the west. The greater part of the remaiaing space is occupied with the Coileges or Hospitals of the Moslems, in the vicinity of the $\mathrm{Mn}_{\mathrm{n}} \mathrm{ks}$, and with the Munasteries of the several Christian communities, of which the Patriarchal Convent of st. Cunstantine, belonging to the Greeks, near the Clurch of the lloly sopulh hre, and that of the Armenians, dedicated to St. James, on the hichest part of Mount Sion, are the must considerable.

The population of the modern city has been variously estinasted, some accounts stating it as luw as 10,000 , wthers as high as 30,000 . It may be safely assumed as abont 12,000 , of which number nearly balf are Muslems, the other half being compmeal of Jews and Christians in about equal proportions. It is governed by a Torkish pasha, and is held by a small garrison. Most of the European nations are there represented by a coisul.

## VI. Exvinons.

A few sites of historical interest remain to be noticed in the enviruns of Jorusalem: as the valleys which eaviron the city have been sufficiently described at the comichement of the article, the mountains may here demand a few words.

The Seopus, which derivel its name, as Josepphes informs us, from the extensive view which it commanded of the surrounding coumry, is the hivh ground to the north of the city, beyond the Tumbs of the King, 7 stadia from the eity ( B. J. ii. 19. $\S 4, v .2 . \S 3$ ), whene bith Cestius and Titus first encarned on their apprach to the (ity (ll. cc.): this range is now ocenpied by a village hamed Shaphit,-the Semitic equivaleat to the (iseck okomós. On the cast of the city is the Muunt of Olives, extending alorg the wh we letigth of its eastern wall, conspicnons with its three summits, of which the centre is t ie bicheat, and is crowned with a pile of buildiugs oceupying the spot where lleiena. the mother of Constantime, buile a Dowihas in cone memoration of the Ascension of our Lord. (Finselius, lita Constantini, iii. 12. Laturis, § 9.) A little below the sumhern summit is a sot mathalle gallery of sepulehral clambers arranged in $a$ seani-
axtle concentric with a circular funnel-shaped ball $2 f$ fect in diameter, with which it is connected by three passages. They are popularly called "the Tombs of the Prophets," but 110 satisfactory account laas been given of these extensive excasatioas. (Plans are given by Schultz, Krafft, and Tobler, in the works referred to below.) Dr. Schultz was inclined to identify this with the rock $\pi$ epa $\sigma$ रiptov, mentioned by Jisephus in his account of the Wall of Circumvallation (B. J. r. 12), which he supposes to be a translation of the Latin Columbarium. (See Dict. Ant. art. Funus, p. 561, b.)

In the bed of the Valley of Jehoshaphat, immediately bereath the centre sumnit of Mount Olivet, where the dry bed of the brook Kedron is spamed by a lridge, is the Gurden of Getlisemane, with its eight venerable olive-trees protected by a stone wall; and close by is a subterramean chureb, in which is shown the reputel tomb of the Virgin, who, however, according to an ancient tradition, countenanced by the Council of E'phesus (A. D. 431), died and was buried in that city. (Labbe, Concilia, tum. iii. eul. 57.3.)

A little to the south of this, still in the bed of the valley, are two remarkable monolithic sepulchral monuments, aseribelto Absalom and Zechariah, exhibiting in their sculptured orumments a mixtore of Doric, Lonic, and perhaps Egyptian architecture, which may possibly indicate a change in the original design in confornity with later taste. Counected with these are two series of sepulchral chanbers, one inmediately behind the Pillar of Absalom, catled by the name of Jehoshaphat; the other between the monoliths, named the Cave of 'st. James, which last is a pare specimen of the Doric order. (Sce $A$ General Fiew in IIuty City. wol. ii. p. 449, and detailed plans, Sce. in pp. 157, 158, with I'rofessor Willis's description.)

To the south of Mount Olivet is another rocky eminence, to which tradition has assigned the name of the Mount of Offence, as "the hill Lefore dernsalem" where king Solumon crected altars for idulatrous worship (1 Kings, xi. 7). In the rocky base of this mount, overhanging the Kedron, is the rockherm village of Siloam, chiefly composed of sepulchral excavations, much resembling a Columbarium, and most probably the rock Peristerium of Josephus. Immediately below this village, on the opposite side of the valley, is the intermitting Fountain of the Tiryin, at a considerable depth helow the bed of the valley, with a descent of many steps hewn in the roek. Its supply of water is very seanty, and what is not drawn off bere runs throngh the rocky ridge of Ophel, by an irregular passage, to the Irool of Siloan in the mouth of the Tyropoeon. This prool, which is mentioned in the Ni.w Testament (St. John, is. T, \&ce.), is now filled with earth and cultivated as a garden, a small tank with colunas built into its side serves the purpose of a puol, and represents the "quadriporticum" of the Burdeaux Phlgrim (A. D. 333), who also mentions "Alia piscima grandis foras." This was probably Hentical with Irezckiath's Pool "between the two walls" (Is. xxii. 11), as it eertainly is with the "Pool of silauh by the king's garden" in Nehemialt (ii) 15, ii. 14; comp. 2 Kings, xxv. 4. The arguheents are fully stated in the Holy City, vol. ii. P1. $474-480$. M1. de Soulcy accepts the identilication.) The king's gardens are still represented in 4 verdant spot, where the concurrenee of the three valleys, Ilimom, Jehoshaphat, and Tyropocon
forms a small plain, which is cultivated by the villagers of Siloam.

In the montir of the southern valley which forms the continotion of these three valleys towards the Dead Sea, is a deep well, varioosly called the Well of Nehemiah, of Job, or Joab; supposed to be identical with Earogel, "the well of the spies," mentioned in the borders of Judah and Benjamin, aod elsewhere (Josh.xv. 7, xviii. 16; 2 Sam. xvii. 17; 1 Kïngs, i. 9).

On the opposite side of the valley, over against the Mount of Offence, is another high rocky hill, facing Mount Sion, called the Hill of Evil Comncil, from a tradition that the house of Annas the highpriest, father-jo-law to Caiaphas (St. John, xviii. 13, 24), once occapied this site. There is a curions coincidence with this in a notice of Josephns, who, in his account of the wall of circumvallation, mentions the monument of Ananus in this part (v. 12. § 2); which monument has lately been identified with an ancient rock-grave of a higher class,-the Acchlanaa of ecclesiastical tradition,-a little below the ruins on this hill; wbich is agaia attested to be "the Potter's Field," by a stratum of white clay, which is still worked. (Schultz, Jerusalem, p. 39.)

This grave is one of a series of sepulchres excavated in the lower part of this hill; among which are several bearing Greek inscriptions, of which all that is clearly iatelligible are the words THC. ariac. CI $\omega$ N., indicating that they belonged to iahabitants or commonities in Jerusalem. (See the Iascriptions in Krafft, aod the comments on his decipherments in the Holy City, Memoir, pp. 56 -60).

Higher up the Valley of Hinnom is a large and very atucient pool, now called the Sultan's (Birket-csSultan), from the fact that it was repaired, and adorned with a handsome fountain, by Sultaa Suliman IbnSelim, 1520-1566, the builder of the present citywall. It is, however, not only mentioned in the mediaeval notices of the city, but is conaected by Nehemiah with aoother antiqnity in the ricinity, called En-nebi Daid. Oa Mount Sion, immediately above, and to the east of the pool, is a large and irregular mass of building, supposed by Cbristians, Jews, and Moslems, to contain the Tomb of David, aod of his successors the kings of Judah. It has been said that M. de Sauley has attempted an elaborate proof of the identity of the Tombs of the Kings, at the head of the Valley of Jehoshaphat, with the Tomb of David. His theory is inadmissable ; for it is clear, from the notices of Nehemiah, tbat the Sepulchres of David were not far distant from the Pool of "Siloah," close to "the pool that was made," and, coosequeatly, on that part of Monnt Sion where they are now shown. (Mehem. iii. 16-19.) The memory of David's tomb was still preserved until the destruction of Jerusalem (Josephus, Ant. xiii. 8. §4, xvi. $7 . \S 1$; Acts, ii. 29), and is aoticed occasionally in the middle ages. (See Holy City, vol. ii. pp. 505-513.) In the same pilc of buildings, now oceapied by the Moslems, is shown the Coenaculum where oar Lord is said to have instituted the Last Supper. Epiphanius mentions that this charch was standing when Hadrian visited Jerasalem (Pond. et Mens. cap. xiv.), and there St. Cyril delivered some of his catechetical lectures (Catech. xvi. 4). It was in this part of the Upper City that Titns spared the houses and city wall to form harracks for the soldiers of the garrison. (Vide sup.)

Above the Pool of the Sultan, the Aqueduct of Pontius Pilate, already mentioned, crosses the Valley
of Hinnom on nine low arches; and, being carried along the side of Mount Sion, crosses the Tyropoen by the causeway into the Haram. The water is conveyed from Etham, or the Pools of Solomon, abont two miles south of Bethlehem. (Josephus, B. J. ii. 9. §4.)

The mention of this aqueduct recalls a notice of Strabo, which has been perpetaally illastrated in the

 (xvi. p. 723.) Whence this abundant supply was derived it is extremely difficult to imagine, as, of course, the aqueduct jast mentioned would be immediately eat off in case of siege ; and, withont this, the inkabitants of the modern city are almost eatirely dependent on rain-water. But the accounts of the various sieges, and the other historical notices, as well as existing remains, all testify to the fact that there was a copious source of living water introduced into the city from witbout, by extensive subterrauean aquedacts. The subject requires, and would repay, a more accurate and careful investigation. (See IIoly City, vol. ii. p. 453-505.)

Besides the other anthorities cited or referred to in the conrse of this article, the principal modern sources for the topography of Jerusalem are the fol-lowing:-Dr. Robinson's Biblical Researches, vols. i. and ii; Williams's Holy City; Dr. Wilson's Lands of the Bible; Dr. E. G. Schultz, Jerusalem; W. Kirafft, Die Topographie Jorusalems; Carl Bitter, Die Erdkunde von Asien, gٌc., Palüstina, Berlia, 1852, pp. 297-508: Dr. Titns Tobler, Golgotha, 1851; Die Siloahquelle und die Oelberg, 1852; Denkblätter aus Jerusalem, 1853; F. de Saulcy, Voyage autour de la Mer Morte, tom. 2.

## IESPUS. [Jaccetini.]

JEZREEL [Esdrafla.]
IGILGILI ('I $\gamma \iota \lambda \gamma t \lambda i$, P'tol.; Jijeli), a sea-port of Mauretania Caesariensis, on the Sians Numidicus, made a Roman colony by Augnstus. It stands on a headland, on the E . side of which a natural roadstead is formed by a reef of rocks ruaning parallel to the shore; and it was probably in ancient times the emporimm of the sarrounding conntry. (Itin. Ant. p. 18 : Plin. v. 2. s. I; Ptol. iv. 2. § 11; Ammian. Mare. xxix. 5; Tab. Peut.; Shaw, Travels, p. 45: Barth, Wanderungen, go., p. 66.) [P.S.]

IGlLIUN (Giglio), an island off the coast of

Brruria, direetly epposite to the Mons Ar - $\mathrm{Cl}_{\text {a }}$ and the port of Cusa. It is, next to Hlas, the umat cousiderable of the islands now the e cost of Et umen, being 6 niles long by about 3 in brealth, and. .m. sists of a group of mountains of considerable wea tion. Hence liutilius speaks of its "silyosa co .n mina." (Itin, i. 325. .) From that athor we liow that, when Rome was taken by Aluic (A. D. 410 ), a number of fugitives from the city toek retuge m Igiliun, the insular position of wheh attorded them complete security. Caesar alsomentions it, during the Civil War, in comjunction with the neighbouring port of Coss, as furnisbing a dew vesocls to Dontitius, with which that general sailed for Massilia. (Caes. B. C. i. 34 ; Plin. ini. 1. s. 12 ; Mel4, ii. 7. §19.) It is evident, therefore, that it was imhatited in ancient as well as modern times. [E. H. B.]

1GLE'TES, HGNE'TES [H1sPNNL.]
IGULLIO NE Es, in European harmitia, mentioned by l'tolemy as lying between the Stavami and Constobuci, and to the east of the Voneds (ini. 5. § 21). Now the Stavani lay south of the Galindae and Sudini, pupulations of which the locality is known to be that of the Galinditae and sulovitae of the midule azes, i. e, the parts abont the Spirdiny-see in Eint Prussia. This would phace the lguiliones in the southern part of Lithnumin, or in pants of Grodno. Podelia, and Volhynie, in the country of the Jazwingi of the thirteenth century, - thure or thereabouts. Zeuss has allowed himself to comsiter sone such torm as 'Itvyrianes as the truer reauing; an !, so doing, identifies the names, as well as the lucalities, of the two pupulations (I I vyr $(\omega \boldsymbol{y}$, Jacaing), -the varietics of form being very numerous. The Jucrings were Lithuanians-Lithuanians as eplpmed to Siaconions ; and in this lies their ethnologictil importance, imasmuch as the southward extension of that branch of the surmatian stock is undetermined. (Sie Zeuss, s. v. Jazwingi.)
[I. G. L.]
 ancient and important town of Umbria. situated on the W. slope of the Apennines, but mit tar from their centrat ridge, and on thr le:t of the lia Flatminia. Its existence as an amment Umbrian city is sufticiently attested by its cuius, as well as by a remarkable monument presently to be noticed; but we find no mention of it in history previous to the period of its subjection to Rome, and we only learn incidentally trom Cicero that it enjoyed the privileged eondition of a " toederata civitas," and that the terms of its treaty were of a highly favourable character. (Cic. pro Balb. 20, where the realing of the older editions, "Fulginatium," is certainly erroneous: see Orelli, ad luc.) The tirst mention of its name occurs in Livy (xlv. 43, where there is no donbt we should read 1guvuun for " Igiturvium ") as the place selected by the Roman senate fur the continement of the Hllyrim kiug (ientius and his sons, when the people of spoletium refused to receive them. Its natural strength of position, which was evidently the cause of its selection on this octavion, led also to its bearing a conspicums part in the beginning of the cival war between Caesar and Pompey, when it wats oceupiel by the practor Slinucius thermus with tise: cohorts; but on the spproach of Curio with three cohorts, Thermus, who was apprebensive of is $r$ volt of the citizens, shandoned the town withont resistance. (Caes, B. C. i. 12: Cre, add Alt, vii. 13, b.) Eader the Koman domion lywium mems th have lapsed into the cendition of an ordinary tunnicipal town: we find it noticed in an inseriphon an

 lul. m. 1. § 53), and it is probable that in Strabur also we skould real 'I rovion fir the corrupt name ${ }^{\circ}$ Izoupor of the 11 Ss . and earior editions. (Strab. v. 1. 227: Chuver. Itel. p. 626.) But its secluded pmation in the monntains, and at at distance of some wnles from the litue of the V'ia Flaminia, was prebably unfavourable to its prosperity, and it does not sem to have been a place of much impertance. Silius Italicus spalks of it as very subject to fors (viii. 459). It early became the sce if a bishop. and retainel its episcopal rank throughout the middle agen, when it rose to be a place of considerably more impurtance than it had ergoyed under the Reman empite.

The modern city of Gubbio centains no ruins of ancient date; but about 8 miles to the l . of it, at a place now called La Schieggia, on the line of the ancient Flaminian War, and just at the lighest $p$ int of the pass by which it crusses the main ridge of the Apernines, some vestiges of an ancient temple are still visible, which are suppused with good reason to be thuse of the temple of Jupiter Apemninus. This is represented in the Tabala I'cutingeriana as existing th the bighest point of the pas, and is noticed alse by Claudian in describing the progress of Honurius along the Flaminian Way. (Cinudian, de 1\%. Cons. Ilon. 504; Tab. Peut.) The oracle consulted by the emperor Claudius "in Apenmino" (Trib. Poll. Cleud. 10) may perhaps have reference to the same spot. Many bronze idols and other small objects of antiguity have been found near the ruins in question; lut a tar more important discovery, made on the same site in 1444, Was that of the celebrated tables of bronke, conumuly known as the Tabula Eugubinae, which are still preservel in the city of Giubbio. Tbese tables, which are seven is number, contan lomg inscriptions, four of which are in Etrusan characters, tion in Latin, and one partially in Etruscan aml partially in Latin chat racters; but the lengrage is in all coses apparently the same, and is wholly distinct from that of the gennine Etruscan monuments on the one hand, as well as trom Latin on the other, though exhibiting strong traces of affinity with the older Latin forms, as well as with the existing remains of the Oscan dialects. There can be no doubt that the language which we here find is that of the Umbrians themselves, who are represented by all ancrent writers as nationally distinct both from the Etrnscans and the Sibellian races. The ethnological and lingtuistic inferences from these important monuments will be mare fully cumsiderel under the article Camma. It is only of late years that they have been investigated with care; early antigualice having formed the mest extravazant theories an to their meaning: Lanzi hat the nernt of first pointing out that they evidently related ouly to certain samificial and othor religions rites to be celebrated at the temple of Jupiter by the lravians themselves and some neighbuaring communitics. The interpretatiun has since been carried out, as far as our imperfect knowledge will permit, by Lepsius, Grotefend, and still more recently in the elaborate work of Anfrecht and Kirchholf. (Lanzi, Sugy io di lingua Eitrusca, vol. iii. 1p. 657- 768 ; Lepsius, de Tuhnlis Eupubinis, 1833; Inseriptiones L'mbricate et Uscau, Lips. 1841; Grotefend, Kudimenta Langune Limbricae, llannov. 1835-Is39; Aufretlit u. Kirchhotf, Die L'mbrischen Sprach. Inalimutio. 4to. Berlin, 1849.) In the still im-
perfect state of our knowledgo of the inseriptions in question，it is somewhat hazardous to draw from then positive conclusions as to proper names；but it seems that we may fairly infer the inention of several small towns or communities in the immediate ncigh－ bourhood of Igavium．These were，however，in all probability not independent communities，but pagi， or villages dependent upon Iguvium itself．Of this description were：Akerunia or Acerronia（probably answering to the Latin Aquilonia），Clavernia（in Lat．Clavenna），Curia or Cureia，Casilum，Juviscum， Museia，Pierinun（？），Tarsina，and Trebla or Trepla． The last of these evidently corresponds to the Latin name Trebia or Trebula，and may refer to the Um－ brian town of that name：the Cureiati of the inscrij）－ tion are evidently the same with the Curiates of Pliny，mentioned by him awong the extinct com－ manities of Umbria（Plin．iii．14．s．19）；while the names of Museia and Casilum are said to be still retained by two villages called MAseia and Casilo in the immediate neighbourhood of Gubbio．Chiaserna， another neighbouring village，is perhaps the Claverna of the Tables．

The coins of Iguvinm，which are of bronze，and of large size（so that they must be anterior to the re－ duction of the Italian As），have the legend invoini， which is probably the original form of the name，and is found in the Tables，though we here mect also with the softened and probably later form＂Jjovina，＂ or＂Iiovina，＂
［E．H．B．］

Edetani and Celtineri on the S．，the Visconis on the W．，on tho N．and NE．，the small peoples at the foot of the Pyrences，as the Jucertisi，Cas－ tellani，Aesetini，and Cereftasi，and on thi SE．the Cosetant．Besides Il．empa，their chief cities were：－the colony of Ceiss（Vililla，wear Xelsa），Osca（Huesca），famons in the story of Sir－ torius；and Athanagia，which Livy（xxi．61） makes their capital，but which no other writer names． On the great road from Italy into the N．of Spatin， reckoning from Tarraco，stood In．EM1．」，62 M．P＇； Tolous， $32 \mathrm{M} . \mathrm{P}^{\prime}$ ．，in the conventus of Caesar－ sugusta，and with the civitas Romaua（ 1 ＇lin．）；I＇Eh－ rus．， 18 M．P．（Pertusa，on the Alcanadre）；Oses， 19 M．P．，whence it was 46 M．P．to Caesaraugusta （Itin．Ant．p．391）．

On a loup of the same road，starting from Caearangusta，were：－Galideca， 15 M．P．，on the river Galliens（Zunra，on the Gallego）； Bonmixae， 18 M．I．（Bouptiva，Ptol：Tori－ wos）；Usca， 12 M．P．；Cave， 29 M．P．；Mexth－ crlefa， 19 M．I．（probably Monzon）；Irembl， 22 M．P．（ Atin．Ant．Pp．451，452）．Ont the road from Caesarangusta，np the valley of the Galliens， to Benearnum（Orthes）in Gallia，were，Fonus G．mborem， 30 3．1＇．（Gurrea），and Ebellinum， 22 M．P．（Beilu），whence it was 24 M．I＇．to the sum－ mit of the pass over the Pyrences（Itin．Ant．p．452）． Besides tbese plaees，P＇olemy mentions Bergusia Beprougia：Balaguer），on the Sieoris ：Bengidem
 Galifica Flavia（「ál入ika фגasuía：Froga？）： and Ongia（＇תpкia，prob．Orgagna），a name also found on coins（Sestini，Med．Isp．p．99），while the same coins bear the name of Arsoses，and in－ scriptions fouad bear the Sicoris have Aesoneviss and Jessonexsis（Muratori，Noer．Thes．p．1021， Nos．2，3；Spon，Misc．Erud．Ant．p．188），with which the Gessonienses of Pliny may perhaps have some connection．Bersical is mentioned on coins（Sestini，p．107），and Octogesa（prob．La Giranja，at the confluence of the Segre and the Ebro）by Caesar（B．C．i． 61 ；Ukert，vol．ii．pt． 1. pp．450－453）．

H．F＇slum．［Enlesinm．］
I＇LICI or ILLIC1（Itin．Ant．1）． 401 ：＇Intkiàs क）＇IAxıkis，P＇toL．ii．6．§ 62 ：Elche），an imland city of the Contestmi，Iut near the coast，on which it
 lying just in the middle of the bay formed by the Mr．Saturni and Dianium，which was called Illici－ tanus Sinus．T＇be city itself stood at the distance of 52 M．P．from Carthagn Noval，on the great road to Tarraco（Itin．Aut．p．401），and was a Culouin immunis，with the jus Italicum（Illin．iii．3．s． 4 ； Paulus，Dig．viii．de Cens．）．Its coins are extant of the period of the empire（Florez，Mod．de Esp． vol．ii．p． 4.58 ；Sestini，1．166；Mimuct，vol．i． p．45，Suppl．vol．i．p． 90 ：Eekhel，vol．i．p． 51 ）． Phny adds to his mention of the place：in cams contribunntur Icositani．（Ukert，vol．ii．pt．1．Tp． 402．403．）

ILIENSES（IXiei：Paus．），a people of the inte－ rior of Sardinia，who appear to have been one of the most considerable of the mountain trilhes in that island．Mela calls them＂antipuissimi in ea ${ }^{n}$＂pm－ lorum，＂and Pliny also mentions them among ther ＂celeberrimi populorum＂of Sardinia．（Mrl，ii，7． § 19 ：Plin．iii．7．8．13．）Pansaias，who terms them＇I $\lambda$ tês，distinetly ascribes to thent a Truian origin，und derives them from a portion of the com－

## 11．1PA．

pamus of Aenens，who settled in the island，and remained there in quiet until they were compelled Iy the Africans，who subsequently occupied the coa－ts of Sardinia，to take refuge in the more rugged and inacerssible mountain districts of the interior． （Pams．x．17．§ 7．）This tale has evidently eri－ ginated in the resemblance of the aame of lijenses，in the form which the lomans gave it，to that of the Trujans；and the latter part of the story was in－ vented to account for the apparent anonialy of a people that had come by sea dwelling in the interior nf the island．What the native name of the Ilieases was，we know not，and we are wholly in the dark as to their real origin or ethnical affinities ：but their existence as one of the most considerable tribes of the interior at the period of the Roman conquest，is well ascertained；and they are repeatedly mentioned by Livy as contending against the supremacy of Liome．Their first insurrection，in B．c．181，was repressed，rather than put down，by the praetor M．l＇inarius；and in B．e． 178 ，the Ilienses and Balari， in coujunction，lail waste all the more fertile and settled parts of the island；and were even able to meet the consul Ti．Sempronius Gracchus in a pitched battle，in whicb，however，they were defeated with heavy loss．In the course of the following year they appear to have been reduced to complete sub－ missiva；and their name is not again mentioned in history：（Liv．xl．19．34，xli．6，12，17．）

The situation and linits of the territory ocenpied by the llienses，cannot be determined：but we find them associated with the Balari and Corsi，as inla－ biting the central and mountaioons districts of the island．Tbeir name is not found in Ptalemy，though he cives a long list of the tribes of the interior．
Many writers have identified the llienses with the Iolaenses or Iolai，who are also placed in the interior of Sardinia ；and it is not improbable that they were really the same people，but ancient authors certainly make a distinction between the two．［E．H．B．］

ILISTRA（＂1גı $\sigma \tau \rho a$ ：Illisera），a town in Ly－ caonia，on the road from Laranda to Isaura，which is still in existence．（Hierocl．p． 675 ：Concil．Ephes． p．534；Concil．Chalecd．p．674；Hanilton，Researches， vol．ii．p． 324 ：Leake，Asia Minor，p．102．）［L．S．］

IlITHIlA（Ei入e九धvias Tó入ıs，Strab，xviii．p． 817：Eiknevias，Ptol．iv．5．§ 73），a town of the Egeptian Heptanomis， 30 miles NE．of Apollinopolis Magna．It was situated on the eastern bank of the Nile，in lat． $25^{\circ} 3^{\prime} \mathrm{N}$ ．According to Plutarch（Isis et Osir．c．73），Ilithyia contained a temple dedicated to Bubastis，to whom，as to the Taurian Artenis， human victims were，even at a comparatively recent period，sacrificed．A has－relief（Minutoi，p．394， seq．）discovered in the temple of Bubastis at El－ Kab，representing such a sacrifice，scems to confirm Plutarch＇s statement．The practice of human sacri－ fice atnong the Aegrptians is，indeed，called in ques－ tion by Herodotos（ii．45）；yet that it once prevailed among then is rendered probable by Manetho＇s state－ ment of a king named Amosis having abolished the custom，and substituted a waxen image for the human victiu．（Porphyr．de Abstinent．ii．p．223；Euseb． Praep．Erang．iv．16：comp．Ovid，Fast．v．621．） The singularity in Plutarch＇s story is the recent date of the imputed sacrifices．［W．B．D．］

## ILITURGIS．［llaturgis．］

I＇LIUMI，I＇LIOS（＂1גtov，in＂1גtos：Eth．＇İteús， f．＇IAás），sometimes also called TnoJa（Tooia）， whence the inhabitants are commonly called T $\rho \bar{\omega} \in s$, and in the Latin writers Trojani．The existence of this city，to which we commonly give the name of Troy，cannot be donbted any more than the simple fact of the Trojan War，which was believed to have ended with the captnre and destruction of the city， after a war of ten years，R．c．1184．Troy was the principal city of the conntry called Troas．As the city has been the subject of curious inquiry，both in ancient and modern times，it will be necessary，in the first instance，to collect and analyse the statements of the ancient writers ；and to follow up this discus－ vol． 11 ．
sion by an account of the investigations of modern travellers and scholars to identify the site of the famous city．Our most ancient authority are the Homeric poems ；but we must at the very outset remark，that we cannot look upon the poet in every rexject as a carcfnl and accurate topographer；but that，admitting his general accuracy，there may get be points on which lie cannot be taken to account as if it had been bis professed object to communicate information on the topography of Troy．

The city of lilium was situated on a rising ground， somewbat above the plain between the rivers Sc － mander and Simois，at a distance，as Strabo asserts， of 42 stadia from the coast of the Hellespont．（Hom． Il．xx．216，fol．；Strab．siii．p．596．）That it was not quite in the plain is clear from the epithets
 the south－east，there rose a hill．fornuing a branch of Mount Ida，surmounted by the acropolis，called Per－ gamam（ т̀̀ Пе́p $\alpha \mu o v$, Hom．Il．iv． 508 ，vi． 512 ； also тà Пёрүapa，Soph．Phil．347，353，611；or， $\dot{\eta} \Pi \epsilon ́ \rho \gamma \alpha \mu a s$, Hom．Il．v． 446,460 ．）This fortified acropolis contained not only all the temples of the gods（Il．iv． 508 ，v． 447,512 ，vi． 88,257 ，xxii．172， \＆c．），but also the palaces of Priam and bis sons， Hector and Paris（Il．vi．317，370，512，vii．345）． The city must have had many gates，as may he in－ ferred from the expression $\pi \tilde{a} \sigma a_{i} \pi u ́ \lambda a_{i}$（ $11 . \mathrm{ii} .809$. and elsewhere），but only one is mentioned by name， viz．，the Ėкaual пúdat，whicb led to the camp of the Greeks，and must accordingly have been on the north－ west part of the city，that is，the part just opposite the acropolis（Il．iii．145，149，263，vi．306，392，xri． $712, \& \mathrm{c}$.$) ．The origin of this name of the＂left gate＂$ is unknown，though it may possibly bare refereace to the manner in which the signs in the beavens were observed ；for，during this process，the priest turned his face to the north，so that the north－west would be on his left haod．Certain minor objects alluded to io the lliad，such as the tombs of llus，Aesgetes， and Myrine，the Scopie and Erineus，or the wild fig－tree，we ought probably not attempt to urge very strongly ：we are，in fact，prevented from at－ tributing much weight to them by the circumstance that the inhabitants of New Ilium，who believed that their town stood on the site of the ancient city，boasted that they could show close to their walls these doubt－ ful vestiges of antiquity．（Strab．xiii．p．599．）The walls of Ilium are described as lofty and strong，and as flanked with towers；they were fabled to have been built by Apollo and Poseidon（Il．i．129，ii． 113,288 ，iii．153， 384,386 ，vii．452，viii．519）． These are the only points of the topography of Ilium derivable from the Homeric poems．The city was de－ stroyed，according to the common tradition，as already remarked，about e．c．1184：but afterwards we hear of a new llium，though we are not informed when and on what site it was boilt．Herodotus（vii．42） relates that Xerses，before invading Greece，offered sacrifices to Athena at Pergamum，the ancient acro－ polis of Priam ；but this does not quite justify the inference that the new town of Ilium was then already in existence，and all that we can conclude from this passace is，that the people at that time entertained no doubt as to the sites of the ancient city： and its acropolis．Strabo（xiii．p．601）states that llium was restored during the last dynasty of the Lydian kings ；that is，before the subjugation of Western Asia by the Persians：and bath Xenophon （Hellen．i．1．§ 4）and Scylax（p．35）seem to speak of llium as a town actually existing in their days．

ILIUM.
It is also certain that in the time of Aloxander Now Ilium did exist, and was inhabited by Acolians. (D. mosth. c. Aristocr. P. 671 : Arrian, Aunl, i. 11. §7: Strab, xiii. p. 593, foll.) fhis new tomn, which is distinguished by Strabo from the famous ancient eitr, was not more than 12 stadin, or less than two English miles, distant from the sea, and was built upon the sptar of a projecting edge of Ida, separating the basjos of the Scamander and simois. It was nt first a place of not much importance (Strab. xiii. pp. 593, 601), hat increased in the coturse of time, and was surcessively extended and embellished by Aleximder, Lysimachns, and Iulius Caesar. During the Mithridatic War New Nium was taken by Fimbria. in e.c. 85 , on which orcasion it suffered greatly, (Stmb. xiii. p. 594: Appian, Mithrid. 53; Liv. Epit, Ixxxiii.) It is said to have been once destroyed before that time, by one Charidemns (Plut. Sertor. 1. ; Polyaen. iii. 14) ; but we neither know when this happened, nor who this Charidemus was. Sulla, however, favoured the towu extremely, in consequence of which it ruse, uniter the Roman dominion, to considerable prosperity, and enjoved exemption from all tases. (Plin. v. 3in.) These were the advantages which the place osed to the tradition that it necupied the identical site of the ancient and holy eity of Troy : for, it may bere be observed, that no ancient author of Greece or Rome ever doubted the identity of the site of Old and New lliom until the time of Demetrius of Scepsis, and Strabo, who adoptesl his views; and that. even afterwards, the popular belief among the people of Ilium itself, as well as throughout the world generally, remained as firmly established as if the criticism of Demetrius and Strabo had never boen heard of. These erities were lel to look for Old llinm forther inland, because they considered the space between Nuw Ilium and the ecast far too small to hase been the seene of all the great exploits deseribed in the 1 lisd ; and, althougb they are obliged to own that not a vestige of Old Ilium was to be seen anywhere, jet they assumed that it must have been sitnated abou: 42 stadia from the sea-coast. They accordingly fixed upon a spot
 This riew, with its assumption of Old and New Hium as two distinct places, does not in any way remore the difficultios which it is intemled to remove : for the shase will still be found far too narrow, nut to mention that it demands of the poet what ean be demandel only of a geographer or an historian. On these grounds we, in common with the general belief of all antiquity, which has also found ahle :ulvoeates among modern critics, assume that Ohl and New Hium occupied the same site. The statements in the Iliad which appear irreconcilable with this vime will disappear if we bear in miud that we have to do with an entirely legendary story, which is little concerned about gengraplical accuracy.

The site of New llium (arcording to onr viem, identical with that of Old Ilium) is acknowledged by all modern inquirers and travellers to be the spot covered with ruins now called Kizssurlik, between the villages of Kum-Kivn Kalli.fotht, and Tchiblak, n little to the west of the last-mestioned place, and not far from the point where the Simois once foined the Seamander. Those who maintain tiant old lium was situared in a different locality canmot, of course, be expected to agree in their opinions as to its actual site, it being impossible to fix upin ary ane spot agreeing in every particnlar with the phet, description. Iespecting the nationality of the int abitants

fois of ilium.
1LLI'BERIS ('I八入ı6eois, Ptol. ii. 4. § II), or 1LLI'BERI I.IBFRRINI (Plin. iii. J. s. 3), one of the chief cities of the Turduli, in Hispana Baetica, between the Baetis and the coast, is identified by inscriptions with Granade. It is probsbly the Elibyrge ('Enisíp $\boldsymbol{q}^{\prime}$ ) of Stephanus Byzantinus. (lnser. ap. Grater, p. 277, No. 3; Florez, Esp. S. vol. r. p. 4. vol. xii. p. 81 ; Mentelle, Geogr. Comp. Esp. Mod. p. 163 ; Cuius ap. Florez, Med. vol. iif. p. 75: Minnet, vol. i. p. 15, Suppl. vol. i. p. 28 ; Eckhel, vol. i. p. 22.)
[P. S.]

COIN OF HLLIBERIS (IN SPAIN).
ILLI'BERIS or ILLIBERRIS ('IA16epis), a town in the country of the Sordones, or Sardones, or Sordi, in Gallia Aquitania. The first place that Hannibal came to after passing tbrough the Eastern Pyrenees was Illiberis. (Liv, xxi. 24.) He must have passed by Bellegarde. Illiberis was near a small river Illiberis, which is south of another small stream, the Ruscino, which had also on it a town named Ruscino. (Strab. p. 182.) Meln (ii. 5) and Pliny (iii. 4) apeak of Illiberis as laving once been a great place, but in their time being decayed. The road in the Antunine Itin. from Arelate (Arles) throngh the Pyrenees to Juncaria passes from Ruscino (CastelRousillon) to Ad Centuriones, and omits lliberis; but the Table places Illiberis between Ruscino and Ad Centenarium, which is the same place as the Ad Centuriones of the Itin. [Cearumuses, Ad.] lliberis is Elue, on the river Tech.

Illiberis or Illiherris is an Iberian name. There is another place, Climberris, on the Gallic side of the Pyrences, which has the same termination. [Ausci.] It is said that berri, in the Basque, means "a town." The site of lliberis is fixed at Wine by the ltins.; and we find an explanation of
the name Elne in the fact that either the name of lliberis was changed to Helena or Elena，or Helena was a camp or station near it．Constans was mur－ dered by Magnentius＂not far from the Hispaniae， io a castrum named Helena．＂（Eutrop．x．9．）Vic－ tor＇s Epitome（c．41）describes Helena as a towo very near to the Pyrenees；and Zosimus has the same（ii． 42 ；and Orosins，vii．29）．It is said by some writers that Helena was so named after the place was restored by Constantine＇s mother Helena， or by Constantine，or by some of his children；but the evidence of this is not gived．The river of Illi－ beris is the Tichis of Mela，and Tecum of Pliny， now the Tech．In the text of Ptolemy（ii．10）the name of the river is written Illeris．

Some geographers have supposed Illiberis to be Collioure，near Port Vendre，which is a plain mis－ take．

 coast of the Adriatic sea．

1．The Name．－The Greek name is Illyras
（Idגupís，Ilecat．Fr．65；Polyb．iii．16；Strab．ii． pp．108，123，129，vii．p． 317 ；Dionys．1＇er． 96 ； Herodian，vi． 7 ；Apollod．ii．1．§3；Ptol．viii． 7. § 1），but the more ancient writers usually employ the name of the people，oi＇I入入úpiot（èv qoús＇I $1 \lambda v$－ pioss，Herod．i．196，iv．49；Scyl．pp．7，10）．The name Illyria（IAdupia）very rarely occurs．（Steph． B．s．$v_{4}$ ；Prop．i．8．2．）By the Latin writers it generally went under the name of＂Illyrionm＂ （Cres．B．G．ii．35，iii．7 ；Yaur．R．R．ii．10．§ i； Cic．ad Att．x．6；Liv．xliv．18，26；Ovid，Trist．i． 3．121；Mela，ii．3．§ 13 ；Tac．Ann．i． 5,46 ，ii． 44，53，Hist．i．2，9，76；Flor．i．18，iv．2；Just． vii．2；Suet．Tib．16；Vell．Pat．ii．109），and the general assent of geographers has given currebey to this form．
2．Extent and Limits．－The Roman Illyricum was of very different estent from the Illyris or ot ＇IA入úpiot of the Greeks，and was itself not the same at all times，but mnst be considered simply as an artificial and geographical expression for the hor－ derers who occupied the E．coast of the Adriatic， from the junction of that gulf with the Ionic sea，to the estuaries of the river Po．The earliest writer who has left any account of the peoples inhabiting this coast is Scylax；according to whom（c．19－27） the Illyrians，properly so called（for the Liburnians and Istrians beyond them are excloded），occupy the sea－coast from Liburnia to the Chaonians of Epirus． The Bulini were the northernmost of these tribes，and the Amantini the sonthermnost．Herodotus（i．196） includes under the name，the Heneti or Veneti，who lived at the head of the gulf；in another passage（iv． 49）he places the Illyrians on the tributary streams of the Morara in Servia．

It is evident that the Gallic invasions，of which there are several traditions，threw the whole of these districts and their tribes into such confusion，that it is impossible to harmonise the statements of the Periplus of Scylax，or the far later Scymnus of Chios，with the descriptions in Strabo and the Ruman historians．

In consequence of this immigration of the Gauls， Appian has confounded together Gauls，Thracians， Paeonians，and illyrians．A legend which he records （Illyr．1）makes Celtus，llyrius，and Gala，to have been three brothers，the sons of the Cyclups Poly－ phemns，and is grounded probably on the inter－ mixture of Celtic tribes（the Buii，the Scordisci，and the Taurisci）among the Illyrians：the Iapodes，a tribe on the borders of lstria，are described by strabo （iv．p．143）as half Celts，half Illyrians．On a rough estimate，it may be said that，in the earliest times，Illyricum was the coast hetween the Naro （Neretva）and the Drilo（Drin），bounded on the E． by the Triballi．At a later period it comprised all the various tribes from the Celtic Taurisci to the Epirots and Macedonians，and eastrard as far as Muesia，iocluding the Veneti，Pannonians，Dalma－ tians，Dardani，Autariatae，and many others．This is Illyricum in its most extended meaning in the ancient writers till the 2nd century of the Christian era：as，for instaace，in Strabo（vii．pp．313－319）， during the reign of Augustus，and in Tacitus（Hist． i．2，9，76，ii． 86 ；comp．Joseph．B．J．ii．16），in his account of the ciril wars which preceded the fall of Jerusalem．When the boundary of Rome reached to the Danube，the＂Illyricus Limes＂（as it is desig－ nated in the＂Scriptores Historiae Augustae＂），or ＂Illyrian frontier，＂comprised the following pro－ vinces：－Noricum，Pamonia Superior，Panoomia

## ILLYRICUM.

Inferior, Monsia Superior, Moesin Inferior, Dacia, and Thrace. This division continned till the time of Cinstantine, who severel from it Lower Mansia and Thrace, but added to it Macedonin, Thessaly, Achaia, Old and New Epirus, Praevalitana, and Crite. At this perind it was one of the fonr great divisions of the Roman enpire under a " lraefectus Practorio," and it is in this signification that it is usel by the later writers, surh as Sextus lufus, the "Auctor Notitiae Dignitatum Inperii," Zosimus, Jormandes, and others. At the final division of the Eoman cmpire, the so-called "Illyricum Orientale" containing the provinces of Macedonia, Thessaly, Epirus, Hellas, New Epirns, Crete, and Pracvalitama, was incorporated with the Lower Empire; while "Myriemn Occidentale "wa united with lome, and embraced Noricum, I'anuonia, Dalmatia, Suvia, and Valeria Ripensis.
A. Illiymes Barmana or Romana, was separated from Istria by the small river Arsia (Arsa), and bounded S. and E. by the Drilo, and on the N. by the Sowns: consequently it is represented now by part of Croatia, all Dulmatia, the Herzegovina, Monte- Nigro, nearly all Bosmia, and jart of Albania.

Illyris Ii mana was divided into three districts, the northem of which was I.wrunt, extending S, as far as the Tedanius (Zermagna); the strip of land extunding from the Arsia to the Titius (La Kerka) was called Linurnis, or the whole of the north of what was once Venetian Palmatia; the territory of the Dalmatae was at first comprehended between the Naro and the Tilurus or Nestus: it then extended to the Titins. A list of the towns will be found unler the several heads of I.herobl, LInetenia, and Dalmitha.
B. Illyies Gifaeca, which was called in later times Eprus Novi, extended from the river Drilo to the SR., up to the Cetamian mountains, which separated it from Epirus l'roper: On the N. it was bounded by the Roman Mlyricum and Mount Scordus, on the W. by the Ionian sea, on the S. by Epirus, nul on the E. by Macedonia; colnprchending, therefore, nearly the whole of modern Althania. Next to the frontier of Chaonia is the small town of Aatasris., and the people of the Amastiass and Buthhanis. They are followed by the Tavlantif, Who oecupied the country N. of the Aous - the great river of S . Macedonia, which rises in Mount Sacturn, anl discharges itself into the Adriatic - as liar as Rpidamnus. The chief towns of this country wre Apoldonia, and Emidamisis or Dymehacomsa. In the interior, near the Macelonian frontier, there is a considerable lake, Lacus Lycusitis, from which the Drilo issmes, Fiver since the middle ages there has existed in this part the town of Achrida, which has been suppesed to be the ancient Luennanes, and was the capital of the Bulgarian empire, when it extended from the Euxine as far as the interior of Actolia, and comprised s . Inyricum, Epirus, Acarnania, Aetolin, and a part of Thessaly, Daring the Roman perind the Dassametae dwelt there; the neighburning country was neculined by the Autariafae, who are said to have been driven from their country in the time of Cassunder, when they removed as fugitives with their women and chillern into Macedonia. The Ardiale and Jarsrhisi dwelt N. of the Autariatac, though not at the same time, but only during the Roman period. Scomma (Scuturi), in later times the capital of Pracvalitana, was unknown during the flourishing period of (irecian listary, and more properly beloms
to Rornan Illyricum; as Lissus, which was situated at the month of the Drilo, was fixed upon by the Romans as the border town of the Illyrians in the S., beyond which they were not allowed to sail with their privateers. Internal communication in this Illyricum was kept up by the Via Candavia or Egnatis, the great line which comnected Italy and the East-Rume, Constantinople, und Jerusalem. A rond of such inpurtance, as Culonel Leake remarks (North. Greece, vol. iii. P. 3II), und on which the distance had been marked with milestunes soon after the lioman conquest of Macedonia, we may believe to have been kept in the best order as long as Rome was the centre of a vigorous authority; but it probably shared the fate of many other great establisbments in the decline of the empire, and especially when it became as much the concern of the Byzaritine as of the Roman government. This fatet accounts fur the discrepancies in the Itineraries ; for though Lychnidus, IIeracleia, and Edessa, still continued, as on the Candavian Way described by Polybius (ap. Strab, vii. pp. 322, 323 ), to be the three principal points between Ihyrrhachinm and Thessalonica (nature, in fact, laving strongly dram that line in the valley of the Genosus), there appears to have been a choice of routes over tbe ridges which contained the bonndaries of Illyricum and Dacedonia. By comparing the Antonine Itinerary, the Peutingerian Table, and the Jerusalem Itinerary, the following account of stations in Illyricum is obtained:-

Dyrrlachiun or Apollonia.

3. Physical Geography. - The lllyrian range of mountains, which traverses Dalmatia under the name of Mount Prolog, and partly under other names (Mons Albius, Bebius), branches off in Carniola from the Julian Alps, and then, at a considerable distance from the sea, stretches towards Venetia, approaches the sea beyond Aquilein near Trieste, and forms Istria. After passing throngh Istria as a lotty mountain, though not reaching the snow line, and traversing Dalmatia, which it separates from Basnia, it extends into Albania. It is a limestone range, and, like most mountains belonging to that formation, much broken up; hence the bold and picturesque coast runs out into mauy promontories, and is flanked by nomereus islands.

These islands appear to have originated on the breaking up of the lower grounds by some violent action, leaving their limestone summits above water. From the salient position of the promontory terminating in I'unta della Planea, they are divided into two distinet groups, which the Greek geographera ealled Absyntides and Imberides. They trend NW. and SE., greatiy longer than broad, and form various fine chant els, called "canale," and named from the nearest adjacent island : these being bold,
with scarcely a hidden danger, give ships a secure passage between them. Cherso, Osero, Lussin, Sansego (Absyrtides), abound witb fossil bones. The bone-breccia of these islands appears to be the same conglomerate with those of Gibraltar, Cerigo, and other places in the Mediterranean. Tbe Liburnian gronp (Aı6upvī̂es $\downarrow \hat{\eta} \sigma o t$, Strab. ii., p. 124, vii. pp. 315, 317; " Lihurnicae Insulae," Plin. iii. 30), Lhssa (Grossa), Brattha (Brazza), Issa (Lissa), Melita (Meluka), Corcyra Nigea (Curzola), Pharos (Lesina) and Ohyxta (Solta), have good ports, but are badly supplied with drinkable water, and are not fertile. The mountainous tract, though industriously cultivated towards the shore, is for the most part, as in the days of Strabo (l. c.), wild, rugged, and barren. The want of water and the arid soil make Dalmatia unfit for agriculture; and therefore of old, this circumstance, conpled with the excellency and number of the harbours, made the natives more known for piracy than for commereial enterprise. A principal feature of the whole range is that called Monte-Negro (Czernagora), consisting chiefly of the cretaceous or Mediterrazean limestone, so extensively developed from the Alps to the Archipelago, and remarkable for its craggy character. The general height is about 3000 feet, with a few bigher summits, and the slopes are gentle in the direction of the inclination of the "strata," with precipices at the outeroppings, which give a fine variety to the scenery.

There is no sign of volcanic action in Dalmatia; and the Nympbaeum near Apollonia, celebrated for the flames that rose continually from it, las probably no reference to anytbing of a volcauic nature, but is connected with the beds of asphaltum, or mineral pitch, which occur in great abundance in the nummulitic limestone of Albania.
The coast of what is now called Middte Albania, or the Illyrian territory, N. of Epirus, is, especially in its N. portion, of moderate height, and in some places evea low and unwholesome, as far as Aclox (Velona or Avlona), where it suddenly becomes rugged and mountainous, with precipitous clifts descending rapidly towards the sea. This is the Khimara range, upwards of 4000 feet ligh, dreaded by ancient mariners as the Acro-Ceraunian promontory. The interior of this territory was much superior to N. Illyricum in productiveness: though mountainous, it has more valleys and opea plains for cultivation. The sea-ports of Epidamnus and Apollonia introduced the luxuries of wine and oil to the barbarians; whose cliefs learnt also to value the woven fabrics, the polished and carved metallic work, the tempered weapons, and the pottery which was furnisbed them by Grecian artisanis. Salt fisb, and, what was of more importaace to the inland residents on lakes like that of Lychnidus, salt itself, wast imported. In return they supplied the Greeks with those precious commodities, cattle and slarcs. Silver mines were also worked at Damasticm. Wax and honey were probably artieles of export; and it is a proof that the natural products of $1!-$ lyria were carefully sought out, wben we find a species of iris peculiar to the country collected and sent to Corinth, where its root was employed to give the special flavour to a celebrated kind of aromatic uaguent. Grecian commerce and intercourse not only tended to civilise the S . Milyrians beyond their nortbern brethren, who shared with the Thracian triles the custom of tattooing their bodies and of offering buman sacrifices ; but through the intro-
duction of Grecian exiles, made them acquainted with Hellenic ideas and legends, ns may be seea by the tale of Cadmus and Harmonia, from whom the cbiefs of the Illyrian Enchelees professed to trace their descent. (Comp. Grote, Hist. of Greece, vol. iv. pp. 1-10, and the authorities quoted there; to whicb may be added, Wilkinson, Dalmatia and Montenegro, vol. i. pp. 38-42; J. F. Neigebaur, Die Sudslaven, Leipzig, 1851; Niebubr, Lect. on Ethnog. and Geog. vol. i. pp. 297-314; Smyth, The Mediterranean, pp. 40-45; Haba, Allanesische Studien, Wien, 1854.)
4. Race and National Character:-Sufficient is not known either of the language or customs of the Illyrians, by whicb their race may be ascertained. The most accurate amoag the ancient writers have always distinguished them as a separatenation, or group of nations, from both the Tbracians and Epirots.
The ancient Illyrians are unquesticnably the ancestors of the people generally known in Europe by the name Albanians, but who are called by the Turks " Arnauts," and by themselves " Skipetares," which means in their language " noountaineers," or "dwellers on rocks," and inhabit the greater part of ancient Illyricum and Epirus. They bave a peculiar language, and constitute a particular race, which is very distinct from the Slavonian inbabitants who border on them towards the N. The ancients, as bas been observed, distinguisthed the Illyrians from the Epirots, and have given no intimations that they were in any way connected. But the Albanians, who inhabit botb Hlyricum and Epirus, are one people, whose language is only varied by slight modifications of dialect. The illyrians appear to bave been pressed soutliwards by Slavonian bordes, who settled in Dalmatia. Driven out from their old territories, they extended themselves towards the S ., where they now inhahit many districto which nescr belonged to them in former times, and have swallowed up the Epirots, and extinguished their language. According to Schafarik (Slav, A/t vol. i. p. 31) the modern Albanian population is 1,200,000.

Ptoleny is the earliest writer in whose works the name of the Albaniuns has been distinctl| recognised. He mentions (iii. 13. § 23) a tribe called Albasi ('A八gavoi) and a towa Albanorolis ('Aagavórodis), in the region lying to the E . of the Ionian sea; and from the natues of places with wiich Albanopolis is connected, it appears clearly to have been in the S . part of the Illyrian territory, and in molem Albania. There are no means of forming a conjecture bow the name of this obscure tribe canc to be extended to so considerable a nation. The Latest work npon the Albanian language is that of F. Ritter von Aylimder (Die Sprache der Albanesen oder Skhipetaren, 1835), who has elucidated this sulject, aad establisleed the principal facts upon a firm basis. Aa account of the positions at which Xylander arrived will be found in Prichard (The Physical History of Mankind, vol. iii. pp. 4ĩ482).

As the Dalmatian Slaves have adopted the name Illyrians, the Slavoaian language spoken in Dalmatia, especially at Ragusa, is also called Illyrian; and tbis designation has acquired general currency; but it must always be remembered that the ancient Hllyrians were in no way connected with the Slave races. In the practice of tattooing their bodies, and offering buman sacrifices, the Illyrians resembled the Tbracians (Strab. vii. p. 315; Herod. v. 6) : the

## 1LLYRICUM.

custom of one of their tribes, the Dalmatians, to have a new division of their lands every eighth year (Strab, l.c.), resembled the well-known prawtice of the Germans, only advanced somewhat further towards civilised life. The autbor of the l'eriplus asuribed to Scylax (l.c.) speaks of the great influence enjoyed by their women, whose lives, in emsequence, he describes as highly licemtious. The Hllyrian, like the modern Albanima Skipetar, was atways ready to fight for hire ; and ronshed to battle. obeying only the instigation of his own love of tijhting, or vengeance, or love of blood, or craving for bouty. But as soon as the fecling was satisfied, or overcome hy fear, his rapid and impetuous rush was sucreeded by an equally rapid retreat or flight. (Comp. Grote, Hist. of Greece, vol. vi. p. 609.) They did not fight in the phalanx, nor were they merely dinof; they rather formed an intermediate class between thenn and the phalanx. Their arms were short spears and light javelins and shields ("peltastae"); the chinf weapon, however, was the $\mu d ́ \chi a t \rho a$, or Albanian knife. Dr. Araold has remaked (Ilist. of Rome, vol. i. p. 495), -"The eastern cont of the Adrintio is one of those ill-fated portions of the earth which though placed in immediate contact with civilisation, hare remained perpetually larbariau." But Scymmus of Chios (cornp. Arnold, vol, iii. p. 477), writing of the Illyrians about a century before the Christian cra, ealls them "a religious people, just and kind to strangers, loving to be liberal, and desiring to live orderly and soberly." After the Roman conquest, and during its dominion, they were as civilised as most otber peaples reclained from barbarism. The emperor Diocletion and St. Jerome were both Mllyrians. And the pulace at Spaluto is the earliest existing specimen of the legitimate conbination of the round arch and the column; and the modern history of the catern shores of the Alriatic begins with the relations established by Heraclius with the Serts or W. Slaves, who moved down from the Carpathians into the provinces between the Aduatic and the Daunke. The states which they constituted were of consideratle weight in the history of Europe, and the kingdoms, or bannats, of Croatia, Servia, Bosnia, Rascia, and Daluatia, ocompied for some centuries a political position very like that now hedd by the seconiary mouarchical states of tho present day. The people of Narenta, who had a republican form of government, owe disphted the sway of the Adriatic with the Venetians; lagusa, whirh sent her Argosies (hagosic) to every conat, never once succumbed to the winged Lion of st. Mark; :and for some time it acemed prubnble that the Servisn colonies established by 11 eraclins were likely to take a prominent part in alvancine the progress of Enroperan civilisation. (Comp, Finlay, fircrce under the Romans, p, 403.)
5. Alistory, - The Illyrians do not appar in history hefore the Polupabumian War, when lrawidas and Perdiceas retreated before them, and the lllyrians, for the first time, prob ble, had to whe sunter Grecian troops. (Thuce iv. $124-128$. ) Nethine is heard of these barkarians afterwards, till the time of Plilip of Nacedon, by whoae vigour and enerry their incursions were first represscd, an it their cotuntry partially conquered. Their collision with the Jlacedontans appears to have riven under the following circumstanes. During the the ceutory hefure Christ a large immineration of Gallic tribes from the westward was taking place, invading the teritory of the
more northerly Illyrians, and driving them forther to the south. Under Bardylis the Illyrians, who had formed themselves into a kingdom, the origin of which cannot be traced, bad extended themselves over the towns, villages, and plains of W. Macedonia (Dind. xri. 4 : Theopmip. Fr. 35, ed. Didot.: Cic. de Off. ii. 11 ; Phot. Bibl. p. 530, ed. Bekker; Lihan. Orat. xxviii. p. 632). As soon as the young Philip of Macedon came to the throne, he attacked these hereditary enemies B. c. 360 , and pushed his successes so vigoronsly, as to reduce to subjection all the tribes to the E. of Lycbnidus. (Comp. Grote, Mist. of Greece, vol. xi. pp. 302-304.) A state was formed the capital of which was probably near Ragusa, bnt the real illyrian pirates with whom the Romans came in collision, must have occupied the N. of Dalmatia. Rhodes was still a maritime power; but by n.c. 233 the Illyrians had become formidable in the Adriatic, ravaging the coasts, and distarbing the navigation of the allies of the Romans. Envoys were sent to Teuta, the queen of the Illyrians, demanding reparation: she replied, that pirace was the habit of her people, and finally had the envoys murdered. (Polyb, ii. 8 ; Appian, Illyr. 7 ; Zonar. viii. 19 ; comp. Plin. xxeiv. 11.) A Roman army for the first tine crossed the lonian gulf, and concloded a peace with the lliyrians upon honourable terms, while the Greek states of Corcyra, Apollonia, and Epidamnus, received their liberty as a gift from Rome.

On the death of Tenta, the traitor Demetrius of Pharos made bimself guardian of Pineus, son of Agron, and usurped the chief authority in Illyricum : thinking that the Rumans were too much engaged in the Gallic wars, be ventured on several piratical acts. This led to the Secund illyrian War, B.c. 219 , which resulted in the sulmission of the whole of Illyricam. Demetrius fled to Macedonia, and Pinens was restored to lis kingdom. (Polyh. iii. 16, 18 ; Liv. xxii. 33 ; App. Illyr. 7, 8; Flor. ii. 5 ; Dion Cass. xxxiv. 46, 151; Zonar. viij. 20.) Pinens was succeeded by his uncle Scerdilaidas, and Scerdilaidas by his son Pleuratus, who, for his fidelity to the Roman canse during the Macedonian War, was rewarded at the peace of 196 by the addition to his territories of Lychnidus and the Parthini, which had before belonged to Macedonia (Polyh, xviii. 30 , xxi. 9, xxii. 4: Liv, xxxi. 28, xxxii. 34.) In the reign of Gentins, the last king of Illyricum, the Dalmatae revolted, n c. 180 ; and the practor L. Anicius, entering Illyricum, finished the war within thirty days, by taking the capital Scodm (Sevtari), into which (ientins had thrown himself, n. c. 168 . (l’olyb. xxx. 13; Liv. xliv, 30 -32, sir. 43; Appian, Illyr. 9; Eutrop. iv. 6.) Illyricum, which was divided into three parts, became annexel to Ronne. (Liv, xlv. 26.) The history of the Roman wars with Dal.matio, lafyda, and linurnia, is given under those heads.

In B. C. 27 Hllyrienn was under the rule of a proconsul appointed by the senate (Dion Cass. liii. 12): but the frequent attempts of the people to recoser their liberty slowed the necessity of maintaining a strong foree in the country ; and in D. C. 11 (1)ion Cass. liv. 34) it was made an imperial province, with P. Comelius Dulabella for " legatus" (* leg. pro. pr.," Orelli. Iuser. no. 2365, comp. no. 312 s ; Tac. Itist. ii. \&6; Narquardt, in Beeker's Rom. Alt, vol. iii. pt. i. pp. 110-115). A large rezion, extending far inland towards the valley of the Save and the Drace, centainod bodies of solduery,
who were stationed in the strong links of the chain of military posts which was scattered along the frontier of the Danube. Inscriptions are extant on which the records of its occupation by the 7 th and 11 th legions can still be read. (Orelli, nos. 3452, 3553, 4995, 4996; comp. Joseph. B. J. ii. 16; Tac. Ann. iv. 5, Hist. ii. 11. 85.) There was at that time no seat of government or capital ; but the province was divided into regions called " conventus:" each region, of which there were three, named from the towns of Scardona, Saloxa, and Narona, was sublivided into numerons "decuriae." Thus the "conventus" of Salona had 382 "decuriae." (Plin. iii. 26.) Iadera, Salona, Narona, and Epidaures, were Roman "coloniae;" Apollonla and Corcyma, "civitates liberae," (Appian, Illyr. 8 ; Polyb. ii. 11.) The jurisdiction of the "pro-practor," or " legatus," does not appear to have extended thronghout the whole of Illyricum. but merely over the maritime portion. The inland district either had its own governor, or was under the praefect of Pannonia. Salona in later times became the capital of the province (Procop. B. G. i. 15 ; Hierocles), and the governor was styled "praeses." (Orelli, nos. 1098, 3599.) The most notable of these were Dion Cassius the historian, and his father Cassius Apronianus.

The warlike youth of Pannonia and Dalmatia afforded an inexhaustible supply of recruits to the legions stationed on the banks of the Danube; and the peasants of Illyricum, who bad already given Claudius, Aurelian, and Probus to the sinking empire, achieved the work of rescuing it by the eleration of Diocletian and Maximian to the imperial purple. (Comp, Gibbon, e. xiii.)

After the final dirision of the empire, Marcellinus, "Patrician of the West," occupied the maritime portion of W. II rricom, and built a fleet which claimed the dominion of the Adriatic. [Dalsiatra.] E. Illyricum appears to have suffered so much from the hastilities of the Goths and the oppressions of Alaric, who was declared, A. D. 398 , its master-general (comp. Claudian, in Eutrop. ii. 216, de Bell. Get. 535), that there is a law of Theodosius Il. which exempts the cities of Illyricum from contributing towards the expenses of the public spectacles at Constantinople. (Tbeod. cod. x. tit. 8. 8. 7.) But though suffering from these inroads, casual encounters often showed that the people were not destitute of conrage and military skill. Attila himself, the terror of both Goths and Romans, was defeated before the town of Azimus, a frontier fortress of Illyricum. (1'riscus, p. 143, ed. Bonn; comp. Gibbon, c. xxxiv.; Finlay, Greece under the Romans, p. 203.) The cansta of Illyricum were considered of great importance to the court of Constantinople. The rich produce transported by the caravans which reached the N . shores of the Black Sea, was then conveyed to Constantinople to be distributed through W. Europe. Under these circamstances, it was of the utmost consequence to defend the two points of Thessalonica and Dyrrhachium, the two cities which commanded the extremities of the usual rond between Constautinople and the Adriatic. (Tafel, de Thessalonica, p. 221; Hullman, Geschich. des Byzantischen Handels, p. 76.) The open country was abandoned to the Avars and the E. Slaves, who made permanent settlements eren to the S. of the Via Eguatia ; but none of these settlements were allowed to interfere wit th. lines of communication, without which the trade of
the West would have been lost to the Greeks. Heraclius, in his plan for circumscribing the ravages of the northern enernies of the empire, occapied the whole interior of the country, from the borders of Istria to the territory of Dyrrhachium, with colonies of the Serhs or W. Slaves. From the settlement of the Servian Slavonians within the bounds of the empire we may therefore date, as has been said ahove, the earliest encroachments of the Illyian or Albanian race on the Hellenic population of the South. The singular events which occurred in the reign of Heraclius are not among the least of the elements which have gone to make np the condition of the modern Greek nation. [E. B.J.]
ILORCI. [Eliocroca.]
ilucia. [Ohetani.]
ILURATUAI ('Inoúpatov, Ptol. iii. 6. § 6), a town in the interior of the Tauric Chersonese, probably somewhat to the N. of Kaffa. [E. B. J.]

ILLTRCA'ONES. [llebciones.]
ILURCls. [Graccurris.]
ILURGEIA. ILURGIS. [Illiturgis.]
ILU'RGETAE. [llemgetes.]
ILURO, in Gallia Aquitania, is placed by the Antunine Itin. on the road from Caesarangusta, in Spain, to Beneharmum. [Beneninacm.] Iluro is between Aspaluca [Aspaluca] and Beneharmurn. The modern site of lluro is Oleron, which is the same name. Oliron is in the department of Easses Pyrenees, at the juaction of the Gare $\delta$ Aspe, the river of Aspaluca, and the Gave dossau, which by their union form the Gare dOléron. Gave is the name in these parts for the river-valleys of the Pyrenees. In the Notitia of Gallia, Iluro is the Civitas Elloronensium. The place was a bishop's see from the commencement of the sixth century. [G. L.]

I'LURO. 1. (Alora), a city of Baetica, situated on a hill. (Inscr. ap. Carter, Travels, p. 161; Ukert, vol. ii. pt. 1. p. 358.)
2. [LaEETANi]
[P. S.]
ILU'ZA ( $\tau \dot{\alpha}{ }^{v}$ IMouga), a town in Phrygia Pacatiana, which is mentioned only in very late writers, and is probably the same as Aludda in the Table of Pentinger; in which case it was situated between Sebaste and Acmonia, 25 Roman miles to the east of the latter town, It was the see of a Christian bishop. (Hierocl. p. 667 ; Concil. Constant. iii. p. 534.)

ILVA ('İaúa, Itol.: Elbry). called by the Greeks Aethalla (AiOa入ia, Strab., Diod.; AiӨá入eıa, Ps. Arist., Philist. ap. Steph. B.), an island in the Tyrrhenian Sea, lying off the coast of Etruria, oppusite to the headland and city of Populonium. It is moch the most important of the islands in this sea, situated between Corsica and the mainland, being about 18 miles in length, and 12 in its greatest breadth. Its outline is extremely irregular, the mountains which compose it, and which rise in some parts to a height of abore 3000 feet, being indented by deep gulfs and inlets, so that its breauth in some places does not exceed 3 miles. Its circuit is greatly overstated by Pliny at I00 Roman miles: the same author gives its distance frum Populorium at 10 miles, which is just about consect; but the width of the strait which separates it from the nearest point of the mainland (near Piombino) does not much exceed 6, though estimated by Diodorus as 100 stadia ( $12 \frac{1}{2}$ miles), and by Strabo, through an enormous error, at not less than 300 stadia. (Strab. v. p. 223; Diod. r. 13 ; Flin. iii. 6. s. I2; Mel. ii. 7. § 19 ; Scyl. p. 2. § 6 ; Apoll. Ihiod.
iv. 654.) Ilva was celehrated in ancient times, as it still is at the present day, for its iron mines; these were probably worked from a very early period by the Tyrrhenians of the opposite coast, and were already noticed by Herataens, who called the island Aieá $\lambda \eta$ : indeed, its Gireck name was generally regarded as derived from the smoke (ailoỉn) of the nunerous furnaces employed in smelting the iron. (Diol. v. 13: Steph. B. s. v.) In the time of Sirato, however, the iron ore was no longer smelted in the island itself, the want of fuel compelling the inthabitants (as it dows at the present day) to transport the ore to the opposite mainland, where it was smelted and wrought so as to be fitted for commercial purposes. The unfailing abundance of the ore (alluded to by Virgil in the line
"Insula inexhaustis Chalybum generosa metallis")
led to the notion that it grew again as fast as it was extracted from the mines. It had also the advantage of being extracted with great facility, as it is not sunk deep beneath the earth, but forms a hill or mountain mass of solid ore. (Strab. l.c.; Diod. l. c.; Virg. Aen. x. 174; Plin. iii. 6. s. 12, xxsiv, 14. s. 4 t Pseud. Arist, de Mirab. 95 ; lutil. Llin. i. 351-356; Sil. Ital. viii. 616.) The mines, which are still extensively worked, are situated at a place calted Rio, near the E. coast of the island: they exhibit in many cases nnequivocal evidence of the ancient workings.

The only mention of Ilva that oceurs in history is in n. c. 453 , when we learn from Diodorus that it was raraged by a Syracusan fleet under Phayllus, in revenge for the piratical expeditions of the Tyrrhenians. Phayllas having effected but little, a second fleet wais sent under Apelles, who is said to bave made himelf master of the island; ont it certainly did not remain subject to Syrueuse. (Diod. xi. 85.) The mame is again incidentally mentioned by Liry (xxx. 39) Juring the expelition of the consul Tib. Claudius to Corsica and Sardinia.

Ilva has the alvantage of several excellont ports, of which that on the N. side of the island, now callel Purto Ferraio, was known in amcient times as the Portis Astioves ('A $\rho \gamma \bar{\omega} o s=1 \mu \dot{\nu} \nu$ ), from the circumstance that the Arconants were believed to have touched there in their return voyage. while sailing in quest of Circe. (Strab. v. p. 224; Diod. iv. 56: Appllon. Whod. iv, 6:*.) Considerable ruins of buildinzs of Roman date atre visible at a place called Le Grutte, near Iortu Fervaio, and others are found near Capo Castelln, at the NE. extremity of the islamd. The quarries of granite near S. Picro, in the SII. part of Elba, appears also to have been extensively worked by the Romans, though no notice of them is fomm in any ancicut writer; but numerous columns, bains for foumtains, and other architectaral ormaments, still remain, either wholly or in purt hewn out of the adjacent quarry. (Hoare, Cless. Tour, vol, i. pp. 23-29).
[F. H. B.]
11.VATES, a Liguram tribe, whose name is found only in Livy lie mentions them first as taking up ar.ns in s. c. 200 , in concert with the Gaulish tribes of the lisubres and Cenomani, to destroy the Roman eolosics of Placentia and Cremona. They are again noticed three years later as being still in arms, after the submission of their Transpadane allies; fort in the course of that yoar's ramInign (n.c. 197) they were redueed by the monsal Q. Minucius, and their name dues not astain appear in history, (Liv, x $x \times .10, ~ x x x i .29,30$.) Frum
the circumstances here related, it is clear that they dwelt on the N. slopes of the Apemines, towards the plains of the Padus, and apparently not very far from Clastidium (Custeggio); but we caunot determine with certainty either the position or extent if their territory. Their name, like those of most of the Ligurian tribes mentioned by Livy, had disappeared in the Angustan age, and is nut found in amy of the geographers. [Ligitia.] Walckenaer, however, supposes the Eleates over whom the consul Ml . Fulvius Nobilior celebrated a triumph in B. C. 159 (Fast. Capit. ap. Gruter, p. 297 ), and who are in all probability the same people with the Veleiates of Iliny [Velenis], to be identical also with the IIvates of Livy; but this cannot be assumed without further proif. (Walckenaer, Géogr. des Gaules, vol. i. p. 154.)
[E. 11. B.]
1MACHARA ('I $\mu u \chi a ́ p a$ or 'H $\mu \chi \chi$ ápa, Ptol.: Eith. Imacharensis, Cic.; Imacarensis, Plin.), a city of Sicily, the name of which does not appear in history, but which is repeatedly mentioned by Cicero among the municipal towns of the island. There is great discrepancy in regard to the form of the name, which is written in many MiSS. "Macarensib" or " Macharensis;" and the same uncertainty is found in those of Pliny, who also notices the town among thuse of the interior of Sicily. (Cic. I'err. iii. 18, 42, v. 7 ; Zumpt, ad loc.; Plin. iii. 8. s. 14: Sillig, nd loc.) From the manner in which it is spoken of by Cicero, it would seem to have been a town of some consideration, with a territory fertile in corn. That writer associates it with Herbita, Assorus, Agyrium, and other tomns of the interior, in a manner that would lead us to suppose it situated in the same region of Sicily; and this inference is confirmed by Ptoleny, who places Hemichara or Himichara (evidently the same place) in the NE, of Sicily, between Capitium and Centuripa. (P'tol. iii. 4. § 12.) Hence Cluverius conjectures that it may bave occupied the site of Traina, but this is wholly uncertain. Fazello and other Sicilian writers have supposed the ruins of an ancient city, which are still visible on the crast about 9 miles N. of Cape Pachynum, near the Porto Yindicari, to be those of Imacliara; but though the name of Macaresa, still borne by an adjoining headland, gives some colvur to this opinion, it is wholly opposed to the data furnished us by ancjent suthors, who all agree in placing Imachara in the interior of the jsland. The ruins in question, which jodicate the site of a considerable town, are regarded by Cluverius (but equally without authority) as those of Ichana. (Cluver, Sicil, p. 356 ; Fazell. de Reb. Sic. iv. 2. p. 217; Amico, Not. ad Fazell. Ip, 417, 447 ; II are's Clussical Tour, vol. ii. p. 301.) [E. 11. B.]

1NAUS', the great mountain chain, which, according to the ancients, divided Nurthern Asia into "Scythia intra Imamm" and "Scythia extra Imaun," 'This word ( $\tau$ " "Iuzoy Üpos, Strab. xx: p. 689; Ptol. vi. 13. § 1; тो '1 $\mu$ ãiò Épos, strab. ii. p. 129; $\delta{ }^{\prime} 1$ paos, Azathem. ii. 9: although nll the MSS. of Strabo (xi. p. 516) have lamms ("Irapos) in the passage deseribing the experdition of the Graeco-Bactrian king Menander, yet there can be no doubt but that the text is corrupt, and the word Imaus should be substituted), connected with the Sanscrit himavat, " snowy" (comp. Plin. vi. 17; Bohlen, das Alte Indien, vol. i. p. 1 t ; Lassen, Ind. Alt. vol. i. p. 17), is one of those many significative expressions which have been used for mountain masses upon every zone of the carth's surface (for instance, Mont Blanc, in Sarcy, Sierra

Nerada, in Granada and California), and survives in the molern Himidaya.

From very early times the Greeks were aware of a great line of meuntains rumning thronghout Central Asia, nearly E. and W., between the 36th and 37th degrees of latitude, and which was known by the name of the diaphragm of Dicaearchus, or the parallel of Rtodes.
The Macedonian expeditions of Alexarder and Seleucus Nicator epened up Asia as far as the sources of the Ganges, but not further. But the knowledge which the Greeks thus ebtained of Asia was much enlarged by intercourse with other Eastern nations. The iadications given by Strabo and P'telemy (l.c.), when compared with the orographic configurativu of the Asiatic continent, recognise in a very remarkable manner the principal features of the mountain chain of Central Asia, which extends from the Cbincse province of $H$ ou $p e, \mathrm{~S}$. of the gulf of Petcheli, along the line of the Kuen-lïn (not, as has generally been suppused, the Himallaya), continuing from the Hindu-Kuish along the S. shores of the Caspian through Mizanderán, and rising in the crater-shaped summit of Damaivend, through the pass of Elburz and Ghilan, until it terminates in the Taurus in the SW. corner of Asia Minor. It is true that there is a break betwcen Taurus and the W. continuation of the Hindi-Kiush, but the celd "plateaus" of Azerbijan and Kurdistin, and the isolated summit of Ararat, might easily give rise to the supposed continuity both of Taurus and AntiTaurus from Karamania and Argaens up to the liigh chain of Elburz, which separates the dannp, wooded, and unlealthy plains of Mäzanderän from the arid "plateaux" of Irak and K'horasun.
The name of Inans was, as bas been seen, in the first instance, applied by the Greek geographers to the Hindu-Kush and to the chaia parallel to the equator to which the name of Himálaya is usnally given in the present day. Gradually the name was transferred to the colossal intersection rumning N . and S ,-the meridian asis of Central Asia, or the Belor range. The division of Asia inte "intra et extra Imaum" was unknown to Strabo and Pliny, though the latter describes the knot of mountains formed by the intersections of the Himáloya, the IIindu-Küsh, and Bolor, by the expression "quorum (Mentes Emodi) promontorimu Imaus vecatur" (vi. 17). The Bolur chain has beea for ages, with ene or two exceptions, the boundary between the empires of China and Turkestan; but the ethnographical distinction between " Scythia intra et estra Imaum" was probably suggested by the division of India into "iatra et extra Gangem," and of the whole continent into "intra et extra Taurum." In Ptolemy, or rather in the maps appended to all the editions, and attributed to Agathodaemon, the meridian chain of Imaus is prolonged up to the most northerly plains of the Irtych and Obi. The positive notions of the ancients upon the route of commerce from the Euphrates to the Seres, forbid the opinion, that the idea of an Imaus running from N. to S., and N. of the Himalaya, dividing Upper Asia inte twe equal parts, was a mere geegraphic dream. The expressions of Ptolemy are so precise, that there can be little doubt but that he was aware of the existence of the Bolor range. In the special description of Central Asia, he speaks twice of Imaus ruming from S. to N., and, indeed, clearly calls it a meridian
 14. § 1 : cump. vi. 13. § I), and places at the fout
of Iulaus the Brltae (Bûdtal, vi. 13. § 3), in the country of Little Thibet, which still bears the indigenous name of Baltistan. At the sources of the Indus are the Dalidias (vii. 1. § 42), the Dardars or Derders meutioned in the poem of the Mahabhurata and in the fragments of Degasthenes, through whom the Greeks received accounts of the region of auriferous sand, and whe occupied the S . slopes of the Indian Cancasus, a little to the W. of Kaschmir. It is to be remarked that Ptelemy doos not attach Inaus to the Comedonem Moxtes (Koundouz), but places the Imaus too far to the E., $8^{\circ}$ further than the meridian of the principal source ef the Ganges (Gungotri'). The cause of this mistake, in placing Imaus so far further towards the E. than the Bolor range, no duubt arose from the data upon which Ptolemy came to his conclusion heing selected from two different sources. The Greeks first became acquainted with the Comedorun Montes when they passed the Indian Cancasus between Cabul and Balkh, and advanced over the "plateau" of Bamian along the W. slopes of Bolor, where Alesander found, in the tribe of the Sibae, the descendants of Heracles (Strab. xvi. p. 688), just as Marco Pole and Burnes (Travels in Bokliara, vol. ii. p. 214) met with people who buasted that they had sprung from the Macedonian conquerors. The N. of Bolor was known from the route of the traffic of the Seres, as described by Marims of Tyre and Ptolemy (i. I2). The combination of notions obtained from such different sources was imperfectly made, and hence the error in longitude.

These obscure orographical relations bave been illustrated by Humboldt upon the mast logical principles, and the result of many apparently contradictory accounts is so presented as to form one connected whele. (Asie Centrate, vol. i. pp. 100 -164, vel. ii. pp. 365-440.)

The Bolor range is one link of a long series of elevated ranges running, as it were, from S. to N., which, with ases parallel to each other, but alternating in their localities, extend from Cape Comerin to the Icy Sea, between the 64th and 75th degrees of longitude, keeping a mean direction of SSE. and NNW. Lassen (Indische Alterthumskunde) coincides with the results obtained by Humboldt. [E. B. J.]

I'MBRASU'S ('I $\mu \mathrm{E}_{\mathrm{paoos}}$ ), one of the three small rivers flowing duwn from Mount Arapelus in the island of Sames. (Strab. xiv. P. 637 ; Plin. v. 37.) According to a fiagment from Callimachus (213; cemp. Schol. ad Apollon. Rhod. i. 187, ii. 868), this river, ance called Pauthenius, flowed in front of the ancient sanctuary of Hera, outside the town of Samos, and the goddess derived from it the surnane of Imbrasia.
[L. S.]
IMBRINIUM. [SAMNIUM.]
 the Aegaean sea, off the SW, coast of the Thracian Chersonesus, and near the islands of Samothrace and Lemnos. According to Fliny (iv. 12. s. 23), Imbros is 62 miles in circumference; but this is nearly double its real size. It is meuntainous and well wooded, and its highest summit is 1845 feet above the level of the sea. It contains, however, several fertile valleys, and a river named Ilissus in antiquity. (Plin. l.c.) Its town on the northern side was called by the same name, and there are still some ruins of it remaining. Imbras was inhabited in early times by the I'elasgians, and was, like the neighbouring island of Samethrace, celebrated for its
worship of the Cabeiri and Iternes, whem the Carians called Itmbrasus. (Stepli. B. s. r. "I $\mu$ Spos.) Both the iskand and the city of Lmbros are mentimed by Homer, who gives to the former the epithet of таита入оєббๆ. (Il. xili. 33, xiv.281, xxiv. 78, IIymn. in Apoll. 36.) The island was annexed to the l'ersian empire by Otanes, a general of Dareius, at which time it was still inhabited by l'elasgiuns. (1ferod, v. 26.) It was afterwards colonisel by the Athenians, and was no doubt taken by Miltiades along with Lemnos. It was always regarded io later times as an ancient Atheaian pussession: thus the peace of Autaleidas, which leclared the independence of all the Grecian states, pevertheless al lowed the Athenians to retain prossession of Lemnos, Imbros, and Scyros (Xen. Hell. iv. S. § 15, v. 1. § 31 ); and at the end of the war with lpilip the Romans restored to the same people the islands of Lemues, Jmbros, Delos, and Scyros. (Liv. axxiii. 30.$)$

The coins of Imbros have the ronmon Athenan emblen, the head of Pallas. Inbros seems to bave afforded gookl anchorage. The fleet of Antioehus first sailed to lobbres, and from thence crossed over to Sciathus. (Liv, sxav. 43.) The ship which catried Ovid inte esile also anchored in the harbour of Imbros, which the poet calls " Inbria

(OIN OF IMBIKOR.
tellus." (Or. Trist. i. 10, I8.) The island is still called liy its ancient name, Fimbro or Imru.

MEUS MoAS, is the name given in the Tabula f'ontingeriana to the mountain pass which leads from the bavin of the lake Fucinus to that of the Pelieni, ami was traversed by the Via Valeria on the way frotn Aiba to Corfioiun. This pass, now called the Forco Carrusi, must in all ages have beth an important line of comnunication, being a natural staldle-like depression io the ridge which Imuats the lake Fucinus on the E., so that the ascent from Coll Armeno (Certemia) to the summit of the jass (a distante of 5 miles) presents but little difficulty: The latter is the hieghest point rearhed by the lime of the Valerian Wiay m thaversing the whole breadth of Italy fiom one sia to the other, but is elovated only a few huodred fect above the lake Fucinus. The kotann rond across this pass was first renderell practicatile for carriares by the emperor Claudms, who continued the Via Valeria from Cerfenuia to the mouth of the Aterous. [Cenvenmis.] (Tub, Peut.: Hhaten. Not ad chur. p. 154: Kramar, Fucine r. Sec, pp. 14.6\%.) [E.11. 1.]

IMMADEUS' or MMMADHA, a pesition on the coast of Callia Narbobensis between Tclo (Touton) and Massilia. The distunecs along the emate nere donbtless aceurately measured, but we cannot be certain that they are accuratelygived in the Ms.s.; and it seems that the routes, especially in the parts near the coast, have been sometimes conforaded. lumadrus, the next station east of Marseille, is plated by D'Anville, and others who follow him. at the Isle

## NATUS.

de Maire; but the numbers will not agree. The real distance is much less than xii. M. P., which is the distance in the Itin.; and 1)Anville, applying his usual remedy, alters it to vii. But Walckenaer well objects to fixing on a little island or rock as the position of Immadrus, and then charging the Itinerary with being wrong. Ile finds the distance from a little bay west of Cap Morgiou to Marseille to agree with the 1 tin. measure of $12 \mathrm{M} . \mathrm{l}$. [G. L.]

IMMUNDUS SINUS (àкáधaptos кó入тos, Stral. xvii. p. 770; Diorl. iii. 39; Ptol. iv, 5. § 7; Plin. vi. 29. s. 33), the modern Foul Bay, in lat. $22^{\circ}$ N., derived its appellation from the badness of its ancborage, and the difficnlty of navigating vessels among its numerons reefs and breakers. In its farthest western recess lay the city of Berenice, founded, or rather enlarged, by Ptolemy I'biladelphus, and so named by him in honeur of his mother, the widow of Ptolemy Soter; and opposite its meuth was the island Ophiodes, famous alike for the reptiles which infested it, and its quarries of topaz. The latter was much emploged by Aegyptian artisaus for oruamenting rings, scarabaei, \&c, \&e. [Benentck.]
[W. B. D.]
NHUS PYRENAEUS, a station in Aquitania, at the northern onse of the Pyrences, on the road from Aquae Tarbellicae ( $\mathrm{Dax}^{\text {r }}$ ) to Pompelun (Pamplona) in Spain. Innss Pyrenaeus is between Carasa (Garis) and the Sammus Pyrenaens. The Summos Pyrenacus is the Sommet de Castel-Pinon; and the Inus I'yrenaeus is St. Jean-Pied-de-Port, "at the foot of the pass." The distance in the Itin, between Summus I'yrenaeus and hus I'yrenaeus is $\mathrm{v}_{\text {., }}$, which D'Anville would alter to $x$., to fit the real distanee. Walckeuner takes the measare to be Gallic leagues, and therefore the v , will be equivalent to $7 \frac{1}{2}$ M. P.
[G. L.]
INA ('IVa, I'tol.: Eth. Inensis), a town of Sicily, the position of which is wholly unknown, except that Ptolemy reckons it among the inland towns in the south of the island. (1'tol, iii. 4. § 15.) That author is the only one of the geographers that mentions it, and tho name has been thought corrupt ; but it is supported by the hest MSS. of Ptolemy, and the reading "Inenseds" is equally well supported in Cicero (Verr. iii. 43), where the old editions had "Eunenses." (Zumpt, at loc.) The orator appears to rank them among the mioor communities of the island which laad been utterly ruined by the exactions of Verres.
[E. H. B.]
INACHO'RIUM (Ivaxúptov, Ptol. iii. 17. § 2), a city of Crute, which, from the similarity of sonnd, Mr. Pashley (Trav. vol. ii. p. 78) is inclined to believe was situated in the modern district of EnneciKhoria, on the W. coast of Ciete. (Höck, Kreta, vol. i. p. 379.)
[E. B. 3.]
I'NACllus ("Ivaxos). 1. A river of the Argeia. [Argos, p. 200, b.]
2. A river in the territory of Argos Anphilochicam. [Arcios Ampinluch., p. 208, b.]

INARIME: [AENABA.]
I'NATL'S ("Ivaros, Ptol. iii. 17. § 2), a city of Crete, the same, no doubt, as Linatus ( ${ }^{( }$Eivatos, Steph. B.; Ilesych. Fitym. Magn. s. v.), sitnated on a mountain and river of the same name. The I'cuti iger Table puts a place called Inata on a river 24 M. P. E. of Lisia, and 32 M. I. W. of Hierapytna. These distances agree well with the three or four hamlets known by the name Kasteliand, derived from the Vinetian fortress. Castle Belvedere, situated on a hill a little to the N . of the villages. The
goddess Eileithyia is said to have been worshipped here, and to have obtained one of her epithets from it. (Callim, Fr. 168; Pashley, Trav. vol. i. p. 289; Höck, Kreta, vol. i. p. 412.)
[E. B. J.]
INCARUS, on the coast of Gallia Narbonensis, is placed by the Itin. next to Massilia. It is west of Massilia, and the distance is 12 M . P. The place is Carry, which retains its name. The distance of the Itin. was probably estimated by a boat rowing along the coast ; and a good map is necessary to show how far it is correct.
[G. L.]
INCRIO'NES ('I $\gamma \kappa \rho i \omega \nu \in s$ ), a tribe of the Sigambri, mentioned only by Ptolemy (ii. 11. §9). They appareotly occupied the southernmost part of the territory inhalited by the Sigambri. Some believe them to be the same as the Juhones of Tacitus (Ann. xiii. 57 ), in whase territory an extensire conflagration of the soil occurred in A. D. 59. Some place them near the mouth of the river Lahn and the little town of Engers; while others. with less probability, regard Ingersheim, on the Neckor, as the place once inlabited by the Incriones. [L. S.]

INDAl'RATHAE ('l $\nu \delta a \pi \rho a \hat{\theta} \theta a$, Ptol. viii. $2 . \S 18$, a name, donbtless, connected with the Sanscrit In-dra-prastha), a people occupying nearly the same position as the Inerixgate.

I'NDIA ( $\bar{\eta}$ 'I $\nu \delta \check{i}$ a, Polyaen. iv, 3. § 30 ; Plin. vi. 17. s. 20 ; $\dot{\eta} \tau \bar{\omega} \nu$ ' $\mathrm{I} \nu \bar{\omega} \bar{\nu} \gamma \hat{\eta}$, Arrian, Anab. v. $4 ; \hat{\eta}$ 'Iעธิıки́, Strab. xi. p. 514 : Eth. 'I $\nu$ óós), a country of great exteot in the southern part of Asia, buunded on the north by the great cbain of the Himalaya mountaina, which extend, under variously modified names, from the Brahmaputra river on the E. to the Indua on the W., and which were known in ancient times under the names Emodus and Imans. [Emoni Montes.] These mountains separated the plain country of India to the S. of them from the steppes of Tatary on the N., and formed the water-shed of most of the great rivers with which India is so plentifully supplied. On the E. the Brahmoputra, which separates it from $A r a$ and Burmah, is its principal boundary; thongh, if the defivition of India be adopted which was io vogue among the later classical geographers, those countries as far as the commencement of the Chinese empire on the S. must be comprehended within the limits of India. On the S . it is bounded by the Bay of Bengal and the Indian Ocean, and on the W. by the Indus, which separates it from Gedrosia, Arachosia, and the land of the Paropanisadae. Some writers, indeed (as Lassen, Pentap. Indie. Bonn, 1827), have considered the districts along the southern spurs of the Paropamisus (or Hindu-Kush) as part of India; but the passage of Pliny on which Lassen relies would make India comprehend the whole of Afghonistan to Beluchistion on the Indian Ocean; a position which can hardly be maintained as the deliberate opinion of any ancient author.

It may, indeed, be doubted whether the Indians themselves ever laid down any accurate boundary of their country westward (Lawsof Monu,ii. v. 22, quoted by Lassen, Pentap. Indic. p. 8); though the Sorasvati (Hydraotes) separated their sacred land from Western India. Gencrally, however, the Indus was held to be their western baundary, as is clear from Straho's words (xv. p. 689), and may be inferred from Pliny's description (vi. 20. s. 23).

It is necessary, before we proceed to give the principal divisions, mountain ranges, rivers, and cities of India, to trace very briefly, through the remains of classical literature, the gradual progress of the know-
ledge which the ancient world possessed of this country; a land which, from first to last, seems to bave been to them a constant source of wonder and admiration, and therefore not unnaturally the theme of many strange and fabulons relations, which even their most critical writers have not failed to record.

Thongh the Greeks were not acquainted with India in the heroic ages, and though the name itsclf does not occur in their earliest writers, it seems not unlikely that they had some faint idea of a distant land in the far East which was very populous and fruitful. The occurrence of the names of objects of
 and others, would seem to show this. The same thing would seem to be obscurely hinted at in the two Acthiupias mentioned by Homer, the une towards the setting, and the other in the direction of the rising sun ( $O d$, i. 23, 24); and a similar inference may probably be drawn from some of the early notices of these Aethiopians, whose separate histories are perpetually confounded together, many things being predicated of the African nation which conld be only true of an Indian people, and vice versà. That there were a people whom the Greeks called Aethiopes in the neighbourhood of, if not within the actual boundaries of India, is clear from Herodotus (vii. 70), who states in another place that all the ludians (except the Daradae) resembled the Aethiopians in the dark colour of their skins (iii. 101); wlile abundant instances may be observed of the intermixture of the accounts of the African and Indian Aethiopians, as, for example, in Ctesias (Indic. 7, ed. Bähr. p. 354), Pliny (viii. 30.3), who quotes Ctesias, Scylax, in his description of India (ap. Philostrat. lit. Apoll. iii. 14), Tzetzes (Chil. vii. 144), Aelian (II. An. xvi. 31), Agatharchides (de Rubro Mari, p. 44, ed. Huds.), Pollux (Onomast. r. 5), and many other writers. Just in the same way a confusion may be noticed in the accounts of Libya, as in Herodotus (iv. 168-199; cf. Ctesias, Indic. 13), where he intermixes Iudian and African tales. Even so late us Alexander's invasion, we know that the same confusion prevailed, Alexander himself believing that he would find the sources of the Nile in India. (Strab. xv. p. 696; Arrian, Erp. Alex. vi. 1.)

It is not remarkable that the Greeks shonld have had but little knowledge of India or its inhabitants till a comparatively late period of their history, and that neither Homer nor Pindar, nor the great Greek dramatists Sophocles and Euripides, should mention by its name either India or any of its people. It is probable that, at this early period, neither commerce nor any other canse had led the Greeks beyond the shores of Syifa eastward, and that it was not till the Persian wars that the existence of vast and populous regions to the E. of Persia itself became distinctly known to them. Some individual names may have reached the ears of those who inquired; perliaps some individual travellers may have heard of these far distant realms; such, for iostance, as the physician Democedes, when residing at the court of Dareius, the son of Hystaspes (Herod. iii. 127), and Democritus of Abdera (n. C. $460-400$ ), who is said by several authors to bave travelled to Ecypt, Persia, Aethiopia, and India (Diog. Laërt. ix. 72; Strab. xvi. p. 703 ; Clem. Strom, i. p. 304; Suidas, s. v.). Yet little was probally known beyond a few names.

The fist historian who speaks clearly on the subject is Hecataeus of Miletus (B.C. 549-486). In the few fragments which remain of his writings, and which have been carefully collected by Klausen (Berl,
1831), tho Indi and the Judns (Fragra. 174 and 178), the Argante (Fragm. 176), the people of Opia on the banks of the ladus (Fragm. 175), the Calatiae, (Fragm. 177; Herod. iif. 38 ; or Calmatia, Ilemed. iii. 97), Gandari and the Gandarii (Fraym, 17s) and their city Caspapyrus (fragm. 179: ('aspatyrus, Herod, iti. 102, iv. 44), are mentioned, in company with other Eastern places. Further, it appears, from the testimony of IIerodotus, that scylax of Caryanda, who was sent by Darcins, uavigated the Indus to Caspatyrus in lactyice, and thence along the Erythracall sea by the Arabian gulf to the coast of Eirypt (iv. 44); in the course of which voyage he must have seen something of India, of which he is said to luve recorded seseral inarvels (cf. Aristot. Polit. vii. 14; 1'lilostr. l'it. Apoll. Tyun. iii. 14; T'zetc. Chil. vii. 144); thongh Klausen has shown satisfactorily, in his edition of the frasments which remain, that the Periplas asually ascribed to this Scylax is at least as late as the time of Philip of Macedon.

The notices preserved in Herolutns and the remains of Ctesias are somewhat fuller, hoth having land opportunities, the one as a great traveller, the other as a resident for many years at the conrt of Artaxerxes, which no previous writers had had. The knowledge of Herodotns (n. C. $484-408$ ) is, however, limited to the acconnt of the satrapies of Dareins; the twentieth of which, be states, comprehended that part of India which was tribntary to the Persians (iii. 94), the country of the most Eastern people with whom he was acquainted (iii. $95-102$ ). To the S . of them, along the Indian Orean, were, according to his view, the Asiatic Aethiopians (iii. 94); beyond them, desert. He adds that the Indians were the greatest and wealthiest prople known; he speaks of the Jndus (on whose banks, as well as on those of the Nile, crocodiles were to be seen) as flowing through their land (iv. 44), and mentions by name Cayatyrns (a town of I'tctyice), the nomadic Padai (iii. 99), and the CaLatiae (iii. 38) or Calantite (iii. 97). He places aloo in the seventh satrapy the Gandarii (iii. 91) [(inndarae], a race who, under the name of Gundharas, are known as a genuine Sunseritspeaking tritie, and who may therefore be considered as comeeted with India, though their principal seat secms to have been on the W. side of the Indus, probably in the neighbonitiood of the present Candahiat.

Ctesias (about r. C. 400 ) wrote twenty-three Luoks of I'ersica, and one of Indica, with other works on Asiatic suljeets, These are all lost, exeept some fragments preserved by lhotias. In his Persica be mentions sume places in Bactria (Frogm. 5 , (vd. Bailr) and Cyrtaea, on the Frythracan sea (Fragm. 40); and in his Indicut he gives an account of the Indus, of the manners and customs of the matives of India, and of its productions, sunc of which bear the stamp of a too credulous mind, but are not altugether minteresting or valueless.

On the advance of Alesiuder through Bactrima to the banks of the Indus, a new light was thrown on the geography of Iudia; and the (izecks, for the first time, acquired with tolerable accuracy some knowledge of the chief features of this rennarkable country: A number of writers - some of them wffieers of Alexander's army-deroted themselves to a description of different parts of his route, or to an account of the events which took place during his progress from Babylon to the IIyphasis ; and tio
the separate narratives of Beton and Diognetns, Nearchus, Onesicritus, Aristobulns, and Callisthenes, coadensed and extracted by Strabo, Pliny, and Arrian, we owe most of onr knowledge of India as it appeared to the ancients. Nune of the original works of these writers have been preserved, but the voyage of Nearehus (the most important of them, thoogh the places in India he names are few in number) las been apparently given by Arrian (in his Iudica) with considerable minnteness. Ncarchus seems to have kept a day-book, in which he entered the distances between each place. IIe notices Pattala, on the Judus (from which he started), and Coreatis (perbaps the present Kurdchi). Pliny, who calls this voyage that of Nearchns and Onesicritus, adds some few places, not noticed by Arrian (vi. 23. s. 26). Onesicritns himself considered the land of the lodians to be one-third of the whole inhabited world (Strab. xy, p. 691), and was the first writer who noticed Taprobane (Ceylon). (1hid. p. 691.) Both writers appear, from Strabo, to have left interesting memoriais of the manners and customs of the natives (Strab. xi. p. 517, xv. p. 726) and of the natural history of the conntry. (Strab. xv. Pp. 693, 705, 716, 717 ; Aclian. Hist. An. xvi. 39, xvii. 6; Plin. vi. 22. s. 24, vii. 2. s. 2; Tzetz. Chit. iii. 13.) Aristobulus is so frequently quoted by Arrian and Strabo, that it is not improbable that he may have written a distinct work on India: lie is mentioned as poticing the swelling and floods of the rivers of the Parjiib, awing to the melting of the snow and the min (Strab. xv. p. 691), the moutlis of the Indus (p. 701), the Brachmanes at Taxila (p. 714), the trees of Hyrcania and India (xi. p. 509), the rice and the mode of its tillage (x). p. 692), and the fish of the Nile and Indus, respectively (xv. p. 707, xvii. p. 804).

Subseqnently to these writers,-probably all in the carlier part of the third century D. C., -were some others, as Megasthenes, Daimachux, Patrocles and Timosthenes, who contributed considerably to the increasing stock of knowledge relative to lndia. Of these, the most valuable additions were those acquired by Megasthenes and Daimachus, who were respectively ambassadors from Seleacus to the Courts of Sandrocottus (Chandragopta) and his successor Allitrochades (Strab. ii. p. 70, xv. p. 702 ; Plin. vi. 17. s. 21), or, as it probably ought to be written, Annitrochades. Megasthenes wrote a work often quoted by subsequent writers, which lie called $\tau \grave{a}$ 'ly p. 132 ; Joseph. c. Apion. i. 20, Antig. x. 11. §ु 1), in which be probably embodied the results of lifis observations. From the fragments which remain, and which have been carefully collected by Schwanbeck (Megusthenis Indiea, 1sonn, 1846), it appears that he was the first to give a tolerably accurate account of the breadth of India,-making it about 16.006 stadia (Arr an, iii. 7,8 ; Strab. i. p. 68. $\mathrm{xv}, \mathrm{p}, 6 \mathrm{8} 9$ ), -to mention the Ganges by name, and to state that it was larger than the Indus (Arrian, v. 6,10 , Intic. 4,13 ), and to give, besides this, smme nutice of an less than fifteen tribntaries of the Indus, and nineteen of the Ganges. He remarked that Itdia contained 118 uations, and so many cities that they could not be numbered (Arrian, Indic. T, 10) ; and observed (the first among the Grecks) the existence of castes among the people (Strab. xv. Y. 703; Arrian, Ind. 11, 12; Diod. ii. 40, 41; Solin. c. 52), with some peculiarities of the Indian religions system, and of the Brachmanes (or Broht
nans). (Strab. xv. pp. 711-714; Clem. Alex. Stron. i. 131.) Again Daimachns, who lived for a long time at Palibothra (Strab. ii. p. 70), wrote a work apon India, which, though according to Strabo full of fables, must also hare contained much valuable information. Patrocles, whom Strabo evidently deemed a writer of veracity (Strab, ii. p. 70), as the admiral of Seleucus, sailed upon the Indian Ocean, and left an acconnt, in which he stated his belief that India was the same breadth that Megasthenes lad maintained (Strab. ii. p. 69. xv. p. 689); but also that it could be circumnavigatedan erroneous view, which seems to have arisen from the idea, that the Caspian Sea and the Northern Ocean were comnected. (Strab. ï. p. 74, xi. p. 518 .)
With the establishment of the mathematical schools at Alexandria, commenced a new aera in Grecian geography; the first systematic arrangement of the divisions of the earth's surface being made by Eratosthencs (b.c. 276-161), who drew a series of parallels of latitude-at unequal distances, however -threugh a number of places remotely distant from one another. According to his plan, his most sonthern parallel was extended through Taprobane and the Cinnamon coast (the SE. end of the A rabian Gulf); his second paralle] (at an interval of 3400 stadia) passed though the S. coast of India, the mouths of the Indus and Meroë; his third (at an interval of 5000 stadia) passed through Palibothra and Syene; his fonrth (at a similar interval) connected the Upper Ganges, Indus, and Alexandria; his fifth (at an interval of 3750 stadia) passed through Thina (the capital of the Seres), the whole chain of the Emodus, Imaus, Paropamisus, and the island of Phodes. (Strab. i. p. 68, ii. Pp. 113-132.) At the same time he drew seven parallels of longitude (or meridians), the first of which passed through the E. coast of China, the second through the months of the Ganges, and the third throngh those of the Indus. His great geographical error was that the intersection of his meridians and latitudes formed right angles. (Strah. ii. pp. 79, 80, 92,93.) The shape of the inhabited portion of the globe be compared to a Macedonian Chlamys extended. (Strab. ii. p. 118, xi. p. 519 ; Macrob. Somn. Scip. ii. 9.) The breadth of India between the Ganges and Indus he made to be 16,000 stadia. Taprobane, like his predecessors, he held to be 5000 stadia long.

Hipparchus (about b.c.150), the father of Greek astronomy, followed Patrocles, Daimachns, and Megasthenes, in his view of the shape of India; making it, however, not so wide at the S. as Eratosthenes had made it (Strah. ii. pp. 77, 81), but much wider towards the N. , even to the extent of from 20,000 to 30,000 stadia (Strab. ii. p. 68). Taprobane he held not to be an island, bnt the commencement of another continent, which extended onward to the S. and W.,-following, probably, the idea which had prevailed since the time of Aristotle, that Africa and SE. India were connected on the other side of the Indian Ocean. (Mela, iii. 7. § 7; Plin. vi. 22. s. 24.) Artemidorus (abont n.c. 100) states that the Ganges rises in the Montes Emodi, flows S. till it arrives at Gange, and then E. by Falibothra to its mouths (Strah. xv, p. 719) : Taprobane he considered to be abont 7000 stadia long and 500 broad (Steph. B.). The whole breadth of India, from the Ganges to the Indus, he made to be 16,000 stadia. (Plin. vi. 19. s. 22.)

The greater part of all that was known up to his
time was finally reduced into a consistent slape by Strabo (n. с. 66-A. D. 36). His view of India was not materially different from that which had been the received opinion since Eratosthenes. He held that it was the greatest and most Eastern land in the world, and the Ganges its greatest stream (ii. p. 130, xv. pp. 690, 719); that it stretched S. as far as the parallel of Meroe, but not so far N. as Hipparebus thought (ii. pp. 71, 72, 75); that it was in shape like a lozenge, the S. and E. being the longest sides. Its greatest breadth was 16,000 stadia on the E., its least 13,000 on the W. ; its greatest length on the S., 19,000 stadia. Below the S. coast he placed Taprobane, which was, in his opinion, not less than Great Britain (ii. p. 130, xv. p. 690). Pliny the Elder and Pomponius Meta, who were contemporaries, added somewhat to the geographical knowledge previously acquired, by incorporating into their works the results of different expeditions sent ont during the earlier emperors. Thus, Pliny follows Agrippa in making India 3300 M. P. long, and 2300 M. P. broad, though be himself suggests a different and shorter distance (vi. 17. s. 21); while, after Seneca, be reckoned that it contained 118 peoples and 60 rivers. The Emodus, Imaus, Paropamisus, and Caucasus, he connected in one continued chain from E. to W., stating that S. of these great monntains, the land was, like Egypt, one vast plain (vi. 18. s. 22), comprehending many wastes and much fruitful land (vi. 20. s. 23). For a fuller notice of Taprobane than had been given by previons writers, he was indebted to the ambassadors of the emperor Claudins, from whom he learnt that it had towards India a length of 10,000 stadia, and 500 towns,-one, the capital, Palaesimundum, of vast size. The sea between it and the continent is, he says, very shallow, and the distance from the nearest point a journey of four days (vi. 22. s.24). The measurements of the distances round the coast of India he gives with some minuteness, and in some instances with less exaggeration than his predecessors.

With Marinus of Tyre and Clandius Ptolemaens, in the middle of the second centary, the classical knowledge of geography may be said to terminate. The latter, especially, has, in this branch of knowledge, exercised an influence similar to that of Aristotle in the domain of the moral and physical sciences. Both writers took a more comprehensive view of India than had been taken before, owing in some degree to the journey of a Macedonian trader named Titianns, whose travels extended along the Tanrus to the capital of China (Ptol. i. 11. § 7), and to the voyage of a sailor named Alesander, who found his way across the Indian Ocean to Cattigara (Ptol. i. 14. § 1), which Ptolemy places in lat. $8^{\circ}$ $30^{\prime} \mathrm{S}$., and between $170^{\circ}$ and $180^{\circ} \mathrm{E}$. long. Hence, his idea that the Indiau Ocean was a vast central sea, with land to the S. Taprobane he held to be four times as big as it really is (vii. 4), and the largest island in the world; and he mentions a cluster of islands to the NE. and S. (in all probability, those now known as the Maldives and Laccadives). In the most eastern part of India, beyond the Gulf of Bengal, which he terms the Golden Chersonesus, he speaks of Labadius and Maniolae; the first of which is probably that now known as Java, while the name of the second has been most likely preserved in Manilla. The main dirisions of India into India intra Gangem and India extra Gangem, bave been adopted by the

INDIA.
majority of sulsequent geographers, from P tor ${ }^{1}$ mom Sulbequent to this date, there are few works whath tall within the rauge of classical geograplay. is which have added any information of real value mu the subject of Iudia; while most of them have borrowed from l'tulemy, whose comprehensive work was soon a text-book in the hands of leanned men. From Agathemerus (at the end of the second century) and Hionysins Periegetes (fowards the end of the third centary) some few particulars may be gleaned: - as for instance, from the latter, the establishment of the Indo-Scythi alone the bauks of the Indus, in Scinde and Giverat; ann, froun a work known by the mame of Periplus, Maris Erythraei (the date of which, thoueh late, is not certainly determined), some interesting notices of the shores of the Indian Ueen. Festus. Avienus, whose paraphrase of Dinysias Periegetes supplies some Lacunace in other parts of his work, adds nothiug of interest to his metrical account of Indian Geography.

Such may serve as a concise outline of the progress of knowledge in ancient times relative to India. Buffre, however, we proceed to describe the country itself under the rarious beads of mountains, rivers, provinces, and cities, it will be well to say a few words on the origin of the natne Indi., with some notice of the suldivisions which were in use among the earlier geographers, but which we have not thought it convenient in this place to perpetuate.

The names Indus, India, are no doubt derived from the Sanscrit appellation of the river, Sindhu, which, in the plural form, means also the people who dwelt along its banks. The adjoining countries have alopted this name, with slight modifications: thus, Hendu is the form in the Zend or old P'ersim, Hoddu in the Hebrew (Esther, i. 1, viii. 9). The Greek languace softened down the word by omitting the $h$, hence "Ivסos, "Ivסia; thungh in some instances the mative name was preserved almost unchanged, as in the इiveos of the Periplus Maris Erythraci. Pliny bears testinony to the native furm, when he says, "Indus incolis Sindus appellatus" (vi. 20. s. 23).

The great divisions of India which have been usually adopted are those of Ptolerny (vii. 1. § 1), into,- (1) India intra Gangem, a rast district, which was bounded, according to that geographer, on the W. by the Paropamisadse, Arachosia, and Gedrosia; on the N. by the Imaus, in the direction of the Sogdiani and sacac; on the E. by the Ganges, and on the S. Ly a part of the Indian Ocean: and (2) India extra Giengem (1'tol. vii. 2. §1), which was bounded on the W. by the Ganges; on the N. by Neythia and Scrica; on the E. by the Siome, and hy a line extended
 Sium) ; and on the S . by the Indian Ocean, and a line drawn from the island of Nanthias (1'tal. vii. 2. §1), whence it appears that Prolemy considered that the Ganses flowed nearly due N. and s. We have considered that this division is two arbitrary to be adopted here; we merely state it as the one proposed by Ptoleny and lome current amous geouraphers. The later ecclesiastical writers made we of other terms, as $\eta$ évö́tepe 'Ivóta, it which they included even Arabin (Suerat. H. E.. i. 19; Theml. i. 23 ;
 23).

The principal monntains of India (comsidered as a whole) wern: - the castern portion of the Pampunisns (ir Hindü-Kiush), the Imaus (Huimarot), and the Emodus (now known by the suncric mane of the Himailaya.) To the extrom E. were tho Montes

## INDIA.

Somamhini, the boundary of the land of the Sinae, tho. Mmas Darnassi, and the Bepyrrhus M. (probably the prosent Naraka M.). An extension of the 3 . 1)anasi is the Maeandrus M. (now Muin-Mura). In India intra Gangem Ptoleny mentions many mountains, the names of which cau with difficulty be supplied with their modern representatives: as the Orudii M., in the S. extremity of the land between the Tyndis and the Chaberus; the Uxentus M., to the N. of them; the Adisathrus M.; the Bittigo M. (probably the range now known as the Ghits), and the M. Vindius (unquestionably the preseut VindLyaz), which extend NE. and SW. along the N. bank of the Nerbudila; M. Sardonix (probably the present Suutpura) ; and M. Apocopa (perhaps the present A ravelli)

The principal promontories in India are:-in the extreme E., Promontorino Magnum, the western side of the Sinus Maynus; Malaei Colon, on the S. coast of the golden peninsula; Promontorium Aureac Chersonesi, the southern termination of the Simus Sabaracus, on the western side of the Chersonesus; Cory or Calligicum, between the S. Argaricus and the S. Colchicus, near the SW. end of the peninsula of Hindostan; C'omaria (now C. Comorin), the must southern point of IIindustan ; Calae Carias (or Calliearis), between the tuwns Anamagara and Muziris; Simylla (or Semylla, the southern end of the S. Barygazenus, perlaps the present C. St.John), and Maleum.

In the same direction from E. to W. are the following gulfs and bays:- the Sinus Magnus (now Gulf of Siam) ; S. P'erimulicus, and sabaricus, on the E. and W. side of the Chersonesus Aurea; S. Gangeticus (Bay of Bengal), S. Argaricns, opposite the N. end of Taprobaue (probably Pall:s Bay) ; S. Colchicus (Bay of Manaar); S. Barygazenus (Gulf of Cambay), and S. Canthi (most likely the Gulf of Cutch).

The rivers of India are very numerous, and many of them of great size. The most important (from E. to W.) are the Dorias (Salven?) and Doanas (the Irrawaddy), the Chrysoana, Besynga, the Tocosanaa (probably the present Arrakan), and the Catabeda (now Curmsul); the Ganges, with many tributaries, themselves large rivers. [Ganges.] Along the W. side of the Bay of Benyal are the Adamas (Brahmini), Dosaron (Mahanádi), Maesolus (Gonlivari), Tyndis (Kistna), and the Chaberis or Chaberus (the Caveri). Along the shores of the Indian Ocean are the Nanaguna (Tarty), the Namadus (Narmade or Nerbudda), and lastly the Indus, with its several tributaries. [Inves.]

The towns in India known to the uncients were very mumerous; yet it is remarkable that but few dotails have been given concerning them in the different authors of whose works fragments still remain. Generally, these writers seem to have been content with a simple list of the names, adding, in some instances, that such a place was an inportant mart for conmerce. The probability is, that, aven so late as I'toleny, few cities had reached sufficient importance to command the productions of an extensive surrounding country; and that, in fact, with one or two exceptions, the towns which he and othors enmmerate were little more than the head places of small districts, and in no sense capitals of great empires, such as Ghazna, Delhi, and Calcutta have lecome in later periods of Indian history. Beginning from the extreme E., the principtl states and towns mentioned in the ancient writers are: Pecinula
on the E. coast of th:e Golden Chersonesus (in the neighbourhood of Malacca); Tacola (perhaps Tazai or Tavoy); Triglyphon, in the district of the Cyrrhat diae, at the mouth of the Brahmaputra (now Tiperale or Tripura); and Cattigara, the exact position of which has heen mnch dispnted among geographers, but which Lassen has placed conjecturally in Borneo. Northward of Triglyphon are a number of small districts, abont which nothing certain is known, as Chalcitis, Basanarse, Cacobae, and Aminachae, the Indraprathae, and Iberingae; and to the W., along the swamp-lnnd at the foot of the Himalaya chain, are the Tiladae, Passalae, Corancali, and the Tacaraei. All the above may be considered as belonging to India extra Gongem.

Again, from the line of coast from E. to W., the first people along the western moaths of the Gaoges are called the Gangaridae, with their chief town Gange (in the neighbourhood of the modern Calcutto); the Calingae, with their chief towns Parthalis and Dandagula (the latter probably Calinapattana, about halfway between Mahkinadi and Godavari) ; the Maesoli and Maesolia, occupying nearly the same range of coast as that now called the Circars, with the capital Pitynda, and Contacossyla (Masulipattana ?) and Alosygna on the seacoast; W. of the Maesolus (Godadiari), the Arvarni, with the chief town Malanga (probably Mandaragja, the present Madras). Then follow the Soringi and Bati, till we come to the land of Pandion (Havoionos $\chi \omega ́ \rho a$ ), which extends to the southern extremity of the peuinsola of Hinduston, and was a district of great wealth and importance at the time of the Periplus. (Peripl. pp. 31, 33.) There can be no doubt that the land of Pandion is the same as the Indian Pandja, and its capital Modura the present Mathura. Withio the same district were Argara (whence the S. Argaricus derives its name), the Carci, and the Colchi. At the SW, end of the peninsula were Cottiara (Cochin), and Comarja, whence the promontory Comorin derives its name. Following the western coast, we arrive at Limyrica (Peripl. pp, 30, 36), mondoubtedly in the neighbourhood of Mangalore, with its cbief towns Carura (most likely Coimbatore, where a great quantity of Roman coins have been dag up during the last fifteea years) and Tyndis (io the neighbourhood of Goa); and then Musopale, Nitrae, and Mandagara; all places on the sea-coast, or at no great distance from it. Somewhat further inland, witbin the district knowo generically at the time of the Periplus by the name of Dachinabades (Dakhinabhida, or Deccan), was the district of Ariaca ('Apiaka $\Sigma a \delta a \nu \omega \bar{\nu}$, Ptol, vii. 1. $\S \S 6,82$; cf. Peripl. p. 30), with its chief town Hippocura (Nandira or IIydrabad, if not, as Ritter has imagined, the sea-port Mongalore); Baetana, Simylla (on the coast near Bassein), Omenagara (undonbtedly the celebrated fortress Akmed-nagar), and Tagara (Peripl. p. 19), the present Deogkir. Further N., the rich commercial state of Larice appears to have extended from the Namadus (Narmadá or Nerbulda) to Barygaza (Beroach) and the Gulf of Cambay. Its chief town was, in Ptolemy's time, Ozene (Oujein or $Z_{\text {Ojayini }}$ ), a place well known to the antiquaries of India for the vast numbers of the earliest Indian coinage constantly foand among its ruins: Minoagara, the position of which is donbtful, and Barygaza, the chief emporium of the commerce of Western India. North of Larice was Syrastrene (Saurashtran), to the west of the Gulf of Cambay; and still further to the westward, at the mouths of
the Indas, Pattalene (L.ower Scinde, and the neighbourbood of Kurachis), with its capital Pattala (Pötala.)

It is much more difficult to determine the exact site of the rarious tribes and nations mentioned in ancient authors as existiog in the interior of the country, thav it is to ascertain the corresponding modern localities of those which ncenpied the seacoast. Some, bowever, of them can be made out with sufficient certainty, by comparison of their classical names with the Sanscrit records, and in some instances with the modern native appellations. Following, then, the course of the Indus northwards, we find, at least in the times of Ptolemy and of the Periplus, a wide-spread race of Scythian origin, oceupying both banks of the river, in a district called, from them, Indo-Scythia. The exact limits of their country cannot now be traced; but it is probable that they estended from Pattalene on the S. as far as the lower ranges of the Hindh-Kush,- in fact, that their empire swayed over the whole of modern Scinde and the Panjob; a view which is borne out by the extensive remains of their Topes and coinage, which are found thronghout these districts, and especially to the northward, near the head waters of the three western of the Five Rivers. A great change had no doubt taken place by the saccessful invasion of a great horde of Scythians towards the close of the second century e. c., as they are known to have overthrown the Greek kiogdom of Bactriana, at the same time effacing many of the names of the tribes whom Alexander had met with two centuries before, such as the Aspasii, Assaceni, Massiadi, Hippasii; with the towns of Acadera, Daedala, Massaga, and Embolima, which are preserved in Arrian, and others of Alexander'a historians.

Further N., along the bases of the Paropamisus, Imans, and Emodus, in the direction from W. to E., we find mention of the Sampatae, the district Suastene (now Sewad), and Goryaes, with the towns Gorya and Dionysopolis, or Nagara (now Nagar); and further E., between the Suastus and the Indns, the Gandarae (one, doubtless, of the original seats of the Gondhiras). Following the mountain range to the E., we come to Caspiria (now Cushanir, in earlier times known, as we have seen, to Herodotus, under the name of Caspatyrus). Southward of Cashmir was the territory of Varsa, with its capital Taxila, a place of importance so early as the time of Alexander (Arrian, v. 8), and prohably indicated now by the extensive remains of Manikyila (Burnes, Travels, vol. i. p. 65 ), if, indeed, these are not too much to the easiward. A little further S. was the land of Pandous (חavṓóov $\chi$ đ́pa, doubtless the representative of ooe of the Pandava dynasties of early Hindu listory), during the time of Alesander the territory of the king Porus. Further eastward were the state Cylindrine, with the sources of the Sutledge, Jumna, and Ganges; and the Gangari, whose territory extended into the bighest range of the Himalaya.

Many small states and towns are mentioned in the historians of Alesander's campaigns aloug the upper Panjub, which we cannot here do more than glance at, as Peucelaotis (Puskkalkivati), Nicaea, Bucepbala, the Glaucanitae, and the Sibae or Sibi. Following next the course of the Ganges, we meet with the Daetichae, the Nanichae, Prasiaca; and the Mandalae, with its celebrated capital Palibothra (beyond all doubt the present Pitaliputra. or Patna), situated at the junction of
the Ernnoboas (IIiranjainaha) and the Gancer . with some smaller states, as the Surasmae. and the towns Methoza and Clinobra, which were subject to the l'rasii. Sonthward from I'alibothra, in the interior of the plain country, dwelt the Cucconagae, on the banks of the Adamas, the Sabitrac, the Salaceni, the Drillophyllitac, the Adeisathri. with their capital Sagids (probably the present Sohaypur), situatted on the northern spurs of the J'indhya, at no great distance from the sources of the Sonus. Between the Sonns and the Ganges were the Bolingac. In a NW. directinn, beyond the Sonus and the linulhya, we find a territory called Sundrabatis, and the Gymuosnphistae, who appoar to have orcupied the country now called Sirkind, as far as the river Sutledye. The Caspeiraci (at least in the time of Ptolemy; see Ittol, vii. I. $\S 4^{i}$ ) scem to have extended over a considerable breadth of country, as their sacred town Modura (Móסovpa $\dot{\eta}$ т $̂ \nu$ จeww) wat situated, upparently, at no great distance from the Verbudda, though its exact position has not been identified. The difficulty of identification is much, indeed, increased by the error of reckoning which prevails throughout Ptoleny, who held that the coast of India towards the Indian Ocean was in a straight lioe E. and W. from Taprobane and the Indus, thereby placing Nanaguna and the Namadus in the same parallel of latitude. On the southorn spurs of the Jindhyct, between the Namadus and Nanaguna, on the edge of the Deccon, were the I'hyllitae and Gundali; and to the E. of them, between the Bittigo M. and the river Chaburus (Civeri), the nomad Sorac ( $\sum \hat{\omega} \rho a t \nu \nu \mu \alpha \dot{\delta} \epsilon s$ ), with a chief town Sora, at the eastern end of M. Bittigo. To the sonthward of these, on the Chaberus and solen, were several smaller tribes, the Brachmani Magi, the Anibastae, Bettigi or Bitti, and the Tabassi.
All the above-mentioned districts and towns of any importance are more fully described under their respective names.

The ancients appear to have known but little of the islands which are now considered to form part of the East Indies, with the exception of Taprobane or Ceylon, of which Pliny and Ptolemy have left some consilemable notices. The reason is, that it was not till : mmeh fater period of the world's history that the Indian Arelipelago was fully opened out by its conmercial resouress to scientific ingniry. lhesides Ceylon, however, Ptolemy mentions, in its neighbourhook, a remarkable cluster of small islands, doubtless (as we have remarked hefore) those now known as the Larcodives and Muldives; the island of Iabadins (.Juna), beluw the Chersmencos Aurra: and the satyrormm Insulae, on the same parallel with the S. end of this Chersonesns, which may perhaps answer to the Anamba or Nitana inlands.

Of the covernment of tadia, consudered as a whole, comparatively little was known to the (ireek writers; indeed, with the exception of occaviotal natues of kings, it may be asserted that they knew nothing $\mathcal{E}$. of Palibuthra. Nur is this strange ; direct connertion with the interior of the comntry cemand with the fall of the Ciracen-Bactrian empire; from that perriokt almost all the information about Inulia which found its way to the nations of the Wirst was derived from the merchants and others, who mate voyages to the diffierent out-ports of the cosmery. It may be worth while to state briffly here sume of tho principal rulers mentioned by the lirerk and Homan writers; premising that, previous to thy ad. vance of Alexander, history is on these spljects
silent. Previous, indeed, to Alexander, we have nothing on which we can rely. There is no evidence that Darins himself invaded any part of India, though a portion of the NII. provinces of Bactria may have paid him tribute, as stated by Herodotus. The expeditions of Dionysus and Hercules, and the wars of Sesostris and Semiramis in India, can be considered as nothing more than fables too eredulously recorded by Ctesias. At the time of the invasion of Alexander the Great, there can be no doubt that there was a settled monarchy in the western part of India, and his dealings with it are very clearly to be made out. In the north of the Panjub was the town or district Taxila (probably Manikyâla, or very near it), which was ruled by a king named Taxiles; it being a frequent Indian custom to name the king from the place he ruled over. His name in Diodorus is Mophis (xvii. 86), and in Curtius, Omphis (viii. 12), which was probably the real mne, and is itself of Indian origin. It appears that Alexander left his country as he found it. (Strah. xv. pp. 698, 699, 716.) The name of Taxiles is not mentioned in any Indian author. The next ruler Alexander met with was Porus (probably Paurava Sanser., a change which Strabo indicates in that of $\Delta$ apaainy into $\Delta a p e \hat{o} \nu$ ), with whom Taxiles had been at war. (Arrian, v. 21.) Alexander appears to have succeeded in reconciling them, and to have increased the empire of Porus, so as to make lis rule comprehend the whole conntry between the Hylaspes and Acesines. (Arrian, v. 20, 21, 29.) His conntry is not named in any Indian writer. Sbortly afterwards, Alcxander reccived an embassy and presents from Abisaris (no doubt Abhisaria), whose territory, as has bren shown by Prof. Wilson from the Analls of Cashmir, must have been in the mountains in the southern part of that province. (Asiat. Res. vol. xv. p. 116.) There had been previonsly a war between this raler and the Malli, Oxydracae, and the People of the Lover I Ianjub, which bad ended in nothing. Alexander contirmed Abisaris in the possession of his own territory, made I'hilip satrap of the Malli and Oxydracac, and Pytho of the land between the confluence of the Indus and Acesines and the sea (Arrian, ri. 15) ; placing, at the same time, Oxyarces over the l'atoparnisadae. (Arr. vi. 15.) It may be observed that, in the time of Ptolemy, the Cashmirians appear to have hold the whole of the Panjab, so far as the linelhyge mountains, a portion of the southern conntry being, bowever, in the hands of the Malii and Cathaci.

The same state of things prevailed for some time after the death of Alexander, as appears by a decree of Perdiccas, mentioned in 1hindorus (xviii. 3), and with little matcrial change under Antipater. (Diod. xviii. 39.) Indeed, the provinces remained true to the Macedoniars till the commencement of the rule of the 1'rasii, when Sandrocottus took up arms against the Macedorian governors. (Justio. xv. 4.) The origin of this rebellion is clearly traceable. Porus was slain by Eudamus about b.e. 317 (Diol. xix. I4) : hence Sundrocottus must have been on the throne about the time that silenens took Babylon. B.e. 312 . The attempt of the ludians to recover their freedom was probably aided by the fact that Porus land been slain by a (ireck. Saudrucottus, as king of the Prasii (Sinsc. Prachya) and of the nations on the Ganges, made war with selenens Nicator, who penetrated far into India. Plutarch says he ruled over all India, but this is not likely. (Ilhut. Alex. 62.) It apprais
that he ernssed the Indus, and obtained by marriage Arachosia, Gedrosia, and the Paropanisadae, from Seleucus. (Strab. xv. p. 724 : Appian, Syr. 55.) It was to his conrt that Megasthenes (as we have before stated) was sent. Sandrocottus was succeeded by Amitrochates (Kansc. A mitroghides), which is almost certaialy the true form of the name, though Strabo calls him Allitrochades. He was the contemporary of Antiochns Soter. (Athen. xiv. 67.) It is clear, from Atheoaens (l. c.), that the same friendship was maintained between the two descendants as between the two fathers. Daimachns was sent as ambassador to Palihothra. (Strab. ii. p. 70.) Then came the wars between the Parthians and Bactrians, and the more complete establishment of the Graeco-Bactrian kingdon, under Menaader, Apollodotus, Encratides, and their successors, to which we cannot here do more than allude. The effect, however, of these wars was to interrupt communication between the East and the West; hence the meagre nature of the historical records of the period. The expedition of Antiochus the Great to India brought to light the mame of another king, Sophagasenus (Polyb. xi. 32), who was, in all probability, king of the Prasii. The Scythians finally pht an end to the Bactrian empire about B. c. 136. (De Guignes, Mém. de l'Acad. d. Inser. xxv, p. 17.) This event is noticed in the Periplus (p. 22), where, huwever, Parthi must be taken to mean Scythi. (See also Periptus, p. 24 ; Dionys. Perieg. vv. 1087 -1088.) Enstathius adds, io his commentary on
 vor. Minnagara was their chief town, a name, as appears from 1sid. Char. (p. 9), which was partly Scythian and partly Sanscrit. (Cf. also De Guignes, l. c.)

The Scythians were in their turn driven out of India by Vicrámaditya, about b. c. 56 (Colebrooke, Ind. Alyebra, Lond. 1817, p. 43), who established his seat of empire at Oujein (Üjayini). At the time when the Periplus was compiled, the capital had been

It is remarkable that no allnsion has been found in any of the early literature of the Hindús to Alexander the Great; but the effect of the later expeditions of the Bactrian kings is apparently indicated under the name of the Yavana. In the astronomical works, the Yavana are barbarians who understood astronomy, whence it has been conjectured by Colebrooke that the Alexandrians are referred to. (Ind. Algebra, p. 80.) Generally, there can be no donbt that the Favana mean nations to the W. of India. Thns, in the Mahabhirata, they make war on the Indians, in conjunction with the Páradi (i. e. Parthi), and the Sacae or Scythiuns. (Lassen, Pentap, p. 60.) In the Drama of the Mudra-Haxasa, which refers to the war between Chandragupta and another Indian King, it is stated that Cusumapura (i. e. Palibothra) was surronnded by the Cirratae, Yavani,Cambogi, Persne, Bactrians, and the other forces of Chandragupta, and the kiug of the Mountain Regions. Lassen thinks, with much reason, that this refers to Seleucus, who, in his war with Chandragupta, reached, as we know, Palibothra. (Plin, vi. 17.)

With regard to the commerce of ancient India, which we have every reason to suppose was very extensive, it is inpossible in this place to do more than to indicate a few of the principal facts. Indeed, the commerce of Ludia, including the northern and the southern districts, may be considered as an epitome of the commerce of the world, there being few provoL If.
ductions of any other country which may not be found somewhere within its vast area.

The principal directions in which the commerce of ancient India flowed were, between Western India and Africa, between the interior of the Deccan and the ontports of the southern and western coast of the Indian Ocean, between Ceylon and the ports of the Coromandel coast, between the Coromandel coast and the Anrea Chersonesus, and, in the N., along the Ganges and into Tatary and the territory of the Sinae. There appears also to have been a remarkable trade with the opposite coast of Africa, along the district now called Zanguebar, in sesamum, rice, cotton goods, cane-honey (sugar), which was regularly sent from the interior of Ariaca (Concan) to Barygaza (Beroach), and thence westward. (Peripl. p. 8.) Arab sailors are mentioned who lived at Muza (Mocha), and who traded with Barygaza. (Peripl. p. 12.) Banians of India had established themselves on the N. side of Sucotra, called the island of Dioscorides (Peripl. p. 17) : while, even so early as Agatharchides, there was evidcatly an active cotnmerce between Western India and Yemen. (Agatharch. p. 66, ed. Hudson.) Again, the rapidity with which Alexander got his fleet together seems to show that there must have been a considerable commerce by boats upon the Indus. At the time of the Periplus there was a chain of ports along the western coast, - Barygaza (Beroach), Maziris in Limyrica (Mangalore), Nelkynda (Neliceram), Pattala (once supposed to be Tatta, but much more probably $\mathrm{Hy}_{\mathrm{y}}$ drabud), and Calliene, now Gallian (Peripl. p. 30): while there were three principal emporia for merchandise, - Ozene (Oujein), the chief mart of foreign commerce, (vide an interesting account of its ruins, Asiat. Res. vol. vi. p. 36), and for the transuission of the goods to Barygaza; Tagara, in the interior of the Deccon (almost certainly Deoghir or Devanagari near Ellora), whence the goods were conveyed over difficult roads to Barygaza and Plathana or Plithana, a place the exact position of which cannot now be determined, but, from the character of the products of the place, must have been somewhere ia the Ghats.

Along the Regio Paralia to the S., and on the Coromandel coast, were several ports of consequence; and extensive pearl fisheries in the kingdom of king Pandion, near Culchi, and near the island of Epiodorus, where the $\pi a \nu \nu k o ́ \nu$ (a silky thread spun from the Pinna-fish) was procured. (Peripl. p. 33). Forther to the N. were, - Masalia (Masulipatam), famous for its cotton goods (Peripl. p. 35); and Gange, a great mart for muslin, betel, pearls, \&c., somewhere near the mouth of the Ganges, its exact locality, however, not being now determinable. (Peripl. p. 36.) The commerce of Ceylon (Selundib, i. e. Siuhala-ducipa) was in pearls of the best class, and precious stones of all kinds, especially the ruby and the emerald. The notices in Ptolenny and Pliny shew that its shores were well furnished with commercial towns (Ptol. vii. 4. §§ 3, 4,5), while we know from the barrative of Cosmas Indicoplenstes ( $a p$ p. Muntfaucon, Coll. Nova Bibl. Patr, vol. ii.) that it was, in the sixth century A.D., the centre of Hindu commerce. Besides these places, we learn that there was an emporinm upon the Coromandel coast, whene the merchant ships crossed over to Cliryse (in all probability Malacca), in the Anrea Chersonesns; the name of it, however, is not specified.

It is probable, however, that the greatest line of commerce was from the N. and W. along tho E

Ganges, commencin; with Taxila near tho Indns, or Luhore on that river, and prosing thence to Palibothra. This was called the lonyal Koud. It is remarkable that the Ramayana describes a raad from Ayodbiyn (Oude), over the Gaoges and the Jumnt, to Ilastinapura and Lathore, which must be nearly identical with that mentioned in tho Greck grographers. The commerce, which appears to have existed between the interior of Asia, India, and the land of the sinne and Serica, is very remarkable. It is stated that from Thina (the capital of the Sinae) fine cottons and silk were sent on foot to liactra, and thence dorn the Ganges to Limyrica. (1'eriph. p. 36.) The Periplus speaks of a sort of annual fair which was held within the territory of the Thinae, to which malabathron (betel) was imported from India. It is not casy to make oot whereabouts Thina itself was situated, and none of the modem attempts at identification appear to us at all satisfactory: it is clearly, however, a northern town, in the direction of Ladetakh in Thilet, and net. as 1 tolemy placed it, at Malacoa in Tenasserin, or; us Vincent ( Voyage of Nearchus, vol, ii. p. 735) conjectured, at Arracem. It is carions that silk should be so constantly mentioned as an article of import from other countries, especially Serica, as there is every reason to suppose that it was indizenous in India; the name for silk tbrougbout the whole of the Indian Archipelago being the Sanserit word sutra. (Colebrooke, Asiat. Res. vol. v. p. 61.)

It is impossible to give in this work any detnils as to the knowledge of aneient India exJibited in the remains of native poems or histories. The whole of this subject has beer. examined with great ability by Lassen in his Indische Alterthumaskunde; and to his pares, to which we are indebted fin most of the Sianserit names which we have from time to time inserted, we must refer our readers. From the careful comparison which has been made by Lassen and other orientalists (among whom l'ott deserves especial mention) of the Indian names presorved by the Greek writers, a great amount of evidence has been adduced in favour of the general f tithfulness of those who recorded what they sam or heard. In many instances, as may be seen hy the names we have already quoted, the Greek writers lave been content with a simple adaptation of the sounds which tbey heard to thonse best suited for their own promunciation. When we consider the barbarons words which have come to Elurope in modern times as the Europen representations of the naturs of places and peoples existing at the present time, we have reason to be surprised at the arcuracy with which Greork ears appreciated, and the Greek lameuare preserred, names which must have appeated to Grecks far more barbarous than they would thave seemed to the modern conquerors of the conntry. The attention of modern selolars has detected many words of genuine Indian orijin in a Greek dress; ond an nble essay by lrof. Tychem on such words in the fragments of Ctesias will repay the perusal of those who are iuterested in such subjects. (Siee Hecren. Asiatic N'ations, vol. ii. Append. 4, ed. Jond. 1846.)

The generic name of the inlabitants of the whole country to the E. of Persia and S. of the Himallaya nountains (with thic exception of the Scres) was, in amement times, Inns (ivooi). or Indians. It is true that the appellation refered to a much witer or math lows extensive range of eomutry, at differant periods it listory. There a.a, homever, be nol If bit, that
when the ancient writers speak of the Indr, they mean the inhabitants of a vast territory in the SE. part of Asia. The extension of the meaming of the name depended on the extension of the knowledge of Irdia, and may be traced, thongh less completely, in the same manner as we liave traced the cradoal progreas of knowledge relative to the land itself. The Iddi are mentioned in more than one of the fragments of Hecataeus (Hecat. Fragm. 175, 178), and are stated by Aeschylos to have been a peuple in tho neighbourhood of the Aethiopians, who made use of camels. (Suppl. 284-287.) Herodotas is the first ancient author who may be said to give any real description of them; and he is led to refer to them, only because a portion of this country, which aljoined the territory of Dareius, was included in ono of the satrapies of his rast empire, and, therefore, paid bim tribute. Some part of his narrative (iii. 94-106, iv, 44, vii. 65) may be durbted, as clearly from bearsay eridence; some is certainly fabulous. The sum of it is, that the lndians were the most popalous and richest nation which be knew of (iii. 94), and that they consisted of many different tribes, speaking different languages. Some of them, he states, dwelt in the immediate neighbourlood of the Aethiopians, and were, like them, black in colnur (iii. 98. 101); some, in the marshes and desert land still furtber E. The manners of these tribes, whom he calls Padaei, and Callatiae or Calantiae, were in the lowest grade of civilisation,-a wandering race, living on raw flesh and raw fish, and of cannibal halits (Cf. Strab. xy. p. 710, from which Mannert, v. 1. p. 3, infers that the Padaei were not after all genuine Indians, but 'Titars.) Others (and theve were the most warlike) occupied the more uorthern districts in the neighbourhood of Caxpatyrus (Cashmir) in the Rcyio Pactyice. Herodotus places that part of India which was subject to Darcius in the 20th satrapy, and states that the annual tributo from it amounted to 360 talents (iii. 94). Nenophon speaks of the Indians as a great nation, and one worthy of alliance with Cyaxares and the Mledes (i. 5. § 3, iii. $2 . \S 25$, vi. $2 . \S 1$ ), though he dues not specify to what part of India he refers. That, however, it was nearly the same as that which Herodotus deseribes, no one can doubt.
From the writers subsequent to Alexander, the folluwing particulars relative to the people and their manners may be gathered. The ancients considered that they were divided into seren castes:-1. Prieste, the royal comsellors, and nearly connected with, if not the same as, the Bpaxuâves or Brahmins. (Strab. xv. pp. 712-716; Arrian, Ind. 11.) With these Straho (l.c.) makes another class, whom he calls rapuâves. These, as Grosskurd (iii. p. 153) has suguested, would seem, from the description of their habits, to lave been fakivg, or penitents, and the same as the Gymnosophistae so often mentioner? hy Strabo and Arrian. This caste was exempted from taxes and service in war. 2. /hushandmen, who were free from war-service. They were the mrat numerous of the seven castes. (Strab, xv. p. 704.) The land itself was lield to belong to the king, who farmed it out, Jeaving to the cultivator one-fourth of the produce as his share. 3. Ilunters and shepherds, who lead a wandering life, their office being to rear eattle and beasts of burden; the horse and the elephant were held to be for the kings only. (Strab. 1. c.) 4. Artizans and handierafismen, of all kinds. (Strah. xv. p. 707.) 5. H'arriors. (Strab. l. c.) 6. Political officters (ěp por, Stral.
l. c.), who looked after affairs in the towns, \&.e., and repnted secretly to the king. 7. The Royal Comsellors, who presided over the administration of justice (Strab. l.c.), and kept the archives of the realm.

It was not permitted for intermarriages to take fhee between any of these elasses, nor for any one to perform the office allotted to another, except in the case of the first caste (called also that of the фinобофоt), to which class a man might be raised from any of the other classes. (Strab. l. c.; Arrian, Ind. c. 12; Diod. ii. 41 ; Plin. vi. 19. s. 22.) We may remark that the modern writers on India recognise only four castes, called respectively Brahmans, Kishatryas, Vaisyas, and Sudrus, - a division which Heeren has snggested (we think without sufficient cvidence) to indicate the remaius of distinet races. (Asiat. Nat. vol. ii. p. 220.)

The lowest of the people (now called Parjahs), as belunging to none of the above eastes, are nowhere distinetly mentioned by aneient writers (but ef. Strab. xv. p. 709; Diod. ii. 29 ; Arrian, Ind. c. 10).

The general description of the Indians, drawn from Mcgasthenes and others who had lived with them, is very pleasing. Theft is said to have been nuknown, so that houses could be left unfastened. (Strab, xy. p. 709.) No Indian was known to speak falsehood. (Strab. l. c. ; Arrian, Ind. c. 12.) They were extremely temperate, abstaining wholly from wine (Strab. l. c.),-their hatred of drunkenness being so great that any girl of the harem, who should see the king drunk, was at liberty to kill him. (Strab. xv. p. 710.) No class eat meat (Herod. iii. 100), their ehief sustenance being rice, which afforded them also a strong drink, i. e. arrak. (Strab. xv. p. 694.) Hence an especial freedom from diseases, and long lives; thongh maturity was early developed, especially in the female sex, girls of seven years old heing deemed naarriageable. (Strab, xv. pp. 701706; Arrian, Ind. 9.) The women are said to have been remarkable for their chastity, it being impossible to tempt them with any smaller gifts than that of an elephant (Arrian, Ind. c. 17), which was not considered discreditable by their countrymen; and the usual custom of marriage was for the father to take his daughters and to give them in marriage to the youths who had distinguished themselves most in gymnastic exereises. (Arrian, l. c.; Strab, xv. p. 717.) Tostrangers they ever showed the ntmost hospitality. (Diod, ii. 42.) As warriors they were notorious (Arrian, Ind. c. 9; Exped. Alex. v. 4 ; Plut. Alex. c. 59,63 ): the weapons of the fuotsoldiers being bows and arrows, and a great twolanded sword ; and of the cavalry, a javelin and a round shield (Arrian, Ind., e. 16; Strab. xv. p. 717; Curt. viii. 9.) In the Panjab, it is said that the Macedonians encountered poisoned arrows, (Diod, xvii. 103.) Manly exercises of all kinds were in vogue among them. The chase was the peculiar privilege of royalty (Strab. xv. pp. 709-712; Ctes. Ind. 14; Curt, vili. 9, seq.) ; gymnastics, music, and dancing, of the rest of the people (Strab. xv. p. 709 ; A:xian, Exp. Alex. vi. 3); and juggling and slight of hand were then, as now, among their chief amusements. (Aclian, viii. 7; Juven. vi, 582.) Their usual dress befitted their hot climate, and was of white liven (Philost. Vit. Apoll. ii. 9) or of cottunstuff (Strab. xv. p. 719; Arrian, Ind. c. 16); their heads and shoulders partially covered (Arrian, l.c.; Curt. viii. 9,15 ) or shaded from the sua by umbrellas (Arrian, l.c.) ; with shoes of white leather, sith very thick and many-eoloured soles. (Arrian, l.c.) Gold and ivory rings and ear-rings were in
eommon use; and they were wont to dye their beards, not only black and white, but also red and green. (Arrian, l. c.) In general form of body, they were thin and elegantly made, with great litheness (Arrian, Ind. e. 17; Strab. ii. p. 103, xv. p. 695), but were larger than other Asiatics. (Arrian, Exped. Alex. v. 4 ; Plin. vii. 2.)

Some peculiar costoms they had, which have lasted to the present day, such as self-immolation by water or fire, and throwing themselves from precipices (Strab. xv. pp, 716, 718; Curt. viii. 9; Arrian, Exped. Alex. vii. 5 ; Laean. iii. 42 ; Plin, vi. 19. 2. 20), and the burning of the widow (suttee); not, indecd, agreeably to any fixed law, but rather according to custom. (Strab. xv. pp. 699-714: Diod. xvii. 91, xix. 33; Cic, Tusc. Disp. v. 27.) For writing materials they used the bark of trees (Strab. xv. p. 717; Curt. ix. 15), probably much as the modern Cinghalese use the leaf of the palm. Their houses were generally built of wood or of the bamboo-cane; but in the cold mountain districts, of clay. (Arrian, Ind. c. 10.) It is a remarkable proof of the extent to which civilisation had heen carried in ancient India, that there were, throughout great part of the country, high roads, with stunes set up (answering to our milestones), on which were inseribed the name of the place and the distance to the nest station. (Strab. xv. pp. 689-708; Arrian, Ind. c. 3.) [V.]

INDDICUS OCEANUS ( $\delta$ 'lvóкòs $\omega \kappa \kappa a \nu o ́ s$, Agath. ii. 14 ; $\tau \delta$ 'l $\nu$ סourov $\pi e ́ \lambda a \gamma o s, ~ P t o l . ~ v i i . ~ 1 . ~ § 5) . ~$. The Indian Ocean of the ancients may be considered generally as that great sea which washed the whole of the southern portion of India, extending from the parallel of longitude of the mouths of the Indus to the shores of the Chersonesus Aurea. It seems, indeed, to have been held by them as part, however, of a yet greater extent of water, the limits of wheh were undefined, at least to the southwards, and to which they gave the generic name of the Southern Sea. Thns Herodotus speaks of $\dot{\eta}$ votim 刃̈́̀ $\lambda \sigma \sigma \sigma$ in this sense (iv. 37), as does also Strabo (ii. p. 121);
 38), while the Erythraean sea, taken in its most extended meaning, doubtless conveyed the same sense. (Herod, ii. 102, iv. 37 ; conpared with Stral. i. p. 33.) I'tolemy gives the distances across this sea as stated by seafaring men; at the same time he guards against their over-statements, by recording his opinion in favour of no more than one-third of their measurements: this space he calls 8670 stadia (i. 13. § 7). The distance along its shores, following the indentations of the coast-lime, he estimates, on the same authority, at 19,000 stadia. It is evident, however, that l'tolemy himself bad no clear idea of the real form of the Indian Ocean, and that he inclined to the opinion of Hipparchus, Polybius, and Marinus of Tyre, that it was a rast inland sea, the southern portion of it being bounded by the shores of an miknown land which he supposed to connect Cattigara in the Chersonesus Aurea with the promontory of Prasum (now Cape Delgado) in Africa (comp, iv. 9. §§ 1,3 , vii. $3 . \S \S 1,3,6$ ). The origin of this error it is not easy now to ascertain, but it seems to have been connected with one which is found in the historians of Alexander's expedition, according to which there was a connection between the Indus and the Nike, so that the sourcea of the Acesines (Chenab) were confounded with those of the Nile. (Arrian, vi. 1.) Strabn, indeed, appears to have had some leaning to a similar view, in that he connected the Erythracan with the Atlantic sea (ii. p. 130); which was also
the opinion of Eratosthenes (Stral, i. p. 64). The Indian Ocean contains at its castern enal three prow. cijal gulfs, which are notieed in ancent authors, the Sisus Pebmelects (Ptol. vii. 2. § 5), in the Chersonesus Aurea (probably now the Straits of
 now the Gulf of Martaban; and the sinus Gisicesticts, or Buy of Bengal.
[V.]
 Strab.: 'Evjirita, I'tol.), a people of Hisprania Tarraromemis, in the extretne NE. corner of the ponimsula, around the gulf of Rhoda and Emporiae (ifulf of Ampurias), is far as the Trophies of
 חu $u \pi)^{\hat{6}}(\mathrm{u})$, on thu summit of the pass over the Prenwes, which furmed the boundary of Gaul an! Spin (Strib) iii. p. 160, iv, p. 178). [Pospent Thopapa.] They were divided into four tibes. Their chiof cities, bendes Emportae and lihoma, were: Juscatia (louryapia, Ptol, ii. 6. \$73. Junquira. or, as some suppose, Figueras), 16.21 P. south of the sumnit of the Pyrenees (Summum ?yrenaemm. Itin.), on the ligh road to Tarraco (Itin. Aut. pp. 390, 397): Cinsisxa (Ccrvia), 15 M. P. farther S. (Ib.; Tab. Peut.) ; anil Dectavi., near Junquera (P'tol it, 6. §73). On the promontory formed by the E. extrenity of the Pyrenees (C.Creus), was a temple of Venus, with a small scaport on the N .
 Ptul. ii. 6. § 20 ; Pyrenaea Venus, Plin. iii. 3. s. 4 ; l'ortus Veneris, Mela, ii. 6. § 5 ; Portus Pyrenaei, lix. sxsiv. 8: Porte I'endres), which some made the boundary of Gaul and Spain, instead of the Trophies of Pompey. Ptolemy names two small tivers as fallme into the gulf of Euporiac, the Clombase (Kıus̃avós: Fluriu) and the Sma-
 Treurs, which is the small river flowing past Rosas. 1 h e district round the gulf of Einporise was called
 the abomulane of rusbes which grew man its marsly

INDUS ( $\delta$ lr $\bar{\delta} \dot{\delta} s$ ), one of the printipal rivers of

Liv, the the lamdary westmard of India. It is mentioned finst in ancient authors by Hecataens of Muletus (Frougm. 144, ed. Klausen), ard sulacequently by Hemdotus (iv, 44), who, however. only notices it in connection with varinus tribes who, he states, lived uynn its hanks. As in the ease of India itself, so in that of the Indus, the first real description which the ancients obtained of this river wis from the historians of Alexander the Great's marches. Arrian states that its sources were in the lower spurs of the Paropamisus, or Indian Cancasus (IIndi-Kiush); wherein he agrees with Mela (iii. 7. § 6), Stratio (xv. p. 690). Curtius (viii. 9. §3), and other writers. It was, in Arrian's opinion, a vast atrean, even from its first somrces, the largest river in the world except the Ganges, and the recipient of many tributaries, themselves larger than any other known streans. It has been conjectured, from the descriptions of the ludus which Arrian has preserved, that the writers from whom be hais condensed his marrative must have seen it at the time when its waters were at their highest, in August and September. Quoting fromCtesias (v. 4.11), and with the autbority of the other writers (v, 20). Arrian gives 40 stalia for the mean breadth of the river, and 15 stadia where it was most contracted; below the confluence of the principul tributaries lie considers its breadth may be 100 stadia, and even more than this When much flooded (vi. 14). Pliny, on the other hand, considers that it is nowhere more than 50 stadia broail (vi. 20. s. 23); which is clearly the same opinios as that of Strabo, who states, that though those who had not measured the breadtly put it down at 100 stadia, those, on the other hand, who had measmred it, asserted that 50 stadia was its greatest, and 7 stadia its least breadth (xv. p. 700). Its depth, according to Pliny ( L c.), was nowhere less than 15 fathoms. According to Diodorus, it was the greatest river in the world after the Nile (ii. 35). Curtius states that its waters were cold, and of the colour of the sea (riii. 9.§ 4). Its current is held by some to have been slow (as by Mela, iii. 7. § 6); by others, rapid (as by Eustath. in Dionys. Perieg. v. 1088). Its course towards the sea, after leaving the mountains, was nearly SII. (1llin. vi. 20. s. 23); on it way it receivel, according to Strabo (xv. p. 700) and Arrian (r. 6), 15. according to Pliny, 19 other tributary rivers (l.c.). Abont 2000 stadia from the Indian Ocean, it was divided into two principal arms (Strab. xv. p. Fol), forming thereby a Delta, like that of the Nile, though not so large, called Pattalene, from its chief town Pattala (which Arrian assents neaut, in the Indian tongue, Delta (v. 4); though this statement may be questioned). (Cf. also Arrian, Ind. 2; Diouys. P'erieg. v. 108s.) The flat land at the mouths of rivens which flom from high mountain-muges with a rapid stream, is eser changing: bence, probably, the different accounts which we receive of the mouths of the Indus from those who recorded the history of Aluxander, anil from the wirks of later gengraphers. The former (as we have stated), with Strabo, gave the Indus only two princijal outlets into the Indian O cmu, - at a distance, the one from the other, according to Aristobulus (ap. Strab. xv. p. 690), of $10 \%$ stadia, but, atcorling to Nearcl us (l.c.), of 1800 stadia. The latter meation tuore than two months: Mela (iii. 7. § 6) speaking of " plura ostia," and l'tolemy yiving the names of seven (vii. 1. §28), in which he is confinned by the author of the Periplus Manis Erythraci (p. 22). The names
of these months，in a direction from W．to E．，are ：－ 1．इ́d́yara $\sigma \tau 6 ́ \mu a$（the Pittí or Lohavi），not impro－ bably in the arm of the stream by which Alexander＇s fleet gained the Indian Ocean；2．ミivōav $\sigma \tau \sigma$ ó $\alpha$ （the Rikala）；3．Xpu⿱ouvv $\sigma \tau \dot{\mu} \mu$（the Hagamari or Kukavari），whereby merchandise and goods ascended
 тара；6．इá6a入a or ミa6d́入aбa（the Pinyari or Sïr）；7．＾uviGáp（probably Lonivári，the Púrana， Darja or Kori）．For the conjectural identifications of these mouths，most of which are now closed，ex－ cept in high floods，see Lassen＇s Map of Ancient India．The principal streams which flowed into the Indus are：－on the right or western bank of the river， the Choaspes，called by Arrian the Guraeus，and by Ptoleny the Suastus（the Attok）；and the Cophen （Cabul river），with its own smaller tributary the Choes（the Kow）；and，on the left or eastern bank， the greater rivers，－whicb give its name to the Pan＊ $j i b$（or the conntry of the Five Rivers），－the Acesines （Chenáb），the Hंydaspes or Bidaspes（Jelum），the Hydraotes（Ravi）；and the Hypanis or Hyphasis （the Sutledge）．［See these rivers under their res－ spective names．］As in the case of the Ganges，so in that of the Indus，it has been left to modern researches to determine accurately the real sources of the river：it is now well known that the Indus rises at a considerable distance on the NE．side of the Himailaya，in what was considered by the Hindus their most sacred land，and which was also the dis－ trict in which，on opposite sides of the mountains， the Brahmaputra，the Ganges，and the Jumnt，have their several sources．From its sonrce，the Indus flows NW．to Iskardu，and thence IV．and SW．，till it barsts through the mountain harriers，and descends into the plain of the Panjib，passing along the western edge of Cashmir．（Fitter，Erdlunde，vol．v． p．216；Moorcroft，Travels in Ladakh and Cashmir， 1841．）The native name Sindhu has been pre－ served with remarkable accuracy，both in the Greek writers and in modern times．Thus，in the Peri－ plus，we find $\Sigma\left(\nu \theta u^{\prime} s\right.$（p．23）；in Ptolemy，$\Sigma(\nu \nu \omega \nu$ （vii．1．§2），from which，by the softening of the lonic pronunciation，the Greeks obtained their form＂Ivoios． （Cf．Plio．vi． 20 ；Cosmas，Indic．p．337．）The present name is Sind or Sindhu．（Ritter，vol．v．pp． 29，171．）
［V．］
INDUS，a river of the south－east of Caria，near the town of Cibyra．On its banks was situated，ac－ cording to Livy（xxxviii．14），the fort of Thabusiun． Pliny（v．29）states that sixty other rivers，and up－ wards of a hundred mountain torrents，emptied them－ selves into it．This river，which is said to have received its name from some Indian who had been thrown into it from an elephant，is probably no other than the river Calbis（Ká入eis，Strah．xiv．p． 651 ； Ptol．v．2．§ 11 ；Pomp．Mela，i．16），at present called Quingi，or Tavas，which has its sotures on Mount Cadmus，above Cibyra，and passing through Caria empties itself into the sea near Caunus，oppo－ site to the island of Rhodes．
［L．S．］
INDU＇STR1A，a town of Liguria，situated on the right bank of the Padus，ahout 20 miles below Turin．It is mentioned only by Pliny，who tells us that its ancient name was Bomincomages，which le connects with Bodincus，the native name of the Padus［Pades］，and adds that it was at this point that river first attained a considerable depth．（Plin iii．16．s．20．）Its site（which was erroneously fixed by carlier writers at Casale）has been established beyond question at a place called Mouteiu di Po，a
few miles below Chivasso，hat on the right bank of the river，where excavations have bronglit to light numerous coins and objects of ancient art，some of them of great beanty，as well as several inscriptions， which leave no donbt that the remains thus dis－ covered are thuse of Industria．They also prove that it enjoyed municipal rank under the Roman empire．（Kicolvi e Rivantella， $1 l$ sito dell antica città d＇Industria，f＇c．，Torino，1745．4to．；Millin，1＇oy． en Piemont，vol．i．pp．308－311．）［E．H．B．］

INESSA．［AETNA．］
INFERUM MARE，［Tyrrhenum Mare．］
INGAEVONES．［Germania and Helletio－ nes．］

INGAUNI（＇I $\gamma$ Yavyou），a Liguian tribe，who inhabited the sea－coast and adjuining mountains， at the foot of the Maritime Alps，on the W．side of the Gulf of Genoa．Their position is clearly iden－ tificd ly that of their capital or chief town，Albium Ingannum，still called Albenga．They appear to have been in early times one of the most powerful and warlike of the Ligurian tribes，and bear a pro－ mineut part in the Iong－continued wars of the Ro－ mans with that people．Their name is first men－ tioned in E．c．205，on occasion of the landing of Mago，the brother of Hannibal，in Liguria．They were at that time engaged in bostilities with the Epanterii，a neighbouring tribe who appear to have dwelt further inland：the Carthaginian general con－ cluded an alliance with them，and supported them arainst the mountaineers of the interior；be subse－ quently returned to their capital after his defeat by the Romans in Cisalpine Gaul，and it was from thence that he took his final departure for Africa， ह．c．203．（Liv．xxviii． $46, \mathrm{xxx}$ ．19．）After the close of the Second 1＇unic War，B．C．201，a treaty was concluded with the Ingauni hy the Roman consul，C．Aelius（Id．xxxi，2）；but sisteen years later（in B．c．185）we find them at war with the Romans，when their territory was invaded by the consml Appius Claudius，who defeated them in se－ veral battles，and took six of their towns．（Id． xxxix．32．）But four years afterwards，e．C． 181 ， they were still in arms，and were attacked for the second time by the proconsul Aemilius Paullus． This general was at first involved in great perils， the Ingauni having surprised and besieged him in his camp；but he ultimately obtained a great and decisive victory，in which 15,000 of the enemy were killed and 2500 taken prisoners．This victory pro－ cured to Aemilius the hononr of a trinmph，and was followed by the submission of the whole people of the Ingauni（＂Ligurum Ingaunorum omne nomen＂）， while all the other Ligurians sent to Rome to sue for peace．（Liv．xl．25－28，34．）From this time we hear nothing more of the Ingauni in history，pro－ bably on account of the loss of the later books of Livy；for that they did not long remain at pestec with Rome，and that hostilities were repeatedly re－ newed before they were finally reduced to sulimis－ sion and settled down into the condition of Roman subjects，is clearly proved by the fact stated by Pliny，that their territory was assigned to them，and its boundaries fixed or altered，no less than thirty times．（＂Liguribus lngaunis agro tricies dato，＂ Plin．iii．5．s．6．）They appear to bave been much addicted，in common with other maritime Ligurian tribes，to habits of piracy，a tendency which they retained down to a late period．（Lir．xl．28， 41 ； Vopisc．Procul．12．）We find them still exjsting and recognised as a separate tribe in the days of

Strabo and Pliny; luse we laive no means of fxithe extent or lim. of their territury, which is 6-bity comprised a , maiderable punti at of the :4.adant an cach side of thor eapital city, aml probably cstended on the W . till it met that if the litemelii. 11 must have finchitel several minor towns, but their capital, of whi h the name is variously written Albion lne:anum athi Abingannum, is the only town expeosly assi nei to thom ly ameient writers.
 iii. 5. : 6. 6.)

1'N(iENA. [Ammacatct.]
1N1CERCM, a town in Lawer P:amnonia, in the nei hhbourkent of which there was a practorium, or place of rest for the emperors when they travelles in those parts. (Itin. Ant. pp. 260, 265.) Sinne identify it with the memern Possega.
[L. S.]
1NOTP's. [10 tios.]
 iii. 3. § 7), a ratus of mountains in Sardinia, mentioned by Livy (x.x. 39) in a manner whel seems to ituply that thoy were in the NE. part of thie Wiand; and this is confirmed by Chadian, whos speaks of then as rendering the northern part of Sudinia rugged and savage, and the adjuining seas stor ny and dangerous to navigators. (Claudian, I3. Gild, 513.) Hence, it is evident that the name was appliad to the lofty and ragged range of mountams in the N. and NE. part of the jsland : and wis, duubtless, given to thim by Roman mavigators, wis account of the sudden and frequent stoms to Which they fave rise. (Liv, l.c.). Pthlemy also pharen the Maivóueva öpt-a name which is obvimasly translated from the Latin onc-in the interior of the island, and thomgh he would seem to consider them as nearer the W. tban the E. coast, the position whwh he assigns them may still be reterred to the vitu rame or mass of noumtains, which extends In wh the arighbomphand of Olbia (Terre Vora) an the E. coats, to that of Curnus on the W. [SAR-

[(i. L.]
 Xanhomanis. Lisy (xxi, 31), after dencribiug Han-
 hib- marelh on the chat side tosards the inland parts is Galli:t. At his tanth cueampuent he canc to the Insula, " where the rivers Arar aud the Rhodanus, Il wing down from the Alph by two different derections, comprisu betwean then sume tract of comutry, and then unite: it is the level country hetween them which i, ealled the lasula. The Allobroges dwell tocar." One thi, hit easily see that there must be some error in the word Arar; for Itannital condd not have realhed the latitude of Lugdunan (Iyon) in four days from the place where he erossed the Rhone: and this is oertain, though we do not know the exart plave where he did cross the lithone. Nor, if he hat wot to the junctinn of the Arar and If madans, conald Livy say that he reacled a phace near which the Allubrores dwell; for, if he had
marthen from the Isara (Isire) to the jumetion of the Derine and lhome, be would have pased throngh the conntry of the Allubroges. [Allonhegra.] Nor does the Arar (Saóne) flow from the Alps, thought the laara does. Beoides this, if llamiloal liad pone so far north as the part between the Saine and Rhone, he would have gone much further north than was necessury for his purpose, as Livy describes it. It is therefore certain, if we louk to the context only, that we must read "Isara" for "Arar;" and there is a reading of one MS., eited by Gronovius, which shows that Isara may lave once been in the text, and that it has been corrupted. (Walckemaer, Goong. foc, vol. i. p. 135.) Livy in this passage eopied Polybius, in whose MSS. (iii. 49) the name of the river is Scoras or Scaras; a name which the elitors ought to hare kept, instead of changing it into lamas (llod́pas), as Bekker and others beforo him have done, though the Inara or Isere is certainly the river. In the latest editions of I'tolemy (ii. 10. § 6) the Isara appears in the form Isar (I $\mathrm{I} \alpha \mathrm{p}$ ); but it is certain that there are great variations in the MSS. of Ptolemy, and in the editions. Walckenaer (rol. i. p. 134) says that the edition of Ulin of 1482 has sicarus, and that there is "Sicaros" in the Strassburg editions of 1513,1520 , 1522. The editio priaceps of 3475 has "Cisur;" and others have "Tisar" and "Jisara." The probable conclusion is, that " Lsc-ar" is one of the furns of the name, which is as genuine a Celtic form as "1s-ar" or "Isara," the form in Cicero (ad Fam. s. 15, \&c.). "Ise-ara" may be compared with the British forms "Isaca" (the Eice), 1sca, and Ischalis; and Is-ara with the names of the Italian rivers Ausar and Aesis.

1'olybius compares the country in the angle between the Rhone and the laara (Isire) to the Dellas of Egypt in extent and form, except that in the Delta the seas unites the one side and the channels of the streams which form the two other sides; but here mountains almost inaccessible form the third side of this Insula. He describes it as pupulous, and a corn conutry. The junction of the 1sar, as Strabo calls the river (p. 185), and the Rhone, was, according to him, opposite the place where the Cevennes approach uear to the banks of the Rhone.

The Isere, one of the chief branches of the Rhoae, rises in the high l'enuine Alps, and flows through the valleys of the Alpine regiun by a very winding course past St. Maurice, Moutiers, Confluns, Montmealion, where it begins to be navigable, Grenoble, the Bunan Cularo or Gratianopolis, and joins the Ihose a fow miles north of Valentia (Falence). Its whole course is estimated at about 160 miles. Jannibal, after staying a short time in the commtry about the junction of the Rhone and the Isire, commented his march over the Alps. It is not material to decide whether his whole arny crossod over intu the Insula or not, or whether he did hinnself, thought the words of Pulybins imply that he did. It is certain that he marched up the valley of the Iecre towards the Alps; and the way to find out where he crossel the Alps is by following the valley of the Isire.
[G. L.]
INSIRA. [MriAE.]
 vinces W. of the Tigris, ceded, in A. D. 297, by Narses to Galerius and the lomans. (Petr. Patr. Fi, 14, Fraym. Nist. Graec. ed. Müller; Gillbn, v. xiii.) St. Martin, in his nute to Le Bean (Bus Eimpirc, vol. i. p. 380), would read for Intelene,

Ingilene (IryıAivq), the name of a small province of Armenia near the sources of the Tigris mentioned by Epiphanius (Haeres. L.N. vol. i. p. 505, ed Valesius; comp. St. Nartin, Mém. sur CArmenie, rol. i. pp. 23, 97.)
[E. B. J.]
INTEME'LII ('L $\nu \tau \epsilon \mu \dot{e} \lambda t o t$ ), a maritime poople of Liguria, situated to the W. of the lngauni, at the foot of the Maritime Alps. They are but little known in history, being only once mentioned by Livy, in conjunction with their neighbours, the Ingauni, as addicted to piratical habits, to repress which their coast was visited by a Roman squadron in 11. c. 180. (Liv. xl. 41.) Strabo speaks of them as a still existing tribe (Strab. iv. p. 202); and their capital, called Albium Intemelium or Albintemehuin, now corrupted into Vintimiglia, was in his time a considerable city. [Albica 1ntemelium.] We have no means of determining the extent or limits of their territory; but it seems to have bordered on that of the Ingauni on the E., and the Yediantii on the W.: at least, these are the only tribes mentioned as existing in this part of Licuria by writers of the Roman Empire. It probably comprised also the whole valley of the Rutuba or Roja, one of the most considerable of the rivers, or rather nountain torrents, of Liguria, which rises at the foot of the Col di Tenda, and falls into the sea at Vintimiglia.
[E. H. B.]
interamina ('ivtépauva: Eth. Interamnas, -artis), was the name of several cities in different parts of Italy. Its olvious etymol, gy, already pointed out by Varro and Festus, indicates their position at the confluence of two streams ("ioter amnes," Varr. L. L. r.28, Fest. v. A mnces, p. 17, Müll.); which is, bowerer, but partially borne out by their actual situation. The form Latenamiem (Ivtepáuzov), and the etbnic form Ioteramnis, are also found, but more rarely.

1. A Roman colony on the banks of the Liris, thence called, for distinction's sake, 1 ixteramina Lirixas. It was situated on the left or northern bank of the Liris, near the junction of the little river which flows by Aquinum (confounded by Strabo with the Melpis, a much more considerable stream), and was distant 6 miles from the latter city, and 7 from Casinum. Its territory, which was included in Latium, according to the more estended use of that name, must have originally belonged to the Volscians, but we have no mention of Interanna as a Volscian city, nor indeed any evidence of its cxistence previous to the establishment of the Roman colony there, in R. c. 312. This took place at the same time with that at the neighbouring town of Casinum, the object of both being obvionsly to secure the fertile valley of the Liris from the attacks of the Samnites. (Liv. ix. 28; Diod. xix. 105; Vell. Pat. i. 14.) Hence we find, in 1. c. 294, the territory of Interamna ravaged by the Sumnites, who did not, bowever, venture to attack the city itself; and, at the opeoing of the following campaign, it was from Interamna that the consul $\mathrm{S}_{\mathrm{p}}$. Carvilius commenced his operations against Snmnium. (Liv. x. 36, 39.) Its territory was at a later period laid waste by Hannibal during his march by the Via Latina from Capua upon Rome, s. c. 212 (Liv. sxvi. 9): and shortiy afterwards the name of Interamna appears among the twelve refractory colonies which declared themselves umnble to furnist any further supplies, and were sabsequently (в. c. 204) loaded with heavier burdens in consequence (1d. xxvii. 9 , xxis. 15). After the Social War it passed, in common with the other Latin colonies, into the state of
a anumeipium; and we find repeated mention of it as a municipal town, apparently of some consequence. (Cic. Phil. ii. 41, pro Mil, 17; Strab. v. p. 237; Plin. iii. 5. s. 9.) it received a colony under the Second Triumvirate, but does not appear to bave enjoyed colonial rank, several inscriptions of imperial times giving it only the title of a municipium. (Lib. Col. p. 234; Orell. Inscr. 2357, 3828.) Its pooition at some distance from the line of the Via Latina was probably unfavourable to its prosperity in later times: from the same cause its name is not found in the ltineraries, and we bave no means of tracing its existence after the fall of the Roman Empire. The period at which it was ruined or deserted is unknown; but miention is fuund io documents of the middle ages of a "Castrum Terame," and the site of the ancient city, though now entirely uninbabbited, is still called Terame. It presents extensive remains of ancient buildings, with vestiges of the walls, streets, and aqneducts; and numerous inscriptions and other objects of antiquity have been discovered there, which are preserved in the neighbouring villhes. (Romanelli, vol. iii. P. 384 ; Cluver, Ital. P. 1039. The inscriptions are given by Mommsen, Inser. Regn. Neap. pp. 221, 222.)
Pliny calls the citizens of this Interamna "Interammates Succasini, qui et Lirinates roeantur." The former appellation was evidently bestowed from their situation in the neighbourhood of Casinum, but is not alopted by any other autbor. They are called in inscriptions "Interamanates Lirinates," and sometimes "Livinates" alone: bence it is probable that we slould sead "Lirinatum" for "Larinatum" in Silius Italicus (viii. 402), where he is enumerating Volscian cities, and hence the mention of Larinum would be wholly out of place.
2. (Terni), a city of Umbria, situated on the river Nar, a little below its confluence with the Velinus, and about 8 miles E. from Narnia. It was surrounded by a branch of the river, so as to be in fact situated on an island, whence it derived its name. The inbabitants are termed by Pliny "Interamnates cognomine Nartes," to distinguish them from those of the other towns of the name; and we find thems designated in inscriptions as Interamnates N:artes and Nalartes; bnt we do not find this epithet applied to the city itself. No mention is foumd of Interamna in history previous to its passing under the Roman yoke; but there is no doubt that it was an ancient Umbrian city, and an inscription of the time of Tiberius has preserved to us the local tradition that it was founded in B. c. 672 , or ratier more than 80 years after Rome. (Orell. Inscr. 689.) When we first hear of lnteramna in history it appears as a flourishing municipal town, deriving great wealth from the fertility of its territory, which was irrigated by the river Nar. Hence it is said to have been, as early as the civil wars of Marins and Sulla, one of the "florentissima Italiae municipia" (Florus, iii. 21); and though it suffered a severe blow upon that occasion, its lands being confiscated by Sulla and portioned out among bis soldiers, we still find it mentioned by Cicero in a manner that proves it to have been a place of importance (Cic ad Att. iv. 15). Its inhabitants were frequently engaged in litigation and dispates witb their neigibours of Reate, on account of the regulation of the witers of the Velimus, which joins the Nar a few miles above luteramna; and under the reign of Tiberius they were obliged to enter an energetic protest against a project that had been started for turning aside the

## INTLRAMNA.

conrse of the Nar, so that it should to lone flow into the Tiber. (Tae. Ann. i. 79.) In the civil war between Vitellins and Vespasizm it was occupied by the troops of the former while their head-yuarters were at Naruin, but was taken with hittle resistance by Artus Varns. (1d. Mist. iii. 61, 63.) Inseriptions sufficiently attest the continued municipad importance of luteramana maler the Roman empire; and, though its pusition was some miles to the right of the great Flaninian hizhway, which proceeded frem Narnia direct to Mevania (Strab. v. p. 227; Tac. Ifist. ii. 64), a branch line of ruad was carried from Narnia by luteramna and Spoletiom to Forum Flaminii, where it rejoined the main highroad. This line, which fullowed very nearly that of the present hiyhroad from Rome to Peragia, appears to hate latterly become the more important of the tmo, and is given in the Antonine and Jerusalem Itineraries to the exclusion of the true Via Flaminia. (Itin. Aut. p. 125; Itin. Ilier. p. 613 ; Tab. Peut.) The great richness of the meadows belonging to Interamna on the banks of the Nar is ceiebrated by Pliny, who tells ns tbat they were cut for bay no less than four times in the year (Plin. xxiii. 28, s, 67) ; and Tacitus also represents the same district as among the most fertile in Italy (Tac, Amn. i. 79). That great historian himself is generally considered as a native of Interamm, but without any distiuct au. thority: it appears, however, to have been subscInently the patrimonial residence, and probably the hirthplace, of lis descendints, the two emperors Tacitus and Florianns. (Vynisc. Flurian. 2.) In A.D. 193, it was at Interanma that a deputation from the senate met the emperor Septimius Severus, when on his march to the eapital (Spartian. Scver. 6); and at a later period (1, 1, 253) it was there that the two emperors, Treboniantus Ciallus and his son Volusimus, who were on their march to oppose Aemilianns in Muesia, were put to death by their own soldiers. (Butrop. ix. 5; Vict. Cites. 31, Epit.31.)

Interatama became the see of a bishup in very early times, and has subsisted without interruption through the middle ages on its present site; the name buing pradually corrupted into its modern form of Torni. I: is still a tlourishing city; and retains various relics of its ancient importance, inclading the renains of an amplitheatre, of two temples supposed to laave been dedicated to the sun and to Hercules, and some portions of the ancient Thermae. None of these ruins are, however, of much importance or interest Many inscriptions have also been discovered (an the site, and are preserved in the Palazzo Publico.

About 3 miles atove Terni is the celebratel cascale of the Velims, which owes its origid to the Loman 31: Curms; it is more folly noticed ander the articfe Vesists.
3. (Terano), a city of licennm, in the territury of the Praetutii, and probably the chief place in the district of that people. The name is omitted by Miny, but is fonnd in I'toleny, who distinctly assigns it to the Practutii; and it is mentioned also in the Liber Colotiarum athong the "Civitates Piceni." It there lieara the ejithet of "Palestime." or, as the name is elsewhere written, "Paletina;" the origin and ineaning of which are wholly unknown. (Ptol. ii. 1. $\S 58:$ Lib. $\mathrm{Col} . \mathrm{pp}, 226,259$.) In the genuine fraynents of Frontimes, on the other hand, the citizen¢ are correetly designated as "Interanuates Practutiani." (Frontiu. i. p. 18, ed. Lachun.) Being situated in the interior of the comutry, at a distance from the highroads, the name is not found in the

## INTERCISA.

Itinerarics, but we know that it was an episcopal see and a place of some importance ander the Roman empirc. The uatne is already corrupted in our MSS. of tie Liber Coloniarum into Teramne, whence its modern form of Tiramo. But in the middle ayce it appears to have been known also by the name of Aprntium, supposed to be a corruption of Praetutium, or rather of the name of the people Irmetutii, applied (as was so often the case in (iaul) to their chief eity. Thus we find the name of Abrutium among the cities of licenum cnumerated by the Geographer of Ravenna (iv. 31); and under the Lombards we find mention of a "comes Aprutii." The name has been retained in that of Abruzzo, now given to the two northermost provinces of the kingdorn of Naples, of one of which, cailed Abruzzo Ilteriore, the city of Teramo is still the capital. Vestiges of the ancient theatre, of baths and other buildings of Roman date, as well as statues, altars, and other ancient remains, hase been discovered on the site : pumerons inscriptions have been also fonnd, in one of which the citizens are designated as "Interamnites Praetutiani." (Romanelli, vol iii. pp. 297-301 ; Mommsen, I. R. N. pp. 329-331.)

There is no foundation for the existence of a fourth city of the name of Interamna among the Frentani, as assumed by Romanelli, and, from him, by Cramer, on the authority of a very apocryplal inscription. [Frentani]
[E. H. B.]
INTERAMNE'SLA (Plilegon. de Longaer. 1: Eth. Interamnienses, Plin. iv. 21. s. 35), a stipendiary town of Lusitamia, named in the inscription of Alcantara, and sapposed by Ukert to have been sitnated between the Cou and Touroes, near Castel Rodrigo and Almeida. (Ukert, vol. ii. pt. 1. p. 398.)
[P. S.]
INTERANNIUN. [Astures.]
[NTERCA'T1A. [JaccaEl.]
INTERCISA or AD INTERCISA, is the name given in the Itineraries to a station on the Vis Flaminia, which evidently derives this name from its being situated at the remarkable tunnel or gallery hewn throngh the rock, now known as the Passo del Furlo. (Itin. Hier. p. 614; Tab. Peut.) This passage, which is still traversed by the modern highway from Rome to Fano, is a work of the emperor Vespasian, its an inscription cnt in the rock informs ns, and was construeted in the seveuth year of his reign, A. D. 75. (Jnscr. ap. Cluver, Ital. p. 619.) It is also noticed among the public works of that emperor by Aurelius Victor, who calls it l'etra Pertusa; and the same dame (חèтрa $\pi \epsilon \rho-$ тoiva) is given to it by Procopius, who has left us a detailed and acenrate description of the locality. (Vict. Caes. 9, Epit. 9 ; 1'rocop, B. G. ii. 11.)

The valley of the Cantiano, a tribntary of the Metaurus, which is here fullowed by the Fiaminian Way, is at tbis point so narrow that it is only by cutting the road out of the solid rock that it can be earried along the face of the precipice, and, in addition to this, the rock itself is in one place pierced by an arched gallery or tannel, which gave rise to the name of Petra l'ertusa. The actnal tunnel is only 126 feet long, but the whole length of the puss is about half a mile. Claudian alludes to this remarkable work in ternss which pruve the almiration that it excited. (Claud de 1\%. Cons. Hon. 502.) At a later period the pass was guarded by a fort, which, from its completely commanding the Flaminian Way, became a military post of importance, and is repeatedly mentioned during the wars of the Goths
with the generals of Justinian. (Prccop. B. G. ij. 11, iii. 6. iv. 28, 34.) The Jerusalem Itinerary places the station of Intercisa 9 M . P. from Calles (Cagli), and the same distance from Forum Sempronii (Fossombrone), both of which distances are just about correct. (D'Anville, Analyse de ITtalie, p. 155.)
[E. H. B.]
INTERNUM MARE, the great inland or Meciiterranean Sea, which washes the eoasts of Sonthern Europe, Northern Africa, and Asia Mioor.

1. Name.-In the Hebrew Seriptures, this sea, on the W. of Palestine, and therefore behind a person facing the E., is called the "Hinder Sea" (Deut. xi. 24 ; Joel, ii. 20), and also the "Sea of the Philistincs " (Exod. xxii. 81), because that people oceupicd the largest portion of its shores. I're-eminently it was "the Great Sea " (Num. xxxiv. 6, 7; Josh. i. 4, ix. 1, xv. 47; Ezek. xlvii. 10, 15, 20), or simply "the Sea" (1 Kings, v. 9; comp. 1 Maco. xiv. 34. xv. II). In the same way, the Homeric poems, Hesiod, the Cyclie poets, Aeschylus, and Pindar, call it emphatieally "the Sea." The logographer Hecataeus speaks of it as "the Great Sea " (Fr. 349, ed, Klausen). Nor did the historians and systematic gengraphers mark it off by any peculiar denomination. The Rom writers call it Mare Isternum (Pomp. Mela, i. 1. § 4; Plin. iii. 3) or Intestinem (Sall. Jug. 17; Flor. iv. 2; ท̀ Eั $\sigma \omega$ かáरatтa, Polyt. iii. 39;
 'Hpak入 cíwv $\sigma \tau \eta \lambda \omega \bar{\nu} \nu$ Náג., Arist. Met. ii. 1), or more frequently, Make Nostrum (Sall. Jug. 17, 18 ; Cues. B. G. v. 1 ; Liv. xxvi. 42 ; Pomp. Mela, i. 5. § 1 ; $\dot{\eta} \kappa \dot{d} \|^{\prime} \hat{\eta} \mu$ âs $\underset{\text { ad́l., strab. ii. p. 121). The epithet }}{ }$ "Mediterranean" is not used in the classieal writers, and was tirst employed for this sea by Solinus (c. 22; comp. Lid. Orig. siii. 16). Tbe Greeks of the present day call it the "White Sea" ('A $\sigma$ ópı @á $\alpha a \sigma \sigma a$ ), to distinguish it from the Black Sea. Throughout Europe it is known as the Mediterranean.
2. Extent, Shape, and Admeasurements.- The Mediterrauean Sea extends from $6^{\circ} \mathrm{W}$. to $36^{\circ} \mathrm{E}$. of Greenwich, while the extreme limits of its Jatitude are from $30^{\circ}$ to $46^{\circ} \mathrm{N}$; and, in round numbers, its length, from Gibraltar to its furthest extremity in Syria, is about 2000 miles, with a breadth varying from 80 to 500 niles, and, ineludiog the Euxine, with a line of shore of 4500 leagoes. The ancients, who considered this sea to be a very large portion of the globe, though in reality it is only equal to one-seveoteenth part of the lacific, assigned to it a much greater length. As they possessed no means for critically measuring horizontal aogles, aod were unaided by the compass and chronometer, correctness in great distances was unattainable. On this account, while the E. shores of the Mediterraneao approache 1 a tolerable degree of correctaess, the relative positions and forms of the W. coasts are erroneous. Strabo, a philosophical rather than a scientific geographer, set himself to reetify the errors of Eratosthenes (ii. pp. 105, 106), but made more mistakes: though he drew a much better " contour" of the Mediterranean, yet he distorted the W. parts, by placing Massilia $13_{2}^{10}$ to the S. of Byzantium, instead of $24^{\circ}$ to the N. of that eity. Ptolemy also fell into great errors, such as the flattening-in of the N. eoast of Africa, to the amonnt of $4 \frac{1^{\circ}}{}{ }^{\circ}$ to the $S$., in the latitude of Carthage, while Byzantium was placed $2^{\circ}$ to the N. of its true position; thus iocreasing the breadth in the very part where the greatest accoracy might be expected. Nor was this all; for the extreme length of the Internal Sca was carried to upirards of $20^{\circ}$
beyond its true limits. The maps of Agathodaemon which accompany the Geography of Ptolemy, though indiffereatly drawn, preserve a mueh better outline of this sea tban is expressed in the Theodesian or Peutingerian Tabie, where the Mediterranead is so reduced in breadth as to resemble a canal, and the site, form, and dimensions of its islands are displaced and disfigared.

The latitudes were estimated by the ancient cbservers in stadia reckoned from the equator, and are not so discordant as might be expected from such a method. The length between the cquinoctial line and Syracuse, or rather the place which they called the "Strait of Sicily," is given as fullows:-

Stalia
Eratosthenes - - - 25.450
Hipparchns - - - 25.600
Strabo - - . . - 25,400
Marinus of TYre - - 26,075 Ptolemy : - . - 26,833
Their longitudes run rather wild, and are reckoned from the "Sacrum Promontorium" (Cape St. Vincent), and the numbers given are as the arc from thence to Syracuse:-

In Admiral Smyth's work (The Mediterranean, p. 375) will be found a tabular view of the abovemeationed admeasurements of the elder geographers, vlong with the determination resulting from his own observations; assuming, for a reduction of the numbers, 700 stadia to a degree of latitude, for a plaue projection in the $36^{\circ}$ parallel, and 555 for the corresponding degree of longitnde. (Comp. Gosselin. Geographie des Grecs, 1 vol. Paris, 1780 ; Geographie des Anciens, 3 vols. Paris, 1813 ; Mesures Itineraires, 1 vol. Paris, 1813.)
3. Physical Geography. - A more richly-varied and broken outline gives to the N . shores of the Mediterranean in advantage over the S . or Libyan coast, which was remarked by Eratostlenes. (Strab. ii. p. 109.) The three great peninsulas, - the Iberian, the Italie, and the Hellenie, - with their sinuous and deeply iadeated shores, form, in combination with the neighbouring islands and opposite coasts, many straits and isthmuses. Exclusive of the Euxine (which, however, must be eonsidered as part of it), this sheet of water is naturally divided into two vast basins; the barrier at the entrance of the straits marks the commencement of the W : basin, which descends to an abysmal depth, and exteods as far as the central part of the sea, where it flows over another barrier (the subaqueous $A d$ venture Bank, discovered by Adniral Sinyth), and again falls into the yet unfathomed Levant basia.

Stralio (ii. pp. 12. - 127) marked off this expanse oy three somaller closed basins. The westernmost, or Tyrrheniao basin, comprehended the space between the Pillars of Hercules and Sicily, inchiding the Iberian, Ligurian, and Sardinian scas; the waters to the W. of Italy were also called, in refereace to the Adriatic, the "Lower Sea," as that gult hore the name of the "Upper Sea." The second was the Syrtic basin, E. of Sicily, including the Ausonian or Siculian, the I mian, and the Libyan seas: on the N. this basin tuns up into the Adristic, on the S . the gulf of Libya penetrates deeply isto
the African continent. The E. part wilfos I anm in interropted by Cyprns alone, and was ownest ome the Carpathian, lamphylian. Cilician, and Syma. seas.

The third or Aegean portion is bounded to the S. by a curved line, which, commencing at the easst of Caria in Asia Minor, is formed by the islands of Pholes, Crete, and Cyther:a, joining the Peloponnesus not far from Cape Malea, with its subdivisions, the Thracian, Myrtoan, learian, and Cretan seas.

From the Aegean, the " White Sca" of the Turks, the chamel of the lifllespont leads into the ProI wint., comnected by the Thracian Bosporus with the Euxine: to tho N1\%. of that sheet of water lies the Palus Macotis, with the strait of the Cimmerian Bosporus. The configuration of the contiuents and of the islands (the latter either severed frum the main or volcanically elevated in lines, as if over long fissares) led in very early times to cosmo1 Lieal views respecting eruptions, terrestrial revolntions, and overpourings of the swollen higher scas into those which were lower. The Euxine, the Hellespont, the straits of Gades, and the intermal Sea, with its many iskunds, were well fitted to originate such theories. Nut to speak of the floods of Oerges and Deucalion, or the legendary cleaviou of the pillars of Hercules by that hero, the Samothrutian traditions recounted that the Euxine, once an inland lake, swollen by the rivers that flowed into it, bad broken first through the Bosporus and afterwards the Hellespont. (Diod, v. 47.) A reflex of these Samothracian traditions appears in the " shice Theory " of Straton of Lampsaens (Strab. i. 12, 49,50), according to which, the swellings of the waters of the Euxine first opened the passaye of the Hellespont, and afterwards caused the outlet throngh the lillars of Hercules. This theory of Atraton led Eratosthenes of Cyrene to examine the problem of the equality of level of all external seas, or seas sorrounding the continents. (Strab. l.c.; comp. ii. p. 104.) Strabo (i. pp. 51, 54) rejected the theory of Straton, as insufficient to account for all the phemomema, and proposed one of his own, the profoundness of which modern geologists are only now beriming tir appreciate. "lt is not," he says (Le.), 4 beranse the lands corered by seas were originally at different altitndes, that the Waters linve risen, or subsided, or receded from some parts and inundated whers. But the reason is, that the same land is sometimes raised up and sometimes depressed, so that it either overflows or returns into its own jlace again. We must therefore ascribe the cause ts the gronnd, either to that ground which is under the sea, or to that which becomes flouded by it; but rather to that which lies beneath the sea, for this is more moveable, and, on account of its wetness, can be altered with greater quickness." (Lyell, Geulogy, p. 17; 1lumboldt, Cosmos, vol. ii. p. 11 s , trans., Aspects of Neture, vol. ii. 11. 73- 83 , trans.)

The flavial system of the Internal Sea, including the rivers that fall into the Euxine, consivts, besides many secundary streams, of the Nile, Danube, Borvsthenes, Tanais, 1’o, lhone, Ebro, and 'Yyras. The general physics of this sea, and their connection with ancient speculations, to not fall within the senge of this article; it will be sumficient to say that the theory of the tides was fint studied on the cuast of thic, which can only in puen al lansuage he called "a tidelose sea." The mariser of whe lind his charts and sailing directories, wiss arquainted

Whit the bewildering currents and counter-enrrents Ithis sen. - the "Typhon" ( $\tau v \phi \dot{\omega} \nu$ ), and the "Prester" ( $\pi \eta \eta \sigma \tau \eta_{0} \rho$ ), the destroyer of those at sia, of which Lucretius (vi. 422-445) has given so terrific a description, - and hailed in the hour of danger, as the "Diosenri" who played about the mast-head of his vessel (1'lin. ii. 437 ; Sen. Nat. Quaest. ii.), the fire of St. Elmo, "sacred to the scaman." Much valualle information upon the winds, clinate, and other atmospheric phenomena, as recorded by the ancients, and compared with modern investigations, is to be found in Smyth (Mediterranean, Pp, 210-302). Furbiger's section nyon Physical Geography (vol. i. PP. 576 655) is useful for the references to the Latin and Greck authors. Some papers, which appeared in Fraser's Magazine for the years 1852 and 1853 , upon the fish known to the ancients, throw conisiderable light apon the ichthyology of this sen. Recent inquiry has confirmed the truth of many instructive and interesting facts relating to the fish of the Mediterran 3 an which have been handed down by Aristutle, I'liny, Archestratus, Aelian, Ovid, Oppian, Athenaens, and Ausonius.
4. Historical Geography.-To trace the progress of discovery on the waters and shores of this sea would be to give the history of civilisation,-" molham sine nomine saxum." 1ts geographical position has eminently tendod torrards the intercourse of nations, and the extension of the knowledge of the world The three peninsulas - the Eberian, Italic, and Hellenic - ron ont to mect that of Asia Ninor projecting from the E. coast, while the islands of the Acgean bave served as stepping stones for the passage of the peoples from one continent to the other; and the great Indian Ocean advances by the fissure between Arahia, Aegypt, and Ahyssinia, onder the name of the Red Sea, so as only to be divided by a narrow isthmus from the Delta of the Nile valley and the SE. coast of the Mediterranean.
"We." says Plato in the Plaedo (p. 109, h.), "who dwell from the Pbasis to the Pillars of Hercules, inhabit only a small portion of the earth in which we have settled round the (Interior) sen, like ants or frogs roond a marsh." And yet the margin of this contracted basin has been the site where civilisation was first developed, and the theatre of the greatest events in the early bistory of the world. Peligion, intellectual culture, law, arts, and man-ners-nearly everything that lifts us abuve the savage, have come from these cnasts.

The earliest civilisation on these shores was to the S., but the national character of the Acgyptians was opposed to intercourse with other nations, and their navigation, snch as it was, was mainly confined to the Nile and Arabian gulf. The Ploeticiams were the first great agents in promoting the communion of proples, and their flag waved in every part of the waters of the Internal Sirs. Carthage and Etruria. though of less importance than Plowenicia in connecting nations and extending the gengraphical lorizon, exercised great influcnce on commercial intercoume with the W. coast of Afric: and the N . of Europe. The progressive movement Ir pagatell itseff more widely and enduriugly through the Greeks and Romans, especially after the lattor had broken the Phoenico-Carthaginian power.

In the Hellenic peninsula the broken configuration of the coast-line invited early navigation and commercial intercourse, and the expeditions of the Samuans (lferod. iv. 162 ) and l'hocarans (llerod.
i. 163 ) laid open the W. enast of this sea. During the period of the Roman Universal Empire, the Mediterranean was the lake of the imperial city. Guon after the conclusion of the First Mithridatie War, piracy, which has always existed from the earliest periods of listory to the present day in the Grecian waters, was carried on systematically by large armies and fleets, the strongbolds of which were Cilicia and Crete. From these stations the pirates direeted their expeditions over the greater part of the Dediterranean. (Appian, Bell. 1Fithr. 92 : Plut. Ponp. 24.) Piraey, erushed by Pompeius, was never afterwards carried on so extensively as to merit a place in bistory, but was not entirely extirpated even by the fleet whieh the Roman emperors maintained in the East, and that eases still occurred is prosed by inscriptions. (Böckh, Corp. Inscr. Graec. mn. 2335, 2347.) The Romans despised all trade, and the Greeks, from the time of Iladrian, their great patron, till the extinction of the Toman power in the East, possessed the largest share of the eommeree of the Dlediterranean. Even after the Moslem conquests, the Aralis, in spite of the rarions expeditions which they fitted out to attack Constantinople, never suceeeded in forming a maritime power; and their naval strength dcelined with the numbers and wealth of their Christian subjeets, until it dwindled into a few piratical squadrons. The emperors of Constantinople really remained masters of the sea. On all points eonnueted with this sea, see Admiral Smyth, The Mediterranear, London, 1854.
[E. B. J.]
INTEROCREA (Ivteporpéa, Strab.), a small town or village of the Sabines, between Amitermmm and Reate. It was placed on the Via Salaria, at the junction of its two branches, one of which led eastwards to Amiternum, the other, and prineipal one, up the valley of the Velimus, to Asculum. It is now called Antrodoco, and is a position of great military inportance, from its commanding the entrance to the two passes just mentioned, which must in all ages have formed two of the prineipal lines of eommunication across the Ajennines. It seems, however, to liave been in aneient times but a small place: Strabo calls it a village; and its name is otherwise found only in the Itineraries, which place it at $14 \mathrm{M} . \mathrm{l}^{3}$. from Reate, a distanee that coincides with the position of Antrodoco. (Strab. v. p. 228; Itin. Ant. p. 307 ; Tab. Peut.) Its ancient name is evidently derived from its position in a deep valley between rugged mountains ; for we learn from Festus (p. 181, ed. Nall.) that Ocris was an ancient word for a mounthin: and it is interesting to find this form still preserved in the name of the Montagne di Ocra, a lofty and ragged growp of the Apennines, near Aquila. (Zannoni, Cartts del Regro di Napoli, 3. fol.)
[E. H. B.]
INTERPROMIIUX, a village of the Marrucini, forming a station on the Via Clandia Valeria between Corfinium and Teate. It is repeatedly mentioned in the Itineraries, bnt the distances are variously given. (Itin. Ant. pp. 102, 310; Tab, Peut.) The line of the ancient highroad is, however, well ascertained, and the position of Interprominm is fixed lyy ancient remains, as well as mediaeval reeords, at a place on the right bank of the Aternus, just below the narrow gorge through which that river flows below Popoli. The site is now marked only by a tavern called the Osteria di $S$. Falentino, from the little town of that name on the hill above; it is distant 12 Roman miles from Corfiniam (S. Pellino),
and 13 from Teate (Chieti), or 21 from Pescara, at the month of the Atemus. (Holsten. Not. aul Cluv: p. 143; DAnville, Analyse de CItalie, p. 17s; Romanelli, vol. iii. p. 117.) An iuscription also mentions Interpromium nnder the name of Pagus Interprominus (Orell. Inser. 144; Romanelli, L.c.); it is called "Interprominm viens" in the Itinerary of Antoninus (p. 102), and was evidently a mere village probably a dependency of Teate. [E.H.B.]

INTI'BlLI. 1. [Edetaisi] 2. A town of Hispania Baetiea, near Illiturgis, the seene of a battle gained by the Romans over the Carthaginians in the Secoud Punic War. (Liv, xxiii. 49 : Fromtin. Stratag. iii. 3.)
[P.S.]
INUI CASTRUML [Casmbm Invi.]
INYCUAl or INYCUS ("I $\nu$ кoov, Steph. B., bnt $\dot{\eta}^{\prime \prime}$ lyukos, Herod.: Eth. 'Ivukivos), a town of Sieily, situated in the SW. of the island, on the river Hypsas, It is principally known from its conneetion with the mythical legends eoncerning Minos and Daedalns; the capital of the Sicanian prioce Coealus, wbo afforded a shelter to the fugitive Daedalns against the Cretan monareb, being placed by some writers at Inycum, and by others at Camicus. (Pans. vii. 4. § 6; Cbarax, ap. Steph. B. v. Kauuर́s.) It is mentioned in historical timies by Herodotas as the place of confinement to whieh Scythes, the ruler of Zanele, was sent by Hippocrates, who had taken him prisoner. (Herod. vi. 23, 24.) Aclian, who eopies the narrative of Herodotus, represents Scythes as a native of Inycum : lut this is probably a nistake. (Ael. J. H. xiii. 17.) Plato speaks of Inyenm as still in existence in his time, but quite a small place ( $\chi$ wptov $\pi$ ávv $\sigma \mu$ ккро́v) ; notwithstanding which be makes the sophist Hippias boast that he had derived from it a sum of 20 minae. (Plat. Hipp, MI. p. 282, e.) It is evident that it always continued to be an inconsiderable place, and was probably a mere dependency of Selinus. Hence we never again meet with its name, thongh Stephanus tells us that this was-still preserved on aeconnt of the excellence of its wine. (Steph. B. s.v. I I voкov; Hesych. s. v.) Vibins Sequester is the only anthor that affords any clue to its position, by telline us that the river Hypsas (the modern Belici) flowed by it (Vib. Sequest. p. 12, according to Claver's emen dation) ; but further than this its site cannot be determined.
[E. H. B.]
10BACCHI. [MARmarica.]
10L, afterwards CAESARE'A ('I $\dot{\omega} \lambda$ K $\alpha \iota \sigma \alpha ́ p \in t \alpha$, Ptol. ii 4. § 5 ; ì Kaı ápeta, Strab., \&c.), originally an obsenre Phoenician settlement on the N . cuast of Africa, became afterwards famons as the capital of Bocchas and of Jnba 11. [Matretania.] The latter king enlarged and adorned the city, and gave it the name of Caesarea, in bonour of his patron Augustus. Under the Romans it gave its name to the prorince of Mauretania C'aesarieusis, of which it was the capital. It was made a colony by the emperor Claudius. Under Valens it was burnt by the Moors; but it was again restored; and in the 6 th century it was a populons and flomrishing city. It oceupied a favourable position milway betreen Carthage and the Straits, and was conveniently sitnated with refe.ence to Spain, the Balearie islands, and Sardinia; and it had a natural harbonr, protected by a small island. To the E. of the city stood the royal mansoleum. (Strab. xvii. p. 831 ; Dion Cass. 1.. 9 ; Mela, i. 6. § 1; Plin. v. 2. s. 1; Eutrop, vii. 5 ; Itin. Ant. pp. 5, 15, 25, 31; Oras. vii. 33 ; Anmian. xxix. 5; Procop. E. I'and, ii. 5.)

I）LAI．
Caesarea is now identilied，beyond all doubt，with the magnificent ruins at Zershell on the count of Algier，in a little more than $2^{\circ} \mathrm{E}$ ．lome．The Arabic name is simply an abbreviation of Carsarea Int；a fact clear to the intuitive sagacity of Sham， and which，in connection with the statements of the ancients，led that incomparable traveller to the trath．Unfortunately，however，nearly all sub－ sequent writers preferred to follow the thick－headed Mamert，who was misled by an error in the An－ tonine Itinerary，whereby all the places along this coast，for a considerable distance，are thrown too far to the W．；until the researehes which followed the French conquest of the country retealed inseriptions which set the question at rest for ever．There exist few stronger examples of that golden rule of eriti－ cism ：－＂Pomderanda sunt testimonia，non nume－ randa．＂（Shaw，Travels，vol．i．pt．1．c． 3 ；Barth， Hianderungen，p． 56 ；Pellissier，in the Erploration Scientifique de l－Algivie，wol．vi，p．349．）［P．S．］

IOLAI or loLAENSES（Ió入dot，Patus；＇Io－ גétiol，Divd．；＇Iodaeis，Strab．v．p．225），a people of Sarduia，who appear to have heen one of the in ligenons or native tribes of the island．Accordine to Strabo，they were the samie people who were called in his day Diagesbians or Diacebrians（ $\Delta$ ita－ $\gamma \xi^{2} \rho \in$ is or $\left.\Delta a \gamma \eta \sigma b \in i s\right)$ ，a ame otherwise mbnown： and be adds that they were a Tyrrlenian people，a statement in itself not improbable．The commonly received tradition，however，represented them as a Greek race，composed of emigrants from Attica and Thespiae，who had settled in the island nader the command of Iolaus，the nephew of Hereules．（Paus．又．17．$\S 5 ; 1$ iod．iv． 30, v．15．）It is evident that this legend was derived from the resemblance of the name（in the form which it assumed accord－ ing to the Greek pronunciation）to that of Iolaus： what the native form of the name was，we know not ；and it is not mentioned by any Latin author， though both Pau－anias and Diodorns affirm that it was still retained by the part of the island which had been inlabited by the lolai．Hence，modern writers bave assumed that the name is in reality the same with that of the llenses，which would seem probable enough ；but l＇ausanias，the only writer who mentious them both，expressly dis－ tinguishes the two．That author sjeaks of Olbia， in the NE．part of the island，as one of their chief towns．Diodous represents them，on the contrary， as occupying the plains and most fertile portions of the island，while the distriet adjuining Olbia is oue of the most rugged and mountainons in Sar－ dinia．
［E．H．B．］
10LCUS（＇I $\omega \lambda$ кós，E：p．＇Iaw入kós，Dor．＇1a ${ }^{2}$ кús： Eth．＇Iúlкios，fetn．＇I $\omega \lambda$ кis，＇I $\omega \lambda$ кias），an ameient city of Margnesia in Thessaly，situated at the head of the Payasacan gulf and at the font of Mt．Pelion （Pind Wen，is．88），and celobrated in the hervio ares as the residence of Jason，and the place where the Argonants assembled．［see Dict．of Boigr．artt． Jason and Absonaveras．］It is mentioned by Iloner，who pives it the ephithets of ejoktueìn and eùpúxopos（l1，ii，712，od xi．256）．It is smid to have been founded by（rethens（ $\Lambda$ pellianl．i． 9 ．§ 11），and to have been colonimed by Minyans from Orchomenos．（Strah．ix．p．414．）Itkens is rarcly mantioned in historical times．It was given by the Thessalians to Hippias，upon his expulion from Athens．（Iferol．v．94．）The town afterwards suf－ fiend from the dissemions of its inhabitants．lut it was finally ruined by the foundation of Denetrias in

IONIA．
n．c． 290 ，when the inhabitants of lulcos and of other adjuining towns were removed to this place．（Strab． ix．p．436．）It seems to have been no longer in ex－ istence in the time of Strabo，since be speaks of the phace where Iolcos stood（ $\delta \tau \hat{\eta} s$＇ $1 \omega \lambda \kappa 0 \hat{v} \tau \delta \delta \pi o s, ~ i x . ~$ 1．438）．

The position of Iolcos is indicated by Strabo，who says that it was on the roal from Boebe to Deme－ trias，and at the distance of 7 stadia from the latter （ix．p．438）．In another passage he says that lolcos is situated above the sea at the distance of 7 stadia from Demetrias（ix．p．436）．Pindar also， as we have already scen，places Jolcos at the toot of Mt．Pelion，consequently a little inland．From these descriptions there is little doubt that Leake is right in placing Iulcos on the steep height between the southernmost honses of Jolo and IVakho－makhald， upon which stands a church called Episkopi．There are at present no ancient remains at this place；but some large squared blocks of stone are said to lave formerly existed at the foot of the lieight，and to have been carried away for the construction of build－ ings elsewhere．Moreover，it is the ouly spot in the neighbourhood which has any appearance of being an ancient site．It might indeed appear，from Livy （ Eliv, 12，13），that Iolens was situated upon the coast ；but in this passage，as well as in Strabo（ix． p．4．36），the name of Iulcos seems to have been given to this part of the coast as well as to the city itself． （Leake，Northern Greece，vol，iv．p． 379 ；Mézieres， Jemaire sur le Pelion et COssa，p．11．）

JOMANES（Plin．vi．17．s．21），the most im－ portant of the affluents of the Ganges，into which it flows near the city of Allahabud（Pratishthina）． There can be no doubt that Arrian means the same river when he speaks of Iobares（Ind．c．8）；נnd Ptolemy expresses nearly the sance sound，when he names the Diamuna（vii． $1 . \$ 29$ ）．It is now calied the Jamuna or Jumna．The Jumna rives in the bighest part of the Himalaya，at no great dis－ tance from the sourc＇s of the Sulledge and Ganges， Ifspectively，in the neighbourhood of Iamumiratari （Jumnotri），which is probably the most saered spot of Hindu worship．It enters the Indian plain country at Fyzabad，and on its way to join the Ganges it passes the important cities of Dehli（In－ draprastha）and Agra（Crishmapura），and receives sereral large tributaries．These afflnents，in order from W．to E．，are the Sambus（Arrian，Ind．c．4）， （probably the Carmancatio or Cambal），the Betwa （or Vetravati），and the Cainas（Arrian，l．c．；Plin． vi．19．s．21：now Cayana or Cena）．The last has been already mentioned as one of the tributaries of the Ganges．

IOMNIUM．［JIUURETINIA．］
IUN（＂l $\omega \nu$ ），a river of Tymphaca in Thessaly， rising in the Cambunian mountains，and flowing into the Peneius：now river of Kraizora．（Strah，vil． p．327，Leake，Northern Grecce，vol．iv p．546．） ION MONS．［LIBYA．］
IONES［ION1．．］
10＇NIA（Twvia），also called Ionis，the country of Avia Jinor inhabited by lonian Greeks，and com－ prising the western coast from Ilhueaen in the north to Miletus in the south．（Herod．i．142；Strab．xiv． init．；Plin．v．31．）1ts length from north to south， in a straight line，mnounted to 800 stadia，while the length of its much indented cosst amounted to 3430； and the distance from Ephesus to Smyma，in a strairtht line，was only 320 stadia，while along the coast it reathed the large nuuber of 2200 ．（Strah．
siv. pp. 632, 665.) Towards the inland, or the east, lonia exteaded ouly a few miles, the towns of Maguesia, Larissa, Tralles, Alabanda, and others, not belonging to it. Ptolemy (v. 2) assigns much narrower limits to Iooia than his predecessors, for, accorling to him, it extended only from the Hermns in Lydia to the Maeander in Caria; so that Phocaea and Miletus wonld not belong to Ionia. According to at generally received tradition, the Ionian colonies on the west coast of Asia were founded after the death of Codrus, the last king of Attica, about 1:. C. 1044 , or, accordine to others, as early as B. c. 1060, about 60 years after the conquest of Pelopoonesus by the Dorians. The sons of Codrus, Neleus and Androclus, it is said, being dissatisfied with the alolition of royalty and the appointment of their eldest brother Medon to the archonship, emigrated, with large numbers of Attic Ionians and bands from other parts of Greece, into Asia Minor. (Strab. xir. p. 633, foll.; Paus. vii. 2.) Here, in one of the most beantiful and fertile parts of the earth, they founded a number of towns, - partly expelling sad parily snbduing the ancient inhabitants, who consisted maialy of Maeonians, Carians, and Pelasgians. (Herod. i. 142; Paus. vii. 2; Pherecyd. Fragm. $26 ;$ thionys. Per. 822, \&c.) As a great many of the original inhabitants remained in the country as subjects of the cooquerors, and as the latter had gone to Asia as warciors, without women, the new colonies were not pure Greek; but still the snbdued nations were not so completely different as to reoder an amalgamation iato one nation impossible, or even very difficult. This amalganation with different tribes also acconnts for the fact that four different dialects were spokeo by the Ionians. (Herod. l.c.)

The towns founded by the lonians - which, though independent of one another, yet formed a kind of confederacy for common purposes-amounted to twelre ( $\delta \omega \delta$ кка́лодıs), a number which must not be regarded as accidental. These towns, of which accounts are given in separate articles, were: ProCaea, Eihthiae, Clazomenae, Teos, Lebedos, Colophon, Ephests, Priexe, Mycs, Miletus, and Simos and Chos in the reighbouring ivlands. (Strab. xiv. p. 633; Aelian, I.. H. viii. 5.) Subsequently, about n. c. 700 , Smyrna, which until then had belonged to Acolis, became by treachery a memher of the Ionian confederacy, which heaceforth consisted of thirteen cities. (Hered. i. 149; Paus. vii. 5 ; Strab. l. c.) These lonian colonies sooo rose to a high degree of prosperity, and in many respects outstripped the mother-country; for poets, philosophers, historians, and artists flourished in the lonian cities long before the mother-country attained to any eminerice in these intellectual pursuits. All the cities of Iomia formed independent republics, with democratical constitutions; but their common affairs were discussed at regular meetings held at Panionium (Пaviónov), the common centre of all the Ionian cities, on the northern slope of Mount Mycale, near Priene, and abont three stadia from the const. (Herod. j. 141, 148 ; Strab. xir. p. 639; Mela, i. 17; Plin. v. 29.) These meetings at Panioninm appear to have given rise to a permanent town, with a Prytaneam, in which the meetings were held. (Steph. B. s.v.) The political boud which held the lonian cities together appears to have been rather loose, and the priocipal objects of the meetings, at least in later times, were religious worship and the celehration of games. The cities contioned to enjoy their increawing prosperity and their iodependence
until the establishment of the Lydian monarchy. The attacks opon the Ionian colonies began even in the reign of Gyges, so that one city after another was conquered, until, in the reign of Cruesns, all of them became subject to the Lydians. When Leydia became the prey of the Persian conqueror Cyrns, in B. C. 557 , Ionia also was obliged to ackoowledge the supremacy of Persia; but the new rulers scarcely interfered with the internal affairs of the cities and their confederacy; all they had to do was to pay tribute, to send their contingeats to the Persian armics, and to submit to satraps and tyraats, the latter of whom were Greek usurpers who set themselves up io their native cities, and were backed by the Persian mooarchs. But the Jonians, accustomed to liberty, were uaable to bear even this gentle juke for any length of time, and is B. C. 500 a general insurrection broke out against Persia, in which the Atheniaus and Eretrians also took part. The revolt had been plauned and organised by Histiaeas, tyrant of Miletus, and Aristagoras, his son-in-law. The Ionians burned and destroyed Sardes, the resi dence of the Persian satraps, but were then ronted and defeated in a bloody battle near Ephesus. In B. c. 496 all the 1 nnians were again reduced, and compelled to assist the Persians with men and slips in the war against Greece. In the battle of Mycale, B. c. 479 , the Ionians deserted from the ranks of the Persians and joined their kinsmen, and thas took the first step to recover their independence, which ten years later was fully sccured by the battle on the Eurymedon. They then entered into a relation with the Athenians, who were to protect them agaiast any further aggression from the Persians; but in consequence of this they became more or less dependent npon their protectors. In the unfortunate peace of Antalcidas, the lonians, with the other Asiatic Greeks, were again made over to Persia, n. c. $38{ }^{7}$; and when the Persian monarchy was destroyed by Alesander, they became a part of the Macedonian empire, and finally fell into the hands of the Romans. The highest prosperity of Ionia belongs to the period of the Lydiau snpremacy; under the rule of Macedonia it somewhat recovered from its previons sufferiogs. Under the Romans the Ionian cities still retained their importance as commercial places, and as seats of art and literature; but they lost their political life, and sank down to the cundition of mere provincial towns. The last traces of their prosperity were destroyed uuder the barbarous rule of the Turks in the middle ages. During the period of their greatest prosperity and independence, the Ionian cities scat out numerous colonies to the shores of the Black sea and to the western coasts and isluads of the Mediterranean. (Comp. Thirlwall, Hist. of Greece, vol. ii. chap. 12, pp. 94, 115, 120, \&c.; Grote, Hist. of Greece, vol. ii. pp. 229253.)
[L.S.]
10 NIUM MARE ('lóvod $\pi$ é $\lambda a \gamma o s$, Ptol.), was the name given by geographers to the sea which bathed the western sbores of Greece, and separated them from those of Sicily and Southern Italy. The appellation would seem to date from a very early periond, when the Iomians still inhabited the shores of the Corinthian gulf, and the part of the Pelopooaess subsequently koown as Achaia; but we have no evidence of its employmeot io early times. The legends inveated by later writers, which derived it from a hero of the name of Jonius or Iod, or from the wanderings of Io(Aesch. Prom. 840; Tzetz. ad Lyycopher. Alex. 630 ; Steph. B. s. v.; Eustath. ad Dionys.

Per. 92), are abvionsly mere etymblat for No traw of the name is found in the 1fomativy and it oceurs for the first time in Aes-hythes ildanfo. from the poetic dietion of that writer, it in mot d.ar in what precise some he emplay, the term ainotus $\mu \mathrm{o}$ Ds Tóvias. (Aexrl. l. c.) Heradatus evidently emplays the name 'Iovos кठ入лоs, the Ionium gnuff, as synonymous with the Adriatic; ant Thucedides likewise uses the term io the same sense, as is evident from his expression, that "Epidamms is a city on the right liand as you sail into the Iunian enulf" (i. 24). IIe also repeatedly uses the term $\delta$ 'Ióvios (witl ко́d tos unlentood) in speakiny of the paxsage frum Correyra to the Iapygian promuntory (ri. 30.34, vii. 33); bat in all these cases he refers only to the narrow set, which might be considered as part of the same gulf or inlet with the entrance of the Adriatic. Scelax also, and even Scymnns Chins, employ the naine of the Iorian gulf in the same sense, as symonymons with the Adriatie, or at least with the somithern part of it (Scyl. §§s 14, 27; Scermn. Ch. 133, 361) [Adriaticum Mare]; while the mane If the Ionian sea, in the more extended sense given tw it loy later geographers, as indicated at the con. memement of this article, is not foumd in any carly Grevk writer. Polybins is the first extant anthor whe neses the term in this sense, and pives the name if 'Lóvas mópos to the sea which extended from the cantrance of the Adriatic along the cuast of Italy as far as the promontory of Curiuthus, which he considers as its southem limit. (Pol, ii. 14, v. 110.) Even here the peculiar expression of the l-mian struit sufficiently shows that this was a mere exturnion of the name from the narrow sea or strait at the entrance of the Adratic to the more open sca to the S. of it. Hence we have no proof that the name wats ever one in common use among the Greeks until it came to be established by the geographers; and even Stralio, who on these points often fullows carlier authors, gives the name only of the Ionian gulf to the part of the sea near the entrance of the Afriatic, whie he extends the appellation of the Sicilian sea
 Sicily to thase of the Pelmonnese. He, as well as Polybius and Sumntrs Chins, fixes the Acroceraumian promoutury as the limit between the Ionian and the Alriatic seas. (Srah, ii. p. 123, vii. pp. 316,317.) Pliny west the name of Jonim Mare wary widely, or rather very vazurly; includine nuder that appeliation the Mure Sienlmin and Creticum of the Growks, as well as appuculy the bower part of the Alriatic (Plin, iii. 8. s. 14. 26. s. 29, 30, iv. 11. s. 1s), and this appears to have been the mase common in lifs day, and which is fillomed by the 1.atim poets. (Virs, Atn. iii, 211, 671; Ovid. Fast. ir. 565 . E.e.) Mela distinguishes the Ionian sen frem the sicilian, and applins the former name, in the A! ac now generally adupted by geographers, as that 1- otion of the brad san butween the sbores of cirece and thone of Sirily, which lay nearect to the forner. (11.1. ii. 4. §1.) But all these names, fiven merely n. funti us of the Meliterranean which had no tornal limite, were eviucntly usad wery vagnely and Imhlantaly; and the zreat exten-ion "iven at a bater Put 1 th the matue of the Alriatie awalhewed up Whturnther thene of thic Inint and Sicilian seas
 flie former name in a wazte and uetmal sume,
 4hated. Thus Servins, chamontine on the rapor

true 2 namm Mare is meant by the poct, say-:" Nourchan, lonitan simme esse immensam, ab lania thy ad Sicilian, et lom us partes esse Adriatieum, A flaticum et kpiroticum," (Serv, ad Acn, iii. 211.) On the other hand, the name of the lonian galf ( $\delta$
 by geographers), in a very limited scuse, to that prtion of the Adriatic immediately within the strait at its entranice. (Eustath. ad Dionys. Per. 92, 389.) I'tolemy even ap,lies the name of the Ionian sea (Tóvtov méरayos, iii. 1. §§14,15) in the same restricted manner.

From the name of the Ionian sea has been derived that of the Ionian islands, now given to the group of seven principal islands (besides several smaller oncs) which constitute an independent republic under the protectorate of Great Britain: but there is no ancient authority for tbis appellation. [E. 11. B.]
 v. 16. §̀ 2. The form' lómm, Stepls. B.; Dionys. r. 910; Juseph, Antiq, ix. 10. § 2 ; Solin. 34, better suits the Phoenician original, which signifies "an entinence;" comp. Mover's Phönizi $r$. pt. ii. p. 177; 1Iitzig, Die Philistier, pp. 131-134: Eth. 'Io-
 The Hebrew name Jarno is still preserved in the Arabic Yafa or Jaffa). A seaport town and haven on the coast of Palestine, situated on an eminence. The ancients asserted that it had existed before the Doluge (Pomp. Mela, i. 11. § 3; Plin. v. 14), and accordiag to legend it was on this shore that Andromeda was rescued by Perseus (Strab, l. c.; Plin. l. c.; comp. Hieron. in Jon. i.) from the monster, whose skeleton was exhibited at Rome by M. Aemilhus Scaurns during his famous curnle a-dilestip) (Plin. is. 4). Wheo the liraelites invaded Canaun it is mentioned as lying on the border of the tribe of Din (Josh, xix. 40), and was the only port passessed by the Jewisb people, till Herod made the harbour at Cacsarea. The timber from Lebanon intended for both the first and second temples tras landed here ( 1 Kings, v. 9; 2 Chron, ii. 16; E:rra, iii. 7) ; and Jonah went to Joppa to find a ship going to Tarshish (Jon. i. 3). Jodas Maceabaens set the shippiog on fire, becanse of the inhabitants haring drowned 200 Jews (2 Macc. xii. 3-7). The town was afterwards taken by Jonatban (1 Macc. x. $7:-76$ ), but wats not long retained, as it was again captured by Simon (xii. 34), and was strongly fortified by him (xiv. 5, xr. 28). It was annesed by Pompeius to the Roman province of Syria, along with other towns which the Jows had lield by grants from the predecessors of Antiorhus (Juseph. Antiq. xiv. 4. § 4, comp. xiii. 9. § 2), and was afterwarls given to llerod by Julius Camar (xv. 7. § 3), and remained part of the dominions of Archelaus (xvii 11. § 4).

In the New Testament Joppra is mentioned in exnnection with the Apmstle 1'eter (Acts. ix. :36-43, x. 5, 18. xi. 5). During the Jewish war, this place, which had become a receptacle for pirates (Strab. svi. p. 759), was taken by Cestins, and 8400 of the inhabitants were put to the sword. (Juseph. B.J. ii. 18. § 10.) Vespawian afterwards utterly demolisheed the ruins of Joppa, to which great numbers of prisons had fied, and taken to piracy for sulsistence. (B.J. iii. 9, §§ 2-5.) In the time of Comstantine Juppa was the seat of a bishop, as wedl it when taken by the Aralians muder Onar, A. D. G3at: the mane of a bishop necurs in the council hi 11 at Jerta alen A. D. 536. At the periox
of the Crusades, Joppa, which had already taken the name of Jaffa ('Ípo, Anna Como. Alex. xi. p. 328), was alternately in the bands of the Christians and Moslems. After its capture by Saladin (Wilken, Die Kreuza, vol. iv. pp. 537, 539) it fell into the hands of our own Hichard (p. 545), was then sacked hy Malek-al-Adel (vol. v. p. 25), was relbuilt by Frederick 11. (rol. vi. p. 471) and Louis IX. (vol. vii. p. 316), when it was taken by Sultan Bibars (vol. vii. p. 517). As the landingplace for pilgrins to Jerusalem, from the first Crusade to our own day, it occurs in all the Itineraries and hooks of travels, which describe the locality and natural unfitness of Jaffa for a haven, in terms very similar to those emploged by the ancients. For coins of Joppa see Eckbel, vol. iii. p. 433. (Reland, PaInest. p. 864 : Von Raumer, Palestina, p. 201 ; Winer, Realeörterbuch, s. v.; Robinson, Researches, vol. iii. p. 31; Ritter, Erdkunde, vol. xvi. pt. i. IT. 5i4-580, Berlin, 1852.)
[E. B. J.]
JORDANES. [Palaestina.]
 Accaean sea, one of the Sporades, ard falsely called by Stephanus one of the Cyclades, lay north of Thera and south of Paros and Naxos. According to Pliny, it was 25 miles in length, and was distant 18 miles from Naxos and 25 from Thera. (Plin. iv. 12. s. 23.) Both Pliny and Stephanus state that it was originally called Phoeoice. It possessed a town of the same name (Ptol. iii. 15. § 28), situated upon a lreight on the western side of the island. It has an excelent harbour, of a circalar form, like the Peiraecus: its month faces the south-west, and is opgnsite the island of Sicinns. The island is now called Nio ( ${ }^{2} v{ }^{\prime} \mathrm{I} \varphi$ ) ; and when Ross visited it, in 1836, it contained 505 families or 2500 souls. The modern town is bnilt upon the site of the ancient one, of which there are still remains.
lus was celebrated in antiquity as the burialplace of Homer, who is snid to have died here on his vorage from Smyrna to Athens. Long afterwards, when the fame of the poet had filled the world, the inhabitauts of Ios are reported to have erected the following inscription upon his tomb-

(Peudo-Herod. Tiit. Homer. 34, 36; comp. Scylax, p. 22 ; Strab. x. p. 484 ; Paus. x. 24 . § 2 ; Plin., Steph. $l l . c c$. .) It was also stated that Clymene, the inother of Homer, was a native of los, and that she was buried in the island (Tans., Steph. B., ll.cc.); and, according to Gellius (iii. 11), Aristotle related that Homer bimself was born in Ios. In 1771 a Dutch nobleman, Graf Pasch van Krienen, asserted that he lad discovered the tomb of Homer in the northern part of the island; and in 1773 he published aa account of his discovery, with some inscriptions relating to Homer which be said he had fuund upon the tomb. Of this discovery a detailed

cosi OF lus.
account is given by Ross, who is disposed to believe the account of Pasch van Frienen; but the original inscriptions have never been produced, and most modern scholars regard them as forgeries. (Ross, Reisen auf den Grieck. Inseln, vol, i. pp. 54. 154, seq.: Welcker, io Zeitschrift fiir die Alterthumsuissenschaft, 1844, p. 290, seq.)

JOTABE (I $\omega \tau \alpha \dot{\alpha} 5 \eta$ ), an island in the Erythraean Sea, not less than 1000 stadia from the city of Aelana, inhabited by Jews who, formerly independent, accepted the yoke of the Empire during the reim of Justimian (Procop. B. P. i. 19). It is now called Tiran, or Djeziret Tyran of Burkhardt (Trav. p. 531), the island at the entrance of the Gulf of Akabah. (Comp, Journ. of Geog. Soc. vol. vi. pp. 54, 55.) The modern name recalls the "Gens Tyra" of Pliny (vi. 33), placed by him in the interior of the Arabian gulf. (Ritter, Frdkunde, vol. xiii. Pp. 223-225, vol. xiv. pp. 19, 262.)
[E. B. J.]
JOTA'PATA ('Iarámata: Eth. 'I $\omega \tau a \pi a \tau \eta \nu o ́ s$, Steph. B, s. v.), a city of Galilee, standing on the summit of a lofty Lill, rising abraptly on three sides, from the deep and impassable ravines which surrounded it. Josephus, who manfully defended it against Ve-pasian, has told the story of its siege and capture: 1200 prisoners were taken, and $40,000 \mathrm{men}$ fell by the sword during its protracted siege : Vespasian gave orders that the city should be razed to the ground, and all the defences burnt. Thus perished Jotapata on the first day of Panemus (July) (B.J. iii. pp. 6-8; comp. Reland, Palaest. p. 867 ; Nilman, Hist. of Jenos, vol. ii. pp. 287 309). Mr. Bankes (Irby and Mangles, Trar. p. 299) has fixed the site at the singular remains of Külat Iln Ma'an, in the Wady-el-Hamám (comp. Burkhardt, Trav. p. 331 ; Ritter, Erdkunde, vol. xv. pt. i. p. 327), bat Robinson (Researches, vol. iii. pp. 279-282) identifies these rmins with the ARBELA of Galilec and its fortified caverns. [E. B. J.]

JO'TAPE ('I $\omega \tau$ ám $\eta:$ Eth. 'I $\omega \tau a \pi \in i \tau \eta s$ ), a small town of Cilicia, in the district called Selenitis, not far from Selims. It is perhaps the same place as Laerte, the native city of Diogenes Laertius. It is identified with the modern fort Lambardu. (Ptol. v. 8. § 2 ; Plin.v. 22; Concil. Chalced. p. 659 ; Hierocl. p. 709, where it is called 'Io $\frac{1}{2} \pi \eta$; comp. Laerte.) The coins of Iotape belong to the emperors Philip and Valerian.
[L. S.]
JOYA'LlA, a town of Lower Pamonia, on the sonthern bank of the river Dravus. (fin. Hieress. p. 562.) In the Peut. Tab. it is called lovalliun, While Ptolemy (ii. 16. § 6.) calls it Iovo $\lambda$ גov or 'Iov́to $\lambda$ ov, and the Geog. Rav. (iv. 19), Ioballios. It occupied, io all probahility, the site of the modern village of Fulpo.
[L. S.]
JuVEM, AD, in Gailia Aquitania, a Mutatio on the road from Bardigala (Bordeoux) to Tolosa (Toulouse); and hetween Bucconis and Tolosa. This Dlutatio was seven leagues from Tolosa. D'Anville conjectures it to be at a place which he names Guevin or Guerin. Walckemaer fixes the Mlutatio of Bucconis near the Bois du Bouconne. [G. L.]

JUTIA, a town in Lower Pannonia, south of the river Drarus, on the road from Poetorium to Dlursa. (Itin. Hieros. p. 561 ; Itin. Ant. p. 130; Tab. Peut.) The site is geverally identified with some rains found at Toplika. Another place of the same name is mentioned in Upper Pannonia, on the same road (Itin. Ant. p. 264), and is identified with some ruins found at Iovincze.
[L. S.]

JOVI'ACUM, a town in Norich in, where a " parfectus scemendae Italicae mihtum Libnmarionum" hath his head-quarters ; a ciremustate surgesting that the town, thoun situated some distance from the Dambe, was yet comected wi h its navigation. (Itin. Ant. 1. 249; Nut. Imp.; Tab, Pent.) [1..-]

JOVTS MoNs (Mongri, bear Almpurius), a apur of the l'yrenees in Spain, ruming ont into the Mediterramean near the frontier of Gaul. The steplike terraces which its face prosented were called Scalac Mereulis. (Mela, ii. 6. § 5.) [1. . .]

JOYIS MOÅs ( Tò $\Delta$ iòs öpos, l'tul. iv. 3. § 18 ; \%ouym), a monntain of Africa Propria, between the tivels Bagradas and Triton, apparcently containing the sumpes of the river Catala.
[P.S.]
Joy's PAcil's, a town in the interior of Noesia, out the esturn luak of the Margus. (Itin. Iferos. p. 56.5 ; Tuth. Peut.; Geog. Lav, iv. 7, where it is (ealled simply lagns.) sume identify it with the mandern tiltuparar:
[L. S.]
JUVIS l'wosontority ( $\Delta$ íos akpa, I'tol. vii. 4. § 4), a promuntory mentioned by Ptolemy, at the S. end of the ishand of Tammbane (Coglon). Its exact proition camot be identified, but it most lave heen in the nejshbourhowl of the present Point du Gulls, if it be not the same.
[1.]
IIAGikO of IPAGRUM (Aguitar, on the Cabru), a city of Hispania Bactica, 28 M.P. somh of Corduba, on the road to Gales. (Hin, Ant. 1n +12 ; Inser. ap . Muratori, p. 1052, No. 3 ; Florez, Esp. S. vol, xii. p. 2: Cims, ap. Florez, Med. vol. ii. p. 647; Mion1ut. vwl. i. p. 17, Suppl, vol. i. p. 29; Sestini, pp. 2R. 29 : Eckluel, vol. i. p. 23.)
[P.S.]
iPASTURGI. [Istregi.]
1PHISTIADAE:- [ATTICA, p. 326, b.]
IPN1 ('I $\pi v 01$, on the const of Maunesia, in Thesshly, at the font of Mount Pelion, where part of the thect of Xerxes was wrecked, seems to have been the name of some recks. (Ilernd, rii. 188 ; Strab. ix. 1. 443 )

H'NO'S ("I $\pi v$ os: Fith. 'Inveus), a town of the 1.orri Ozulaw, of mseertain site. (Thuc. iii. 101 ; sumd. B. s. r.)

11'SUS ("I quevs or "I 1 yos), a small town of Phryeia, a frw miles below Symada. The place itself mesior was of any particular note, but it is celebrated in listony for the great battle fought in its plains, hi. c. 301 . lye the agel Autigonus and his son Demetrius :Manint the combined forees of Cassander, 1.ysimathus, Ptolemy, and scleueus, in which Antigums lust his conguests and his life. (Plut. Pyrro. 1; Apman, Nivriuc. 55.) From Heroches (p. 677) aul the Acts of Cuncils (Concil. Nicucu, ii. p1 161), we learn that in the woventh and einhth couturies it was the see of a Chriotian bishop. Sume moklerns identify $I_{p}$ ns with $I_{p}$ sili Ilisser.
[L. S.]
 by II mur ( 12 . ix. 150,292 ), wisally itentificl with the later Ahia on the Messenian gulf: [A:s.1.]

## hienotulis. [Beroea.]

MRE'SIAE: [Aswertum.]
hima Flavia. [Gallaecia.]
IHIA (Eipia, 1'tol.: Eth. Iriensis: Yoghera), a considerable town of the interior of Liguria, mentioned both by I'liny and I'tolemy, as well as in the Itineraries, which phatee it 10 miles from Dertona, on the road to Placentia. (Plin. iii. 5. s. 7 ; Ptel. iii. 1. § 35. ; Itin. Ant. p. 288 ; Tub. Peut.) This distance agrees with the site of the molern town of Joyhera, which appears to have been called in the middle ages Vicus Iriae, a name gralually corrayted into its modern appellation. It is situated on the little river Staffora, which would seem to have borne in ancient times the same name with the city: it is called Hiria or Iria by P. Diaconos, whotells us that the emperer Majorianus was put to death on its banks. (Hzst. Miscell. xvi. p. 554.) Ptelemy includes Iria, as well as Dertona, in the territory of the Taurini; but this would seem to be certainly a mistake: that people coold never have extended so fur to the eastward. An inscription (of which tho reading is, however, a matter of controversy) has "Coloniae Foro Juli Iriensium," from which it would seem that Iria, as well as the neighhouring Dertona, became a colony after the death of Caesar, and ohtained the name of Forum Julii; but this is very doubtful. No other trace is fiund either of the name or the colony. (Maftici, Mus. Ver. p. 371.4 : Murat. Inser. P. 1108. 4; Orell. Inser. 73.) [E. 11. B.]

IRINE, an island in the Argolie gulf, sumped by Leake to be Fpsili. (Plin. iv. 12. s. 19 ; Leake, Peloponnesiaca, p. 294.)
mindus sints. [Canthi Sinvs.]
11R1PYO, a town of Hispania Baetica (Plin, iii. 1. s. 3), which Ckert supposes to have been situated in the Sierra de Ronda, near Zara or Pinal. (Florez, Esp. S. rol. xii. p. 303 ; Coins, ap. Flurez, Med. vol. ii. p. 474, vol. iii. p 85 : Mionnct, vol. i. p. 56, Suppl. vol. i. p. 113 ; Sestini, Med. Isp. p. 61 ; Lkert, vol. ii. pt. 1. p. 358.)
[P.S.]
1RIS ( $\delta$ " $1 \rho$ os: Kusuluadk), a considerable river of Pantus, which has its sourees in the heights of Antitaurns in the south of Pontus. It flows at first in a north-western direction, until reaching Comana it trkes a western tum: it thus passes by the towns of Mesyla and Gaziura. A little above Amisus it receives the Seylax, and turns eantwand; nome Eupatoria the lyens cmpties itself into it. After this it flows due north, mal, traversing the plain of Themiscyra, it empties itself into the Euxine by four mouths, the westermmost of which is the mast important. (Strab. xii. p. 556.) The Iris is smaller than the IIalys (Apollim. Rhod, ii. 368), hut till a consi2able river, flow ing throngh a vast extent of country, and, ateorling to Xemophon (Anab, v, 6. §3), was thxie plethra in thradth. (Comp, stral. i. p. 52, xii. 547; Sulax, 1. 32 ; Ptul v. 6. §2; Xenoph. v. 6. § 9 , vi. $2 . \S 1$; Apnill n. Jihut, ii. 965 ; Dionys. Per. 783 ; 1'lin. vi. 3, 4.) The part near its month is
now called Yechil or Yekil Irmak. (Hamilton, Researches, vol. i. p. 340.)
[L. S.]
IRLS [ImRNe.]
1RE's or IRA ("1pos or '1 $\rho \alpha$ ), a town of Malis, of uncertain sitc. (Steph. B. s. vv. ; Lycophr. 903.)

Is ("1s, Herod. i. 179), a torru of Mlesopotamia, eight days' juurney N. of Babylon, situated, according to Herodutus, on a streain of the same name, which bruught down the bitumen which was used in the construction of the walls of Babylon. There is no reason to doubt that it is represented by the modera Hit. There does not appear to be any river at present at Hil, but a small stream may have been easily blocked up by the sand of ages. There are still bitumen springs in the neighbourhood of this
 monis of lsidorus ( $\mathrm{p}, 5$ ) refers to the same town. (Ritter, Erdkunde, vol. ii. p. 148; Rennell, Geogr. of Herod. p. 552.)

ISACA, in Britain, a river mentioned by Ptolemy (ii. 3. §4) as lying west of the outlet of the Tamarus (Tamar). In the Nonumenta Britannica, Isacae ostia are identified with Weymouth, and also with Exmouth: most probably the latter, name for name, as well as place for place. Io the Geographer of Raveana the furm is Isca, which is preferable. [Isca.]
[R. G. L.]
ISADICI (El $\sigma \alpha{ }^{\circ} \delta ı k o t$ ), a people whom Strabo (si. p. 506) couples with the Troglodytae and other tribes of the Caucasus. The aame nay imply some Hellenic fancy about savage justice and virtue. (Comp. Groskurd, ad loc.)
[E. B. J.]
ISAMNIUM, in lreland, mentioned by Ptolemy (ii. 2. §8) as a promontory north of the Bubinda (river Boyne) $=$ St. John's Foreland, Clogher Head, Dunany Point, Ballashan Point (?).
[R. G. L.]
ISANNAVAT1A, in Britain, mentioned in the 6th 1 tinerary as lying between Lactodurum and Tripontium. It is a name of some difficulty, since neither of the places on each side of it has been identified. (Sce rv.) In the Gengrapher of Ravenna we find a Baunovallum, and in the 8th Itincrary a Banmovantum. Probably these two names are jilentical. At any rate, Bannovantom $=1$ sannavatia, sioce each is 28 miles from Magiorioium. Thus, in the 6th Itinerary, we have: -

Magiovinio
Lactodoro
lsannavatia
N. P.

- xvi.
- xii=xxriii.

11. P.

Bannavanto
Magiovioio

- xxviii.

It is only safe to say that Isannavatia mas a towa in the sonthera part of Northamptonshire, probably Daventry. The Itinerary in which it occurs has only two names beyond doubt, viz. Verulamium and Lindum (St. Alban's and Lincoln). Daventry, however, is Horsley's identification. In more than one map of Roman Britain, Bannovallum is placed in Lincolushire. This is because it is, in the first place, separated from Bannovanatnm, and then fixed on the river Bain, a Liacolnshire river. This is the meaning of Horncastle beiog given as its equivalent. The change, however, and the assumption, are equally gratuitous.
[R. G. L.]
I'SARA, the river. 1. [1nsula.]
2. The lsara, which was a branch of the Sequana, has its name preserved in the Celtic name of a place which was on it, named Briva lsarae. [Briva Is.ak.ie.] The Celtic element Is has become Oise, the modern name of the river, which is the same

YOL. 11.
word as the Eaclish Ouse. D'Anville says that the nume lara in the middle ages became Esia or Aesia. Vibius sequester mentions a river Esia which flows into the Sequana; but D'Anville susperts the passage to be an interpolation, though it is impossible to judge what is interpolation in soch a strange book as Vibius Sequester. Oberlia, the editor of Vitius Sequester, maintains the passage to be genuine ( p . 110)
[G. L.]
3. [Luns.]

1SARCI, a Rhaetian tribe dwelling about the mouth of the river lsaras (Plin. iii. 24), from which it appears to have derised its name.
[L. S.]
IsaRGUS. [Ilargus.]
ISARUS ('loapos: the Isor), a river of the Rbaetian Alps, flowing from an Alpine lake, and in a southern direction until it juins the Athesis near Pons Drusi. (Strab. iv. p. 207, where the "1 oapos (or $\alpha$ ) is said to receive the Atagis (Athesis); either a ouistake of Strabo himself, or by a transcriter transposing the names. Comp. Ilarcs.) [L. S.]

1SALRA ( $\tau$ à "loavpa: Eth. 'I $\sigma u v p e e^{\prime}$ ), the capital of Isiuria, situated in the sonth-west of the country; it was a wealthy, populuus, and nell-furtifed city at the foot of Mount Taurus. Of its carlier history nothing is known; but we learn from Diodorus ( $x$ viii, 22) that when it was besieged by Perdiccas, and the inhatitants were no longer able to hold out, they set fire to the city, and destroyed themselves with all they possessed. Large quantities of molten gold were fonnd afterwards by the Macedonians among the ashes and ruins. The town was rebuilt, but was destroyed a second time by the Ioman Servilius 1 saurions, and thenceforth it remained a heap of ruins. Strabo (xii. p. 568) states that the place was ceded by the Romans to Amyntas of Galatia, who built out of the ruins of the ancient city a netw one in the neigbbotrhood, which he surrounded with a wall; but he did not live to complete the work. In the third century of our aera lamura mas the residence of the rival emperor Trebellianns (Trebell. Poll. XXX. Tyran. 25); but in the time of Ammianus Marcellinus (siv, 8) nearly all traces of its former magoificence had varished. At a later period it is still mentioned, uader the name lsituropolis, as a town in the province of Lycamia. (Hierocl. p. 675 ; Concil. Chalced. p. 673 ; comp. Strab. גiv. p. 665 ; Ptol. v. 4. § 12; Steph. B. s. v.; Plin. v. 27.) Of Old Isaura no ruins appear to be found, though D'Anville and others bave identified it with the modern Bei Sheher; they also believe that Seidid Sheher occupies the site of New Isaura, wbile some travellers regard Serki Serai as the representative of New lsaura; but Hamilton (Researches, vol. ii. pp. 330, full.) has given good reasons for thinkings that certain ruins, among which are the ren ains of a triomphal arch of the emperor Hadrian and a gateway, on a hill near the village of Ollow Benuor mank the site of New Isaura. The walls of the city can still be traced all around the place. The lsamians were a people of robhers, and the site of their city was particularly favourable to such a avule of life. [Is.acrin.]
[L. S.]
1SAUTLA ( $\eta$ l $\sigma$ aupia), a district in Asia Minor, bordering in the east on Lycaonia, in the aorth on Phrygia, in the west on Pisidia, and in the south on Cilicia and Pamplylia, Its iahatitants, living in a wild and rugged mountainons country, werc little knowe to the civilised nations of sntiquity: The country contained but few towns, which existed especially in the northern part, which was lezs
mowntainons, though the capital, lanam, was in the suth. Stratio, in a sumewhat obseure parsate (xii. p. 568), seems to distinguish betweets 'Iaqupia, the northen part, and 'Ioaupus). the wothern and lens known part, which le regards as belomeing to levemma. Later writers, too, desimate by the nane lasuria only the torthern part of the comtry, and take no motice of the south, Whit hwan to them al most a tetra inoognita. The I Aratitants of that sedndel mountainons rextion of Asia, the lauri or lsauriea gens, appar to have bien a kimelr 1 race of the Pisidians. Their prin1.pal foums of living were derivel from plunder and wipu: fom their monntain fastnesses they wed to . . an! fato the plains, and to ravage and plunder toneser they conld overe me the iuhabitants of the whor in Cilicia, Phrygia, and Misidia: Thene a farinting habits ren lerent the Icaurians, who also to. ${ }^{\text {o }}$ put in the piracy of the Cilicians, so dancerous to the wi fhoming countrics that, in B. C. 78 , the Fiman- wht against then an army moder P. Servihas, whe, atter sever:I bangerous camprigns, succeachat in con juering mast of their strongholls and sulaning thom to subaiosion, in consequence of whi It le received the sumame of lsauriens. (Strah). l. c; 1hiod. Sie. xviii. 22 ; Zosim. v. 25; Mela, i. 2; Plin. v. 23; Eutrop. vi. 3; Liv. Epit. 93 ; Dion C.m. xlv. 16; Fler. iii. 6; Ptol. v. 4. § 12; Orus. v. 23; Amm. Mare. xiv, 2, xxv, 9.) The Isaurians after this were quite distinet from the lycaonians, fir Cicero (ad Att. v. 21 ; comp. ad Fum. xy. 2) diatinguisbes between the Forum Lycaonium and the lsauricum. But notwithatanding the severe mesurns of Servilius, who had destroyed their struncholds, and even their capital of 1suma, they suber puently contimued to infest their neighbours, which induerd the tetrarch Amyntas to attempt their extirpation; but he did not succeel, and lost his life in the attempt. Although the glorious vietory of lompey over the firates had put an end to such practices at sea, the Isaurians. who in the milat of the possessions of Lime maintained their indenmonewe, continned their predatory exarsions, and defliel the power of Fome; and the Romans, meFhle to protent their sobjeets against the bold mounthineers ith any orher way, endeavoured to clreck them ly surmunding their country with a ring of firtreates. (Trub. P'ull. XXX. Tyr. 25.) In this, however, the Dumans succented but imperfectly, for the Isaminus frempently broke through the suramoling line of fortifieations; and their surcemes emfohit was them so mueh that, in the thirst century of ond sura, they nuited themedres with their kinsbum, the Cilicians, into one mation. From that time the inhalitants of the highlands of Cilicia aho nim. Ir prived under the naine of Isauri, and the th : matrat, unt atnok expelitions on a very large soste. Wist. Eccles. .i. 8.) Once the Isaurians eren liad the honume of giving an emperor to the East in the ferwin of Zens, surnamed the Isaurian; but they were subsequently minch reduced by the emperor Anastasius, so that in the time of Justinian they had cesased to be formilable. (Comp. (iibbon, Hist. of the Decline, (fec, chap. xI.) The Issurians are deseribed as an ugly race, of low stature, and baully armed; in the open field they were bad soldiers, but as hardened monataineers they were irresistible in what is called kucrilla warfare. Their country, thuach for the most part consisting of rnerged mountains, was not altogether barren, and the vine was cultivated to a comsiderable extent. (Amm. Marc. siv. 8.) Traditions originating in the favourite pursnits of the ameient Isaurians are still cursent among the present inhabitants of the contry, and an interesting specimen is related in Hamilton's Researches, vol. ii. p. 331.
[L. S.]
ISCA, the name of two towns in Britans. The criticism of eertain diffieulties connected with their identification is given under Muriduxuar. Here it is assumed that one is Exeter, the other Cacrleon-on-Usl.

1. I-CA $=$ Er-eter, mentioned by Ptolemy (ii. 3 . § 30). In the 12th and 15 th Itineraries this appears as 1sea Dumm niorum, 15 miles from Muridnnum. The word Domnoniormon shows tbat Devonshire is the county in which it is to be sought. Name for name, Exeter suggests itself. Nevertheless, IInrsley gives Uxela as the Roman name for Exeter, and placed Isca D, at Chiselloro'. After remarking on Iswea, that "it is universally supposed to be the river Exe in Devonshire," and that "1 laere ostia must, tberefore, be Ermouth," he milts, "Isea Dumnoniorum has been uniwersally tahen for Exeter; I have placed it near ('hiselhoro' and South P'e therton, near the borders of Sumersetshire " (p. 37t). His objections (p. 462) lie in the diffiectly of fixing Mnridunam ( $q \cdot v$. ) ; but, brymul this, he considurs bimself free to claim Uxela $(7, x)$ as Exeter. For considering Isca Dumnoniorinn to bu Excter, hesees no better reason than "general opinion and some seeming affinity of names." Y'et the "affisity of mames" has been laid great stress on in the case of Issacae ostia. The Inea of Ptoleny must be about 20 or 30 miles north-cast of the month of the Exce, "on which river Exeter stands. This reaches to the Ax." IInce he suggests Ilchester as Isea Dumn.; hot, as he adenits that that town las a claim to be consilemen lschalis ( $4 \cdot r_{\text {r. }}$ ), lie also admits that some of the localities ahont Hampden Hill (where there are the remains of a Roman eamp), South $\Gamma_{\text {, therton (wheme }}$ Roman coins have been fomd), and Cliselloro' (not fire from the Are). have better chaims. Hence, m his map, Uxela $=$ Eireter, and 1 sen D. = Chis Uhoro: Ansuminy that some, if not nll, thase difficulties are explained under Uxela and Merobexam, the pnsitive evidence in favorr of Exeter is somuthing more than mere opinion and similarity of name.
(1) The form lsea is marer to Eis than $-1, x$, and that laca-Ere is aduitted. The $U x$ - in $U$ xeela may hettor $=A x$.
(2) There is no doubt as to the other lera $=$ Caerleon-om- L'sk. Simw, Ruser IIoveden, who wrote whilst the Cormish was a sprken lauguage, states that the name of Eacter was the same as that of Caerleon, in British, i. e. Corrmisc tivitas aquae.
(3) The statement of Horshy, that "he could never hear of any military way hadine to or from" Eixter, miskots. In 1. luhele (1. L82) we have a
most distinct notice of the road from Seaton, and, nine miles from Excter, the locality called Street-way Head; the name street = road (when not through a tou'n or village) beiog strong evidence of the way leing Roman. Tesselated parements and the foundations of Roman walls have been found at Exeter, as well as other remains, showing that it was not only it Roman town, bat a Roman town of impurtance, as it contibued to be in the Saxon times, and as it had probably been in the British.

2 Isca Legionis = Caerleon-on- $C$ s $\ell$, is mentioned in the 12 th Itinerary, i.e. in the one where Isca Dannoniormm occurs. The only town given by Ptolemy to the Silures, the population of the parts to which Isea (sometimes called by later writers Isca silurum) belongs, is Bullaeum. This $=$ Burrium of the Itinerary, 8 Roman miles from Isia (= Csk, about 6 English miles from Caerleon.) Hence, Isea may have been a military station of comparatively recent date. But there is a further complication. It is the Deronshire Isea to which Ptulemy gives the Second Legion (Afriuy
 perhaps, with truth). on the part of Ptulemy, is, " in my opinion, the only manifest and material error cernmitted by him in this part of England" (p. 462).

Azain: several inscriptions from the Hall (per lineam I'alli) show that, when that was built, the second Legion was on the Scottish border, taking part in the work; the previons history of the legion being, that it came into Britain nnder the reign of Claudius, commanded by Vespasian. (Tac. Hist. iii. 44.) On the other hand, an inseription mentioned by Horsley, but now lost ( $p, 78$ ), indicates their presence at Caerloon in the time of Severus. As the Itinerary places them there also, we must suppose that this was their quarters until the times approachiog the evacuation of Britain. When the Dotitur was made, they were at Rutupiae (Richboro') : PRAEfOSITUS LEGIONIS II. AUGUST. EUrupis.

The Roman remains found at Caerleon are considerable. A late excavation for the parts about the Castle Mound gave the remains of a Roman villa, aloog with those of a medieval castle, built, to a great extent, ont of the materials of the former. In some cases the stucco preserved its colour. There was abandance of pottery,-Samian ware, ornamented with figures of combatant gladiators, keys, bowls, bronze ornaments, and implements. At Pil Bach, near Caerleon, tesselated pavements have been found, along with the folluming inscription:- DIIS M.A. NiDVS TADIA VELLAVIYS . VIXIT ANNOS SEKAGLNTA QVINQVE - ETTADIVS EXUPEITYS FILIVS VIXIT AXXOS TRIGINTA SEPTLKI . DEFVNTVS (sic) EXPEDITIONE GERMANICA . TADIA EXGPERATA FHLAA M.ITR ET PATEI PHSSLMA SECVS TVmyaval patmis posyit. Others, of less length, to the number of twenty, lave also been found in the neighbourlood. (See Archaeologia C'ambrensis; Juurnal of British Archaeological Association (passim); and Delineations of Roman Antiquities found at Caerleon. J. E. Lee.) [R. G. L.]

ISCA, river. [IsACA.]
ISCADIA (Eiokaঠia), a town in the W. of Baetica, between the Baetis and the Anas, not far from 'Tucci. (Appian, Hisp. 68.)
[P.S.]
ISCHALLs, in Britain, mentioned by lotolemy (ii. 3. 28 ) as one of the towns of the Belgre, Bethl

Vents) being the other two; identified, in the Monumenta Britannica, with Ilehester. [Isca DumsoNIonvm.]
[R. G. L.]
ISCHO'POLIS ('I $\sigma \chi$ $\bar{\prime} \pi \sigma \lambda \iota s$ ), a small town on the coast of Pontns near llharnacia, was in ruins even in the time of Strabo (sii. p. 548), but is still noticed by Ptolemy (v. 6. § 5).
[L. S.]
ISlACO'RUM POliTLS'('I $\sigma a k c ̂ \nu ~ \lambda \iota \mu \dot{\eta} \nu$, Arrian, Peripl. p. 21, Anon. Peripl. p. 9), a harbour on the Enxine sea, 380 stadia from the island at the mouth of the Borssthenes, and 1200 stadia from the Psilon (Suliua) montlı of the Danube. (Arrian, l.c.) lt has been identified by Rennell (Comp. Gcog. vol. ii. p. 360) with Odessa. There is some difficulty in adjusting the discrepancies in detail; but the argregate distance appears to be clearly enough made out. Thus, from tbe island to Olessns Arrian allows a distance of 80 stadia, and from Odessus to the port of the Istrians ('I $\sigma \tau \rho \cdot a v \omega \bar{\nu} \lambda \iota \mu \hat{\prime} \nu$ ) 250 stadia, and thence to that of the Jsiaci 50 stadia. The
 at Tarma) is probably a false reading, and is the same as the Ordesus ('Opōnoús) of Ytolemy (iii. 5. § 29) and Pliny (iv. 12), situated upon the river Axiaces, or the modern Teligul, a large estuar! which receives a niver of the same name. As the interval in Arrian between Odessus (Ordesus) aul the island is too short, so the next is too large; but the crrors balance one another, and the harbour of the Isiaci agrees with that of Odessa witlin three quarters of a mile; the port of the Istrians may have lain to the N. of the bay of Odessa. [E. B. J.]

ISIDIS OPPJDUM (Plin. r. Io. s. 11). Near the eity of Busiris, in the Aegyptian Delta, was situated a splendid temple of Isis, around which, besides the ordinary dwellings of the priests within the sacred precincts, gradually clustered a large and flourisling village, inhabited by the artisans and hosbandmen who supplied the mants or tilled the lands of the immates of the temple. These buildings formed probably the hamlet or town of Isis mentioned by Pliny. The modern village of Bahbeyt. N. of the ancient city of Busiris, is supposed to enver the ruins of the Tcmplnm Isidis. (Pococke, Travels in the East, rol. i. p. 34 ; Minutoi, P. 304.) [Businis.]
[W. B. D.]
JsINISC.A, a place in Rhactia Secunda, on the ancient rond between Augsburg and Salzburg. (Itin. Ant. Pp. $236,251,257$; Tab. Peut., where it is called Isunisca.) It is identified by some with Isen, and by others with a place near Helfendorf [L.S.]

ISIONDA (I $\sigma \Delta \delta \dot{\gamma} \delta a$ ), a town in the suttli-west of Pisidia, a tew miles to the nortb-west of Ter messus. (Polyb, Exc, dc Leg. 31; Liv. x xxviii. 15.) Strabo (xii. p. 5\%0), in enumerating the Pi-idian towhs, mentions one which he calls Siada, a natrat which some editors believe to be a corrupt realine for Inonda; bnt, as there existed a town of the name of Sinda near Cibyra in Pisidian Plrygia, it wonld Lu hazardons to decide anything. (Sce Kramer's note on Strab. l. c.) Sir C, Fellowes (Asia Minor, I. 194) found extensive remains of an ancient town on the top and side of one of the many isolated hills of the district, which he supposes to be the ruins of Isionda, but be does not mention any eoins or inscriptions in support of his conjecture. [L. S.]

JSIS ( $\delta$ "I $\sigma / 5$ ), a narigable river on the east coust of the Eusine between the Acinasis and Mugras. from each of which its distance amountel to 90 stadia, while its mouth was 180 stadia sonth of that of the Phasis. (Arrin, Peripl. p. 7 ; Plin, vi. 4;

Scylax. p. 32 , where the common realing "Ipss has been corrected by Gail.) This river is believed to be the mustern Tishowok.
[L.S.]
I'siley (1siu, fin. Anton. p. 167 ; 1sui, Dit. 1 mp .). was a fort situated on the borders of the Thetail and Heptanumis in Erypt, in lat. $27^{\circ} 5^{\prime} \mathrm{N}$., tand in the rastom lank of the Nile. 1-ium was alont 20 milos SE. from the eastle of Hieracon, and montr 24 mites XE. from that of Mothis. Ender thic Buman cmpire a troop of British infontry (ala 1; itutum) was stationel there.
[W, B, 1).]
1sll's Mosis ( ( ò "loıov ópos, Ptul. is. 7. § 5), a in motian. or rather a ritle of highlands rising gradually on its western side, but steep and escarped tonsitras the cant, on the coant of Achhopia, and in the lewio Troslongtica. It was seated in lat. $20^{\circ}$ 1' X., n little to the smithward of the healland Mne"1urn (Mıqueiov Karpov, Ptol. iv. 5. § 7), nnd SW. of lierenice and the Sinus lmmandus (Foul Buy). Alow lisius answers to the modern Ras-el-Duacr. Sirabo, indeed ( $\mathrm{x} v i \mathrm{i}, \mathrm{p}, 770$ ), places this emiaence further to the suuth, and says that it was so called from a temple of tsis near its summit. [W. B. D.]

ISMARIS ( $1 \tau \mu a p$ is $\lambda f \mu \nu \eta$ ), a sinall lake on the sontin coast of Thrace, a little to the east of Maronea. (Ilerod. vii. 169; Steph. B. s. $v,{ }^{\text {' }}$ I $\sigma \mu$ apos.) On its tastern side rises Mt. Isimarus. [1smarkis.] [L. S]

ISMARLS ("I $\sigma \mu a p o s)$, a mountain rising on the east of lake lsmaris, on the sonth coast of Thrace (Virg, Eel. vi. 30, Gcarg. ii. 37 ; P'ropert. ii. 13. 5. iii. 12. 25 : Lucret. v. 31, where it is called Ismara, as in Virg. Aen. x. 351.) Homer (Od. ix. 41. 198) speaks of Imarus as a town of the Cicones, on or at the foot of the mountain. (Comp. Mare. Horacl. 25.) The name of the town also pppears in the form limaron. (Plin, iv. 1s.) The distriet about Ismarus prolnced wine which was hizhly esteemed. (Athen. i. D. 30; Ov. Met. ix. 641; Steph. B. $\left.s v_{1}\right)$

Illyr. 7.) That Issa remainel free for a long time is proved by its coins, which also show that the island was famous for its wine (comp. Athen. i. p. 22), bearing, as they do, an "nmplara" on one side, and on the other a vine with leaves. (E.ckhel, vol. ii. p. 159.) The inhabitants were expert seamen, and their beaked ships, "Lembi Kasaci," renderol the Romans especinl service in the war with Philip of Macelor. (Liv. xxxi. 4., xxxvii. 16 , xlii. 48.) They were exempted from the payment of tribute (Liv. Jlv .8 ), and were reckomet as loman citizens ( ${ }^{\prime}$ lin. iii. 21), In the time of Cassar the chief town of this island appears to have been very flourishing.

The isiand now ealied $L$ issa rises from the sea, so that it is seen at a considerable distance; it has two ports, the larger one on the NE. side, with a town of the same name: the soil is barren, and wine furms its chiei produce. Lissa is memorable in modern times for the victory obtained by Sir W. Hoste over the French squadron in 1811. (Sir G. Wilkinson, Dalmatia and Montenegro, vol. i. p. 110 : Neizebuur, Die Sudslavens, P1. 110-115.) [E. B. J.]

COIS OF 158.
ISSA. [LESBOS.]
IssaCHAR. [Palanstina.]
ISSE'DONES ('I $\sigma a \eta \delta \delta v_{6}$, steph. B. $s . v$. ; in the Fornan writers the usual form is " E.sedones "), a people living to the E. of the Areippaei, and the most remote of the tribes of Central Asia with whom the Hellenic colvnies on the Euxine had any communication. The nume is found as early as the spartam Alcman, b, C. 67 t -631, who calls them "Assellones" (Fr. 94, ed. Welcker), and Hecatacus (Fr.168, ed. Klausen). A great movenient among the nomad tribes of the N . bad taken place in very remote times, following a direction from NE, to ${ }^{\circ}$ W\%: the Arimaspi lad driver: oat the lssed nes from the steppes onir wbich they wandered, and they in turn alruve ont the Scythians, and the scythians the Cimmerians. Traces of these migrations were indi ated in the porm of Aristeas of Proconnesus, a semimythical personage, whose pilgrimage to the laud of the Issedones was strangely disfigured after his death by the fables of the Milesian colonists. (Hermi. iv. 13.) The Essedones, according to Horodutus (iv. 26), have a custom, when any one loses his father, for the kinsfolk to kill a certain number of sheep, whose flesh they lash up together with that of the deal inan, and make merry over it. This done, they peel and clean ont his skull, which after it has been gilded becomes a kind of idol to which yearly sacrifices are offerel. In all other respects they are a righteous people, submitting to the rule of women equally with that of men : in other words, a civilised people.

Heeren (.lsiat, Vat, vol. ii. p. 15, traus.). upan Dr. Levden's anthority ( 1 siat. Rts. vol. ix. p. 202), illu-trates this way of carrying out the duties of
filial piety by the practice of the Battas of Sumatra. It may be remarked that a similar story is told of the Indian Padaci. (Herod iii. 99.) Pomponius Mela (ii. 1. § 13) simpiy copies the statement of Herodotus, though he ulters it so far as to assert that the Issedones used the skull as a drinking cup. The name occurs more than once in Pliny (iv, 26, vi. 7, 19) ; and Ptolemy, who has a town Issedon in Serica (' $1 \sigma \sigma \eta \delta \delta \dot{\omega}$, vi. $16 . \S 7$, viii. 24. §5), mentions in another place (viii. 24. §3) the Scythian Issedon. (Comp. Stepb. B. s. e.; Amm. Marc. xxiii. 6 § 66.

Von Humboldt (Asic Centrale, vol. i. pp. 390412) has shown that, if the relief of the countries between the Don and the Irtysh be compared with the itinerary traced by Hervdotus from the Thyssagetae to the Issedones, it will be seen that the Father of History was acominted with the existence of vast plains separating the Cral and Altaï, chaios which modern geographers have been in the habit of uniting by an imaginary range passing through the steppe of the Kirghiz. This route (Herod. iv. 23, 24) recognises the passage of the Cral from W. to E., and indicates another chain more to the E. and more clevated - that of the Altaï. These chains, it is true, are not desigषated by any special names, but Herodotus was not acquainted even in Europe with the names of the Alps aod Rhipaean mountains; and a comparison of the order is which the peoples are arranged, as well as the relief and description of the country, shows that much definite infurination had been already attained. Adraacing from the Palus Maeotis, which was supposed to be of far larger dimensions than it really is, in a ceotral direction towards the NE., the first people found occupying the plaias are the "Black-clothed "Melanchlaeni, then the Budini, Thyssagetae, the Iuncae (who have been falsely identified with the Turks), and finally, towards the E., a colony of Scythians, who had separated themselves from the "lioyal Scythians" (perhaps to barter gold and skins). Here the plains end, and the ground becomes broken ( $\lambda \iota \theta \dot{\omega} \delta \eta \eta s$ кal $\tau \rho \eta \chi \dot{\epsilon} \eta$ ), rising into mountalins, at the foot of which are the Argippaei, who have been identified from their loog chins and flat noses with the Kalmucks or Mongolians by Nicbuhr, Bückh, and others, to whom reference is made by Mr, Grote. (Hist. of Greece, vol. iii. p. 320.) This identification has been disputed by Humboldt (comp. Cosmas, vol. i. p. 353 note, 440 , vol. ii. p. 141 note, 202, trans.), who refers these tribes to the Finnish stock, assuming as a certain fact, on evidence which it is difficult to make out, that the Mongolians who lived around Lake Baikal did not move into Central Asia till the thirteenth century. Where the data are so few, for the language (the principle upon which the families of the limaua race are marked off) may be said to be unknown, ethoographic analogies become very hazardous, and the more so in the case of nomad tribes, the same under such wide differences of time and climate. But if there be considerable difficulty in making out the analogy of race, the local bearings of these tribes may be laid down with tolerable certainty. The country up to the Argippaei was well known to the traders; a barrier of impassahle mountains blocked up the way beyond. [Hyperbores] The pusition of the Issedones, according to the jedications of the route, must be assigned to the E. of Ichim in the steppe of the central horde of the Kirghiz, and that of the Arimaspi on the N. declivity of the

Altaï. The communication between the two peoples for the purpose of carrying on the gold traile was probably mate throngh the plains at the NW. ex tremity of the Altaï, where the range juts out in the form of a huge promontory.
[E. B. J.]
ISSICUS S1NUS. [Isses.]
IssUS ('I $\sigma \sigma \dot{s}$ aod 'I $\sigma \sigma o i$, Nen. Anal. i. 2. § 24, and i.4. §1), a town of Cilicia, on the gulf of 1sous (Irakos кódतos). Herodotus calls the gulf of issus the gulf of Myriaodros (iv. 38), from the town of Myriandros, which was on it.

The gulf of Isous is now named the gulf of $I s$ : kenderun or Scanderoon, from the town of Scanderoon, formerly Alexandria ad Issum, on the eant side. It is the only large gulf on the southern site of Asia Minor and on the Syrian coast, and it is ant important place in the systems of the Greek geographers. This gulf runs in a NE. direction into the land to the distance of 47 miles, measured nearly at right angles to a line drawn from the promontory Megarsus (Cape Karadash), on the Cilician coast. to the Rhosicus Scopulus (Ras-el-Khainzir, or Hynzyr, as it has sometimes been written), on the byrian coast ; for these two capes are respectively the limits of the gulf on the west and east, and 25 miles fiom one another. The widtis iumediately north of the eapes is somewhat less than 25 niles, but it does not diminish much till we approach the northern extremity of the gulf. It seepns certain that the ancient outlet of the Pyramus was west of and close to Ciphe Karadash, where Beaufort supposes it to have beell; and this is consistent with the old prophecy [Vol. I. p. 620], that the alluvium of the Pyramis would some time reach to the shore of Cyprus; for if the river had entered the gulf where it does now, 23 miles further east, the prophecy would have been that it would fill up the gulf of Iisus. For the earth that the river formerly discharged into the sea is now sent into the gulf, where it "has produced a plain of sand along the side of the gulf, somewhat similar in shape, and equal in size, to that formed by the Ghiuk Sonyoo [Calycadnus, Vol, 1. p. 483] ; but the eibow where the current that sets round the gulf quits it, is obtuse and withont any shoals. Perhaps the disappearance of the Serrepolis of Ptolemy from the coast, may be accounted for by the progressive advance of the shore inte the gulf, which bas lett the ruins of that town sunic miles inland" (Beaufort, Caramania, p. 296). Ptolemy's Serraepolis (亡it $\dot{p}$ ainuais), which be calls a small place ( $\kappa \omega \dot{\mu} \eta \eta$ ), is between Mallus, which is a little east of Cape Megarsus, and Aegae or Aymz. [AEgae.] The next city to Aegae on the coast is Issus, and this is the remotest city in this part of Cilicia which Ptolemy mentions. Xenophon also syeaks of it as the last city of Cilicia on the road to Syria.

The mountains which hound the gulf of Issus are described in the article Amaxcs. The bold Rhosicus Scopulus ( 5400 feet high), where the Syrian Amanus terminates on the coast, may be distinctly seen by the sailor when he is nhreast of Seleuceitit (Seleflieh), at the mouth of the Caly cadnus, a distance of 85 geographical miles (Beaufurt). A small stream flows into the bead of the gulf of Issus, and a few from the Amanus enter the cast side, onic of whicb, the Pinarus, is the Deli T'schai; and the other, the Carsus of Xenophon, is the Merkes. The Amauus which descends to the Rhosicus Scripulus, and the other branch of the Ananus which shuts in the gulf of Issus on the

F 3

LSSU
NW: and forms Strabo's Amanides Pylae, weto in the interior, as Strabo says (p. 535) ; and cur modern mape represent it so. There is a plain at the head of the gulf. Sitrabo gives a reater extent to the 1 ssie gulf than we do to the gulf of Scandrroon, for he makes it extend aloms the Cilietim coms as far as Ciluia Trachea, and certainly to Soli (pp. 53.34, 664). In annther pawage (p. 125) he slows what extent las gives to the gulf of lasus, by plawims Cypus in the Paumhylan ser aod in the gulf of 1 whs, - the west part of the ikland beine in the l'an$1^{\text {hyy }}$ ian, and the enst in the $\mathbf{I}$-sic gulf. The gulf of 1 stenderun was survered by Lt. Murphy in the Eupdrates expedition under the command of Colonel Chismey.

Th-ancient ceo_raphers dill not agree about the positum of the inthuns of the country which we call Asia Homor; by which isthrms they meant the shorte-t dintance arruss the exstem part of the jeninsula from the Eansine to the Nechterraocan. Strabo (p. 673) makers this shortest distance lie along a line juiniur Amisns and Tarsus, If he had said Amistrs and the luat of the gulf of lasos, he would have twen quite risht. He was nealy correct as to the lomitnie of the heal of the quit it lasus, which lieplands in the meridian of Ami-us and Themiseyra (3.126) ; and in :mother passaue he say's that the heal of the gulf of lasus is a little more east than Aminns, or not at all more east ( p . 519). Amisus i-, in fact, a little further east than the most e:stern part of the galf of 1 ssus. The longest direction of the iulhatitel world, according to strubo's syṣtem (p.118), from west to east, is measured on a line drawn through the Stelae (Struits of Gibraltar), and the sulian strait (Sirctils of Micsina), to 1.hudus and the culf of lssix, whence it follows the Taurus, which divides Asia into two parts, and terminst is on the ea-tern sea. Those ancient geographors wha made the isthmus of the Asiatic peniosula extun? from Issus to the Euxine, considered the shertent time across the isthmus to be a meridian lum, and the dispute was whether it ran to sinope or Amisus ( Strab. 1, 678). The chuice of Issus as the puint on the Mediterranean to reekon from, shows that I str was the limit, or mont eastern point, on the sonth corat of the geniosula, and that it was not (in that part of the bay of lisus where the canst runs क) ath. Chosenmotly Isus was on or near the head is the cult. Herodutus (iv: 38) makes the southern w: *) the this pemimsula, or Acte, ass he calls it, extend fr it the Myriameric gulf (cult of lasus) to the Than in phmontary, whirh is quite earrect. On the- impth side le makes it extend from the mouth ut the Phasis to the promontury sisem, which is c.rres as to the pomentary; but he earries the molk tho fire tent, whoo he makes it bugin at the Phin - Thin mi.take, however, shows that he Lue a comething of the poxition of the muyth of the IIa s, tur he intends to make the Acte begin at
 lic west and wate : and thoneh the mouth of the Phasis is fot exatly ot this fout, it was the best kuma river of any anar it. In another paxsage (i. i-2), which, like nany others in lis listacy, is uhb--turdy "apmesed. be theotition the suck (ei xi,s) of this Acte th searly cht throueh ly the nee Halys; suld be makes ths widh from the smi of pusite to
 an attive mank- -an matimate vory muth shom if the trath, evas if wo allow tireck attivity to walk so

## 1SSUS.

prut finan hearsay ( -1.1. i. p. 538), that the bay of Jsaus can be seen finn the summit of Argacus [Al:casess], is very improbable.

Nenophom says that Cyrus marched 15 parasangs froin the Prranus (.faikin) " to lasi, the uttermost city of Cilicin, on the sea, preat and prosperons." From Issus to the Prylne of Cilicin and Syvia, the boundary between Syria aod Cilicia, was five parasaugs, and here was the river Carsus (Xel), Anab. i. 4. § 4). The next stage was five parasangs to Myriandrus, a town in Syria on the sea, oecopjed by Phomicians, a trading plave (Ėuтópov), where many merchant ships were lying. Carsten Niebuln, who went through the l'ylae Cilicine to Tarsus, has some remarks on the 1 molable site of 1 ssus, but they lead to no cuncluson (vil. i. p. 116), except that we cannot certaialy determine the site of 1 lows from Xenuphon; and yet ho wonld give us the best means of determining it, if we knew where he crose ed the l'yranos, and if we were also ecrtain that the numbers in the Greek text are correct.

The uearest ruad to Susa from Surdis was thrungh the Cilician plaius. The difficulties were the passare inte the plains by the Cilicine Pyae or pass [Vol. 1. p. 619], and the way out of the plains along the gulf of Issus into Syria. The great road to Susa Which Llerixdotas describes (. . 49, 52), went north of the Taurus to the Euphrates. The land forces in the expelition of Datis and Artaphernes, B.C. 490, crossed the Syrian Amanus, and went as far as the Aleian plain in Cilicia; and there they enibarked. (Herod, vi. 95.) They did not marels by land through the Cilician Pylae over the Taurns into the interior of the peninsula; but Mardonius (Herod.vi. 43), in the previous expedition had led his troops into Cilicia, and sent than on by land to the Ifellespontus, while he took ship and sailed to lonia. The land force of Mardonius innst have passed out of Cilicia by the diffisult pass in the Taurns. [Vol. 1. p. 619.]

Shortly before the battle of Issus (n. c. 333) Alexander was at Mallos, when he heard that Datrins with all his force wats at Sochi in Assyria; which place was distant two marches from the Assyrian I'ylac. (Arrian, Anab. ii. 6.) "Assyria" and "Assyrian" here mean "syila" and "Syrian." 1)arins had erosed the Euphirates, probably at Thapsacus, and was encamped in an opeo country in Syria, which was well saited for his cavalry. The jlace Sichi is vnknown : but it may be the place which Cartius ealls Unchae. (Q. Curt. iv. 1.) Arrian anys that Alexaoder left Mallos, and on the secund day he passed through the l'ylae and reached Myriaudrus: be does not mention Issus on this march. Now the shortest distance that Alexander could matech from Mallos to Scanderoan is at least 70 miles, and if Myriandrus was south of Scanderaon, it was more than 70 miles. This statement of Arrian as to time is therefore false. Curtins (iii. 8) suys that Alesander only neached Castabalum [CasTanatusi] on the second day from Mallos; that he went themeis Jsous, and there deliberated whether he shoulif go on or halt. Darins erossed the Amsanus, which spyarates Syria from the hay of Issus, by a p.ss callend the Amamicac Pylae (Arrian, ii. 7), and advancing to Issna, was in the rear of Alexanier, whe) had passed through the Cilician and Syrian Pyne, Darius came to the 10ns in the Amamus, silys Curtius, on the same nipht that Alexander cance to the pass (tinces) by which syria is entered.
so situated that he came to Issus first, where he slamefully treated the sick of the Macedonians who had beeu left there. The nest day he moved from Issus to parsue Alexander (Arrian; Curtius, iii. 8); that is, he moved towards the Pylae, and he came to the banks of the river Pinarus, where he halted. Issus was, therefore, north of the Pinarus, and sone little distance from it. Kiepert's map of Asia Minor marks a pass in the range of the Syrian Atnanus, which is north of the pass that leads over the same momatains from the east to Baiae (Bayas). and nearly due east of the head of the gnlf of Issus. He calls it Prlae Amanides, by which he meaos the Pylue Amanicae of Arrian, not the Amanides of Strabo ; and he takes it to be the pass by which Datius crossed the Syrian Amanus and came down upon the gulf. This may have heen his route, and it would lring him to Issus at the head of the gulf, which lie came to before torning south to the Pinarus (Deli Tschai). It is certain that Darius crossed by some pass which brought him to Issus before he reached the Pinarns. Yet Kiepert has placed Jssus south of the Pinarus, or rather between the two branches of this river, which be represents as uniting near the coast. Kiepert also marks a road which passes orer the junction of the two branches of the Amanus [Anhixus, Vol. I. p. 114] and runs to Marash, which he supposes to be Germanicia. This is the dotted road marked as running north from the bead of the gulf of Issus in the plan [Vol. 1. p. 115]: but even if there be such a road, it was not the road of Darius, which must have heen the pass above mentioned, in the latitude of the head of the gulf of Issus; which is not marked in the above plan, but ouglit to be. This pass is probably the Amanicae Pylac of Ptolemy, which he places $5^{\prime}$ further south than 1 ssus, and $10^{\prime}$ east of lssus.

Alexander, bearing that the Persians were in his rear, turned back to the Pylae, which he reachod at midnight, and halted till daybreak, when he moved on. (Arrian, Anab. ii. 8.) So long as the road was narrow, be led his army in column, bot as the pass widened, he exteuded his column into line, part towards the momntain and part on the left towards the sea. When he came to the wide part (evjpuxupia), be arranged his amy in order of battle, which Arrian describes very particalarly, Darius was posted on the north side of the Pinarus. It is plain, from this description, that Alexander did not march very fur from the Pylae before he reached the wider part of the valley, and the river. As the sea was on his left, and the mountains on his right, the river was a stream which ran down from the Syrian Amanus; and it can be no other than the Deli Tschai, which is about 13 miles north of the Carsus (Merkes), direct distance. Polybius (xii. 17), who criticises Callisthenes's description of the battle, states, on his authority, that Darius descended into Cilicia through the Pylae Amanides, and encamped on the Pinarns, at a place where the distance between the mountains and the sea was not more than 14 stadia; and that the river ran across this place into the sea, and that in its course through the level part "it had aborupt and difficult eminences ( $\lambda$ d́申ovs)." This is explained by what Arrian says of the banks of the river being steep in many parts on the nortb side. (Anab.ii. 10.) Callisthenes further said, that when Alexander, after having passed the defile ( $\tau$ d otéva), heard of Darius being in Cilicia, he was 100 stadia from him, and, accordingly, he marched buck through the defile. It is not clear, from the
extract in Polybius, whether the 100 stadia are to be reckoned to Issus or to the J'inatus. According to Arrian, when Alexander heard of Darius heing behind him, he sent some men in a falley back to Issus, to see if it was so; and it is most consistent with the narrative to suppose that the men saw the Persians at Issus betore they had advanced to the river; but this is not quite certain. The l'er. sian army was visible, being near the coast, as it would be, if it were seen at Issns.

Strabo (p. 676), following the historians of Alexander, adds nothing to what Arriau has got from them. Alexander, he says, led his infantry from Soli along the coast and through the Mallutis to Issus and the forces of Darius; an expression which might mislead, if we had no other narrative. He aiso says, after Mallus is Aegae, a small town with a harbour, then the Amanides Pylue [Amanioks Pylae], where there is a harbour; and after Acgne is Issus, a small town with a harbour, and the river Pinarus, where the fight was between Alexander and Darius. Accordingly he places Issns north of the Pilarus. Cicero, during his proconsulship of Cilicia, led his Jorces against the monntaineers of the Amanus, and he was salnted as imperator at Issus, "where," he says, " as I have often lieard from yon, Clitarchus told you that Darius was defeated by Alexander." There is nothing to be got from this. (Ad Fam. ii. I0.) In another passage, he says that be occupied for a few days the same camp that Alexander had occupied at lssus against Darius. (Ad Att. v. 20.) And again (ad Fom. xiv. 20), be says that, " he encamped for four diys at the roots of the Ainanus, at the Arae Alexandri." If this is the same fact that lie mentions in his letter to Atticus, the Arae were at Issus, and Issus was near the foot of the Amanus.

The battle between Septimius Severus and Nizer was fought (A. D. 194) somewhere aboat Issus; but nothing can be collected from the description of Herodian (iii. 12), except that the battle was not fought on the same ground as Alexander's, though it was fongbt on the gulf of Issus. Stephanus (s.r.; 'I $\sigma \sigma$ ós) describes it as "a city between Syria and Cilicia, where Alexander defeated Durius, which was called, for this reason, Nicopolis by him; and there is the bay of Issus; and there, also, is a river named Pinarus." Strabo, after speaking of Issus, mentioos, on the Issic gulf, Rhosus, and Myriandrus, anl Alexandria, and Nicopolis, and Mopsuestia, in which description be proceeds from the Syrian side of the gulf, and terminates with Mopsuestia on the P'yramus. According to this enumeration, Nicopolis would be between Alexandria (Scanderoon) and Mopsuestia: and it may be near Issus, or it may not. Ptolemy ( $\mathrm{v} .8, \S 7,15 . \S 2$ ) places Nicopolis exactly one degree north of Alexandria and $50^{\prime}$ north of Issus. He places Issus and Khosus in the same longitude, and Nicopolis, Alexandria, and Myiandrus $10^{\prime}$ further east than Issus. The absolute truth of bis numbers is immaterial. A map constructed according to Ptoleny would place Issus at the head of the gulf, and Nicopolis inland. Nicupolis is one of the cities which he enumerates among the inland cities of Cilicia Proper.

Issus, then, being at the head of the gulf, and Tarsus being a fixed point in the march of Cyrus, we may now see bow the matter stands with lemophon's distances. Cyrus marelied 10 parasalgs from Tarsus to the river Psarus (Sarus). Silun, and erossed at a place where it was 300 feet wuie

## ISTRIA.

From the Sarus the arny marched 5 parasangs to the Pyramus, which was crossed where it was 600 Greek feet wide; and the march from the Pyramus to losus was 15 parasangs. Accordingly, the whole distance marched from Tarsus to lsuus was 30 parasangs. The direct distance from Tamsus to the head of the gulf is about 56 geosraphical miles; and these two points are very nearly in tha same latituln. The molern road from Tarsus, throuth Adana on the Sarus, and Moponestia on the l'yramus, to the head of the gulf, has a general directim from W. to E. The length of Cyrus's march, foom Tarsus to the Sarus, exceeds the direct dist.mee on the map very much, if we reckon the parasang at 3 gearraphical miles; for 10 prasangs are 30 egengraphical miles, and the direct distance to Alana is not more than 16 niles. Mr. Ainsworth inf noms us that the Sarus is not fordable at Adana; and Cyrus probably erossed at some other place. The march from the Sarus to the Pyramus was 5 paravangs, or 15 geographical miles; and this appors to lo. vely nearly the direct distance from Adana to Mopsueatia (Misis). But Cyrus may have crossed sonie distance briluw Mlopsuestia, without lengthening his tmarch from the Sarus to the Pyramus; and he may have done this even if he had to go lower down the Sarus than Adana to find a furd. If he liul not go higher up the Pyranans to seek a ford, fur the reasons which Mr. Ainsworth mentions, he must Inve crossed lower down than Mopsuestia. The distance from the point where the supposed old lied burins to turn to the south, to the NE. end of the gult of Issus, is 40 geographical miles; and thus thee distance of 15 parasangs from the passage of the I'rramus to I wus, is more easily reconciled with the real distance than the measurenent from Tarsus to the Sarus.
The places not absolutely determined on or near the gulf of Issus, are: Myriaudrus, Nicopolis, Epis 1haneia [Epiphaneta], Arae Alesandri, and lssus, thoneh we know that listos, must have been at the heat of the culf and on it. The following extract from Colonel Chesncy contains the latest information on thece sites:- "Abnut 7 miles south-eastward from the borders of Syria are the remains of a considerable city, probably those of 1ssus or Nicopolis, with the ruius of a temple, a part of the Acropolis, an extonsive aqueduct, generally with a double row ut arches, rumuing ESE. and WNW. These, in addition to the walls of the city itself, are entirely built of lava, aud still exist in considerable perfection. Norarly 14 miles southwaril from thenee, the Delif Chiil quits the foot of the Amanus in two branches, whoch, attor traversing the J -sic plain, unite at the fint of the mountain jost previonsly to entering the sat. The principal of these branclies makes a deep curse towards the NE., so that a body of troops wecupying one side might see behind and outflank thene pooted on the opposite side, in which, as well as in other respects, the stream aypurars to anwwer to the Pimaras of Nlexander's Listomians. A listle sunthward of this river are the castle, khinn, bizir, baths, and other ruins of Báyus, once Batae, with the three villages of Kuretur in the neighboumhonl, situated in the midst of groves of oramee and palan trees. Again. 5 miles southward, is the pans, above moticed, of Sukil-tuttin, and at nearly the same distance onwari, the fine bay and anchorage of Iskenteruin, with an open but convenient landing-jlace on a bold batach; but, in consequence of the accumulation of the sand by which the mouths of the streans
descending from this part of the Amanus are choked, a pestilential swamp extends from the very edge of the sea almost to the foot of the mountain. In the marsh towards the latter are some trifling ruins, which may possibly be the site of ancient Myriandrus; and within a mile of the shore are the remains of a castle and bridge constructed by Godfrey of Bouillon." (Expedition for the Survey of the Rivers Euphrates and Tigris, vol. i. p. 40s.)

There is uo direct proof here that these remains are those of lisus. The aqueduct probably belongs to the Roman period. It seems most likely that the remains are those of Nicopolis, and that Issus on the coast has disappenred. Colonel Cbesney's description of the bend of one of the branches of the Deli Tschai corresponds to Arrim's (ii. 2. § 10), who says, "Darius plared at the foot of the mountain, which was on the I'ersian left and opposite to Alesander's right, :bout 20,000 men; and some of them were on the near of Alexander's army. For the mountain where thoy were posted in one place opened to sume depth, and so a part became of the furm of a bay on the sea. Darius then, by advancing further to the bend, brought the men who were posted at the front of the monntain, in the rear of the right wing of Alexander."

There still seems some doubt about the site of Myriandrus, which Mr. Ainsworth (Travels in the Track of the Ten Thousand, ©c. p. 60) places about half way hetween Scanderoon and Rhosns (Arsns); and he bas the authority of Strabo, in his enmmeration of the places on this coast, and that of I'tolemy; Who places Myriandrus 15 south of Alexandria ad Issum. As to Arsus, lee obseryes, - "there are many rnins, and especially a long aqueduct leading from the foot of the mountains."

## ISTER. [DANuncs.]

I'STHMIA, a small distriet in Thessaly. [Zela. sium.]

ISTHMUS. [Comnthes, p. 682, seq.]
ISTO'NE. [Concyri.]
ISTONIUN. [Celtheerta.]
I'STRLA ('I $\sigma \tau \rho(\alpha)$ or HI'STRIA, was the name given by the Greeks and liomans to the country which still bears the same appellation, and forms a peninsula of somewhat triangular form near the head of the Adriatie sea, ruming out from the coast of Liburtia, between Tergeste ( Trieste) and the Sinus Flanaticus, or Gulf of Quarnero. It is about 50 G. miles in length, and 35 in breadth, while the isthmus or strip of land between the two gulfs of Trieste and Qumrnero, by whicb it is mited to the mainland, is ahout 27 G. miles across. The name is derived both by Greek and Latin authors from the fabulous notion entertained at a very early period that one branch or arm of the Danube (the Ister of the Greeks) flowed into the Adriatic sen near its head. (Strab. i. p. 57; Plin. iii. 18. s. 22.) The deep inlets and narrow channels with which the coasts of the Adriatic are intersected for a considerable distance below the peninsula of Istria may have contributed to favour this notion so long as those consts were imperfectly known; and henve we cannot wonder at Scylax speaking of a river named Intrus (which he identifies with the Danube) as flowing through the land of the Istrians (Scyl. p. 6. § 20); but it seems ineredible that an author like Mela, writing in the days of Ausustus, should not only s cak of a river lstyr as flowing into this part of the

Adriatic, but should assert that its waters eatered that sea with a turbulence and force similar to those of the Padus. (Mel, ii. 3. § 13, 4. § 4.) In point of fact, there is no river of any magnitude flowing into the upper part of the Adriatic on its eastern shore which could afford even the slightest countenance to such a notion; the rivers in the peninsula of Istria itself are very trifiog streams, and the dry, calcareous ridges which hem in the E. shore of the Adriatie, all the way from Trieste to the southern extremity of Dalmatia, do not admit either of the formation or the outlet of any considerable body of water. It is scarcely possible to account for the origin of such a fable; bat if the inhabitants of 1stria were really called lstat ("I $\sigma \tau \rho o t$ ), as their native nune, which is at least lighly probable, this circumstance may have first Jed the Greeks to assame their connection with the great river Ister, and the existence of a considerable amount of traffic up the valley of the Sarus, and from thence by land across the Julian Alps, or Monnt Ocra, to the head of the Adriatic (Strab. vii. P. 314), would tend to perpetuate such a notion.

The Istrians are generally considered as a tribe of Illyriaa race (Appiaa, Illyr. 8; Strab. vii. p. 314; Zeuss, Die Deutschen, p. 253), and the fact that they were immediately surrounded by other Illyrian tribes is io itself a stroag argument in favour of this view. Scymous Chius alone calls them a Tbracian tribe, but on what authority we know not. (Scymo. Ch. 398.) They first appear in history as taking part with the other 1llyrians in their piratical expeditions, and Liry ascribes to them this cbaracter as early as в.c. 301 (Liv. 工. 2); but the first occasion on which they are distinctly mentioned as juining in these enterprises is just before the Second Punic War. They were, however, severely punished; the Roman consuls MI. Minucius Rafus and P. Cornelius were sent against them, and they were reduced to complete sulunission. (Eatrop. iii. 7; Oros. iv. 13; Zonar, viii. 20; Appian, Illyr. 8.) The next mention of them occurs in B. c. 183 , when the consul M. Claudius Marcellus, after a successful campaign arainst the Gauls, asked and obtained permission to lead his legions into Intria. (Liv. xxxix. 55.) It does not, however, appear that this invasion produced aay considerable result ; but their piratical expeditions, together with the oplosition officred by them to the foundation of the Roman colony of Aquileia, soon becaane the pretext of a fresh attack. (ld. xl. 18, 26, sli. 1.) In e. c. 178 the consul A. Manlius invaded lstria with two legions; and though be at first sustained a disaster, and narrowly escaped the capture of his camp, he recovered his prsition before the arrival of his colleague, M. Juaius, who had been sent to his support. The two consuls now attacked and defeated the 1strians; and their successor, C. Claudius, following np this advantare, tuok in succession the towns of Nesactium, Mutila, and Faveria, and reduced the whole people to submission. For this success he was rewarded with a triumph, в. c. 177. (Liv. xli. 1-5, 8-13; Flor. ii. 10.) The subjection of the 1strians on this occasion seems to have been real and complete; for, though a few years after we find them joining the Carni and Iapydes in complaining of the exactions of C. Cassins (Liv. sliii. 5), we hear of no subsequent revolts, and the district appears to have continued tranquil under the Roman yoke, until it was incorpurated by Augustus, together with Venctia and the land of the Carni, as a portion of ltaly. (Strab, v.
p. 215 ; Plin. iii. 19. s. 23.) It coatinued thencetorth to be always iocladed under that name, thourh geographically comnected much more closely with Daluatia and Illyricum. Hence we find, in the Notitia Dignitatum, the "Consularis Venetise et Histriae" placed under the jurisdiction of the Vicarias Italiae. (Not. Dign. ii. pp. 5, 65.)

The natural limits of Istria are clearly marked by those of the peninsula of which it consists, or by a line drawn across from the Galf of Trieste to that of Quarnero, near Fiume ; but the political boundary was fixed by Augustus, when be included Istria in Italy, at the river Arsia or Arsa, which falls iuto the Galf of Quarnero about 15 miles from the southern extremity of the peninsala. This river has its sources in the group of monatains of which the Monte Maggiore forms the highest point, and which constitutes the heart or nucleus of the peninsula, from which there radiate ranges of great calcareotis bills, gradually declining as they approach the western coast, so that the shore of Istria along the Adriatic, though hilly and rocky, is not of any considerable elevation, or picturesque in claracter. But the calcareous rocks of which it is composed are iadented by deep inlets, forming excellent harbours ; of these, the beautiful land-locked basin of Pola is particularly remarkable, and was noted in ancient as well as modern times. The northera point of Istrin was fixed by Augustas at the river Formio, a small stream falling into the Gulf of Trieste hetween that city and Capo d'Istria. Pliny expressly excludes Tergeste from 1stria; but Ptolemy extends the linits of that province so as to inclade both the river Formio and Tergeste (Ptol, iii. 1. §27); and Strabo also appears to consider the Timavas as constituting the boundary of 1stria (Strab. v. p. 215), though he elsewbere calls Tergeste " a village of the Carai" (rii. p. 314). Pliny, however, repeatedly alludes to the Formio as having constituted the boundary of Italy before that mame was ufficinily extended so as to include Istria also, and there can be no donbt of the correctness of his statement. Istria is not a coantry of any great natural fertility ; but its calcarems rocky soil was well adapted for the growth of olives, and its oil was reckoaed by I'liny inferior only to that of Venafrum. (Plin. xv. 2. s. 3) In the later ages of the Roman empire, when the seat of government was fixed at Ravemna, Istria became of increased importance, from its facility of communication by sea with that capital. and furnished considerable quantities of corn, as well as wine and oil. (Cassiod. Varr. xii. 23, 24.) This was probably the most flourishiag period of its history. It was subsequently raraced in succession by the Loulbards, Avars, and Sclavi (P. Diac, iv. 25, 42), but appears to have contonued permanently subject to the Lombard kingdom of ltaly, until its destruction in A. D. 774 .

The towns in Istria mentioned by ancient writers are not numerous. Nuch the most important was PoLA, near the extreme southern promontory of the peninsula, which became a Roman colony under Augustus. Proceeding along the coast from Tergeste to Pula, were Aegida (Capo distria), subsequently called Justinopolis, aad Parextios (Parenzo); while on the E. const, near the mouth of the river Arsia, was situated Nesacticm, alrealy noticed by Liry among the towns of the independent 1strians. The two other towns, Mutila and Faveria, meationed by him in the same passage (sli. 11), are otherwise unknown, and cannut be identifiel. I'tu-
leany also mentions tbree tornss．which lie fives in the interior of the e untry，wal nauce lucumm， Piguentam（Mukov́evzov），and Alvam ir Alvin （A入ovav）．of these，Piqueat in mey he prohally jidentified with Pinguente：a con－iderable plare in the heart of the mometain district of the interior：and Alvon with Allona（called Alvona in the Tahnla）， which is，h wever．J．of the Arsa，and therefore not strictly within the Pan province of Istria．In like bauner the Pucinnm of 1 thlemy is evidently the same place with the＂castellum，nobile vim， Tu in um＂of Pliny（vii．18．s．22），whit is the latter phace in the territory of the Carni．between the Thavas and Terkeste，and was pertaps the same with the motera Duino．Niukum，a place men－ ti）thet in the Antonine Itinerary（p，271）between Tististe ：ant Parmtion，camot be detern ined with any certity．Tlie Tabrla also gives two manes in the NW，part of the peninsula，Quari and Silro （sivau）．Work of which are wholly miknown．The stume anthority marks three small islands of the thast of herin，to which it gives the names of Sepo－ rana（？），Urarria，and Pullarat：the last is men－ tionsl alon toy Pliny（iii．26．s．30），and is probably the rocky island，or rather group of islets，off the lathour of 1：iat，$n \mathrm{w}$ known as Li Brioni．The other two canne be identified，any mre than the （1asa of Pliny（l．c．）；the Alnyrtiles of the same aublor are the larger islands in the Golfo di Quar－ nero，which belong rather to Liburnia than to Istria． ［Ansyhtiols．］

The extrene southern prom ntory of 1stria，now cal ed Puritte di Promunture，seems to have been kinwn in ancient tume as the Promoxtories Polaticem（áкрати́poon חo入atuóv，Niteph．B s．r． пó $\lambda a$ ）．Immediately adjuinug it is a deep bay or lartour，now kmown as the Golfo dt Medulino， which must be the Portus I＇lanaticus（probably a corruption of Flusticus）of the Talula．

The Geographer of Kavenna，writing in the seventh ceatury，but from earlier authoritics，mentions the manes of many towns in Istria monticed by earlier pomstraphers，but which may prolably have grown up tuder the Roman empire．Amonz these are Hn－ mago，still called（＇nuigo，Xestuhts（Cittic Niunta）， luviznio（Rocigno），and Piranon（Pirano），all of then stuated on the W．coast，with genol purts，and whit to would naturally teceme placen of some trate during the thamishing Imerind of Istria above alludel to．（Anmı．Ravenio．iv．30，31．）

## I. Name.

The name of Italy was very far from being originally applied in the same extensive signification which it afterwards obtained. It was coufined, in the first instance, to the extreme snothern point of the Italian peniusuls, not including even the whoke of the modern Calabria, but only the southern peminsular portion of that country, bounded on the N. by the marrow isthme which separates the Terinaean and Scylletian gulfs. Such was the distinct statemment of Autiochus of Syracuse (ap. Strab. vi. 1. 2.35); nor have we any reason to reject his testimony upon this point, though it is certain that this usage must have ceased long before the time of that historian, and is not found in any extant abcient anthor. At a subsequent period, bat still in very early times, the appellation was extendel to the whole tract along the shores of the Tarentine gulf, as far as Metapontum, and from thence across to the gulf of Posidomia on the western sea; though, accorling to other statements, the river Lauis was its worthern limit on this side. (Strab. v. p. 209, ri. p. 2544 ; Antiochus, ap, Dionys. i. 73.) This appears to have been the established nsage atnong the Girecks in the fith century 1.c. Antiochus expressly excluded the lapygian peninsula from Italy, and Thueydides clearly adopts the same distinction (vii. 38 ). The countries on the shores of the Tyrrheuian sea, north of the Posidonian gulf, were then known only by the names of Opica and Tyrrheuia; thus Thucydides calls Cumae a city in Opicia, and Aristotle spoke of Latium as a district of Opica. Even Theopirastus preserves the distinction, and speaks of the piae-trees of Italy, where those of the Bruttian mountains only can be meant, as opposed to those of Latium (Thuc. vi, 4; Arist. ap. Dionys. i. 72; Theoplı. H. P. v. 8.)

The name of ltahia, as thus applied, seems to have been synonymous with that of Oenotria; for Autiochus, in the same passage where he assigned the narrowest limits to the former appellation, confined that of Oenotria within the same boundaries, and spuke of the Oenotri and Itali as the same people (ap. Strab. vi. p. 254; ap. Dionys. i.12). This is in perfect accordance with the statements which represeat the Oenotrians as assuming the name of Italians (Itali) from a chief of the name of Italus (1)ionys. i. 12, 35 ; Virg. Aen. i. 533 ; Arist. Pol. vii. 10), as well as with the mythical genealogy according to which Italus and Oenotrus were bruthers. (Surv. ad Aen. l. c.). Thucydides, who represents Htalus as coming from Arcadia (vi. 2), probably adopted this last tradition, for the Oenotrians were generally represented as of Arcadian origin. Whether the two names were originally applied to the sume people, or (as is perhaps more protable) the Itali were merely a particular tribe of the Oenotrians, whose name gradnally prevailed till it was extended to the whole people, we lave no means of determining. But in this case, as in most others, it is clear that the name of the people was antecedent to that of the country, and that Italia, iu its original signification, meant merely the land of the Itali; though at a later period, by its gradual extension, it lad altogether lost this national meaning. It is imipossible for us to trace with accuracy the successive steps of this extension, nor do we know at what time the Romans first adopted the name of Italia as that of the whole peninsula. It woold be still more interesting to know whether they received
this usage from the Greeks, or foumi if :h cuy preralent among the nations of ltnly; but 1: 1. difficult to believe that tribes of different races, orivin, and language, as the Etruscams, Umbriaus, Subelliaus, and Uenotrians, would have concurred in calliug the country they inbabited hy one general appellation. If the Greek account already given, according to which the name was first given to the Oenotrim part of the pecinsula, is worthy of confidence, it must have been a word of Pelasgic origin, and subsequently adopted by the Sabellian and Oscan races, as well as by the Romans themselves.

The etymology of the name is wholly urcertain. The current tradition among the Greeks aad Romans, as alieady noticed, derived it from an Ocnotrian or 'elasgic chief, Italus; but this is evidently a mere fiction, like that of so many uther eponymous herues. A more learued, but scarcely more trustworthy, etymology derived the nane from Italos or Italus, which, io Tysthenian or old Greek, is said to have signified an ox; so that Italia would have memut "the land of catte." (limacos, ap. Gell. xi. 1; Yarr. R. R. ii. 1. §9.) The ancient form bere cited is evidently connected with the Latin "vitulus ;" and it is prubable that the name of the people was originally Vitulos, or Vitalos, in its Pelas ic form; we find the same form retained by the Sabellian nations as late as the first century D. C., when the Sumvite denarii (struck during the Social War. n. c. $90-88$ ) have the inscription "Vitelu" for Italia.

It is probable that the rapid extension of the Roman power, and the successive subjugation of the different uations of Central and Sutathern Italy by its victorious arms, tended also to promote the extension of the one common name to the whole; and there seems little doubt that as early as the time of Pyrrhus, this was already applied in nearly the sarre sense as afterwards continued to be the usage,-as comprising the whole ltalian peninsula to the frontiers of Cisalpine Gaul, but excluding the latter country, as well as Liguria, This continued to be the customary and official meaning of the name of Italy from this tine till the close of the Repablic ; and hence, even after the First Trimmvirate, Gallin Cisalpina, as well as Transalpioa, was allutted to Caesar as his province, a term which was never applied but to countries out of Italy, bat long belore the close of this period, the name of Italy would seem to have been often employed in its more extensire, and what may be termed its geogruphical, meaning, as iucluaing the whole land from the font of the Alps to the Siciliau straits. Polybius certainly uses the temm in this sense, for he speaks of the Romans as having subdued all Italy, except the land of the Gauls (Gallia Cisalpina), and repeatedly describes Hannibal as crossing the Alps into Ituly, and designates the plains on the banks of the Padus as in Italy. (Pol. i. 6, ii. 14, iii. 39. 54.) The natural limits of Italy are indeed so clearly marked and so obvions, that as soon as the name came to bo once received as the designation of the country in general, it was almost inevitable that it should acquire this extension; hence, thongh the official distinction between Italy and Cisslpine Gaul was retained by the Romans to the very end of the Republic, it is clear that the mere extended use of the name was already familiar in common usage. Thus, already in r. с. 76 , Pompeius enploys the expreswiom " in cervicibus Italine," of the paases of the A/ps into Cisalpine Gaul (Sall. Ilist. iii. 11) ; and Decimus Bru-
 Ifaly, when he erosees thic Alp. (Cin whin.xi.20.)
 patelly use die name of lady in the wider ath wore ermeral sense, thonghe the necessity of distimenishins the province of Cisalpine Gaml, loads the later frequently to wherve the oftirial distinction. (Cacs. 73. G. v. 1, vi. 44, vii. 1: (iie. Phil. iv. 4, v. 12.) But, inded, had not this nse of the name been already vommon, lafore it came to be officially adopted, thit circumstance alone wouh scarely have rendeese it so fun liar no we find it in the Latin writers of the Aurustan age. Vireti, for instance, in celebrating the praises of Italy, never thought of exdudinf from that appellation the plains of Cisalpine Ganl, or the lakes at the fout of the Alps. From the time, indeed, when the rights of Romsm eitizens wore extended to all the Cisatpine Ganls, no real whtimetion any lan_er subsitued between the different fut- of Italy: but Cisalpane Gaul still furmed a -cpurate prosince under I). Drutus in B. C. 43 (C'ic. Phil, in 4, 5, iv. 4, v, 9, \&c.), and it is probable that the tuinn of that proninee with Italy tock place in the finllowiog your. Dinn Cassitis speaks of it, iu If i: 41, as an ahte.uly eatalilished arrangenment. (1) in (as xlvaii. 12; Savizny, Verm, Scler. iii. p. 318.)

From the time of Augustus onwark, the name of Italia continned to be applied in the same same thrmehout the period of the Roman erapire, thouth with wene slight molifications of its frontiers on the : if of the Alps: but during the last ares of the Wintom empirs, it simalar change took flace, by whi-h tip natse of ladia came to be specially ap-
 part ot what we nou call ltaly, comprising the five provines of A milia, Hatimia, Liguria, Venetia, amil Istria, fugether with the Cottian and Khactian Alp, and thins exeludiug nearly the whole of what had been incturled water the name in the days of ('u era. This usage pmatitr atase from the division of the whole of It.ly for administrative purposes into IW, _reat diatricts, the one of which was phaced unher an offie er called the " Viearius Urbis Emate," whil. the ether, or northern portion, was subeet to the "Viearius laline." (Not, Dig. ii. 18; Gothuft. ad Cod. Therod. si. I, leg. 6; Nicbuler, vol. i. p. 21.) The practice was confirmed for a time by the circumstance that this part of I taly became the seat of the Lumbard monardy, which issmmed the title of the king fom of Italy (" Iecomm Italiae") ; hut the anciont sidnifirati in still prevailed, and the name of Italy was apphed throughout the middle aress, as it still is at the freent day, within the boundaries establisheel by Aurustus:

The other nanes :tpplied hy ancient writers, ospecially by the Latin and later (ireck poets, to the Jtalian poninsula may he very briefly disposel of. 1) iny-ius tell. ns that in very rembte ages Italy wats called by the (irocks Ilveperia, or Auso in, mad by the natives Satmma. (bings i 35.) Of these three names. Hespeata ('Eirtepia). or "the Laud of the II est." was (evieently a men vague appellation, emplayed in the iufane ot engraphical discovery, and which was somptimes hunitod to lady, smuetimes uod in a moth wider serne as comprasing the whale Weit of Euronn, indadius Spaill. [11rspaxis.] But them is nan evidetice of its laving laen esuphowed in the mowe litated somer, at a very carly fornen The name is ont themed an all in
 Staschorus repreented Acheas as departing from

Tiny fin - IIesprin. where in all probs ility Italy i:
 cho. hated Acneas to Dutiun. (Schwecler, Rön. Grach. vol. i. p. 298.) But even in the days of Steicturus the appellation was probably one confineti the the poets and logographers. At a later period we can trace it as naed by the Alexamalrian pocte, from whom in all probability it passed to the Romans, and was adopted, as we know, by Fimius, as well as by Tirgil and the writers of the Augustan ayc. (Arathyllns, ap. Dimys. i. 49; A pollon. Rhod. iii. 311 ; Emuins, Ann. Fr. p. 12; Virg. Aen. i. 530. iii. 18.5, \&u.)

The name of Atsidsia, on the contrary, was one derived originally from one of the races which inhabited the Italian proinsula, the Amruci of the Itumans, who were known to the tirecks as the Ansunts. These Ausmians were a tribe of Optean or Oscan race, and it is probable that the name of Auwnia was at fir: tapplicd mach as that of Opicin or Opiea was by Thueydides and other writers of the fith century 1s. c. lint, as afplied to the nhahe penimsula of ltaly, the name is, so far as we know, purely protical; mur can it le tracel farther bark than the Alesatodrian writers Lyequison and Apollonius Rholius, who emplosed it f.miliarly (as did the Latim puects in imitation of them) is a puetical equivalent for Italy, [Atsones.]

As for the name of somturisia, thoumh it is found in a protended Girerk oracle cited by Dionssius (ミxtopyiay alay, Dionys. i. 19), it may well be doubted whether it uas exer an ameiont appellation at all. Its ubrious dexivation trom the name of the Latin god Suturnus proves it to have been of native Italiam, and not of (ireck, invention, and probably this was the only anthority that l)ionvsins laal for saying it was the mative name of ltaly: But all the tralittons of the Roman mytholocy comect Satmons so closely with Latimn, that it seems almost tertain the name of Saturnia (if it was ever more than a poetical fabrication) originally belonged to Latium only, and was thence eradually extended by the Lomans to the rest of Italy. Eunius scems to have used the phrase of "Sutnrnia terra" only in reference to Latims, while Virgil applits it to the whole of Italy. (Ennius, ap, I'arr. L. L. v. 42; Virg. Georg. ii. 173.) It is never used in either sense by Latin prose writers, though several authors state, as Dionissins dues, that it was the ancient name of Italy. (Festus, a. Suturniu, 1. 322; Justin. xliii. 1.)

## 11. Botindatifs and Puystcal. Geogharhy.

There are few countries of whiel the boundaries are more clearly marked out by nature than those of laaly. It is well described by one of its modern poots as the land
"Chi'Apeumin parte e "] mar circonda e l'Alpe ;" and this single line at once enumerates all the principal plysieal features that impart to the country its peculiar physiognomy, Italy con-ists of a great peninsula, projecting in a SE: direction into the Mediterranean sea, and buundeal on the II. hy the partions of that sea commonly known as the Tymbenian and Sicilizu seas, but tomprised by the kimans under the name of Mare Intorum, or the Lower Kea; on the l.. by the Adriatic, or the 1 pprer Sien ( Mlare Supormm), as it was commanly termed by the Romans; while to the N. it spratho ont finto a broal expanse, formomb, as it were, the base or teot by which it tulleres to the eontinent of Enrope, and
around which sweeps the great chain of the Alps, forming a continuous barrier from the shores of the Mediterranean near Massilia to the head of the Aldiatic at Tricste (Tergeste). From the western extremity of this vast mountain chain, where the rauges of the Maritime Alps atht immediately on the sea-shore, branches off the inferior, bat still very cunsiderable, chain of the Apennines, which, after sweeping round the Ligurian gult, stretches in an unbroken line directly across to the shores of the Adriatic, and then, tnrning abruptly to the SE., divides the whole peninsula thronghout its entire length, wntil it ends in the promontory of Leucopetra, on the Sicilian sea. [Arennints.]

The precise limits of Italy can thus only be doubtful on its northern frontier, where the massive ranges of the Alps, though presenting, when riewed on the large scale, a rast natural barrier, are in fact indented and penetrated by deep and irregular ralleys, which render it often difficnlt to determine the natural boundary; nor has this been always adopted as the political one. Along the coast of Liguria, between Massilia and Genoa, the Maritime Alps send down successive ranges to the sea, forming great headlands, of which the most striking are: that between Noliand Finale, cormonly regarded by modern geographers as the termination of the Maritime Alps; and the promontory immediately W. of Monaco, which still bears the remains of the Tropaea Augusti, and the passage of which presents the greatest natural difficulties to the construction of a road along this coast. This mountain headland would probably be the best point to fix as the datoral linut of ltaly on this side, and appears to have been commonly regarded in ancient times as such; but when Augustas first extended the political limits of Italy to the foot of the Alps, he found it convenient to carry them somewhat further W., and fixed on the river Varus as the bonndary; thus inclnding Nicaea, which was a colony of Massilia, and had previously been considered as belonging to Ganl. (Strab. iv. Pp. 178,184 , r. p. 209 ; Plin. iii. 4. s. 5, 5. s. 6, 7 ; Mela, ii. 4. § 9 ; Ptol. iii. 1 § 1 ; Lucan, i. 404.) Though this demareation does not appear to have been always followed; for in the Itinerary of Antoninus (p. 296) we again find the Alpis Maritima (meaning the mountain headland above described) fixed as the boundary between Italy and Gaul: it was generally adopted, and has continued without alteration to the present day.

The extseme NE. limit of Italy, at the head of the Adriatic Gulf, is equally susceptible of various determination, and here also Augustus certainly transgressed the natural limits by including 1stria within the confines of ltaly. (Plin. iii. 18. s. 22; Strab. v. p. 209, vii. p. 314.) But here, also, the reasons of political couvenience, which first gave rise to this extension, have led to its subsequent adoption, and Istria is still commonly reckoned a part of Italy. The little river Formio, which flows into the Adriatic between Trieste and Capo d'lstria, was previouslyestablished as the boundary of ltaly on this side: but the range of the Julian Aips, which, after sweeping round the broad plain of the Frioul, suddenly approaches close to the Adriatic, near the sources of the Timavus, anl presents a continuous mountain barrier from thence to Trieste, would seem to constitute the true natural limit.

Even between these two extremities, the chain of the Alps does not always form so simple and clearlymarked a frontier as might at first be expected. It
would not, indeed, be difficult to trace geographically such a line of boundary, by following the water-shed or line of highest ridge, throughout : but the imperfect knowledge of the Alps possessed by the ancients was scarcely sufficient for snch a purpose; and this line was not, in ancient, any more that in modern times, the actual limit of different nationalities. Thns, the Rhaetians, who in the days of Strabo and Iliny were not comprised in Italy, inhabited the valleys and lower ridges of the Alps on the S . side of the main chain, down quite to the borders of the plains, as well as the northern declivities of the same mountains. Hence, a part of the Southern Tirol, inclnding the valley of the Adige alove Trent, and apparently the whole of the Valtcline, thongh sitnated on the scuthern side of the Alps, were at that time excluded from Italy: while, at a later period, on the contrary, the two provinces of Rhaetia Prima and Rhaetia Secunda were both incorporated with Italy, and the boundary, in consequence, carried far to the N. of the central line of geographical limit. In like manner the Cottian Alps, which formed a separate district, nnder a tributary chieftain, in the days of Augustus, and were only incorporated with Italy by Nero, comprised the valleys on both sides of the main chain; and the provinces established in the latter periods of the Empire under the names of the Alpes Cottine and Alpes Maritimae, appear to have been constituted with equally little reference to this natural bonndary. (Walckenaer, Géogr. des Gaules, vol. ii. pp. 21-36, 361.395.)

While Italy is bounded on the N . by the great natoral barrier of the Alps, it is to the chain of the Apennines, by which it is traversed in its entire length, that it mainly owes its peculiar configuration. This great mountain chain may be considered as the back-bone or vertebral column of the Italian peninsula, which sends down offsets or lateral ridges on both sides to the sea, while it forms, thronghout its long course, the water-shed or dividing ridge, from which the rivers of the peninsula take their rise. A detailed description of the Apennines has already been given under the article Apennint's : they are here noticed only as far as they are connected with the general features of the Ihysical geography of Italy.

1. Northerix Italy.-The first part of the chain of the Apennines, which extends from the point of their junction with the Maritime Alps along the N. shore of the Gulf of Genoa, and from thence across the whole breadth of Italy to the Adriatic near Ariminum, constitutes the southern boundary of a great valley or plain, which extends, without interraption, from the fout of the Apennines to that of the Alps. This broad expanse of perfectly level conntry, consisting thronghout of alluvial soil, is watered by the great river Padns, or Fo, and its numerous tributaries, which bring down the waters from the flanks both of the Alps and Apendines, and render this extensive plain one of the most fertile tracts in Europe. It extends throogh a space of abore 200 geog. miles in length, but does not exceed 50 or 60 in breadth, until it approaches the Adriatic, where the Alps beyond Vicenza trend away rapidly to the northward, sweeping in a semicircle round the plains of the Friuli (which are a mere continuation of the great plain of the $P o$ ), until they again approach the Adriatic near Trieste. At the same time the Apennines also, as they approach towards the Adriatic, gradually recede from the
bwiks of the Palus ; so that Arininum (hament where their lowest slopes first desement to the sea. shore is distant nearly 60 grone miles from the month of that river, and it is atmost as mach more from thence th the foot of the Alps. It is this vast phain, together with the hill-comitry on cach side of it, formed by the lower slopes of the mountains, that constituted the country of the Cisalpine Gauls, to which the Ronasas gave the naune of Gismai Cisim. risi. The westernmost part of the same tract, including the upper basin of the $P_{0}$, and the extensive hilly district, nuw called the Monferrato, which stroches from the foot of the Alennines to the south b,utk of the Po, was inhabited from the earliest patials ly Lisurian tribes. and was included in Luctits, aceseding to the Roman use of the name. At the oppmite estremity, the partion of the great Hlain Ve :und N. of the Adige (Athesis), as well as the dustrict now called the Friuli, was the land of 1hn. Vencti, and cunstitated the Roman province of Veamma. The Eomans, howeyer, appear to linve ne rasintally usef the name of Gallia ('ixalpina, in a 'Hare lax and gencral sense, for the whole of Northern !: ily, or everything that was not comprised within the limits of Italy as that name was understoul priur to the time of Augustus. At the present day the name of Lomberrly is frequentiy applied to the whole basiu of tho Po, including loth the proper Gallia Cisalpina, and the aljacent parts of Liguria and V enctia.

The name of Northers ltaly may he conveniontly adopted as a geographical desiguation for the same tiact of country : but it is commonly understond as comprining the whole of Liguria, including the sea-corst: thow,h this, of courne, lies on the S. sile of the dividing ridge of the Apeunines, In this sense, therefure, it comprises the provinces of Ligurin, Gallia Cisalpina, Venetia and Etria, aud is limited towands the S. by the Macra (Sagra) on the W. coment, and by the Rubicon on that of the Adriatic. In like manuer, the name of Cextrac ftaly is frejuntly apdied to the middle portion, comprising the urthern lalf of the peninsula, and extending athur the W. cuast from the month of the Marra to that of the Silarus, and on the E. from the Rabicon to the Frento: while that of Sontmene Etaly is given to the reasaining purtion of the peninsula, induding Apulia, Calabria, Lucania, and Brottium. Fin! it mat be lorne in mind that these names are merty geormphital distiretions, for the convenience of dewriptim and reference, and do not correspond to any real divisions of the country, either natural or $p$ ditical.
2. (hinthal Itah. - The country to which this name is spmbed differs essentimily from that Wher lies to the $X$. if the Apemimes. White the Fotter paments a broad level basin, boundel on both Silou ly momtais, and into which the streaus and tinm iontrette fom atl sides, the eentre of the Italeth pentant is athent wholly filled up $1 y$ the 1. a d mav of dhe Aponines, the uftects and latural trecolus of whenth. i. veme paris, dracend quite to

 as funder, one condionse: itr. in it whets there
lhowin ill lateral arms or ranges, separated by deep internentic valleys. This is, indeed, the case, with thlown: recrularity, on the eastern sile of the mnuntains, and bence the numerous rivers which desvend to the Adriatic punsue nearly parallel courses at right angles to the direction of the main chain. But the central mass of the mountains, which comprises all the loftiest sanmits of the Aprmines, is broken up and intersected by deep longitndinal valleys, sometimes separated only by myrow ridges of moderate elevation, at others by rugged ranges rising abruptly to a height equal to that of the loftiest sumnits of the chain. The number of these valleys, ocourring in the very beart of the Apennines, and often almost entirely enclosed by the mountains, is a feature in the physical geography of lialy which has in all ages exercised a n aterial influcuce un its fortunes. The ul land walleys, with their fine summer pasturnges, were a necessury resource to the inhabitants of the dry plains of the soutb; and the peculiar configuration of these valleys opened out rontes through the heart of the mountain districts, and facilitated mutual communication between the nations of the peniusula.

It is especially in the southern part of the district we are now considering that the Apennines assume this complicated and irregular structure. Between the parallels of $44^{\circ}$ and $42^{\circ} 30^{\prime} \mathrm{N}$. lat. they may be regarded ns forming a broad mountain chain, which has a direction nearly paraliel with the line of coast of the Alriatic, and the centre of which is nowhere distant more than 40 geog. miles from the shore of that sea, while it is nearly double the same distance fium that of the Tyrrhcdian. Hence there remains on the W. side of the mountains an extensive tract of country, constituting the greater part of Etruria ant the S. of Urobria, which is wholly distinct from the monntain regions, and consists in part of fertile plains, in part of a lilly, but still by no meaus mountainous, diotrict. The great valleys of the Arno and the Tiber, the two principal rivers of Contral Iraly, which bave their sources very near ovic another, but flow the one to the W . the other to the S., may be considered as the bey to the geograply of this part of the peninsula. Between them lies the hilly tract of Etruria, which, notwithatanding the elevation attained by some isolated summits, has nothing of the claracter of a mountain country, and a larse part of which, as well as the portions of Unabria borlering on the valicy of the Tiber, may be deservedly reckowed anong the most fertile districts in laaly. South of the Tiber, again, the broad voleanic plains of Latiom expand between the Apernines and the sea; turd though these are interrupted ly the isolated group of the Aiban bill, and still nore the raygol mountains of the Vibecians, whin hiftween Terracina and Ciaila, descend yute to the seashore, as soon as these are pasved, the momains again recede from the rea-omst, and leave a comsiderable interval which is filled up by the lusudiant plain of Campania.

Nuthing ean be uole striking than the contrast presented by different parts of the coontries thus courprised inder the name of Central Etaly. The suow still lingers in the upland pastures of Sumnium and the Abruzzi, when the corn is nearly ripe in the fluins if the fiman Campagnes. The elevated distracts of the Eedizni, the lestini, :und the Marsi, wete always noted for their of ha and cheerlas elimate, and were beiter adapted for yaturage than the , row the of com. Eren at Caree li, only 40 miles
distant from the Tyrrhenian sea, the olive would no longer flourish (Ovid, Fust. iv. 683); though it grows with the utmost luxuriance at Tibux, at a distance of little more than 15 miles, but on the southern slope of the Apennines. The richness and fertility of the Campanian plains, and the beautiful shores of the Bay of Naples, were proverbial; wbile the Samnite ralleys, hardly removed more than a day's jonncy towards the interior, laad all the characters of bighland scenery. Nor was this contrast confined to the physical characters of the regions in question: the rude and simple mountaineers of the Sabine or Marsic valleys were not less different from the luxurious inhabitants of Etruria and Campatia; and their frugal and homely habits of life are constantly alluded to by the Roman poets of the empire, when nothing but the memory remained of those warlike rirtues for which they had been so distinguisbed at an earlier period.

Central Italy, as the term is bere used, comprised the countries known to the Romans as ExRumia, Umbran (including the district adjoioing the Adriatic previously occupied by the Galli Senones), Picewum, the land of the Sabini, Vestini, Maesi, Peligit, Markucini, and Feentani, all SaaNutat, together with Latium (in the widest sense of the name) and Campanis. A more detailed account of the physical geography of these several rogions, as well as of the people that inhabited them, will be found in the respective articles.
3. Sohtaern Itais, according to the distinetion above established, comprises the southern part of the peninsula, from the river Silarus on the $W_{\text {., }}$. aud the Frento on the E., to the Iapygian promontiry on the Ionian, and that of Leacopetra towards the Sicilian, sea. It thus includes the four provinces or districts of Apulia, Calabiena (in the Roman sense of the name), Lucania, and Enutties. The physical geography of this region is in great part determined by the chain of the Apennines, which, from the frontiers of Samnium, is continued through the heart of Lucania in a broad mass of mometains, which is somerbat narrowed as it enters the Brattian peninsula, but soon spreads out again sufficiently to fill up almost the whole of that llistrict from shore to shore. The extreme soutlorn mass of the Apemines forms, indeed, a detarhed mountain range, which in its physical characters and direction is more closely comected witb the mountains in the NE. of Sicily than with the proper cbain of the Apennines [Apesnlwus]; so that the notion entertained by many ancient writers that sicily had formerly been joined to the mainland at Rheginm, though wholly false with reference to bistorical times, is undoubtedly true in a geolugical sense. The name of the Apennioes is, however, universally given by geographers to the whole range which terminates in the bold promontory of Leucopetra (Capo dell' Armi).

East of the Apennines, and $S$. of the Frento, there extends a broad plain from the foot of the mountilus to the sea, forming the greater part of Apulia, or the tract now known as Puglia piana; while, S. of this, an extersive tract of billy country (not, however, rising to any considerable elevation) branches off from the Apennines near Venusia, and extends along the frontiers of Apulis and Lucania, till it appruaches the sea between Egnatia and Brundusium. The remainder of the peninsula of Calabria or Messapia, though it may he considered in some degree as a continuation of the sanse tract, preecit.
notling that can be called a runge of hills, muth less of monntains, as it is erronenusly represented on many maps. [CalabRiA.] Between the central miss of the Apennines (which occupies the heart of Lucania) and the gulf of Tarentam, is another broad billy tract, gradually deocending as it approaclies the shores of the gulf, which are burdered by a strip of alluvial plain, varying in brealth, but norrhere of great extent.

The Apennines do not attain to so great an clevation in the southern part of the Itslian peninsula as in its nore central regions; and, though particular summits rise to a considerable height, we do not here meet with the same broad monntain tracts or upland valleys as further northward. The centre of Lneania is, indeed, a ragged and mountainons country, and the lofty gronps of the Monti della Madzlalenu, A. of Potenza, the Mte. Pollino, on the frontiers of Bruttinm, and the Sila, in the heart of the latter district, were evidently, in ancient as well as modern times, wild and secluded districts, almost inaccessible to civilisation. But the coasts both of Lucania and Brattiom were recions of the greatest beauty and fertility; and the tract extending along the shores of the Tarentine gulf, thought now wild and desolate, is cited in ancient times as an almost proverbia] instance of a beautiful and desirable country. (Archil. ap. Athen. xii. p. 523.) The peninsula of Calabria or Messapia, as already remarked by Strabo, notwithstanding the absence of streams and the apparent aridity of the soil, is in reality a district of great fertility, as is also the tract which extends along the coast of the Adriatio from Egratia to the month of the Aufidus : and, though the plains in the interior of Apulia are dry and dnsty in sumnier, they prodnce excellent corm, and are described by Strabo as " bringing forth all things in great abnadance." (Strab. vi. p. 284.)

The general form and configuration of Italy was well known to the ancient geographers. Polybins, indeed, seems to have had a very imperfect notion of it, or was singularly nolappy in bis illustration; for lie describes it as of a triangular form, having the Alps for its base, and its two sides bounded by the sea, the Ionian and Adriatic on the one side, the Tyrrhenian and Sicilian on the other. (Pol, ii. 14.) Strabo justly objects to this description, that Italy cannot be called a triangle, withont allowing a degree of curvatnre and irregularity in the sides, which wonld destroy all resmblance to that figure; and that it is, in fact, wholly impossible to compare it to any geonetrical fignre. (Strab. v. p. 210.) There is somewhat more truth in the resemblance suggested by Pliny, - and which seems to hare heen commonly adopted, as it is referred to also by Rutilius (Plin. iji. 5. s. 6; Rutil. Itin. ii. 17) - to the leaf of an oak-tree, though this would imply that the projecting portions or promontories on each side were recarded as more considerable than they really are. With the exception of the two great peninsulas or promontories of Calabrit (Dlessapia) and Bruttiun, which are attached to its lower extrenity, the remainder of Italy, from the Padus and the Dlacra southwards, las a general oblong form; and Strabo truly enough describes it, when thus considered, as much about the same shape and size with the Adriatic Sea. (Strab. v. p, 211.)

Its dimensions are very rarionsly stated by ancient writers. Strabo, in the comparison just cited, calls it little less than 6000 stadia ( 600 geog. miles) long, and about 1300 stadia in its greatest tradult;
of these the latter measurement is almost exacty correct, but the former mich overstated, as her in speaking there of Italy exclusive of Cisalpine Gata). The total length of ltaly (in the wider semac of thiword), from the foot of the Aips near Aosta (Auguvta Pratoria) to the lapysian promontory, is ab ut 620 geng. miles, as measured in a direct line on a map; but from the same point to the promontory of Lenerpetra, which is the extreme southern point of Italy, is above 660 geog. miles. Pliny states the distance from the same starting-point to Rherium at 1020 31. P., or 816 geog. miles, which is preatly overtated, unless we suppose him to follow the windings of the road instead of measuring the distance gentraphically. (Plin. iii, 5.s. 6.) He also states the yreatest hreadih of Italy, from the Varns to the Arsia, at $410 \mathrm{M} . \mathrm{P}$. . Which is very nearly - rrect; the actual distance from the Varus to the tom of the Atriatic, measured in a straight line, l.mit 300 reag miles ( 375 M. P.). while from thence to the Arsia is about 50 geog. miles. Pliny FWh. that the breadth of the peninsula, from the $y$ uthis of the Tiber to thise of the Aternus, is 136 M. P., which consideably exceeds the truth for that particular point; but the widest part of the Ieninsula, from Ancona across to the Monte Arventaro, is $\mathbf{3} 30$ geog., or 162 Roman, miles.

## Ill. Climite and Natural Prodectioxs.

Italy was not less renowned is ancient than in modern times for its beauty and fertility. For this it was indehted in great part to its climate, comlinel with the advantages of its physical configuraton. Estending from the parallel of $30^{\circ} \mathrm{N}$. lat. to $46^{\circ} 30^{\prime}$, its sonthern extremity enjoyed the same dimate with Greece, while its northern portions were un a par with the S. of France. The lofty range of Apennines extending throughout its whole length. and the seas which hathe its shores on both sides, contributed at once to temper and vary its climate, (Il is to adapt it for the productions alike of the :omperate and the warmest parts of Furope. Hence the variety as well as abnodance of its natoral produec, which excited the admiration of so many auciuat writers. The fine burst of enthnsiasm with which Virgil sings the praises of his native land is tan well known to require notice (Virg. Georg ii. 136-176) ; but even the prostic Dionysius and Strabo are kindted into almost equal ardour liv the sume theme. The former writer remarks, that of all countrics with which he was acquainted Jaly united the nost natural advantages: for that it did not, like Firypt or Babytmia. prosess a soil adouted for agrienture only: but while the CamI wimp phans riwalled, if they did not surpass, in :- tuyy all other arade lanls, the olives of MessaP' 1. Int Ca and the Sabines, were not excelled by faty ulhes: anl the vibeyarls of Etruria, the FaBrriban ata the Alban hill. proluced wines of the 2iv: "xwathent guality and in the greatest al undance. Ar was it l-s fawourathe to the rearing of flocks, wherther of sheep or enats: while its fastures were of the richest dereriptien, and supported innumerable herds hoth of horses and cattle. Its mountain sides were chothed with maguificent firests, affording at nlan of timber for ship-building and all other furpmes, which eoull be tran-jorted to the coast with facity ly its numerous navigable rivers. Abmiance of warm springs in diffecnt parts of the comontry supfetied nut only the means of lusurinus bath, but valuable medical remedies. Its buas
stommber in fish, and its mountains contained mines of .th kints of metals ; but that which was the Ereatust advantige of all was the excellent tempesature of its climate, free alike from the extremes of heat and cold, and adapted for all kinds of plants anil animals. (Dionys. i. 36,37 .) Strato dwells not unly on these natoral resources, but on its pro litical advantages as a seat of empire; defended on two sides by the sea, on the third by almost impassable mountains; possessing excellent ports on both seas, yet mot affording too great facilities of access; and situated in such a position, with regand to the ereat nations of Western Euroje, on the one side, and to (ireece and Asia, on the other, as seemel to destine it for unisersal dominion. (Strab. vi. 1\% 286.) Pliny, as might be expected, is not less enthusiastic in favour of his native country, and Varm adds that of all countries it was that in which the greatest advantage was derived from its natural fertility by careful cultivation. (Min. iii. 5. s. 6, xxxvii. 13. s. 77 ; Varr. R. R. i. 2.)

It is probable that the climate of 1taly did not differ materially in ancient times from what it is at the present day. The praises hestowed on it for its freedom from escessive heat in summer may surprise those who compare it in this respect with more northern climates; but it is to be remembered tbat ancient writers spoke with refercnce to the countries around the Mediterranean, and were more familiar with the climate of Africa, Syria, and Egypt, than with those of Gaul or Germany. On the other hand, there are passages in the Foman writers that seem to indicate a degree of cold exceeding what is foun ! at the present day, especially in the neighbourhood of Rome. Horace speaks of Soracte as white with snow, and the Alhan hills as covered with it on the first approach of winter (Hor. Carm. i. 9, Ep. i. 7. 10); and Juvenal cven alludes to the Tiber being covered with ice, as if it were an ordinary nccurrence (vi. 522). Some allowance may be made for poctical exaggeration; but still it is probable that the climate of Italy was somewhat colder, or rather that the winters were more severe than they now are, though this remark must be confined within narrow limits; and it is probable that the change which has taken place is far less than in Gaul or Germany.

Great stress has also been laid by many modern writers upon the fact that populous citics then existed, and a thriving agricultural population was found, on sites and in districts now desolated by malaria; anis bence it is inferred that the climate has become much more unhealthy in modern times. But population and cultiration have in themselves a strong tendency to repress the causes of malaria. The fertile distriets on the coasts of Southern Italy orce occupied by the flourishing (ireck colonies are nuw pestilential wastes; but they became alinest desolate from nther causes before they grew so unhealthy. Ins the case of Paestum, a marked din inution in the effects of malaria bas heen perceived, even from the slight amount of Population that has been attracted thither since the site has become the frequent resurt of travellers, and the partial cultivation that has resulted from it. Nor can it be asserted that Italy, even in its most flourishing days, was erer free from this scourge, though particular localities were undoubtedly more bealthy than at present. Thus, the Maremma of Tuscany was noted, exen in the time of Pliny, for its insaluhrity (Plin. Fp. v. 6): the neighbourlood of Ariea was almest uninhabited from the same cause, at a still carlier
perivel (Strab. v. p. 231); and Cicero even extols the situation of Rome, as compared with the rest of Latium, as " a healthy spot in the midst of a pestilential region." (Cic. de Rep. ii. 6.) Bat the innerial city itself was fir from being altogether eximpt. Horace abounds with alinsions to the prevalence of fevers in the summer and autumn ( $E p$. i. 7 , Sat. ii. G. 19, Carm. ii. 14. 16), though the dense population most have tended materially to repres them. Even at the present day the most thickly peopled parts of Rome are wholly exenpt from malaria. (This question is more fully discussed ander the azticle Latium.)

The volcanic phenomena displayed so conspicuously in some parts of Italy did not fail to attract the attention of ancient writers. The eruptions of Aenaria, which bad occurred soon after the first settlemient of the Greek colonists there, were recorded by Timaens (ap. Strab. v. p. 248); and the fables connected with the lake Avernus and its neighbourhood had evidently a similar origin. Strabo also correctly argued that Vesuvius was itself a volcanic mountain, long befure the fearful eraption of A. D. 79 gave such sigual proof that its fires were not, as he supposed, extinct. (Strab. v. p. 247.) This catastrophe, fearful as it was, was confined to Campania; but earthquakes (to which Italy is so subject at the present day) appear to have been not less frequent and destructive in ancient times, and were far from being limited to the volcanic regions. They are mentioned as oceurring in Apulia, Piceum, Umbria, Etruria, Liguria, and other parts of Italy; and though their effects are generally noticed somewhat raguely, get the leading phenomena which accompany them at the present day - the subsidence of tracts of land, the fall of rocks and portions of mountains, the change of the course of rivers, the irraption of the sea, as well as the overthrow of buildings, and sometimes of whole towns and cities are all mentioned by ancient writers. (Liv. xxii. 5 ; Jul. Obseq. 86, 96, 105, 106, 122, \&c.) Slight shocks were not unfrequent at Rome itself, though it nerer soffered any serious calamity from this cause. But the volcanic action, which had at a far distant periud extended over broad tracts of Central Italy, and given rise to the plains of the Campagna and the Phlegraean Fields, as well as to the lofty groups of the Alban and Ciminian hills, had ceased long hefore the age of historical record; and no Roman writer seems to bave suspected that the Alban lake had once been a crater of eruption, or that the "silex" with which the Via Appia was paved was derived from a stream of basaltic lava. [LATHM.]

The volcanic region (in this geological sense) of Central Italy consists of two separate tracts of country, of considerable extent; the one comprising the greater part of Old Latium (or what is now called the Campagna of Rome), together with the southern part of Etruria; and the other occupying a large portion of Campania, including not only Vesavius and the volcanic hills around the lake Avernus, but the broad and fertide plain which extends from the Bay of Naples to the banks of the Liris. These two tracts of volcanic origin are separated by the Volscian mountains, a series of calcareous ranges branching off from the Apennines, and filling up the space from the banks of the Liris to the borders of the Pontine marshes, which last form a broad strip of alluvial soil, extending from the volcanic district of the Roman Campagna to the Monte Circello.

The volcanic district of Rome, as we may tern the more northern of the $t w o_{t}$ is about 100 miles in length, by 30 to 35 in breadth; while that of Campania is about 60 miles long, with an average, though very irregnlar, breadth of 20 . North of the former lie the detached summits of Mte. A miata and Radicofani, both of them composed of volcanic rocks; while at a distance of 60 miles E. of the Campanian basin, and separated from it by the intervening mass of the Apennines, is situated the isolated volcanic peak of Mt. Vultor (Voltore), a mountain whose regular conical form, and the great crater-shaped basin on its northern flank, at once prove its volcanic claracter; though this also, as well as the volcanoes of Latinm and Etruria, has displayed no signs of activity within the bistorical era. (Daubeny, On Volcanoes, cb. xi.)

It is scarcely necessary to ennmerate in detail the natural productions of Italy, of which a summary view bas already been given in the passages cited from ancient authors, and the details will be found under the heads of the several provinces. Bat it is worth while to observe how large a portion of tbose productions, which are at the present day among the chief objects of Italian cultivation, and even impart to its scenery some of its most peculiar characters, are of quite modern introduction, and were wholly unknown when the Greek and Roman writers were extolling its varied resources and inexbanstible fertility. To this class belong the maize and rice so extensively cultivated in the plains of Lombardy, the oranges of the Ligurian coast and the neighbonrhood of Naples, the alues and cactuses which clothe the rocks on the sea-shore in the southern provinces; while the mulberry tree, though well known in ancient times, never became an important object of cultare until after the introduction of the silk-worm in the 13 th century. Of the different kinds of fruits known to the ancient Romans, many were undoubtedly of exotic origin, and of some the period of their introduction was recorded; but alnost all of them throve well in Italy, and the gardens and orcbards of the wealthy Romans surpaised all others then known in the variety and excellence of their produce. At the same time, cultivation of the more ordinary descriptions of fruit was so extensive, that Varro remarks: " Arboribus consita Italia est, ut tota pomaium videatur." (R.R. i. 2.§ 6.)

Almost all ancient writers concur in praising the metallic wealth of Italy; and Pliny even asserts that it was, in this respect also, snperior to all other lands; but it was generally believed that the goverument intentionally discouraged the full exploration of these mineral resources. (Plin. iii. 20. s. 24 , xxavii. 13. s. 77; Strab. vi. p. 286 ; Dionys. i. 37; Virg. Georg. ii. 166.).

It is doubtful whether this policy was really designed to husband their wealth or to conceal their poverty; but it is certain that Italy was far from being really so rich in metallic treasures as was supposed, and could bear no comparison in this respect with Spain. Gold was nnquestionably found in some of the streams which flowed from the Alps, and in some cases (as among the letymuli and Salassi) was extracted from them in considerable quantities ; but these workings, or rather washings, appear to have been rapidly exliansted, and the goldworks on the frontiers of Norionm, celebrated fur their richness by Polybius, lad ceased to exist in the days of Strabo. (Strab. iv. p. 208.) Silver is ennmerated, also, among the metallic weasures of

Italy ; but we have no specific aecim: of its prom thetion, and the fact that silver money was anknown t.) the ancient nations of Italy suthiciently shows that it wats not found in any great quantity. The early coinage of Italy was of copper, or rather bronze ; anl this metal appears to have been extracted in larse quantities, and applied to a varicty of purposes by the Etruseans, from a very early period. The tame people were the first to explore the iron mines of 11 va , which continued to be athsiduously worked foy the lomans; though the metal prodnced was tionsht inferior to that of Noricum. Of other thinerals, cinnabar (mitrium) and calamine (cadmimu) are soticed by lliny. The white marble of Luna, also, wais extensively quarried hy the Romans, and seens to have been recognised as a superior material for sculpture to any of those derived frem Greece.

## 1V. Rivers, Lakes, and Molxtains.

The coufiguration of Italy is unfarourable to the formation of great rivers. The Padns is the only strean whicl deserves to rauk among the principal rivers of Enrope: even the Arnus and the Tiber, cellotrated as are their names in history, being inferior in magnitude to many of the secondary streauns, which art: mere tributaries of the Rhine, the Rhone, (or the l)anube. In the north of Italy, indeed, the hivers which flow from the perpectual snows of the Apss are furnishel with a copions and constant supply of water; but the greater part of these which have their sources in the Apennines, though large and formidable streams when swollen by heary rains or the suows of winter, dwindle into josignificance at other times, and present but scanty streams of water winding through broad beds covered with stones and shingth: It is only by comparison with Greece that Italy (with the escepition of Cisalpine Gatul) could be prained for its abundance of navigable rivers.

The Parts, or Po, is by far the most important give of Italy, flowing from W. to E. through the wery midet of the great basin or tromuh of Nurthern Italy, and rembins, in consequener, firm both sides, all the wat-r from the sulthern dechevities of the Alp, as wall as from the numthern Alpes of the Apritines, lleme, thourh its course does not exceed 380 _m s.miles in leugth, and the direct distance from its sources in the Man Vesulus (Mte. I iso) to its month in the Adriato is only 230 miles, the buly of water which it brimes down to the sea is very large. Its principal tributarios are as follows, be inning with these on the N. lauk, and procereling from W, to E:-(1) the 1 mia Minon (Doria Riparia) , which sums the Po near T'uria' Sucusta Taurinorman: (2 ithe Sthes (Sturu): (3) the Orgas ( 1 r-cu) . (4) the Durias Maji r, of Ihora Betleet: (5) the Siessites (Sestin); (6) the Ticinus (Ticiun); (7) the Lambirn (Lambro); (8) the Addna (Adda) ; (9) tlo Ohius (oylion): (10) the Dincius (1/inciot). Lepmally mumerons, though lew important in valume and magnitule, are its thibutarmes from the S. side, the chict of whin are : - (1) the Tanarus (Tomaro), flumine from the Maritine Alje, and molh the most considerable of the suthern tueluts of the $P$ ? ; (2) the Trwhin (Trabluin) ; (3) the Tarns (Tavo); (t) thu Incins (Enzer); (5) the Gaburlun (Scechia) ; (6) the Scaltemu (Panovi): ( $\overline{\text { ( }}$ ) the Renus (Rome); (8) the Vatew ms (Nenterme). (Ilin. iii. 16. s. 20.)

The firse river whelh, deecmiline from the Alpe, done not juin the Prelus, is the Athersis or Acligh. which in the lower part of its corne fows neatly
paral. i with the greater river for a distance of above .50 mulns. E. of this, and flowing from the Alps liret: to the Adriatic, come in succession, the Medoaens or Brenta, the Plavis or Piare, the Tilavemptus (Taglinmento), and the Sontius (Isonso), besides many smaller streauns, which will ho noticed under the article Visertia.

Liguria, S. of the Apennines, has very few streams Wurthy of notice, the mountains bere approaching so close to the coast as to leave but a short course for their waters. The most considerable are, the Varus (I'ur), which forms the western liont of the province; the Rutuba (Rojia), flowing through the land of the Intemelii, and the Macra (Mogru), which divides Liguria from Etruria.

The rivers of Central Italy, as already mentioned, all take their rise in the Apennines, or the mountain groups dependent upon them. The two most importunt of these are the Arnns (Arno) and Tiberis (Terere). The Ausar (Serchio), which now pursues an independent course to the sea a few miles N . of the Armus, was furmerly a confluent of that river. Of the smaller streams of Etruria, which have their sources in the group of biils that separate the basin of the Arno from that of the Tiber, the most considerable are the Caecina (Cecina), the Uinbro (Ombrone), and the Armiois (Fiora). The great valley of the Tiber, which has a ceneral southerly direction, from its sources in the Apennines on the confines of Etravia and Limbria to its mouth at Ostia, a distance in a direct line of 140 geng . miles, is the most important plysical feature of Central Italy. That river receives in its conrse many tributary streams, but the only ones which are important in a geographical puint of virw are the Clasis, the Nall, and the Axio. Of these the Nar brings with it the waters of the Velinus, a stream at Jeast as considerable as its own.

South of the Tiber are the Lists (Gorigliano or Liri), which has its sources in the central Apenmines near the lake Fucinus; and the VrextreNus (Ioltwent), whirh brings with it the collected waters of almost the whole of Samnium, receiving near Beneventum the trifntary streams of the Calor (Calore), the Sabatus (Subbrato), and the Tanarus (Tamaro). Both of these rivers flow tbrough the plain of Campania to the sea: santh of that province, and separating it from Lucania, is the subarrs (Sile), which, with its tributaries the Calor (C'alore) and Tanager (Negru), drains the western valleys of the Lucanian Apromines. This is the last river of any magritude that flows to the weatern coast of Italy: further to the S , the Apenoines approsich so noar to the shore that the struans which descend from them to the sea are mere monntain torrents of trilling length and si/e. One of the mest considerable of them is the Laiis (Lao), whieh fomms the Fimit between Lucania :and Bruttium. The other minor streans of those two provinces are enumetated under their respective articles.
heturning now to the castern or Adriatic const of Italy, we find, as alrealy noticed, a large number of streams, descending from the Apennines to the sea, but few of then of any great magnitude, though those wi ich lave their sources in the highest parts of the range are formidable torrents at particular seasons of the year. Beysming from the frontiets of Cisalpine Gaul, and proceedins from N. to S., the most imputant of these rivers are: - (1) the Ariminus (Marecchiu); (2) the Crustunins (Cunca); (3) the 1'isaurus ( 'inglit); (4) the Metautus (Mctenvo);
(5) the Aesis (Esino) ; (6) the Potentia (Potenza); (7) the Flusor (Chienti); (8) the Truentus (Tronto); (9) the Vomanus (Vomano); (10) the Aternus (Aterno or Pescara): (11) the Sagrus (Sangro); (12) the Trinius (Trigno) ; (13) the Tifernus (Biferno): (14) the Frento (Fortore); (15) the Cerbalus (Cervero); (16) the Aufidas (Ofanto), which has much the longest course of all the rivers falling into the Adriatic.

Beyond this, not a single stream worthy of notice flows to the Adriatic; those which have their sources in the central Apenuines of Lucania all descending toward, the Tareutine gulf; these are, the Bradanus (Bradano), the Casnentus (Basiento), the Aciris (Agri), and the Siris (Sinno). The only rivers of Bruttimn worthy of mention are the Crathis (Crati) and the Neacthns (Neto).
(The minor streams and those noticod in history, but of no geographical importance, are eoumorated in the descriptions of the several provinces.)

The Italian lakes may be considered as readily arranging themselves into three gronps:-1. The lakes of Northern Italy, which are on a far larger scale than any of the others, are all hasins formed by the rivers which descend from the high Alps, and the waters of which are arrested jnst at their exit from the monntaias. Heace they are, as it werc, valleys filled vith water, and are of eloogated form and considerable depth; wlule their superfluous waters are carried off in deep and copious streams, which become some of the priocipal feeders of the Po. Such are the Lacus Verhanns (Lago Maggiore), formed by the Ticinns; the Lacus Larins (Lago di Como), by the Addua; the Lacus Sebinns (Lago d fseo), by the Ollius; and the Lacus Benacus (Lago di Garda), by the Mincius. To these Pliny adds the Lacus Eupilis, from which flows the Lamber or Lambro, a very trifling sheet of water (Plin. iii. 19. s. 23); while neither he, nor any other ancient writer, mentions the Lago di Lugono, situated between the Lake of Como aod Lago Maggione, though it is inferior in magnitude only to the three great lakes. It is first mentioned ly Gregory of Tours in the 6 th century, under the name of Ceresius Lacus, an appellation probably ancient, though not now found in any earlier author. 2. The lakes of Central ltaly are, with few exceptions, of volcanic origin, aad occupy the craters of long extinct volcanoes. Hence they are mostly of circular or oral furm, of no great extent, and, not being fed by perennial streams, either require no natual outlet, or have their surplus waters carried off by very inconsiderable streams. The largest of these volcanic lakes is the Lacus Vulsinieosis, or Lago di Bolsena, in Southern Etruria, a basin of about 30 miles in circumference. Of similar character and origin are, the Lacus Sabatinns (Lago di Bracciano) and Lacns Ciminns (Lago di Vico), in the same district; the Lacus Albanus (Lago d'Albano) and Lacus Nemorensis (Lago di Nemi), in Latium: and the Lake Asernus in Campania. 3. Wholly differing from the preceding are the two most considerable lakes in this portion of Italy, the Lacus Trasimenus (Lago di Perugia) and Lacus Fucinus (Lago Fucino or Logo di Celano); both of which are basins surrounded by hills or mountains, leaving no natural outiet for their waters, but wholly uncunnected with volcanic agency.

The mountains of 1taly belong almost exclusively either to the great chain of the Alps, which hounds it on the N.., or to that of the Aperuines. The prin-
cipal summits of the latter range have heen already noticed under the article Arevininus. The few ontlying or detached summits, which do not properly belong to the Apennines are :-(1) the Monte Amiato or Monte di Santa Fiora, in the heart of Etruria, which rises to a height of 5794 feet above the sea; (2) the Mons Ciminus, a volcanic group of very inferior elevation ; (3) the Moss Albancs, rising to above 3000 feet ; (4) the Noss Vesurics, in Campania. attaining between 3000 and 4000 feet ; (5) the Moss Yultch, on the oppasite side of the Apennines, which measures 4433 feet; and (6) the Mons Gasganus, an isolated anass, but geologically connected with the Apennines, while all the preceding are of volcanic origin, and therefore geologically, as well as geographically, distinct from the neighhouring Apennines.

To thesc may be addod the two isolated mountaio promontories of the Mons Argentarias (Monte Argentaro) on the coast of Etraria, and Mons Circeius (Monte Circello) on that of Latium, - both of them rising like rocky islands, joined to the mainland only by low strips of alluvial soil.

## IV. Ethnograpiy of Ancient Italy.

The inquiry into the origin and affinities of the different races which peopled the Italian peninsula before it fell altogether under the dominiun of Rome, and the national relations of the different tribes with which the rising republic came successively into contact, is a problem which has more or less attracted the attention of scholars ever since the revival of letters. But it is especially of late years that the impulse given to comparative philology, combined with the spirit of historical criticism, has directed tbeir researches to this subject. Yet, after all that las been written on it, from the time of Niehuhr to the present day, it must be admitted that it is still eoveloped in great obscurity. The scantiness of the monuments that remain to us of the languages of these different nations; the varions and contradictory statements of ancient authors concerning them; aod the uncertainty, even with regard to the most apparently authentic of these statements, on what authority they were really founded; combine to embarrass our inquiries, and lead us to mistrust our conclusions. It will be impossible, within the limits of an article like the present, to enter fully into the discussion of these topics, or examine the argaments that have been brought forward by different writers upon the subject. All that cao be attempted is to give snch a summary view of the most prohable results, as will assist the student in forming a connected idea of the whole subject, and enable him to follow with advantare the researches of other writers. Many of the particular points here briefly referred to will be more tully investigated in the several articles of the different regions and races to which they relate.

Leavigg out of view for the present the inhabitants of Northern Italy, the Gauls, Ligurians, and Veneti, the different nations of the peninsula may be grouped under five beads:-(1) the P'elasgians; (2) the Oncans; (3) the Sabellians; (4) the Unbrians; (5) the Etruscans.

1. Pelasglans.-All abcient writers concur in ascribing a Pelasgic origin to many of the most ancient tribes of Italy, and there seems no renson to doubt that a large part of the population of the peninsula was really of Pelesgic race, that is to say, that it belonged to the same great nation or fumily
with : med the original population : Groce, *. 1 as that of Epirus and Macedonia, and of a par: as least of Threse and Asis Minor. The statemenis ant aremonts upon which this infereher is thasel inis more fully idiscussed muter the article I'E lasor. It may hure suffice to say that the gemoral fact is put forward pronine tly by Dionysias and Strabo, and bas then genernlly adipted by molern writers from Niebuhr downwards. The Pelasgian In Iatim of Italy aypears in histurical times prin-
 our horn gart of the peninsula. But it is not im(1) thathe that it had, as was reporten by traditions wh chront in the days of the earliest historians, a - -... thene extended much more widely, and that 14. Fivatian tribes had been gradually pressed L-m I- the sonth by the successively advancing B.1. of population, which appear under the name of Itro 11 ratis or Ausmuians, anil the Sabellians. At tom tione when the first Greek colunies were estahlonimi in Suthern Italy, the whole of the country AW an intly known as Lucania and Bruttium was on lambly a peopie whun the Greeks called Oexo-fistis- (Oilverpoi), and who are generally repreLumblas a l'clas zic race. Inleed we learn that the colnuints themselves continued to call this people, whellis thry had reluced to a state of serflom, l'e-La-si. (Steph. B. s. c. Xîos.) We find, however. fraco of the tra lition that this part of Italy was at ant- tiuc 1 -opled bey a tribe called Stctut, who are Warranted as passing over from thence into the 1. w. I : which they gave the nanic of Sicily, and whome alawe they are found in listorical times. [Stett.1.1.] The nome of these Siculi is found also anf cumpection with the carliest pupalation of Latium [1. 1115 m ]: buth there an! in Oenemia they are a hamouted by som authoritios as a branch of the 1' Gese race, whilu others resard them as a distinct Feeythe lat the latter cace we have no clue whatever f.) their mi_in or natimal afthitics.

Nist to the Ocmortim- come the Messapians or laps-i.t.c. who are represented by the Greek legends and tradions as of Pelaceic or Greek descent: and thare + om ranamal le gromads for assumimg that the - muta ion was comet, thonsh no ralue can be at1, hi. I th the my:himal loushl-connected with it by the 1 erauthors and early tireek historians. The
 on. the Momenpians and salentines, in the lapengian
 cinuter a illed by the Remans Apalia. A strong comingitem of the inference derived in this ctas it in othen a tharitich is found in the traves still rePantit - it the Mtssapiath diat-ct, whide appears to How hamen a clow affinity to Greck, and to have d Memel tren it ente in mach the same legre th the M an-fulian amb uther co thate dialects. (Dummech, I wor. Imakisthe Trutehter. 1中. 41-98.)

It is tar more inticult to trace with any sectrity the Pelaw ie fremhtion of eemeral Italy, where it anpars to leave I ta very early blendent with other batnal ci-mons. aut on! thet :mywhete sutsist in a1) 1 me in lod fum within the perive of histurnal stent. Put varnom as haw been the theories and aha with re and to the fuy ulation of Etruria,

 (a) nostlern districts. [Einechisi.] Th.
vry uame of Tyrrhenians, universally giren by the Grecks to the iuhabitants of Etruria, appears indies.lntly connected with that of Pelasgians ; and the widmec of lamzuace affords some curious and interesting fact in corroboration of the same view. (1) maddson, Farronianus, 2t edit. 1p. 166-170; Lejnius, Tyrrhen. Pelasger; 1P. $40-43$.)

If the Pelas ic element was thas prevalent in Southern Etruria, it might naturally be expected that its existence wonld be traceable in Latium also; and accordingly we find aburdant evidence that tre of the component ingredients in the pop lation of Latium was of l'elargic extraction, though thas imh nut subsist within the bistorical period in a sogsurate form, but was already indisolubly blended with the ot her elements of the Latin nationality. [Laticm.] The eridence of the Latin language, as puir ted uat by Niebuhr, in itseif indicates the combinations of a Gireek or Pelasgic race with one of a ditferent origin, and closely akin to the other nations which we find predominant in Central Italy, the Umbrians, Oscans, and Sabiues.

There seems to be also sufficient proof that a Pe-La-gic or Tyrrhenian population was at an early period settled along the coasts of Campania, and was probably at one time conterminous and comectel with that of Lueania, or Oenotria; but the nutices of these Tyrrhemian settlements are rendered obscure and confused by the circunstance that the Greeks applied the same name of Tyrrbenians to the Etruscans, who subsequently made themselves masters for some time of the whole of this country: [CassP.IxiA.]

The notices of any Polasgic population in the interior of Central Italy are so few and va; ne as to be acarcely worthy of investication; but the traditions collected by Dionysius fr th the carly Greek histurians distinctly refresent them as having been at one time settled in Northern Italy, and experfally point to Spina on the Adriatic as a Pelaseic city. (Dionys, i. 17-21; Strab, r. p. 214.) Nevertheless it lardly appears probable that this d'elaspic race formed a permanent part of the population of those regin us. The tra li i ins in question are more fully investigated under the artiलle I'Eliser. There is some cridence also, thoush very vauue and indefinite, of the existente of a Pelasgic population ou the coast of the Adriatic, especially on the shores if Picenum. (These notures are collected by Nirhnir, wol, i. Pp. 49, 50, and are discussed noder l'rev:x|"M.)
2. Oscias. - At a very early period, and certaluly hef re the commencement of historical rew rd, a cousiderable portion of Central l:aly appears io have been in the possession of a perple who were called by the Grecks Opicans, and by the Latins Oncans, ant whom we are led to identify also with the Ausonians [Avroses] of the (ireeks, and the Auruicans of limman writers. From them was derived the thame of Opicia or Opica, which appears to have been the nsual appellation, in the days both of Thucydides and Aristotie, for the central portion of the peninsula, or the country north of what was then called Italy: (Tinue. vi. 4; Arist. Pol. vii. 10.) All the carliest authorities concur in representing the Opicans as the earlicst inlabitants of Camparia, and they were still in possession of that fertile district when the Greck culonies were planted there. (Sirab. v. p. 242.) We find also statements, which have every character of authenticity, that this same jurple then vecupited the monntain as region alter-
wards called Samnium, nutil they were expelled, or rather subdued, by the Sabine colonists, whe assumed the name of Samnites. (ld. v. p. 250.) [Samsicm.] Whether they were more widely extended we have no positive evidence; but there seems a strong presumption that they had already spread thenselves through the neighbowing districts of Italy. Thus the llirpini, who are represented as a Sammite or Sabellian colony, in all probability found an Oscan population established in that country, as did the Samnites proper in the more northern province. There are also strong arguments for regarding the Volscians as of Oscan race, as well as their neighbours and inseparable allies the Aequians. (Niebnlır, vol. i. pp. 70-73; Domakdson, V arromianus, pp. 4, 5.) It was probably also an Oscan tribe tbat was settled in the bighlands of the Apennines about Reate, and which from thence descended into the plains of Latium, and constituted one important element of the Latin nation. [Latium.] It is certain that, if that people was, as already mentioned, in part of Pelasgic origin, it contained also a very strong admixtare of a non-Pelasgic race; and the analogy of language leads us to derive this latter element from the Oscan. (Donaldson, l.c.) Indeed the extant monuments of the Oscan language are sufficient to prove that it bore a very close relation to the oldest form of the Latin; and Niebuhr justly remarks, that, had a single hook in the Oscan language been preserved, we should have had little difficalty in deciphering it. (Niebulır, vol. i. p. 68.)

It is difficult to determine the precise relation which this prianitive Oscau race bore to the Sabines or Sabellians. The latter are represented as conquerors, making themselves masters of the countries previously occupied by the Oscans; but, both in Samnium and Campania, we know that the language spoken in historical times, and even long after the Roman conquest, was still called Oscan; and we even find the Samnites carrying the same language with them, as they gradually extended their conquests, into the furthest recesses of Bruttium. (Fest. s. v. Bilingues Brutates, p. 35.) There scems little duhlit that the Samnite conquerors were a comparatively small body of warriors, who readily adopted the language of the people whom they subdued, like the Normans in France, and the Lombards in Nurthern Italy. (Niebuhr, vol. i. p. 67.) But, at the same time, there are strong reasons for supposing that the language of the Sabines themselves, and therefore that of the conquering Sabellian race, was not radically distinct from that of the Oseans, but that they were in fact cognate dialects, and that the two nations were members of the same family or race. The questions cuncerning the Oscan language, so far as it is known to us from existing monuments, are more fully adverted to under the article Usc1*; but it must be borne in mind that all such monuments are of a comparatively late period, and represcnt only the Sabello-Oscan, or the language spoken by the combined people, long after the two races had been blended into one; and that we are alinost wholly without the means of distinguisbing what portion was derived from the one source or the other.

[^1]3. The Samellans. - This name, which is sometimes used by ancient writers as synonymous with that of the Sabines, sometimes to designate the Samnites in particular (Plin. iii. 12. x. 17 ; Virgil, Georg. ii. 167 ; Hor. Sat. i. 9. 29, ii. 1. 36; Heindorf. ad loc ), is commonly adopted hy modern historians as a general appellation, including the Sabines and all thase races or trihes which, according to the distinct tradition of antiquity, derived their origin from them. These traditions are of a very different character from most of those transmitted to us, and have apparently every clairn to be received as historical. And though we bave no means of fixing the date of the migrations to which they refer, it seems certain that these cannot be carried back to a very remote age; but that the Sabellian races had not very long been established in the extensive regions of Central Italy, where we find them in the histurical period. Their extension still further to the S. belongs distinetly to the listorical age, and uid not take place till long after the establishment of the Greek colonies in Southern Italy.

The Sabines, properly so called, had their original abodes, according to Cato (ap. Diomys. ii. 49), in the lefty ranges of the central Apemnines and the upland valleys about Amiternum. It was from thence that, descending towards the western sea, they first hegan to press upon the Aborigines, an Oscun race, whom they expelied from the valleys about Reate, and thus gradually extended themselves intu the country which they inlabited under the Romans, and which still preserves its ancient narne of La Subina. But, while the uation itself bad thos shifted its quarters nearer to the Tyrrhenim Sea, it had sent out at different periods culonies or bodies of emigrants, which had established themselves to the E. and S. of their original abodes. Ot these, the most ponerfal and celebrated were the Sonnuites (之̇avvitat), a people who are universally represented by ancient historians as descended from the Sabin's (Strab. v. p. 250 ; Fest. v. Samnites; Varr. L. L. vii. § 29) ; and this tradition, in itself sufficiently trustworthy, derives the strongest confirmation from the fact already noticed, that the Romans applied the name of sabelli (obviously only another form of Sabini) to bath nations indiscriminately. It is even probable that the Samnites called themselves Sabini, or Savini, for the Oscan name "Safinim" is found on coins struck during the Social War, which in all probability be long to the Samnites, and certainly not to the Sabines proper. Equally distinct and uniform ture the testimonies to the Sabine origin of the Piceni or Picentes (Plin. iii. 13. s. 18 ; Strab. v. p. 240), who are found in historical times in possession of the fertile district of Picenum, extending from the central chain of the Apeunines to the Adriatic. The Peligui also, as we learn from the evidence of their native poet (Ovid, Fast. iii. 95), claimed to be of Sabine descent; and the same may fairly be as sumed with regard to the Vestini, a tribe whom we find in historical times occupying the very valleys which are represented as the original abodes of the Sabines. We know nothing historically of the erigin of this people, any more than of their neigbbours the Marrucini ; but we find them both associated so frequently with the Peligni and the Marsi, that it is probable the four constituted a common league or confederation, and this in itselt raises a presumption that they were kindred races. Cato already remarked, and without donbt correctly, that the name of the Marrucini was directly derived from that of

## ITALIA.

the Marsi (Cato, ap. Priscian. ix. 9) ; and there can be no doubt that the same relation subsisted between the two pations: but we are wholly in the dark ns to the origin of the Marsi themedves. Several circunstanees, hawever, combine to render it probable that they were clasely eonnected with the Sabines, but whether as a distinct offiet from that jeople, or that the two proceeded from one common stock, we have no means of determining. [M.ansa.]

The Frentani, on the uther hand, are generally reprevented as a samnite race ; indeed, both they and the llirpini were so elosely comected with the Numnites, that they are often considered as furming only a part of that people, though at other times they figure as indepeodent anil separate nations. But the traditions with regard to the establishment of the IIfpini and the origin of their name [Hharivi], seem to indicate that they were the result of a sefarate migration, subsequent to that of the body of the Samnites. South of the Hirpini, again, the Lucanialls are universally deseribed as a Samnite colony, or rather a brauch of the Samoites, who exteniled their conjuering arms over the greater part of the country called by the Greeks Ocnotria, and thus came into direct collisiun with the (ireek colomies on the southern coasts of Italy. [Magna (ibaecta.] At the height of their power the Lucauians even made themselves masters of the bruttian peninsula; and the subsequent revolt of the Bruttii did not clear that country of these Sabellian invaders, the Bruttian people being apparently a mixed population, made up of the Lucanim conguerors and their Oenotrian serfs. [Bevitit] While the Simnites and their Lucanian progeny were thus extending their power on the S . to the sicilian strait, they did not omit to make themselves masters of the fertile plains of Campania, which, together witls the flourishing cities of Capua and Cumae, fell futo their hands betwem 440 and $420 \mathrm{~m} . \mathrm{C}$. [CA3M2:.土ی1..]

The dominion of the Sabellian race was thus established from the neighbowhood of Aucuna to the southorn extremity of Bruttium : but it must not be supposed that throughout this wide extent the population was become essentially, or even mainly, Sabellian. That people appears rather to have been a race of conquering warriors; but the rapidity with which they becnone blended with the Osenn populations that they found previousiy established in some pant at least of the countries they subdued, seems to puint to the conclusion that there was no very wide difference between the two. Even in Sambium itself (which probably furmed their stronghold, and where they were doubtless more numerons in proportion) we know that they adopted the Osean languare ; and that, while the lomans speak of the people and their territory as Sabellian, they desigute their speecha as Oscath. (Liv, viii. $1, x, 19,20$.) In like maner, we know that the Lucamian insaders carried with them the same lansuage into the wihls of Bruttinm; where the donble origin of the people was shown at a late period by their continuing to sporak buth Greek gand Osean, (Fest. p. 35.) The rolations between these Sabellimn eonquerors and the Oscan mbahitants of Central Italy remer it, on the whole prubable, that the two nations were only brancles from one eummon stock (Nichuhr, vol i. 1) : (04), related to one another vory much like the Normans, Danes, and Saxons. Of the lampare of the Sabines themselves we have unfortunately searcely any remains : but there are some words queted by an-
cient anthors as being at once Sabine and Oscan ; and Varro (himself a native of leate) bears distinct testimony to a consection betweed the two. (Varr. L. L. vii. § 28 , ed. Mitller.) On the other hand, there are evidences that the Sabine language had considerable affinity with the Umbrian (Domaldson, farron. p. 8): and this was probably the reason why Zenodotur of Troezen (ap. Dionys, ii. 49) derived the Salines from an Umbrian stock. But, in fate, the Umbrian and Osean languages were themselves by no means so distinct as to exclude the supposition that the Sabine dialect may lave been intermediate between the two, aud have partaken Lurgely of the claracters of both.
4. Ummanas. - The general tralition of antiquity appears to have fixed upon the Uinbrians as the most ancient of all the races inhabiting the Italian peninsula. (Plin. iii. 14. s. 19; Flor. i. 17 ; Dionrs. i. 19.) We are expressly told that at the earliest period of which any menory was preserved, they occupied not only the distriet where we find them in historical times, but the greater part of Etruria also; while, across the Apemines, they beld the fertile flains (subsequently wrested from them by the Etruscans and the Gauls) from the neighbourhood of Ravenna to that of Ancona, and appareutly a large part of l'icenum also. Thus, at this time, the Umbrians extended from the Adriatic to the Tyrrheman sea, and from the manths of the Patus nearly to those of the Tiber. Of their origin or nutional affinities we learn but little from ancient authons ; a notion appears to have arisen anong the lomans it a late period, thoush not alluded to by any writer of authority, that they were a Celtic or Gaulish race (Solin. 2. § 11; Serv, ad Aen. xii. 753; 1sidor. Orig. ix. 2), and this viow has beon adopted by many modern authons. (Walckenaer, Giogr: des Gaules, vol. i. p. 10 ; Thierry, Hist. des Gaulois, vol. i.) But, in this instance, we have a much safer guide in the still extant remains of the Uimbrian latngnage, preserved to us in the celebrated Tabulae Engubinae [Iquyum] ; and the rescarches of modern philologers, which have been of late years e-pecially directed to that interesting mooument, have sufficiently proved that it has no such close affinity with the Celtic as to lead us to derive the Umbrians from a Gaulish stock. On the other hand, these inquiries have fully estabizhed the existence of a general resemblance between the Umbrian, Oscan, and oldest Latin languages ; a resemblance not confined to jarticular words, but extendiog to the grammatical forms, and the whole structure of the language. Hence we are fairly warraoted in concluding that the Umbrians, Oscans, and Latins (one important element of the nation at least), is well as the Sabines and their deseendants, were only branches of one race, belonging, not merely to the same great family of the Indo-Teutonic nations, but to the same subdivision of that family. The Uubrian nay very probably lave been, as believed by the Romans, the most ancient branch of these kindred tribes; and its language would thus bear mnch the same relation to latin and the later Osean dialects that Mueso-liothie does to the several Tentonic tongues. (Ihonaldion, 1arvom. pp. 78, 10.t, 105; Schwegler, Kumisthe Geschichte, wol. i. p. 176.)
5. Etrescans.-While there is good reason to suppose a general and even close uffinity between the nations of Central Italy which have just been reviewed, there are equally strong grounds for regarling the Etruscans as a people of wholly dif-

ITALIA.
ITALIA.
ferent race and origin from those by which they were surrounded. This strongly marked distinctness from the other Italian races appears to have been recognised both by Roman and Greek writers. Dionysius even uffirms that the Etruscans did not resemble, either in language or manners, any other people whatsoever (Dionys. i. 30); and, however we may que.tion the generality of this assertion, the fact in regurd to their langnage seems to be borne out by the still existing remains of it. The various theories that have been proposed concerning their origin, and the views of modern philologers in regard to their language, are more fully discussed under the article Etruria. It may suffice here to state that two points nay be considered as fairly established:I. That a considerable part of the population of Etruria, and especially of the more sonthern portions of that country, was (as already mentioned) of Pelasgic extraction, and continued to speak a dialect closely akin to the Greek. 2. That, besides this, there existed in Etruria a people (probably a conquering race) of wholly different origin, who were the proper Etruscans or Tuscans, bat who called themselves Rasena; and that this race was wholly distinct from the other nations of Central Italy. As to the ethnical affinities of this pure Etruscan race, we are almost as much in the dark as was Dionysius; bnt recent philological inquiries appear to have established the fact that it may be referred to the same great family of the Indo-Teutonic nations, though widely separated from all the other branches of that family which we find settled in Italy. Tbere are not wanting, indeed, evidences of many points of contact and similarity, with the Umbrians on the one hand and the Pelasgians on the other; but it is probable that these are no more than would naturally result from their close juxtaposition, and that misture of the different races which had certainly taken place to a large extent before the period trom which all onr extant monnments are derived. It may, indeed, reasonably be assumed, that the Umbrians, who appear to have been at one time in possession of the greater part, if not the whole, of Etruria, would never be altogether expelled, and that there mnst always have remained, especially in the N. and E., a subject population of Uubrian race, as there was in the more southern districts of Pelasgian,

The statement of Livy, which represents the Rhaetians as of the same race with the Etruscans (v. 33), eren if its accuracy be admitted, throws but little light on the national affinities of the latter; for we know, in fact, nothing of the Rhaetians, either as to their language or origin.

It only remains to advert briefly to the several branches of the population of Northern Italy. Of these, by far the most numerous and important were the Gauls, who gave to the whole basin of the Po the name of Gallia Cisalpina. They were universally admitted to be of the same race with the Gauls who inhabited the conntries beyond the Alps, and their migration and settlement in Italy were referred by the Roman historians to a comparatively recent period. The history of these is fully given under Gillia Cisalpina. Adjoining the Gauls on the SW ., both slopes of the Apennines, as well as of the Maritime Alps and a part of the plain of the Po, were occupied by the Ligurians, a people as to whose national affinities we are almost wholly in the dark. [Liguria.] It is certsin, however, from the positive testimony of ancient writers, that they
were a distinct race from the Gauls (Strab. ii. p. 128), and there seems no donbt that they were establishod in Northem Italy long before the Gallic invasion. Nor were they by any means confined to the part of Italy which ultimately retained their name. At a very early period we learn that they occupied the whole coast of the Mediterranean, from the foot of the Pyrences to the frontiers of Etruria, and the Greck writers uniformly speak of the people who occupied the neighbourhood of Massilia, or the modern Provence, as Lignrians, and not Gauls. (Strab.iv. p. 203.) At the same period, it is probable that they were more widely spread also in the basin of the Po than we find them when they appear in Roman history. At that time the Taurini, at the foot of the Cottian Alps, were the most northern of the Ligorian tribes; while S. of the Padus they extended probably as far as the Trebia. Along the shores of the Mediterranean they possessed in the time of Polybins the whole comntry as far as l'inie and the mouths of the Arnus, while they beld the fastnesses of the Apennines as far to the E. as the frontiers of the Arretine teritory. (Pol. ii, 16.) It was not till a later period that the Macra became the established boundary between the Roman province of Liguria and that of Etroria.

Bordering on the Gauls on the F.., and separated from them by the river Athesis (-1dige), were the Veneti, a people of whom we are distinctly tuht that their language was different from that of the Gauls (1.ol. ii. 17), but of whom, as of the Ligurians, we know rather what they were not, than what they were. The most probable hypothesis is, that they were an lllyrian race (Leuss, Die Deutschen, p. 251), and there is good reason for referzing their neighbours the Istriaxs to the same stock. On the other hand, the Carni, a mountain tribe in the extreme NE. of Italy, who immediately bordered both on the Venetians and Istrians, were more probubly a Celtic race [Canni].

Another name which we meet with in this part of Italy is that of the Euganet, a people who had dwindled into insignificance in historical times, but whom Livy describes as once great and powerful, and occupying the whole tracts from the Alps to the sea. (Liv. i. 1.) Of their national affinities we know nothing. It is jossible that where Livy speaks of other Alpine races besides the Rhactians, as being of common origin with the Etruscans (v. 33), that he had the Eugancans in view; but this is mere conjecture. Ife certainly seems to have regarded them as distinct hoth from the Venetians and Gauls, and as a more ancient people in Italy than either of those races.

## V. History.

The listory of ancient Italy is for the most part inseparably conuected with that of Rome, and cannot be considered apart from it. It is impossible here to attempt to give even an outline of that history; but it may be useful to the student to present at one view a brief sketch of the progress of the Roman arms, and the period at which the several nations of Italy successively fell under their yoke, as well as the measures by which they were gradually consolidated into one homogeneous whole, in the form that Jtaly assumed under the rule of Augustus. The few facts known to us concerning the history of the several nations, before their conquest by the Romans, will be found in their respective articles; that of the Grcek colonies in Sonthern 1taly, and

## 1 TALIA.

therir relations with the surrounding tribes, are given under the head of Masisa fibabcla.

1. Conquest of Italy by the Romans, B, c. 509-264.-The earliest wars of the lonnans with their inmediate neighbours sareely coure here under our 1. Insideration. Placel on the very frontier of three jowerful mations, the infant city was from the very first engaged in perpetual hostifities with the Latins, the Sabines, and the Etruscans. And, however litule d. endence can be placed upon the details of these wars, as related to us, there seems no doubt that, even under the kings. Rome had risen to a superiority wrer most of ber neightours, and had extended ber actual doninion over a considerable part of Latium. The carliest period of the Republic, on the other hand (froun the expulsion of the Tarquias to the tiaulivis iuvaion, в. с. $509-390$ ), when stripped of the runsutic garb in which it has been clothed by looman writers, presents the spectacle of a difficult and often dubious struggle, with the Etruscans ob the one hand, and the folscians on the other. The 1.pture of Veii, in E. C. 396, and the permatent an$\therefore$ xation of its territory to that of Rome, was the A.nt decisive advantare acequired by the rising repoblie, and may be lusked upon as the first step to d. A domination of Italy, Ereu the great calamity a watued by the R mans, when their city was takea tant in part destroyed by the Gauls, B. c. 390 , was 2. t.tr :rom permaneatly checking their progress, that it would rather seem to bave been the means if openiag out to thera a career of conjuest. It is pribable that that event, or rather the series of predatory invasions by the Gauls of which it formed a purt, gave a seri us shock to the nations of Central Italy, and produced among them much disorganisati 1 and sonsequent wealkness. The attention of the Etruwans was naturally drawn off towards the N., and the Romans were able to establish culonies at Sutrium and Nepete; while the power of the Volarinus appears to have been greatly enfecbled, and the series of triumphs over them recorled in the $F$ thti now marks real progress. That of M. Valerius C.irvis, after the destraction of Satricum in e. c. 346 (Liv. vii. 27 ; Fast. Capit.), seoms to in licate the t tal subjugation of the Volscian peopie, who never azain appear in history as an independeat power. Shartly affer this, in B.C. 343 , the Romans for the first time came into collision with the Samnites. That people were theo undoubtedly at the height of their jower: they and their kindred Sabellian thates had recently extended their cunquests over Flomst the whole sonthern portiun of the peninsula 1.instore, p. 86); and it cannot be doubted, that There the $R$-ruans and Samnites first fonnd themwion offinsed in arms, the contest between them - ote for the stimemacy of Italy. Memwlite, a *-3t mure furmilable dangur, th whith of much briefer daration, threatened the rising power of Rome. Thie revolt of the Latins, who had hatherto been among the main iustruments and supports of that power, threatened to shake it to its foundation; and the victory of the Rourus at the foot of Mt. Vesurias, urict T. Jlat ius and P. Decits (1, C. 340), was perthap the nost important in their whele history. Three eatupaizns sulliced to terminate this formidable war ( $\mathrm{B}, \mathrm{c}, 340-338$ ). The Latins were now rednced tron the condition of dependent al ies to that of subjects, whether under the nume of lioman citizens or in less favourable terms [Latiom]; and the greater furt of Campania was placed in tho ame condtion.

At this time, therefore, only seventy years before the First l'unic War, the Roman dominion still comprised only Latium, in the more limited sense of the name (for the Aequi and Hemici were still independent), together with the southern part ef Etruria, the tervitory of the Volscians, and a part of Canparia. Buring the next fitty years, which was the period of the great extension of the Roman arms and influence, the contest between liome and Sammium was the main point of iuterest ; but alnost all the surrounding mations of haly were gradnally drawn in to take part in the struggle. Thus, in the Secoud Samnite War (B. c. $326-304$ ), the names of the Lucanians and Apulians - nations with which (as Livy observes, viii. 25) the Roman people had, up to that period, had muthing to do-appear is taking an active part in the contest. In anotber part of 1taly, the Marsi, Vestini, and P'elimni, all of them, as we have suen, probably kindred laces with the Sarnnites, took up arms at one time or another is support of that people, and were thus for the first time brouglt into cullisiva with Rome. It was not till 1s. c. 311 that the Etruscans on their side joined in the contest: but the Etruscan War at voce assumed a character and dimensions scarcely less formidable than that with the Sammites. It was now that the Romans for the firt time carried their arms beyoud the Cimmiau Hills; and the northern cities of Etruria, Rerusia, Cortomn, and Arretium, now first appear us taking part in the war. [Etuuras.] Before the close of the contest, the Uimbrians also took up arms for the first time against the Romans. The peace which put an end to the Second samnite War (B. C. 304 ) added nothinz to the territorial extent of the Roman power; but nearly contemporary with it, was the revolt of the Hernicans, whichended it the complete subjugation of hat pe ple (D.C. 3U6); and a few years later the Aequians. who followed their example, shared the same fate, 1. c. 302. About the same time (B. C. 304) a treaty was concluded with the Marsi, Marrucini, Peligni, and Frentami, by which those nations appear to have passed into the condition of dependent allies of Rome, in which we always subsequently find them. A similar treaty wats granted to the Vestini in B. C. 301.

In B. C. 298, the contest between Rome and Samuium was renerwed, but in this Third Samnite War the people of that name was only one member of a powerful confederacy, consisting of the Samnites, Etruscans, U'mbriaus, and Gauls; nevertheless, their united furces were defeated by the Romans, who, after several successful campaigns, compelled both Etruscans and Samnites to sue for peace ( $\mathrm{D}, \mathrm{C}, 290$ ). The same year in which this was concluded witnessed also the subjugation of the Sabines, who had been so long the faithfal allies of Rome, and nuw appear, for the first time after a long interval, in arms: they were admitted to the Roman franchise. (Liv, Epit. xi.; Vell. Pat. i. 14.) The slourt interval which elapsed before hostihties were generally recewed, afforded an opportunity for the subjugation of the Galli Senones, whose territory was wasted with fire and sword by the consml Dolabella, in 283; and the Roman colony of Sema (Sena Giallica) estabhshed there, to secure their permanent submission. Already ic 1. C. 282, the war was renewed both with the Etruscans and the Sumnites; but this Fourth Samnite War. as it is often called, was soon merged in one of a more extensive character. The Sammites were at first assisted by the Luraniaus
and Bruttians, the latter of whom now oceur for the first time in Roman history (Liv. Epit, xii.); but circumstances soon arose which led the Romans to declare war against the Tarentines; and these called in the assistance of Pyrrhus, king of Epirus. The war with that monareh (the first in which the Romans were engaged with any non-Italian enenry) was at the satne time decisive of the fate of the ltalian yeniasila. It was, indeed, the last struggle of the nations of Southern Italy against the power of Rome: on the side of Pyrrhus were ragged, besides the Tarentines and their mercenaries, the Samnites, Lucanians, and Bruttians: while the Latins, Campanianas, Sabines, Umbrians, Volscians, Marrucini, Peligni, and Frentani, are enumerated among the troops which swelled the raoks of the Romans. (Dionys. xx. Fr. Didot.) Hence, the final defeat of Pyrritus near Beneventum (в. c. 275) was speedily fullowed by the complete subjugation of Italy. Tarentum fell into the hands of the Romans in b.c. 272 , and, in the same year, the consuls Sp. Carvilios and Papirius Cursor celebrated the last of the many Fuman triumphs over the Samnites, as well a's the Lucanians and Bruttians. Few particulars have been transmitted to us of the petty wars which folloved, and served to complete the conquest of the peninsula. The Picentes, who were throughout the Sunnite wars on friendly terms with Rome, now appear for the first time as enemies; but they were defeated and reduced to submission in r. C. 268 , The subjection of the Sallentines followed, B. C. 266 , and the same year records the conquest of the Sarsinates, probably including the other mountain tribes of the Umbrians. A revolt of the Volsinians, in the folluwing year (в. C. 265), apparently arising out of civil dissensions, gave occasion to the last of these petty wars, and earned for that people the credit of being the last of the Italians that submitted to the Roman power. (Florus, i. 21.)

It was not till long after that the mations of Northern Italy shared the same fate. Cisalpine Gaul and Liguria were still regarded as furcign provinces; and, with the exception of the Senoues, whose territory had been already reduced, none of the Gaulish nations had been assailed iu their own abodes. In n. c. 232 the distribution of the " Gallicus ager" (the territory of the Senones) became the occasion of a great and formidable war, which, however, ultimately ended in the victory of the liomans, who immediately proceeded to plant the two colonies of Placentia and Cremona in the territory of the Gauls, в. c. 218. The history of this war, as well as of those which followed, is fully related under Gallia Cisalpina. It may here suffice to mention, that the final conquest of the Boii, in n. c. 191, completed the subjection of Gaul, south of the Padus; and that of the Transpadane Gauls appears to have been accomplished soon atier. though there is some uncertainty as to the exact period. The Venetians had generally been the allies of the Fomans during these contents with the Gauls, and appear to have passed gradually and quietly from the condition of independent allies to that of dependents, and ultimately of subjects. The Istrians, on the contrary, were reduced by force of arms, and submitted in E. c. 177. The last people of Italy that fell under the yoke of Rome were the Ligurians. This hardy race of mountaineers was not subdued till atter a long series of carapaigns; and, while the Roman arms were overthrowing the Maced mian and Syian empires in the

East, they were still constantly engaged in an inglorious, but arduous, struggle with the Ligurians, on their own immediate frontiers. Strabo obsertes, that it cost them eighty years of war to secure the coastline of Liguria for the space of 12 stadia in width (iv. p. 203); a statement nearly correct, for the first triumph over the Ligurinns was celebrated in 13. c. 236, and the last in B. c. 158 . Even after this last period it appears to have been a long time before the people were finally reduced to a state of tranquillity, and lapsed into the condition of ordinary Roman subjects.
2. Italy under the Romans. - It would be a great mistake to suppose that the several nations of Italy, from the periods at which they successively yiekded to the Roman arms and acknowledged the supremacy of the Ropublic, became her subjects, in the strict sense of the word, or were reduced under any uniform system of administration. The relations of every people, and often exen of every city, with the supreme head, were regulated by special agreements or decrees, arising out of the circumstances of their conquest or submission. How varions and different these relations were, is sufficiently seen by the instances of the Latins, the Campanians, and the Hernicans, as given in detail by Livy (viii. 11 -14, ix. 43). From the loss of the second decade of that author, we are unfortunately deprived of all similar details in regard to the other nations of Italy; and hence our information as to the relations established between them and Rome in the third century B. C., and which continued, with little alteration, till the outbreak of the Social War, в. c. 90, is unfortunately very imperfect. We may, however, clearly distinguish two principal classes inte which the ltalians were then divided; thuse who possessed the rights of Roman citizens, and were thos incorporated into the Roman state, and those who still retained their separate national existence as dependent allies, rather than subjects properiy so called. The first class comprised all those communities which had received, whether as nations or separate cities, the gift of the Roman franchise; a right sometimes conferred as a boon, but often also imposed as a penalty, with a view to break up more effectually the national spirit and organisation, and bring the people into closer dependence upon the supreme authority. In these cases the citizenship was conferred without the right of suffiage; but in most, and perhaps in all such instances, the latter privilege was ultimately conceded. Thas we find the Sabines, who in n. c. 290 obtained only the "civitas sine suffirgio," admitted in B. C. 268 to the fuil enjoyment of the franchise (Vell. 1'at. i. 14): the same was the case also, though at a much longer interval, with Formiae, Fundi, and Arpinum, which did not receive the right of suffrage till $n, c$. 188 (Liv. viii. 41, x. 1, xxxviii. 36), thougb they had borne the title of Roman citizens for more than a century. To the same class belonged those of the Roman colonies which were called "coloniae civium Romanorum," and which, though less numerous and powerful than the Latin colomies, were seattered through all parts of Italy, and incloded some wealthy and important towns. (A list of them is given by Madvig, de Coloniis, pp. 295-303, and by Marquanit, Handb. der Rümischen Alterthümer, vol. iii. pt, i. p. 18.)

To the second class, the "Socii" or " Civitates Foederatae," which, down to the period of the Sucial War, included by far the largest part of the Italiau
people, belonged all those nations that hin submitted to Rome apon any other terms than those of citizenship; and the treaties (foedera), which determined their relations to the central power, included alunst every varicty, from a condition of nominal equality and independence (aequum fordus), to one of the nust complete subjection. Thus we find Ileraclen in Lueania, Neapolis in Caupania, and the Camertes in Umbria, noticed as possessing particularly favourthble treaties (Cice pro Bulb. 8, 20, 22); and even some of the cities of Latium itself, which had not received the Roman civitus, continued to maintain thi- nominal independeace long alter they had become virtually subject to the jower of Rome. Thus, even in the hins of Polybius, a loman citizen might retire into e.rile at Tibur or l'raeneste (Pol, vi. 14: Liv. xliii, 2), and the pror and decayed town of Laurentum went through the form of annually ronewing its treaty with Rome down to the close of the R-public. (liv. viii. 11.) Nor was this indeprentewce merely nominal: thouch politically dependent upon Rome, and compclled to follow her lead in their external relations, and to furnish their contingent of troops for the wars, of which the dominant republic alune reaped the benefit, many of the cities of Italy contimed to enjoy the absolute control of their own affairs and internal regulations; the troops Which thicy were bound by their treaty to furnish wrre not eurolled with the legions, but fought under their own standards as auxiliaries; they retained their own laws as well as conrts of judicature, and, even when the Lex Julia conferred upon all the Italian allies the privileges of the Roman civitas, it was necensary that each city should adopt it by an act of its orrn. (Cic. pro Balb. 8,) Nearly in the sume position with the dependent allies, however different in their origin, were the so-called "Coloniae Latimae;" that is, Koman colonies which did not enjoy the rights of Roman citizenship, but stood in the same relation to the Roman state that the cities of the Latin League had formerly done. The name was, durabtless, derived from a period when these colonies were actually sent out in common by the Ifmans and Latins; but settlements on similar terms contimed to be founded by the Romans alone. Jone after the extinction of the Latin League; and, befire the Social War, the Latin colonies included many of the must flowishing and important towns of ltaly. (For a list of them, with the dates of their foundation, see Madvig, de Coloniis, L. c.; Mumumen, Römische Muns-Wesen, pp. 230-234: and Maryuarit, l. c. p. 33.) Theso colonies are justly reczarded by lisy as one of the main supports of the Ricpublic during the Second Punic War (Liv. xxvii, 9,10 ), and, doubitess, proved one of the most elfoctual means of consolidating the Roman dominion in Italy. After the disolution of the latin league, r. c. 338, these Latm colonies (with the few cities of Latium that, like Tibur and Praeneste, still retained their separate oreanisation) fismed the " nomen Lat num," or body of the Latins. The close combection of these with the allies explains the frequent recurethee of the plrase 'socii et nomen Latinum" throughont the later books of J.ivy, and in other authors in reference to the same period.

A great and general change in the relations previously subsiating between the Italian states and Hone was introluced by the socinl War (a, c. $90-$ 89), and the settlement whilh tonk place in consequence of it. Great as wrete the dangits with whith Liome was threatened by the formidable coalition of
those who had 0 long been her bravest defenders, they would have been still more alarming lad the whole Italian people taken part in it. But the allies who then rose in arms against lome were almost exclusively the Sabellians and their kindred races. The Etruscans and Combrians stood aloof, while the Sobines, Latins, Volscians, and other tribes who had already receivel the Roman franchise, supported the Republic, and furnished the materials of her armies. But the senate hastened to scewe those who were wavering, as well as to disarm a portion at least of the openly disaffected, by the gift of the Roman Irachise, including the full privileges of citizens: and this was subsequently extended to every one of the allies in succession as they submitted. There is some uncertainty as to the precise steps by which this was effected, but the Lex Julia, passell in the year $90 \mathrm{n} . \mathrm{c}$., appears to bave conferred the franchise upou the Latins (the " nomen Latinum," as above delined) and all the allies who were willing to accept the booa. The Lex Plautia Papiria, passed the following year, e. c. 89 , completed the arranyement thus begun. (Cic. pro Balb. 8, pro Arch. 4 : A. Gell. iv. 4: Appino, B. c', i. 49 ; lell. 1'at. ii. 16.)

By the change thus effected the distinction between the Latins and the allies, as well as between those two classes and the Roman citizens, was entirely duoe away nith; and the Latin colonies lapsed into the condition of ordinary municipia. At the same time tbat all the free inhabitants of Italy, as the term was then understood (i.e. Italy S. of the Macra and Rubicon), thus received the full rights of Roman citizens, the same boon was granted to the inhabitauts of Gallin Cispalanm, whife the Transpadani appear to bave been at the sume time raised to the condition and privileges of Latins, that is to say, were placed on the same footing as if all their towns had been Latin colonies. (Ascon, in Pison. p. 3, ed. Orell. ; Savigny, l'ermischte Schriften, vol. iii. pp. 290-308 ; Marçuardt. Handb. vol. iii. pt. i. p. 48.) This peculiar arrangement, by which the Jus Latii was revived at the very time that it became naturally extinct in the rest of Italy, is more fully explained under Gallia Cisalpina. In n. c. 49 , after the outbreak of the Cixil War, Caesar bestowed the full franchise upon the Transpadaoi also (Dion Cnss, xli. 36 ); and from this time all the free inhabitants of ltaly became united ander one common class as citizens of lome.

The ltalians thus admitted to the franchise were all ultimately enrolled in the thirty-five Roman tribes. The principle on which this was done we know not ; but we learn that each municipium, and sometimes even a larger distriet. was assigned to a particular tribe: so that cvery citizen of Arpinum, for instance, would belong to the Cornelian tribe, of Bencerentum to the Stellatine, of Brixia to the Fatbian, of Ticinum to the Papian, and so on.* But in so doing, all regard to that geographical distrihution of the tribes which was undoubtedly kept in view in their first institution was necessarily lost ; and we have not sufficient materials for attempting to determine how the distribution was made. A knowledge of it mast, bowever, have been of essential importance so lung as the Eepublic continued ; and

* This did not, however, interfere with the personal right, where this previously existed, so that at Ruman citizen alrealy belonging to another tribe, who settled himself in any mumicipium, retained his own tribe.
in this sense we find Cicero allnding to "Italia tributim descripta " as a matter of interest to the candidates for public offices. (Q. Cic. de Petit. Cons. 8.)

3. Italy under the Roman Empire.-No material change was introduced into the political condition of Italy by the establishment of the imperial autbority at loure; the constitation and regulations that $\in \mathbf{x}$ isted before the end of the Republic continued, with ouly a few modifications, in full force. The most important of tbese was the system of municipal organisation, which perraded every fart of the country, and which was directly derived from the days of Italian freedom, when every town had really possessed an independent government. Italy, as it existed under the Romans, may be still regarded as an aggregate of individual communities, though these had lost all pretensions to national independence, and retained ooly their separate municipal existence. Every municipium had its own internal organisation, presenting very nearly a miniature copy of that of the Poman republic. It had its seoate or conncil, the nembers of which were called Decuriones, and the council itself Ordo Decurionam, or often simply Ordo ; its popular assemblies, which, however, soun fell into disuse under the Empire; and its local magistrates, of whon the principal were the Duumviri, or sometimes Quatuorviri, answeriog to the Foman consuls and praetors: the Quioquemales, with functions analogous to those of the censors; the Acdiles and Quaestors, whose duties nearly corresponded with those of the same nugistrates at Rome. These different magistrates were annually elected, at first by the popular assembly, subsequently by the Senate or Decurions : the members of the latter body held their offices for life. Nor was this municipal guverument coufined to the town in which it was resident : every such Muoicipium possessed a territory or Ager, of which it was as it were the capital, and over which it exercised the same municipal juisdiction as within its own walls. This district of course varied much in extent, but in many instances comprised a very considerable territory, including many smaller towns and villages, all which were dependent, for municipal purposes, upon the central and chief town. Thus we are told by Pliny, that niany of the tribes that inhabited the Alpine valleys bordering on the plains of Gallia Cisalpina, were by the Lex Pompeia ussigned to certain neighbouring manicipia (Lege Pompeia attributi municipiis, Plin. iii. 20. s. 24), that is to say, they were included in their territory, and subjected to their jurisdiction. Ayain, we know that the territories of Cremona and Mlantua adjoined one another, though the cuties were at a considerable distance. - In like manner, the territory of Beneveotum comprised a large part of the land of the Hirpini. It is this point which gives a great importance to the distinction hetween municipal towns and those which were not so ; that the former were not only themselves more important places, but were, in fact, the capitals of districts, into which the whole country was divided. The villages and minor towns included within these districts were distingnished by the terms "fura, conciliabula, vici, castella," and were dependent upon the chief town, though sometimes pusessing a subordinate and imperfect local organisation of their own. In some cases it even happened that, from local circumstances, one of these subordinate places would rise to a condition of wealth and prosperity far surpassing those of the municipiun, on which it nevertheless continucd dependent. Thus,
the opulent watering-place of Baiae always remained, in a municipal sease, a mere dependency of Cumae

The distinction between coloniae and municipia, which had been of great importance under the Roman republic, lost its real sigoificance, when the citizens of both alike possessed the Roman franchise. But the title of colonia was still retained by those towns which had received fresh colonies towards the close of the liepublic under Caesar or the Triunvirate, as well as under the Empire. It appears to have been regarded as an honorary distinction, and as giving a special claim upun the favour and protection of the founder and bis desceadants; though it conferred no real pulitical superiority. (Gell. xvi. 13.) On the other hand, the Praefecturae-a name also derived from the early republican periodwere distinguished from the colonies and municipia by the circuinstance that the juridical functions were there exercised by a Praefectus, an officer sent direct from Rome, instead of by the Duumviri or Quatuorriri (whose legal title was IIviri or IIIfini Juri dicundo) elected by the municipality. But as these distinctions were comparatively unimportant, the name of " municipia" is not unfrequently applied in a greaeric sense, so as to include all tuwns which had a local self-government. "Oppida" is sometimes employed with the saone meaning. Iliny, however, generally uses "oppida" as equiralent to "municipia," but exclusive of colonies : thus, in describing the eighth region, he says, "Coluniae Bunonia, Brixillunn, Mutina, etc. . . . Oppida Caesena, Claterna, Forum Clodi, etc." (iii. 15. s. 20, et pasim). It is impontaot to observe that, in all such passages, the list of "oppida " is certainly meant to include coly municipal towns ; and the lists thus given by l'liny, though distigured by corruption and carelessness, were probably in the first instance derived from official sources. Hence the marked ayreement which may be traced between them and the lists given in the Liber Coloniaram, which, notwithstanding the corruptions it has suffered, is onquestionably based upon good materials. (Concerning the manicipal institutions of Italy, see Sarigny, Vermischte Schrifien, vol. iii. p11. 279-412, and Gesch. des Rom. Rechts, vol. i. ; Marquardt, Handb. d. Röm. Alterthümer, vol. iii. jt i. pp. 44-55; Hoeck, Röm. Geschichte, book 5, chap. 3; and the article Gallia Cisalfina.)

The muoicipal organisation of Italy, and the territorial distribution connected with it, lasted lhroughont the loman ermpire, though there was always a strong tendency on the $ן$ art of the central authority and its officers to encroach upon the manicipal powers : and in one impurtant point, that of their legal jurisdiction, those fowers were materially circuonscribed. But the municipal constitntion itself naturally acquired increased importance as the central power became feeble and disorganised : it survived the fall of the W'estern Empire, and contimed to subsist under the Gothic aod Lombard conquerors, until the cities of ltaly gradually assumed a pusition of independence, and tbe municipal constivations which had existed under the Roman empire, became the foundation of the free republics of the middle ages. (Savigny, Gesch. des Kömischen Rechts ins Mittel Alter, vol. i.)

The coclesiastical arransements introduced after the estabiishnent of Christianity in the Roman empire, appear to have stwo, in cluse comection with the municipal limits. Alnost every town which was then a fluorishing mnnicipium became the see of a
bishop, and the limits of the diocese in general cotincided witis those of the municipal territory.* But in the period of dectay and confusion that fillowed, the episcopal see often remained after the city had been ruined or fallen ioto complete decay: hence the ecclesiastical records of the early ages of Christianity are often of material assistance in enabling us to trace the existence of ancient cities, and identify ancient localitics.
4. Political and Administrative Division under the Roman Empire - It is not till the reign of Augustus that any division of Italy for administrative phrposes occurs, and the reason is ohvious. So long as the different nations of taly preserved the seroblanee of independence, which they maintained till the poriod of the Social War, no uniform system of udministration was possible. Even after that period, when they were all merged in the condition of laman citizens, the municipal institutions, which were still in full force, appar to lave luen regarded as sufficient for all purposes of intormal management; and the general objects of the State were confided to the ordinary homan magistrates, or to extraordinary officers appointed for particular purposes.

The first division of Italy into eleven regions by Aligustus, appears to have been designed in the first instance merely to facilitate the arraogements of the census; but, as the taking of this was closely (-upled with the levging of taxes, the same divisions were soon alopted for financial and other administrative purposes, and continued to be the havis of all subseqnent arrangements. The divisions established by Augustus, and which have fortunately licen preserved to us by Pliny (the ouly author who mentions their in titutim), were as follows: -

1. The First Region comprised Latium (in the more extended schse of that name, incluling the land of the Hernicans and Volscians), together with Campania, and the district of the Picentini. It thus extended from the mouth of the Tiber to that of the Silarus ; and the Anio formed its buundary on the N .
2. The second lecgion, which adjoined the precetiae on the ski, inclutest Apulia, Calabria, and the Jand of the Hirpini, which was thus separated from the rest of Sammum.
III. The Third kinkin enntained Iucania and Bontionn: it was boundel by the silarus on the NIT: and by the Bralauns on the XE.

15: The Fourth legoun containel all Samnium, except the Mirpini, together with the Frentani, Marrucini, Masi, Peligui, Aequiculi, Vestini, and sahiri. It thas extended from the Anio to the frontiors of licenum, and from the boundary of Umbria on the N. to Apalia on the s. It was sepavated from the litter district by the river Tifernus, thid frem l'icenum by the Aternus.
$\because$ The Fitth Region was compnsed solely of the ancient licernm (including under that name the territery of Madria and of the Praetutii), and extended along the Alriatic from the mouth of the Aternus to tinat of the Aevis.

* A glince at the list of bislopprics existine in tuy of the proninces of Contral ltaly (Etruria, for instanes, or Umbria), as connparel with the names of the trinns enumerated by Pliny in the same district, will at once show the comection letweon the two. (Bingham's Eeclesiastical Antiquitics, havis. chap. v.
VI. The Sixth Region contained Umbria, to gether with the land N . of the Apennines, once occupied by the Senonian Gauls, and which extended along the coast of the Adriatic from the Aesis to the Ariminus. On the W. it was separated from Etruria by the Tiher, along the left bank of which it extended as far as Ocriculum.
VII. The Seventh Region consisted of the ancient Etruia, and preserved the ancient limits of that country: viz. the Tiber on the E., the Apennines on the N. , and the Tyrrhenian sea on the W ., from the mouth of the Tiber to that of the Maera.

V1IL. The Eirchth Re_ion, or G:allia Cispadana, extended from the frontiers of Ligmria near Placentia, to Ariminum on the Adriatic, and was bounded by the Apeanines on the S, and by the Padus on the N .

1X. The Ninth Region comprised Liguria, extending along the sea-coast from the Macra to the Yarus, and inland as far as the Padus, which formed its northem boundary from the confluence of the Trehia to its sources in MIt. Vesulas.
X. The Tenth Region was composed of Venetin, includios the land of the Carni, with the adidition of Istria, and a part of Gallid Cisalpina, previonsly occupied by the Cenomani, extending as far W. as the Addua.

X1. The Eleventh Region comprised the remainder of Gallia Transpadana, or the whale tract between the Alps and the P'alus, from the sources of the latter river to its confluence with the Addua.

It is probable, both from the silence of Plins, and from the limited scope with which these divisions were first instituted, that the regions had originally no distinctive names applied to them : but these would be gradually adopted, as the division aequired inereased political importance. No difficulty conld alise, where the limits of the legim coincided (or nemly so) with those of a previously existing people, as in the cases of Etruria, Liguria, Picenum, \&e. In other instances the name of a part was given to the whole: thus, the first regiun came to be called Regio Campaniae; and hence, in the Liber Coloniarum, the "Civitates Campranize" include all Latimm also. [Campania.] The name of Regio Samnii or Samnium was in like manmer given to the fourth region, though perhaps not till after the northern part of it had been separated from the rest under the name of Valeria.

The division introduced by Augnstus continnet with but little alteration till the time of Contstautine. The changes intruduced by Halrian :and 31. Aurelius regarded only the administration of justive in Italy generally (Spartim. Hadr. 22 ; Capit. M. Aut. 11); hat in this, as well as in various other regulations, there wats a marked approseh to the assimilating the govermment of Italy to that of the provinecs; and the term "Commlaris," applied to the judicial officers appointel I $y$ Habrian snerely to denote their dignity, noon canat to be used as an official designation for the governom of a district, as we find it in the Nutitia. But the distinction between 1taly and the provinces is still strongly marked by Ulpian, and it was not till thas fourth century that the term "Provincia" can o to be appled to the regions or districts of Italy (Mummsen, ad Lib. Col. pp. 193, 194.)

The changes introduced into the divisions of Augustus, cither bef re the tium of Constantine of un ler that emprom, were the follwing: - 1 . The fourth resiun was devided into tho, the southern
portion containing Samnium (to which the land of the Ilirpini, included by Angustus in the second renion, was reunited), together with the Frentani and Peligni; while the land of the Subines, the Marsi, and the Viestini, constituted a separate district, which bure the name of Valeria, from the great higbway, the Via Valeria, by which it was traversed. 2. The fortion of the sixth region which lay between the Apemnines and the Adriatic (originally inhabited by the Ganls) was separated from Umbria properly so called, and distinguisbed by the nanse of Hicenum Aunonarium, while the true Picenum was called, for the sake of distinction, Picenum Suburbicarium. 3. The eighth region, or Gallia Cispadana, was divided into two, of which the westernmost portion assumed the name of Aemilia, from the highroad of that name; an appellation which seems to have come into common nse as early as the time of Nartial (iii. 4, vi. 85): while the eastern portion, mach the smaller of the two, received that of Fiaminia, though the highroad of that name only extended to Ariminum, on the very frontier of this district. This new division seems to have been generally united with Picenum Annonarium, though retaining its separate name. 4. The Alpes Cottiae, a mountain district which in the time of Augnstus had still relained its nominal independence, though incorporated with the Roman empire by Nero, seems to have continned to form a spparate district till the time of Constantine, who united it with the ninth reginn, the whale of which now came to be known as the Alpes Cottiae: while, still more strangely, the name of Liguria was transferred from this region, to which it properly belonged, to the eleventh region, or Gallia Transpadana; so that late writers speak of Mediolanum as the capital of Liguria. [higuna.] 5. The only other change that requires notice was the division of Etruria into two portions, called Tuscia Annonaria and Tuscia Crbicaric. This, as well as the similar distinction between the two Picenums, had its origin in the administrative arrangements introduced by Maximian, who, when he established the imperial residence at Milan, imposed apon the northern and adjoining provinces the task of finding supplies (annonae) for the imperial conrt and followers, while the other portions of Italy were charged with similar burdens for the supply of Rome. (Mommsen, ad Lib. Col. pp. 198-200.) Hence Trebellius Pollio, writing in the reign of Diocletian, after enumerating the districts of Southern and Central Italy, comprises all that lay N. of Flaninia and Etruria under the general appellation of "omnis annonaria regio." (Treb. Poll. Trig. Tyr. 24.)

In addition to these changes, Constantine, in the general reorganisation of his empire, united to Italy the two provinces of Rhaetia (including Vindelicia), as well as the three great islands of Sicily, Sardinia, and Corsica. These last, together with all the central and southern provinces of Italy, were placed under the jurisdiction of the Vicarius Urbis Rurne, while all the northern provinces were subjeet to the Vicarius 1taliae. The minor arrangements seem to have frequently varied in detail, but the seventeen provinces into which the "Dioecesis Italiae " was now divided, are thus ennmerated in the Notitia Dignitatum (ii. pp. 9, 10): -

1. Venetia.
2. Aemilia.
3. Liguria (i.e. Gallia Transpadana).
4. Flaminia et Picenum Annonarium.
5. Tuscia et Umbria.
6. Picenum Suburbicarium.
7. Campania.
8. Sicilin.
9. Apulia et Calabria.
10. Lueania et Bruttii.
11. Alpes Cottiae (Liguria).
12. Pietia Prima.
13. Raetia Secunda.
14. Samnium.
15. Valeria.
16. Sardinia.
17. Corsica.

This list substantially agrees with that in the Libellus Provinciarum (published by Gronovius, Lugd. Bat. 1739), a document of the time of Theodosius I., as well as with that given by Paulus Diaconus in his geographical description of Italy (Hist. Lang. ii. 14-22), though he has added an eighteenth province, to which be gives the name of "Alpes Apennini ;" which can be no other than the northern part of Etruria, or Tuscia Annonaria, Of the seventeen prorinces enumerated in the Notitia eight were placed under governors who bore the title of Consulares, seven under Praesides, and the two southernmost under Correctores, a title which appears to have been at one time common to them all.
(For further details on the administrative divisions of Italy during the latter period of the Roman empire, see the Notitia Dignitatum in Partibus Occidentis, Bonn, 1840 , with Bücking's valuable commentary; Mommsen, uber die Lib. Colon. in the Schriften der Römischen Feldmesser, vol. ii. Berlin, 1852; Marquardt, Handb. der Rön. Alterthümer, vol. iii. pt. i. pp. 55-71.)

The divisions thns established before the close of the Western Empire, were continued after its fall mnder the Gothic monarchy, and we find them frequently alloded to as subsisting under their old names in Cassiodorus and Procopins. It was not till the establishment of the Lombards in Italy that this division gave place to one wholly different, which became the foundation of that which subsisted in the middle ages. The Lombards divided the part of Italy in which they established their power, including all the N., or what is now called Lombardy, together with a part of Tuscany and Umbria, into a number of military fiefs or governments, under the name of Duchies (Ducatus): the Duchy of Friuli, Duchy of Ierona, Duchy of Pavia, \&c. Besides those immediately subject to the Lombard kings, tro of these were established further to the $\mathrm{S} .$, - the Duchy of Spoleto and Duchy of Benevento, which enjoyed a semi-independent position : and the last of these was extended by successive conquests frum the Greek Empire, tili it comprised almost the whole of the S. of Italy, or the modern kingdom of Naples. The Greek emperors, however, still retained possession of the Exarchate of Ravenna, together with the district called the Pentapolis, comprising a considerable part of Picenum, and what was called the Duchy of Rome, including a part of Etruria and Unibria, as well as Latium. In the S. also they always kept possession of some of the maritime places of Campania, Naples, Gaita, and Salerno, as well as of a part of Calubria, and the cities of Otranto and Gallipoli. After the fall of the Lombard kingdom, in A.D. $7=4$, thongb they had now lost their possessions in the N., the Exarchate and the Pentapolis, the Byzantine emrercrs
 wherable part of the S., and wrestel from the 4 bly of Benevento the districts to which they save the names of the Copitanatr and the Basil cala (a part of the ancient Apnlia and Lucamia), and of which the? retained poseosion till the 11th century. It wit then that a new encmy first appared on the sceme: and the Nurmans, under Robert Guiscard, completed the final expulsion of the Greek enperons from Italy. The eap ture of Bari in 1071, and of Salurno in 1077. dextroyed the last restiges of the dominion that had been foundel iov the generals of Jastinian. (D'Anville, F'tats formis en Europe apres la Chute de lEimpire Romain, 4to. Paris, 1771.)

## VI. Populition of Italy under the Romans.

The statements transmitted to us from antiquity concerning the amount of the population in differeat cities and countries are for the most part of so vague a character and such uncertain authonty as to be little worthy of consideration; but we bave two facts recorded in connection with that of ltaly, Which tmay lead us to form at least an approximate estimate of its numbers. The first of these data is the statement given by Polybius, as well as by scyeral loman writers on the authority of Fabius, and which there is every reason to believe based on authentic documents, of the total amount of the foreen which the Romans and their allies were able to oppose to the threatened invasion of the Gauls in 15. c. 225. According to the detailed enumeration given by Polybins, the total number of men capable of bearing arms which appeared on the registers of the R-mans at ] their allies, amounted to above 700,000 foot anl 70,000 horsemen. Pliny gives then at 700,000 finot and 80,000 horse ; while Eutropius and Orosius state the whole amount in round numbers at 800,000 . (Pol, ii. 24; Plin. iii. 20. 5. 24 ; Eutrop. iii. 5 ; Oros. iv. 13.) It is crident, from the 1 recise statements of Polybius, that this was the tutal amonnt of the free population of
 $\ddot{\sigma} \pi \lambda \alpha \beta \quad \beta a \sigma T \alpha \delta_{6}(\nu)$, aml not that which could be actually brought into the feld. If we estimate the proportion of these to the total free population as 1 til 4, which apprars to have been the ratio currently adonted in ancient times, we should obtain a tutat of 32000.000 for the free pupulation of the Italian peninsula, exclusive of the greater part of (isalpine Gaul, and the whole of Liguria*: and even if we alupt the proportion of 1 to 5 , more comenomily recefved in monlern times, this would still -ive a total of only $4,000,000$, at amount by no bustus very larer, is the popalation of the same fart- if latly at the preent day comiderably exand 9,000, 1000 . (Serristuri, Statistici diltalia.) Of the amont of the servile p"pmlation we have no mems of fortuing an estimate: but it was prothatly in large at this jeriod of the Roman history; at I its whompent rapil increase was contomporamons with the dimi uition of the free pepplation. The cemplaints of the extent to which this hat

* Ihe Cenonari ant Vencti were atnong the . ${ }^{\text {Hites }}$ who sent assistance to the Romans on this ocoasi on, but their actual contingent of 20,000 men is all that is inchuded in the estimate of l'olybius. liory dil not, like the Italian all ies, and doubtless wuld not, send registers of their total available rtoources.
take: ; ince as early as the time of the Granifh, ath therir lamentations nver the depopulation of It.ly (l'hut. T. Gracch. 8), would lead us to suppose that the number of free eitizens had greatly fallen off. If this was the case in B. ©. 133, the events of the next half century - the sanmuinary struggle of the Social War, which swept off, according to Vellesins Paterculus (ii. 15), more that 300,000 men in the virour of their age, and the cracl devastation of Sumnium and Etruria ly Sulia-were certainly not calculated to repair the deficiency. But, notwithstanding this, we find that tho census of s. c. 70 , which included all the new citizens recently anlmitted to the Roman franchise, and did nut yet comprise any population ont of Italy, nor even the Transpadane Gauls, gave a result of 910.000 Koman citizens (capita civium); from which we nay fairly infer a free prpulation of at leat 4.50n.000. (Liv. E'pit. xcviii. ed. Jahn, compared with Phle, on, ap. Phut. Bibl. p. S4. ed. Bekker.) The rapid estension of a Roman population in Callia Ci-pulama, as well as Venetia and Liguria, had evidently mure than compensated for the diminution in the centra! provinces of the peninsula.

Of the populousness of Italy under the Empirc, we have no data on which to found an estimate. But there are certainly no reasons to suppose that it ever exceeded the amount which it had attained under the Republic. Complaints of its depopulation, of the decay of flowrisbing towns, and the desolation of whole districts, are frequent in the writers of the Augnstan age and the first century of the Cluristian era. We are told that Caenar in n. c. 46, already fiund a dreadful diminution of the
 $2 \mathbf{2 5}$ ) ; and the period of the Triumvirate must have tendenl greatly to asaravate the evil. Augnstus seems to have used every means to recruit thee exlausted population: but that his efforts were but partially sucecosful is evident from the picture which Strabo (writing in the reign of Tiberins) gives us of the state of decay and desolation to which the once prpalous provinces of Sumnium, Apulia, and Lucania, were in his day reduced; while Livy confirms liis statement, in regard even to d'stricts nearer Rome, such as the land of the Aeprians and Vol.cians. (Strab, V. P. 249, vi. Pp. 253 , 251 ; Lir. vi. 12.) Plins, writing under Ve:pasian, speaks of the "latifundia" as having been "t ie ruin of Italy;" and there seems no reasun to suppree that this evil was afterwards checked in any material degree. The splendour of many of the imunicifal towns, and especially the magnificent public buldings with which they were adornel, is apt to corsey a notion of wealth and opalence which it semos hand to combine with that of a declining pey ulation. B t it imst be remembered that thene great wurk wote in many, probably in most instances, erected the the munifience eithor of the emperors or of trivate $\mathrm{j}^{2}$ dividuals ; and the vast wealth of a few nobles was so far from being the sign of general prosjerity, that it was looked upom as one of the main causes of de ay. Many of the towns and cities of 1taly were, however, $n 0$ doubt very fluorishing and prpulous: but numerons testimonies of ancient writers seem to prove that this was fir from being the case with the country at large ; and it is certain that no ancient anthor lends any countenance to the nution entertained by some modern writers, of "the incredible multitudes of people with whi h Italy ahounded during the reigns of the Ruman emperors" (Ad-
dison, Remarks on Italy). (See this question fully discussed and investigated by Zumpt, über den Stand der Bevölkerung im Alterthum. 4to. Berlin, 1841.)

Gallia Cisalpina, including Venctia and the part of Liguria N. of the Apennines, seems to have been by far the most flourishing aad populous part of ltaly under the Roman empire. Its extraordinary natural resources had been brought into cultivation at a comparatively late period, and were still unexhausted: nor bad it suffered so mnch from the civil wars which had given a fatal blow to the prosperity of the rest of Italy. It would appear also to have been comparatively free from the system of cuitivation by slave labour which had proved so ruinons to the more southern regions. The younger Pliny, indeed, mentions that hisestate near Comum, and all those in its neighbourhood, were cultivated wholly by free labourers. (Plin. Ep. iii. 19.) In the latter ages of the Empire, also, the establishment of the imperial court at Mediolanum (which continued from the time of Maximian to that of Honorius) must have given a fresh stimulus to the prosperity of this favoured region. But when the Empire was no longer able to guard toe barrier of the Alps ayainst the irruptions of barbarians, it was on Northern Italy that the first brunt of their devastations naturally fell; and the numerous and opulent cities in the plains of the Padns were plundered in succession by the Goths, the Huns, and the Lombards.

## Vil. Authorities.

Considering the celebrity of Italy, and the importance which it enjoyed, not ozly under the Romans but during the middle ages, and the facility of access which has rendered it so favourite a resort of travellers in modern times, it seems strange that our knowledge of its ancient geography should be still very imperfect. Yet it cannot be denied that this is the casc. The first disadvantage under which we labour is, that our ancient authorities themselves are far from being as copions or satisfactory as might be expected. The account given by Strabo, though marked by much of his nsual good sense and judgment, is by no means sufficiently ample or detailed to meet all our requirements. He liad also comparatively little interest in, und was probably himself but imperfectly acquainted with, the early bistory of Rome, and therefore did not care to notice, or inquire after, places which had figured in that history, but were in bis time sunk into decay or oblivion. Mela dismisses the geugraphy of Italy very hastily, as being too well known to require a detailed description (ii. 4. § 1): while Iliny, on the contrary, apologises for passing but lightly over so important and interesting a subject, on account of the impossibility of doing it justice (iii. 5. s. 6). His enumeration of the different regions and the towns they contained is nevertheless of the greatest ralue, and in all probability based upon authentic materials. But be almost wholly neglects the physical geography, and enumerates the ialand towns of each district in alphabetical order, so that his mention of them gives us no assistance in determining their position. Ptolemy's lists of names are far less authentic and trustworthy than those of Pliny; and the positions which be professes to give are often but little to be depended on. The Itineraries afford valuable assistance, and perhaps there is no country for which they are more useful
and trustrorthy guides; but they fail ns exactly where we are the most in want of assistance,-in the more remote and unfrequented parts of Italy, or those districts which in the latter ages of the Empire had fallen into a state of decay and desolation. One of the most important aids to the determination of ancient localities is unquestionably the preservation of the ancient names, which have often been transmitted almost without change to the present day; and even where the name is now altered, we are often enabled by ecclesiastical records to trace the ancient appellation dowa to the middle ages, and prove both the fact and the origin of its alteration. In numerous instances (such as Aletium, Sipontum, \&c.) an ancient church alone records the existence and preserves the name of the decayed city. But two circumstances must gnard us against toe hasty an inference from the mere evidence of name: the one, that it not uofrequently happened, during the disturled periods of the middle azes, that the inhabitants of an ancient town would migrate to another site, whether for security or other reasons, and transfer their old name to their new abode. Instances of this will be fonnd in the cases of Abellinut, Aufidesia, \&c, aod the most remarkable of all in that of CAPCA. Another soarce of occasional error is that the present appellations of localities are sometimes derived from erroneons traditions of the middle ages, or even from the misapplication of ancient names by local writers on the first revival of learning.

Oae of the most important and trustworthy auxiliaries in the determination of ancient names and localities, that of inscriptions, unfortunately requires, in the ca-e of ltaly, to be received with mach care and caution. The perverted ingenuity or misguided patriotism of many of the earlier Italian antiquarians frequently led them either to fabricate or interpolate such docmments, and this with so much skill and show of learning, that many such fictitions or apocryphal inscriptions have found their way into the collections of Gruter, Muratori, and Orelli, and lave been cited in succession by numerous modern writers. Mommsen bas conferred a great service upon the student of Italian antiquities by subjecting all the recorded inscriptions belonging to the kingdom of Naples to a searching critical inquiry, and discarding from his valuable collection (Inscriptiones Regni Neapolitani Latinae, fol, Lips. 1852) all those of dubious authenticity. It is much to be desired that the same task may be undertaken for those of the rest of Italy.

The comparative geography of ancient and modern Italy had more or less engaged the attention of scholars from the first revival of learning. But of the general works on the subject, those before the time of Cluverius may be regarded more as objects of curiosity than as of much real use to the student. Biondo Flavio (Blondus Flavius) is the earliest writer who bas left us a complete and connected view of Italian topography, in his Italia Illustrata (first poblished in 1474 , afterwards with his other works at Basle, in 1531 and 1559): after him came Leandro Alberti, whose Descrizione di tutta Italia (Venice, 1551) contains some valuable notices. But the great work of Cluverins (Italia Antiqua, 2 vols. fol. Logd. Bat, 1624) altogether superseded those whicb had preceded him, and became the foundation of all subsequent inquiries. Cluverius has not only brought together, with the most praiseworthy diligence, all the passages of
ancient auluors bearing upon his sulject, but he had binself travelled over a great part of ltaly, noting the distances and observing the remains of ancient towns. It is to be regretted that he has not left us more detailed accounts of these remains of antiquity, which have in many cases since disappeared, or have not been visited by any more recent traveller. Lucas Helstenius, the contemporary and friend of Cluver, who had also visited in person nany of the more unfrequented districts of Italy, has left as, in his notes on Cluverius (Adnotationes al. Cluverii Italiam Antiquom, 8 vo. Romae, 1666), a valuable supplement to the larger work, as well as many inportant corrections on particular points.

It is singular how little we uwe to the researches of modern travellers in Italy. Not a single book of travels has ever appeared on that country which can be compared with those of Icake or Tholwell in Grrece. Sivinburne's Travels in the Tiro Sicilies is one of the best, and greatly superior to the more recent works of Keppel Craven on the same part of Italy (Tour through the Southern Prorinces of the Kinghlom of Naples, 4 to. Lond. 1821; Excursions in the Abruzi and Vorthern I'rocinces of Nuples, 2 vols. 8vo. Lrud. 1838). Eustace's well-known book (Clussical Tour through Italy in 1802) is almost wholly worthless in an antiquarian point of view. Sir R. Hoare's Classical Tour, intended as a sort of supplement to the preceding, contains some valuable notes from personal observation. Dennis's recent work on Etriuria (Cities and Cemeteries of the Etruscans, 2 vols. 8 vo. Lond. 1848) contains a far more complete account of the antiquities and topography of that interesting district than we possess concerning any other part of ltaly. Sir W. Gells Topagraplyy of Rome and its Vicinity (2 vols. 8 vo. Loud. 1834 ; 2nd edit. 1 vol. $1846^{*}$ ), taken in comjunction with the nore claborate work of Nibby on the same district (Anulisi della Carta dei Dintorni di Roma, 3 vols. 8 vo. Rimme, 1849), supjlius much raluable information, especially what is detived from the personal rescarches of the author, hont is far from fulfilling all that we require. The wuk uf Westphal on the rame subject (Die Römische Kanipugne, ito. Berlin, 1829) is still more imperfect, thung valuable for the care which the author bestowed on tracing out the direction and remains of tho ancient roads throm,hont the district in question. Abcken's Nitthl Italien (Evo. Stuttgart, 1843) contains a good sketcle of the physical geograply of Central Italy, amel mach information concernime the antignities of the different nations that inhabited it: but cuters very little intor the topoapaply of the rugiuns he describes. The publications of the In-Lituto Archeolugico at liome (first conmencel in 1829 , aml contitued down to the frewent time), thongh directed more to archaeoh.esal tham tumeraphaial researches, still contain thay valuable monomirs in illustration of the topoWhtily of certain districte, tis well as the still exwang remains in atrefat localities.

The lural works and listoriss of partichlar disfricts atul cities in Italy are immmerable. But very fow of them will hor foum to be of any real service to the stadent of ancent geograply. The earlier works of this deacription are with few exceptions charateriocd by very imperfeet seholarship, an almost total want of criticism, and a blind cre-

* It is this edition which is always referred to in the preseat work.
fluliy, or still blinder partinlity to the native city as in ih particular nuthor. Even on those points in whul their testimony would appear must likely th be waluable,-such as notices of ruins, inseripuions, and other remains of antiquity, -it mast too often be received with caution, if not with shspicion. A striking exception to this general remark will be found in the treatise of Galateo, De Situ Inpygiae (8vo. Basel, 1551 ; republished by Graevius in the Thesaurus Antiquitatum Italiae, vol, ix. part v.) : those of Barrio on Calabria (the modern province of the name) and Antonini on Lneania (Barrius, de Antiquitate et Situ Calabriae, fol. Ronnac, 1737; Automini, La Lucanin, 4to. Naples, 1741), thon'l not without their merit, are of far inferior valne. The results of these local researches, and the conclusions of their authors, will be for the most part found, in a condensed form, in the work of the Abate Romanelli (Antica Topogrufut 1storica del Regno di Napoli, 3 vols, 4 to. Naples, 1815 ), which, notwithstanding the defects of imperfect scholarship and great want of critical sagacity, will still be found of the greatest scrvice to the student for the part of Italy to which it relates. Cramer, in his well-known work, bas almost implicitly followed Romanelli, as far as the latter extends; as for tho rest of Italy be has done little more than abridge the work of Cluverius, with the corrections of his commentator Holstenius. Mannert, on the contrary, appears to have composed his Geographie ront Italien without consulting any of the local writers at all, and consequently without that detailed acquaintance with the actual gengraplyy of the country which is the indispensable foundation of all inquiries intoits ancient topography. Refichard's work, which appears to enjoy some reputation in Germany, is liable in a still greater degree to the same charge:* while that of Forbiger is a valuable index of references both to ancient and modern writers, but aspires to little more. Kraner's monograplyy of the Lake Fucinus (Der Fuciner See, 4to. Beriin, 1839) may be mentioned as a perfect model of its kind, and stands umrivallel as a cuntribution to the geography of Italy. Niebuhr's Lectures on the Gengrapby of Italy (in his Vortrige ïber Alte İïnder u. Iolker-kunde, pp. 318-576) contan many valuable and important views, especially of the jhysical gengraphy in its connection with the listory of the inlabitants, and should be read by every student of antiqnity, thourh by $n o$ means free from errors of detail. [E. H. B.]

ITALICA (Itá入ıka, Strab. iii. p. 141 ; Itol. ii. 4. § 13; '1raरuк力, Appian, Ilisp. 38; Steph. B. s. v.), a Ioman city, in the comntry of the Turdetani, in Hispania Baetica, on the right bank of the Baetis, opposite Hispalis (Scrille), from whieh it was distant only $6 \mathrm{M} . \mathrm{P}$. to the NII. (Itin. Ant. p. 413 , comp. p. 432.) It wals founded by seipio Africanus, on the site of the old Iberian town of Sancios, in the Second Punic War (b. c. 207), and poopled with his disabled reterans; whence its mame, "the Italian city." It had the rank of a municipium : it is mentioned more than once in the bistory of the Civil Wars : and it was the native place of the emperors Trajan. Hadrian, and Theodosius tive Great, and. as smme say, of the poet Silius Italicus. (See Dict. of Gireeki and Rom. Biog. s.v.)

* Some severe, but well merited, strictures on this work are contained in Niebubr's Lectures ons Routhn Ilistrry (vol. iii. p. xciv. 2 d edit.).

Its coins，all of the imperial age，bear military embleus which attest the story of its origin，and on some of them is the title julia augusta．The city flourished under the Goths，and，for some time， under the Moors，who preserved the old name，in the form Talika or Talca；but，in consequence of a change in the bed of the river，its inhabitants aban－ doned it，and migrated to Seville．Heuce，in con－ tradistinction to the city which（although far more ancjent，see Hispalis）became thns its virtual successor，Italica received the name of Old Seville （Sevilla la V＂ija），under which name its ruins still exist near the wretched village of Santi Ponce，while the surrounding country retains the ancient name， los campos de Talca．The chief object in the ruins is the amphitheatre，which was in good preservation till 1774，＂when it was nsed by the corporation of Seville for river dikes，and for making the road to Badajoz．＂（Ford．）Mr．Ford also states，that＂on Dec．12，1799，a fine mosaic parement was dis－ covered，which a poor monk，named Juse Moscaso， to his honour，enclosed with a wall，in order to save it from the usual fate in Spain．Didot，in 1802， published for Laborde a splendid folio，with en－ gravings and description．．．．．Now，this work is all that remains，for the soldiers of Soult converted the enclosure into a goat－pen．＂The only other portion of the ruins of Italica to be seen above－ ground consists of some vaulted brick tanks，called Ja Casa de los Baños，which were the reservoirs of the aquednet brought by Adrian from $T_{\text {ejaula，}} 7$ leagues distant．（Caes．B．C．ii．20；Bell．Alex． 53 ； Giell．Noct．Att．xv． 13 ；Oros．v．23；Geog．Rav．； Florez，Esp．S．vol．גii．pp．227，foll．；Coins，ap． Florez，Med，de Esp．vol，if．p． $47 \%$ ；Mlionnet，vol．i． p．17，Suppl．vol．i．p．31；Sestini，p．61：Eckhel， vol．i．p． 23 ：Ukert，vol．ii．pt．1．p．372；Ford， Handluok of Spain，pp．63，64．）

I＇THACA（＇İák ：Eth．＇1Qamí；ios and＇IQastós： Ithacensis and Ithacus：Thicukz，Өiákn，vulgarly； but this is merely an alteration，by a simple meta－ thesis of the two first letters，from＇IOdk known to be the correct orthograpliy by the Ithacans themselves，and is the name used by all educated Greeks．Leake，Jorthern Greece，chap．xxii．）This island，so celebrated as the scene of a large portion of the Homeric poems，lies off the coast of $A$ car－ nania，and is separated from Cephallenia by a channel about 3 or 4 miles wide．Its name is said by Eustathius（ cd Il ．ii．632）to have been derived from the eponymous hero Jthacus，mentioned in Or ． xviii．207．Strabo（x．2）reckorts the circumfe－ rence of Ithaca at only 80 stadia：but this measure－ ment is very short of the truth；its extreme length from north to south being about 17 miles，its great－ est breadth about 4 miles，and its area nearly 45 sq ． niles．The island may be described as a ridge of limestone rock，divided by the deep and wide Gulf of Molo into two nearly equal parts，connected by a narrow isthmus not more than balf－a－mile across，and on which stands the Paleocastro of ${ }^{*}$ Ac̈tus（＇Actós），traditionally known as the＂Castle of Ulysses．＂Ithacs everywhere riscs into ragged hills，of which the chief is the monntain of A nage （Avarȳ：Ital．Anvi），in the northern division，which is identified with the Nemros of Virgil（Aen．iii． 271 ）and the Nípirov civoбi申u入入ud of Homer（ $O d$ ． is．21）．Its forests have now disappeared；and this is，doubtless，the reason why rain and dew are not so common here in the present as in Humer＇s age，and why the island no longer abonnds in hogs fattened on acorns like those gnarded by Eumaeus．In all other points，the poet＇s descriptions（ $O d$ d．iv．603，seq．，xiii． 242 ，seq．，ix．27，seq．）exhibit a perfect ficture of the island as it now appears，the general aspect being one of ruggedness and sterility，rendered striking by the bold and broken outline of the mountains and cliffs，indented by numerous harbours and creeks （ $\lambda$ théves $\pi$ ávophot，Od，siii．193）．The climate is healthy（à $\gamma a, \theta \grave{\eta}$ кoupotpọ́os，$O d$ ．ix．27）．It may here be observed，that the expressions applied to Ithaca，in Od．ix．25，26，have puzzled all the com－ mentators ancient and modern：－

（Cf．Nitzsch，ad loc．；also Od．x．196．）Strabo（x． 2）gives perhaps the most satisfactory explanation： he supposes that by the epithet $\chi \theta a \mu a \lambda \eta$ the intended to express how Ithaca lies under，as it were． the ueighbouring mountains of Acarnania；while by that of $\pi a \nu v \pi \epsilon \rho \tau a ́ \tau \eta$ he meant to denote its position at the extremity of the group of islands furmed by Zacynthus，Cephallenia，and the Echinades．For anuther explanation，see Wordsworth，Greece，Pic－ torial，gre．，pp．355，seq．

Ithaca is now divided into four districts（Ba0ú， ＇Acrós，＇Av $\begin{aligned} & \\ & \eta \text { ，＇} \mathrm{E} \xi \omega \gamma \hat{\eta}, \mathrm{i}, ~ e . ~ D e e p ~ B a y, ~ E a g l e ' s ~ C l i f f ', ~\end{aligned}$ Highlond，Outland＇）；and，as natural causes are likely to prodnce in all ages similar effects，Leake（l．c．） thinks it probable，from the peculiar conformation of the island，that the four divisions of the present day nearly correspond with those noticed by Heracleon， an anthor cited by Stephanus B．（s．v．Kpoкútetov）． The name of one of these districts is lost by a defect in the text；the ofhers were named Neïum，Crocy．． leium，and Aegireus．The Aegilips of Homer（II． ii．633）is prolably the same with Aegireus，and is

## ITHACA.

while he belieses the modern cantal town of Bathiy to occupy the site of Cricyleia. (Il. l. e.) It is true that Strabo (pp, 3i6, 453) places Aegilips and Crocyleia in Lencas; lut this appears invonsistent with $1 l$ momer and other ancient anthorities. (Sec Leake, l. c.)

Plutareh (Quast. Graec. 43) and Stephanus B. (s.v.) state that the proper name of the ancient capital of Ithaca was Alcomenae or Alalommenae. and that C'lyses bentowed this appellation upon it from his having been himsolf bort near Alalcomenae in Bocotia. But this name is not found in Homer; and a passage in Strabo tends to identify it with the rains on the isthmus of Aetris, where the fortress and royal residence of the thacan chieflains probably stood, on accoont of the advantages of a position so easily accessible to the sea both on the eastorn and weatern sides. It is argued by Leake (l. c.) that the Homeric capital city was it Polis, a little harbour ent the N.W. coast of the island, where some llellenic remains may still be traced. For the poet ( 0 d. iv. 844 , seq.) represents the suitors as lying in wait for Telemachus on his return from Pelopmanesus at Asteris, "a small island in the chamel between Ithaca and Sams (C'ephealonit)," where the only island is that now called $\Delta a \sigma \kappa \dot{d}$ oov, sitnated exactly opposite the entrance to Port Polis. The tralitional name of Polis is alone a strong argument that the town, of which the remains are still visible there, was that which Scylas (in Acarnania), and still more especially Itwleny (iii. 14), mentions as baving borne the same name as the i-land. It seems highly probable that $\dot{\eta} \pi \dot{d} \lambda t s$, or the city, was among the Ithacans the most common designation of their chicf town. And if the Homeric capital was at Polis, it will follow that Mt. Neinm, under which it stood ('IӨáкचs 'Tжovntov, Od. iii. 81), was the mountain of Exoge (Ital. Ervi), at the northern extrenity of the island, and that one of its sumaits was the Hermacan liill ('Ephaíos $\lambda$ dópos, Od. xvi. 471) from which Eumatens saw the ship of Telemachus entering the harbour. It becomes probable, also, that the harbour liheithrum ('Peiepou), which was "under Ncimm" but "apart from ti.e
 with either of the neighbuming bays of -1fäes or Frikes. Nuar the village of Froug may be observed the substructions of an ancient building, probably a temple, with several steps and miches cut in the rock. These remains are now called by the neighbouring peasants " the Schuol of 11 omer."

The llomeric "Fountain of Axthusa" is identified with a copions spring which rises at the foot of a clifl fronting the sea, near the SE. extremity of Hhaca. This clifl is still called Korac (Kópag), dind is, doubtless. that alluded to at Od. xin. 407, seq., xir. 5 , sel., xiv. 398 . (Siec, expecititly on this point, Leake, l.c., and Mure, Tour in Cirecce, vol. i. p. $6 \overline{4}$, seq.)

The mont remarkable natural feature of Ithaca is the Giulf of Molo, that inlet of the sca which nearly divides the island into two fortions; and the most renarkable relie of antiquity is the socailed "Castle of Ulysses," placed, as has been already intimated, on the sides and summit of the stecp hill of Aitris, on the comecting isthmus. Here may be tracel several lines of inclosure, testifying the lighest antiquity in the rude strueture of massive stones which compose then. The position of several gates is distinetly marked; there are also traces of a tower and of two large subtermanem cis-
tems. There can he little donbt that this is the spot to which (isero (de Orat. i. 44) allndes in praising the patriotistn of Ulysses - "nt Ithacam illam in a-perrimis saxis tanquan nidulam affixam sapientissimus vir immortalitati antepeneret." The name of Athis, morcover, recalls the striking scene in Otl. ii. 146, seg. At the base of this hill there have heen discovered several ancient tombs, sepulchral inseriptions, vases, rings, medals, \&c. The eoins of Ithaca usnally bear the head of Clysses, with the pileus, or conical cap, and the legend '10ak $\hat{\omega}$; the reverse exhibiting a cock, an emblem of the hero's vigilance, Athena, his tutelar deity, or o:her devices of like import. (Sce Eeckhel.)

The Homeric port of Phorcys (Od. xiii. 345) is supposed to be represented by a simall creek now called Dexia (probably hecause it :s on the right of the entrance to the harbour of Bathy), or by another ereek now ealled Skhinus, both on the southern side of the riulf of Mulo. (Leake, l. c.) At a cave on the side of Mount Stephanos or Meronugli, above this gulf, and at some short distance from the sea, is placed the "Grotto of the Nympls," in which the Neeping Clysses was deporited by the Phoenicians who brouglit him from Scleria. (Od. xiii. 116, seq.) Leake (l, c.) considers this to be " the only point in the island exactly corresponding to the poet's data."

The modern capital of Ithaca extends in a narrow strip of white houses round the southern extremity of the horse-shue port, or "deep" (Batu'), from which it derives its name, and which is itself but an inlet of the Gulf of Molo, often mentioned already. After passing through similar vicissitudes to those of its acighbours, Ithaca is now one of the seven Ionian Islands under the protectorate of Great Britain, and contains a popnlation execeding 10,000 souls, -an industrious and prosperous community. It has been truly observed that there is, perhaps, no spot in the world where the influence of classical associations is more lively or more pure; for Ithaca is indebted for no part of its interest to the rival distinctions of modern annals, - so mach as its naune searcely occurring in the page of any writer of historical ages, unless with reference to its pretical celebrity. Jndeed, in A. D. 1504 , it was nearly, if not quite, uniuhabited, having been depopulated by the incursions of Corsairs; and record is still extant of the privileges aecorded by the Venetian govermment to the settlers (probably from the neighbouring islands and from the mainland of Greece) by whom it was repeopled. (Leake, l. c.; Bowen, Ithaca in 1850, p. 1.)

It has been assumed throughout this article that the island still called Ithaca is identical with the Homeric Ithaca. Of that fact there is ample testimony in its geographical position, as well as in its interaal features, when compared with the Odyssey. To every sceptic we may say, in the wirds of Athena to Ulysses (Od. xiii. 344), -

(The arguments on the sepptical sile of the question have lieen collected by Völcker, Ilomer. Cieugr: 46

COIN OF ITHACA.

- $\% 4$, but they have heen successfully confuted by Rithle von Lilienstern, Ueber dos Ifomerische Ithaca. The fullest anthorities on the subject of this article are Gell, Geography ond Antiquities of Ithaca, London, I807; Leake, Northern Grecce, vel, iii. pp. 24-55; Mure, Tour in Greece, vol. i. pp. 38-81; Bewen, Ithaca in 1850, London, 1852.) [G. F. B.]

ITHACE'SLAE INSULAE, is the name given by Pliny (iii. 7. s. 13) to seme small islets epposite to Vibe on the W. coast of Bruttium. These can be no other than some mere rocks (tro small to be marked en ordinary maps) which lie just opposite to the remains of Birona, in the Golfo di Sta. Eufemia, and on which some traces of ancient buildings (probably connected with that port) were still visille in the days of Barrio. (Barrius, de Situ Calabr. ii. 13 ; Romanelli, vol. i. p. 57 ).
[E. H. B.]
 1. A town of Histineotis in Thessaly, described by Homer as the "rucky lthome" ('1 $\theta \omega \dot{\mu} \eta \kappa \lambda \omega \mu a \kappa \delta \epsilon \sigma \sigma \alpha$, Il, ii. 729), is placed by Strabo within a quadrangle formed by the four cities, Tricca, Metropulis, Pelinnaenm, and Gemphi. (Strab. ix. p. 437.) It probably eccupied the site of the castle which stands on the summit above the village of Fanuri. Lake obsersed, near the north-western face of the castle, some $r$ emains of a very ancient Hellenic wall, consisting of a few large masses of stone, roughly hewn on the outside, but accurately joined to one mother without cement. (Leake, Northem Greece, vol. iv. p. 510.)
2. A mountain fertress in Messenia, where the Messenians loag maintained themselves against the Spartans in the First Messenian War. It was afterwards the citadel of Messene, when this city was founded by Epaminondas. For details, see Messexe.

ITHO'RIA (IOapia), a town in Aetelia, near the Achelous, and a short distance south of Conope. It was situated at the entrance of a pass, and was strongly fortified both by nature and by art. It was taken by Philip V., and levelled to the ground, в. c. 219. (Pol iv, 64.)

JTIUM PROMONTO'RIUM, is placed by Ptolemy (ii. 9. § 1) in Celtogalatia Belgica. After the mouths of the Seme, he mentions the outlet of the river Phrudis [Frudss], Icium ('Ikiav axкpov), and then Gesoriacum (Г $\quad$ бooptaròv èr:vetov), which is Boulogne. One of the eld Latin versions of I'tolemy has Itium Promontorinm, and others may have it too. He places Gesoriacum and Itimm in the same latitude, and $\mathbf{l}$ tiun due west of Gesoriacum. This is a great mistake, for, Itium being Cap Grisnez, the relative position of the two places is north and south, instead of east and west. There is no promontory on this $1^{\text {sart }}$ of the French coast nerth or south of Boulogne except Grisnez, at which point the const changes its direction from south to noith, and runs in a general ENE. direction to Calais, Grovelines, and Dunkerque. It is therefore certain that there is a great mistake in Ptulemy, both in the direction of the coast and the relative pasition of Geseriacum and Itium. Copp Girisnez is a chalk cliff, the termination on the cosst of the chalk hills which cross the department of Pas de Calais. The chalk cliffs extend a few miles on each side of Cap Grisnez, and are cleatly seen from the English coast on a fine day. This eape is the nearest point of the French cuast to the opposite coast of Kent.
[G. L.]
l'TIUS PORTUS ( $\tau \delta$ "Itiov, Strab, p. 199). When Caesar was preparing fur his second British ex-
pedition (n.C. 54), he says (B.G. v. 2) that he ordered his forces to meet at "Portus litins, from which port he had found that there was the most cenvenient passage to Britamia, -about 30,000 passus." In his first expedition, B. C. 55 , he says that lie marched, with all his forces, into the conutry of the Morini, because the passage from that coast to Britannia was the shortest (B. G. jv. 21) ; but he dors not name the port from which he sailed in his first expedition ; and this is an omission which a man can easily understand who has formed a correct notion of the Commentaries. It seems a plain conclusion, from Caesar's words (v. 2) that he sailed frem the Itius on his first expedition ; for he marched into the country of the Morini, in order to make the shortest passage (iv. 21) ; and he made a goorl passage (iv. 23). In the fifth bork he gives the distance from the ltius to the British coast, but not in the fourth book; and we conclude that he ascertanued this distance in his first voyage. Drumann (Gieschichte Roms, vol. iii. p. 294) thinks that the passage in the fitth book rather proves that Caesar did not sail from Itius on his first voyage. We must accordingly suppose that, having had a good passage on his first voyage to Britannia, and back to the place from which he lad sailed, he chose to try a different passage the second time, which passage he had learned (cognoverat) to be the mest convenient (commodissimum). Yet he landed at the same place in Britannia in both his voyages (v. 8) ; and he had ascertained (cognoverat) in the first voyage, as he says, that this was the best landing-place. So Drumann, in his way, may prove, if he likes, that Caesar did not land at the same place in both voyages.

The name Itius gives some reason for supposing that Portus Itius was near the Promontorium Itium; and the opinion now generally accepted is, that Portus Itius is Wissant or Witsand, a few miles east of Cap Grisuez. The critics have fixed Portns Itius at various places; but nut one of these guesses, and they are all guesses, is worth notice, except the guess that Itius is Gesoriacum or Boulogne. But the name Gesoriacum is nut Itius, which is one oljjection to the supposition. The only argument in favour of Boulogne is, that it was the nsual place from which the Romans sailed for Britannia after the time of Claudius, and that it is in the country of the Morini. Gesoriacum was the best spot that the Romans could choose for a regular place of embarkation, for it is adapted to be the site of a town and a fortified place, and has a small river. Accerdingly it became the chief Roman position on this part of the French coast. [Gesorincem.]

The distance of Portus Itins from the nearest port of Britannia, 30 M. P' $^{\prime}$, is too much. It seems to be a just conclusion, that Caesar estimated the distance from his own experieace, and therefore that he estimated it either to the cliffs about the South Foreland, where he anchored, or to the place seven or cight miles (for the MSS. of Caesar vary here) further along the coast, where he landed. It is certain that be first approached the British coast under the ligh chalk cliffs between Folkestone and Wiolner. It is a disputed point whether he went from his anchorage under the cliffs northwards to Deal, or southward to Sandgate or IIythe. This matter does not affect the position of Itins, and it is not discussed bere ; but the writer maintains that Caexar landed on the brach at Deal. There are difficulties in this question, which the reader may examine by referring to the authorities mentioned at the ond ofthis article. The pas-

## ITIUS PORTLS.

saze in the fifth book ( $\mathrm{v} . \mathrm{s}$ ), in which Caesar describes his second voynge, shows very elearly where he landed. lle sailed from Portus Itius, on his second expedition. at sunset, with a wind nbout SW. by W.; about midnight the wind failed him, he could not keep his course, and, being carried too far by the tide, at daybreak, when he looked abont him, he saw Britannia on his left hand behind him. Taking ndvantave of the change of the tide, he used his oars to reach "that part of the island where he had found in the previous summer that there was the best landing." lle had been carried a few miles past the Cantiun Promontorium, or Nurth Foreland but not out of sight, and he could easily find his way to the beach at Deal. There are many arguments to show that Deal was Caesar's lauding-place, as it was for the Rumans under the empire, who built near it the strong plitee of Ratupiae (Richborough), on the Stour, near Sunduich.
D. Auville makes out Caesar's distance of 30 M. P. thins. He reckuns 22 or 24 M. P., at mast, from Portus Itius to the English cliffs, and 8 miles from his anchorage under the cliffs to his landingplace make up 30. Perhaps Caesar means to estimate the whole distance that he sailed to his landing place ; and if this is so, his estimate of " about 30 liuman miles" is not far from the truth, and quite as near as we can espect. Strabo (p. 199) miakes the distance 320 stadia, or only 300 , according to a note of Eustathins on Dionysius Periegeters (v. 566), who either found 300 in his copy of Strabo, or made a nistake about the number; for he derived his information about Caesar's passage only from Strabo. It may be observed bere that Strabo mentions two expeditions of Caesar, and only one port of embarkation, the Itius. He understood Caesar in the same way as all people will do who can draw a conclusion from premises. But even 300 stadia is tou great a distance from Hissant to the British coast, if we reckon 8 stadia to the Roman mile; but there is good reason, as D'Anville says, for making 10 stadia to the mile here Pliny gives the distance from Buulogne to Britannia, that is, we must assume, to the ustal landing place, Rutupize, at 50 M. P., which is tor much; but it seems to be some evidence that be could not suppose Boulogne to be Caesar's place of embarkation.

Cuesar mentions another port rear Itius. IIe calls it the Clterior Portus (iv. 22. 23, 24), or Superior, nnd it was 8 MI.P. from Itias, We night assume from the term Ulterior. which has reference to ltius, that this port was further to the north and east than Itius; and this is proved by what he says of the wind. For the wind which carried him to Britannia on his first expedition, his direct course being nearly north, prevented the ships at the Ulterior Portus from coming to the place where Caesar embarked (iv. 23). The Ulterior, or Superior, Portus is between ${ }^{1 /}$ issant and Calais, and may be Sangutte. Caluis is too far cff: When Caesar was returning from his first expedition (iv. 36, 37) two transport ships could not make the same portus-the Itius and the Elterior or Superior-that the rest of the ships did, but were carriel a little lower down (paulo infra), that is, further south, which we know to be Caesar's meaning by comparing this with another pasare (iv. 28). Caesar does not say that theac two slips landed at a "portus," as C'kert supposes (Gallien, P. 554), who makes a port miknow a to Caesar, and gives it the name " inferiur."

Du Cange, Carnden, and others, correctly took

Portus Itins to be I"tsanel. Besides the resemblance of name, Du Cange and Gibson hatve shown

MAP illéstintivg tile position of pobtes 1TICS.
A. A. Strait of Dorer, or Pas de Calais. 1. Portus Itius (Wissant). 2. 11fum Pr. (Cap Grisncz). 3. (icsoriacum, atterwards Bononia (bowlogne). 4. (alais. 5. Sandpate. 6. Portus Dobris (Durcr). 7. Rutupiae (Nichburukgh). 8. River Stour. 9 Cantium Pr. (North Furcland). 10. Regulbium (lieculeer).
that of two middle age Latin writers who mention the passage of Alfred, brother of St. Edward, into England, one calls Hizsant lortns lecius, and the other I'ortus Wisanti. D'Anville conjectores that Wissant means " white sand." and accordingly the promuntory Itium wimld be the White, a very good name for it. But the word " white," and its various forms, is Teutonic, and not a Celtic word, so far as the writer knows: and the word "Itius" existed in Caesar's time on the coast of the Morini, a Celtic people, where we do nut expect to see a Teutonic name.

Wiesant "as knowd to the Romans, for there are traces of a road from it to Taruenna (Theroutune). it is no port now, and never was a port in the modern sense, hut it was very well suited for Caesar to draw his ships up on the beach, as he did when he landed in England: for Wissant is a wide, sheltered, saudy bay. Froissart speaks of 1 Hissant as a large town in 1346 .

A great deal has lieen written abont Caesa's voyages. The first and the best uttempt to explain it, though it is not free from some mistakes, is Ir. Halley's, of which) an exposition is given in the Clasial Mluseum, No, xiii., by is Long. D'Anville, with his usual judgment, saw that Itius mast be li"issant, but he supposed that Cacsar landed at Ilythe, south of Dorer: Walckenaer (Giog. des Giaules, vol. i. pp. 44 s , 452 ) has some remarks on ltins, whieb he takes to be Wissunt; and there are remarks on Portus Itius in ilie (ientleman's Mruazine for Neptember, 1846, by H. L. Long, Risq. Perhaps the latest examination of the matter is in G. Long's edition of Cacear, Nute on Ciesar's British Expeditions, pp. 248-257. What the later Gornan geographers and critics, Ukert and others, bave suid of these voyages is of no value at all.
[G. L.]

ITON or ITO'NU'S ("l $1 \tau \omega \nu$, Hom. ; $\left.{ }^{*} 1 \tau \omega \nu 0 s, S t r a b.\right)$, a town of Plithiotis in Thessaly, called by Homer " ${ }^{\text {mother of flocks }}$ ( Il. ii. 696), was situated 60 stadia from Alns, upon the river Cuarius or Coralins, and above the Crocian plain. (Strab, ix. p. 435.) Leake supposes the Kholo to be the Cuarius, and places Itonus near the spot where the river issues from the mountains ; aud as, in that case, Iton possessed a portion of the pastoral highlands of Othrys, the epithet " mother of flocks" appears to have been well adapted to it. (Leake, Northern Greece, vol, iv. pr. 356,357 .) Iton had a celebrated temple of Athena, whose worship, under the name of the Itonian Athena, was carried by the Boeotians, when they were expelled from Thessaly, into the coantry named after them. (Strab. l. c.; Steph. B. s. v.; Apollod. ii. 7. § 7.; Appollon. i. 551, with Schol.; Callim. IIymn. in Cer. 74. ; Paus. i. 13. § 2, iii. 9. § 13, ix. $34 . \S 1$, x. 1. § 10 ; Plat. Pyrrh. 26.)

ITO'NE (ITóvq), a town in Lydia of noknown site. (Dionys. Per. 465 ; Steph. B. s. v.) [L. S.]

ITUCCI (Plin. iii. 1. s. 3), or ITUCI (Coins; 'Iти́кп, Appian, Hisp. 66, 68), a city in the W. of Ilispania Baetica. Under the Romans, it was a colonia immunis, with the surname Virtes Julia, and it helonged to the conventus of Hispalis. Its prohable site, in the opinion of Ukert, was between Martos and Espejo, near I'alenzucla. (Ukert, vol. ii. pt. 1. p. 369: Coins, ap. Florez, Med. de Esp. vol. ii. p. 487; Mionnet, vol. i. p. 18, Suppl. vol. i. p. 32 ; Sestini, p. 63 ; Eckhel, vol. i. p. 24.) [P. S.]

ITUNA, in Britain, mentioned by Ptolemy (ii. 3. §2) as an aestuary immediately to the north of the Moricambe aestuary $=$ Morecambe Bay. This identifies it with the Solvay Firth. [R. G. L.]

ITURAEA ('Itoupaia), a district in the NE. of Palestine (Strab. xvi. p. 755 ; Plin. v. 19), which, with Trachonitis, belonged to the tetrarchy of Pbilip. (st. Luke, iii. 1 ; comp. Joseph. Ant. xv, 10. § 1.) The name is so loosely applied by the ancient writers that it is difficult to fix its boundaries with precision, but it may be said ronghly to be traversed by a line drawn from the Lake of Tiberias to Damascus. It was a mountainous district, and full of caverns (Strab.l.c.) : the inlabitants, a wild race (Cic. Phil.ii. 24), favoured by the natural features of the country, were in the habit of robbing the traders from Damascus (Strab. xvi. p. 756), and were famed as archers. (Virg. Georg. ii. 448 ; Lucan, vii. 230, 514.) At an carly period it was occupied by the tribe of Jetur (1Chron. v. 19 ; 'Itovpaïos, LXX.), whose name is connected with that of Jetur, a son of 1shmael. (1 Chron. i. 31.) The Ituraeads-either the descendants of the original possessor, or, as is more probable, of new comers, who had occupied this district after the exile, and assumed the original name -were eventually subdued by king Aristobulus, n.c. 100. who compelled them to be circumcised, and incorporated them in his dominions. (Josepb. Ant. xiii. 11. § 3.) The mountain district was in the hands of Ptolemaens, tetrarch of Chalcis (Stral. svi. p. 753 ); but when Pompeius came into Syria, Ituraea was ceded to the Romans (Appian. Mithr. I06), thongh probably it retained a certain amount of independence under native vassal princes: 11 . Antonius imposed a lieary tribute upon it. (Appian, B. C. v. 7.) Finally, under Clandius, it beeame part of the province of Syria. (Tac. Ann. xii. 23; Dion Cass. lix. 12.) The district El-Djedur; to the K. of Ilermon (Djebel-esh-Scheikh), and lying W. of the Hadj road, which ractording "to Burckinardt
(Trav. p. 286) now contains only twenty inhabited villages, comprehended the whole or the greater part of ancient Ituraca. (Mïnter, de Reb. Itaracor: Havn. 1824 : comp. Winer, Realwoürterbuch, s. v.; Ritter, Erdkunde, vol. xv. pt, ii. Pp. 354-357, 899.)
[E. B. J.]

## ITURISSA. [TURISsA.]

IIYCA. [Itecer.]
ITYS, in Britain, mentioned by Ptolerny (ii. 3. § 1) as a river lying north of the Epidian promiontory (Mull of Cantyre), with the river Longus between. As this latter=Loch Linnhie, the Itys is probably the Sound of Slent, between the Isle of Skye and the mainland. In the Monumenta Britannica we bave Loch Torridon, Loch Duich, Loch Eu.
[R. G. L.]
JudaEA. [Palaestina.]
JUDAH. [Palaestiva.]
IVERNIA. [IERNE.]
IVERNIS ('Iovepvis), mentioned by Ptolemy (ii. 2. $\S 10$ ) as one of the inland towns of Ireland, the others being Rhigia, Rlaeba, Laberus, Macolicum, another Rhaeba, Dunum. Of these, Dunum has been ideutified witb Down, and Macolicum with Mollow, on the strength of the names. Laberus, on similar but less satisfactory ground, = Kil-loir in West Meath. Ivernus is identified by O'Connor with Dun-keran, on the Kermare river; but the grounds on which this has been done are unstated.
[R. G. L.]
IVIA or JIVIA. [Galiaecia.]
JULIA CONSTANTIA. [Osset.]
JULIA FIDENTIA. [ULLL.]
JULIA JUZA (Iov入ia Ió $\delta$ ( $)$, a city on the const of Hispania Baetica, between Gades and Belon. colonized by a population of Romans mixed with the removed inhabitants of the town of Zelis, near Tingis, on the Libyan shore of the Straits. Thus far Strabo (iii. p. 140) : later writers speak of a place named Jela Transdecta, or simply Tieaxsdecta (Iovлia T $\rho \alpha \nu \sigma \delta о i к \kappa \tau \alpha$, I'tol. ii, $4 . \S 6$; Marcian. Heracl. p. 39 ; Geog. Rav.), E. of Mellaria; and coins are extant with the epigraph julda traducta (Florez, Med. de Esp, vol, ii. 1. 596, Esp. S. vol. x. p. 50 ; Mionnet, vol. i. p. 26, Suppl. vol. i. pp. 19, 45; Sestini, Med. Isp. p. 90 ; Num. Goth.; Eckhel. vol. i. Pp. 29-31). Mela does not mention the place by either of these names; but, after speaking of Carteia, he adds the following remarkable words: et quam transvecti ex Africa Phoenices habitant, atque unde nos sumus, Tingentera. (Mela, ii. 6.) It can bardly be doubted that all these statements refer to the same place; nay, the very names are identical, Transducta being only the Latin translation of the word Joza (from הS', egressus est) used by the Plovenician inhabitants to describe the origit of the city. Its site nust have been at or near Tarifa, in the middle of the European shore of the Straits, and on the S.-most point of the peninsula. (Mém. de l'Acod, des Inscr. p. 103 ; Philos. Trans. xxx. p. 919 ; Mentelle, Geog. Comp. Esp. Anc. p. 229 ; Ekert, ii. 1. p. 344.)
[P.S.]
Julia I.ibica. [Cerretane.]
JULiA MiftiLis. [Mymtilis.]
JULIA Romilla. [Hispalis.]
JULLA TRANSDCCTA. [JUHAA Joza.]
JULIA VICTRIN. [Tarraco.]
JULIACUNI, a town in Gallia Belgica. In the Antonine Itin, a road runs from Castellum (Carsel) through Tongern to Juliacum, and thence to Colonia (Cologne). Juliacum is 18 leagnes from Colania: Anuther road rans from Colonia Trajana to

Juliacn：n，and from Juliacum through Tiberiacum to Cologne．On this road also Juliacum is placed 18 leagues fron Cologne．Juliacum is Juliers，or $J u l i c h$ ，as the（iermans call it，on the river Roer，on the carriage roal from Cologne to Air－la－Chapelle．

The first part of the word seoms to be the Iloman mame Juli－，which is rendered more probable by finding between Juliacmu and Colonia a place Ti－ beriacmm（Berchein or Berghen）．Acum is a common ending of the names of tomns in North G．allia．
［G．L．］
JULIANOPOLIS（＇lountavovimodis），a town in I．ydia which is not mentional until the time of Hierocles（ p .670 ），according to whom it was situ－ ated close to Maconia，and must be looked for in the southern parts of Mount Tinolus，between Phila－ delphis and Tralles．（Comp．Plin．v．29．）［L．S．］

JTLIAS［BETISMDA．］
JULIO＇BOAA（Iou入tósova），a tumn in Gallia Belyica，is the city of the Caleti，or Caleitae as Pto－ lemy writes the name（ii．8．§85），who occupied the Pays de Ctux．［Caleti．］The place is Lillebone， on the little river Bolbec，near the north bank of the Scine，between IIavre and Caudebec，in the present department of Seine Inferieuse．The Itins，show several roads from Juliubona；one to Rutomagus （Roven），through Brevivdurum；and anather through Brevindurun to Nuviomagus（Lisieur），on the south side of the Scine．The roul from Juliobona to the west terminated at Carocotinum．［Cakoconisers．］ The place has the name Juliabona in the Latin midule aye writings．It was a favourite residence of the dukes of Normandie，and William，named the Conqueror，had a eastle here，where he often resided．

The mame Juliobona is one of many examples of a word formed by a Koman prefix（Julio）and a Celtic termination（Bona），like Augustobona，Julio－ magus．The word livoua or Bibona［Dtwosa］has the same termioation．It appears from a middle age Latin writer cited by D＇Anville（Nutice，g＇c．，Julio－ buma），that the place was then called lilebona，from which the modern name Lillebonne has come by prifixing the article；as the river Oltis in the south of Firance has become L＇Utt，and Lot．

The name Juliobons，the traces of the old roads， and the remains discovered on the site of Lillebonne prove it to have been a Kouran town．A Roman theatre，tombs，medals，and dutiquities，have been discovered．
［G．L．］
JLLIOBRI＇GA（＇lou入tófplya），the chief city of the Cantabri，in Ilispania Tauraconensis，belonging to the conventus of（＇lmmia，stond near the sources of the Ebro，on the eminence of Ketortillo，S．of Rey－ nusa．Five stones still mark the bounds which divided its territury from that of Legio IV．It had its port，named Portus Victoriae Juliobrigensinm， at Santounc．（Plin．iii．3．s．4．iv．20．s． 34 ；Ptol． ii．6．§ 51 ；Inscr．ap．Gruter，p 354；Morales， Antig．1． 68 ；Florez，Eisp．S．vol．vi．p． 417 ；Cantubr． p． 64 ：Ukert，vol，ii．pt．1．p． 443 ．）［P．S．］

HTLOMAGUS（ oundóparas），a town of the Andecavi，in Gallia havduuensis，and their capital． （Ptol，ii，\＆．§ 8．）It is named Juliomagus in the Table，and marked as a capital．It is now Angers． ［AnDECANI．］
［G．I．．］
JULIOPOLIS．［Gonmman and Theses．］
JULIO＇POL1：AE，iYP＇］l．Pling（vi，23．s，26） alone among ancient geographers mentions this Ihace among the towns of Lower A＂gypt．From the silcace of his predecessors，and from the manc itself，we may reasonably iufer its recent origin．Aceording
to Pling，Juliupolis stood about 20 miles distant frum Alexandreia，upon the banks of the canal which eonnected that city with the Canopic arm of the Nile．Some geographers suppose Juliopolis to have been no other than Nicopolis，or the City of Vietory， founded by Augnstus Cacsar in B．C．29，partly to commemorate his reduction of Aegypt to a Roman province，ad\} partly to punish the Alexandrians for their adhereace to Cleopatra and M．Antonius． Mannert，of the contrary（x．i．p．626），believes Juliopolis to have been merely that suburb of Alex－ andreia which Strabo（xvii．p．795）calls Eleusis． At this place the Nile－boats，proceeding up the river， touk in cargoes and passengers．
［W．B．D．］
IU＇LIS．［Cens．］
JULLUM CA＇RNICUM（Ioú入tov Kápyıkov，Ptol： Zuglio），a town of the Carni，situated at the foot of the Julian Alps，which，from its name，would seem to have been a Roman colony founded either by Julins Caesar，or in his honour by Augustus．If Paulus Diaconus is correct in ascribing the foun－ dation of Forum Julii to the dictator himself（P． Diac．Hist．Lang．ii．14），there is little doubt that Julinm Carnicum dates from the same period：but we have no account of its foundation．Ptolemy in one place distinetly describes it as in Noricum （viii．7．§ 4），in another more correctly as situated on the froutiers of Noricum and ltaly（ $\mu \in \tau a \xi \stackrel{\nu}{\mathrm{v}} \tau \bar{\eta} s$ ＇Ita入les каi Napıко仑̂，ii．13．§4）．But Pliny ex－ pressly includes it in the territory of the Carni and the tenth region of Italy（＋Julienses Carnorum，＂iii． 19．s．23），and its position on the S．side of the Alps clearly entitles it to be considered in Italy．Its pasition is correctly indicated by the Itinerary of Antoninus（p．219），which places it 60 J．P．，from Aquilcia，on the road leading nearly due N ．from that city over the Julian Alps．The first stage on this road，＂Ad Tricesimum，＂still retains the name of Trigesimo，and the site of Julium Carnicum is marked by the rillage of Zuglio（where some Roman remains have been discovered），in a side valley open－ ing into that of the Tagliumento，about 4 miles above Tulmezzo．The pass from thence over the Monte di Sta．Croce into the valley of the Gail，now prac－ ticable ooly for mules，follows the line of the ancient loman road，given in the Itinerary，and therefore probably a frequented pass under the Romans ［Alpes，p．110，No．7］：but the inscriptiou on the faith of which the construction of this road has been ascribed to Julius Cacsar is a palpable forgery． （Cluver．Ital．p．200．）
［E．II．B．］
JUNCARIA，JUNCARICS CAJIPUS．［1x－ digfites．］

JUNONIA INSULA．［Fortexatie ins．］
JURA．［Helvetil ；G．illia，p．951．］
JURCAE（＂lupkai），mentioned by Herodotus （iv，22）as lying contiguous to the Thyssagetae， who lay beyond the Bulini，who lay besend the Suromatae of the Palus Maeotis and Luwer Tanaïs． Their country was well－wooded．They were hunters， and had horses．This puints to some portion of the lower U＇ralian range．They were prubably tribes of the Ugrian stock，akin to the present Morduins，Tisherimise，Tshurushes，of which they were the most southern portion．The reason for for this lies in the probability of the name being a derivative fiom the root $-k r$－（as in C＇kraine and （arin－thia）$=$ border，or boundary，some form of which gave the Slavonic population their equivalent to the Germanic name Morcomanni $=$ March－ men．
［R．G．L．］

JUSTINIANA.
KEDEMOTH.

JUSTINIA'NA, [Carthago: Hadrumetum.] JUSTINIANA PRLMA. [SCUPR.]
JLStiNianópolis. 1. A city in Epeirus, formerly called Hadrianopolis. [Iladmavoroms.]
2. The later name of Hadrumetum in Africa. [Hadrumetum.]

JUTHUNGI ('IoúӨour ${ }^{01}$ ), a German tribe dwelling on the banks of the Danube. They are described by some ancient writers as a part of the Alemanni (Amm. Marc. xvii. 6); but they belonged more probably to the Gothic race : even their name seems to be only another form for Gothi or Gothones. (Ambros. Epist. 20.) Dexippus, from whom we learn most about their history, calls them a Scythian tribe, which, however, clearly means that they were Goths.

In the reign of the eroperor Aurelian the Juthungi invaded Italy, and, heing defeated, they sued for peace, but were obliged to return without having effected thoir purpose: afterwards they made preparations for another invasion. (Dexip. pp. 11, 12, 18, 19, 21, ed. Niebuhr and Bekker.) In these wars, however, they never appeared alone, but always in conjunction with others, either Alcmannians, Suevi, or Goths. (Sue Eisenscbmidt, de Origine Ostrogothorum et l'isigothorum, p. 26; Latham, Tacit. Germ., Epileg. p. cxiii.)
[L. S.]
JUTTAH ('ITáv, LXX.), a town of Judah (Jush. xv. 55), appropriated to the priests; according to Eusebius (Onomast, s. v. It $\tau \tau a ́ v$ ) it was 18 M. P. from Eleutheroprlis. Reland (Palaest. p. 870) supposes this to have been the residence of Zacharias and Elizabeth, and the birthplace of John the Paptist, - the $\pi \delta^{\prime} \lambda u s$ 'Ioviס̃ of Luke, i. 39, being so written, hy a corruption or from a sufter pronunciation, instead of $\pi$ óגts 'loúra. The modern Yütta, on the site of the old town, in which there are said to be indications of old remains, preserves the ancient name. (Rolinson, Bib. Res. vol. ii. pp. 190, 195, 628 ; Ritter, Erdkunde, vol. xv. pt. i. pp. 638, 641; Winer, s.v.)
[E. B. J.]
JUVAVUM, JUYA'TIA, a town in the interior of Noricum, on the left bank of the river lvarus. It is the modern city of Salburg, situated in an extensive and fertile valley, on the slope of a range of a high monntain. It is chiefly known from inscriptions : one of which (Orelli, no. 496) describes the place as a culony planted by the cmperor Hadrian; but its genuineness is disputed. (Orelli, Inscript. vol. i. p. 138.) Juvavium was the head-quarters of the fifth cohort of the first legion (Notit Imper.) and the residence of the governor of the province. At an earlier period it seems to have been the residence of the native kings of Noricum. In the second half of the fifth century it was destroyed by the Heruli ; but was restored as early as the seventh century, and still contains many beautiful remains of antiquity, especially mosnics. (Comp. Orelli, Insoript. nos. 496, 497 ; Itin. Ant. p. 235, where it bears the erroneous name of Jovavis ; Eugipp. $1^{-1}$ it. S. Sever. 13, 24, where it is called lopia; J it. S. Ruperti, ap. Basnace, tom, iii. pt. 2. p. 273 ; Eginhard, Jit. Caroli M. 33; Juravia, oder Nachrichten vom Zustande der Gegenden und Stadt Juxavia, Salzburg, 1784, fol.)
[L.S.]

## K.

KADESH (Kaiots, LXX), or KADESH-BARNEA, a site on the SE. of Palestines with a fountaing Ein-
mishpat (Gcn. xiv. 7, xvi. 14), where the Israclites encamped with the intention of entering the Promised Land (Num. xxxii. 8), and the point from which the spies were sent. (Num. xiii. xiv. 40-45, xxi. 1-3; Jeut, i. 41-44; conlp. Judg. i. 17.) The supposition that the Kailenh-Barnea, to which the lvraelites first came, is different from the Kiadesh-Meribah, which formed their later encampment, where the wants of the people were miraculously supplied from the smitten rock (Num. ©x. 14), reconciles some difficulties. On the hypothesis that there wero two places of this name, the first Kadesh and its Localities agrees very well with the spring of 'Ain Kädis or Kirdés, lying to the E. of the highest part of Ijjebel Halol, towards its N. extremity, about 12 miles from Moilihhi Hadjar, (Beer-Iahai-roi, Gen. xvi. 14), and something like due S. from Khalasa (Chezil, Josh. xv. 30), which has been identified by Mr. Rowlands (Williams, IIoly City, vol. i. App. pp. 466-468) with the rock struck by Moses.
The second Kadesh, to which the Israelites came with a view of passing through the land of Edom, cuincides better with the more easterly position of 'Ain-el-Weibeh which Dr. Robinson (Bib. Res. vol. ii. pp. 582, 610, 622) has assigned to it (comp. Kitto. Scripture Lands, p. 82), Ritter (Erdlcunde, vol. xiv. pp. 1077-1089), who refers to the latest discoveries in this district, does not determine whether one Kadesh would sufficiently answer all the conditions required. [E. B. J.]

KADMONITES (Ke $\delta \mu \omega v a i o t$, LXX.), a nation of Canam at the time that Abraham sojourned in the land (Gen.xv. 19). The name Beni-Kedem, "children of tbe East" (Judg. vi. 3 ; comp. Isa, xi. 14), was probably not distinctive of, but collectively applied to various peoples, like the Saracens in the middle ages, and the Beduins in later times. (Ritter, Erdhunde, vol. xv. pt. i. p. 138.) [E. B. J.]

KAMON (Kaцй̀, LXX.), a torn in Gilead, belonging to the tribe of Manasseh, where Jair died. (Judges, x. 5; comp. Jiseph. Antiq. v. 7. §6.) The Kamona (Kapwvá) of Eusebius, which lay 6 M. I'. to the N. of Legio (Onomast. s. v.), must have heen unother place of the same name; but the city which Polybins (v. 70) calls Camus (Kauovis), and which was taken, with other places in Peraea, by Antiochas, is identical with the town in Gilead. (Reland, Palaest. 649 ; Winer, s. v.; Von Raumer, Palest. p. 242 ; Ritter, Erdhunde, vol. xv. p. 1026.) [E.B.J.]

KANAH (Kavá, LXX ). 1. A town in the N. district of Asher. (Josh. xix. 28.) Dr. Robinson recognises it in the large village of Kina, on the brow of the IFady-'Ashür, near Tyre.
2. A river which divided the district of Manasseh from that of Ephraim (Josh. xıi. 8, xvii. 9, 10), protably the river which discharges itself into the sea between Caesareia and Apollonia (Arundinetis; comp. Schultens, l'ita Salad. pp. 191, 193), nuw the Nahr Abu-Zubâra.
[E. B. J.]
KAPHARABIS (Kaфapafis), a furtified place, in Idumaea, taken, with Kaphethra, by Cerealis, A. D. 69. (Joseph, B. J. iv. 9. § 9.)
[E. B. J.]
KEDEMOTH (Baкe $\delta \mu \omega \theta$, LXX.), a city in the tribe of Reuben (Josh, xiii. 18), which gavo its name to the wilderness of Kedemoth, on the borders of the river Arnon, from whence Mases sent messengers of peaco to Sibon king of Heslibon (Deut. ii. 26.) Its site has not been made ont. (Ritter, Erdikunde, vol. xv. pt i. pp. 574, 1208; Wiver,

K1EDESH（Kaסrys，1．XX．）．1．A town of Naphttai． $20 \mathrm{M} . \mathrm{P}$ ．from Trre．（Eurel．Onomast．s．v．Cedes．） Its Caaaanitish chieftain was slatn at tho conquest of the land（Josh，xii．22）；afterwards it belonged to the Levites，and was ome of the cities of refage． （Itosh．xx．7，xxi．32； 1 Cloron．vi．76i．）Barak was born here（Judters，iv．6）：and Tiglath－pileser naado the conquest of it（ $2 \mathrm{Kings}, ~ x v, 29$ ）．It was the sceae of the victory of ．Jonathan Maccabaeus over the princes of Demetrius（1．Mace．xi，63－73），and was the birthplace of Tubius（Kióls $\tau$ ѝs $N \in \phi \theta a \lambda \epsilon i \mu$ ， Tibit，i．2）．In dosplus，Kúdıaa（Antiq．ix． 11. § 1）or $\mathrm{K} \dot{\delta} \alpha a \sigma a$（Antiq，xiii．5，§ 1）is spoken of as the boundary hetween Tyre and Gatilee：during the war it appears to have been hastile to Galilee （IB．J．ii．18，§ 1）．The strougly fortified place in this district，called Kvסou $\sigma \sigma 0$ by the same writer （B．J．iv，2．§ 3），is probably the same as Kelesb． A village oa the hills opponite the marshes of Ilulet－ Bituiis，still called Kedes，is identified by Dr． 1Whiuson with the ancient city．（Bibl．Res．vol．iii． p．355．）Kecles was visited in 1844 by the Rev． E：il sinith，who has a full account of it in NS． （Libllinth．Sacra，vol，iii，p．203．）

2．A town in the S ．district of the tribe of Judah． （Jush，xv．23．）

［E．B．J．］
KliNITES（Kwaus，LXX．），a semi－nomad tibe of Midianites，dwelling anome the Amaiekites．（Gen． xv．19；Num．xxiv．21；1 Strn．av．6．）Hobab （Jethro），the tulher－in－law of Muses，and Heber，the hushand of Jach，who slew Sisora（．Iuclg．i．16，iv． 11），belouged to this race．The Hechabites are montioned，with other families，as belongine to the Kenites．（1 C＇lrom，ii． $55 ; J$ or．xaxv．2；Winer， s．v．；Ritter．Firthomele，vol．x1．p1．135－138； Kwald，leseck．des Vollees Isruele vol．i．p．337， vol．ii．p．31．）
［F．．B．J．］
KENIZZITFS（Keva（aiot，LXX），a（amantish
 is called a Kencrite（Numt，xxsii．12；Josh．xiv．6）， and Ohniel，his youuger brother，is ahom called a son of Kenaz．（Juitg．i．13，iii．9；comp．Jush．xv．17； 1 （hrom．iv，13．）A wher bram of this race and referrel to the Eidonites．（Gicn xaxvi．11；Winer， s．r．；litter，firdlowele，vel．XV．P．138；Ewald， （iessh，des Volkes Isruel．val．i．p．338．）［E．B．J．］

KERIOTII（KapoẃӨ，DAX．）．1．A town of the tribe of Judah．（, Hokl．xv．25．）It was probathly the birtiphtue of the traitor Judas，who owed hif， suraune（lowapuérns）to this plare．（Comp．Winer， 8．v．Judus．）1r．Rohinson（Bibl．Res．yol．ii．p．4－2） lise sugensted that it may be represented by $1: 7-$ Kioreyctois，situated at the foot of the mountain
mite．S．of 11 einos，where there are sites of ruias virule：

2．A town of Moab．（Jer：xlriii．24．41；Amos， ii．‥）
［E．B．I．］
KILJIT11，a word signifying in Hebrew＂town，＂ or＂city；＂the following are the princigal places to which this tem is attached．

1．Kiejathaim（Kıpla日aíu，1．X．），or the ＂double city，＂one of the most aacient towns in the country E．of the Jordan，as it was in the hands of the Bmims（Gen．xiv． 5 ；comp．Ewall，（iesch．des bulkes Israel．vol．i．p．308），who were expelled from it by the Moabites．（Deut．ii．9，11．）Kirja－ thairn was afterwards assigned to the childrea of Reulen（Num．xxxii．37；Josh，xiii．19）；but during the exile the Muabites recovered this and other towns．（Jer．xlviii．1，23；Ezzek，xxv．9．） Eusebius and Jerome（Onomast．s．$r$ ．Kapıa⿱atu） describe it as being fall of Christians，and lying 10 N．P．W．of Medeba Burckhardt（Trav．p． 367 ） heard of ruins called El－Teim，half as hour W．of the site of Medclan，which he coajectures to have been this place，the last syllable of the name being retained．This does not agree with the distance in the Unomasticon，but Jerome is probably wrong in identifying the Christian town with the ancieat Kirjatiaim，as the foraner is no doubt，from the data assigned by bim，the modern Kureyriitt， S ．of the Wady Zürka Main，and the latter the El－Teim of Burckhardt，to the N．of the Hody．（Comp．Ritter， Erdlunde，vol．xv．pp． 1185,1186 ．）There was another place of this name in the tribe of Naplatali． （1 Chron．vi．76．）

2．Kikfath－Anea，the ancient name of Hebron， but still in use in the time of Nelsemial！（xi．25）． ［Hebron．］

3．Kirjath－Bahl．［Kirdath－Je．inlim．］
4．Kirjath－Hezotit，or＂city of streets，＂a town of Noab．（Vum．xxii．39．）

5．Kiksith－Jeahim，or＂city of forests，＂one of the fur towns of the Gibeonites（．／osh．ix．17）， and not far distant from Beeroth（ $: 1 /$－Birch）．（Ezra， ii．25．）At a later I 1 riod the ark was brought here from Beth－Shemesh（ 1 Sam．vii．1，2），and remained there till it was removed to Jerusalem（ 1 Chron． xiii．6）．The place was rebuilt and inhabited after the exile（E：rrn，l．c．；N．h．vii．29）．Josephus（Aut． vi．1．§ 4）says that it was near to Beth－shemesh， turd Eusebius and Terume（Onomant．s．c．Baal－ C＇urathiarime spark of it，in their day，as a village 9 or 10 M. P．from Jerusalem，on the way to lhios－ polis（Lyydela）．Dr．Robinson（Bibl．Kes．vol．ii． $\mathrm{pp} .334-337$ ）has identified it with the present Kuryt－el－Encib，on the road to Ramleh．The monks have tound the Anathotis of Jeremiah （i．1；comp．Hicron．in luc．；Onomast．s．v．；Joseph． Ant．x．7．§ 3），which is now represented by tho modern＇Anitu at Kiryet－l－Enáb，but the ecele－ si：stical tradition is evidently iacorrect．There was formerly here a convent of the Alinorites，with a latin church．The latter remains eatirely deserted， but not in ruins；and is one of the largest and most solidly constructed elmurches in I＇alestine．（Ritter， Sirdkunde，vol xvi．pp．10s－110．）

6．Kikiath－Sel－bkr，or＂city of the book＂ （Josh，xv． 15,16 ：Juely．i．11），also called KikJatu－ S．sxi．ıн，＂city of palus．＂（Josh．xv．49．）Afterwards it twok the name of 1）kr：ur（ $\Delta a b i p$, 1．．．．．．）．a＂worl＂ or＂oracle＂Debir wats cajtumed by Josha（x． 38），but being afterwarls retaken by the Canaanites， Caleb gave Lis daughter Aclisu to Othnicl，for his
bravery in carrying it by storm (Josh. xv, 16-20). It belonged afterwarls to the rriests. (Josh. xxi. 15; 1 Chron. vi. 58.) Debir is nfterwards lost sight of; but from the indications already given, it appears to have been oear Hebron,-but the site has not been made out. There was a second Debir in the tribe of Gad. (Josh, xiii. 26.) (Von Rammer, Palest. p. 182 ; Winer, s. v.)
[E. B. J.]
 "the stronghold of Moab." (Isa.xvi.), called also KirHeresikth and Kir-Heres. (Isa. xvi. 7, 11 ; Jer. xlviii. 31.) In the Chaldee version and the Greek of the Apocrypha, it appears in the form of KerakkaMoab, and Characa (Xápara, 2 Mace. xii. 17 ). Under this latter name, more or less corrupted, it is mentioned by Ptolemy (Xарáксна, v. 17. § 5 ; comp. Xарак $\omega \bar{\omega}$, Steph. B.) and other writers, both ecclesiastical and profane, down to the centuries before the Crusades. (Abú-l-féda, Tab. Syr. p. 89; Schultens, Index ad Vit. Salad. s. v.) The Crusaders found the name extant, and erected the fortress still known as Kerak, which, with that of Shóbek, formed the ceatre of operations for the Latios E. of the Jordan, With the capture of these, after a long siege by Saladin, A. D. 1188 , the dominion of the Franks over this territory terminated. (Wilken, die Kreuzz, vol. iv. pp. 244-247.) The whole of this district was unknown till A. D. 1806, when Seetzen (Lachs, Monatl. Corr. xviii. pp.433, foll.) penetrated as far as Kerak. A fuller account of the place is given by Barckhardt (Trav. pp. 379-387), by whom it was next visited io 1812; and another description is furnished by Irby and Mangles (Trav. pp. 361-370), who followed in the same direction in 1818. (Robinson, Bibl. Res. vol, ii. pp. 566-571; Hitter, Erdkunde, vol. xv. pp. 916, 1215.)

## Kishon. [Cison.]

L.

## L.ABANAE AQUAE. [Aquae Labanae.] <br> LABEATES. [LABEATIS LAcers.]

LABEATIS LACUS, a large lake of Roman Illyricum, situated to the N. of Scodra, the chief city of the Labeates (Liv. xliii. 21, xliv. 31, xlv. 26) or Labeatae. (Plin. iii. 26.) It is now called the lake of Scutari, famous for the quantity of fish, especially of the "Cyprinus" family. The rivers, which drain the rocky district of Monte-Negro, discharge themselves into this lake, which communicates with the sca by the river Babbaxa. (Wilkinson, Dalmatia, vol. i. pp. 411, 415, 476.)
[E. B. J.]
LABI'CUMor LAVI'CUM, sometimes also(Liv.ii. 39, iv. 45) LAVJ'Cl, ( $\tau \grave{\text { L Aabukóv : Eth. Aabıkavós, }}$ Labicanus and Lavicanus: La Colonsa), an ancient city of Latium, situated at the foot of the northeastern slope of the Alban hills, and distant abont 15 miles from Rume. Its foundation was ascribed, according to a tradition reported by Servius (ad Aen. vii. 796), to Glaucus, a son of Minos: and Virgil (l.c.) mentions it ameng the cities which sent assistance to king Latinus against Aeneas, so that he must have regarded it as more ancient than the Trojan settlement in Latium. But the current tradition, adopted by Dionysins, represented Labicum, in common with so many other Latin cities, as a colony of Alba. (Dionys. viii. 19 ; Miodor. ap. Euseb. Arm. p. 185.) Whatever was its orgin, we know with certainty, that it was one
of the cities of the Latin League, and as such retained, down to a late period, the right of participating in the sacrifices on tbe Alban Mount. (Dionys. v. 61 ; Cic. pro Planc.9.) It first appears in history as taking part in the league of the Latins against Rome previous to the battle of Regillus (Dionys. l. c.), and is afterwards mentioned among the cities which are represented as taken in successiun by Coriolanus, during his campaign against the Romans. (Liv. ii. 39 ; Dionys, viii. 19.) It is not improbable that this legend represents the historical fact that Labicum, together with Bola, Pedum, and ether places which figure in the same narrative, actnally fell about that time into the hands of the Aequians, as Satricum, Corioli, and other towns further to the S., did into those of the Volscians. (Niebuhr, vol. ii. p. 259.) Bat during the subsequent wars of the Romans with the Aequians, Labicom always appears as a Latin city: and from its position on the frontier of Latium adjoining the Aequians, its name repeatedly occurs in the history of those contests. Thus, in B. c. 458 , its territory was ravaged by the Aequian general Gracchus: and in 418 we find the Labicans themselves abandoning the Roman alliance, and joining the Aequians, together with whom they establisbed a camp on Mount Algidus. Their combined furces were, however, defeated by the Roman dictator Q. Servilius Priscus, and Labicum itself was taken by storm. In order to secure their new conquest against the Aequians the Roman senate sent thither a colony of 1500 Roman citizens, which appears to bave maintained itself there, though attacked the very nest year by the Aequians. (Liv. iii. 25 , iv. $45-4 \pi, 49$.) In E. c. 383 , its territory was again ravaged by the Praenestines, at that time on bostile terms with Rome (Liv. vi. 21); and after a long ioterval, in B. c. 211, it once more sustained the same fate from the army of Hamibal. (Liv. xxvi. 9.)

From this time the name of Labicum disappears from listory, but we learn that it still existed as a municipium, though in a very poor and decayed condition, in the days of Citero. (Cic. pro Planc. 9, de Leg. Agr. ii. 35.) Strabo, however, speaks of the town as in ruins, and Pliny mentions the population "ex agro Labicano" in a manner that seems to imply that, though they still formed a "populus" or community, the city no longer existed. (Strab. v. pp. 230, 237; Plin. iii. 5. s. 9.) In like manner we find the "ager Labicanns" elsenhere mentioned, but no further notice of the town. (Snet. Caes. 83.) The inhabitants seem to have, under tbe Roman empire, congregated together afresh in the neighbourhood of the station on the Via Labicana, called Ad Quintanas, and bence assumed the name of Lavicani Quintanenses, which we meet with in inscriptions. (Orell. Inser. 118, 3997.) The territory appears to have been one of great fertility, and was noted for the escellence of its grapes. (Sil. Ital. viii. 366 ; Jul. Capit. (lod, Albin. 11.)

The position of Labicom has been a subject of much dispute, having been placed by different writers at Valmontone, Zagarolo, and Lugnano. But the precise statement of Strabo (v. p. 23i) as to the course of the Via Labicana, together with the fact that lie describes the ancient city as situated on a hill to the right of that read, about 120 stadia ( 15 Roman miles) from Rome, ought to have left no difficulty on the subject: and Holstenius long ago corrcetly placed the anciunt city on the hill ouw

## LABICUM

occupied by the village of La Colonna; a height a little in adrance of the Tusculan hills, and commanding the adjoining purtion of the plain. It is about a mile from the 15 th milestone on the loman roud, where, as we have scen, the suburb Ald Quintanas afterwards grew up, and is cettainly the only position that accords with Strabo's description. Nis ruins are visible; bat the site is one well calculated for an ancient city, of small matgnitude, and the discovery of the iuscriptions already uoticed in its immediate neighbourhood may be considered conclusive of the point. The modern villaye of $L a$ Colonna dates ouly from the 11th century. (Holsten. Not. ad Clue. p. 194 ; Fabrett. de Aspueduct. p. 182 ; Nibly, Dintorni di Romut, vol. ii. pp. 157 -164.) Ficoroni, in his elabotate work (Memorie dellar Prima e Sicomia Cittiz di Labico, tto. Roma, 1745), has laboured to prove, but certainly withont success, that Labicum was sitnated on the Colle dei Quadri, near Lugnumo, about 5 miles beyond La Colonna. The remains there discovered and described by bim remier it probable that Ingnano was an ancient site, probably that of Bola [BuLA] ; but the distance from Rome excludes the supposition that it was that of Labicum.

The Tia Lanicisis, which issued from the Porta Eoqnilina at Rome together with the Via Pracuestina, but separated from the latter immediately afterwards, held a course nearly parallel with it as far as the station Ad Quintanas; from whence it turned round the fout of the Alban hills, and fell into the Via Latina at the station Ad l'ictas, where the latter road had just descended from Alt. Algidus. (Strab. v. p. 237 ; flin. Ant. pp. 304, 305.) It is strange that the Itinerary gives the name of Lavicana to the contination of the road after their junction, though the Vis Latina was so mnch the more important of the two. The course of the ancient lia Labicana may he readily traced from the gates of Rome by the Torre Itignatara, Cento Gille, Torre Nuora, and the Osterite di Finncehio to the Osteria dellic Colonna, at the foot of the hill of that name. This Osteria is 16 miles from Rome and a mile beyond the ancient station Ad Quintanas. From thence the road proceeded to San Cesario, and soon after, quitting the line of the modern rad to Falmontone, strack off direct to join the Via Latina : but the exact site of the station Ad Pictas has not been determined. (Histphal, Kom. Kumpagre, Pp. 78-80; Gells Topogr. of Rome, p. 279.)

On the left of the Via Labicana, about thirteen miles and a half from liome, is a small crater-furmed Juke, which has often been considered us the ancient Lacus Regrillus: but the similar basin of the Lago di Cornufelle, near Tusculum, appears to have a better claim to that celebrated name. [lieghalus 1..ncts.]

The course of the Via Labicana in the immediate neighbonrhood of Rome was bordered, like the otber highways that issued from the city, with numerous sepulchires. many of them on a large scale, ath of massive cunstruction. Of those, the one now known as the Turre Pignatora, about throe miles from the Porth Ifaggiore, is represeuted by very ancient traulition, but with no other :athority, ns the mansoleum of 110lema, the mother of Constantine the (ireat. (Nibby, vol. ini. p. 243.) We leam, aloo, that the family tomb of the emperor Bidins Joliauns was situated on the same road, at the distance of 5 miles from liome. (Spartian. Viul. Jul. 8.)

## LACETANI.

LABISCO. [LAvisco.]
1.ABIS(UM. [lavisco.]
1.ABUTAS (Aaboras), a mmall river of the plain of Antioch. (Sitrab. xvi. p. 751.) It runs from the north, parallel to the Aseevernes, and, mixing with its waters and those of the Oenoparas coming from the cast, in a small lake, they flow off in one stream and juin the Orontes a little above Antioch. It is the western of the two rivers shown in map, Vol. 1. p. 115, and Pagrae (Bagras) is sitnated on its western bank near its mouth.
[G. W.]
LABRANDA ( $\tau$ à $\Lambda \dot{\alpha} 6 p a \nu \delta \alpha$ or $\Lambda a ́ 6 p a v \nu \delta a)$, a villace in the west of Caria, about 60 stadia from the town of Mylasa, to which the village belonged, and with which it was connected by a road called the sacred. Labranda was sitnated in the mountains, and was celebrated for it sanctuary of Zeus Stratios, to which processions went along the sacred road from Mylasa. Herodotus describes (v. 119) the sanctuary as an extensive grove of plane trees, within which a body of Carians, in their war against the Persians, retreated for safety. Strabo (xiv, p. 659) speaks of an ancient temple with a $\xi$ oúavon of Zeus Stratios, who was also surnamed "Labrandenus" or "Labrandeus." Aelian (H. A. sii. 30), who states that the temple of Labranda wa: 70 stadia from Mylasa, relates that a spring of clear water, within the sanctuary, contained fishes, with golden neeklaces and rings. Chandler (Autiq. of Iomia, pt. 1. c. 4, and Asia Minor, c. 55) was the first who stated his belief, that the ruins at Iakli, south of Kizeljik, consisting of a theatre and a ruined temple of the Ionian order, of which 16 columns, with the entablature, were then still standing, were those of ancient Labranda and of the temp.' of Zeus Stratios. But Choiseul Gouffier, Barbié du Bocage, and Leake (Asia Minor, p. 232), agree in thinking that these ruins belong to Euromus rather than Labranda. Their view is supported by the fact that the ruins of the temple have nothing very ancient about them, but rather show that they belong to a structure of the Roman period. The remains of Labranda must be looked for in the hills to the north-east of Mylasa. Sir C. Fellows (Journal. p. 261), apparently not knowing what had been dune by his predecessors, unhesitatingly speaks of the ruins at Iakli as those of Labranda, and gives an engraring of the renains of the temple under the name of the "Temple at Labranda."

LABRONIS PORTVS. [LIntratm.]
LABU's or LABU'TAS ( Aábos or Aaboútas), a mountain range in the N. of Parthia, mentioned by Polybius (x. 29). It seems to have a part of the greater range of $\$ 1$. Coronus, and is probably represented now by the Sobad-Koh, a part of the Elburz mountains.
[ V ]
LACANI'TIS (Aakavitis), the name of a district in Cilicia Proper, above Tarsus, betweon the rivers Cydnns and Sarus, and containing the town of Iremopolis. (Ptol. v. 8, § 6.)
[L.S.]
LACCURIS. [Oretant.]
LACEA. [lusimania.]
LACEDAEMION ( $а к \in \delta \bar{i} i \mu \omega \nu$, Steph. B. s. t.; Enstatb, ad. 1 ll . ii. 582), a torm in the interior of Cyprus. (Engel, Kypros, vol, i. p. 158.) [E. B, J.]

LACEDAEMON, LACRDAEJUNII. [LACO$\mathrm{NLA}$.

LACEREIA. [Dotics Campts.]
LACETANI (Aavetavor), ore of the small peoples of Ilisyania Tartaconensis, who occupied tho valleys at the S. foot of the Pyrences. (Lace-

## LACHISII．

LACIPPO．
tania quae subjecta Pyrenaeis montibus est，Liv．）． Their＂pathless forests＂（devia et silvestris gens， Liv．）lay S．of the Cerretani，W．of the lndi－ eetes，and N．of the Laletavi．（It is impossible to avoid the suspicion that these names are identical， especially as we bave the intermediate form LaB－ AETANi，and that Lacetania is only the N．part of Laletania．Moreover，the name is confonnded with the Jacetant in the MSs．of Caes．B．C．i．60．） Ouly one town is mentioned as belouging to them， and that without a name，bnt simply as having been taken by M．Cato．（I＇lut．Cat．Maj． 11 ；Liv． xxi． $23,26,60$ ，et seq．，$x x v i i i .24,26$ ，et seq．， xxxiii．34，xxxiv． 20 ；Dion Cass．xlv． 10 ；Martial， i．49．22．）
［P．S．］
LACHISH（Aaxis，LXX．；$\Lambda a ́ \chi є i s, ~ \Lambda a \chi \in i \sigma a, ~$ Josepl．），a city to the south of the tribe of Judah （Josh． $\mathbf{~ v} .39$ ），the capital of one of the petty kings or sheikhs of the Canaanites（x．3）．It was taken and destroyed by Joshua（iv． $31-33$ ），and is joined with Adorain and Azekah（2 Chron．xi．9）as one of the cities built，or rather fortified，by Rehoboam． It was besieged by Sennacherib on his invasion of Judiea，в．c．713．（2 Kings，sviii．14，17，xix．8．） It is placed by Eusebius and St．Jerome（Onomast． s．v．）seven miles south of Eleutheropolis，in Darana or＂the valley．＂（Josh．xv．39．）But for this it might bave been ideatified with $L^{\prime} m L \dot{d} k i s$ ，on the left of the road between Gaza and Hebron，abont five hours from the former，where is an ancient site ＂now covered confusedly with heaps of small round stones，among which are secn two or three fragments of marble columns．＂（Rohinson，Bibl．Res．vol，ii． p．388．）The objections to the identification are not， perbaps，so great as is represented：the title Um，equi－ valent to metropolis，would seem to mark it as a place of importance；and there is no other vestige of a town in those parts that can be referred to Lachish． It is con－iderably south of west from Beit Jebrin （Eleutheropolis），which is near enough to satisfy the description of Eusebins，who is not remarkable for precise accuracy in his bearings，nor，indeed，in his distances，except in the parts with which he was familiar，and on the more frequented thoroughfares． No argament can be drawn from its juxtaposition with Adoraim and Azekah，in 2 Chron．xi．9，as it might be near enough to group with them in a list of names which，it is evident，does nut pretend to geograpbical precision．
［G．W．］
LACIACA or LACIACUM（in the Peut．Table it is called Laciacis），a town in tbe north－west of Noricom（It．Aut．pp．235，258）．The name seems to be connected with＂laens，＂and thus to point to the lake district in upper Anstria；lence some have identified the place witb Seewalchen，or St．Georgen on the Attersee．But Muchar（Noricum，p．267） is probably right in identifying it with Franken－ markt．
［L．S．］
LA＇CIBI（Plin．iii．1．s． 3 ；ムaki Bis，I＇tol．ii． 4. § 11），a tributary town of Hispania Baetica，which Illiny assigns to the conventus of Gades，while Pto－ lemy places it among the cities of the Turdnli，in in the neighbourhood of Hispalis．
［P．S．］
 on the south coast of the Baltic，between the rivers Chalusus，and Suevus or Suebns．It is mentioned ouly by Ptolemy（ii．11．§27）．and it is certain that its site must be looked for to the west of Warnenuinde， but the precise spot cannot be ascertained，whence some bave identified it with 11 ＇ismar，others with Raseburg，and others again with Lauchlurg．［L，S．］

LACIDAE．［AtTIC．，p．326，a．］
LACIN1A．［Japydia；
L．ACI＇NIUM（ $\tau \grave{\prime}$ Aakíniov ăkpun：Capo delle Colonne），a promontory on the E．coast of the Bruttian peniusula，about 6 miles S ．of Crotona． It formed the soutbern limit of the gulf of Ta－ rentum，as the lapygian promontory did the northern one：the distance between the two is stated by Strabo，on the antbority of Polybins，at 700 stadia， while Pliny apparently（for the passage in its prenent state is obviously corrupt）reckons it at 75 Roman miles，or 600 stadia；both of which estimates are a fair approsimation to the truth，the real interval being 65 geog．miles，or 650 stadia． （Strab．vi．p． 261 ；Plin．iii．11．s． 15 ；Mel．ii． 4. §8．）The Lacinian promontory is a bold and rocky headland，forming the termination of one of the offshoots or branches of the great range of the Apeonines（Lucan．ii． 434 ；Plin．iii．5．s．6）：it was crowned in ancient times by the celebrated temple of the Lacinian Jone，the ruins of which， surviving throngh the middle ages，have given to the promontory its modern appellation of Capo delle Colonne．It is also known by that of Cupo Niur， a name evidently derived from the Greek Nás，a temple；and which seems to date from an early period，as the promontory is already designated in the Maritime linerary（p，490）by the name of Nans．That Itinerary reckons it 100 stadia frum thence to Crotona：Strabo gives the same distance as 150 stadia ；but both are greatly overrated． Livy correctly says that the temple（which stood at the extreme point of the promontory）was only about 6 miles from the city．（Liv．xxiv．3．）For the history and description of this famous temple， see Crotona．

Pliny tells us（iii．10．s．15）that opposite to the Lacinian promontory，at a distance of 10 miles from the land，was an island called Diosceron（the island of the Dioscuri），and another called the island of Calypso，supposed to be the Ogygia of Homer．Scylax also mentions the island of Calypso immediately after the Lacioian promontory（ $\S 13$ ， p．5）．But there is at the present day no island at all that will answer to either of those mentioned by Pliny：there is，in fact，no islet，bowever small，off the Lacinian cape，and hence modern writers have been reduced to seek for the abode of Calypso in a small and barren reck，close to the shore，near Capo Rizzuto，abont 12 miles S．of Lacininm．Swinburne， who visited it，remarks how little it corresponded with the idea of the Homeric Ogygia：but it is difficnlt to believe that so trifling a rock（which is not even marked on Zannoni＇s elaborate map）conld bave been that meant by Scylax and Pliny．＊The statement of the latter concerning the island which he calls Dioscoron is still more precise，and still more difficult to account for．On the other hand， be adds the names of three others，Tiris，Eranusa， and Meloessa，which he introduces somewhat vaguely， as if he were himself not clear of their position． Their names were probably taken from some poct now lost to us．
［E．H．B．］

L．ACOBRI＇tiA．［1．Lesithain：2．Vacenth］
1．ACONTA．LACONICA，or LACEDAEMON， the south－easterly district of Peloponnesus．

## I．Name

Its most ancient name was Lacerluemon（hake－ $\delta a / \mu: v \nu)$ ，which is the only forin found in Slomer， who applies this name as well to the country，as to its capital．（ll．ii． $5<1$, iii．239．244．\＆c．）The nsual name in the Greek writers was Laconica
 still continued to be used．（Ilerod．vi．58．）The Riomans eallel the comory Lacosica（Plin．xxy． 8．s．53：Laconice，Mda，ii．3）or Laconia （1Plin．vi．34．s． 39 ，xvii．18．s．30），the latter of which is the furm asually employed by modern writers．Mela（l．c．）also uses Lacosis，which is hurrowel from the Greek（it Aakwv＇s raia，Him． Hymur．in Apull．410．）The Ethnic names are Aárcu，－avos，Аакє $\delta a \mu$ о́vios，Lat．Laco or Lacon， －nis，Lavelaent nins：fem．Sávaıva，пakwvis，La－ romiv．The a names are applied to the whole free popalation of Iawtin，buth to the Spartan citizens anl to the Perimui，spoken of below（for autbori－ tice，see Clinton，$F, H . \times$ ol ii． $11,405,406$ ）．The are u－nally deriwed from a mythical liero，Laeot or Lacedacmon；but some modern writers think that the ront Lac is comictel with $\lambda a ́ k o s, ~ \lambda a ́ к к o s, ~ l a w n s, ~$ luruna，and wat given originally to the central distriet from its bine derply sumk betwem moun－ tains．（Curtias，Pelepounesus，vol．ii．p．309．）

## II．Genehal Deschhtion of the Constry．

The natural features of Laronia are strongly marked，and excreisel a powerfiul influmee upron the history of the people．It is a long valley，surroumbed on three siles by motutains，and opren only on the fourth to the sea．On the purth it is bounded by the sonthern barrior of the Acadian monntains， from which run in a garallel derection towams the sonth．the two lofty montuin ranzes of laygelus and Parnon，－the foriner divaline laconia nod Mvescnia，and terminatine in the fremothry of T．unarun，naw C．Matapurn，the southertment ex－ tremity of（i．aro and of Farope，the later stroth－ ing along the cantorn e ast，and terminating in the pronontory of Malea．The river Linetas flows through the cutire length of the waller h hier luetwern these monntan masses，and falls into the sea，which
was called the Laconian gulf．Laconia is well de－ aribed by Entipites ns a country＂hollow，sur－ $r$ tumbed by mountains，rugged，and difficult of arcess （1）：un enemy＂（ $n$ p．Strab．viii．p．366）；and the difficulty of involing it made even Epaminotidas hesitate to enter it with his army．（Nen，IIell．v． 5. § 10．）On the northern side there are only two natural passes by which the plain of Sparta can be invaded．（Sce below：）On the western side the lofty masses of Taygetus form an almost insurmountable larrier；and the pass across them，which leads into the plain of Sparta，is so difficult is searcely to be practicable for an anny．On the eastern side the rocky character of the coast protects it from invasion by sea．

## III．Moustaise，Rivers，and Plains．

 19：〒à Taû $\gamma \in \tau \alpha$ ，l＇ulyaen．vii． 49 ；Taygeta，Virg． Grorg．ii． 487 ：the first half of this word is said by Ilesychius to signify great）．This mountain is the loftiest in Peloponnesus，and extents in an almust unbruken line for the space of 70 miles from Leundari in Arcadia to C．Matapan．Its vast lecight，unbroken length，and majestic form，have been celebrated by buth ancient and modern writers． Homer gives it the epithet of $\pi \in \rho \not \subset \hat{\eta} \kappa \in \tau u v$（ $O d$ ．vi． 103），and a modern traveller remarks that，＂whether from its real height，from the grandenr of its outline， or the ahruptuess of its rise from the Ylain，it created in his mind a strouger impression of stupendous bulk and loftiness thrm any montatain he had seen in Greece，or perhaps in any other part of Europe．＂ （ Alure，Tinur in Greece，vol．ii．p．221．）Taygetus rises to its greatest height immediately ntove Sparta， It principal summit was called Taletiom（Ta入e in antiquity ：it wav sacred to the Sun，and horses and other vietims were here sacrificed to this god． （Paus．iii．20．§ 4．）It is now called S．Elins，to whose chapel on the summit an aunual pilgrimage is made in the mididle of the summer．Its height has been ascertained by the Freneh Commission tu be 2409 metres，or 7902 English feet．Another summit near Taletum was called Evoris（Eviópas， Belvelere，I＇aus．l．c．），which Leake jdentifics witls M1t．Paximádli，the highest summit next to St．Elias， from whieln it is distant $5 \frac{1}{2}$ geographical miles． The ancient names of none of the other lieights are mentioned．

By the Byzantine writers Taygetns was called
 ＂Five Fingers，＂on accuunt of its various sum－ mits ahove the Spartan plain．（Con－tant．I＇orplayr． de $A \mathrm{dm}$ ．Imp．c．50．）In the 13 th century it bure the name of Mclinguis（ $\delta$ Svjùs tov̂ Me－ Aıクүoū，sce Leake，Pelopmnesiacu，p．138）．At the base of Taycetus，immedintely above the Spar－ tan plain，there is a lower ridge rouning parnlle］ to the bigher summits．This lower ridge consists of huge projecting masses of precipitous rocks，sume of which are more than 2000 feet hich，though they appear insignificant when compared with the Ifty barrier of laygetus behind thetn．After at－ taining its gratest elevation，Mt．Taygetus sinks gralualls down tuwards the south，and sends forth a long and lufty counterfork towards the Eurotas， now callel Lylkolini（AukaSoũv，Wolt＇s－mountain）， which bumbls the Spartan flain on the south．It there contracts again，and runs down，as the lack－ bone of a small $1^{\text {eninsula，to the southernmost es－}}$
tremity of Greece. This mountainous district bet treen the Laconian and Messenian gulfs is now called Mani, and is inhabited by the Jlanistes, who always maintained their independence, while the rest of Greece was subject to the Turks : the southern part of the peninsula, as well as the promontory, bore the name of Taenarua in antiquity. [Taexaber.] Although there is no trace of any volcanic action in Mt. Tayyetus, many of its chasms and the rent furms of its rocks have been produced by the numerous and violent earthquakes to which the district bas heen subjected. Hence Laconia is called by Humer "full of hollows" ( $\kappa \eta \tau \dot{\epsilon} \in \sigma \sigma \alpha, ~ 11$. ii. 581 , Od. iv. 1), aud Strabo describes it as a country easily shaken by carthquakes (Strab. viii. p. 367). In the fearful earthquake, which laid $S_{\text {parta }}$ in ruins in B. . 464 , and killed more than 20,000 Lacedaemonians, hage masses of rocks were rolled down from the highest peaks of Taygetus. (1lut. Cim. 16.)
On the sides of Mt. Taygetus are forests of deep green pine, which abounded in ancient times with game and wild animuls, among which Pausanias inentions wild goats, wild boars, stags, and bears. The district between the summits of Taletmm and Evoras was called Theras (eq́pas), or the hunting ground. (Paus. iii. 20. §§ 4, 5.) Hence Taygetus was one of the favourite haunts of the huntress Artemis ( Od . vi. 103), and the excellence of the Laconian dogs was proverbial in antiquity. (Aristot. Hist. An. vi. 20 ; Xen. de Ten. 10 . §̧ 1 ; Virg. Georg. iii. 40.5; Hor. Epod. vi. 5.) Modern travellers tell ns that the dogs of the country still support their ancient character for ferocity and courrage. (Nure, vol. ii. p. 231.)

The southern part of Mount Taygetus is rich in marlle and iron. Near Crucese there were quarries of green porphyry, which was extensively employed ly the Romans. [Croceae.] There was also another kind of marble obtained from quarries more to the sonth, called by the Romans Taenarian narble. The whetstones of Mount Taygetus were likewise in much request. (Strab. viii.p. 367 ; "Taenarius lapis," 1lin. xxxxi. 22. s. 43; "cotes Lasonicae ex Taygeto monte," Plin. xxxvi. 22. s. 47.) The iron found in the mountain was considered sery good, and was much used in the manufacture of warlike weapons and agricultural instruments. (Steph, B. s. $v$. Лaкєбаíयшv; Xen. II ell. iii. 3. § 7 ; Plin. vii. 57 ; Eustath. ad Il. p. 298, ed. Rem.)

Moent Pazson ( $\delta$ חáprav, Paus. ii. 38. § i) is of an entirely different character from the opposite range of Taygetus. It does not form one minterrupted line of mountains, but is troken up into various detached masses of less elevation, which furm a striking contrast to the unbroken and majestic barrier of Taygetus. The mass to which the name of Parnon was more especially applied was the range of mountains, now called Maler $\dot{0}$, forming the natural boundary between Arcadia, Laconis, and Argolis. It is 6355 teet ligh, and its summit is nearly equidistant from the Eurotas and the eastern coast. This mountain is continued in a general south-easterly direction, but how far sontllwards it continued to bear the name of Parnon is unknown. Its eastern declivities, which extend as far as the coast at a considerable eleration, contain the district now called Tzakonia, a corruption of the word Laconia, the inhabitants of which speak a dialect closely resembling the ancient Greek: of this an account has been gived elsewhere. [Vol. 1.
p. 728.] On its western side Mt. Parnon sinks down more rapidly, and divides itself into separate hills, which bear the names of Bapnosthkess, Olympes, Ossa, Thorsax, and Mexelaim; the two last are oppooite sparta, and a modern observer describes Menelaium as not remarkable cither for beight or variety of outline, hut rising gradually in a succession of gentle ridges. (Mure, vol. ii. p. 22.3.) In its southern continuation, Mt. Parnon still continues of moderate height till near the commencement of the peninsola between the Myrtoan and Laconian gulfs, where it rises under the name of Mount Zarax (Zápag) to a height of 3500 feet, and ruas along the eastern coast at a considerable elevation, till it reaches the promuntory of Nialea.

The Ecrotas (Eípútas) flows, as already observed, thronghout the entire length of the valley between the ranges of Taygetus and Parnon. Its more ancient names were Boarcas (Bwuíкаs, Etym. M. s. v.) and Hameb's ("1 $\mu$ крos, Plut. de Fluv. 17): it is now called Iris and Niris in its upper and middle course, and Basili-potgmo from the time it leaves the Spartan plain till it reaches the sea. In its course three districts may be distinguished; - the vale of the upper Eurotas; the vale of the middle Eurotas, or the plain of Sparta; and the vale of the lower Eurutas, or the maritime plain. 1. The Jale of the Upper Eurotas. The river Eurotas rises in the mountains which form the sonthern boundary of the Arcadian plains of Asea and Megalopolis. It was believed by buth Pausanias and Strabo that the Alpheius and the Eurotas had a common origin, and that, after flowing together for a short distance, they sank under ground; the Alpheius reappearing at Pegae, in the territory of Megalopolis in Arcadia, and the Eurotas in the Bleminatis in Laconia; but for a fuller account of their statements upon this subject the reader is referred to the articie Alpheies. All that we know for certain is that the Eurotas is formed by the union of several copious springs rising on the southern side of the monntain ahove mentioned, and that it flows from a narrow glen, which gradually opens towards the SSW. On the eastern side it keeps close to the mountains, while on the western side there is a little level ground and some mountain slopes between the river and the heights of Taygetus. At the distance of little more than a mile from Sparta, the Eurotas receires the Oexts (Oivoûs, Polyb. ii. 65, 66; Athen. i. p. 31; Liv. xxxiv. 28), now called Kelefina, which rises in the watershed of Mt. Parnon, and flows in a general sonth-westerly direction: the principal tributary of the Oerms was the Goreylers (róp ${ }^{\prime}$ unos, Polyb. ii. 66), probably the river of 1 resteni. (Leake, Peloponnesince, p. 347.) Nearly opposite the union of the Oenus and the Eurotas, the mountains of Taygetus press close upon the river, but again slmost immediately withdraw to a greater distance than before, aud the river emerges into the Spartan plain.
2. The Tale of the Midlle Eurotas. Sparta is situated at the commencemeut of this vale on the twit bank of the Eurotas. Between the river and MI. Taygetus the plain is of considerable extent. Its soil is particularly adapted for the growth of olives, which are in the present day preferred to those of Athens; and the silk of the Spartan plain is superior to the silk of every other district of Greece. (Mure, vol. ii. p. 224.) The soil, however, cannot be compared with that of the rich Jessenian
plain，and hence Euripides，in contrastin，the two conntries，describes Laconia as a poor laud，in which there is a large tract of arable，but of laburious tillage（ap．Stab）viii．p．36it）．This is in ac－ cordunce with the account of leake，who says that the soil of the plain is in gencral a poor misture of white clay and stones，difficult top plough，and better suited to olives thatn corn．（Morea，vol，i．p．14s．） The vale，howerer，possesses a genial climate，being shottered on every side by mountains，and the scenery is of the most lipantiful description．Hence Lacedaemon has been aptly characterised by Honer
 ii． 581 ，iii． 443, Od,$~ i v . ~ 1)$ ．The climate is favour－ able to beaty；and the women of the Spartan plain are at present taller and more robust than the other （irceks，have more culour in general，and look healthier；which agrees also with Homer＇s Sake－ סainova ка入入ıү́v́vaka（Leake，Morea，vol．iii．p． 149）．The security of the Spartan plain against hostile attacks has been briefly alluded to．There were only two roads practicuble for an invading army；one by the upper Eurotas，leading from sonthern Arcadin and Stenyclarus；the other by the long and narrow valley of the Oenus，in which the roads from Tecea and Argos united near Sellasia．

3．Vale of the Loser Eurotas．At the southem extrensity of the Spartan plain，the mountains again nuproach so close．as to leave scarcely space for the pasage of the Eurotas．The monntains on the western side are the long and lofty counterfork of Mt．Taygetus，called Lykobuini，which bas been already mentioned．This gorge，through which the Eurotas issnes from the rale of Sparta into the maritime plain，is mentioned by Strabo（ó Eivpótas
 about 12 miles in length．The maritime plain， which is sometimes called the plain of Helos，from the town of this name upon the ennst，is fertile and of some extent．In tbe lower part of it the Eurotas flows through marsbes and saudbanks into the La－ conian gulf．

The banks of the Eurotas and the dry parts of its bed are overgromn with a profusion of reeds． Hence the epithets of סovaroтрбфаs and סovakóets are frequently given to it by the poets．（Theogn． 785；Eurip Ipligg．in A 4ut．179，Helen，207．）
The only trihutary of the Eurotas，which pos－ sesses an indcurndeat valley，is the Oenus already mentiuned．Ihe other trihutaries are mere moun－ tain torrents，of which the two following names have been preserved，both desending from Mt．Tar－ getus throngh the Suran plain：Tiasa（Tiaara， l＇als．iii．18，§ 6 ；Atben，iv．p．139），placed hy l＇ausanias on the road from Auyclap to Sparta，and hewe ilentified loy lasake with the Pand leimona； Jimblifa（фé入ıa，iii．20．§3），tho river between Ausclae and Pharis．The Cxactos（Kvakiwv）， meutioned in one of the ordinauces of l．yeurgus，was identified by later writers with the Oenus．（Plut． L．yc．6．）

The strearis Suext＇s and Scymas，flowing into the soa on the westenn side of the lacomian gult， are spoken of below．［Sice 1．114，b．］

Before leaving the rivers of Lacomia，a few words must be sain respecting an ancient Laconian hridge still existing，which has been assigned to the re－ motest autiquity．This is the bridge of Xorokanpo， built over a tributary of the Eurotas，about three hours＇ride to the south of Sjarta，just whore the strean issucs from one of the decpest and darkest
golzes of Taygetus．It was first discovered by Ross，and has been deseribed by Mure，who supposes it to belong to the same period as the monuments of Mycenae．Even if it dors not belong to so early a date，but is a gennine IIellenic work，it would esta－ blish the fact that the Greeks were arquainted with the nse of the concentric arch at a very carly period； whereas it has been usually supposed that it was not known to them till the time of Alexander the Great．The general appearance and character of this structnre will be best seen from the annexed druwing taken from Mure．The masenry is of the polygonal species：the largest stones are thase of the arel，some of which are fiom four to five feet long， from two to three in breadth，and between one and two in thickness．From the character of the struc－ tnre，and from its remote situation，Mure concludes that it cannot be a Roman work；and there are strung reasons for believing that the Greeks were acquainted with the use of the arch at a mncb earlier period than has been usually supposed． （ Mure，vol，ii．p．247，seq．；comp．Leake，Pelopon－ nesurca，p．1t 6, self．）

BHIDGE OF XEROKANPO．
There are no other plains in Laconia except the three ahove mentioned in the valley of the Eurotas； but on the slopes of the momntains，especially on those of Parnou，there is a considerable quantity of arable as well as pasture ground．The whole area of Laconia is cuaputed to contain 1896 English square miles．

## 1V．History．

The political history of the country forms a proniment part of Grecian history，and cannot be narrated in this place at sufficient length to be of ralue to the student．But as the boundaries of Laconia differed considerably at varions periods， it is necessary to mention briefly those facts in the bistory of the country which produced those changes．

It will be seen from the preceding description of the physical features of Lateonia，that the plain of Syarta forms the very kernel and heart of the country．Accordingly，it was at all times the seat of the ruling class；and from it the whole country received its appellation．This place is said to have been originally inhabited by the Leleges，the most ancient mhatitants of the country．According to traditiom，Lelex，the first king，was succeeded by his son Myles，and the latter by his son Eurutas，who collected into a clonnnel the waters which were spmed over the phain，and gave his own name to the river which he had thus formed．He died without male offspring，and was suceceded by Lacedaemon， the son of Leus and Taygeta，who married Sparti，
the daughter of his predecessor. Lacedaemon gave to the people and the country his own name, and to the city which he founded the name of his wife. Amyclas, the son of Lacedremon, founcled the city called after him Amyclae. (l'ans, iii. 1.) Subsequently Lacedaemon was ruled by Achaean princes, and Sparta was the residence of Nenelans, the brother of Agamemnon. Nenelans was succeeded by Orestes, who married his daughter Hermione, and Orestes by his son Tisamenus, who was reigning when the Dorians invaded the country under the guidance of the Heracleidae. In the threefold division of Peloponnesus among the descendants of Hercules, Lacedaemon fell to the share of Eurysthenes and Procles, the twin sons of Aristodemus. According to the common legend, the Dorians conquered the Peloponnesus at once; but there is sufficient evidence that they only slowly became masters of the countries in which we afterwards find them settled; and in Laconia it was some time before they obtained possession even of all the places in the plain of Sparia. According to a statement in Ephorus, the Dorian conquerors divided Laconia into sis districts; Sparta they kept for thernselves; Amyclae was given to the Achaean Philonomus, who betrayed the country to them; while Las, Pharis, Aegys, and a sixth town the name of which is lost, were governed by riceroys, and were allowed to receive new eitizens. (Ephor, ap. Strab. viii. p. 364 ; on this corrupt passage, which has been happily restored, see Niiller, Dorians, vol. i. p. 110, transl. ; Niebuhr, Ethnograph. vol. i. p. 56, transl. ; Kramer, ad Strab. l. c.) It is probable that this division of Laconia iuto six prorinces was not actually made till a much later period; but we have sufficient eridence to show that, for a long time after the Dorian conquest, the Dorians possessed only a small portion of Laconia. Of this the most striking proof is that the Achaean city of Amyelae, distant only $2 \frac{1}{2}$ miles from $\mathrm{S}_{\text {parta, }}$ maintained its independence for nearly three centuries after the Dorian conquest, for it was only subdued shortly before the First Messenian War by the Spartan king Teleclus. The same king tork Pharis and Geronthrae, both Achaean cities ; and his son and successor, Alcamenes, conquered the town of Helos, apon the cuast near the mouth of the Eurotas. (Pans iii. 2. $\$ \$ 6$. 7.) Of the snbjugation of the other Achaean towns we have no accunuts; but there can be little doubt that they were mainly owing to the military organisation and martial spirit which the Spartans had acquired by the institutions of Lyeargus.

By the middle of the eighth century the Dorians of Sparta had become undisputed masters of the whole of Laconia. They now began to extend their dominions at the expense of their neighbours. Originally Argos was the chief Dorian power in the Peloponnesus, and Sparta only the second. In ancient times the Argives possessed the whole eastern coast of Lacoma down to Cape Malea, and also the island of Cythera (Herod. i. 82) ; and although we liare no record of the time at which this part of Laconia was conquered by the Spartans, we may safely conclude that it was before the Messemian wars. The Durians in Messenia possessed a much more fertile territory than the Spartans in Laconia, and the latter now began to cast longing eyes npon the richer fields of their neighbours. A pretext fur war soon arose; and, by two long protracted and obstinate contests, usnally called the First and Second Messenian wars (the first from R. c. $7 \pm 3$ to

724, and the second from r. c. 685 to 668), the Spartans conquered the whole of Messenia, expelled or reduced to the condition of Helots the inlabitants, and annesed their country to Laconia. The name of Messenia now disappears from history; and, for a period of three centuries, from the close of the Second Messenian War to the restoration of the independence of Messenia by Epaminondas, the whole of the sonthern part of Pcloponnesus, from the western to the eastern sea, bore the appellation of Laconia.
The upper parts of the ralleys of the Eurotas and the Oenns, the districts of Sciritis, Beleminatis, Maleatis, and Caryatis, originally belonged to the Arcadians, but they were all conquered by the Spartans and annexed to their territory before B. C. 600. (Grote, Mist. of Greece, rol. ii. p. 588.) They thas extended their territories on the north to what may le regarded as the natural boundaries of Laconia, the mountains forming the watershed between the Eurotas and the Apheius; but when they crossed these limits, and attempted to obtain possession of the plaio of Tegea, they met with the most determined opposition, and were at last obliged to be content with the recognition of their supremacy by the Tegeatans, and to leave the latter in the independent enjoynient of their territory.

The history of the early struggles between the Spartans and Argives is unknown. The district on the coast between the territories of the two states, and of which the plain of Thyreatis was the most important part, inhabited by the Cynurians, a Pelasgic yeople, was a frequent object of conteution between them, and was in possession, sometimes of the one, and sometimes of the other power. At length, in B. C. 547, the Spartans ohtained permanent possession of it by the celebrated battle fought hy the 300 champions from either nation. [Crsuma.] The duminions of the Spartans now extended on the other side of Mount l'arnon, as far as the pass of Anigraea.

The popnlation of Sparta mas divided into the three classes of Spartans, Perioeci, and Helots. Of the condition of these classes a more particnlar account is given in the Dictionary of Antiquities; and it is only necessary to remark bere that the Spartans lived in Sparta itself, and were the ruling Dorian class ; that the Perioeci lived in the different townships in Laconia, and, though freemen, had no share in the government, but received all their orders from the ruling class at Sparta; and that the Helots were serfs bound to the soil, who cnltivated it for the benefit of the Spartan proprietors, and perhaps of the Perioeci also. After the extension of the Sjartan dominious by the conquest of Messenia and Cyouria, Laconia was said to possess 100 townships (Strab. viii. p. 362), among which we find mentioned Anthana in the Cynurian Thyreatis, and Aulon in Messenia, near the frontiers of Elis. (Steph. B. s. vv. 'Avөáva, Aú入úv.)

According to the common story, Lyenrgus divided the territory of Lacunia into a nnmber of equal lots, of which 9000 were assigned to the Spartans, and 30,000 to the Perioeci. (Plut. Lyc. 8.) Some ancient critics, however, while beliesing that Lycurgus made an equal division of the Lacouian lands, supposed that the above numbers referred to the distribution of the Lacelaemonian territory after the incorporation of Messenia. And even with respect to the latter opinion, there were two different statements; some maintained that 6000 lots had been
given by Lycurgns, and that 3000 were athed ly king l'olydorns at the end of the Firet Mewnian War; others supposed that the original numbert of 4500 was doubled by Polydorus. (Plut. l. c.) From these statements attempts have leen male by modern writers to calculate the population of I.aconia, and the relative numbers of the suartans and the Pec ivecti: but Mr. Grote has brought formard strong reasons for befieving that no sach division of the landed property of Laconia was ever made by Lycuryas, mand that the belief of his having done so arose in the third century before thie Cliristian era, when Atin attempted to make a fresh division of the land of Lacollia. (Grote, Ilist. of Greece, vol. ii. p. 521.) In any case, it is inpussible to determine, as some writers have attempted, the lands which belonged respectively to the Spartas and the Perioeci. All that we kinow is, that, in the lav proposed by Agis, the land bound by the four limits of Pellene, Sllasia, Malea, and Taygetus, was diviled into 4500 lots, oine for cach Spartan ; and that the remainder of T,aconia was divided iuto 15,000 lots, one for each Prerinecus (Plut. Alyis, 8.)
With respect to the population of Laconia, we lave a few isolated statements in the ancieat witers. of these the most important is that of Herodotus, who says that the citizens of Sjarta at the time of the Persian wars was about 8000 (vii. 234). The number of the Perive:i is nowbere stated; but we know from Herolotus that there were 10.000 of theyn present at the battle of Platiaea, 5000 beavyarmed, and 5000 light-armed (ix. 11, 29) ; and, as there were 5000 sipartaas at this battie, that is fiveeizhths of the whole number of citizens, we may venture to assume as an approximate number, that the Periveci at the hattle may have been abo fiveeightis of their whole number, which would give 16,000 for the males of full aree. After the time of the I'ersian wars the number of the spartan citizeas gradually but steadily declined; and Clinton is prolably riglt in his supposition that at the time of the invavion of Laconia, in E. c. 369 , the total number of Spartans did not exceed 2010: and that Isocrates, in describing the oriyinal Dorian conyuerors of Tacumia as only 2000, has probably :ulispted to the description the aumber of Spartias in his awn tirae. (1-ocr. Panath. p. 286, c.) About 50 years after that event, in the time of Aristote, they were searely 1000 (Aristot. Pol. ii. 6. § 11 ): tud eichty years still later, in the reign of Ayis, 13. C. 244, their number was reduced to only 700 (Plut. Alyis, 5.) The number of Helots was very large. At the battle of Plataea there were 33,001 lizht-armed Heluts, that is seven for every single Sputan (llerol. ix. 28.) On the paphation of Lawonia, see Climton, F. H. vel. ii. p. fō, seq.

From 13. c. 547 to n. c. 371 , the baundaries of Laconia continurd to be the same as we have mentiuned sbove. But after the cuerthrow of her suprenuacy by the f.tal battle of Leustra, the Spartans were successively stripped of the duminions they had acquired it the expetas of the Messenians, Areadians, and Argives. Epaminundas, by establishing the independent state of Messmis. coalined the - partans to the country cast of Mount Taygetus; and the Areadian city of Megalopoli, which was formbed by the same statesman, encroached upon the Spartan territory in the upper vale of the Eirotis. White the Thebans were engaged in the Sucrel War, the Spartans endeavoured to recover sonic of their territory which they bad thus lost;
bul If was still further circumseribed by Philip, the fathin of Alexander the Great, who deprived the spartans of several districts, which he assigned to the Argives, Arcalians, and Messenians. (Polyth. ix. 28 ; Pans iv. 28. § 2.) After the establishment of the Aebaeas L.rague their inflaence in the Pelupomnenns sank lower and lower. For a short time they showed unwonted vigour, under their king Cleomenes, whose resolution bad given new life to the state. They defeated the Achacans in several battles, and seemed to be regaining a portion at least of their former power, when they were checked in their progress by Antigonus Doson, whom the Achaeans called in to their assistance, and were at length completely humbled by the fatal battle of Scllasia, B. c. 221. (Dict. of Biogr. art. Cleomenes.) Soon afterwards sparta fell into the hands of a snccession of usurpers; and of these Nabis, oue of the most sanguinary, was connpelled by T. Quinctius Flamininus, to surrender Gythium and the other maritime towns, which had sided with the Romans, and were now severed from the sipartan dominion and placed under the protection if the Achasan League, B. c. 195. (Str.b. viii. p. 366; Thirlwall, Hist. of Greece, vul. viii. p. 326.) The spartans were thus confined almust to the valley in which thcir Dorian ancestors bad first settled, and, like them, were surrounded hy a number of hootile places. Seven years afterwards, B. C. 188, Sparta itself was taken by Philopremen, and annexed to the Acbaean League (Plut. Phil. 16; Liv. xxxviii. $32-34$ ); but this step was displeasing to the Rumans, who viewed with appreheasion the further increase of the Achaean League, and accordingly encouraged the party at Sparta opposed to the interests of the Achaemis. But the Ronan conquest of Greece, which soon followed, put an end to these dispates, and placed Laconia, together with the rest of Greece, under the immediate govermment of Rome. Whether the Lacedaenocian tuwns to which Flamininus bad granted independence were placed ayain usider the dominion of Sparta, is not recorled ; lunt we know that Augustus guaranteed to them their independence, and they are henceforth mentioned under the name of Eleuthero-Lacones. Paussnias says there were originally 24 towns of the Eleuthero-Lacones, and in his time there were still 18 , of which the aunles were Gythium, Teutbrone, Las, Pyrrhicus, Cacaepolis, Oetylus, Leuctra, Thalamue, Alagonia, Gerenia, Asopus, Actiae, Boeae, Zavax, Lpidaurus Limera, Braside, Geronthrae, Marios. (Paas. iii. 21. § 7.) Angustus shored favour to the Spartans as well as to the Lacedaemonians in general: he gave to Sparta the Messenian town of Cardamyle (1ans. iii. $26 . \$ 7$ ) ; he also annesed to Laconia the Scssenian tutn of Plarae (Paus. iv. 30. § 2), and gave to the Laceduemoniaus the island of Cythera. (Dion Cass. liv. 7.)
At the end of the fourth century of the Christian era, Laconia was devnstated by the Gioths onder Alaric, who took Sjparta (Zosim. v. 6). Subsequently Slavonians settled in the comnry, and retained pussession of it for a long time; but towards the end of the eighth century, in the reign of the empress Irene, the Byzantinic court made an effort to recover their dominions in Peloponnesus, and finally succecded in reducing to suljection the slawotians in the plains, while those in Laconia who would not subnit were obliged to take retuge in the fastursses of Mt. Taygetus. When the F'ranks becanie masters of Laconia in the 13th century, they found upon
the site of ancient Sparta a town still called Iacedaimonia; bnt in A. D. 1248 , Williatn Villelardoin built a fortress oo one of the rooky hills at the foot of Mt. Taygetus, about three miles from the city of Lacedaemonia. Here he took up his residence; and on this rock, called Misithra, usually pronounced Miströ, a new town arose, which became the capital of Laconia, and continued to be so till Sparta began to be rebuilt on its ancient site by order of the present Greek government. (Finlay, Medieval Greece, p. 230 ; Curtins, Peloponnesos, vol. ii. p. 214.)

## V. Towss.

1. In the Spartan Plain. - The three chief towns were Spirta, Amyclae, and Phabis, all situated near one another, and upon some of the lower lieights close to the Eurotas. Their proximity would seem to show that they did not arise at the same time. Arnyelae lay only $2 \frac{1}{2}$ miles south of Sparta, and appears to bave been the chief place io the country before the Dorian invasion, South of Amyclae, and on the road from this town to the sea, was Pharis, also an Achaean town in existence before the Dorian conquest. Tuenapye may be regarded as almost a part of Sparta. [Sparta.] $\mathrm{O}_{0}$ the slopes of MIt. Taygetus, above the plain, there were several places. They were visited by Pansantias (iii. 20. §§ 3-7), but it is difficult to determine the road which be took. After crossing the river Phellia, beyond Amyclae, he turned to the right towards the mountain. In the plain was a sanctuary of Zeus Messapeus, belonging, as we learn from Stephanus, to a village called Messapeae (Meqбamear), and beyond it, at the entrance into the mountains, the Homeric city of Berseae. In the mountains was a sanctuary of Demeter Eleusinia, and 15 stadia frem the later Lapitimecm, near which was Derrinum, where was a fountain called Anonus. Twenty stadia from Derrhium was Harplela, which borders upon the plain. Pausanias gives no information of the direction in which he proceeded from the Eleusinium to Harpleia. Leake supposes that he turoed to the south, and accordingly places Harpleia at the entrance into the plain by the bridge of Xerókampo; while Curtins, on the contrary, imagines that he tarned to the north, and came intn the plain at Miströ, which he therefore identifies with Harpleia. It is impossible to determine which. of these viems is the more correct. The antiquities and inscriptions discovered at Mistrá prove that it was the site of an ancient town, and Leake conjectures that it represeots the Homeric Messe.
2. In the J'ale of the Cpper Eurotas. - The road from Sparta to MIegalopolis followed the vale of the Eurotas. On tbis road Pansanias mentions first several moouments, the position of one of which, the tomb of Ladas, may still be ilentified. This tomb is deseribed as distant 50 stadia from Sparta, and as situated above the road, which bere passes very near to the river Eurotas. At about this distance from Sparta, Leake perceived a cavern in the recks, with two openings, one of which appeared to bare bceo fashioned by art, and a little beyond a semicircular sepulchral niche: the place is called by the peasants $\sigma$ roùs \$oúprous. (Leake, Morea, vol, iii. p. 13.) Further on was the Characoma (Xаро́кш $\mu \alpha$ ), a fortification, probably, in the narrow part of the ralley; above it the town Peliana, the frontierfortress of Sparta in the rale of the Eurotas; and 100 stadia from Pellana, Belemina. (Pans. iii, 20.§8
-21. §3.) In the neighbourhood of Belemina was Aegys, originally an Areadian town, which was conquered at an early period by the Spartans, and its territory annexed to Laconia. In the upper vale of the Eurotas was the Lacedaemonian Turpolis. (Liv. xxxv. 27.) Pellana was one of the three cities (Polyb. jr. 81) ; Belemina was undoubtedly another; and the third was eitber Acgys or Carystus.

The road to Terea and Argos ran along the vale of the Oenus. (l'aus, iii. 10. §§ 6-8.) After crossing the bridge over the Eurutas, the traveller saw oo his right hand Mount Thornas, upon which stood a colossal statue of Apollo Pythaeas, guarding the city of Sparta, which lay at his feet. (Comp. Herod. i. 69 ; Xen. Hell. vi. 5. § 27.) A little further on in the vale of the Oenus, was Sejlasia, which was the bulwark of Sparta in the vale of the Ocuus, as Pellana was in that of the Eurotas. Above Sellasia was a small plain, the only one in the vale of the Oenus, bounded on the east by Mt. Olympus and on the west by Mt. Evas : a small stream, called Gorgylns, flowed throngh the western side of the plain into the Oenus. This was the site of the celebrated battle in which Cleomenes was defeated by Antigonus. [Sellasla.] In this plain the road divided inte tro, one leading to Argos and the other to Tegea. The road to Argos followed the Oenus; and to the west of the road, about an hour distant from the modern Aruikhova, lay CAhyae. From this place to the confines of the Thyreatis in Argolis, was a forest of oaks, called Scotitas (ミкотitas), which derived its name from a temple of Zeus Scotitas, abont 10 stadia west of the road. (Paus. iii. 10. § 6; Polyb. xvi. 37.) On the ridge of Mt. Parnon the boumdaries of Argolis and Laconia were marked by Hermae, of which,
 may perhaps be the remains. (Ross, Reisen im Peloponnes, p. 173.) There was also a town Uexts, from which the river derived its name.

The road to Tegea, which is the same as the present road from Sparta to Tripolitzi, after leaving the plain of Sellasia, passes over a high and mountairons district, called sciritis in antiquity. The territory of Laconia extended beyond the higbest ridge of the mountain; and the chief source of the Alpheins, called Sarantopitamos, formed the boundary between Laconia and the Tegeatis. Before reaching the Arcadian frontier, the road went through a narrow and rugged pass, now called Klisura. The two towns in Sciritis were Scmes and Oeum, called Ium by Xenophon.
3. In the southern part of Laconia. - On the road from Sparta to Gythium, the chief port of the country, Pausanias (iii. 21. § 4) first mentions Croceae, distant about 135 stadia from Spanta, and celebrated for its quaries. Gythucm was 30 stadia beyond Croceae. Above Gythium, in the interior, was Aeglae, to which a road also led from Croceae. Opposite Gythium was the island Cranar. After giving an account of Gytbium, Pausanias divides the rest of Laconia, for the purpuses of his description, into what lies left and what

Following the order of Pausanias, we will first mention the towns to the left or east of Gythiam. Thirty stadia above Gythium was Trinases, situated upon a promontory, which formed the NF. extremity of the peninsula terminating in Cape

Taenarnm. Eighty stadia bevond Trinasus mas Hetos, aloo upon the coast. Thie road from Sparta to Helos followed the Eurotas the greater part of the way; and leake noticed in several parts of the ruck ruts of chariot wheels, evidently the vestiges of the aucient carriage-road. (Leake, Morea, vol. i, p. 194.) Thirty staulia south of Helos on the coast was Acriae; and sixty stadia south of Acriae, Asoriss, the later name of Cypsetssis. Between Acriae and Asopus, Ptolemy mentions a town Mismmsa (Buávowa, iii. 16. §9), the name of which werors in an inscription in the form of Biadimupolis (Bıaס[tw]ounoneitav, Bückh, Inse. No. 1336). Between Asopus and Acriae was an inland plain, called Leues, containing in the interior a town of this name, and in the same veighbourhood was Preside. Feturning to the coast, 50 stalia sonth of Asopus, was a temple of Asclepius, in a spot called Hyperteleatus. Two hundred stadin sonth of Asopas was the promontory and peninsula OvegNathus, connected with the mamland by a narrow isthmts, which is, bowever, generally covered with water. Between Onugnathus and Malea is a considerable bay, called Boeations Sinus, from the town of Boese, situated at its head. In this neighbourhood were three ancient towns, called Eus, Aphropistis, and SIDE, which were founded by the Dorians; the two firmer on the Boraticus Sinus, and the other on the eastern sea north of Cape Malea. Between Buese and Malea was Nrmphaelas (Númpauy or Núpauvv), with a cave near the sea, in which was a fountain of sweet water. Pausanias (iii. 23. §2) calls Nymphanm a $\lambda i \mu \nu \eta$, hat, as there is no lake in this neichlourhood, Boblaye conjectures (Recherches, q'c. p. 99) that we should read $\lambda_{t \mu} \lambda^{2} \nu$, and phaces Nymplaenm at the harbour of Santa Murina, where a fountain of water issues from a grotto. The promontory Malea (Manéa, Steph. B. s. v. et alii ; Ma入éat, Herod. i. 82; Strah. viii. p. 368), still calles Malidi, the most southerly puint in Greece with the exception of Taenarum, was mach dreaded by the ancient satilurs on account of the winds and waves of the two seas, which here mect tuenther. Hence arose the proverb, "after donlling Malea, forget your country" (Strab. viii. p. 3is), and the epithet of Statims, "formidatum Naleae caput" (Theb, ii. 33). On the promontory there was a statne of Apillo. (Steph. B. s. v. Aierforos ; 'A $\delta \delta \lambda \lambda \omega \nu \nu \mathrm{M} \alpha \lambda \epsilon \alpha \dot{\alpha} \eta \overline{2}$, Paths. iii. 12. § 8.) South of Malea was the ishund Cytulea. Followiug the eastern coast we first come to Sidx, already mentioned; then to Erideliu:m, 100 stadia from Malea; nest to Epidautus Limeka, and successively to Zarax, Crpmanta, and Prashae or Brasiae, of which the last is near the confines of Argolis. The numbers in Palasanias, giving the distances of these places from one another, are corrupt: see Cypilanta. In the interior, between the Lurotas and the south-western slopes of Parmon, Pausanias mentions Gemoxrmmak, situated 120 stadia north of Acrine; Manirs, 100 stadia east of Geronthrac; GLyPris, also callel (ilympia, north of Marius; and Semints, 20 stadia from Gieronthrae.

Returning now to Gythium, we proceed to enumerate the towns to the right, that is, west and south, of this phace, aceording to the phan of Pausanias (iii. 24. § 6, seq.) ; in other words, the towns in the peninsula throngh which Mount Taygetus runs. Forty stadia south of Gythium was I.as upon the coast, which some writers call Asine. Thirty stadia from a hill near Las was 1lyPst, in
the interior; and a little below Las was the river Smemus ( $\sum \mu \hat{\eta} v u s$ ), rising in Mt. Taygetus, which lrausanias praises for the excellence of its water, now tho river of Passitved. Immediately south of this river was the temple of Artemis Dictyma, on a promontory now called Ayheranos; and in the sume neighbourhood was a village called by Pausanias Araenus of Araenum, where Las, the fonnder of the city of Las, was said to have been buried. South of the promontory of Agheranus is a stream, now called the river of Dhikora, the Scybas (亡̌úpas) of I'ansanias (iii. 25. §1), beyond which were an altar and temple of Zens: there are still some ancient remains on the right side of the river near its mouth. Further south is the peninsula of Skutari, inclosing a bay of the same name, which is conjectured to be the sinus Acgilodes of Pliny (iv. 5. s. 8): if so, we must place here Aegila, which is mentioned incidentally by Pausanias (iv. 17. § 1) as a town of Laconia. Inland 40 stadia from the river Scyras lay Pymmenus. SF, of Pyrrhichus on the coast was Tecthrone. Between Tenthrone and the Taenarian peninsula no town is mentioned, but at a place on the cuast called Kikonia there are considerable remains of two temples. The Taenarian peninsula is connected with that of Taygetna by an isthmus half a mile across, and contains two harbours, named Psamathus and Achilleies Pohtcs [see Taenarum]: the extremity of the peninsula is C. Matopan. Pounding the latter point, and ascending southwards, we come to the town of TAEnarum, afterwards called Caenepolis, 40 stalia above the Taenarian isthmus. Thirty stadia N. of Caenepolis was the commencement. of the promontory Trymides, nearly as large as the Taenarian peninsula, lut connected with the mainland by a moch wider isthonus. On this promontary were the towns of Hippola and Messs. North of Messa was Oetylus; but the distance of 150 stadia, assigned Ly lausanias between the two places, is too much. [Oetyles.] Eighty stadia north of Oetylus was Tinatamae. situated inland, and 20 stadia from Tbalamae was Peruxis, upon the coast. Both these towns were apon the lesser Pamsus, now called the Miléa, which the Messenians said was originally the boundary of their territory. (Strab. viii. p. 361 ; l'aus. iii. 26. §3.) The districts north of this river were taken away from the Lacedaemonians by Philip in e.c. 338, and granted to the Messenians; but it is probable that the Jatter did not long retain possession of them. In the time of the Roman empire they formed part of EleutheroLaconia. (Leake, Peloponnesiaca, p. 179.) Twenty stadia north of Peplinas, upon the coast, was Levetra or Levethum ; and 60 stadia north of the latter, Cabidamyse, at the distance of 8 stadia from the sea. North of Cardanyle was Gerexia, the most northerly of the Eleuthero-Laconiun towns. Thirty stadia from Gerenia, in the interior, was Alagonla.
(On the geograply of Laconia, sce Leake, Morea and I'eloponnesiuca; Boblaye, Recherches, ge.; 10oss, Reisen im Peloponnes and 11'anderungen in Griechenutend; Curtins, Peloponn(sos.)
LACONICUS SIAUS, [LAconia.]
laconimulegl. [Celte: ; Vettonfs.]
LACRIN(i), mentiosed by Capitulinas (M. Antonin. c. 22), by Dion Cassius (1xxxi. 12), and by Petrus 1'atricius (Excerpt. Legat. p. 124, ed. Bomin), along with the Asmsig and Btim. They were cither Dacian or on the Dician frontier, and
are known only from haviag，in the Marcomannic war， opposed a boly of iavading Astings，and，baving so done，contracted an alliance with Rome．［R．G．L．］

LACTA＇RIUS MONS（Гд́лaктos úpos：Monte S．Angelo），was the name given by the Romans to a mountain in the neighbourhood of Stabiae in Cam－ pania．It was derived from the circumstance that the monntain abounded in excelleat pastures，which were famous for the quality of the milk they pro－ duced；on which account the moantain was resorted to by invalids，especially in cases of consumption， for which a milk diet was considered particularly heneficial．（Cassiod．Ep．xi．10；Galen，de Meth． Med．v．12．）It was at the foot of this mountain that Narses obtained a great victory over the Guths under Tel̈as in A．D．553，in which the Guthic king was slain．（Procop．B．G．iv．35，36．）The de－ scription of the Mons Lactarins，and its position with regard to Stabiae，leave no doabt that it was a part of the mountain range which branches off from the Apennizes near Nocera（Nuceria），and separates the Bay of Naples from that of Yaestum．The highest point of this range，the Monte $S$ ．Angelo， attains a licight of above 5000 feet；the whole range is calcareons，and presents beantiful forests，as well as abundant pastures．The name of Lettere，still borne by a town on the slope of the mountain side， a little above Stabiae，is evidently a relic of the an－ cient name．
［E．H．B．］
LACTORA，in Gallia Aquitania，is placed by the Antonine Itin．on the road between Aginnam（Agen） and Climberrum（Auch），and 15 Gallic leagues from each．The distance and name correspond to the po－ sition and name of Lectoure．Several Roman in－ scriptions have been discovered with the name Lac－ torates，and Civitas Lactorensium；but the place is not mentioned by any extant writer．
［G．L．］
LACUS FELICIS，a place in Noricum，on the south of the Danube， 25 miles west of Arelape，and 20 miles east of Laureacum（It．Ant．pp．246，248）． According to the Not．Imper．，where it is called La－ cufelicis，it was the head－quarters of Norican horse archers．It is now generally identified with the town of Niederwallsee，on the Dauube．
［L．S．］
LACYDON．［Massilla．］
LADE（ $\Lambda \alpha \dot{\alpha} \eta$ ），the largest of a group of small islands in the Sinus Latmicus，close by Miletus，and opposite the month of the Macander．It was a pro－ tection to the harbours of Miletus，but in Strabo＇s time it was one of the baunts and strongholds of pirates．Lade is celebrated in history for the naval defeat sustained there by the loniaus against the Persians in B．c．494．（Herod．vi．8；Thacyd．viii． 17,24 ；Strab．xiv．p． 635 ；Paus．i． $35 . \S 6$ ；Steph． B．s．v．；Pliu．v．37．）That the island was not quite uninhabited，is clear from Strabo，and from the fact of Stephanus B．mentioning the ethnic form of the vame，$\Lambda$ aঠ̃aios．
［L．S．］
LADICUS，a mountain of Gallaecia，the name of which occurs in ancient inscriptions，and is still pre－ served in that of the Codos de Ladoco，near Monte－ furado on the Sil．（Florez，Esp．S．vol．xv．p．63； Ukert，vol．ii．pt．1．p．278．）
［P．S．］
LADOCEIA（ тà ムaठóketa），a place in Arcadia， in the district Maenalia，and，after the building of Megalopolis，a suburb of that city，was situated upon the road from the latter to Pallaatiam and Tegea． Here a battle was fought between the Mantiveians and Tereatae，B．c． 423 ，and between the Achaeans and Cleomenes，E．c．226．Thacydides calls it Laodicium（ムauסiktov）in Oresthis．（Paus．viii， 44.
§ 1；Thuc．iv． 184 ；Pol．ii．51，55．）［Orestili－ sium．］

LADON（ $\Lambda$ a $\delta \omega \dot{\prime} \nu$ ）．1．A river of Elis，flowing into the Peneins．［Ells，p． 817 ，a．］

2．A river of Arcadia，flowing into the Alpheius． ［Alpheies．］
LAEAE1（土ataiot），a Paennian tribe in Mace－ donia，incladed within the dominion of Sitalces， probably sitnated to the E．of the Strymon．（Thuc． ii．96．）
［E．B．J．］
LAEAETA＇N1 or LEËTA＇NI（Aataitavoi，Ptol． ii．6．§§ 18，74；ムeๆravol，Strab．iii．p．159），a people on the N．part of the E．coast of Hispania Tarraconensis，above the Cosetani．Strabo merely speaks vaguely of the sea－coast butween the Ebro and the Pyrenees as belonging to＂the Leتttani and the Lartolaeëtae，and other such tribes＂（ $\tau \bar{\omega} \nu \quad \tau \epsilon$
 as far as Emporium，while Ptolemy places them about Barcino（Barcelona）and the river Rubri－ catas（Llobregat）；wheace it appears that they extended from below the Rubricatus on the SW．up to the borders of the Indigetes，apoa the bay of Emporiae，on the NE．They are uadouhtedly the same people as the Laletasi of Pliny（iii．3．s．4； comp．Inscr．ap．Grater．p．cdxxx．），who speaks of their country（Laletania）as producing gond wine in abandance．（Plin．xiv．6．s． 8 ；comp．Martial，i． 27,50 ，vii． 52 ；Sil．Ital．jii．369，xv．177．）Strabo describes it as a fertile country，well furnished with harbours．Besides their capital Barcino（Bar－ celona），they had the following towns：（1．）On the sea coast，from SW．to NE．：Baetulo（Bartou－ $\lambda \omega ́ v$, Ptol．ii．6．§ 19 ：Badelona；Muratori，p． 1033，no． 3 ；Florez，Esp．S．vol，xxir．p．56，vol． xxix．p． 31 ；Marca，Hisp．ii．15，p．159），witb a small river of the same name（Besos ：Mela，ii．6）； Iluro or Eluro，a city of the conveatas of Tarraco， with the civitas Romana（Mela，ii． 6 ；Plin．iii． 3. s． 4 ；Aì入oupúv，Ptol．ii．6．§ 19，where the valgar reading is $\Delta i \lambda o v \rho \bar{\omega} \nu$ ；prob．Mataro，Marca，Hisp． ii．15，p． 159 ；Florez，Esp．S．vol．xxix．p．34）； Blanda（Bגávסa，P＇tol．l．c．：Blanes），un a height， NE．of the month of the little river Lannum （Tordera：Plin．iii．3．s．4）：between Bactalo and Huro Ptolemy places the Lunarium Pr（ （houd－ poov äкpov；probably the beadland marked by the Torre de Mongat）．（2．）On the high road from Tarraco to Narbo Nartius in Gaul（Itin．Ant． p．398）：Fines， 20 M．P．W．of Barcino（near Mortorell，on the right bank of the Llobregat）， marking doubtless the borders of the Laeétami und the Cosetani ；then Barcivo ；neat Praetomum， 17 M．P．（near IIostalrich or Lat Roca，where are great ruins ；Marca，Hisp，ii．20）；Setermae or Secerrane， 15 M．P．（prob．S．Pete de Sercadr or San Seloni）；Aquae Voconias， 15 M．P．（Caldas de Malavella）．（3．）Other inland towns：Runim－ eata（Ptol．）；Egara，a municipium，whose site is unknown（Inscr．op．Muratori，p．1106，no 7， p．1107，no．1）；Aquae Calidae，a civitas sti－ pendiaria，in the conventus of Tarraco（Plin．iii． 3. s．4，Aquicaldenses：Caldas de Mombuy，N．of Bar－ celona，Marca，II isp．ii．16，p． 167 ；Florez，Esp．S． vol．xxis．p． 37 ；Ukert，vol．ii．pt．1．pp．423， 424．）
［P．S．］
LAEDERATA（ $\Lambda \in \delta \in \rho d \dot{\tau} \alpha a$ or Aitepará，Procop． de Aed．iv．6），a town in the north of Moesia，on the Danube，and a few miles east of Viminacium． In the Notitia its name is Laedenata；it must have been near the modern Rama．
L.AE'LIA (Aai入ia, I'tol. ii. 4. §12: Arnonc or El Bererucal), an inlaud city of the Turketans. in the W. of Ilispania Baetiea, not far from lalions one of the Spanish cities of which we have seword coins, belonging to the period of its indepmenere, at well as to the early Roman empire. Thicir typers atre, an armed horseman, at full sperd, with ears of coms, boughs, and palon-tress. (kluroz, Esp, S. vol. sii. pp. 256-258: . $1 / e d$ vol. ii. 1. 489 , vol. iii. p. 92; Niomuet, vol. i. p. 19, Supul. vol, i. p. 35 : Sotini, Med. pp. 20, 65 ; Num. (Buth.; Lekhel, vol. i. p. 25 ; Ckert, vol. ii. pt. 1. p. 373.) [P.'S ]

LAEPA (Lepe, noar Aymmonte), a city of the Tudetami, on the coast of Baetica, a little E. of the momth of the Amas (iumadalyuitio : Mela, iii. 1; compr. Plin. iii. 1. s. 3, where, hawever, the reatins is donbtfinl ; Bell. Alix. 57, where Lat pann shondid probably be sulatitutel for the MLS. readings of Leptim or Leptum; Florez, Esp. S. vol. x. p. 45, vul. xii. 14, 56. 57 ; Ukert, vol. ii. 1t. 1. p. 339. This place must not be confounded with l'tolemy's Lavira, which is only a various reading for [ип:
[P. S.]
LaERON FL. [Gallaecta.]
LAESIRY'GONES (Aavotpuyoves), a fabulurs people of ciants, who are mentioned by Homer in the Olyssey ( $x .80-132$ ) , and described as governed by a king named Lamus. They were a pastoral people, but bad a city ( $\check{\sigma} \tau v$ ) which Homer calls Sauorpuyovin, with a port, and a fountaio named Artacia. It may well be doubted whether Honser meant to assign any detioite locality to this people, any more than to the Cyclopes; but later Greek writers did not fail to fix the place of their abode, thongh opinions were muilh divided on the subject. The general tradition, as we learn from Thncydides (si. 2), placed them in Sicily, thongh that historian wisely declares bis total ignorance of everything concerning them. Other writers were less cantious; some fixed their abodes in the W. or NW. part of the islaod, in the country subsequently occupied by the Flymi (Lycophr. Alex. 956) ; but the more prevalent opioion, at least in later times, seems to have been that they dwelt in the neighlonurbod of Leantimi, whence the name of Laestrigonil Campi was given to the lertile plain in the neighbourhood of that city. (Strab, i. p. 20: Plin. iii. 8. s. 14; Tzetz. aul Lyyophler. 662,956; Sil. 1tal. xiv, 126.) A wholly different tradition, with the origin of which we are macquainted, but which is viry generally adopted by lioman writers, represented Formiae on the const of laly as the abole of the laestrygones, and the city of their king Lamus. The moble family of the Lainiue, in the days of Augustus, even pretended to derive their descent from the mythical king of the Laestrygones. (Cic. ad -Att ii. 13; Hor. Carm, iii. 17: 1 Plin. iii. 5. ※. 9 ; Sil. Ital. vii. 410.) [E.H.B.]

LAEJI or $1 . A 1$ (Aáos) a tribe of Cisalpine Ganls, who dwelt ncar the sources of the river Padus. This is the statement of Polybius (ii. 17), who associates then with the Libivii (Aebekiot), aml says that the two tribes occupiad the part of the plains of Cisalpine Gaul nearest to the sourees of the Padus, and next to them came the lnstuhres. He distinctly reckons them omong the Giaulish tribes who had crossed the Alps and settled in the plains of Northern Italy: on the other hand, both Livy and Pliny call thom Lerurians. (1.iv, v. 35 ; Plim, iii. 17. s. 21.) The reading in the passage of livy is, indend, very uncertain; but he would appear to agree with Pliny in placing them in the neighbourhood of Ticinum.

Pliny even ascribes the foundation of that city to the i.aeri, in conjunction with the Marici, a name otherwise wholly nuknown, but appareatly also a Licurian tribe. There can be no donht that in this part of Italy tribes of Gaulishs mad Ligurian origin were very mucb intermised, and probably the latter were in many cases confounded with the Gauls. [Ligima.]

LAGANIA (Aaravia), a village of the Tectosagae in Galatia, 24 miles to the east of Juliopolis, lt is not mentioned by any of the classical writers, but it must afterwards have increased in importance, for during the Christian period, it was the see of a bishop, and took the name of Ausstasiopolis (Concil. Chake. p. 662, and P. 95, where the name is misspult Muбavia: Itin. Ant. p. 142, where the name is Lagancos; It. Mieros. p. 57.4, where we read Agannia). There is little donbt that the Latania in l'tolemy ( $\mathrm{v}, 1 . \$ 14$ ) and the Rheganagalia of Hierocles (p.697) are the same as Lagania (contp. Theod. Syc. c. 2). Kiepert, in his map of Asia Mioor, identifies it with Beg Busar. [L. S.]

LAGARIA (Aarapia: Eth. Aarapıravós, Lagarinns), a small town of Lucania, sitnated between Thurii and the river Sybaris; which, according to the commonly received legend, was founded by a colony of Phocians under the command of Epeins, the architect of the wooden borse. (Strab. vi. p. 263; Lycopbr. Alex. 930 ; Tzetz. ad loe.) Strabo, the only geographical writer who mentions it, calls it only a fortress ( $\varphi$ poipiov), and it was probably never a place of any importance; though deriving some celebrity in after times from the excellence of its wine, which was esteemed one of the best in Italy. (Strab. l. c.; Plin. siv. 6. s. 8.) The statement of Strabo, above quated, is the only clue to its position, which cannot therefore be determined with any certainty. Cluverins placed it at Nocara, abont 10 miles from the sea, and this conjecture (for it is nothing more) las been adopted by Romanelli. The wines of this neighbomrbood are said still to preserve their ancient reputation. (Cluver. Ital. p. 1272. Romanelli, vol. i. p. 248.)
[E.H. B.]
LAGECUM. [Legeolium.]
LAGINA (Tà Adjuva), a place in the tenitory of Stratoniceia, in Caria, contained a most splendid temple of Hecate, at which every year great festivals were celebrated. (Stral, xiv. p. 660.) Tacitus (Ann. iii. 62), when speaking of the worslip of Trivia among the Stratoniceians, evidently means Hecate. The name of Lagina is still preserved in the village of Lakena, not far from the sources of the Tishiur. Laginia, mentioned by Steph. B. as a
 Lagima of Strabo.
[L. S.]
LAGN1 ( $\Lambda a \gamma \nu i$ ), a town of tho Arevacae, in Hispania Tarraconensis, mentioned orily by Diodorns Siculus (Excerpt, vol. ii. p. 596).
[1. S.]
LAGUS, a town in Plorygia, on the north-cast of Mandropolis. (Liv, xxxviii. 15.) The town is mentiuned only by Livy in his account of the progress of the lioman consul Cn. Manlius in Asia Minor, when Lagos was found deserted by its inhabitants, but well provided with stores of every description, whence we may infer that it was a town of some conse4uence.
[L.. S.]
LAGU'SA (ムárovoa, $\Lambda a \gamma \circ \hat{v} \sigma \sigma a)$, no island in the Acgaean sea, the name of which ocetrs in Strabo between those of Sicinus and 1Holegandrus. Heaco it is probably the same as Kardiotisara, a rocky islet between the two latter islands. But Kiepert,
in his map, identifies it with Polyaegus. (Strab. X. p. 484 : Steph. B. s. v. ; Eustath. ad Il. ii. 625, p. 306.)

LAGU'S. 1 ( $\Lambda$ á $\gamma \sigma v \sigma$ ), one of a group of small islands in the bay of Telmissus in Lycia, 5 stadia from Telmissus, and 80 from Cissidae. (Plin. v. 35 ; Steph. B. s. v. ; Stadiasm. Mar. Mag. §226, foll.) This island is generally considered to be the same as the modern Panagia di Cortialissa. [L. S.]

LAGESSAE, a group of small islands off the coast of Troy, to the north of Tenedos (Plio. v. 38 ; comp. Eustath. ad Ifom. Il. ii. p. 306). Their modern name is Taochan Adassi.
[L.S.]
LAISH, the more aucient uame of Dan. [Dan.]
LALASIS (Aaia $\sigma$ is, Ptol, v. 8. § 6, where some Mss. have $\Delta \alpha \lambda a \sigma$ is $)$, a district in Cilicia, extending along Mount Taurus, above the district called SeIentis. Pliny (v. 23) also mentions a town Lalasis in Isauria, and this town accordingly seems to have been the capital of the district Lalasis, which may have extended to the north of Mount Taurus. It is probable, moreover, that the Isaurian town of $L a$ lisanda, mentioned by Stephanus B., and which, he says, was in his day called Dalisanda, is the same as Lalasis; and if so, it is identical with the Dalisanda of Hierocles (p. 710). Basilius of Sclencia informs us that the town stood on a lofty heigbt, but was well prorided with water, and not destitute of other advantages. (Wesseling, ad Hierocl. l. c.). From all these circumstances, we might be iaclined to consider the reading $\Delta a \lambda a \sigma$ 's in Ptolemy the correct one, were it not that the coins of the place all bear the inscription $\Lambda a \lambda a \sigma \sigma \epsilon \omega \nu$. (Sestini, p. 96.)
[L. S.]
LALENESIS ( $\Lambda a \lambda \eta \nu \in \sigma$ is or $\Lambda a \delta o l \nu \notin \rho i s$, Ptol. v . 7. $\S 6$ ), a small town in the district of Melitene in Armenia Minor, on the east of Zoropassus. Its site is anknown, and no ancient writer besides Ptolemy mentions it.
[L. S.]

## LALETA'NI. [LaEËtani.]

LAMA. [Vettones.]
L.AMASBA (Itin. Ant. pp. 35, ter, $40:$ Lamasbua, Tab. Peut.), a city of the Massylü, in the interior of Numidia, near the confines of Manretania, 62 M. P. from Sitifi, and 62 from Tamugadi, Lapie and D'Avezac identify it with Ain-Ilazel, at the N. foot of the mountains of the Welled-Abd-enNour; but its site scems to agree better with the considerable ruins at Baitna, on the S. of those mountains, and W. of the M. Aurasius (JebelAuress: Sliaw, Travels, gc. p. 52 ; Pellissier, Exploration Scientifique de lAlgérie, vol, vi. p. 389).
[P. S.]
LAMBER or LAMBRUS, a river of Northern Italy, in Gallia Trauspadana, noticed by Pliny among the affluents of the Padus which join that river on its left or northern bank. (Plin, iii, 19. s. 23.) It is still called the Lambro, and rises in a small lake called the Lago di Pusiano (the Eupilis Lacus of Pliny), from whence it flows within 3 miles of Milan, and enters the Po about midway between the Ticino and the Adda. Sidonius Apollinaris contrasts its stagnant and weedy stream (ulvosum Lambrum) with the hlue waters of the Addua. (Ep. i. 5.) The Tabula as well as the Geographer of Ratvenm give a town of the name of Lambrum, of which no trace is found elsewhere. It is probably a corruption of a station, Ad Lambrum, at the passage of the river of that name, though the Tabula erroneonsly transfers it to the S. side of the Pains. (Tab. Peut.; Geogr. Rav. iv. 30.) [E. H. B.]

LAMBE'SE (Itin. Ant. pp. 32, 33, 34, 40: Tab. Pert.; ムáubaî́a, Ptol. iv. 3. § 29 ; Laminaes.i, Inscr.; Lambaese, Augustiv. adv. Donat. vi. 13 ; Lambesitana Colonia, Cyprian. Epist. 55 : Lemba or Tezzout, large Ru.), one of the most important cities in the interior of Numidia, belonging to the Massylii. It lay near the confines of Maurptania, at the W. foot of M. Aurasius (Jebel Auress), 102 M. P. from Sitiei, 118 from Theveste, and 84 from Cieta. It was the station of an entire legion,
 Ptol. l. c.; and Inser.). Its importance is attested by its magnificent ruins, among which are seen the remains of an amphitheatre, a temple of Aesculapins, a triumphal arcb, and other buildings, enclosed by a wall, in the circuit of which 40 gates have been traced, 15 of them still in a good state of preservation. The silence of Procopius respecting such a city seems to imply that it had been destroyed before the age of Justinian. (Shaw, Trovels, p. 57 ; Bruce: Peysomel; Pellissier, Explorotion Scientifique de l-Algérie, vol. vi. pp. 388,389 .) [P. S.]

LAMBRI'ACA or LAMBRI'CA, a town of the Callaïci Lncenses in Gallaecia, near the confluense of the rivers Laeron and Vlla, not far from ElPalron. (Mela, iii. J. § 8; Ukert, vol. ii. pt. 1. p. 439.)
[P. S.]
LAMETI'NI ( $\Lambda \alpha \mu \eta \tau i v 01$ ), a city of Bruttium, mentioned only by Stephanus of Byzantium (s.v), on the authority of Hecataeus, who allded that there was a river also of tbe mame of Lametes ( áuntos). We find this again alluded to by Lycophron. (Alex. 1085.) There can be no doubt that this is the stream still called Lamato, which flows into the gulf of Sta. Eufemia: and this is confirmed by the authority of Aristotle, who gives to that guif, otherwise known as the sinus Teminaeus or Hipponiates, the name of the Lametine Guif ( $\delta$ पаиๆтîros кóגлоs, Arist. Pol. vii. 10). Hence there can be little doubt that the city of Lametini also was situated on the shores of the same bay, though Stephanus vagnely calls it "near Crotonn." (Steph. B. l.c.) No other writer mentions the name (which is evidently an ethnic form like Leontini), and it is probable that the towa was destroyed or sunk into a dependent coodition at an early perjod. An inscription, which records it as an existing municipal town in the time of Trajan, is almost certainly spurious. (Mommsen, Inser. Regn. Neap. App. No. 936.) It is generally supposed to have been situated either at or near the medern village of Sta. Eufemia, but this is mere corjecture. [E.H.B]
LA'AIIA ( $\Lambda a \mu i a$ : Eth. Aapiev́s: Zituint), a town of the Malienses, though afterwards separated from them, situated in the district Phthiotis in Thessaly. Straho describes Lamia as situated above the plain which lies at the foot of the Maliac gulf, at the distance of 30 stadia from the Spercheius, and 50 stadia from the sea (ix. pp. 433, 435). Livy says that it was placed on a height distant seven miles from Heracleia, of which it commauded the prospect (xxxvi. 25), and on the route which led from Thermpylae tbrough the passes of Phtbiotis to Thaumaci (xxxii. 4). Strabo further relates that it was subject to eartbquakes (i. p. 60). Lamia is celebrated in history $n \mathrm{n}$ account of the war which the Athenians and the confederate Greeks carried on against Antipater in n.c. 323. Antipater was at first unsuccessful, and took refage in Lamia, where he was besieged for some time by the allies. From this circumstance this contest is usually called

## 1．AMPSACUS．

the Lamian war．Having afterwards receired sus＂ cours from Craterus，Antijater retreated northwards， and defeated the allies at the hattle of Cramon in the following year．（Diod．xxiii．9，seq．；Polyb．ix． 29．）In B．C． 208 Philip，son of Demetrius，de－ feated the Actoliaos near Lamia．（Liv，sxvii．30．） In 192 Lamia opened its gates to Antiochns（Liv． xaxr．43），and was in coasequeace besieged in the following year by Philip，who was then acting io conjurction with the Romans．（1，iv，xaxvi．25．）On this occavion Livy meotions the difficulty which the Macedonians experienced in mining the rock，which was siliceous（＂in asperis locis silex saepe impeoe－ trabilis ferrooccurrebat＂）．In 190 the town was taken by the Romans．（Liv，xxxvii．4，5．）Lamia is mea－ tioned by Pliny（iv．7．s．14），and was also in existeoce in the sisth centnry．（Hierocl．p．642，ed． Wesseling．）The site of Lamia is fised at Zitini， both by the description of the ancient writers of the pusition of Lamia，and by an inscription which Paol Lucas copied at this place．Zitumi is situated on a hill，and is loy nature a strongly fortified position． The only remains of the aocient city which Leake discovered were some pieces of the walls of the Acropolis，forming a part of thase of the modern castle，and some small remains of the torn walls at the foot of the hill，beyoud the extreme modern hocres to the eastward．On the opposite side of the town Leake noticed a small river，which，we learo from Strabo（ix．p．434，4．50），was called A chelous． The port of Malia was named Phalama（Tà \＄á－入apa，Strab．is．I． 435 ；Polyb．xx．11：Lir，xarii． 30．xxxr． 43 ；J＇lin．ir．7．s．12），now Stylidhar． Zituini has been eompared to Athens，with its old castle，or acropolis，above，and its Peiraeens at Sty－ titha，on the shore below．There is a tine view from the castle，conmaurling the whole country adjacent to the head of the Maliac gulf．（Lueas．loyage dens la Grice，vol．i．p． 405 ；Leake，Jorthern Greece， vol．ii．p． 2 ；Stephani，Reise，gc．1．39．）

coin of lamid．
LAMHACUS SINUS（ $\delta$ Aautakds кó入тоs），a nane given by l＇ansamias to the Maliac gulf，from the i uportant town of lamia．（Paus．i．4．§ 3，vii． 15．§2，x．1．§2．）In the same way the galf is now called Zitumi，which is the modern name of Lamin．

LAMI＇NIT＇M（Aaulvov：Fith．Laminitani：near Futnllema，between Montiel and Alcuraz），a towo of the Carjetati（according to Prolemy，though wime antlone it to have belonged rather to the （Ontati），in Hispania Tarraconmsis，It was a sti－ prosliary tawn of the coorentus of New Carthace， and stine on the wi＿h rowl from Fincrita to Caesar－ aryanta．Cle river Avis（fruarliana）rose in the lamds of Laminium，TM．P．E．of the town．（Plin． iii．1．x．2．3．s． 4 ；ltin．Ant．pp．445，446；Ptat ii． i．$\S 57$ ：Inser，ap．Flurez，Fsp，S．vol．iv．p． 38, vol．v．pp．22，122，wol．vii．p．140；Vkert，vol．it． pt．1．p． 411 ：in Plin．xxxri．21．s．47，where Pliny spaks of the whetstones found in Hither Span as Cotes Flaminitanace，Tkert supposes we misht to read Cotes Laminitanae．）
［I＇．S．］

LAMO＇TIS（Aauêtıs），a district on the eastern const of Cilicis Aspera，between the rivers Caly－ cadnus and Lamns．Its capital bore the nane of L．amus，from which that of the district was derived． （Ptol．v．\＆．§ 6 ；comp．Lastr8．）
［L．S．］
LAMPAS（ $\Lambda a \mu \pi \alpha \dot{s}$ ），\＆harbour on the E．comst of the Tauric Chersonese， 800 stadia from Thendosi：1， and 220 stadia from Crill－Dletopon．（Atrian，Peripl． p．20；Aron．Peripl．p．6．）Arriao uses the two names Iampas and Halmitis as if they beloaged to the same place，but the Aonnrmous Coast－lescriher speaks of Lampas alooe．Halmitis probably took its name from being a place for salting fish．The name is preserved in the places now called Biouk－ Lambat and Koutchouk－Lambat．Tartar villages at the end of a hay defended by the promontory of Plakn，near which aocient ruins have beea fond． （Dubois de Montpereux，loyage autour du Caucase， wol．v．p．713，vol．vi．p． 460 ；Renacll，Compar： Geag．vol．ii．p．340．）
［E．B．J．］
LAMPATAE or LAMPAGAE（ムaurátat or Sauтâ ${ }^{\text {al，Ptol．vii．I．§ 42），a small trihe who }}$ lived among the offshouts of the Imaus，in the NII： pirt of Jodia，about the sources of the Choes（now Kameli），which is itself a tributary of the Kibuob river．

## ［v．］

LAMPE（ $\Lambda \alpha u \pi$ í），a town in Crete，also called Lappa．［LappA．］Besides this town Stephanus B．（s．v．）inentions two other town of this name， otherwise anknown，one in Arcadia and the other in Argolis．

LAMPONEIA or LAMPO NIUM（Aaurívєla， Aaprciviov），an Acolian towo in the sonth－west of iroas，of which no particulars are koown，except that it was annexed to Persia by the satrap Otancs in the reign of Darins Hystaspis．It is montioned only by the earliest writers．（Herod．v． 26 ：Strab． siii．P． 610 ：Steph．B．s．v．）
［L．S．］
LAMPRA［Attica，p．331，a．］
 sometimes also called Lampsacum（Cic．in Verr．i． 24 ；Pomp．Mela，i．19），was one of the most cele－ brated Greek settlements in Mysia on the IIellespont． It was known to have existed noder the name of Pitcusa or Pityussa before it receired coloaists from the Ionian cities of Phocaen and Miletus．（Strab． xiii．p． 589 ；Steph．B．s．$r_{2}$ ；Plin．v． 40 ；Hom．It． ii． 829 ：Plut．de I＇irt．Mul．18．）It was situated， opposite to Callipolis，in the Thracian Chersonesus， and possessed an escellent harbour．Herodotus（vi． 37）relates that the elder Miltiales，who was settled io the Thracian Chersonesas，made war upon the Lampsaceni，but that they took him by surprise， and made bim their prisoner．Beiog threatenel， however，by Croesus，who supported Miltiades，they sst him free．During the Inian revolt，the town fell into the hands of the Persiaos．（Herod，v．117．） The territory about Tampsacus produced excelloot wine，whence the king of Penia bestowed it apon Themistocles，that he might thence provide himself with wioc．（Thncyil．i．138：Athen．i．p． 29 ； Diod．xi． 57 ；Plut．Them． 29 ；Xippos，Them．10； Amm．Narc．xxii，8．）But even while Lampsacns acknowledged the supremacy of Persia，it continued to be governed by a native prince or tyrant，of the name of Hippocles．His sin Acaatides married Archedice，a danghter of Pisistratus，whase tomb， commenorating her virtues，was seea there in the time of Thucydides（vi．59）．The attempt of

Euamon to seize the citadel, and thercby to make himself tyrant, seems to helong to the same period. (Athen. xi. p. 508.) After the battle of Mycale, in B. c. 479, Lampsacus joined Athens, hut revolted after the failure of the great Athenian expedition to Sicily: being, however, unfortified, it was easily reconquered by a fleet under Strombichides. (Thue. viii. 62.) After the time of Alexander the Great, the Lampsaceni had to defend their city arainst the attacks of Antiochus of Syria; they voted a crown of gold to the Romans, and were received by them as allies. (Liv. xxxiii. 38 , xxxv. 42, sliii. 6 ; Polyb. xxi. 10.) In the time of Strabo, Lampsacus was still a flourishing city. It was the birthplace of many distinguished anthors and philosophers, such as Charon the historiad, Anaximenes the orator, and Metrodorus the disciple of Epicurus, who himself resided there for many years, and recknned some of its citizens among his intimate friends. (Strab. l.c.; Diog. Laërt. x. 11.) Lampsacns possessed a fine statue by Lysippus, representing a prostrate lion, but it was removed by Agrippa to Rome to adorn the Campus Martius. (Strab. l.c.) Lampsacus, as is well known, was the chief seat of the obscene worship of Priapus, who was believed to have been born there of Aphrodite. (Athen. i. p. 30 ; Paus. ix. 31. § 2 ; A pollon. Rhod. i. 983 ; Ov. Fast. vi. 345 ; Virg. Georg. iv. 110.) From this circumstance the whole district was believed to have derived the name of Abarnis or Aparnis (àmapveĩ $\theta a 4$ ), because Aphrodite denied that she had given birth to him. (Theophr. Hist. Plant. i. 6, 13.) The ancient name of the district had been Bebrycia, prohably from the Thracian Bebryces, who had settled there. (Comp. Hecat. Fragm. 207; Charon, Fragm. 115, 119 ; Xenoph. Anab. vii. 8. § 1; Polyb. v. 77; Plin. iv. 18, v. 40 ; Ptol. v. 2. § 2 ; Steph. B. s. v.) The name of Lamsaki is still attached to a small town, near which Lampsacus probably stood, as Lamsaki itself contains no remains of antiquity. There are gold and silver staters of Lampsacus in different collections; the imperial coins bave been traced from Augustus to Gallicnus. (Sestini, Mon. 1'et. p. 73.)
[L. S.]

conn of lampsacts.
LAMIPSUS, a town of Histizeotis in Thessaly, on the borders of Athamana. (Liv. Exxii. 14.)

LAMPTRA. [ATHICA, p. 331, a.]
LAMUS (Aápos), a village of Cilicia, at the mouth of the river Lamus, from which the whole district derived the name of Lamotis. The river is mentioned by Stephanus B. (from Alexander Folyhistor), and both the river and the village by Strabo (xiv, p. 671) and Ptoleny (v. 8, §§ 4, 6). The river, which is otberwise of no importance, furmed the houndary between Cilicia Aspera and Cilicis Propria, and still bears the name of Lamas or Lamuro. Abont the village of Lamus no particulars are known. (Comp. Nonnus, Dionys. xxiv. 50 ; Hierocl. p. 709.)
[L S.]

LAMYRON (Aauvoúv), a great harbour near Cape Heraclium, on the coast of Pontus, not far from Themiscyra. (Anonym. Peripl. Pont. Eux. p. 10.)
[L. S.]
LANCE (Itin. Ant. p. 395), or LA'NCIA (Aa $\gamma-$ кía, Dion Cass, liii. 25, 29 ; Flor. iv. 12; Oros. vi. 21), or LANCLATUM (ムаүкiatov, Ptol. ii. 6. § 29), the chief city of the Lanceati (Aajкiatob, Ptel. l. c.) or Lanctevses (Plin. iii. 3. s. 4), a tribe of the Astures, in Hispania Tarraconensis. It was strongly fortified, and was the most important city of that region, even more so than Legio VII. Ge-miva, at least before the settlement of the latter by the Romans, by whom Lancia was destroyed, thongh it was again restored. It lay on the high road from Caesarangusta to Legio V1I. (Leon), only 9 M. P. from the latter, where its name is still to be traced in that of Sollanco or Sullancia. (Florez, Esp. S. rol. xri. p. 16; Ukert, vol. ii. pt. 1. p. 441.) [P. S.]

LA'NCIA, LANCIA'TI, LANCIA'TUM. [Lance.]
LA'NCIA OPPIDA'NA. [Vetrones.]
LANCIENSES. [LAXCE.]
LANCIENSES OCELENSES or TRANSCUDANI. [Ocklum.]

LANGOBARDI, LONGOBARDI (AaryoEápסo,
 a tribe of Germans whom we first meet with in the plain, south of the lower Elbe, and who belonged to the Suevi (Strab. vii. p. 290, where Kramer reads ムaүкíßapסor; Ptol. ii. 11. §S 9, 17). According to Panlus Diaconus, himself a Langobard, or Lombard (Ilist. Longob. i. 3, 8; comp. Isidor, Orig. ix. 2; Etym. M. s. v. $\gamma^{\prime} \nu \in(O \nu)$, the tribe derived its name from the long beards, by which they distinguished themselves from the other Germans, who generally shaved their beards. But it seems to be more probable that they derived the name from the country they inhahited on the banks of the Elbe, where Borde (or Bord) still signifies " a fertile plain by the side of a river;" and a district near Mogdeburg is still called the lange Börde (Wilhelm, Germanien, p. 286). According to this, Langobardi would sig. nify "inhabitants of the long bord of the river." The district in which we first meet with them, is the left bank of the Elbe, from the point where the Sala empties itself into it, to the frontiers of the Cbauci Minores, so that they were bounded in the north by the Elbe, in the east by the Semnones, in the sonth by the Chernsci, and in the west by the Fosi and Angrivarii. Traces of the name of the Langobardi still oceur in tbat country in such mames as Bardengau, Bardewik. The earliest writer who mentions the Langobardi as ithabiting those parts, is Velleius Paterculus (ii. 106). But notwithstanding the unanimous testimeny of the ancients that they were a branch of the Suevi, their own historian (Paul. Diac. l. c.; comp. Euseh, Chron, ad an. 380) states that the Langobardi originally did not inhabit any part of Germany, but had migrated soutb from Scandinavia, where they had borne the name of Vinili, and that they assumed the name Langobardi after their arrizal in Germany. It is impossible to say what value is to be attributed to this statement, which has found as many advocates as it has had opponents. From Strabo (l.c.) it is clear that they occupied the northern bauk of the Elbe, and it is prssible that they were among those Germans whom Tiberius, in the reigu of Augustus drove acmoss the Elbe (Suct. Aug. 21). In their new country they were soon reduced to submission by Maroboduus, but
afterwards they shook off the yoke, and, in conjunetion with the Semmones, foined the confedency of the Cheruseans against the Marcomami. (Ticc. Ann. ii. 45.) When, in consequence of the murder of Arminius, the power of the Cheruseans was decaying more and more, the Langobardi not only supported and restored Italus, the king of the Cheruseans who had been expelled, but seen to hare extended their own territory io the south. so as to oceupy the country between Halle, Maydeburg, tand Leipzig. (Tac. Ann. xi. 17.) They were not a numerons tribe, but their want of numbers was made up for by their natural bravery (Tac. Germ. 40), and Velleins deseribes them as : " gens etian Germanal feritate ferveior." Shortly after these events the Langolardi disappear from bistory, until they are mentioned again by I'toleny (l.c.), who places them in the extensive territory between the Rhine and Wiser, and even beyond the latter river almost as far as the Elbe. They thus oecupied the country which had formedy bren inhabited by the tribes forming the Cheruscan confeleracy. This great extension of their territory shuws that their power must bave been increasing ever since their liberation from the yoke of Maroboduus. After this time we again hear nothing of the Longobardi for a considerable period. They are indeed mentioned, in an excerpt from the history of l'etrus Patricins (Exc. de Legat. p. 124), as allies of the Obii on the frontiers of Pannonia; but otherwise history is silent about th m , until, in the second half of the 5 th rentury, they appear on the aorth of the Danube in Clper Hungary as tributary to the Heruli (Procop. de Bell. Goth. ii. 15, who describes them as Christians). Whether these Langobardi, however, were the same people whom we last met with between the thine and the Elbe, or whether they were only a band of emigrants who bad in the course of time become so numerous as to form a disti ct tribe, is a question which cannot be answered with certainty, although the latter seems to be the more probable supposition. Their natural love of frectom could not bear to submit to the rule of the Heruli, and after having defeated the king of the latter in a great battle, they subdued the neighbouring Quati. likewise a Sucrion tribe, and heaceforth they were for a lane time the ferror of their neizhtbours aml the Liunat province of Pannonia. (Paml. Diac. i. 22.) Fon, heme the unost poserful nation in those parts, they extended their dominion down the Danube, and occupind the extensive plains in the north of Datia on the river Theiss, where they first came in courlict with the Gupidae, and entered Pannonia. (Paul. Disc, i. 20.) The enperor Justimian, wanting their support against the (iepidae. gave them lands and supplied them with money (l'rocop. Bell. Goth. iii. 33), and under their king Auduin they gaiood a great victory over the Gepilae. (I'aul. 1)ace. i. 25 ; Pracop. Bell Goth. iii. 34. iv. 18, 25.) Alloin, Audoin's successor, after having, in coryunction with the Avari, connletely overthrown the empire of the fiepidae, led the Langoliardi, in A. D. 568 , into Italy, where they permanently established themselves, and founded the kingdous from which down to this day the north-east of 1 ally bears the name of Lombardy. (Exc, de Legat. pp. 303. 304: Marius Rpisc. Chron. flonc, ii. 412.) The owrasion of their iuvading ltaly is related as follows. When Allowin had concluded his alliance with the Avari, and had ceded to them his own dominious, Narses, to take revolpe up a Justin, invited them to quit their poor counry and take possession of tho fertile plains of Italy. Alboin
accordingly crnssed the Alps, and as the north of Italy was badly defended, he succeeded in a short time in establishing his kingdom, which continued to flourish antil it was overpowered and destroyed by Charlemagne. (Paul. Diac. ii. 5; Eginhard, Iit. Carol. M. 6.) The bistory of this singular people, whose name still survives, has been written in Latin by Paulus Diaconus (Warnefried), in the reign of Charlemagne, and hy another Lombard of the 9th ceutury, whose name is mnknown. (Comp. Wilhelm, Germanien, p. 281, foll.; Zeuss, die Deutschen und die Nachbarstämme, P. 109, foll.; F. Dufft, Luaestiones de Antiquissina Longobardorum Ilistoria, Berlin, 1830, 8 ro, ; Koch-Stemfeld, das Reich der Longobarden in Italien, Munich, 1839; Lathan, Tac. Germ. p. 139, and Epileg. p. Ixxxjv.) [L.S.]
LANGOBRI'GA. [Lusimania.]
LANU'VIUM (Aavoüioy, Strah. ; Aavoífiov, Ptol.: Eth. Aavoúbos, Lannvinus: Civití Lavinia), an ancient and important city of Latium, situated on a lofty liill forming a projecting spur or promontory of the Alban Hills towards the S. It was distant about 20 miles from Rome, on the rigbt of tbe Appian Way, rather more than a nile from the road. The name is often written in inscriptions, even of a gooul time, Lanivium; hence the confusion which has arisen in all cur MSS. of ancient authors between it and Lavinium: the two names are so frequently interchanged as to leave constant doubt which of the two is really meant, and in the middle ages they appear to bave been actually regarded as the same place; whence the name of "Civitas Lavinia" by which Lanovium is still known, and which can be traced as far back as the fourteenth century. The foundation of Lanurium tras ascribed by a tradition recorded by Appian (B. C. ii. 20) to Diomed; a legend probably arising from some fancied connection with the worsbip of Juno at Argos. A tradition that has a more historical aspect, though perbaps little more historical wortb, represented it as one of the colonies of Alba. (Diod, vii. ap. Euseb. Arm. p. 185.) The statement of Cato (ap. Priscian. iv. 4. §21) that it was one of the cities which co-operated in the consecration of the celebrated temple of Diana at Aricia, is the first fact conceroing it that can be looked upon as historical, and shows that Lanuvinm was already a city of consideration and power. Its name appears also in the list given by Dionysius of the cities that formed the league against Rome in B. C. 496, and there is no donbt that it was in fact one of the thirty cities of the Latin Leaque. (Dionys. v. 61 ; Niebuhr, vol. ii. p. 17.) But from this time we hear litule of it, except that it was the faithful ally of Rome during ber long wars with the Volscians and Aequians (Liv, vi. 21): the position of Lanuviun would indeed canse it to be one of the cities most immediately interested in opposiog the progress of the Volscians, and render it as it were the natural rival of Antium. We have no expluation of the eauses which, in в. c. 383 , led the Lanurians suddenly to change their policy, and take up arms, together with some ether Latin cities, in favour of the Volscians (Liv. vi. 21). They minst have slared in the defeat of their allies near Satricum; but apparently were aduitted to subunission on favourable terms, and we hear no more of them till the great Latin War in B. C. 340 , in which they twok an active and important part. At lirst, indeed, they seem to have hesitated and delayed to take tho ficld; but in the two last campaigns their forces are
particularly mentioned, both among those that fought at Pedum in n. C. 339, and the next year nt Astura (Liv. viii. 12, 13).* In the general settlement of affairs at the close of the war Lamuvium obtained the Ruman civitas, but apparently in the first instance withont the right of suffrage; for Festns, in a well-known passage, ennmerates the Lanuvini among the commnnities who at one time enjoyed all the other privileges of Roman citizens except the suffrage and the Jus Magistratunm (Liv. viii. 14; Festus, v. Municipium), a statement which can only refer to this period. We know from Cicero that they subsequently obtained the full franchise and right of suffrage, but the time when they were admitted to these privileges is unknown. (Cic, pro Balb. 13.)

From this time Lanuvium lapsed into the condition of an ordinary mmicipal town, and is mentioned chiefly in relation to its celebrated temple of Juno Sospita. It did not, however, fall into decay, like so many of the early Latin cities, and is mentioned by Cicero among the more populons and flonrishing municipia of Latinm, in the same class with Aricia and Tnscnlum, which he contrasts with such poor and decayed places as Labicnra and ColJatia (Cic, de Leg. Agr. ii. 35). Its chief magistrate retained the ancient Latin title of Dictator, which was borne by T. Annius Milo, the celebrated adversary of Clodius, in the days of Cicero. (Cic, mro Mil. 10; Orell. Inscr. 3786.) Previons to this period Lanuvium had suffered severely in the civil wars of Marins and Sulla, having been taken by the former at the same time with Antium and Aricia, just before the capture of Rome itself, B. C. 87. (Appian, B. C. i. 69; Liv, Epit. 80.) Nor did it escape in the later civil wars: the treasures of its temple were seized by Octavian, and a part at least of its territory was divided among a colony of veterans by the dictator Caesar. (Appian, B. C. v. 24; Lib. Colon. p. 235.) It sulisequently received another colony, and a part of its territory was at one time allotted to the vestal virgins at Rome. (Ibid.) Lanuvium, however, never bore the title of a colony, but continned only to rank as a monicipinm, thongh it seems to have been a flourishing place throughout the period of the Roman Eimpire. It was the birthplace of the emperor Antoninus Pius, who in consequence frequently made it his residence, as did also his successors, M. Anrelius and Commodus: the last of these three is mentioned as having frequently displayed his skill as a gladiator in the amphitheatre at Lanuvium, the construction of which may probatly be referred to this epoch. Inscriptions attest its continned prosperity under the reigns of Alexnnder Severus and Philippus. (Suet. Avg. 72; Tac. Ann. iii. 48: Capit. Ant. Pius, 1; Lamprid. Commod. 1, 8; Vict. de Caes. 15 ; Orell. Inser. $884,3740, \& \mathrm{c}$.)

Lanuvium was the place from which several illustrious Roman families derived their origin. Among thesc were the Annia, to which Milo, the adversary

[^3]of Clodius, belonged ly adoption, as well as the Papia, from which he was originally descended; the Roscia, and the Thoria (Cic. pro Mil. 10; Ascon. ad Milon. Pp. 32, 53; Cic. de Divin. i. 36, ii. 31, de Fin. ii. 20), to which may probably be added, on the anthority of coins, the Procilia and Mettia. (Eckhel, vol. v. pp. 253, 267, 289, 293.) We learn from Cicero that not only did the Roscia Gens derive its origin from Lanuvium, but the celebrated actor Roscius was himself born in the territory of that city. (Cic. de Div. i. 36.)

But the chief celcbrity of Lanuvium was derived from its temple of Jnno Sospita, which enjoyed a peculiar sanctity, so that after the Latin War in n. c. 338 it was stipulated that the Romans should enjoy free participation with the Lannvians themselves in her worship and sacred rites (Liv, viii. 14): and although at a later period a temple was erected at Rome itself to the goddess under the same denomination, the consuls still continned to repair annually to Lanuvium for the purpose of offering solemn sacrifices. (Liv, xxxii. 30, xxxiv. 53; Cic. pro Muren. 41.) The peculiar garb and attributes of the Lanuvian Juno are described by Cicero (de Nat. Deor. i. 29), and attested by the evidence of nnmerons Roraan coins: she was always represented with a goat's skin, drawn over her head like a belmet, with a spear in her hand, and a stnall shield on the left arm, and wore peculiar shoes with the points turned np (calceoli repandi). On coins we find her also constantly associated with a serpent; and we learn from l'ropertius and Aelian that there was a kind of oracle in the sacred grove attached to ber temple, where a serpent was fed with fruits and cakes by virgins, whose chastity was considered to be thas put to the test. (Propert. iv. 8 ; Aelian, H. A. xi. 16, where the true reading is undonbtedly Savovite, and not Maovivip ; Eekhel, vol. v. p. 294.)
The frequent notices in Livy and elsewhere of prodigies occurring in the temple and sacred grove of Juno at Lanuvium, as well as the allnsions to her worship at that place scattered through the Roman poets, snfficiently show how important a part the Jatter had assumed in the Roman religion. (Lir. xxiv. 10, xxix. 14, xxxi. 12, xl. 19 ; Cie. de Divin. i. 44, ii. 27 ; Ovid. Fast. vi. 60 ; Sil. Ital. xiii. 364.) We learn from Appian that a large treasure had gradnally accumulated in her temple, as was the case with most celebrated sanctuaries; and Pliny mentions that it was adorned with very ancient, but excellent, paintings of Helen and Atalanta, which the emperor Caligula in vain attempted to remove. (Plin, xxxv. 3. s. 6.) It appears from a passage in Cicero (de Fin. ii. 20) that Juno was far from being the oaly deity esjecially worshipped at Lannvium, but that the city was noted as abonnding in ancient temples and religions rites, and was probably one of the chief seats of the old Latin religion. A temple of Jnpiter adjoining the fornm is the only one of which we find any special mention. (Liv, xxsii. 9.)
Though there is no donbt that Civita Larimiz occnpies the original site of Lannvium, the position of which is well described by Strabo and Silius Italicns (Strab, v. p. 239 ; Sil. Ital. viii. 360), and we knuw from inscriptions that the ancient city continned in a flourishing condition down to a late period of the Roman empire, it is curions that scarcely any ruins now remain. A few shapeless masses of masonry, principally suhstructiens ard foundations, of which those that crown the summit
of the hill may passibly have belonged to the trayte of Juno Sospita; and a small pention of a theatre. brought to light by excavations in 1832 , are all that are now visible. The inseriptions discerved on the spot belong principally to the time of the Antonines, and escavations in the last century brouglit to lizht many statues of the same periol. (Nibby, Dintorni di Roma, vol. ii. pp. 173-187; Abcken, Dlittel Italien. p. 215.)
Launvium, as alrealy obverved, was situated at a short distance from the Appian Way, on the right of that road: the station "Sub Lanuvio." marked in the Tatula Pentiogeriana between Aricia and Tres Tabernae, was evidently situated ou the hish road, probably at the eighteenth milestone from Rome, from which peint a branch road led directly to the ancient citr. (Westphal, Rüm. Kamp. p. 28 ; Nibby, l. c.)

The remains of two other ancient roads may be traced, leading from the W . and S . of the eity in the direction of Antium and Astura. The existence of this line of communication in ancient times is incidentally referred to by Cicero ( $\mathrm{ad} A \mathrm{Att}$, xii. 41, 43, 46). The tract of country extending S . of Lanuvium is the direction of Antium and the Pontine marshes, was even in the time of Strabo very unhealthy (Strab. v. p. 231), and is now alinost wholly depopulated.
[E. H. B.]
LAODICEIA COMBUSTA ( $\Lambda$ добікеıа катакєкашнivn or кєкац $\mu \dot{\jmath} \eta$ ), one of the five cities built by Seleucus I., and named after his mother Seleuca Its surname (Lat. Combusta) is derived by Strabo (xii. pp. 576,579 . xili. pp. $626,628,637$ ) from the volcanic nature of the surrounding country, but IIamilton (Researches, ii. p. 194) asserts that there is "not a particle of volcanic or igneons rock in the neighbourhourd;" and it may be added that if sueh were the case, the town woald rather bave been called $\Lambda . \tau$ गेs катакекаицё̀ns. The most protable solution undouhtedly is, that the town was at one time destroyed br fire, and that on being rebuilt it received the distinguishing surname. It was situated on the north-west of Iconium, on the high road leading from the west coast to Melitene on the Euphrates, Some slescribe it as situated in Ljeaonia (Steph. B. s. r. ; Strab. xiv. p. 663), and others as a torn of Pisidia (Socrat. Hist. Ecel. vi. 18; Hieroel. p. 6\%2), and Ptolemy (v. 4. § 10) places it in (ralatia; but this discrepancy is easily explained by rucollecting that the territories just mientioned were often extended or reduced in extent, sothat at one time the town belonged to Lyenonin, while at another it formed part of Pisidia. Its foundation is not mentinned by any ancient writer.

Buth Leake (Asia Minor, p. 44) and Hamilton ilentify Laoliceia with the morlon Ladik; and the former of these gengraphers states that at Ladik lo saw more numerous fragments of ancient architecture and senlpture than at any other place on his route through that country. Inscribed marbles, altars, columns, capitals, friczes, cornices, were dispersed throughout the strects, and amony the houses and burying grounds. From this it wouli appear that Landiceia must once have been a very consideral lo town. There are a few imperial cions of Landiceva, belonging to the reizns of Titus and Domitian. (Sestini, Mim. Ant. p. 95 : e nip. Druyscm, Geseh. des JIfllen. i. p. 663, foll.) [I. S.]

LAOHCDEIA AD LYCl'M (Aaoziveia $\pi$ pòs T Súkゅ: Eski Hissur), a city in the south-west of
 is whated on the long spur of a hill between the narrow walleys of the small rivers Asopns and Caprus, which discharge their waters into the Lycus. The town was originally called Diospolis, and afterwards Rhoas (Plin. v. 29), and Laodiceia, the building of which is ascribed to Antiochus Theos, in honour of his wife Laodice, was Irrobal ly fouraded on the site of the older town. It was nut far west from Colossae, and only sis miles to the west of Hierapolis. (It. Ant. p. 337 ; Tab. Peut. ; Strab. xiii. p. 629.) At first Laodiceia was not a place of much importance, but it soon acquired a high degree of prosperity. It suffiered greatly during the Mithridatic War (Appian, Bell. Mithr. 20; Strab, xii. p. 578), bat quickly recosered under the dominion of Rone; and towards the end of the Republic and onder the first emperors, Laodiceia became one of the most important and flourishing commereial cities of Asia Minor, in which large money transactions and an extensive trade in wood were carried on. (Cic. ad Fam. ii. 17, iii. 5 ; Strab. sii. p. 577 ; comp. Vitrov, viii. 3.) The place often suffered from earthquakes, especially from the great shock in the reign of Tiberius, in which it was completely destroyed. But the inhrabitants restored it from their own means. (Tac. - 4 nn . xiv. 27.) The wealth of it imhabitants created among them a taste for the arts of the Greeks, as is manifest from its ruins; and that it did not renrain behind-haod in science and literature is attested by the names of the scepties Antiochus and Theiodas, the successors of Aenesidemus (Diog. Laërt. ix. 11. § 106,12 . § 116), and by the existence of a great medical school. (Strab. xii. p. 580.) During the Roman period Laodiceia was the chief city of a Roman conventus. (Cic. ad Fam, iii. 7. is. 25, siii. 54,67 , xv. 4, ad $A$ tt. v. 15, 16, 20. 21. ri. 1, 2, 3. 7 , in Verr. i. 30.) Many of its inhal itants were Jews, and it was probably owing to this circumstance, that at a very early period it became one of the chief seats of Christianity, and the see of a bishop. (St. Paul, Ep. ad Coloss, ii. 1, iv. 15, foll. : Apocal. iii. 14, foll. ; Joseph. Ant. Jud. xiv. 10,20; Hierocl. p. 665.) The Byzantine writers often mention it, especially in the time of the Comneni; and it was fortified by the emperor Manuel. (Nicet, Chon. Ann. pp. 9, 81.) During the invasion of the Turks and 3longuls the city was much exposed to ravages, and fell into decay, but the existing remains still attest its former greatness. The ruins near Denisli are fully described in Pococke's, Chandler's. Cockerell's, Arundel's and Leake's works. " Nothing," says Hamilton (Rescarches, vol. i. p. 515), "can exceed the desolation and melancholy appearance of the site of Laodiceia; no picturesque features in the nature of the ground on which it stands relieve the dull uniformity of its undulating and barren liills; and with few exceptions, its grey and widely scattered ruins possess no architectural merit to attract the attention of the traveller. Yet it is inpossible to view them without interest, when we ennsider what Laodiceia onee was, and how it is connected with the early history of Christianity. . . . . Its stadium, gymnasium, and theatres (one of which is in a state of great preservation, with its

[^4]seats still perfectly horizontal, though merely laid upon the gravel), are well deserving of notice. Other buildings, also, on the top of the hill, are full of interest ; and on the east the line of the ancient wall may he distinctly traced, with the remains of a gateway ; there is also a street within and without the town, fanked by the ruins of a colonuade and numerous pedestals, leading to a confused heap of fallen ruins on the brow of the hill, abont 200 yards outside the walls. North of the town, towards the Lycus, are many sarcophagi, with their covers lying near them, partly imbedded in the ground, and all having been long since riffed.
"Amongst other interesting objects are the remains of an aquednct, commencing near the summit of a low hill to the south, whence it is carried ou arches of small square stones to the edge of the bill. The water must have been much charged with calcareous matter, as several of the arches are covered with a thick incrustation. From this hill the aqueduct crossed a valley before it reached the town, but, instead of being carried over it on lofty arches, as was the usual practice of the Romans, the water was conveyed down the hill iu stone barrel-pipes ; some of these also are much incrusted, and some completely choked up. It traversed the plain in pipes of the same kind; and I was enabled to trace them the whole way, quite up to its former level in the town.

The aqueduct appears to have been overthrown hy an earthquake, as the remaining arches lean bodily on one side, without being much broken. . . . .
"The stadium, which is in a good state of preservation, is near the southern extremity of the city. The seats, almost perfect, are arranged along two sides of a narrow valley, which appears to have been taken adrantage of for this purpose, and to have heen closed up at both ends. Towards the west are considerable remains of a snbterranean passage, by which chariots and horses were admitted into the areoa, with a long inscription over the entrance. .... The whole area of the ancient city is covered witb ruined buildings, and I could distinguish the sites of several temples, with the bases of the columns still in situs. .... The rnins bear the stamp of Roman extravagance and luxury, rather than of the stern and massive solidity of the Greeks. Strabo attributes the celebrity of the place to the fertility of the soil and the wealth of some of its inhabitants: amongst whom Hiero, haring adorned the city with many beantiful buildings, hequeathed to it more than 2000 talents at his death." (Comp. Fellows, Journal written in Asia Minor, p. 280, foll.; Leake, Asia Minor, p. 251, foll.)
[L.S.]
LAODICEIA AD LIBANUM ( 1 aodiкeia 市 $\pi \rho d s$ ^isávư), mentioned by Strabo (xvi. p. 755) as the commencement of the Marsyas Campus, which extended along the west side of the Orontes, near its source. [Marsyas Campus.] It is called Cabiosa Liodiceia by Ptolemy (Kabiшoa ムaoסíкєıa, v. 15), and gives its name to a district ( $\Lambda a 0 \delta t \kappa \eta \nu \eta$ ) , in whicb he places two other towns, Paradisus (Mapá$\delta_{\text {eioos }}$ ) and Jabruda ('Iá́épovóa). I'liny (v. 23), among otber people of Syria, reckons " ad orientem 1.aodicenos, qui ad Libannm cognominantur." [G.W.]

LAODICEIA AD MARE, a city of Syria, south of Heracleia [Vol. 1. p. 1050], described by Strabo (xri. pp. 751,752) as admirably built, with an excellent harbour, surrounded by a rich country specially fruitful in vines, the wine of which furnished its chief snpply to Alexandria, The rineyards were
planted on the sides of gently-sloping hills, which were cultivated almost to their summits, and extended far to the east, nearly to Apameia. Strabo mentions that Dolabella, when he fled to this city before Cassius, distressed it greatly, and that, being besieged there until his death, he destroyed many parts of the city with him, A. 1), 43. [Dict. of Biong. Vol. I. p. 1059.] It was built by Selencus Nirator, and named after his mother, It was furnished with an aquednct by Herod the Great (Joseph. B.J. i. 21. $\$ 11$ ), a large fragment of which is still to be seen. (Shaw, Travels, p. 262.)

The modern city is named Ladikiyek, and still exhilits faint traces of its former importance, notwithstanding the frequent earthquakes with which it has been risited. Irly and Mangles noticed that "the Marina is built upon foundations of ancient colamns," and "there are in the town, an old gateway and other antiquities," as also sarcophagi and sepulchral caves in the neighbourhood. (Travels, p. 223.) This gateway has been more fully described by Shaw (l.c) and Pococke, as " a remarkable triumphal arch, at the SE. comer of the town, almost entire: it is built with four entrances, like the Forum Jani at Rome. It is conjectured that this arch was built in honour of Lucius Verus, or of Septimius Severus." (Description of the East, vol. ii. p. 197.) Shaw noticed several fragments of Greek and Latin inscriptions, dispersed all over the rains, but entirely defaced. Pococke states that it was a very inconsiderable place till within fifty years of his visit, when it opened a tobacco trade with Damietta, and it has now an enormons traffic in that article, for which it is far more celcbrated than ever it was for its wine. The port is half an hour distant from the town, very small, hut better sheltered than any on the coast. Shaw noticed, a furlong to the west of the town, "the rnins of a beautiful cothon, in figure like an amphitheatre, and capacious enongh to receive the whole British navy. The mouth of it opens to the westward, and is about 40 feet wide."
[G.W.]

## COIN OF LAODICEIA AD MARE.

LAODICEIA (Aloסikeia). 1. A town in Media, founded by Seleucus Nicator, along with the two other Hellenic cities of Apameia and Heracleia. (Strab. xi. p. 524; Steph. B. s.v.) Pliny (vi. 29) describes it as being in the extreme limits of Media, and founded by Antiochus. The site has not yet been identified. (Ritter, Erdhunde, rol. viii. p. 599.)
2. A towa which Pliny (vi. 30) places along with Selenceia and Artemita in Mesopotamia. [E. B. J.]
LAPATHUS, a fortress dear Mount Olympus. [Asciris.]

LAPATHUS, LAPETHLS ( $\Lambda a ́ \pi a \theta o s$, Strab. xiv. p. 682 ; $\Lambda a^{\prime} \pi \eta \theta 0 s$, Ptol. v. $14 . \S 4$ : Plin. . . 31 ; $\Lambda \eta \pi \eta \theta i ́ s$, Scsl. p. 41 ; $\Lambda a ́ \pi i \theta u s$, Hierocl.: Eth. $\Lambda \alpha-$ $\pi \eta \theta \in \dot{u} s$, Aa $\dot{\eta} \theta \mathrm{t}$ os : Lapitho, Lapta), a town of Cyprus, the foundation of which was assigned to the Plooniciaus (Steph. B. s. v.), and which, according to Nonnus
(Dinnys. xiii. 447), owed its name to the legendary Latpathas, a follower of Dionysus. Strabo (l. c.) says that it received a spartan colony, headed by Praxander. He adds, that it was situated opposite to the town of Naydus, in Cilicia, and possessed a harbour and docks. It was situated in the N. of the island, on a river of the same name, with a district called Larethia (Aampia, I'tol. v. 14. §5). In the war between Ptolemy and Antigonus, Lapathis, with its king Praxippus, sided with the latter. (Diud. xix. 59.) The name of this place was synonymons with strupidity. (Suid. s, v, $\Lambda a \pi \alpha ́ \theta$ ou) l'ococke (Trar, in the East, vol. ii. pt. 1. p. 223) saw at Lapitho several walls that were cut out of the rock, and one entire romn, over the sea: there were also remains of some towers and walls. (Mariti, Viagni, vol. i. p. 125 : Engel, $K_{y p}$ ros, vol. i. pp. 37. 78,174 , 224. 364.507.$)$
[E. B. J.]
LAPAT1HUS, a fortress in the north of Thessaly, nuar Tempe, which Leake identities with the ancient castle near Rápsani. (Liv. sliv. 2, 6; Leake, Nurthern Greece, vol. iii. pp. 397,418.)
L.APH STIUM. [BoEMTIA, p. 412, b.]

LAPIDEI CAMPI or LAPIDELS CAMPUS ( $\pi \in \delta i o y ~ \lambda t e \bar{\omega} \delta \in s, \lambda i \theta_{1} y O \nu \pi \epsilon \delta i a v$ ), in Gallia Narbonensis. Strabo (p. 182) says: "Between Massalia and the mouths of the Rhone tbere is a plain, about 100 stadia from the sea, and as much in diameter, being of a circular form; and it is called the Stony, from its cbaracter; for it is full of stones, of the size of a man's fist, which have grass growing among them, wbich furnishes alundant food for animals : and in the middle there is standing water, and salt syrings, and salt. Now all the country that lies above is windy, but on this plain especially the Melamborian ( La bise) cones down in squalls, - a violent and chilling wind: accordingly, they say that some of the stones are moved and rolled about, and that men are thrown down from vehicles, and stripped both of arms and clothing by the blast." Thus is the plain called La Crau, noar the cast side of the east branch of the delta of the Khone, and near the E'tang de Brre. It is described by Arthur Young (Tratels, dr. vol. i. p. 379.2 ad ed.), who visited and saw part of the plain. Ho supposed that there might be about 136.780 Englith acres. " it is compused eutirely of shingle-being so mifurm a mass of round stones, some to the size of a man's head, but of all sizes less, that the newly thrown up shingle of a seashore is hardly less free from soil. Beneath these surfice-stones is not so muh a sand as a kind of cetented rubble, a small mixture of loam with fratments of stone. Vigetation is rare and miserable." The only use that the uncultivated part is turned to, the says, is to feel, in wintor, an immense number of sheep, which in summer feed in the Alps towards Barcelonotte and Picdmont. When he saw the place, in August, it was very lare. The number of sheep said to be fed there is evidently an exaceeration. some large tract of the Craw liad been broken up when he was there, and planted with vines, olives, and mulberries, anl converted into eorn and meadow. Corn had not suceneded; but the meadows, ovvered richly with "clover, chicory, rib-grass, and ancma elation." presented an "extraondinary contrist to the suil in its thaturat state. The name Crou is probathy a Celtic word. In the Slatistigue du IÍpart. des Bouches dis Rhone (tum, ii, p. 190, quoted in Ckert's Gallien, 42.5) it is suppmed that Cronn, as it is there written, is a Li-uritun word: whith nay be true, or it may not. What is added is more valuable
information: " There is in Provence a number of places which have this name; and one may eren say that there is not 4 village which bas not in its territory a Craou."

Aristotle (Strabo, p. 182) supposed that earthquakes, of the kind named Brastae threw up these stones to the earth's surface, and that they rolled down together to the hollow places in these parts. Posidonies, who, having travelled in Gallia, had probably seen the C'raut, supposed that the place was once a lake. Here the text in Strabo is obscure, and perhaps corrupt; but he seems to mean that the action of water rounded the stomes, for he adds, after certain words not easy to explain, that (owing to this motion of the water?) "it was divided into many stones, like the yebbles in rivers and the shingle on the sea-shore." Strabo (whose text is here again somewhat corrupted) considers both explanations no far true, that stones of this kiod could not have been so made of themselves, but must have come from great rocks being repeatedly liroken. Auother bypothesis, not worth mentioning, is recorded in the notes of Eustathius (ad Dionys. Perieg. v. 76).

It is a proof of the early communication between the Phocaean colony of Massalia and other parts of Greece, that Aeschylus, whose geography is neither extensive nor exact, was acquainted with the existence of this stony plain; for in the Prometheus Unbound (quoted by Strabo) he makes I'rometheus tell Hercules hat when he comes into the country of the Ligyes, Zeus will send him a sbower of round stones, to defeat the Ligurian army with. This stony plain was a good ground for mythological figments. (The following passages of ancient authors refer to this plain: Mela, ii. 5; Plin. iii. 4, xxi. 10; Gellius, ii. 22, and Seneca, Nat. Quaest. v. 17, who speak of the violent wind in this part of Gallia; and Dionys. Halicam. i. 41, who quotes part of the passage from the Prometheus L'nbound.)

This plain of stones probably owes its origin to the floods of the Rhone and the Dhurance, at some remote epoch when the lower part of the delta of the Rhone was covered by the sea.

L.A'PITHAE ( $\Lambda a \pi i \theta$ au $)$, a mythical race in Thessaly. See Dict. of Biogr. and Myth. Vol. II. p. 721.

LAPITHAEUM. [LACON1A, p, 113,a.]
LAPITHAS. [Elis, p. 817, b.]
LAPPA, LAM1PA ( $\alpha \dot{\alpha} \pi \pi a$, Ptol. iii. 17. § 10 ;
 ^atraîos. Aautaîos), an inland town of Crete, with a di-trict extending from sea to sea (Scylax, p. 18), and possessing the port Phoenix. (Strab.x. p. 475.) Althungh the two forms of this eity's name occur in aucient authors, yet on coins and in inseriptions the word Lappa is alone found. Stephanus of Byzantium shows plainly that the two names denote tha same place, when he says that Aenion, in his Cretica, wrote the word Lappa, and not Lampa. The same author (s.v. Aá $\mu \pi \eta$ ) says that it was founded by A samemnon, and was called after one Lampos, a Tarrhacan; the interpretation of which seems to be that it was a colony of Tarrha.

When Lyctus had been destroyed by the Cnossians, its citizens found refinge with the jenple of lappa (l'olyb. iv. 53). After the submiswion of Cydonia, (nowsus, Lyctus, and Eleutherna, to the arms of Motellus, the Romans advanced agrinst Lappa, which was taken by sturm, and appears to lave been almost entirely destroyed. (Dion Cass, xxxvi. 1.) Auguxtus, in consideration of the aill rendered to liim by the Lappacans iu his strugglo with M. Antonins,
bestowed on them their freedom，and also restored their city．（Dion Cass．fi．2．）When Clristianity was established．Lappa became an episcopal sce ； the name of its hishop is recorded as present at the Synod of Ephesus，A．D．431，and the Council of Chalcedon，A．1． 451 ，as well as on many other sub－ sequent occasions．（Cornclius，Creta Sacra，vol．i． pı．25t，252．）

Lappa was 32 M．P．from Elentherna and 9 M．P． from Cisamus，the port of Aptera（Peut．Tab．）；dis－ tances which agree very well with Polis，the modern representative of this famous city，where Mr．Pashley （Tracels，vol．i．p．83）found considerable remains of a massive brick edifice，with buttresses $\mathbf{1 5}$ feet wide and of 9 feet projection；a circular building， 60 feet diameter，with niches round it 11 feet wide ；a cistern， 76 ft ．by 20 ft ；a Roman brick building，and several tombs cut in the rock．（Comp．Mus．Class．Antiq． vol．ii．p．293．）One of the inscriptions relating to this city mentions a certaiu Narcns Aurelius Clesippus， in whose honour the Lappaeans erected a statue． （Grnter，p． 1091 ；Chishull，Antiq．Asiat．p． 122 ； Mabillon，Mus．Ital．p．33；Böckh，Corp．Inser．Gr． vol．ii．p．428．）

The bead of its benefactor Augustus is exhibited on the coins of Lappa：one has the epigraph，ӨE $\Omega$ KAIエAPI EEBAミT $\Omega$ ；others of Domitian and Conmodus are found．（Hardouin，Num．Antiq． pp．93， 94 ；Niomnet，vol．ii．P． 286 ；Supplèm．vol． iv．p． 326 ；Rasche，vol．ii．pl．ii．p．1493．）On the autonomots coins of Lappa，from which Spanheim supposed the city to have possessed the right of a－ylnm，like the Grecian cities enumerated in Tacitus， see Feckhel，vol，ii．p． 315 ．The maritime symbols on the coins of Lappa are acconnted for by the ex－ tension of its territory to both shores，and the posses－ sion of the port of Phoenix．
［E．B．J．］
LAPURDUN，in Gallia．This place is only men－ tioned in the Notitia of the Empire，which fixes it in Novempopulans；but there is neither any historical notice nor any linierary measurement to determine its position．D＇Abrille，who assumes it to be re－ presented by Bayonne，on the river Adour，says that the name of Bayonne succeeded to that of Lapurdum， and the conntry contained between the Adour and the Bidasoa has retained the name of Lobourd． It is said that the bishopric of Boyonne is not men－ tioned before the tenth century．The name Bayonne is Basque，and means＂port．＂It seems probable that Lapurdun may have been on the site of Bayonne； but it is not certain．

## Lar FluviUs［Canis Flumen．］

LARANDA（ тà Lápavסa：Eth．Mapavסeús，f． Aapavסis ；Larenda or Karaman），one of the most important towns of Lycaonia， 400 stadia to the south－east of Iconium．Strabo（xii．p．569）states that the town belonged to Autipater of Derbe，which shows that for a time it was governed by native princes．Respecting its history in antiquity scarcely anything is known beyond the fact that it was taken by storm，and destroyed by Perdiccas（Diod．xviii． 22 ）；that it was afterwards rebuilt，and on ac－ count of the fertility of its neighbourhood became one of the chief seats of the Isaurian pirates．（Anum． Mare，xiv．2；comp．Steph．B．s．v．；Ptol．v． 6. § 17；Hierocl．p． 675 ；Euseh．Hist．Ecel．vi．19．） Suidas（ $s, v$ ．）says that Laranda was the hirtluplace of Nestor．an epic poet，and father of Pisander，a pnet of still greater celebrity；but when he calls the
 Lycia for Lycaonia．Leake（As．Min．p．100）
states that he found no Greek remains at Larand：a nor are there any coins belonging to the place．The ancient name，Larenda，is still in common use among the Christians，and is even retained in the firmans of the Porte；but its more general name， Karaman，is derived from a Turkish chief of the same name；for it was at one time the capital of a Turkish kingdom，which lasted from the time of the partition of the dominion of the Seljukian monarchs of leonium until 1486，when it was conquered by the emperor Bayazid 11．At present the town is but a poor place，with some manufactures of coarse cotton and woollen stuffs．Respecting a town in Cappadocia，called by some Laranda，see the article Leandis．
［L．S．］
LARES（Sall．Jug．90，where Laris is the acc pl．：$\Lambda \not 6 p \eta s$, Ptol．iv．3．§ 28 ：the abl．form L．A－ mibes is given，not only，as is so usual，in the Itin． Ant．p．26，and the Tab．Peut．，but also by Au－ gustine，adv．Donat．vi．20；and that this ablative was used for the nominative，as is common in the Romance languages，is shown by the Greek form Ad́piGos，Procop．B．1．ii．23，whence came at once the modern name，Larbuss or Lorbus）．An important city of Numidia，mentioned in the Jngurthine War as the place chosen by Marius for his stores and military chest．（Sall．Jug．l．c．）Under the Romans it became a colony，and helonged to the province of Africa and the district of Byzacena．Ptoleny places it much too far west．It lay to the E．of the Bagradas，on the road from Carthage to Theveste， $63 \mathrm{M} . \mathrm{P}$ ．from the latter．In the later period of the Etapire it hat decayed．（Pellissier，Exploration Scientifique de $[$ Algérie，vol，vi．p．375．）［P．S．］

LARGA，in Gallia，is placed by the Anton．ltin． between the two known positions of Epamanduodurum （Mandeure）and Mons Brisiacus（I＇ieus Brisach）． The distance from Epamanduodurum to Larga is 24 M．P．in the Itin．，and in the Table 16 Gallic leagues，which is the same thing．Larga is Largitzen， on or near the Largutes，in the Frencb department of Hout Rhin and in the neighbourbood of Altkirch． ［Epamandcodurem．］
［G．L．］
LA＇RICA（ムapıкй，Ptol．vii．1．§§ 4，62），a rich commercial district on the extreme of India，described by Ptolemy as being between Syrastrene and Ariaca， and having for its chief town Barygaza（Beroach）， the emporium of all the surrounding country．It must，therefore，liave comprebended considerable part of Guzerat，and sume of the main land of India， between the gulf of Barygaza and the Namadus or Nerbuida．Ptolemy considered Larice to have been part of Indo－Scythia（vii．1．§62），the Seythian tribes having in his day reached the sea const in that part of India．
［V．］
LARI＇NUM（ $\Lambda$ d́pivov，Ptol．；$\Lambda$ d́pwa，Steph．F．： Eth．ムapwaîas，Steph．B．；but Mapıvâtis，Pol．；Lari－ nās，－atis ：Larino lecchio），a cousiderable city in the northern part of Apulia，situated about 14 miles from the sea，a little to the S ．of the river Titernus． There is much discrepancy among ancient authori－ ties，as to whether Larinum with its territory，ex－ tending from the river Frento to the Tifernus， belonged properly to Apnlia or to the land of the Freutani．Ptoleny distinctly assigns it to the latter people；and Pliny also，in one passage，speaks of the ＂Larinates cognomine Frentani：＂but at the same time he distinctly places Larinum in Apulia，and not in the＂regio Frentama，＂which，according to him，beatins only from the Tifernus．Mela takes the same view，while Straho，strangely enough，omits all
mention of Larinum. (P’ol. iii. 1. § 65; Plin, iii. 11. s. 16; Mel, ii. 4. § 6.) Carsur, en the other land, distinguishes the territory of Larinum both fiom that of the Frentani and from Apuliat ("per fines Marrucinorum, Frentanorum, Larinatium, in Apuliam pervenit," B. C. i. 23). Livy uses almost exactly the same expressions (xxvii. 43); and this appears to be the real solution, or rather the origin of the difficulty, that the Larinates long formed an independent community, possessing a territory of considerable extent, which was afterwards regarded by the geographers as connected with that of their nurthern or sonthern neighbours, according to their own judgment. It was included by Augustus in the Second Region of Italy, of which be made the Tifernus the boundary, and thus came to be natusally considered as an appurtenance of Apulia: but the boundary woukd seem to bave been subsequently changed. for the Liber Coloniarum includes Larinum among the "Civitates Regionis Samuni," to which the Frentani also were attached. (Lib. Colon, p. 260.)

Of the early history of Larinum we have scarcely any information. Its name is not even once mentioned during the long continued wars of the Romans and Samnites, in which the neighbouring Luceria figures so conspicnously. Hence we may probably infer that it was at this period on friendly terms with Rome, and was one of those Italian states that passed gradually and almost imperceptibly frem the condition of allies inte that of dependents, and ultimately subjects of Kome. Daring the Second Ponic War, on the other hand, the territory of Larinum became rejeatedly the scene of operations of the Roman and Carthaginian armies. Thas in s.c. 217 it was at Gerunium, in the immediate swighbourhoed of Larinum, that Hannibal took up his winter-qnarters, while Fabins established his camp at Calela to watch him; and it was bere that the engagement took place in which the rashness of Minueins had so nearly insolved the Roman army in defeat. (Pol. iil. I01; Lix. sxii. 18, 24, \&c.) Again, in 13. C. 207 , it was on the borders of the same territury that Hannibal's army was attacked on its march by the prator Hostilins, and snffered severe loss (Liv. xxvii. 40) ; and shortly after it is again mentioned as being traversed by the consul Claudius on his memorable march to the Mctaurus. (Ibid. 43 : Sil. Ital. 21. 565.) In the Sicial War it appears that the Larinates must have joined with the l'rentani in taking up arms against lome, as their territory was ravaged in 1. c. 89 by the prator C. Cosconins, after his victory over Trebatius near Caunsinm. (Appian, B. C. i. 52.) During the civil wars of Catear and Pompey, the territory of Larinum was traversed by the former general on his advance to Brondusium (Caes. B. C. i. 23). Pompry seems to have at one time made it his head-quarters in Apulia, but abandoned it on learning the disaster of Domitius at Corfinium. (Cic. ad Att. vii. 12, 13, 1.)

From the repeatel mention during these military operations of the territory of Larimum, while none oceurs of the city itself, it would appar that the latter could not have been situated on the high road, which probably passed through the plain below it. Int it is evident from the oration of Ciecro in defonce of A. C'lumtius, who was a native of lavinum, that it was in lis day a flourishing and considerable manicipal town, with its lucal magistrates, senate, public archives, form, and all the other appurtenances of municipal government. (Cic. pro Cluent.
$5,8,13,15, \& \mathrm{c}$.) We learn from the Liber $\mathrm{C}_{\mathrm{D}}$ loniarmm that it received a colony under Caesar (Lege Julia, Lib. Colon. p. 260): but it alpears from inseriptions that it continued to retain its municipal rank under the Roman Empire. (Orell. Inser. 143; Mommsen, Inscr. Regn. Neap. pp. 272,273 .) The existing remains snfficiently prove that it must have been a large and populous town; but no mention of it is found in history after the close of the lioman Republic. Its name is found in the hineraries in the fourth century (Itin, Aut. p. 314, where it is corruptly written Arenio; Tab. Peut.) ; and there is no reason to suppose that it ever ceased to exist, as we fiud it already noticed as an episcopal see in the seventh century. In A. D. 842 it was ravaged by the Saracens, and it was in consequence of this calamity that the inhabitants appear to have abandosed the ancient site, and founded the modern city of Larino, a little less than a mile to the W . of the ancient one. The ruins of the latter, now called Larino Vecchio, occupy a considerable space on the summit of a hill called Monterone, about three miles S. of the Biferno (Tifernus): there remain some portions of the ancient walls, as well as of one of the gates; the ruins of an anphitheatre of considerable extent, and those of a bnilding, commonly called Il Palazzo, which appears to have stood in the centre of the town, adjoining the ancient foron, and may probably have been the Curia or senate-house. (Tria, Memorie di Lurino, i. 10.)

The territory of Larinnm scems to have originally extended from the river Tifernns to the Frento (Fortore), and to have included the whole tract between those rivers to the sea. The tomn of Cliternia, which was situated within these limits, is expressly called by Pliny a dependency of Larinum ("Larinatun Clitemia," Plin. iii. 11. s. 16) ; and Teanum, which is placed by lim to the N. of the Frentu, was certainly sitnated on its right bank. Hence it is probable that the municipal territory of Larinum under the Roman government still comprised the whole tract between the two rivers. Tbe Tabula places Larimum eighteen miles from Teanum in Aptulia, and this distance is confirmed by an express statement of Cicero. (Tab. Peut.; Cic. pro Cluent. 9.)

There exist numerens coins of Larinum, with the iuscription ladivod in Roman letters. From this last circumstance they cannot be referred to a very early jeriok, and are certainly not older than the Roman conquest. (Eckleel, vol. i. p. 107; Mlommsen, Rüm. Münzwesen, p. 335.)
[E. H1. B.]

COLS OF LARINEM,
LARISSA (Aapu $\sigma \sigma \alpha$, but on coins and inscr Aá-
 name common to many P'elargic towns, and probably a l'elasgic word sianitying city. (Comp. Strab. xiii. p. 620; 1 ionys. i. 21 ; Nicbuhr, Ilist. of Rome, vol. i. note 60.) Ilence in mythology Latissa is represented as the daughter of Pelasgus (l'aus. ii. 24.
§ 1). or of Piasus, a Pelasgian prince. (Strab. xiv. p. 621.)

1. An important town of Thessaly, the capital of the distriet Pelasgiotis, was situated in a fertile plain upon a gently rising ground, ou the right or sonth bank of the Peneius. It had a strongly fortified citadel. (Diod. xv, 61.) Larissa is not mentioned by Homer. Some commentators, however, suppose it to be the same as the Pelasgic Argns of Homer (Il. ii. 681), bnt the latter was the name of a district rather than of a town. Others, with more prohability, identify it with the Argissa of the poet. (Il. ii. 738.) [See Vol. 1. p. 209.] Its foundation was ascribed to Acrisins. (Steph. B.s. v.) The plain of Larissa was formerly inhabited by the Perrhaebi, who were partly expelled by the Larissaeans, and partly reduced to suhjection. They continued subject to Larissa, till Philip made himself master of Thessaly. (Strab. ix. p. 440.) The constitution of Larissa was democratical (Aristot. Pol. v. 6), and this was probably one reason why the Larissaeans were allies of the Athenians dnring the Peloponnesian War. (Thinc. ii. 22.) During the Roman wars in Greece, Larissa is frequently mentioned as a place of importance. It was here that Philip, the son of Demetrius, kept all his royal papers during Lis canpaign against Flamininus in Greece; but after the battle of Cynoscephalae, in c. c. 197, he was obliged to abandon Larissa to the Romans, having previously destroyed these documents. (Polyb, xviii, 16.) It was still in the hands of the Romans when Antiechns crossed over into Greece, e. c. 191, and this king made an ineffectual attempt upon the town. (Liv, xxavi. 10.) In the time of Strabo Larissa continued to be a flomrishing town (ix. p. 430). It is mentioned by Hierocles in the sixth century as the first town in Thessaly (p. 642, ed. Wessel.). It is still a considerable place, the residence of an archbishop and a pasha, and containing 30,000 irhabitants. It continues to bear its ancient name, though the Turks call it Yenisheher, which is its official appellation. Its circumference is less than three miles. Like other towns in Greece, which have been continually inhalited, it presents few remains of Hellenic times. They are chiefly found in the Tarkish cemeteries, consisting of plain quadrangular stones, fragments of columns, mostly fluted, and a great number of ancient cippi and sepnlchral stelae, which now serve for Turkish tombstones. (Leake, Northern Greece, vol. : p. 439 , seq.)

COIN OF LARIESA.
 a town of Thessaly of less importance than the preceding one, was situated in the district of Phthiotis, at the distance of 20 stadis from the Malinc gulf, upon a height advancing in front of Mount Othrys. (Strab. ix. p. 435.) It oecupied the side of the hill. and was bence surnamed Cremaste, as hanging on the side of Mt. Othrys, to distinguish it from the
more celebrated Larissa, situated in a plain. Strabo also describes it as well watered and producing vines (ix. p. 440). The same writer adds that it was surnamed Pelasgia as well as Cremaste (l.c.). From its being sitnated in the dominions of Achilles, sone writers suppose that the Roman poets give this hero the surname of Larissaens, but this epithet is perhaps used generally for Thessalian. Larissa Cremaste was occupied by Demetrins Poliorcetes in B. C. 302, when he was at war with Cassander. (Diod. xx. 110.) It was taken by Apustius in the first war between the Romans and Phillp, n c. 200 (Liv. xaxi, 46), and again fell into the hands of the Romans in the war with Perseus, e. c. 171. (Liv. xlii. 56,57 .) The ruins of the ancient city are situated upon a steep hill, in the valley of Gardhiki, at a direct distance of five or sis miles from Khamiko, The walls are very conspicuous on the western side of the hill, where several courses of masonry remain. Gell says that there are the fragments of a Diric temple npon the acropolis, but of these Leake makes no mention. (Gell, Itinerary of Greece, p. 252; Dodwell, Travels, vol. ii. p. 81; Leake, Northern Greece, vol. iv. p. 347.)
3. The citadel of Argos. [Vol. I. p. 202.]

LARISSA ( $\Lambda$ ápurooa). 1. A town in the territory of Ephesns, on the north hank of the Caystrus, which there flows through a most fertile district, producing an excellent kind of wine. It was situated at a distance of 180 stadia from Ephesus, and 30 from Tralles. (Strab. ix. p. 440, xiii. p. 620.) In Strabo's time it had sunk to the rank of a villace, but it was said once to have been a $\pi \delta \dot{\delta} \lambda t$, with a temple of Apollo. Cramer (As. Mir. i. p. 558) conjectures that its site may correspond to the modern Tirieh.
2. A place on the coast of Troas, about 70 stadia south of Alexandria Troas, and north of Hamaxitus. It was supposed that this Larissa was the one mentioned by llomer (Il. ii. 841), but Stratio (siii. p. 620) controverts this opinion, becanse it is not far enough from Troy. (Comp. Steph. B. s. v.) The town is mentioned as still existing by Thu cydides (viii. 101) and Xenophon (Hellen. iii 1. § 13 ; comp. Scylax, p. 36 ; Strab. ix. p. 440, xiii. p.604). Athenaens (ii. p. 43) mentions some hot springs near Larissa in Troas, which are still known to exist a little above the site of Alexandria Troas. (I'oyage Pittoresque, vol. ii. p. 438.)
3. Larissa, sumamed Phaconis, a Pelasgiar town in Aeolis, but subsequently taken possession of by the Acolians, who constituted it one of the towns of their confederacy. It was situated near the coast, about 70 stadia to the south-east of
 Herod. i. 149). Strabo, apparently for good reasons, ennsiders this to be the Larissa mentioned in the lliad (ii. 840). Xenophon (IIellen. iii. 1. § 7, comp. Cyrop. vii. 1. §45) distinguishes this town from others of the same name by the epithet of "the Egyptian," because the eller Cyrus had established there a colony of Eryptian soldiers. From the same historian we must infer that Larissa was a place of considerable strength, as it was besieged in vain by Thimbrom; but in Strabo's time the place was deserted. (Comp. Plin. v. 32 ; Vell. Pat. i. 4 ; Vit. Hom. c. 11 ; Steqh. B. s. v.; Itol. v. 2. § 5.)
[L.S]
LARISSA ( ápi $\sigma \sigma$ a, Xen. Anab, iii. 4. § 7), a town of Assyria, at no great distance fiom the left bank of the Tigris, observed by Xenophon on the
retreat of the Ten Thousand Greeks. It appenrs to have been situated a little to the north of the junction of the Lyeus (Zaib) and the Tigris. Xenophon describes it as a deserted city, formerly built by the Medes, with a wall 25 teet broad, and 100 hichi, and extending in circumference two parasangs. The wall itself was constructed of bricks, but had a foundation of stone, 20 feet in height (probably a casing in stone over the lower portion of the bricks). He adds, that when the Dersians conquered the Medes, they were not at first able to take this city, but at last captured it, during a dense fog. Aljoining the town was a pyramid of stone, one plethron broad, and two plethra in height. It has been conjeetured that this was the rite of the city of liesen, mentioned in Genesis (x. 12); and there can be Jittle duubt, that these ruins represent those of Niunrud, now so well known by the exeavations which Mr. Layard has conducted.
[V.]
I.Alis'sA (Aápıara), a city of Srria, placed by I'memy in the distriet of Cassiotis, in which Antioch was situated (v, 15. § 16), but probably identical with the place of the same name which, accorcling to Strabo, was reckoned to Apamia (xvi. p. $5: 2$ ), and which is placed in the Itinerary of Antuninus 16 M. P. from Apamia, on the road to Ennesa. D'Anville identifies it with the modern Kalaat Shyzar, on the left bauk of the Orontes, between Manah and Kalaat el-Medyk: or Apamia.
[G. W.]
LARIssUS or LARISUS, a river of Achaia. [Yol. I. p. 14, a.]

LARIL's LACUS (六 Aápios $\lambda$ l $\mu \nu \eta$ : Lago di Commo, one of the largest of the great lakes of Ninthern Italy, situated at the foot of the Alps, and formed by the river Addua. (Strab. iv. p. 192 ; Ilin. iii. 19. ※. 23.) It is of a peculiar form, long and narrow, but divided in its southern portion into two great arms or braches, forming a kind of fork. The SW. of these, at the extremity of which is situated the city of Como, has no natural outlet; the Addna, which carries off the superfluous waters of the lake, flowing from its SE. extremity, where stands the molern town of Leeco. Virgil, where be is speakime of the ereat lakes of Northem Italy, gives to the Larios the epithet of "maximus" (Gearg. ii. 159); and Sertius, in his note on the passage, tells us that, according to Cato, it was 60 miles long. This estimate, though greatly overrated, scems to have acquired a sort of traditimary authority: it is repeated by Cassiodorus ( ${ }^{\circ}$ or. $E_{p}$, xi. 14), and even in the Itinerary of Autoniuus ( 1.278 ), and is at the present day still a prevalent notion among the boatmen on the lake. The real divtatace from Como to the head of tha lake dses nut execed 27 Italian, or 34 Roman miles, to whith five or six more may be added for the distance by water to Riva, the Layo di Riva benge often regarded as only a portion of the larger l.ke. Strabo, therefore, is not far from the truth in estimating the Larius as 300 stadin ( $37 \frac{1}{2}$ Roman milew) in length. and 30 io breadth. (Strab, iv. p. 209.) Dot it is only in a few places that it attains this width; and, owiog to its inferior breadth, it is really much smaller than the lenacus (Lago di (iardit) or Vertanus (Lago Maggiare). Its waters are of great depth, and strromuled on all sides ly hish mountans, risiug in maoy places vely abatitly from the share: notwithetanding which their lewer slones weec clabod in :ucient times, as they still are at the preselt day, with rich groves
of clives, and afforded space for numeroms villas, Anong these the most celcbrated are thone of the younger $\mathrm{I}^{2}$ ling, who was himself a native of Conum, and whose paternal estate was situated on the banks of the lake, of which last he always speaks with affection as "Larius noster." (Ep. ii. 8, vi. 24, vii. 11.) But, besides this, he lad two villas of a more ornamental character, of which he gives some account in his letters (Ep. is. 7): the one situated on a lofty promontory projecting out into the waters of the lake, over which it commanded a very extensive prospect, the other close to the water's edge. The description of the former would suit well with the site of the modern Villa Serbelloni near Bellaggio; but there are not sufficient grounds upon which to identify it. The name of Villa Pliniana is given at the present day to a rilla about a mile beyond the village of Torno (on the right side of the lake going from Como), where there is a remarkable intermitting spring, which is also described by Pliny (Epp. iv. 30 ) ; but there is no reason to suppose that this was the site of either of his villas. Clandian briefly cbaracterises the scenery of the Larius Lacus in a few lines (B. Get. 319-322); and Cassiodorus gives an elaborate, but very aceurate, description of its beautics. The immediate banks of the lake wero adorned with villas or palaces (praetoria), above which spread, as it were, a girdle of olive woods; over these again were vineyards, climbing up the sides of the mountains, the bare and rocky summits of which rose abore the thick chesnut-wouds that encircled them. Streams of water fell into the lake on all sides, in eascades of snowy whiteness. (Cassiod. Var. xi. 14.) It would be difficult to describe more correctly the present aspect of the Lake of Como, the beautiful scenery of which is the theme of admiration of sll modern travellers.

Cassiodorus repeats the tale told by the elder Pliny, that the course of the Addun could be traeed throughout the lengtl) of the lake, with which it did not mix its waters. (Plin, ii. 10.), s. 106 ; Cassiod. l. c.) The same fable is told of the Lacus Lemannus, or Lake of Geneva, and of many other lakes formed in a similar manner by the stagnation of a large river, which enters them at one end and flows out at the other. It is remarkable that we have no trace of an ancient turn as existing on the site of the modern Lecco, where the Addua issues from the Jake. We learn, from the Itinerary of Antoninus (p. 278), that the usual course in proceeding from Curia over the Rhaetian Alps to Mediolanum, was to take boat at the head of the lake and proceed by water to Comum. Tbis was the route by which Stilicho is represented by Cluudian as proceeding across the Alps (B. Get. l. c.) ; and Cassiodorns speaks of Comum as a place of great traffic of travellers (l.c.) In the latter ages of the Roman empire, a flect was maintained upon the lake, the head-quarters of which were at Comum. (Not. Diyn, ii. p. 118.)
The name of Lacus Larius seems to have been early superseded in common usage by that of Lacts Comacisus, which is already found in the Itinerary, as well as in Paulus Diaconus, although the latter author uses also the more classical appellation. (ivin. Ant. l.c.; P. Diac. Mist. v. 38, 39.) [E.H.B.]
LARIX or LARICE, a place on the southern frontier of Noricum, at the foot of the Julian Alps, and on the road from Aquileia to Lauriacum. The town seems to bave owed its name to the forests of larch trees which abound in that district, and its site
must be looked for between Idria and Krainburg, in Illyricum, (It. Ant. p. 276 ; comp. Muchar, Noricum, p. 247.)
[L. S.]
LARNUM (Tondera), a small coast river in the territory of the Laeetani, io Hispania Tarraconensis, falling into the sea between Iluro and Blanda. (Plin, iii. 3. s. 4.) It has been inferred that there was a town of the same name on the river, from Pling's mention of the Larnenses in the conventus of Caesaraugusta : but it is plain that the Laeëtani belonged to the conventus of Tarraco. (Ukert, vol. ii. pt. 1. p. 456, assigns these Larnenses to the Arevacae.)
[P. S.]
LARTOLAEAETAE. [LAEËTANr.]
LARYMNA ( $\Lambda \alpha \dot{\rho} \nu \mu \nu a$ ), the name of two towns in Boeotia, on the river Cephissus, distinguished as Upper and Lower Larymna. (Strab. ix. pp. 405, 406.) Strabo relates that the Cepbissus emerged from its subterranean channel at the Upper Larymna, and joined the sea at the Lower Larymna ; and that Upper Larymna had belonged to Phocis until it was annexed to the Lower or Boeotian Larymna by the Romans. Upper Larymna belonged originally to the Opuntian Locris, and Lycophron mentions it as one of the towns of Ajax Oileus. (Lycophr. 1146.) Pansanias also states, that it was originally Locrian; and be adds, that it voluntarily joined the Boeotians on the increase of the power of the Thehans. (Paus. ix. 23. § 7.) This, however, probably did not take place in the time of Epaminondas, as Scylax, who lived subsequently, still calls it a Locrian town (p. 23). Ulrichs conjectures that it joined the Boeotian league after Thebes had been rebuilt by Cassander. In B.c. 230, Larymna is described as a Boeotian town (Polyb. xx. 5, where Mápupuay should he read instead of AaEpivay); and in the time of Sulla it is again spoken of as a Boeotian town.

We may conclude from the preceding statements that the more ancient town was the Locrian Larymna, situated at a spot, called Anchoe by Strabo, where the Cephissus emerged from its subterranean channel. At the distance of a mile and a half Larymna had a port upon the const, which gradually rose ioto importance, especially from the time when Larymna joined the Boeotian League, as its port then became the most convenient commonication with the eastern sea for Lebadeia, Chaeroneia, Orchomenos, Copae, and other Boootian towns. The port-town was called, from its position, Lower Larymna, to distinguish it from the Upper city. The former may also have been called more especially the Boeotian Larymna, as it became the seaport of so many Boeotian towns. Upper Larymna, thongh it bad joined the Boeotian League, continued to be frequently called the Locrian, on account of its ancient connection with Locris. When the Romans united Cpper Larymna to Lower Larymna, the inhabitants of the fomer place were probably transferred to the latter; and Upper Larymna was henceforth abandoned. This sccounts for Pausanias mentioning only one Larymna, which must have been the Lower city; for if he had visited Upper Larymna, he conld hardly have failed to mention the emissary of the Cephissus at this spot. Moreover, the ruins at Lower Larymna show that it became a place of much more importance than Upper Larymna. These ruins, which are called Kastri, like those of Delphi, are situated on the slore of the Bay of Larmes, on a level covered with loshes, ten minutes to the left of the mouth of the Cephissus.

The circuit of the walls is less than a mile. The annexed plan of the remains is taken from Leake.

## Plan of lanymna.

1. A small port, anciently closed in the maaner here descrilsed.
2. The town wall, traceable all around,
3. Another wall along the sea, likewise traceable.

4 A mole, in the sea.
5, Varions ancient foundations in the tower and
polis. Various ancient foundations in the tower and acropolis.
f. A Sorus.
7. Glizfoneró, or Salt Source.
8. An oblong foundation of an ancient building.

Leake adds, that the walls, which in one place are extant to nearly half their height, are of a red soft stone, very much corroded by the sea air, and in some places are constructed of rough masses. The sorus is high, with comparison to its length and breadth, and stands in its original place upon the rocks : there was an inscription upon it, and some omaments of sculpture, which are now quite defaced. The Glyfonero is a small deep pool of water, impreguated with salt, and is considered by the peasants as sacred water, becanse it is cathartic. The sea in the bay south of the ruins is very deep; and bence we ought probably to read in Pausanias
 instead of $\lambda\{\mu \nu \eta$, since there is no land-lake at this place. The ruins of Upper Larymna lie at Bazaräki, on the right bank of the Cephissus, at the place where it issues from its subterranean channel. (Leake, Northem Greece, vol, ii. p. 287, seq.; Ulrichs, Reisen in Griechenland, p. 229, seq.)

LARY'SIUMI. [Gythiem.]
LAS (^áas, Hom ; Aâs, Scyl., Paus., Strah.; Aâ, Steph. B. s. v.: Eth, $\Lambda$ âos), one of the most ancient towns of Laconia, situated upon the western coast of the Laconian gulf. It is the only town on the coast mentioned ly Scylax (p. 17) between Taenarus and Gythinm. Scylax speaks of its port; but, according to Pausanias, the town itself was distant 10 stadia from the sea, and 40 stadia from Gythium. (Paus. iii. 24. §6.) In the time of Pansanias the town lay in a hollow between the three mountains, Asia, llium, and Cnacadium; hut the old towa stood on the summit of Mt. Asia. The name of Las signified the rock on which it originally stool. It is mentioned by Homer (Il. ii

к
585), and is said to have been destruyed by the Diesenri, who hence derived the surname of Tapersae. (Strab, viii. p, 36i4; Steph. B, s, v, Aá.) There was allso a mountain in Laconia colled Lapersa. (Stephs B. s. v. Matépra.) In the later period it was a place of no importance. Livy spoaks of it as "vioms maritimus" (xxxviii, 30), and l'alatums mentions the ruins of the eity on Mh. Asia. Before the walls he saw a statne of 11 recules, and a trophy erected over the Macolontans who were a part of Mhilipis army when he invaded Laconia; and among the ruins he notied a statue of Athema Asia. The modern town was near a fomutain called Galaco ( $\Gamma$ a入ak ${ }^{\prime}$ ), from the milky enlonr of its water, and near it was a grmbasum, in which stood an ancient statue of Hermes. Besides the ruins of the old town on MIt. Asia, there were also buildings on the two ather mountains mentioned above: on Mt. Ilimm stood a temple of Donysus, and on the summit a temple of Asclepins; and on Mht. Cnacadium a temple of Apollo Carneius.

Las is spoken of by Polybius (v. 19) and Strabo (viii. p, 363) under the name of Asine: and hence it has beon supposed that some of the fugitives from Asine in Argoli, may have settled at Las, and given their name to the town. But, notwithstanding the statement of Polybins, from whow Strabo probably coniud, we have given reasons elsewhere for believing that there was no Laconian town ealled Asine ; aud that the mistake probably arose from confounding "Avine" with "Asia," on which Las originally stood. [Asive, No. 3.]

Las stoml upon the liill of Passaxi, which is now erowned by the ruins of a fortress of the middle ages, ammen which, howerer, Leake noticed, at the sonthern end of the ematern wall, a piece of Tellenie wall, about 50 paces in length, and two-thirds of the haight of the modern wall. It is formed of prlyt mal blocks of stone, some four feet long and three liroad. The fomtain cialaco is the stream Turkiorrysu. which rises between the bill of $I_{\text {as- }}$ sendi :and the sillate of Kirrela, the latter beine ne nule and a half weot of P'assarí. (Leake, Mower, vol. 1. 1. 25.54, sey., 1. 276, seg. ; I'elopoanesiura, p. 150. FAlave, Richoredirs, de 1. 87 ; Curtins, Pelupnumesns, vol. ii. p. 273, scr.)
LASAD.A (Aaraia), a city in Crote, near the romisteal of the "Fair Hawens," (Acts, sxvii. 8.) This phaen is mit mentionel hy any ether writer, hat is prabilly the same as the lisia of the Pentingor Tables, 16 N. P. to the Fi. of Gortyna. (Comp Hikk, Ki- (4, wel. i. pp, 112, 4:39, Somi MSS, have Lave: athere, Alaw. The Vintrate peats Thatam, whith 1he a wontombel was the tru* mane. (Comp. Coacybrare and 11 woun, life oud Fipit, of it. Poult, vol. ii. 1, 330.)
[ $\mathrm{B}, \mathrm{B}, \mathrm{J}$, ]
LA'SION ( laciav or Aaciór), the thint tuwn of the mont dimots district of Actureiat in Slis pumper.
 phe. Curtios placm it with qreat probability in the apmer valley of the Lodum, at the Poleokastro of Kinumni, on the : at from the Elcian Pylon and Ephyra to P'smphis. Lation whs a frempent objeet of dispute between the Areadran and Eloitms, buth of whom laid claim to it. In the war whels the Spurtans earried on ac:unst Elis at the chasio of the PeloPunceian War, Pausamias, king of Spata, took LaAnu (Dioul, siv. 17). The insavion of Pausanins is "At mentioned by Xemplom in his aceoment of this " ir; but the latter anthor relates that, by the treaty 81 paes concluded between Elis and spartat in the.

400, the Bleians were obliged to give np Lasion, in consequence of its being claimed by the Arcadians. (Xen. Ilell. iii. 2. §30.) In д. c. 366 the Eleians attempted to recover Lastion from the Arcadians; they took the town by surprise, but were shortly afturwards driven out of it ayain by the Arcudians. (Xen. Il.ll. vii. 4. § 13, seq.; Dind. xv. 7i.) In b. c. $2 \neq 9$ Lasion was again a fortress of Elis, bnt upon the capture of Psophis by Philip, the Jician garrison at Lasion straightway deserted the place. (Polyb. iv. 72, 73.) Polybins mentions (v. 102) alone with Lasion a fortress called l'yrges, which he places in a district named Perippia. (Leake, Morea, vol. ii. p. 200, seq.; Boblaye, Recherches, \&c. p. 125; Curtius, Peloponnesos, vol. i. p. 41.)
I. $\Lambda^{\prime}$ SSORA, a town of Galatia, mentioned in the Peut. Tab, as 25 miles distant from Eceobriga, whence we may infer that it is the same place as the Aarжopia of I'toleny (r. 4. §9). The Antosine Itinerary (p. 203) mentions a town Adapera in about the same site.
[L. S.]
I.ASTI'GL, a town of Hispania Baetica, belonging to the conventus of Hispalis (Plin. iii. 1. s. 3), and one of the eities of which we have coins, all of them belonging to the period of its independence : their type is a head of Mars, with two ears of corn lying parallel to each other. The site is supposed to be at Zahara, lying on a height of the Sierra de Ronda, ahove the river Guadal te. (Carter's Travels, p. 1:1; Florez, Esp. S. vol. ix. pp. 18, 60, Med. vol. ii. p. 475 , vol. iii. p. 85 ; Mionuct. vel. i. p. 50, Suppl. vol. i. P. 113; Sestini, Med. Isp. p. 61; Num. Goth.; Eckhel, vol. i. p. 25; Ukert, vol. ii. pt. 1. pp. 358, 382.)
[P.S.]
LASUS, a town of Crete, enumerated by l'liny (iv. 12) among his list of inland cities: A coin with the epigraph $\triangle A T I \Omega N$, the Dorie form for Aa iiav, is claimed by Erkhel (vol. ii. p. 316, emmp. Sestini, p. 53) for this place.
[E. B. J.]
LATARA. [Lfmus.]
LATHON ( $\Lambda \alpha \alpha^{2} \neq v$, Strab, xvii. p. 836, where the rulgar reading is $\Lambda \alpha \delta \omega \nu$; comp. xiv. p. 647, where
 Euerg. op Ath. ii. p. $7 t$; Fluvies Lethon, Plin. v. 5 ; Solin. 27 ; Letmes Aminis, Lucan, ix. 355), a river of the Hesperidae or Hesperitae, in Cyrenaica. It rose in the llerenlis Arenae, and fell into the sea a little N. of the eity of Itesperides or Bkmovice: Strabo conneets it with the harbour of the city $\left.\left(\lambda_{i} \mu\right\rangle\right\rangle \nu{ }^{+} \mathrm{E} \sigma \pi \in \rho i \delta \hat{\omega} \nu$; that there is not the slightest reason for altering the reading, as Groskurd and others do, into $\lambda i \mu \nu \eta$, will presently appear) ; and Scylax (p. 110, Gronov.) mentions the river, which lu- calls l'eccius ('Eккеtós), as in close proximity with the city and habour of Hesperides. Pliny ex pressly states that the river was not far from the city, and places on or near it a sacred grove, which w:ts supposel to represent the "Gardens of the llesprides" (Min. r. 5: nee procul ante oppidum flurins Lethon, lucus sncer, ubi Ilesperidum harti me. moroutur). Athenaens quotes from a werk of 1 'tuleny Energetes praises of its fine pike and eels, somewhat inconsistent, especially in the mouth of a luxurious king of Egypt, with the mythical sound of the name. That name is, in fact, plain Doric Greek, descriptive of the character of the river, like omr Linglish Mole. So well does it deserve the name, that it "escuped the notice" of commentators and grographers, till it was diseoxered by Beechey, as it still flows "coneculed" from such scholars as depend on vague guesses in place of an aceurate knowledge
of the localities. Thus the laborions, but often most inaccurate, compiler Forbiger, while taking on himself to correct strabo's exact account, tells us that "the river and lake (Strabo's harbour) bave now entirely vanished ;" and yet, a few lines down, he refers to a passage of Beechey's work withio a very few pages of the place where the river itself is actually described! (Forbiger, Hundbuch der alten Geographie, rol. ii. p. 828 , note.)

The researches made in Beechey's expedition gire the following results :-East of the headland on which stands the rains of Hesperides or Berenice (now Bengazi) is a small lake, which communicates with the barbour of the city, and has its water of course salt. The water of the lake raries greatly in quantity, accordiog to the season of the year; and is nearly dried up in summer. There are strong grounds to beheve tbat its waters were more abundant, and its communication with the harbour more perfect, in ancient times than at present. On the margin of the lake is a spot of rising ground, nearly insulated in "inter, on which are the remains of ancieot buildings. Eust of this lake again, and only a ferw yards from its nargin, there gushes forth an abundant spring of fresh water, which empties itfelf into the lake, "runring along a channel of inconsiderable breadth, bordered with reeds and rushes," and "might be mistaken by a common observer for an inroad of the lake into the sandy soil which bounds it." Moreuver, this is the only stream which empties itself into the lake; and indeed the only one found on that part of the coast of Cyrenaica. Now, even without searching further, it is evident how well all this aoswers to the description of Strabo (svi. p. 836) :-" There is a promontory called Pseudopenias, on which Berenice is situated, beside a certain Lake of Tritonis ( $\pi \alpha \rho \dot{\alpha}$ $\lambda i \mu \nu \eta \nu \tau \iota \nu \dot{\alpha}$ Tpicovidóo), in which there is gene rally ( $\mu$ á̀ı $\sigma \tau \alpha$ ) a little island, and a temple of Aphrodite upon it: but there is (or it is) also the Harbour of Hesperides, and the river Lathon falls into it." it is now evident how much the sense of the description would be impaired by reading $\lambda i \mu \nu \eta$ for $\lambda i \mu \eta \nu$ in the last clause ; and it matters but little whether Strabo speaks of the river as falling into the harboor berause it fell into the lake which communicated with the barbour, or whether he means that the lake, which be calls that of Tritonis, was actually the larebour (that is, an inner harbour) of the city. But the little stream which falls into the lake is not the only representative of the river Lathon. Further to the east, in one of the sulterraucan caves which abound in the neighbourhood of Bengazi, Beechy found a large body of fresh water, losing itself in the bowels of the earth ; and the Bey of Bengazi affirmed that be had tracked its subterraneous conrse till be donbted the safety of proceeding fuother, and that he bad found it as much as 30 feet deep. That the stream thus lost in the earth is the same which reappears in the spring on the margin of the lake, is extremely probahle ; but whether it be so in fact, or not, we can hardly donbt that the ancient Greeks would iraagine the connection to exist. (Beechey, Proceedings, क̛o. pp. 326, foll. ; Bath, Honderangen, ofc. p. 387.
[P.S.]
LATHRIPPA ( $\Lambda \alpha \theta \rho i \pi \pi \alpha)$, an inland town of Arabia Felix, mentioned by Ptolemy (vi. 7. § 31), which there is no difficulty in identifyiog with the ancient name of the renowned El-jpedineh, "the city," as it is called by emphasis among the disciples of the false prophet. Its ancient name, Yutlirib, still exists in the native geographies and local tra-
ditions, which, with the definite article $c l$ prefixed, is as acelrately represented hy Lithrippa as the Greek alphabet would admit. "Medineh is situated on the edge of the great Arabian desert, close to the chain of monntains which traverses that country from north to south, and is a contiouation of Libanon. The great plain of Arabia in which it lies is considerably elevated abore the level of the sea, It is ten or eleven days distant from Mekka, and has been always considered the principal fortress of the Hedjaz, being surrounded with a stone wall. It is one of the best-built towns in the East, ranking in this respect next to Aleppo, though ruined honses and walls in all parts of the town indicate how far it has fallen foom its ancient spleodour. It is surrounded on tbree sides with gardens and plantations, which, on the east and south, extend to the distance of six or eight miles. Its population amounts to 16,000 or $20,000-10,000$ or 12,000 in the town, the remaioder in the suburhs." (Burckhardt, A rabiu, 321-400 ; Ritter, Erdkunde, vol. i. p. 15, ii. $\mathrm{pp} .149, \& \mathrm{~s}$.)
[G. W.]
LATIUM ( $\bar{\eta}$ Aavivn: Eth. and Adj. Latinus), was the name given by the Romans to a district or region of Central Italy, situated on the Tyrrleoian sea, between Etruria and Campania.

## I. Name.

There can be little doubt that Latium meant originally the land of the Lativi, and that in this, as in almost all other cases in ancient history, the name of the people preceded, instead of being derised from, that of the country. But the ancient Roman writers, with their usual infelicity in all matters of etymology, derived the name of the Latini trom a king of the name of Latinus, while they sought for another origin for the name of Latinm. The common etymology (to which they were obviously led by the quantity of the first syllable) was that which derived it from " latteo;" and the ussal explanation was, that it was so called because Saturn bad there lain hid from the parsuit of Jupiter, (Virg. den. viii. 322; Ovid, Fast. i. 238.) The more learned derivations proposed by Saufeius and Varro, from the inhabitants baving lived hidden in caves (Saufeius, ap. Serv. ad Aen. i. 6), or becanse Latiun itself was as it were kidden by the Apennines (Varr. ap. Serv. ad Aen. viii. 322), are certainly not more sati:factory. The form of the nane of Latium wonld at first lead to the supposition that the etlnic Latini was derived from it; but the same remark applies to the case of Samnium and the Samnites, where we koow that the people, being a race of foreign settlers, must lave giren their name to the country, and not the converse. Probally Latini is only a lengthened form of the name, which was originally Latii or Latvi; for the connection which las been generally recognised between Latini antl Lavinium, Latinus and Lavinus. scems to point to the existence of an old form, Latvinus. (Dunald-on, Varronianus. p. 6; Niebnhr, 1'.u. L. Kunde, p. 352.) Varro himself scems to regard the name of Latimn as derived from that of Latinus (LL. ₹. § 32) ; and that it was generally regarded as equivalent to "the land of the Latins" is sufficiently proved by the fact that the Greeks always rendered it by if
 found only in Greek writers of a late period, who borrowed it directly from the Romans. (Appian, B. C. ii. 26; Herodian, i. 16.) From the same cause it must have procveded that when the Latini ceased to
have any national existence, the name of 1.atiun i still not unfrequently used, so inpuivalent to " momen latinum," to designate the whule boly of those who possessed the rights of Latins, and were therefore still called Latini, though vo Jonger in a national semse.

The suggestion of a modern writer (Abcken, Mittel Italien, p. 42) that Latium is derived from "Latus," broud, and means the broad phain or expanse of the Campagna (like Campania from "Campus"), ajpears to be untenable, on account of the difference in the quantity of the first syllable, notwithstandine the analozy of $\pi \lambda a \tau$ is, which has the first as llable short.

## II. Extext and Bolvdamies.

The name of Latiam was applied at different periods. in a very differnt extent and sicnitication. Originally, as aiready petinted out, it meant the land of the Latimi; atad as longe as that people retained their indepembent national existonce, the name of Latium could only tou applied to the territory possessed by them, exclusive of that of the Hernici, Aequians, Volscians, \&c., who were at that period independent and often hostile nations. It was not till these separate nationalities had been merged into the comnom condition of vhljects and citizens of Rome that the name of Latium came to be extended to all the territory whicb they had preriously occupied; and was thus applied, first in common parlance, and afterwards in utticial usage, to the whole region from the borders of Etroria to thase of Campania, or from the Tiber to the Liris. Hence we must carcfully distinguish between Latium in the original sense of the name, in which alone it occurs tbroughout the early Roman listory, and Latium in this later or geographical sense; and it will be necessary bere to treat of the two quite separately. The period at which the fatter unage of the name came into vogue we have no means of deterniming: we know only that it was fully establi-hed before the time of Aurustas, and is recognised by all the geographers. (intmb. s. pp. 228, 231: Plin. iii. 5. s. 9 ; Ptol. iii. 1. §§ 5.6) Pliny designates the original Latium, or Latium properly no calfed, as Latium Antiquum, to which he opposes the newly added portions, is Latium Adjectum. It inay, however, be doubted whether these appellations were ever adopted in cummon use, though convenient as generathical distinctions.

1. Latiom Anmeucm, or Latium in the original and historicul sense, was a country of small extent, boundel by the Tiber on the N ., by the Apennines on the E., and by the Tyrrhenian sea on the N : while on the S . its limits were nut defined by any natural bnumdaries, and appear to have fluctuated comiderably at different periods. Pliny defues is as extending from the month of the Thier to the Circeiau promoutury, a statement confirmed by Sirabo (Plin. iii. 5. s. 9: Strab. v. p. 231) ; and we hate other authority aloo for the fact that at an early perion all the tract of mantiy plain, known as the Pontme Marshes + " P muti ms Ager," extending from V ditase and Autizu to C'ircei, was inhabited ly latins, and remardel to a part if Latim 13. (Cato, ap. Priscian. v. 1. 66s.) Exen of the :adjaning numbtain tract, suberyumbly oce upard by the Whecians, a part at least must have been orizivally Lativ, for Cors, Nurba, and Sutia were all of then Latio cition (Dionys. v. 61), - though, at a somewhat later furiod, not only had these tuwne, as well as the phain ber neath, fallen into the hands of the Volsciams, but
:1.at people haul made themselves masters of Antium and Velitrin, which are in consequence repeatedly called Volscian cities. The manner in which the carly Roman liistory has been distorted by poetical legends and the exaggerations of national ranity renders it very dilicult to trace the course of these changes, and the alterations in the frontiers consequent upns the alternate progress of the Volscian and the Roman arms. But there seems no reason to doubt the fact that sucb changes repeatedly took place, and that we may thus explain the apparent inconsistency of ancient listorians in calling the same places at one time Volscian, at another Latin, cities. We may also clearly discern two ditterent periods, during the first of which the Volscian arms were gralnally gaining upon those of the Latios, and extendiny their tomimion over cities of Latin origin: While, in the secund, the Volscians were in their tum giving way before the preponderating posser of Rome. The Gaulish insasion (B.C. 390) may be taken, apprusimately at least, as the turuing point between the two periods.

The case al pears to bave been somewhat similer, though to a less degree, on the r.orthern frontier, where the Latins adjoined the Sabines. Here, alio. we fint the same places at different times, and by different authors, termed sometimes Latin and sometimes Sabine, cities ; and thongh in some of these cases the diserepancy may bave arisen from mere inadvertence or error, it is probable that in some instances botb statements are equally correct, but refer to different periods. The circumstance that the Anio was tixed by Angustus as the boundary of the First Resion seems to bave soon led to the notion that it was the northern limit of Latium also ; and bence all the tuwns beyond it were regarded as Sabine, though several of them were, according to the general tradition of carlier times, originally Latin cities. Such was the confusion resulting from this cause that Piny in one passage enumerates Nomentum, Fidenae, and even Tibur among the Subine torns, while be elsewhere mentions the two former as Latin cities,-and the Latin origin of Tibur is too well established to admit of a doubt. (Plin. iii. 5. s. 9. 12. s. 17.)

In the absence of natural bonndaries it is only by means of the rames of the towns that we can trace the extent of Latium; and here fortonately the lists that have been transmitted to us by Dionysius and Pliny, as well as those of the colonies of Alba, afford uv material assistance. The latter, indeed, cannot be recarded as of historical value, but they were unquestionably meant to represent the fact, with which their authors were probably well acquainted, that the places there enumerated were properly latin cities, and not of Sabine or Volscian orizin. Taking these authorities for our guides, we may trace the limits of ancient Latimm as follows:-1. From the mouth of the Tiber to the confluence of the Anio, the former river comstitutel the boundary between Latium and Etruria. The Romans, indeed, from an early puriod, extended their territory beyond the Tiber, and held the Janiculum and Campus Vatimanus on its ri.ht bank, as well as the su-called Soptem lagi, whelh they wrested from the Veientes: anl it is probable that the Etruscans, on the other hand, hail at one perind extended thoir power aver a part of the district on the left bauk of the Tiber, but that river nesertheless constituted the generaliy recognised geographical linit between Ftruria and Latium. 2. North of the Anio the Latin territory
romprised Fidenae, Crustomeriarn, and Nomentam, all of which are clearly established as Latin towns, while Eretum, only 3 miles from Nomentum, is equally well made out to be of Sabine origin. This line of demareation is confirmed by Strabo, who speaks of the Sabines as extending from the Tiber and Nomentum to the Vestini. (Stral, v. p. 228.) From Nomentum to Tibur the frontier caunot be traced with accaracy, from our uncertainty as to the pasition of several of the towns in this part of Latiam-Corniculam, Medullia, Cameria, and Ameriola; bot we may feel assured that it comprised the outlying groop of the Montes Corviculani (Mte, S. Angelo and Monticelli), and from thence stretched across to the foot of Monte Gennaro (Mons Lacretilis), around the lower slopes of which are the roins or sites of more thau one ancient city. Probably the whole of this face of the mountains, fronting the plain of the Campagna, was always regarded as belonging to Latiom, though the inner valleys and reverse of the same range were inhabited by the Sabines. Tibur itself was unquestionably Latin, though how far its territory extended into the interior of the mountains is difficult to determine. Bot if Empulum and Sassula (two of its dependent towns) be correctly placed at Ampiglione and near Siciliano, it must have comprised a considerable tract of the mountain country on the left bank of the Anio, Varia, on the other hand, and the valley of the Digentia, were onquestionably Sabine. 3. Returning to the Anio at Tibur, the whole of the W. front of the range of the Apennines from thence to Praeneste (Palestrina) was certainly Latin ; but the limits which separated the Latins from the Aequians are very difficult to determine. We know that Bola, Pedum, Tolerium, and Vitellia, all of which were situated in this neighbourhood, were Latin cities ; though, from their proxinity to the frontier, several of them fell at one time or otber into the hands of the Aequians; in like manner we cannot doubt that the whole group of the Alban Hills, including the range of Mount Algidus, was included in the original Latium, though the Aequians at one time were able to occapy the beights of Algidus at the opeoing of almost every campaign. Valmontone, whether it represent Toleriom or Vitellia, must have been about the most advanced point of the Latio frontier on this side. 4. The Volscian frontier, as already observed, appears to have undergone much floctuation. On the one hand, we find, in the list of the cities forming the Latin Leagne, as given by Dionysius (v. 61), not only Velitrae, which at a later period is called a Vulscian city, but Cora, Norba, and Setia, all of which were situated on the western front of the range of mountains which formed in later times the stronghold of the Volscian nation; but looking on the Pontine Marshes. Even as late as the outbreak of the great Latio War, b. c. 340, we find L. Aunius of Setia, and L. Numicius of Circeil, holding the chief magistracy among the Latins, from whom at the same tiune Livy expressly distinguishes the Volscians (Liv. viii. 3). These statements, combined with those of Pliny and Strabo already cited, seem to leave no doubt that Latium was properly regarded as extending as far as Circeii und the promontory of the same name, and comprising the whole plain of the Pontine Dlarshes, as mell as the towns of Cora, Norba, and Setia, on the E. side of that plain. On the other haod, Tarracina (or Anxur) and Privernum were certainly Volscian cities; and there can be no doubt that during the period of the Volscian
power they bad wrested a great part of the tract just described from the dominion of the Latins. Antiom, which for some reason or other did not form a member of the Latin League, was from an early period a Volsciatn city, and became oae of the chief strongholds of that people during the fitth century is. c.

The extent of Latium Antiquum, as thas limited, was far from considerable; the coast-line, from the mouth of the Tiber to the Circeian promontory, does not exceed 52 geographical or 65 Ruman miles (Pliny erroneously calls it only 50 Roman miles) ; while the greatest length, from the Circeian promontory to the Sabine frontier, near Eretam, is little more than 70 Ruman miles; and its breadth, from the mouth of the Tiber to the Sabine frontier, is just about 30 Roman miles, or 240 stadia, as correctly stated by Dionysius on the authority of Cato. (Dionys. ii. 49.)
2. Laties Novers. The bondaries of Latium io the enlarged or geographical sense of the name are mach more easily determined. The term, as thas employed, comprehended, besides the original territory of the Latins, that of the Aequians, the Hernicans, the Volscians, and the Auruncans or Ausonians. Its nortbern frontiers thas remained anchanged, while on the E. and S. it was extended so as to border on the Narsi, the Samnites, and Campania. Some confusion is nevertheless created by the new line of demarcation established by Augustus, who, while he constituted the first division of Italy out of Latium in this wider sense together with Campania, excluded from it the part of the old Latin territory N. of the Anio, adjoioing the Sabines, as well as a part of that of the Aequians or Aequiculani, including Carseoli and the valley of the Turano. The opper valley of the Anio about Subiaco, oo the other hand, together with the mountainons district extending from thence to the valley of the Sacco, constituting the chief abode of the Aequi during their wars with Rome, was wholly comprised in the nerly extended Lativm. To this was added the mountain district of the Hernici, extending nearly to the valley of the Liris, as well as that of the Volsci, who occupied the country for a consióerable estent on both sides of the Liris, including the mountaio district around Arpinum and Atina, where they bordered on the territory of the Samnites. The limits of Latium towards the S ., where its froutiers adjoined those of Campania, are clearly marked by Strabo, who tells us that Casinum was the last Latin city on the line of the Via Latina,-Teanum being already in Campanis; while on the line of the Via Appia, near the sea-coast, Sinuessa was the frootier town of Latium. (Strab. v. pp. 231, 233, 237 ; Plin. iii. 5. s. 9.) Pliny, in one passage, appears to speak of the Liris as constituting the boundary of this enlarged Latiom (Ib. § 56), while shortly after (\$59) be termus Sinaessa "oppidum extremom in adjecto Latio," whence it has been supposed that the boundary of Latium was at first extended only to the Liris, and snbsequently carried a step forther so as to inclade Sinuessa and its territory. (Cramer's Italy, vol. ii. p. 11.) Bat we have no evidence of any such succersive stages. Pliny in all probability uses the term "adjectum Latium" only as contradistioguished from "Latiam antiquum;" and the expression in the previous passage, " ande nomen Latii processit ad Lirim amnem," need not be constraed too strictly. It is certain, at least, that, in the days of Strabo, as well as those of Pliny, Si-
nuessa was already regarded as inclutel in latime. and the former author nuwhere alludi an the Liso as the boundary.

## ItI. Physteal Geograbuy.

The land of the Latins, or Latiom in its original sense, formed the southern part of the great ba-in through which the Tiber flows to the ses, aml which is bounded by the Ciminian Mills, and other ramers of volcanic hills conneeted with them, towards the N., by the Apennines on the E., and by the Alban 1Iills on the S. The latter, however, to wht form a continuous barrier, bring in fact an isolated group of veleanice uri_in, separated by a considerable gap from the Apemines on the one side, whike on the other they Lesw a broad strip of low plain between their lowest shupes and the set, which is continned on in the hroad expanse of levil and marsly ground, commonly known as the Powtine Marshes, extending in a bruad band between the Volscian mountains and the sea, until it is suddenly and abraptly terminated by the isolated mass of the Circeian promontory.

The great basin-like tract thus bounded is divided into tiro purtions by the Tiber, of which the one on the N. of that river belongs to Suuthern Etruria, and is not comprised in our present subject. [Etberia.] The snathern part, now known as the Cimpagna di Roma, may be regarded as a broad expane of undulatory plain, extending from the seacuast to the foot of the Apennines, which rise from it abruptly like a gigantic wall to a beight of from 3000 to 4000 feet, their highest summits even exceeding the latter clevation. The Monte Genuaro, ( 4285 En_lish feet in height) is one of the loftient snmmits of this rauge, and, from the boldness with which it rises from the subjacent plain, and its advanved pasition, appears, when viewed from the Cinnuraynt, the most elevated of all; but, according to Sir W. diell, it is exceeded in actual height both by the Monte Pennecchio, a little to the NE. of it, and by the Monte di Guadagnolo, the central peak of the groap of monatains which rive immediately above Praeneste or Palestrinc. The citadel of Pracneste itwelf occupies a very elevated position, forming a kind of autwork or advanced post of the chain of Apemines, which here trends away suddenly to the eatward, sweeping round by Ginatzano, Oherano. and hojate, till it resumes its general SE. direction, and is continned on by the lofty ammes of the Hernusan mountains, which hound the valley of the Succo on the E. and continuc unbroken to the valley of the Liris.
${ }^{(1 p p r i t e}$ to 1 'racneste, and sepratel from it by a loresdth uf nearly 5 mites of intervening plain, rises the isolated group of the Alban mountains, the form of which at once proves its valcanic orfing. [Atonses Moss.] It is a neatly nircular mass, of about 40 mailes in circumferenee; and may be conseived as firmiug a creat erater, the outer ridge of which has bern broken up into numerous morn of loss detarhed summits, several of which were "rowned in anciont times by towns if firtresses, surh as Tusculum, Corbin, S.e: while at a lawer livel it throws ont detached off-houts, or outlying ridges, affording andvantapems sites for towns, and which were aceordingly ocenpind by those of Velitrac, Lanmvinu, Alla Lompa, S.e. The group of the Alban momitails is wholly dotached on all sides: on the S. a strip of phain, of much the same breadth as that which sejarated it from the $A_{\text {penmines of Pracheste. divydres it }}$ tronn the soluordinate, but very lofty intss of mom-
tains, commuly known as the BHanti Lepini, or Volscian momtains. This group, which forms an untlying mass of the Apennines, separated from the main chain of those mountains by the broad vallry of the Trerus or Sacco, rises in a Lold and impesing mass from the level of the Poutine Marsbes, which it borlers throughont their whole extent, antil it reaches the sea at Tarracina, and from that place to the mouth of the Liris sends down a succession of monntain headlands to the sea, constituting a great natural barrier between the plains of Latium and those of Campania. The highest summits of this सroup, which consists, like the more central Apemines, wholly of limestone, attain an elevation of netrly 5000 feet above the sen: the whole mas fills up amost the entire space between the valley of the Trerus and the Pontine Diarshes, a breadth of from 12 to 16 miles; with a length of near 40 miles from Monte Fortino at its N. extremity to the sea at Torracina: but the whole distance, from Monte Fortino to the end of the mountain clain near the mouth of the Liris, exceeds 60 miles. The greater part of this rugsed mountain tract belenged from a very early period to the Volscians, but the Latins, as allready mentioned, possessed several towns, as Signia, Cora, Norba, Sc., which were built on projecting puint. or underfatls of the main chain.

But though the plains of Latium are thus strongly characterised, when compared with the groups of mountains , ust described, it must not be snpposed that they constitute an uobreken plain, still less a level alluvial tract like those of Northern Italy, The Campayna of Rome, as it is called at the present day, is a country of wholly different character from the ancient Campania. It is a broad undulating traut, never rasing into considerable elevations, but procuting much more variety of ground than would bo suspected from the pencral uniformity of its appearance, and irrerularly intersected in all directions by numerous streams, which bave cut for themselves deep channels or ravines tbrough the soft rolcanic tafo of which the soil is composed, leaving on each side steep and often precipitous banks. The height of these, and the depth of the valleys or ravines which are bounded by them, vary greatly in different parts of the Cimpagna ; hut besides these local and irregular flnctuations, there is a general rise (though so gradual as to be imperceptible to the eye) in the level of the plain towards the E. and SE; so that, as it approwhes Prumeste, it really attains to a consilerable clevation, and the river courses which intersect the phain in mearly parallel Fines between that city and the Anio become decp and narrew ravines of the blost formidable description. Even in the lower and mere level parts of the Campagna the sites of ancient cities will be generally found to acempy pances bounded to a considerable extent frequently on three sides out of tour-by steep banks of tufo rork, affording natural means of defence, which could be easily strengthened by the simple expedient of cutting away the face of the rocky bank, sal the to render it altugether inarcessible. The peculliar configuration of the Compayna resilting from these causes is well represented on Sir W. Gell's п. p , the only ene which gives at all a faithful idea of the physieal geography of latiun.

The volcanic urizin of the greater part of Latiun has a material influence upon its physical character and conlition. The Alban mountains, as already mentioned, are unquestionalily a great voleauic mass
which must at a distant period have becu the centre of volcanic outbursts on a great scale. Besides the central or principal crater of this gromp, there are several ninor craters, or crater-shaped hollows, at a much lower level around its ridges, which were in all probability at different periods centres of eruption. Sonie of these have been filled with water, and thus constitute the beantiful basin-shaped lakes of Albano and Nemi, while others have been drained at periods more or less remote. Such is the case with the Vallis Aricina, which appears to have at one time constituted a lake [Antcia], as well as with the now dry basin of Cornufelle, below Tusculum, supposed, with good reason, to be the ancient Lake Regillns, and with the somewhat more considerable Lago di Castiglione, adjoining the ancient Gabii, which has been of late years either wholly or partially drained. Besides these distinct foci of volcanic action, there remain in several parts of the Campagna spots where sulphurens and other vapours are still evolved in considerable quantities, so as to constitute deposits of sulphur available for economic purposes. Such are the Lago di Solfatara near Tivoli (the Aquae Albulae of the Romans), and the Silfatara on the road to Ardea, supposed to be the site of the ancient Oracle of Fatunus. Namerous allusions to these sulphureons and mephitic exhalations are found in the ancient writers, and there is reason to suppose that they were in ancient times more numerous than at present. But the evidences of volcanic action are not confined to these local phenomena; the whole plain of the Campagna itself, as well as the portion of Soathern Etruria which adjoins it, is a deposit of volcanic origin, consisting of the peculiar substance callel by Italian geologists tufo, 一 an aggregate of vuleanic materials, hand, small stones, and scorine or cinders, together with pumice, varying in consistency from an almost incoherent sand to a stone sufficiently lard to be well adapted for building purposes. The hardest varieties are those now called peperino, to which belong the Lapis Gabinus and Lapis Albanus of the ancients. But even the common tufo was in many cases quarried for building purposes, as at the Lapidicinae Rubrae, a few miles from the city near the bank of the Tiber, and many other spots in the immediate neighbourhood of Rome. (Vitruv. ii. 7.) Deds of true lava are rare, but by no means wanting : the most considerable are two streams which lare flowed from the foot of the Alban Mount; the one in the direction of Ardea, the other on the line of the Appian Way (which runs along the ridge of it for many miles) extending as far as a spot called Capo di Bove, little more than two miles from the gates of Fome. It was extensively quarried lyy the Romans, who derived from thence their principal supplies of the hard basaltic lava (called by them sitex) with which they paved their high roads. Smaller beds of the same material occur near the Logo di Castiglione, and at other spots in the Campagna. (Coocerning the geological phenomena of Latimm see Daubeny $O_{n}$ Folcanoes, Pp. $162-173$; and an Essay by Hoffmann in the Beschreibung der Stadt Rom. vol. i. Pp. 45-81.)

The strip of country immediately adjoining the sca-coast of Latiom differs materially from the rest of the district. Between the borders of the volcanic duposit just described and the sea there intervenes a broad strip of sandy plain, evidently formed merely by successive accumulations of simd from the sca,
and constituting a barren tract, still covered, as it was in ancient times, almost wholly with wood. This broad belt of forest region extends without interruption from the mouth of the Tiler near Ostia to the promontory of Antium. The parts of it acarest the sea are rendered marshy by the stagnation of the streams that flow throngh it, the outlets of which to the sea are blocked up by the accumnlations of sand. The headland of Antium is formed by a mass of limestone rock, forming a remarkable break in the otherwise uniform line of the coast, though itself of small elevation. A bay of about 8 miles across separates this headland from the low point or promontory of Astura: beyond which commences the far more extensive bay that stretches from the latter point to the mountain headland of Circeii. The whole of this line of coast from Astura to Circeii is bordered by a narrow strip of sand-bills, within which the waters accumblate into stagaant pools or lagoors. Beyond this again is a broad sandy tract, covered with dense forest and brnsliwood, but almost perfectly level, and in many places marshy; while from thence to the foot of the Volscian mountains extends a tract of a still more marshy character, forming the celebrated district known as the Pontine Marshes, and noted in ancient as well as modern times for its iosalubrity. The whole of this region, which, froms its N. extremity at Cisterna to the sea nuar Terrocina, is about 30 Roman miles in length, with an average oreadth of 12 miles, is perfectly flat, and, from the stagnation of the waters which descend to it from the mountains on the E., has been in all ages so marslyy as to be almost uninhabitable. Pliny, indeed, records a tradition that there once existed no less than 24 cities on the site of what was in lis days an unpeopled marsh. but a careful inspection of the locality is snfficient to prove that this must be a mere fable. (1lin. iii. 5. s. 9.) The dry land adjoining the marklies was donbtless occupied in ancient times by the cities or towns of Satricum, Ulubrae, and Suessa Pometia; while on the monntain ridges overlooking them rose those of Cora, Norba, Setia and Privernum; but not even the name of any town bas been preserved to us as situated in the marshy region itself. Equally unfounded is the statement hastily adopted by Pliny, though obviously inconsistent with the last, that the whole of this alluvial tract had been formed within the historical period, a notion that appears to have arisen in consequence of the identification of the Mons Circeius with the island of Circe, described by Honeer as situated in the midst of an open sea. This remarkahle beadland is indeed a perfectly insulated mountain, being stparated from the Apennines near Terracina by a strip of level sandy coast above 8 miles in breadth, forming the southern extremity of the plain of the Pontine Marshes; but this alluvial deposit, which alone connects the two, must have been formed at a period loog anterior to the historical age.

The Circeias promontory formed the southern limit of Latium in the original sense. On the opposite side of the Pontine Marshes rises the lofty group of the Volscian monntains already described: and these are separated by the valley of the Trerus or Sacco from the ridges more immediately connected with the central Apennines, which were inhabited by the Aequians and Hernicans. All these mountain districts, as well as those inbabited by the Volscians on the S . of the Liris, around Arpinum and Atina, partake of the same general character: they are occupied almost entircly by masses and groups of

LATIUM.
limestnne mountains, freqnently rising to a great height, and very abraptly, while in other cases their sides are clothed with magnificent forests of oak and chestnnt trees, and their lower slopes are well adapted for the growth of vines, olives, and corn. The broad valley of the Trerus, which eatends from the foot of the hill of Praeneste to the valley of the liris, is bordered on both sides by bills, covered with the richest vegetation, at the back of which rise the lofty ranges of the Volscian and Ilernican morntains. This valley.which is followed thronglont by the course of the Via Latina, forms a natural line of communication from the interior of Latimm to the valley of the Liris, and so to Campania; the inmportance of which in a military point of view is apparent on many occasions in Roman history. The broad valley of the Liris itself opens an easy and unbroken commmaication from the heart of the Apernines near the Lake Fucinus with the plains of Campania. On the other side, the Anio, which has its sources in the rugged mountains near Trevi, not far from those of the Liris, flows in a SW. direction, and after changing its mourse abruptly two or three times, emerges through the gorge at Ticoli into the plain of the Roman Campagna.

The greater part of Latium is not (as compared with some other parts of Italy) a country of great natural fertility. On the other liand, the barren and desulate aspect which the Campagna now presents is apt to convey a very erroneous impression as to its rharacter and resources. The greater part of the volcanic plain not only affords good pasturage for sheep and cattle, hut is capable of producing consifferable quantities of corn, while the slures of the hills on all sides are well adapted to the growth of vines, olises, and other fruit-trees. The wine of the Alban Hills was celebrated in the days of Horace (Hur. Carm. ir. 11. 2. Sat. ii. 8. 16), while the figs of Tusculum, the hazel-nuts of Praeneste, and the pears of Crustumium and Tibur were equally noted for their excellence. (Macrob. Sat. ii. 14, 15; Cato, R. 1. 8.)

In the early ages of the Roman history the cultiration of cors must, from the number of small towns seattered uver the plain of Latium, have been carried to a far greater extent than we find it at the present day ; but under the Roman Empire, and eren before the close of the lepublic, there appears to have been a continually iocreasing tendency to diminish the amount of aralle cultivatiou, and inerease that of posture. Nevertheless the attempts that hare been made even in modern times to promote agriculture in the neighhourhood of Rewne have sufficiently proved that its decline is more to be attributed to other causes than to the sterility of the soil itself. The tract near the sea-eoast alone is sandy and barren, and fully justifies the language of Fabius, who called it "agrum tnacerrimunh, littorosissinomque" (Nerv. ad Aen. i. 3). On the other haml, the slopes of the Alban llills are of great fortility, and are still studded, as they were in ancient times, with the villas of Roman nobles, and with gardens of the greatest richness.

The climate of Latiom was very far from being a healthy one, even in the thont flourishimg times of Fome, though the greater amount of population and cultivation tended to diminish the effects of the malaria which at the present day is the sconrge of the district. Strabo tells us that the territory of Ariea, an well as the tract between Antium and 1.anuvium, and exteuding from thence to the Pontine

## LATIUM

Marshes, was marshy and nnwholesome (v. p, 23i). The Pontine plains themselves are described as "pestifcrons" (Sil. Ital. viii. 379), and all the attempts made to drain them seem to liave produced but little effect. The unhealthiness of Ardea is noticed both by Martial and Seneca as something proverbial (Mart. iv. 60 ; Seneca, Ep. 105) : hut, besides this, expressions occur which point to a mach more general diffusion of malaria. Livy in one passage represents the Joman soldiers as complaining that they had to maintain a constant struggle "in arido atque pestilenti, circa mrbem, solo" (Liv. vii. 38); and Cicero, in a passage where there was much less romm for rhetorical exaggeration, praises the choice of Romulus in fixing his city "in a healthy spot in the midst of a pestilential region." ("Locum delegit in regione pestitenti saluhrem," Cic, de Rep, ii. 6.) But we leam also, from abundant allusions in ancient writers, that it was only by comparison that Roine itself could be considered healthy ; even in the city malaria fevers were of frequent occurrence in summer and autumn, and Horace speaks of the beats of summer as bringing in "fresh figs and funerals." (Hor. Ep. i. 7. 1-9.) Frontinus alvo extols the increased supply of water as tending to remove the causes which had previonsly rendered Rome notorious for its unhealthy climate ("cansae gravioris cocli, quibus apud veteres urbis infamis aer fuit," Frontin. de Aquaed. § 88). But the great accumulation of the population at Rome itself mnst have operated as a powerful check ; for even at the present. day malaria is unknown in the most densely populated parts of the city, though these are the lorrest in point of position, while the hills, which were then thickly propled, but are nuw almost uniohabited, are all subject to its ravages. In like manner in the Campagma, wherever a considerable nuclens of pupulation was once formed, with a certain extent of cultivation around it, this would in itself tend to keep down the mischief; and it is probable that, even in the most floutishing times of the Roman Empire, this evil was considerably greater than it had been in the earlicr ages, when the numerous free cities formed so many centres of population and agricultural industry. It is in accordance with this view that we find the malaria extending its ravages with frightful rapidity after the fall of the Roman Enupire and the devastation of the Campagna; and a writer of the 1Ith century speaks of the deadly climate of Rome in terms which at the present day would appear greatly exaggerated. (1'etrus Damianus, cited by Bunsen.) The unhealtbiness arising from this canse is, however, entirely confined to tbe plains. It is foond at the present day that an elevation of 350 or 400 feet above their level gives complete immonity ; and hence Tibur, Tusculum, Aricia, Lanorium, and all the other cities that were built at a considerable height above the plain were perfectly healthy, and were resorted to during the summer (in ancient as well as modern times) by all who could afford to retreat from the eity and its immediate neighbourlood. (See on this sulject Tournon, E'tudes, Statistiques ster Rome, liv, i. chaj. 9 ; Bunsen, Beschreibung der Stadt Rom. vol. i. [1. $98-108$.)

## IV. Historx.

1. Origin and Affinties of the Latins - All ancient writers are agreed in representing the Latins, properly so called, of the inhabitauts of Latiom in the restricted sense of the term, as a distinct people
from those which surrounded them, from the Volscians and Aequians on the one hand, as well as from the Sabines and Etruscans on the other. But the fiews and traditions recorded by the same writers concur also in representing them as a mixed people, produced by the blending of different races, and not as the pure descendants of one common stock. The legend most commonly adopted, and which gradually became firmly established in the popalar belief, was that which represented Latium as inhabited by a people tormed Aborigines, who received, shortly after the Trojan War, a colony or band of emigrant Trojans under their king Acneas. At the time of the arrival of these strangers the Aborigines were governed by a king pamed Latiuns, and it was not till after the death of Latiuus and the union of the two races under the rule of Aeners, that the combined people assnmed the name of Latini. (Liv. i. 1, 2 ; Dionys. i. 45, 60 ; Strah. v. p. 229 ; Appian, Rom. i. 1.) But a tradition, which has much more the character of a national one, preserved to us on the authority both of Varro and Cato, represents the population of Latium, as it existed previons to the Trojan colony, as already of a mixed chatacter, and resulting from the union of a conquering race, who descended from the Central Apennines about Reate, with a people Whom they found already established in the plains of Latium, and who bore the name of Siculi. It is strange that Varro (according to Dionysius) gave the name of Aborigines, which must originally have been applied or adopted in the sense of Antochthones, as the indigenous inbabitants of the country [AboRIGINES ], to these foreign invaders from the north. Cato apparently used it in the more natural signification as applied to the previously existing population, the same which were called by Dionysius and Varro, Siculi. (Varr. ap. Dionys. i. 9, 10; Cato, ap. Priscian. v. 12. § 65.) But thongh it is impossible to receive the statement of Varro with regard to the name of the invading population, the fact of such a migration having taken place may be fairly admitted as worthy of credit, and is in accordance with all else that we know of the progress of the popolation of Central Italy, and the course of the several successive waves of emigration that descended along the central line of the Apennines. [Jtalia, pp. 84 , 85.]

The authority of Varro is here also confirmed by the result of modern philological researches. Niebuhr was the first to point ont that the Latin language bore in itself the traces of a composite character, and was made up of two distinct elements; the one nearly resembling the Greek, and therefore probably derived from a Pelasgic source; the other closely connected with the Oscan and Umbrian dialects of Central Italy. To this he adds the important observation, that the terms connected with war and arms belong almost exclusively to the latter class, while those of agriculture and domestic life have for the most part a strong resemblance to the corresponding Greek terms. (Niebulr, vol. i. pp. 82, 83; Donaldson, Varroniunus, p. 3.) We may hence fairly infer that the conquering people from the north was a race akin to the Oscans, Sabines and Umbrians, whom we find in historical times settled in the same or adjoining regions of the Apennines: and that the inhabitants of the plains whom they reduced to subjection, and with whom they became gradnally mingled (like the Normans with the Saxons in England) were a race of Pelasgic extraction. This last cirenmstance is in
accordance with the inferences to be drawn from several of the historical traditions or statements transmitted to us. Thus Cato represented the Aborigines (whon be appears to have identified with the Sicnli) as of Hellenic or Greek extraction (Cato, ap. Dionys. i. 11,13 ), by which Roman writers often mean pothing more than Pelasgic: and the Siculi, where they reappear in the S . of italy, are found indissolably comnected with the Oenotrians, a race whose Pelasgic origin is well established. [SICULI.]

The Latin people may thus be regarded as composed of two distinct races, botly of them members of the great Indo-Tentonic family, but belonging to different branches of that family, the one more closely related to the Greek or Pelasgic stock, the other to that race which, under the varions forms of Umbrian, Oscan and Sabellian, constituted the basis of the greater part of the population of Central Italy. [ITALIA.]

But whatever value may be attached to the historical traditions above cited, it is certain that the two elements of the Latin people had become indissoltubly blended before the period when it first appears in bistory: the Latin nation, as well as the Latin language, is always regarded by Roman writers as one organic whole.

We may safely refuse to admit the existence of a third element, as representing the Trojan settlers, who, according to the tradition commonly adopted by the Romans themselves, formed an integral portion of the Latin pation. The legend of the arrival of Aeneas and the Trojan colony is, in all probability, a mere fiction adopted from the Greeks (Schwegler, Rom. Gesch. vol. i. Pp. 310-326) : though it may hare found some adventitions snpport from the existence of usages and religious rites which, being of Pelasgic origin, recalled those found among the Pelasgic races on the shores of the Aegcan Sea. And it is in accordance with this view that we find traces of similar legends connected with the worship of Aeneas and the Penates at different points along the coasts of the Aegean and Mediterranean seas, all the way from the Troad to Latium. (Dionys. i. $46-55$; Klausen, Aeneas u. die Penaten, book 3.) The worship of the Penates at Lavininm in particular would seem to have been closely connected with the Caheiric worship so prevalent among the Pelasgians, and hence probably that city was selected as the supposed capital of the Trojans on their first settlement in Italy.

But thongh these traditions, as well as the sacfed rites which contioued to be practised down to a late period of the Roman power, point to Lavininm as the ancient metropolis of Latium, which retained its sscred character as such long after its political power had disappeared, all the earliest traditions represent Alba, and not Laviniam, as the chief city of the Latins when that peuple first appears in connection with Rome. It is possible that Alla was the capital of the conquering Oscan race, as Lavininm had been thit of the conquered Pelasgians, and that there was thus some bistorical foundation for the legend of the transference of the supreme power from the one to the other: but no such supposition can claim to rank as more than a conjectore. On the other hand, we may fairly admit as historical the fact, that, at the period of the foundation or first origin of Rome, the Latin people constitnted a national league, composed of numerous independent cities, at the head of which stood Alba, which exercised a certain supremacy over the rest. This vague superionty, arising prebably from its greater actual power, appears to bave given rise

## LATIUN.

 tropolis of Latium, and that all, wh any rati flem greater part, of the cities of Latinn were meruly oor lonies of Alba. So far was tl is ideat curried, that : find expressly enumerated in the list of such colnual places like Ardea, Tusculum, sud 1'racmeste, wisi accorling to other traditions echerally reseivest, wew more ancient than Alla itself. (Liv. i. 52 ; Bhen. iii 34: Dioul. vii. ap. Euseb. Arm. p. 185; Vict. Ures Geut. Rom. 17.) [At,m. Loxics.]

1lliny has, however, preserved to us a statement of a very ilfterent stamp, according to which therwere thiry towns or communities, which he termthe "populi Altienses," that were arenstumsed to share in the sacrifices on the Alban Mount. Many of these names are now nbscure or unknown, several others appear to have been always fiecossiderable places, while a few orily subsepmenty ficure tunong the well-known cities of Latiom. It is theretors hishly probable that we have here an authentic record, preserved from ancient times, of a leapue which retually sulsisted at a very early perion, before Alba berame the head of the more important and better known confederacy of the Latins in ecrieral. Of the tomns thus enumerated, thowe whese sitnation can be determined with any certainty were all (with the remarkable exception of Filenae) situated in the immediate nei libourhond of the Alban 1lills; and thus appear to have bem urouped around Alba as their natural centre. Among them we find Bola, Pedum, Toleria, and Vitellia mis th. N. of the Alban Hills, and Corioli, Lonmela, and Pullusca on the S . of the same group, On the other band, the more powerful citics of Aricia, L atuvimh, and Tuscnlam, though so moch nearer to) Allia, are not included in this list. But there is a re markable statement of Cato (ap. Prisciun, is. p. 629 ), in which he speaks of the celnhrated temple of Diana at Aricia, as fuunded in common by the perple of Tusculum, Aricia, Lavivino, Laurnitum, Cura, Tibur, Ponctia, Ardea, and the Tutuli, that suems to point to the existence of a sepsuate, and, as it were, counter league, subsisting at the same time with that of whieh Alba was the head. All these minor unions wonld seem, howerer, to have ultimately heen merged in the general enfikmy of the Latins, of which, acendius to the trulition universally at pted by Roman writ in, Alba wis the acknow. 1. 4 hend.

Aonther people whose name appoats in all the earlont historical traditions of Lation in, Lnt who han! herome completely merged in the aneral bowly of the Latin nation, before we arrive at the libutorienl periol, was that of the liutuli. T cir cotpital was Ardea, a city to which a Greck or Ar- tre nifith was ascribed [ARDEA]: if any value can bo attached to such traditions, they may be rugurd d as pumting to a Pelascic origin of the Rutuli; athal Nieboler explains the traditionary groatuess of Avdea by supposing it to have been the chief city of utaritime Latiom, while it was still in the hands of the P'Claserians. (Nichuhr, vol. i. p. 44, vol. ii. p. 21.)

One of the most difficult puesti ms comareted with the early history of Latim is the maning ath, origin of the term "Prisci Latni," whath we find appliel by many Roman writers to the civies of the Latin Leasuc, and which ocems in is timmola given by Livy that bas eve y apprarance of heito very ancient. (Liv. i. 32.) It may sately be asommed that the term means "Old Latins," in I Niebulir's ideas that I'rity was itedf a matimal apreflation
ins been truerally rejected as untenalile. But it is difficult to believe that a people could ever have called thenselves " the old Latins:" and yet it seems certain that the name was so used, hoth In in its occurrence in the formula just referred to Mrich was in all probability horrowed from the w/ Law bouks of the Fetiales), and from the -ircumstance that we find the name almost solely It connection with the wars of Aucus Marcius and Tirquinius Prisens (Lir. i. 32, 33, 38) ; and it w. ter occurs at a later period. Hence it seems impossible to suppose that it was used as a term of distinction for the Latins properly so called, or inhabitants of Latium Antiquam, as contradistinguished from the Aequians, Volscians, and ither pations subserquently included in Latium: a supposition adupted by several modern writers. Ou the other laand the name does not occur in the If man history, prior to the destraction of Alha, and perhaps the most plausible conjecture is that the name was one insumed by a league or confederncy of the Latin cities, established after the fall of Alba, but who thus asserted their claim to mpresent the oricinal and ancient Latin people. It nitst be adn :eel that this explanation seems whilly at variance with the statement that the Prisci Latini were the colones of Alba, which is fonld both in Livy and Dionysius (Liv. i. 3; Dionys. i. 45), but this prohably meant to convey mothing more than the notion already noticed, that all the cities of latimu were founded by such colonims. Livy ut least, neems certainly to reasard the "Prisci Latio" as equivalent to the whole Latin nation, and not as a jart contradistinguished from the rest. (Liv. i. 38.)
2. Relatinus $\mathrm{yf}^{\prime}$ the Intins with Rome.-As the first historieal ay manee of the Latins is that of a confeleration of dintirent cities, of which Alba was the heari, so the fall and destruction of Alba may be recarded as the first event in their annals which can be termed historical. The circumstances transmitted th us in eonnection with this are moloubtedly poetical fictions: but the main fact of the destruction of the city and downfal if its power is well established. This erent must inare been followed by a complete derangenent in the previonsly existing relations. lome alpears to have speedily pat forth a claim to the supremace which Alba had previously exercised (Dinys. iii. 34); but it is erident that this mas not ackuowleled by the other cities of Latium ; and the Prici Latini, whose name appears in bistory only during tl is period, probably formed a separate learue of their own. It was not long, however, betirre the Romads surceeted in establishing their supeIinrity: and the statement of the Roman anoals, that the Latin learue was renewed under Tarquinius Superbus, and the supremacy of that monarch acknowledged by all the othor cities that composed it, delires a strong cunfirmatinn from the more anthentic testimony of the treaty between Rome and Carthage, preserved to us by Polybius (iii. 22). In this impirtant document, which dates from the year inmediatcly following the expulsion of the kings (B.c. 509). Rume appears its stif uhating on behalf of the people of Ardea, Antium, Laurentum, Circeii, Tarracina, - od the other sulfject (ur lopewhent) cities of Latium, and even making conditions in rezard to the whale Latin territory, as if it was sulject to its rule. But the state of things which appears to have been at this time foly esta lislred, was bruken up soon atter ; whether in conseluence of the revolution at

Rome which led to the abolition of the kingly power, or from some other cause, we know not. The Latin cities became wholly independent of Rome; and though the war which was marked by the great battle at the lake Regillus has been dressed up in the legendary bistory with so much of fiction as to render it difficult to attach any historical value to the traditions connected with it, there is do reason to doubt the fact that the Latins had at this time shaken ofil the supremacy of Rome, and that a war between the two powers was the result. Not long after this, in n. c. 493 , a treaty was conciuded with them by Sp. Cassius, which determined their relations with Rome for a long period of time. (Liv. ii. 33; Dionys. vi. 96; Cic. pro Balb. 23.)

By the treaty thus concluded the Romans and Latins entered into an alliance as equal and independent states, both for offence and defence: all booty or conquered territory was to be shared between them; and there is much reason to believe that the supreme command of the allied armies was to be held in slternate years by the Roman and Latin generals. (Dionys. l.c.; Nieb. vol. ï. p. 40.) The Latin cities, which at this time composed the leagne or confederacy, were thirty in number: a list of them is given by Dionysins in another passage (r. 61), but which, in all probability, was derived from the treaty in question (Niebnhr, vol, ii. p. 23). They were:-Ardea, Aricia, Bovillae, Bubentum, Corniculum, Carventum, Circeii, Corioli, Corbio, Cora, Fortinei (?), Gahii, Laurentom, Lavinium, Lannvinm, Labicum, Nonentum, Norba, Praeneste, Pedum, Querquetulum, Satricum, Scaptia, Setia, Tellense, Tibur, Tusculum. Toleria, Tricrinum (?), Velitrae. The number thirty appears to have been a recognised and established one, not dependent upon accidental changes and fluctuations: the cities which composed the old league nnder the supremacy of Alba are also represented as thirty in number (Dionys, iii. 34), and the "populi Albenses," which formed the smaller and closer anion ruder the same head, were, according to Pliny's list, just thirty. It is therefore quite in accordance with the nsages of ancient nations that the league $\pi$ ben formed anew should consist as before of thirty cities, thongh these could not bave been the same as previonsly composed it.
The object of this alliance between Rome and Latium was co donbt to oppose a barrier to the rapidly advancing power of the Aequians and Volscians. With the same view the Hernicans were soon after admitted to participate in it (n. c. 486); and from this time for more than a century the Latios continned to be the faithful allies of Rome, and shared alike in her victories and reverses during her long and arduous struggle with their warlike neighbours. (Liv, vi. 2.) A sbock was given to these friendly relations by the Ganlish War and the capture of Rome in B. c. 390: the calamity which then befel the city appears to have incited some of her nearest neighbours and most faithful allies to take up arms against her. (Varr. L. L. vi. I8; Liv. vi. 2.) The Latins and Hernicans are represented as not only refusing their contingent to the Roman armies, hat supporting and assisting the Volscians against them; and though they still aroided as long as possible an open breach with Rome, it seems evident that the former close alliance hetween them was virtually at an end. (Liv. vi. 6, $7,10,11,17$.) But it wonld appear that the bonel of union of the Latio Lcague itself was, by this time,
very moch weakened. The more powertul cities are found acting with a degreo of independence to which there is no parallel in earlier times: thus, in n. c. 383 , the Lanuvians formed an alliance with the Volscians, and Praeneste declared itself hostile to Rome, while Tusculum, Gabii, and Labicum continued on friendly terms with the republic. (Id. vi. 21.) In в. c. 380 the Romans were at open war with the Praenestines, and in B. c. 360 with the Tiburtines, but in neither instance do the other cities of Latium appear to have juined in the war. (Id. ri. $27-29$, vii. $10-12,18,19$.) The repeated invasions of the Gauls, whose armies traversed the Latio territory year after year, tended to increase the confosion and disorder: nevertheless the Latin Leagae, thongh much disorganised, was never broken ap; and the cities composing it still continued to bold their meetings at the Lacus Ferentinae, to deliberate on their common interests and policy. (Id. vii. 25.) In B. c. 358 the league with Rome appears to have been renewed upon the same terms as before; and in that year the Latins, for the first time after a long interval, sent their contingent to the Roman armies. (Liv. vii. 12.)

At length, in B. C. 340, the Latins, who had adhered faithfully to their alliance during the First Samnite War, appear to bave been ronsed to a sense of the increasing power of Rome, and became conscious that, onder the shadow of an equal alliance, they were gradually passing into a state of dependence and servitude. (Id. viii. 4.) Hence, after a vain appeal to Rome for the establishment of a more equitable arrangement, the Latins, as mell us the Vulscians, took part with the Campanians in the war of that year, and shared in their memorable defeat at the foot of Mount Vesuvius. Eren on this occasion, howerer, the councils of the Latins were divided: the Laurentes at least, and probably the Lavinians also, remained faitbful to the Koman cause, while Signia, Setia, Circeii, and Velitrae, though regarded as Roman colonies, were among the most prominent in the war. (Id, viii. 3-11.) The contest was renewed the next year with various success; but in B. C. 338 Furius Camillus defeated the forces of the Latins in a great battle at Pedum, while the other consul, C. Maenius, obtained a not less decisive rictory on the river Astura. The straggle was now at an end ; the Latin cities submitted one after the other, and the Roman senate pronounced separately on the fate of each. The first great object of the arrangements now made Was to deprive the Latins of all bunds of national of: social milty: for this purpose not only were they prohibited trom holding general councils or assemblies, but the several cities were deprived of the motual rights of "comnubinm" and "commercium," so as to isolate each little community from its neighbours. Tibur and Praeneste, the two most powerful cities of the confederacy, and which had taken a prominent part in the war, were deprived of a large portion of their territory, but continued to exist as nominally indepeadent communities, retaining their own lams, and the old treaties with them were renewed, so that as late as the time of Polybins a Roman citizen might choose Tibur or Prueneste as a place of exile. (Liv. xhiii. 2; Pol. vi. 14.) Tusculum, on the contrary, received the Roman franchise; as did Lanuvium, Aricia, Pednm, and Nomentmin, thongh these last appear to have, in the first instance, reccived ouly the imperfect citizenship without the right of suffirage. Velitrae was

## LATIUM,

more severely punished; but the people of this city also were soon after admitted to the Roman franchise, and the creation shortly after of the Maecian and Kcaptian tribes was designed to include the new citizens added to the republic as the result of these arrangements. (Liv, viii, 14, 17; Niebuhr, vol. iii. pp. 140-145.)

From this time the Latins as a nation may be said to disappear from history: they became gradually toore anod more bleaded into one mass with the Koman prople; and though the formula of "the allies and Latin nation" (socit et nomen Latimum) is one of perpetual occurrence from this time forth in the Romar history, it must be renembered that this phrise includes also the citizeas of the so-cailed Latin colonies, who formed a body far superior in importance and numbers to the remains of the old Latin people. [Itais., p. 90.]

In the above historical review, the history of the old Latins, or the Latins properly so called, has been stndionsly kept separate from that of the other nations which were subsequently incladed under the general appellation of Latimm,-the Apquians, Hernicuos, Volscians, and Aus nians. The history of these seteral tribes, as long as they sustained a separate national existence, will be found under their respective pames. It nay suffice here to mention that the Hernicans were reduced to complete subjection to Rome in B. c. 306, and the Aequians in B. C. 304; the period of the final subjugation of the Volscians is mure nacertain, but we meet with no mention of them in arms after the capture of Priveroum in E. c. 329 ; and it seems certain that they, as well as the Ausonian cities which adjoined them, had fallen into the power of Rome before the commencement of the second Samoite War, b. c. 326. [Vorscl.]. Hence, the whole of the cuantry subsequently known as Latium had become finally subject to Rome before the year $300 \mathrm{~B} . \mathrm{C}$.
3. Letium under the Romans.- The history of Latium, pruperly speaking, ends with the breaking up of the Latin League. Although some of the cities continued, as already mentioned, to retain a nomioal independeoce down to a late period, and it was not till after the outbreak of the Social War, in D.c. 90, that the Lex Julia at leagth conferred upon all the Latins, without exception, the rights of Roman citizens, they had looz before lost all traces of national distinction. The only events in the intervening period which belong to the listory of Latium are inseparably bound up with that of Rume. Such was the invasion by Pyrrins in B.c. 280 , who advanced however only as tar as Praeneste, from whence he looked down upon the plain around Rome, but without venturing to derceod into it. (Entrop. ii. 12; Flor. i. 18. §24.) In the Srond Puoic War, however, Hannibal, advancine like Pyrrhus by the line of the Vin Latins, established bis camp within fiver miles of the city, and carried his ravages up to the very gates of Rome. (Liv. sxvi. 9-11; Pol. is. 6.) This was the last tine for many centories that Latium witnessed the prennoce of a forcign hostile arroy; but it suffered severoly in the civil wars of Marius and Sulla, sad the whole tract near the sea-coast eppocially was ravaged by the Samnite auxiliaries of the furmer io a manner that it seems never to have recovered (Strab, v. p. 232.)

Before the close of the Republic Latium appears to have lapsed almost completely intu the condition of the mere suburban district of Rome. Tibur. Tusculum, and Praeneste became the favourite resorts of

## LATIUSI,

the Rcman nobles, and the fertile slopes of the Alhan llills and the Apennines were studded with villas and garlens, to which the wealthier citizens of the metropolis used to retire in order to avoid the heat or bustle of Rorne. Bat the plain immediately aroand the city, or the Campagna, as it is now called, scems to have lost rather than gained by its proxirnity to the capital. Livy, in more than one passage, speaks with astonishment of the inexhanstible resources which the infant republic appears to bave possessed, as compared with the condition of the same territory in his owa tune. (Liv. vi. 12, vii. 25.) We Learn from Cicero that Gabii, Labicam, Collatia, Fidenae, and Bovillae were in his time suok into almost complete decay, while even those towns, such as Aricia and Lanuvium, which were is a comparatively flouriking condition, were still very inferior to the opulent municipal towus of Campania. (Cic. pro Planc. 9, de Ley. Agrar. ii. 35.) Nor did this state of things become materially improved even under the Bomao Empire. The whole Laurentine tract, or the woody district adjoining the sea-coast, as well as the adjacent territury of Ardea, had already come to be regarded as unhealthy, and was therefore thinly inbabited. In other parts of the Campagna single farms or villages already occopied the sites of ancieot cities, such as Antemnae, Collatia, Fidenae, \&c. (Strab. v. p. 230) ; and Pliny gives a long list of cities of ancient Latium which in his time had altogether ceased to exist. (Plin. iii. 6. s. 9.) The great lines of highway, the Appian, Latia, Salarian, and Valerian Ways, became the means of collecting a considerable popalation along their irmmediate lines, but appear to have had rather a contrary effect in regard to all intermediate tracts. The notices that we find of the atternpts made by successive emperors to recruit the decaying population of many of the tomns of Latium with fresh colonies, sufficiently shom how far they were from shariog in the prosperity of the capital; while, on the other hand, these colonies seem to have for the most part sacceeded only in giviog a delusive air of splendour to the towns in question, without laying the foundation of any real and permaneat improvemeat.
For many ages its immediate proximity to the capital at least secured Latiun from the ravages of foreign invaders; but when, towards the decline of the Empire, this ceased to be the case, and each successive starm of tartarians carried their arms up to the very gates and walls of Rome, the district immediatrly round the city probathly saffered more severcly than any other. Before the fall of the Western Einpire the Campagna seems to lave beea reduced almost to a desert, and the evil must have bero continually augmented after that period by the long continued wars with the Gothic kings, as well as subsequeatly with the Lombards, who, though they never ronde themsclves masters of Rone itseif, repeatedly laid waste the surronadiag territory. All the records of the middle ages represent to us the limnan Campagna as reduced to a state of comphete desolation, from which it has never more thas partially recovered.

In the division of Italy under Augustus, Latium, in the wider sense of the term, together with Camjamia, constituted the First Region. (Plin. iii. 5. s. 9.) But gradualif, for what reason we know not, the mame of Campania came to be generally cuployed to designate the whole region; while that of Latiuun fell completely into disuse. Hence the origin of the aame of La Campagna di Roma, by
which the ancient Latium is known in modern times. [Campania, p. 494.]

## V. Political and Religious Istititutions.

It is for the most part impossible to separate the Latin element of the Roman character and institutions from that which they derived from the Sabines: at the same time we know that the connection between the Romans and the Latins was so intimate, that we may generally regard the Roman sacred rites, as well as their political institutions, in the absence of all evidence to the contrary, as of Latin origin. Bnt it would be obviously here out of place to enter into any detail as to those parts of the Latin institutions which were common to the two nations. A few words may, however, be added, concerning tbe constitution of the Latin Leagne, as it existed in its independent form. This was composed, as has been already stated, of thirty cities, all apparently, in name at least, equal and independent, though they certainly at one time admitted a kind of presiding authority or supremacy on the part of Alba, and at a later period on that of Rome.

The general councils or assemblies of deputies from the several cities were held at the Lucus Ferentinae, in the immediate neighbourhood of Alba; a custom which was eridently contected in the first instance with the supremacy of that city, but which was retained after the presidency had devolved on Rome, and down to the great Latin War of B. c. 340. (Cincins, ap. Fest. v. Proetor, p. 241.) Each city had undoubtedly the sole direction of its own affairs: the chief magistrate was termed a Dictator, a title borrowed from the Latins by the Romans, and which continued to be employed as the name of a municipal magistracy by the Latin cities long after they had lost their independence. It is remarkable that, with the exception of the mythical or fictitions kings of Alba, we meet with no trace of monarchical government in Latium; and if the account given by Cato of the consecration of the temple of Diana at Aricia can be trasted, even at that early period each city had its chief magistrate, with the title of dictator. (Cato, ap. Priscian. iv: p. 629.) They must necessarily have had a chief magistrate, on whotn the command of the forces of the whole League would devolve in time of war, as is represented as being the ease with Mamilins Octavins at the battle of Regillus. But such a commander may probably have been specially chosen for each particnlar occasion. On the other hand, Livy speaks in B. C. 340 of C. Annius of Setia and L. Numisius of Circeii, as the two "praetors of the Latins," as if this were a customary and regnlar magistracy. (Liv. viii. 3.) Of the internal government or constitution of the individual Latin cities we have no knowledge at all, except what we may gather from the analogy of those of Rome or of their later monicipal institutions.

As the Lucus Ferentinae, in the neighbourhood of Alba, was the established place of meeting for political purposes of all the Latin cities, so the temple of Jupiter, on the summit of the Alban Motuit (Monte Cavo), was the central sanctuary of the whole Latin people, where sacrifices were offered on their behalf at the Feriae Latinae, in which every city was bound to participate, a custom retained down to a very late period by the Romans themselves. (Liv. xssii. 1; Cic. pro Planc. 9; Plin. iii. 6. s. 9.) In like manner there can be no doubt that the custora sometimes adopted by Roman generals of cele-
brating a trinmph on the Alban Mount was derived from the times of Latin independence, when the tetrople of Jupiter Latiaris was the natural end of such a procession, just as that of Jupiter Capitolinus was at Rome.

Among the deities especially worshipped by the Romans, it may suffice to mention, as apparently of peculiarly Latin origin, Janus, Saturnus, Fannus, and Picus. The latter seems to have been so closely consected with Mars, that he was probably only another form of the same deity. Janns was originally a god of the sun, answering to Jana or Diana, the goddess of the moon. Saturins was a terrestrial deity, regarded as the inventor of agricultme and of a!! the most essential improvements of life. Hence he came to be regarded by the pragmatical mythologers of later times as a very ancient king of Latium; and by degrees Janus, Saturnus, Picus, and Faunus became established as successive kings of the earliest Latins or Aborigines. To complete the series Latinus was made the son of Faunus. This last appears as a gloomy and mysterious being, probably originally connected with the infernal deities: but who figures in the mythology received in later times partly as a patron of agriculture, partly as a giver of oracles. (Hartung, Religion der Römer. vol. ii. ; Schwegler, R. G. vol. i. pp. 212-234.)

The worship of the Penates also, though not peculiar to Latinm, seems to have formed an integral and important part of the Latin religion. The Penates at Lavinium were regarded as the tutelary gods of the whole Latin people, and as such continuted to be the object of the most scrupulous reverence to the Romans themselves down quite to the extinction of Paganism. Every Roman consul or praetor, upon first entering on his magistracy, was bound to repair to Lavinium, and there offer sacrifices to the Penates, as well as to Vesta, whose worship was elusely conaected with them. (Mserob. Sat. iii. 4 ; Varr. L.L. v. 144.) This custom points to Lavinium as having been at one time, probably before the rise of Alba, the sacred metropolis of Latium: and it may very probably have been, at the same early period, the political capital or head of the Latin confederacy.

## VI. Topography.

The principal physical features of Latium have already been described; but it remains here to notice the minor rivers and streams, as well as the names of some par-ticular bills or mountain heights which have heen transmitted to us.

Of the several small rivers which bave their rise at the foot of the Allan hills, and flow from thence to the sea between the mouth of the Tiher and Antium, the only one of which the ancient name is preserved is the Numicius, which may be identified with the streara now called Rio Torto, between Laviniom and Ardea. The Astcra. rising also at the foot of the Alban hills near Velletri, and flowing from thence in a SW. direction, enters the sea a little to the S. of the promontory of Astura : it is now known in the lower part of ita course as the Fiume di Conca, bat the several small streams by the confluence of which it is formed have each their separate appellation. The Nymphasus, mentioned by Pliny (iii. 5. s.9), and still called La Ninfa, rises immediately at the foot of the Volscian mountains, just below the city of Norba: in Pliny's time it appears to have had an independent course to the sea, but now loses itself in the Pontine Marshes,
where its waters add to the stagmel Bo But the primepal arents in the formation an : ©.a. extmonn marshes are the Urexs a if the Auasenes, buth of then flowing from the Volsci,es monntains and nuiting their waters before they wach the sea. They Atit retain their andent names. of the lesser stieams of Latiom, which flow jut, the Titur, we need only nwation the ecelebrated Alsia, whin falls into that
 ath -mall F sticus, whii how it just bolow the ory, having presionsly recemed the waters of the Agt a Fiamitina (in w callel the Marrana degli (rrti), which have their somes at the fios of the Allaw Halls, our Marino ; mit the Rives Atrsaars (atill calley the Rino Allweze), which carries off tiou supwrollums waters of the Mlban lake to the Tibor, abom four milos helow Rome.

The tuoumaims of Latiurn, as alrealy mentionel. unv lee classed into three principal groups:-(1) the Apennines, jmperly so called, inctuding the raoges at the back of Tiliur and Pracueste, as well as the momtains of the Aequians and Herricans; (2) the -tup of the Alb:u livis, of whith the central and ! thent sumunt (the Monte Caro) was the proper is mo Albanns of the ancients, wlale the part wheh 6.and pameste and the Volscian Montains wiss hown as the Moss Algides; (3) the lofty proup - mass of the Volscian Montain. frequently callow Is modern exapmphers the Monti Lepini, th w_h As have no ancment antlosity for this whe of the now 1. The name of Mons Lrrinus occurs only in Cir dimonth ( s .131 ), as that of a moturtain in the nejgh-

 fow heen the drtached group of outlying peath. Whal separete trom the mani range of the Aperinim. nun kin wn as the Montiorlli, situated between the Tiber and the Sfonfe fiemunro. The Moxs Sicen, so celcbrated in Reman history, was a mere hill of triffug elevation above the a j ining y lain. situated on the rijht bank of the Anio, close to the Via Nomentana.

It only ermains to enumerate the towns or citien which existed within the limits of Latium; but is thany of these had disappearel at a very early perios, and all trace of their crographical position is Jost, it will be necemary in the first instance to confine thi list to places of which the site is known, apjuaxi:mately at least, yeserving the more obscure nams. 1 if subsequent comviduration.

Beginuing trom the mouth of the Tiber, the firet plate is Giris. situated on the left bank of the Ahor, am\&, as it name impnts, ori_inally d ace to its in moth, thongh it os now three milis dintam trint it A shint distatate from the ceat 1, aul ahout S y the fism O. i.t, wat Larmextrys, the repated capltal of the Abriacines, sitmated prubably :it Torre di Patrmen, or at least in that imtumbinte meithtome home. A fow miles further S., I we considecably anme inlath, boin new 4 milos fo of the ens, was L. wisits, the site of whilh Hay be clearly re-
 the same divtare fis . the sea, was Alamia, whin ha
 pabetine phint of the conks, wat Axirtst, still callen Ionto it likan Ditwer, 9 ant 10 milis fartlor on at - F the en at, was the thend er villuge of Areras, with the i-lit of the same mane; and from

 the Chemathementy and the town of Cnick:
athich was gencrally reckoned the last place in Latum Proper. Rotaminy to Rome as a centre, we find N. of the city, and between it and the Sabine If matier, the crities of Antemsae, Fidesiae, Crestumpricm, and Xomextes. On or around the urutp of the Muntes Corniculani, were situated Cohisiculum, Medullia, and Aaeriola: Camania, also, may probably be plared in the same nid,bbourhood; and a little nearer Rome, on the roud Jeading to Numentum, was Fictles. At the f wt, or rather on the lower slopes and underfalls of the main ranue of the Apennines, were Tinur, Amacla, and I'baexiste, the latter oecupying a lufty spar or projecting point of the Apemnines, standing out towards the Alban Hulls. This latter group was surrounded as it were with a er)wn or circle of ancient towns, beginning with Commo (Rocca Priore). nearly opposite to Prueneste, and contimued on by Tusci lima, Alba, and Amecia, to Laxuvics and Velituak, the last two situated on projecting offshoots from the central group, standing ont towards the Pontine Plains. On the skirts of the Volscian mountains or Mfonti Lepini, were situated Sigsia, Coba, Norba, and Setha. the last three all standing on commanding heights, looking down upon the plain of the Pontine Marsbes. In that plaio, and immediately adjoining the marsbes themselves, was Ulubras, and in all probability Suessa Pometia also, the city which gave name luth to the mar.hes and plain, but the precise site of which is unkumm. The other places within the marshy tract, such as Fomer Aprus, Tres Tabersae, and Tuiposticar, owed their existence to the constraction of the Tia Appia, and dia not represent of rejlace ancient Latio turns. In the level tract bordering on the Pontine Plains on the N., and extending from the foot of the Alban Hills towards Autium and Ardea, were situated Sambicum, Losgila, Pollescea and Coheli; all of them places of which the exact site is still a matter of doubt, but which must certainly be sought in this neighbourhuod. Between the Lanreatine region (Lamreus tractus), as the forest distriet near the sea was often called, and the Via Appia, was an open level tract, to which (or to a part of which) the name of Caypes Soloxics was given; and within the limits of tbis district were situated Tellenae: and Politoricm, as well as probably Aplolae. Bovillae, at the fuot of the Alban bills, and jnst on the S , of the Appian Way, was at one extremity if the same tract, while Ficass stood at the other, immediately adjoining the liber. In the portion of the phain of the Campagna extending it the line of the Via Appia to the foot of the Apennines, between the Anio and the Albar Hills, the unly cty of which the site is known was Gabin, 12 miles distant from lome, and the same distance from l'raeneste. Nearer the Ajennines were ScapTIA and I'edust, as well as probably QueretueTilat whic Labicum oceupied the hill of $L a$ Colunna, nearly at the foot of the Alban group. In the tract which extends southwar is between the Apemines at Pracneste and the Alban Hills, so as to commect the plain of the Campayna with the land of the Hernicans in the valley of the Trerus or sicco, were sitnated Vimpana, Toleatrm, and proLably also BoLs and Oetoss: thon_h the exaet site of all fumr is a matter of dubbt. Ecrassa, which appears in hist yy is a Volscian city, ond is never mentimned as a hatin one, must nerertheless have been situated within the limits of the Latin territory, ap-

## LATIUM.

parently at the foot of the Mons Lepimus, or northein extremity of the Volscian mountains, [Ecetra.]

Besides these cities, which in the carly ages of Latinm formed members of the Latin Leagne, or are otherwise conspicuous in Roman history, we find mention in Pliny of some smaller towns still existing in his time; of which the "Fabienses in Monte Albano" may certainly be placed at Rocea di Papa, the highest village on the Alban Mount, and the Castrimonienses at Morino, near the site of Alba Longa. The list of the thirty cities of the League given by Dionysius (v. 61) has been already cited (p. 139). Of the names included in it, Bubextum is wholly unknown, and must have disnppeared at an early perind. Carventum is koown only from the mention of the Ars Carventana in Liry during the wars with the Aequians (iv. 53,55 ), and was probably situated somewhere on the frootier of that people; while two of the oames, the Fortineii (фортіреiot) and Tricrini (Tpukpivot), are utterly unknown, and in all probability corrupt. The former may probably be the same with the Foretii of Pliny, or perhaps with the Forentaiai of the same author, but both these are equally unknown to ns.

Besides these Pliny has given a long list of torns or cities (clara oppida, iii. 5. s. 9. § 68 ) which once existed in Latinm, but had wholly disappeared in his time. Among these we find many that are well known in history and have been already noticed, riz. Satricum, Pometia, Scaptia, Politorium, Tellenae, Caemina, Ficsna, Crastumerium, Ameriola, Mednllia, Corniculum, Antemnae, Cameria, Collatia. With these he joios two cities which are certainly of mythical character: Satornia, which was alleged to have previonsly existed on the site of Rome, and Autipolis, on the hill of the Janiculum ; and adds three other names, Sulmo, a place not mentioned by any other writer, but the name of which may probably be recognised in the modern Sermoneta; Norbe, which seems to be an errobeous repetition of the well-known Norba, already mentioned by him among the existing cities of Latium (Ib. §64): and Amitinum or Amiternum, of which no trace is found elsewhere, except the well-known city of the name in the Vestini, which cannot possibly be meant. But, after mentioning these cities as extinct, Pliny adds anotber list of "populi" or communities, which had been accustomed to share with them in the sacrifices on the Alban Nount, aod which were all equally decayed. According to the panctuation proposed by Niebubr and adopted by the latest editors of Pliny, he classes these collectively as "populi Albeoses," and enumerates them as follows: Albani, Acsulani, Accienses, Aholani, Bubetaoi, Bolani, Casuetani, Coriolani, Fjdenates, Foretii, Hortenses, Latiuienses, Longulani, Manates, Macrales, Nutucumenses, Munienses, Numinienses, Olliculani, Octnlani, Pedani. Polluscini, Querquetulani, Sicani, Slownenses, Tolerienses, Tutienses, Vimitellarii, Velienses, Venetulani, Vitellenses. Of the names here given, eleven relate to well-known towns (Alba, Aesula, Bola, Corioli, Fidenae, Longula, Pedum, Pollusca, Querquetula, Tolerium and Vitellia): the Bubetani are evidently the same with the Bubentani of Dionysius already noticed; the Foretii may perbaps he the same with the Fortineii of that author; the Hortenses may probably be the inhabitants of the town called by Livy Ortona; the Nunienses are very possibly the people of the town aftermards called Castrimoenium: but there still remain sisteen wholly unknown. At the same time there are scveral indications (snch as the

LATMICUS SINUS.
agreennent with Dionysins in regard to the otherwisc noknown Bubentani, and the notice of Aesula and Querquetula, tomns which do not figure in history) that the list is derived from an antheutic source; and was probably copid as a whole by Pliny from some more ancient authority. The conjecture of Niebuhr, therefore, that we have licre a list of the subject or dependent cities of Alba, derived from a period when they formed a separate and claser leagne with Alba itself, is at least bighly plausible. The notice in the list of the Velienses is a strong confirmation of this vien, if we can suppose them to be the inhabitants of the hill at Rome called the Velia, which is known to us as bearing an important part in the ancient sacrifices of the Septimontium. [Roma.]

The works on the topography of Latium, as might be expected from the peculiar interest of the subject, are sufficiently nomerous: but the older ones are of little value. Cluverius, as usual, laid a safe and solid fonodation, which, with the criticisms and corrections of Holstenius, must be coosidered as the basis of all subsequent researches. The special morks of Kircher (Fetus Latium, fol. Amst. 1671) and Volpi (I'etus Latium Profanum et Sacrum, Romae, $1704-1748.10$ vols. 4 to.) cootain very little of real value. After the ancient authorities had been carefnily bronght togetber and revised by Cluverins, the great requisite was a carefal and systematic examioation of the localities and existing remains, and the geographical survey of the country. Tbese objects were to a great extent carried out by Sir W. Gell (whose excellent map of the country around Rome is an inraluable gnide to the historical inquirer) and by Professor Nibby. (Sir W. Gell, Topography of Rome and its Vicinity; with a large map to accompany it, 2 vols. 8 vo. Lond. 1834: 2 d edit. 1 vol. Lond. 1846. Nibby, Anolisi Storico-Topografico-Antiquaria della Carta dei Dintorni di Ruma, 3 vols. 8 vo. Rome, 1837: 2 d edit. Ib. 1849. The former work by the same author, Jiaggio Antiquario nei Contorni di Roma, 2 vols. 8 ro. Rome, 1819, is a very inferior performance.) It is unfortunate that both their works are deficient in accurate scholarship, and still more in the spirit of historical criticism, so absolutely necessary in all inquiries into the early bistory of Rome. Westphal, in bis work (Die Römische Kampagne in Topographischer u. Antiquarischer Hinsicht dargestellt, 4to. Berlin, 1829) publisbed before the survey of Sir TV. Gell, and consequently with imperfect geograpbical resources, attached binself especially to tracing out the ancient roads, and bis work is in this respect of the greatest importance. The recent work of Bonnann (Alt-Latinische Chorographie und StädteGeschichte. 8vo. Halle, 1852) contains a careful review of the historical statements of ancient authors, as well as of the researches of modern inquirers, but is not based npon any new topograpbical revearches. Notrithstanding the labours of Gell and Nibby. mnch still remains to be done in this respect, and a work that shonld combine the results of such inquinies with sound scholarship and a jndicious spirit of criticism would be a valuable contribution to ancient geography.
[E. H. B.]
LATMICUS SINUS ( $\delta$ תatutkдs кó入лоs), a bay on the सestem coast of Caria, deriving its name from Mornt Latmus, which rises at the head of the gulf. It was formed by the mouth of the river Maeander which flowed into it from the nortb-east. Its breadth, between Miletus, on the southern headland, and Pyrrla in the north, amounted to 30
atadia, and its whole lencth, from Nilecus to Heracleta, 100 stadia. (Strab. xiv. p. 635.) The bay now exists only as an mland lake, its mouth haviug heen closed up by the deposits brunght down by the Maeander, a circumstance which las misled some modern travellers in those parts to confond the lake of Baff, the aneient Latmic gnlf, with the lake of Myus. (Leake, Asia Minor, p. 239 ; Chandler, c. 53.)
[L. S.]
LAPYU'S ( $\Lambda \dot{d} \tau \mu 05$ ), a mountain of Caria, rising at the head of the Latmic bay, and stretehing along in a north-western direction. (Strah. siv. p. 635 ; Apollon. Nhod. iv. 57 ; Plin. v. 31 : Pomp. Shel. i. 1i.) It is properly the western offshoot of Mount Albanus or Albacus. This mountain is probably alluded to by Homer (Il. ii. 868), when he speaks of the mountain of the Phthiriuns, in the neighbourhond of Miletus. In Greek mythology, Mount Litmus is a place of some celebrity, being described as the place where Artemis (Luna) kissed the sleeping Endymiun. In later times there existed on the mountinin asanctuary of Endymion, and lis tomb was shown in a cave. (Apollorl, i. $7 . \S 5$; Hygin. Fub. 271 : Ov. Trist. ii. 299 : Yal, Flace, iii. 28 ; Paus. v. 1. § 4 ; Stat. Silr. iii. 4. § 40.)
[L. S.]
Lato. [Camara.]
LA YOBRIGI When the Helvetii determined to leare their country (a.c. 58). they persuaded " the Rauraci, and Tulingi and Latubrig, who were their neighbours, to adopt the same resolution, and after hurning their towns and villages to join their expedition." (Caes. B. G. i. 5.) The number of the Tulingi was 36,000 ; and of the Latubrigi 14,000. (B. G. i. 29.) As there is no place for the Tulingi and Latobrizi within the limits of Gallia, we must look east of the Ribine for their country. Walckenaer (Géog. \&c., vol. i. p. 559) supuses, or mather considers it certain, that the Tulingi werein the distriet of Thiengen and Stuhlingen in Baden, and the Latubrigi about Donaueschingen, where the Briggach and the Bregge join the Danube. This opinion is foundel on resemblance of names, and on the fact that these two tribes mast have been east of the Rlune. If the Latobrigi mere Celtae, the name of the people may denote a prosition on a river, for the Celtic word "brig" is a fort or the passage of a river. If the Latobrigi were a Germanic people, then the word "briy" ought to have some mudern name corresponding to it, and Wulckenaer finds this correspondence in the name Brutge, a small place on the Bregge.
[(i. L.]
LATU'POLIS or LATO (ムatimodis, Strab. xvii. Pp. 812, 817; $\pi \dot{\delta} \lambda t 5$ ムáт $\omega \nu$, Ptol. iv. 5. § 71 ; \írtwr, Hierocl. p. 732: Itin. Autonin. p. 160), the modern Esmeh, was a city of Upper Ecypt, seated upon the western bank of the Nile, in lat. $25^{\circ} 30^{\circ} \mathrm{N}$. It derived its name from the fish Lato, the largest of the fif:y-two species whith inhabit the Nile (Kussegger, Reisen, vol, i. p. 300), and which appears in sculptunes, among the symbuls of the goddess Neith, l'allas-Athene, surrounded by the walal shield or ring indicative of rosalty or divinits (Wilkinson, M. and 6 . vol v. p. 2.53). The tutelary deities of Late pr lis seem to have been the trind, - Kineph or Climuphis, Neith ur Sate, and Ilak, their uflopring. The temple was remarkable for the beanty of its site and the magnificenee of its architecture. It was built of red sandstatse: and its portico consisted of six rows of fiur columus ench, with lutusleaf capit:als, all of which lowever differ from each other. (1)cnon, loyays, vol. i. p. 14s.) But with
the exception of the jamb of a gateway-now converted into a door-sill-of the reiga of Thotbmes Ild. (xviiuth dynasty), the remains of Latopolis belong to the Macedonian or Roman eras. Ptolemy Erergetes, the restorer of so many teraples in Upper Egypt, was a benefactor to Latopolis, and he is painted upon the walls of its temple followed by a tame lion, and in the act of striking down the chiefs of his enemies. The name of Ptolemy Epiphanes is found also inscribed upon a doorway. Yet, although from their scale these ruins are imposing, their scnlptures and hieroglyphics attest the decline of Aegyptian art. The pronaos, which alone exists, resembles in style that of Apollinopolis Mlayaa (Edfoo), and was begun not earlier than the reign of Clandius (A. D. $41-54$ ), and completed in that of Vespasian, whose name and titles are carved on the dedicatory ioscription over the ent ance. On the ceiling of the pronaos is the larger Latopolitan Zodiac. The name of the emperor Geta, the last that is read in bieroglyphics, althongh partially erased by his brother and morderer Caracalla (A.D. 212), is still legible on the walls of Latopolis. Beforc raising their own edifice, the Konans seem to have destrojed even the basements of the earlier Aggyptian temple. There was a straller temple, dedicated to the same deities, about two miles and a half N . of Latopolis, at a village now ealled E'Dayr. Ilete, too, is a small Zodiaceof the age of Ptoleny Evergetes (15. c. 246-221). This latter building has been destroyed within a few years, as it stood in the way of a new canal. The temple of Esseh has been cleared of the soil and rubbiah which filled its area when Denon visited it, and now serves for a cotton warebouse. (Lepsius, Einleitung, p. 63.)

The molern town of Esneh is the emporium of the Abyssimian trade. Its camel-market is much resorted to, and it contains manufactories of cottons, shawls, and pottery. Its population is about 4000.
[W. B. D.]
LATOJICl ( $\Lambda a \tau 6$ croo, Ptol. ii. 15. § 2). a tribe is the south-western part of Pannonia, on the river Savus. (Plin. iii. 28.) They appear to bave been a Celtic tribe, adod a place Praetoriund Latoricorum is mentioned is their country by the Antonine Itinerary, on the road from Aemona to Sirmim, perhaps on the site of the modern Neustädtl, in Hlyria. (Comp. 7euss, die Deutschen, p. 256.) [L.S.]
LATU KUS SINLS. [MaURETANLA.]
LA'VARA. [Lusitavia.]
LAVATRAE, a station in Britain, on the road from Londinium to Lnguvallum, near the wall of Hadrian, distant, according to one passage in the Antonine hin., 54 miles, according to another, 59 miles, from Eboraeum, and 55 miles from Longuvallum. (Anton. Itin. pp. 468, 4;6.) Perhaps the same as Boncs, or the river Gireta, in the North Hiding of Lorkshire. The charch of Bowes contained in the time of Cauden a hewn slah, bearing an inscription denicatory to the Ronan emperor hadrian, and there used for the eommunion table. In the nei,hbourhoud of Bones, there are the remains of a Roman camp and of an aqueduct.
LAU'GONA, the modern Latin, a river of Germany, on the cast of the Rbine, into which it empties it elf at Lahnstcin, a few miles above Coblenz. The ancients praise it for its clear water (Venant. Fort. viii. 7; Geogr. Rav. iv. 24, where it is called Logna.
[L. S.]
LAMLANESLNE or LATHNLANESIAE (Aa-
 v. 7. $\S 9$ ), the name of one of the four districts into which Cappadocia was divided under the Romans. It was the part extending from the northern slope of Mount Amanns to the Euphrates, on the north of Aravene, and on the east of Muriane.
[L. S.]
LAV'INIUM ( $\Lambda$ aoviviov; Aabivioy, Steph. B.: Eth. Aa\&ariárךs, Laviniensis: Pratica), an ancient city of Latium, situated about 3 miles from the seacnast, between Laurentum and Ardea, and distant 17 miles from Rome. It was fonoded, according to the tradition ntiversally adopted by Roman writers, by Aeneas, shortly after his landing in Italy, and called by him after the name of his wife LaviDia, the daughter of the king Latinus. (Liv. i. 1; Dionys, i. 45, 59; Strab. v. p. 229; Yarr. L. L. v. § 144 ; Solin. 2. § 14.) The same legeadary history represented Ascanius, the son of Acneas, as transferring the seat of government nud rauk of the capital city of the Latins from Laviuium to Alba, 30 years after the foundation of the former city. But the attempt to remove at the same time the Penates, or household gods of Lavinium, proved unsuccessful: the tutelary deities returned to their old abode; hence Lavinium continued not only to exist by the side of the new capital, but was always rogarded with reverence as a kind of sacred metropolis, a character wiich it retained even down to a late period of the Roman history. (Liv. i. 8; Dionys. i. 66, 67 ; Strah. v. p. 229 ; Vict. Orig. Gent. Rum. 17.) It is impossible here to enter into a discussion of the legend of the Trojao settlement in Latium, a questiun which is briefly examined ander the article Latiums; but it may be observed that there are many reasous for admitting the correctness of the tradition that Lavinium was at one time the metropolis or centre of the Latin state; a conclusion, iodeed, to which we are led by the name alone, fur there can be litile doubt that Latinus and Lavinus are ouly two forms of the same name, so that Lavinium would be merely the capitat or city of the Latins. (Niebulur, vol. i. p. 201; Dinaldson, Varronianus, p.6.) The circumstance that the Penates or tutelary gods of Lavinium cuntinued down to a late jeriod to be regarded as thase not only of Rome, but of all Latium, affords a strong corroboration of this view. (Varr. L. L. v. § 144.) Whether Lavinium was from the first only the eacred metropolis of the Latin cities, - a kind of common sanctuary or centre of religious worslip (as supposed by Schwegler, Kömische Geschichte, vol. i. p. 319), -or, as represented in the common tradition, was the political capital also, until supplauted by Alba, is a point on which it is difficult to pronoutice with certainty; bnt the circumstance that Lavinium appears in history as a separate political community, and one of the cities composing the Latin League, would seem opposed to the former view. It is certain, huwever, that it had lost all political supremacy, and that this had passed into the bands of Albar, at a very early period; nor did Lavinium recover any political importance after the fall of Alba: throughout the historical period it plays a very suburdinate part. The first notice we find of it in the Roman history is in the legends concenuing Tatins, who is represented as being murdered at Lavinium on nccasion of a soleman sacrifice, in revenge for sume depredations committed hy his followers on the Lavinian territory. (Lir, i. 14; Diunys. ii. 51, 52; Ilut. Rom. 23 ; Strab. v. p. 230.) It is remarkable that Livy in this passage represents the people vot. 11 .
injured as the Laurentes, though the infury was avenged at L.avinium,-a strung proof of the intimute relations which were conceived as existing between the two cities. The treaty between Fonse and Lavinium was said to have been renewed at the same time (Liv. l.c.), and there is no doubt that both the Roman annals and traditions represented Lavinium, as well as Laurentum, as almost uniformly on friendly terms with Rome. It was, however, an independent city, as is proved by the statement that Collatinus and his family, when banished from Rome. retired into exile at Larinium. (Liv. ii. 2.) The only interruption of these friendly relations took place, according to Dionysius, a few years after this, When he reckons the Lavinians among the Latio cities which entered iuto a league against Rome before the battle of Regillus. (Dionys. v. 61.) There is, however, good reason to believe that the names there enumerated are in reality only those of the cities that formed the permaneut Latin League, and who concluled the celehrated treaty with Sp. Cassius in B. c. 493. (Niebuhr, rol. ii. pp. 23, 24.)

Lavioium is next mentioned during the wars of Coriolanos, who is said to have besieged and, sccording to Livy, reduced the city (Liv. ii. 39; Dionys. viii. 21); but, from this time, we hear no more of it till the great Latin War in E, e. 340 . On that occasion, according to our present text of Livy (viii. 11), the citizens of Lavinium are reprcsented as sending auxiliaries to the forces of the League, whn, however, arrived too late to be of service. But no mention occurs of Lavinium in the following camprigns, or in the geneal settlenent of the Latin state at the end of the war; hence it appears higbly probable that io the former passuge Lanuvium, and not Lasinium, is the city really meant ; the confusion between these names in the MSs. being of perpetual occurrence. [Lanuviem.] It is much more probable that the Lavinians were on this occasion also comprised with the Laurentes, who, as we are expresly told, took no part in the war, and in consequence continued to maintain their former friendly relations with Rome without intermptivn. (L. vi. l. c.) From this time no historical mention occurs of Lavidium till after the fall of the Roman Republic ; but it appears to have fallen into decty in common with most of the places near the const of Latium; and Strabo speaks of it as presenting the mere vestiges of a city, bnt still retaining its sacred rites, which were believed to have been transmilted from the days of Acneas. (Strab. v. p. 23丷.) Dionysius also tells us that the memory of the three animals-the eagle, the wolf, and the fox - which were connected by a well-knuwn legend with the foundatiun of Lavinium, was preserved by the lignres of then still extant in his time in the forum of that town; while, according to Varro, nut only was there a sinilar bronze figure of the celebrated sow with her thirty young ones, but pait of the flesh of the sow herself was still preserved in pickle, and shown by the priests. (Diouys. i. 57, 59; Varr. R. R. ii. 4.) The name of Lavinium is omitted by Pliny, x here we should have expected to find it, between Laurentum and Ardea, but he enamerates among the existing commanities of Latimm the " Ilioneases Lavini," - an appellation evidently assumed by the citizens in commemoration of their supposed Trojan descent. (Plin, iii. 5. s. 9.)

Shortly after the time of Pling, and probably in the reign of Trajan, Lavinium scems to have re-
ceived a fresh colony，which for a short time raiscl it again to a degree of prosperity．On this occasion it wruld appear that the Laureutides and Laxinians were united into one community，whieh assumed the name of Lauro－Lavisiust，and the citizens that of Laditextes Lavisites，names which from henceforth occur frequently in inseriptions． As a tribute to its ancient sacred character，though a fresh apportionment of lands necessarily attended the establishment of this colony，the territory still retained its old limits and regulations（hge et con－ secratione veteri manet，Lib．Colon．p．234．）Tbis union of the two communities iuto one has given lise to muth confusin and misconception．Nir can we trace exactly the mole in which it was ef－ fected ；but it woull aypear that Lavinium became the ehief town，while the＂pupulns＂continned to be uften catled that of the Latrentes，thougb in re carretly disionated as that of the Laurentes Lavi－ 1．is．．．Tiee etfect of this confusion is apparent in 1．0．conmentary of Servins on the Aeveid，whu ＂radently conteun led the Lanentum of Virsil with thi：Lauro－Lavinium of hiv awn day，and thence， stranzely unn＿h，identifies it with the Lavinium founded is the same city．（Sots．ad fer．i．2．） lout，oven at a mach earlier periud，it wabld seen ns if the＂ager Laurens，＂or Laurentine territury， was regarded as comprising Laviuium；and it is certainly described as extending to the river Numi－ ctrs，which w：is situated between Lavinium and Addea．［Nvments．］loscripti－ns discovered at Pratica cablic us to trace the existence of this new colony，or revived Lavinium，down to the end it the $4 i \mathrm{~L}$ century；and its name is found also in the Itineraries and the Tabula．（Itin．Ant．p．301； Tah．Peut．；Orell．Inscr．1063，2179，3218，3921．）

We learn also from a letter of Symmachus that it was still subsisting as a municipal town as late as A．D．391，and still retained its ancient reli，ius character．Macrobius abo informs us that in lis time it was still cust mary for the Roman emsuls and praeturs，when eatering on their oftice，to repuir to Lavinium to offer certain sarrifices there to Vesta and the Penates，－a custom which appears to bave been transmitted without interraption from a very early perin！．（Macrob，Sat．ii．4．§ 11；Val．Max． i．6．§ 7 ；Spumach．Ep．i．65．）The final demay of Lavimuni mas probably prudned by the f．ll if pagauism，and the consequent extanction of that religions reverence which had appar ontly been the priacipal meads of its presenvetion for a long white before．

The position of Lavinitum at Pratica may be con－ sidered as clearly established，hy the disworery there． of the numermes inseriptions already referred to re－ lating to Luurn－Larinium ；in other reppects also the site of Protica arrees well with the hata for that of Lavinimin，which is placed by Dombsans 24 stadia，or 3 miles，from the co．s．st．（1hmys，i， 56. ．） The Itineraries call it 16 miles from Rume；but this statement is helow the truth，the real anstance lexif little，if at al ．leos than is miles．The mant dhreet appronch to it fro o R me i＇y the Via Arbatina， from whence a side branch divelgees som afier pasing the Solfitara－a spot supp ed to be the site of the eclebrated grove and oracle of Famme，reterred to by Virgil［Akde．］，wheh is about 4 miles from Pratica．The site of this latter village，whith sti 1 possesses a baromal castle of the midfle ages，re－ sembles those of most of the early Latit towns：it is a nearly isolated hif l，with a level summit of no
ereat extent，bounded by wooled ravines，with steep banks of tufo rock．These banks have probahly been on all sides mure or less scarped or cut away artificially，and some slight remains of the ancient Walls may be still traced in one or tivo places．Be－ silles the inscriptions already noticed，some frag－ ments of marble colunns remaiu from the Imperial perind，while broken pottery and terra cottas of a ride workmas：hip found scattered in the soil are the only relics of an earlier age．（Nibhy，Dintorni， vol．ii．pp．206－237．）
［E．H．B．］
LAlisco or LABISCO，in Gallia Narboseosis， appears on a route from Jtediolanum（Milan）through Darartasia（Moutiers en Turentuise）to \ienoa（ 1 i－ cunc）on the Rhone，Lavisco is between Lemincom （Lemens，or Chambery as Mont Leminc）and An－ gustum（Aoste or Auuste），and 14 J．P．from each． D＇Anville supposes that Larisco was at the furd of the little river Laisse，near its source ：but the dis－ tance between Lenincum and Au nstam， $28 \mathrm{M} . \mathrm{P}$ ． is tio much，and accordingly ho would alter the fizures in the tro jarts of this distance on each side of Lavisco，from xilii．to viiii．
［G．L．］
LALJELLC＇M（Aaúue入入or，Ptol，iii．1．§ シ̈t： Iomello），a town of Giallia Transpadana，not men－ tioued by Pliny，hut placed by I＇tolemy，together with Vercellae，in the territory of the Libici．The 1tin．Ant．（1p．2\＄2，347）places it on the ruad from Ticinums to Vercellie，at 22 M．P．from the former and 26 from the latter city：these distances agree well with the poition of Lomello，a small town on the right lark of the Agogna，about 10 miles from it conluence with the Po．According to the same Itinerary（p．340）another road led from thence by Rigomagus and Quadratae to Augustae Taurioorum， and in accordance with this Amminaus Marcellidus （xv．8．§ 18）mentions Laumellum as on the direct road from Ticinum to Taurini．It seems not to have enjoyed untuicipal rank in the time of Plioy， bst apparently be une a place of more consideration in later days，and under the Lombard rule was a town of importance，as it couthued during the middle ages；so that，though now but a poor de－ cayed place，it still gives to the surroundiog dis－ trict the name of Lumellina．
［E．H．18．］
LAUREA＇TA，a place on the coast of Dalmatia， which was taken by the traitor llaufus，for Tutila anl the Goths，in A．1． 548 ．（Prucop．B．G．iii．35； I．e Beau．Bns Empire，vol．is．p．182．）［E．B．J．］

LAURENTCM（Aav́pevtov，Strab，et al．；$\Lambda \omega$－ pevtov，［1ion．1lal．：Eth．Aavpevtivos，Laarentinus： Turre（il Puternö），an ancieat city of Latium，situated near the sea－cosst between Ostia and Laritiam， about 16 miles from Rome．It was represented by the lecendary histury universally adopted by Roman writens as the ancient capital of Latium，and the residence of king Latinus，at the time when Aencas and the Trujan colony landed in that country．Alt writers also concur in representing the latter as first landing on the shores of the Laurentine territory． （Liv．i．1：Dionys．i．45，53；Strab．v．p． 229 ； Appian．Rum．i．1；Vict．Orig．Gent．Rom．13： Virg．A（n．vii．4，5，\＆e．）But the same legendary history related that atter the death of Latinus，the seat of government was transferred lirst to Lavinium， and subsequently to Alba：hence we cannot wonder that，when Laurentum appears in historical times，it holds but a very subordinate place，and appears to bave fallen at a very early period into a state of comparative insignificance．The historical notices of the city are inded extremely few and scanty；the

## LAURENTUAL.

## LAURENTUM.

147
most important is the occurrence of its name (or that of the Laurentini at least), together with those of Ardea, Antium, Circeni, and Tarracins, among the allies or dependants of Rome, in the celebrated treaty of the Romans with Carthage in n. c. 509. (Pol. iii. 22.) From thia docurrent we may infer that Lanrentum was then still a place of some consideration as a maritime town, thongh the proximity of the Roman port and colony of Ostia must bare tended much to its disadvantage. Dionysias tells us that some of the Tarquins had retired to Laurentom on their expulsion from Rome: and he subsequently notices the Laurentines among the cities which composed the Latin League in B. c. 496. (Dionys, v. 54,61 .) We learn, also, from an ibcidental nutice in Liry, that they belonged to that confederacy, and retained, in consequence, down to a late period the right of participatiog in the sacrifices on the Alban Monnt. (Liv, xxxrii. 3.) It is clear, therefore, that though no longer a powerfal or important eity, Laurentum continued to retain its independent position down to the great Latio War in B. c. 340. On that occasion the Laurentines arc expressly mentioned as having been the only people who took no share in the war; and, in consequence, the treaty with them which previonsly existed was renewed withont alteration. (Liv. viii. 11) "From thenceforth" (adds Liry) "it is renewed always from year to year on the 10 th day of the Feriae Latinae." Thus, the poor and decayed city of Lureotum contiuned down to the Aurustan age to retain the nominal position of an independent ally of the imperial Rume.

No farther notice of it occurs in history during the Roman Republic. Lucan appears to reckon it as ove of the places that bad fallen into decay in consequence of the Civil Wars (vii. 394), but it is 1 mibable that it bad long before that dwindled into a very small place. The existence of a town of the name (" oppidum Laurentum ") is, however, attested by Mela, Mtrabo, and Pliny (Mel. ii. 4. § 9; Strab. v. p. 232 ; Plin. iii. 5. s. 9); and the sea-coast in its vicinity was adorned with mumerous villas, anong which that of the younger Pliny was conspicuous. (Plin. Ep. ii. 17.) It is remarkable that that :uthor, in describing the situation of his villa and its neighbourhood, makes no allusion to Laurentom itselt. though he mentions the neighbouring culony of Ostia, and a villase or "vicus" immediately alloining his villa: this last may probably be the same which we find called in an inscription "Vicas Aurustus Laurentiom." (Gruter, Inscr. p. 398, No. 7.) Hence, it seems probable that Lanrentum itself had fallen into a state of great decay; and this must lhave been the cause that, shortly after, the two commanities of Lidrentum and Lavininm were nouted into one manicipal body, which assumed the appellation of Lanro-Lavinium, and the inhabitants that of Lauro-Lavinates, or Laurentes Lavinates. Sumetimes, bowever, the united "popolus" calls itself in inscriptions simply " Senatos p(pulnsque Laurens," and in one case we find mention of a "Colonia Augusta Laurentium." (Orell. Inser: 124; Groter, p. 484, No. 3.) Nevertheless it is at least very donbtful whether there was any fresh colony established on the site of the ancient Laurentum: the ouly one mentioned in the Liber Coloniarum is that of Lanro-Lavinintm, which was undoubtedly fised at Lavinium (Pratica). [LAviniur.] The existence of a place bearing the wame of Lanrentom, though probably a mere
village, down to the latter ages of the Empire, is, however, clearly proved by the Itineraries and Tahnla (Itin. Ant. p. 301; Tab. Peut.); and it appears fromecclesiastical docnments that the locality still retained its ancient name as late as the sth century (Anastas. V'it. Pontif. ap. Nibby, vol. ii. p. 201). From that time all trace of it disappears, and the site seems to have been entirely forgotten.

Laurentum seems to have, from an early period, given name to an extensive territory, cxtending from the mouth of the Tiber nearly, if not quite, to Ardea, and forming a part of the broad littoral tract of Latinm, which is distinguished from the rest of that conntry by very marked natural characteristics. [Latiem.] Hence, we fiod the Laurentine territory much more frequently referred to than the city itself; and the place where Aeneas is represented as landing is uniformly described as " in agro Laurenti;" though we know from Virgil that be conceived the Trojans as arriving and first establishing themselves at the mouth of the Tiber. But it is clear that, previons to the foundation of Ostia, the territory of Laurentum was considered to extend to that river. (Serv. ad Aen. vii. 661, xi. 316.) The name of "ager Latarens" scems to have continued in common use to be applied, even under the Roman Empire, to the whole district extending as far as the river Namicius, so as to include Lavinium as rell as Laurentom. It was, like the rest of this part of Latinn near the sea-const, a sandy tract of no natural fertility, whence Aeneas is represented as cornplaining that be had arrived "in agrum macerrimum, littorosissimumque." (Fab. Max. ap. Sere. ad Aen. i. 3.) In the immediate neighbourhood of Laurentum were considerable marshes, while the tract a bittle further inland was covered with wood, forming an extensive forest, known as the Silva Laurentina. (Jul, Obseq. 24.) The existence of this at the time of the landing of Aeneas is alluded to by Virgil (Aen. xi. 133, \&s.). Uoder the Roman Empire it was a favourite haunt of wild-boars, which grew to a large size, but were considered by cpicares to be of inferier flavoar on account of the marshy character of the ground in which they fed. (Virg. Aen. x. 709; Hor. Sat. ii. 4. 42; Martial, ix. 495.) Varro also telis us that the orator Hortensius had a farm or villa in the Laurentine district, with a park stocked with wild-boars, deer, and other game. (Varr, R. R. iii. 13.) The esistence of extensive marshes near Laurentum is noticed albo by Virgil (Aen. x. 107) as well as by Martial ( $x .37 .5$ ), and it is evident that even in ancient times they rendered this tract of country unhealthy, thongb it could not have suffered from malaria to the same extent as in modern times. The villas which. according to Pliny, lined the shore, were buile close to the sea, and were probably frequented only in winter. At an earlier period, we are told that Scipio and Laelins used to repair to the seaside on the Laurentine coast, where they amused themselves by gathering shells and pebbles. (Cic. de Or. ̈̈. 6; Val. Max. viii. 8. § 4.) On the other hand, the bay-trees (lauri) with which the silva Laurentiza was said to abound were thought to have a beneficinl effect ou the health, and on this account the emperor Commodus was advised to retire to a villa near Lamrentum during a pestilence at Rome. (Herodian. i. 12.) The name of Lanreotum itself was generally considered to be derived from the number ef these trees, though Virgil would derive it from a particular and celcbrated tree of the kind. (Vict.

## LAURENTUM.

## LAURICH.

Ority. G. Rom.. 10; Varr. L. L. v. 152; Vine. Acn. vii. 59.)

The precise site of Laurentum lias been a subject of much doubt; though it may be placed approximately without question between Ostia and I'ratica, the lattor beiag elearly established as the site of Lavinium. It has been generally fixed at Torre di Paterno, and Gell asserts positively that there is no other position within the required limits "where cither ruins or the traces of ruins exist, or where they can be supposed to have existed." The ltinerary gives the distance of Laurentum from lome at 16 M. I', which is somewhat less than the truth, if we place it at Torre di Poterno, the latter being rather more than 17 M. P. fiom Rome by the Via Laurentina; but the same remark applies to Lavinium also, which is called in the Jtinerary 16 miles from Rome, though it is full 18 miles in real distance. On the other hadd, the distance of 6 miles given in the Table between Lavinium and Laurentum coincides well with the interval between Pratica and Torre di Paterno. Nibby, who places Laurentum at Capo Cutto, eonsiderably nearer to Pratica, admits that there are no ruins on the site. Those at Torre di Paterne are wholly of Roman and imperial times, and may perhaps indicate nothing more than the site of a villa, though the traces of an aqueduct leading to it prove that it must bave been a place of some importance. There can indeed be no doubt that the spot was a part of the dependencies of Lanrentum under the Roman Empire; though it may still be questioned whether it marks the setual site of the ancient Latin city. (Gell, Top. of Rome. pp. 294-298; Nibby, Dintorni di Romut, vol. ii. pp. 187-205; Alnken, Mittelitalien, p. 62; Bormamn, Alt Latin. Corographic, pp. 94-97.)

It is hardly necessary to notice the attempts which have been made to determine the site of Pliny's Laurentine villa, of which be las left us a detailed description, familiar to all scholars (Plin. Ep. it. 17). As it appears from his own account that it was ouly one of a series of villas which adorned this part of the const, and many of them probably of equal, if not greater, pretensions, it is evidently idle to give the name to a mass of brick ruins which there is मuthing to identify. In their zeal to do this, antiquarians have overlooked the ciremonsance that his villa was evidently close to the sea, wbich at once exeludes almost all the sites that have been suggested for it.

The roud which led from Rome lirect to Latrentum retained, down to a late prrind, the name of lis Ladmentina. (Ovil, Fuat. ii. 673; Val. Max. viii. 5. § 6.) It was only a branch of the Via Ostiensis, from whidh it aiverred about 3 miles from the gates of Rome, and procected nearly in a direct line towards Torre di l'aterni.. At abount 10 miles from Rome it crosed a small brook or stream by a brilge, which appuars to lave been called the Pons ad Decimam, ami subsequently I'ons Decimus: bence the name of Derimo naw given to a casule or farm a mile further on; though this was situated at the 11 th mile from lome, as is proved by the discovery on the spot of the Roman mikstone, as well as by the measurement on the map. Fivnains of the ancient pavement mark the eourse of the Via Laurentian both before and after passing this bridge. (Nilby, Dintorni, wol. i. p. 539 , vol. iii. p. 621.)

Iloman authors generally agree in stating that the place where the Trojans first landed and established
their camp was still called Trọia (Liv. i. 1: Cato, ap. Serv. ad Aen. i. 5; Fest. v. Troia, 1. 365), and that it was in the Lamrentine territory; but Virgil is the only writer from whom we learn that it was on the banks of the Tiber, near its mouth (Aen. vii. 30, ix. 469, 790, \&e.). Heace it roust bave bren in the part of the "ager Lamrens" which wals assigned to Ostia after the foundation of the colony ; and Servius is therefore correct in placing the camp of the Trojans "circa Ostiam." (Serv. ad Aen. vii. 31.) The name, however, would appear to have been the ooly thing that marked the spot. [E. II. B.]

LAURETANUS PORTLS, a seaport on the eoast of Etruria, mentioned only by Livy (xxx. 39). From this passage it appears to have been situated between Cosa and Populonium; but its precise position is unknown.
[E. II. 13.]
LAURI, a place in North Gallia, on a road from Lugdunum Batavorum (Leiden) to Noviomagus (Nymeguen), and between Fletio (V'leuten) and Niker Pullas. It is $5 \mathrm{M} . \mathrm{P}$. from Niger Pullus to Lauri, and I2 M. 1'. from Lauri to Fletio. No more is known of the place.
[G. L.]
LAURLACUM or LAUREACUM, a town in the north of Noricum, at the point where the river Anisius empties itself into the Damule. (Aunn. Mare xxxi. 10; It. Ant. pp. 231, 235, 241, 277; Gruter, Inser. p. clxiv. 3; Not. lmp, in the Tob. Peut. its name is misspelt Blaboriciaeum.) In a doubtful inscription in Gruter (p. 484.3) it is called a Koman colony, with the surname Augnsta: Laureacam was the largest town of Noricum Ripense, and was connected by high roads with Sormian and Taurunum in Pannonis. According to the Antonine Itinerary, it was the head-quarters of the third legion, for which the Notitia, perbaps mure correctly, mentions the scond. It was, moreover, one of the chicf stations of the Damubian fleet, and the residence of its praefect, and contained considerable manufactures of arms, and e-pecially of shields. As the town is not mentioned by any earlier writers, it was probably built, or at least extended, in the reign of M1. Aurelius. It was one of the earliest seats of Clristianity in those parts, a bishop of Lauriacum being mentioned as early as the middle of the third century. In the fifth century the place was atill so well fortified that the people of the surrounding country took refuge in it, and protected themselors against the attacks of the Alemamians and Thuringians; but in the 6th century it was destroyed by the Avari, and althongh it was restored as a fiuntior fortress, it afterwards fell into dectay. Its tiame is still preserved in the modern villare of Lorch, and the celebrated convent of the sume name, around which nunterous remains of the Ioman town may be scen extending as far as Ens, which is about a mile distant. (Comp. Muehar, Noric. i. p. 362, 268, 163, ii. p. 75.) [L.S.]

LAURIUM1 (Aaúptioy, Herud. vii. 144; Aáptoy, Thuc. ii. 55 : Adj. Auvpiatikós; lience ai $\gamma$ 入aûkes Maupiwtikai, Aristoph. Az. 1106, silver coins, with the Athenian figure of an owl), a range of hills in the south of Attica, celebrated for their silver mines. These hills are mut high, and are covered for the most part with trees and brushwood. Tho name is probally derived from the shafts which were sunk for obtaining the ore, siace $\lambda$ aúpa in Greek significs a strect or lane, and Aaupeion would thereforo mean a place formed of such lanes, -i. e., a mine of shafts, cut as it were into street:, like a catacomb. (Wiordsworth, Athens und Attica, p. 209.) The mining district extended a little way north of

Sunium to Thoricus, on the eastern coast. Its present condition is thus described by Mr. Dodwell : " One hour from Thorikos brought us to one of the ancient shafts of the silver mines; and a few hundred yands further we came to several others, which are of a square form, and cut in the rock. We observed only one round shaft, which was larger than the others, and of considerable depth, as we conjectured, from the time that the stones, which were thrown in, took to reach the bottom. Near this are the foundations of a large round tower, and several remains of ancient walls, of regular construction. The traces are so extensive, that they seem to indicate, not only the haildings attached to the mines, but the town of Laurium itself, which was probably strongly fortified, and inhabited prineipally by the people helonging to the mines." Sume modern writers doubt whether there was a town of the name of Laurium; but the grammarians (Suidas and Photins) who call Laurium a place ( тúros) in Attica appear to have meant sumething more than a mountain; and Dodwell is probably correct in regarding the ruins which he describes as those of the town of Lamium. Near these ruins Dodwell observed several large heaps of scoria scattered about. Dr. Wordsworth, in passing along the shore from Sunium to Thoricus, observes:- -" The ground which we tread is strewed with rusty heaps of seoria from the silver ore which once enriched the soil. On our left is a hill, called Scoré, so named from these heaps of scoria, with which it is covered. Here the shafts which have been sunk for working the ore are visible." The ores of this district have been ascertained to contain lead as well as silver (Walpole's Turkey, p. 426). This confirms the emeudations of a passage in the Aristotelian Oeconomics proposed by Böckh and Wordsworth, where, instead of Tupicu in ПuӨoк入ท̂s

 gests Lavpiwv, and Wordsworth àprupluv, which ought rather to be ápyupe ${ }^{\prime} \omega \nu$, as Mr. Lewis observes.

The mame of Laurium is preserved in the corrupt form of Legrana or Alegrand, which is the name of a metókhi of the monastery of Mendéli.

The mines of Laurium, according to Xenophon (de Tectig. iv. 2), were worked in remote antiquity; and there can be no donbt that the possession of a Jarge supply of silver was one of the main causes of the early prosperity of Athens. They are alluded to by Aeschylus (Pers. 235) in the Jine -

## 

They were the property of the state, which sold or let for a long term of years, to indisiduals or companies, particular districts, partly in consideration of a sum or fine paid down, partly of a reserved reat equal to one twenty-fourth of the gross produce. Shortly before the Persian wars there was a large sum in the Athenian treasury, arising out of the Laurian mines, from which a distribution of ten drachmae a head was going to be made among the Athenian citizens, when Themistreles persuaded them to apply the money to the increase of their fleet. (Herod. vii. 144 ; Plut. Them. 4.) Bückh supposes that the distribution of ten drachmae a head, which Themistocles persuaded the Atheoians to forego, was made annually, from which he proceeds to calculate the total produce of the mines. But it has been justly observed by Mr. Grote, that we are not authorised to conclude from the passage in Herodotus that all the money received from the
mines was about to be distributed ; nor moreover is there any proof that there was a regular aunual distribution. Io addition to which the large sum lying in the treasury was probably derived from the original purchase money paid down, and not from the reserved anoual rent.

Even in the time of Xenophon (Mem. iii. 6. § 12) the mines yielded much less than at an early period; and in the age of Philip, there were loud complaints of nosuccessful speculations in mining. In the first century of the Christian era the mines were exhansted, and the old scoriate were smelted a second time. (Strah. ix. p. 399.) In the following century Lauriom is mentioned hy Pansanias (i. 1), who adds that it had once been the seat of the Athenian silver mines. (Dodwell, Tour throunh Grecee, vol. i. p. 537, seq.; Wordsworth, A thens and Attica, p. 208, seq.; Walpole's Turkey, p. 425, seq.; Fiedler, Reise durch Griechenland, vol. i. p. 36, seq.; Leake, Demi of Attica, p. 65; Böekh, Dissertation on the Silver Mines of Laurion, aplended to the English translation of his Public Economy of Athers; Grote's Greece, vol. v. p. 71, seq.)
LAU'RIUM, a village in Etruria, more correctly written Lorium. [Lorium.]

LAURON (Aav́pou: prob. Laury, W. of Nucar, in Valencia), a towo of Hispania Tarraconensis, near Sucro, and not far from the sea. Though apparently an insignificant place, it is invested with great interest in history, both for the siege it endured in the Sertorian War, and as the scene of the death of Cn. Pompeius the Younger, after his flight from the de. feat of Munda. (Liv, xxxiv. 17 ; Appian, B. C. i. 109 ; Plut. Sert. 18, Pomp. 18 ; Flor. iii. 22, iv. 2, comp. Bell. Hisp. 37 ; Oros. v. 23 ; Ukert, vol. ii. pt. 1. P. 404.)
[P.S.]
LAUU'S (ヘâos: Eth. ^âùvos: near Scalea), a city on the W. coast of Lucania, at the mouth of the river of the same name, which formed the boundary between Lucania and Brattium. (Strah. vi. pp. 253, 254.) It was a Greek city, and a colony of Sybaris; but the date of its foundation is unknown, and we have very little information as to its history. Herodotus tells ns that, after the destruction of Sybaris in e.c. 510 , the inhabitants who sorvived the catastrophe took refuge in Laïs and Scidrus (Herod. vi. 20); but he does not say, as has been supposed, that these cities were then founded hy the Sybarites : it is far more probable that they had been settled long before, during the greatoess of Sybaris, when Posidonia also was planted by that city on the coast of the Tyrrhenian sea. The only other mention of Laüs in history is on occasion of a great defeat sustained there by the allied forces of the Greek cities in southern Italy, who had apparently united their arms in order to check the progress of the Lucanians, who were at this period rapidly extending their power towards the south. The Greeks were defeated with great slanghter, and it is probable that Laïs itself fell into the hands of the barbarians. (Stral. vi. p. 253.) From this time we hear no more of the city: and though Strabo speaks of it as still in existence in his time, it seems to hare disappeared before the days of Pliny. The latter author, however (as well as Ptolemy), notices the river Lañs, which Pliny concurs with Strabo in fixing as the bonndary between Lucania and Bruttium. (Strab. l.c.; Plin. iii. 5. s. 10 ; 1'tol, iii. 1. § 9 ; Steph. B. s. v.)

The river Laiis still retains its ancient name as, the Lao, or Laino: it is a considerable stream, falling into the Gulf of Policastro. Near its sources
abut 10 miles from the sea, is the town of Laino, supposed by Cluverins to represent the ancient Latis; but the latter would appear, from Straho's description, to have been nearer the sea. R monalli would place it at Scaica, a small town with a gend port, about thres miles N. of the month of the river; but it is mere probable that the ancient city is to be looked for between this aud the river Lato. (Clnver. Ital, p. 1262 ; IKomanelli, vol. i. p. 383.) Aecording to Strabo there was, near the river and city, a temple or 1 I roum of a hero mamed Dracon, close to which was the actual secne of the great battle between the Greeks and Lueanians, (Strab. l.c.)

Strabo speaks of a gulf of Laüs, by which he ean hardly mean any other than the extensive bay now called the Cinlf of Policastro, winch may be eonsidered as extinding from the promontory of Pyms (Capo degli Infreschi) to near Circlla. There exist coins of Laüs, of ancient style, with the inscription $\operatorname{AANON}$ : they were struck after the destruetion of Syharis, which was probably the mont flourishing time in the history of Lails. [E. H. B.]

COIN OF T.LËS.
IAUS POMIPE1A. sometimes aho ealled simply Laws (Eth. Landen-is : Lodi Verchio), a city of Gidlia Transpadana, situated 16 miles to the SE . of Milan, on the highroal from that city to Plawentia. (Itin. Aut. pp. 98. 127.) According to 1 liny it was an ancient Gaulish city fomeded by the Buiais spon after they crosed the Alys. (1)in. iii. 17. x. 21.) It afterwards becatic a Roman manieipal town, and probably assuncel the epithet of J'mpeia in complinent to Pomunuins Strabo, who confermid the rishts of Latin citizens njon the mununipulites of Transpadane (anal; but we foul no. apecial mention of the fact. Nor does any biothical nutioe of Laus oceur mode the Romim Einfine: thomzh it srems to have bown at that periond a monideratle tuwn, and is termat in the ltmeraries "Lande civitas." and ly P. Jitanmm ' baudmoin "ivitas." (Itin. Aut, p. 98: Itim. Mier. 1. 617; P. Diace v. 2.) In the widlic new Lorle becane an impratant cite, an 1 ant independout republic; but W.s taken and devtrmed in A. D. 1112 by the Mi-
 Ite 4 itaving undertakon to restore it, transteracal Tha wow city th the site of the mandorn Lodi, on the ing: bank of the. Whes. The ancient fite is still one pheal by a lurse villawe called Lodi Kecheio, sthant 5 in iles due W . if the madern eite. It 1. inerectly placel by the ltinemates 16 M . I'. from Medialanum, and 24 from Ilacentia. (Itin. Ant. p. 98.)
[E. H. B.]
LALSONITS IACTS in the comntry of the Hhwetii. The Antonine ltin, has a rond from Mcdiulanm (Mitun) throngh Cinnesa to Argentoratum (Strotsshory). Sixtem loman milos from Gionera, on the roal to Strassburg, the lin. has Jiquesthin, Which is Colonia Equestris or Nosidutum ( X y/on): and the next flace is Lams hatumbur, 20 Romm miles from Equestris. To the nest station, Urba (Orbe), is 18 Ron an mils. In the Table the name
6. Lawam Losome," and the distances from Genera to Cutouia Ripuestris and Jacam Loomene are respectively 18 Al. F', or 36 torether. The Laeus Lansumins is smpmed to be Latuscanne, on the Lake if Genera; or rather a place or district, as D'Anvillucalls it, named IVR\%. The distance from Gew va to Nyon, along the lake is abont 15 English miles; and from Nigon to Lousame, ahont 22 or 23 miles. The distance from Geneva to Nypn is nearly exaet; but the 20 miles from Einnestris to the Lacus Lausomins is not enough. If lidi, which is west of Lausemne, is assumed to be the place, the measures will aztee better. 1rAnxille cites $\mathrm{M1}$. Bochat as authority for an inseription, with the nane Lonsommenses, having been dug up at Fidi, in 1739; and he adds that there are remains there. (Comp. Ukert's note, Gallien, p. 491.)
[G. I.]
LAU'IULAI: or A1) LAUTVILAS (ai Aaúto$\lambda a \mathrm{a}$, Diol.). is the name given by Livy to the pa-s between Tarracina and Fundi, where the road winds round the fret of the mountains, between them and the sea, so as to form a marmow pass, easily defensible againat a hostile furce. This spot figures on two occasions in Rmman history. In 1s. c. 342 it was here that the mintiny of the Joman army mider C. Marans lintilns first broke ont: one of the diseontented vohorts having seized and oceupied the fass at Jantulae, and thus formed a nurlens around which the rest of the malcontents quirkly assembled, uutil they thought themselves strong enough to march upoin Runc. (Liv. vii. 39.) At a later period, in B. c. 315 , it was at fantriae that is grat battle was fonyht between the lionams, under the alietator Q. Fahnus, ami the Sumnites. Livy represents this as a drawn hattle, with mo detisive resulte: but lue himself adnits that some annalints relatel it as a defeat on the part of the lamans, in which the master of the horse, Q. Aulius, was slain (ix. 23). 1) indurus has evitemtly followed the anmalists thus refirred to (xix. 72), and the incidental remark of Livy himself shortly after, that it canced great ayitation thronghont Campania, and led to the revolt of the: mighbuming Absontian citios, would seem to prowe that the rewerse 1 unt veally lave been minch more sucrions than be has chosen to represent it. (Liv. is. 25: Nimbulur, vil. iii. ip. 228-231.) The locality is always desicmated by Livy as "ad Lautulas:" it is Probalse that this tixas the name of the pass, lut whecther theme was a village or other place called Lantulae, wa are unahle to tell. The name was problably dorived trom the existence of warm springs unua the spat. (Xiebuhr, 7. c., note 389.) It is evilently the sume pass which was occupiod hy Shincins in the Second Pmic War, in order to (enarad the appoarh to Latium from Campauia (Liv. exii. 15), though its name is nut there menthoned. The spot is now eall d I'asso di Portella, and is marded by a tower with a fate, formint the b.aricy letween the Roman and Neapolitan territoris. (Eustace, vol. ii. p. 309.) [1. H. B.]

LANTA. [Chlimehis.]
1.A7.1 (Aáso, Arrian, R'vipl. p. 11; Plin. vi. 4; Aâ̧ar, l'tul. v [1). §̧ 5), ome among the many tribes which compused the imbigenons popplation which whaterel round the great rame of the Caucasus. This peuple, whose oriminal seats were, according to I'roeopins (B. G. iv. 2), on the N. side of the river Phasis, gave their name, in later times, to the country which was known to the Greeks and Romans as Colhis, but which heneeforth was called "Regio Lazica." 'They are frequently mentioned in the

Byantine writers ; the first time that they appear in history was A.D. 456, during the reign of the emperor Marcian, who wats successful against their king Gobazes. (Prisc. Exc. de Leg. Rom. p. 71; comp. Le Beau, Bas Empire, vol. vi. p. 385.) The Lazic war, the con:est of Justinian and Chosroes on the tanks of the Phasis, bas been minutely described by contemporary historians. (Procop. B. P. ii. 15, $17,28,29,30$, B. G. iv. 7-16, Agath. ii. iii. iv. pp. 55-132, 141 : Menand. Protect. Exc. de Leg. Gent. pp. 99, 101, 133-147; comp. Giibbon, c. xlii.; Le Beau, vol. ix. pp. 44, 133,209-220,312-353.) In the Atlas (pt.i. pl. xiv.) to Dubois de Montpereux ( Ioyage Autour du Coucase, comp. vol. ii. pp. 73-132) will be found a map of the theatre of this war. In A. D. 520 , or 512 according to the era of Theophanes, the Lazi were converted to Christianity (Gibbon, l. c.; Neander, Gesch. der Cloristl. Recligion, vol. iii. p. 236), and, under the name of Lazians, are now spread tbrough the country near the SE. angle of the Eusine from Guriel to the neighbourhood of $T$ rebizond. Their language, belonging to the Indo-Germanic farmily, appears to contain remains of the anci-nt Colchian idiom. (Cosmos, vol. ii. note 201, trans.; Prichard, Physical Hist. of Mankind, vol. iv. p. 263.)
[E. B. J.]
LEA, an island in the Aegaean sea, mentioned oully by Pling (iv. 12. s. 23) iv conjuuction with Ascania and Anaphe.
LEANDIS ( $\Lambda$ eavōis), a torn in the eastern part of the strategy of Cataonia, in Armenia Minor, 18 miles to the south of Cocusus, in a pass of Mount Taurns, on the road to Anazarbus. (Ptol. v. 7. § 7.) This town is perhaps the same as the L.aranda of the Antonine Itinerary (p. 211) and of Hierocles (p.675), which must not be confounded with the Laranda of Lycaonia or Isauria. [L. S.]
leani'tae. [Leanites Sinus.]
LEANITES SINUS (Aeavitps кj́d̃os), a bay on the western side of the Persian Gulf, so named from the Arab tribe Leavitae (Aeanĩac, Ptol. vi. 7. § 18). They are placed north of Gerrah, between the Themi and the Abucaei. Pliny states that the name was variously written: "Sinus iutimus, in quo Laeanitae qui nomen ei dedere; regio corum Agra, et in sinu Laeana, vel, at alii Azelana ; nam et ipsum sinum no.tri Aelaniticum scripsere, alii Aeleniticum, Artemidurus Alaniticum, Juba Laeniticum" (vi.28). Agra, which lliny represents as the capital, is doubtless the "Adari civitas" ('A $\delta \dot{\alpha} \rho o u \pi$ ádis $^{2}$ ) of Ptolemy, in the country of the Leanitae. Mr. Forster regards the name as an abbreviated form of "Sinus Khaulanites" or Bay of Khioulan, in which he discorers an idiomatic modification of the name Haulanites, the Arabic form for Havileans, - identical with the Beni Khaled, -the iuhabitants of the Aral or Havilah of Scripture [Havilan]. (Geogrophy of Arabia, vol. i. pp. 48, 52,53 , vol. ii. p. 215.) The gulf apparently extended from the Itamus Portus ( $K$-denia) on the north, to the Chersonesi extrema (Ras-el-Châr) on the south.
[G. W.]
LEBADE. [Sipylus.]
Lebadela (Ae $\alpha$ dóela, Herod., Strab., et alii;
 a town near the western frontier of Booctia, described by Strabo (ix. p. 414) as lyiug between Mt. Helicon and Chaeroneia. It was situated at the foot of a precipitous height. which is an abrupt northerly teruiuation of St. Helicon. Pausanias relates (ix. i39. § 1) that this height was originally occapied by the Homeric city of Mideia (Miठ́ela, Il. ii. 507),
from whence the inhabitants, under the conduct of Leladns, an Athenian, migrated into the plain, and founded there the city named after him. On the other hand, Strabo maintains (ix. p. 413) that the Homeric cities Arne and Mideia were both swallowed up by the lake Copais. Lebadeia was origioally an insignificant place, but it rose into importance in consequence of its possessing the celebrated oracle of Trophonius. The oracle was consulted both by Croesus (Herod. i. 46) and by Mardonius (Herod. viii. 134), and it contimed to be consulted even in the time of Plutarch, when all the other oracles in Boeotia had becone dumb. (Plut. de Def. Orac. 5.) Pansanias himself consulted the oracle, and he speaks of the town in terms which show that it was in his time the most flourishing place in Boeotia. But notwithstanding the sanctity of the oracle, Lebadeia did not always escape the ravages of war. It was taken and plindered both by Lysander and by Archelaus, the general of Mithriates. (Plat. Lys. 28, Sull. 16.) In the mar against Perseus, it espoused the side of the Rumans, while Thebes, Haliartos, and Coroneia declared in favoor of the Macedonian king. (Polyb. xxrii. 1.) It continues to exist onder the slightly altered name of Lizadhio, and during the Turkish supremacy it gave its name to the whole province. it is still a consilerable town, thoogh it suffered greatly in the war of independence a aainst the Tarks.
The modern town is situated on tro opposite bills, rising on each bank of a small stream, called Hercyna by Pansanins, but the greater part of the hownes are on the western slope, on the summit of which is a ruined castle. Pausanias says that the Hercyna rose in a cavern, from two fountains, close to one another, one called the fountain of Oblivion and the other the fonntain of Memory, of which the persons who were guing to consult the oracle were obliged to drink. The Hercyna is in reality a contivuation of an occasional torreat from Moont Helicon ; but at the southern estremity of the town, on the eastern side of the castle-Lill, there are somie copious sources, which were evidently the reputed fountains of the Hercyna. They issue frum either side of the Hercyua, those on the right lank being the most copions, flowing from under the rocks in many large streams, and forming the main body of the river; and those on the left bank being insigrificant. and flowing, in the time of Duiwell, through ten small spouts, of which there are still remains. The fiuntains on the right bank are warm, and are called
 or the water unfit for drinking; while the fountains on the left bank are cold and clear, and are named Krya (ì kpía, i. e. ì kpúa Bpúris, the cold source, in opposition to the warm, Chiliii). Neither of these two sets of foontains rise out of a cave, and so far do not correspond to the description of Pausanias; but there is a cascrn close to each; and in the course of aces, since the destruction of the sacred buildings of Trophonius, the caverns may easily have been choked up, and the springs bave emerged in different spots. The question, bowever, arises, which of the caverns contained the reputed sources of the Hercyna? The answer to this must depend upon the position we assign to the sacred grove of Trophonius, io which the source of the Hercena was situated. Leake places the sacred grove on the right or eistera bank; but Ulrichs on the left, or western bauk. The latter appears more probable on account of the passage in I'ausanias, ôetpyet $\bar{i} \hat{i}$
 viov, where there is little douht that motauós, or some equivalent term, must be applied as the nominative of $\delta$ ecip $\overline{\text { es }}$. The ancient city would, in that ease, have stuol on the right or castem bank of the river, which also as pears probable from the numbrous fragments of antiquity still seattered over the eminenee on this side of the river; and the grove of Trophumils would have been on the western side of the stream, on which the greater part of the modern town stands.

The mast remarkable object in the grove of Trophonius was the temple of the bero, containing his statue by Praxitelus, resembling a statue of Asclepius; a temple of Demeter, surnamed Europe; a statue of Zeus Hyetius (Pluvin) in the open air; and higher up, upon the mountain, the oracle ( $\tau \delta$ pavteiov). Still higher up was the hunting place of Persephone; a large unfinished temple of Zeus Basileus, a temple of Aymllo, and another temple, contaming statues of Cronus, Zeus, and Hera. Pausanias likewise mentions a chapel of the Good Daemon and of Goud Furtune. where those who were going to consult the oricle first passed a certain number of days.
lit the Turkislt mosque, now converted into a church of the Panagia, on the western side of the river, three inseriptions bave been found, one of which contains a dedication to Trophonius, and the other a catalogne of dedications in the temple of Truphontus. (Nic Bükh, Inscr. 1571, 1588.) Hence it hats been inferred that the temple of 'Trophotius occupicd this site. Near the fomitain of Kirge there is a square chamber, with seats cont out of the rock, which may perthaps be $\mathfrak{t}^{\prime \prime}$ (hapel of the Gund D.wen in and Gond Fortune. Near this 1 hatuber is a caven, which is usually regarded as the cutrance to the oracle. It is 25 feet in depth, and ternin ites in a hollow flled with nater. But thas could nut have been the oracle, since the latter, according to the testiunony both of Pua*aias and lhilostratus, wals not situated in the valley upon the Hereyna, but bigher up upons the mountain. (Paus. ix. 39. § 4 ; Plilostr. J"it. Atpull. viii. 19.) Mure justly expresses his surprise that Luake, after yuoting the descriptim of Pausanias, who says that the oracle was ini too ofous, should supphise that it was situated at the foot of the hill. A person who (onsulted the oracle descended a well constructed of masury, 12 feet in depth, at the buttom of which was a small opening on the side of the wall. Upon reachugt the bottom be lay upon his back and introctuced his leges into the hole, when ugon a sudden the rest of his body was rapidly carried formand inten the sanctuary. The site of the oracle has mint yet ben disenerid, and is not likely to be, without an extensive extamam. An account of the rites oberesel in consulting the vracle is siven in the Dict. of Antiq. 1. E41, 2nd ed. (Bodwell, Tour therongh Greece, vol. it t. 216. Neq.; Leake, Nirthern (ircece, val. ii. p. 118 , sel.; Mure, Tour in Gireece, vol. i. p. 233, seq.; Lhiels, Ruiven in Griechenlind, 1. 164, sey.)
1.EBAEA (Areain), an ancient city in Upier Maccduma, and the residence of the early Macedotian hmss, mentinace ouly by Hervantus (viii. 1:3i).

LEBEN (A\&bzy, Sthah, x. p 478 ) or LEBENA (Sésiva, 1'tul, iii. 17. §4; Stcudiasm.; Plin. iv. 12,
 a maritime town of Crete, which was a harbour of Gurtyn, about 7) stadhet inbual. (strah.l.c.) It
possessed a templo of Asekepins, of great celebrity (Philustiat. Jit. I ! millom. ix. 11), and is represented by the moders hamhet of Lida. (Hïck, Areta, vol. i. pp. 8, 394, 399.)
[E. B. J.]
LEBECII. [Lmer.]
LEBLDON1IA, a town upon the coast of Hispania Tarraconensis, situated upan the mountain Sellus, at no great distance frin Tarraco. It is mentioned only by Arimns (Or. Marit. 509), in Thove time, however, it hath censed to exist.

LE'BEDOS (Ai6e $\delta$ os: Fith. AeGe $\delta i o s$ ), an aneient city on the western const of Asia Minur, 90 stadia to the east of Cape Myomerns, and 120 th the north-rest of Coloption. (Sirab. xiv, 1. 643.) The place was originally inbabited by Cari.us, until, on the immigration of the Ionians into A -ia, it wats taken possession of by them under the guidance of Andraemon, a son of Colrus. (1'aus. vii. 3. § 2.) strabo (xiv. p. 633), however, in speaking of the foundation of the lonian cities, states that it was culonised by Audropompus and his followers, having previously burne the name of Artis: the tomb of Andraemon, moreover, was shown in the neighbourhoud of Colophom, on the raad crossing the river Hales. (l'aus, l. a.) For a long time ledbedos continued to be a city flourishing by its commerce, the fertility of its territury, and the excellent hot mineral springs in its neighbourhood, which still exist. (Heeat. Fragm. 219; 11 rod. i. 142; Thueyd. viii. 19.) It was afterwards masrly destruyed by Lysimachus, who tramspunted its pupulation to Ephesus (1'ua- l. c. i. 9. § 8); ufter which time lochedus appears to have fallen mure and more into dreay, so that in the days of 1lonace it was more deserted tham Gabii or Fidenace (Epist, i 11. 7.) It is mentioned, howerer, ns late as the 7th century of the Christian era (Adlan, 1: H. viii. 5; Ptol. v. 2. § 7 ; Mela, i. 17; 1lm. II. N. v. 31 ; Hicrocles, p. 660) ; and the Romans, in order to raise the place in sume measure, established thene the conpary of actors ( $\tau \in \chi$ vitat $\pi \varepsilon \rho$ h tòv $\Delta i o n v \sigma o \nu)$ who had farmerly dwelt in Teos, whene during a civil commotion they withdrew to Ephesus. Attalus afterwards tramsplanted them to Myomesus; and the k mans, at the request of the Tevians, transferred them to Lebulos, where they were very welcome, as the place was rery thinly iuhubited. At Leledoss the wetors of all Lonia as fir as the Hellespont had ever after all annual meeting, at which games were celehrated in honour of Dionysus. (Strab, siv. p. 6.3.) The site of Lebedus is marked by some nitins, wow called Ecclesia or Xingi, and consisting of masses of naked stone and bricks, with cement. There also exists the basement and an entire floor of a small temple: and nearer the sea there are traces of ancient walls, and a few fragments of Doric colums. (Chandler's Asia Minor, p. 125.) [L. S.]

LEBINIIUS (Aés $\nu \theta$ os), a small island in the Acgaean sea, one of the Spurales, NE, of Amargus, between which and Lebintho lies the still smaller island Cunarus (Strab x. p. 487 ; Steph. B. s.r. $\Delta \mu \in \pi \alpha \dot{\eta}$; 11lin. iv. 12. s. 23 ; Mela, ii. 7, 11 ; Ov. Mct. viii. 222, Ar. Am. ii. 81 ; lioss, Reisen auf den (iriech. Inseln, vol. ii. p. 56.)
1.EBONAII, a town of Palestine, north of Shilwh, identitied by Maundrell with Leban, a village 4 hours S. of Jiuplus. (Iully. xxi. 19; Winer, Billisch. Realworterbuch, s. $r$.)

LEBCNI. [Lusitania.]
1.BC1AAELD. [Comstimus, p. 682.]

by the ．Ferusalon Itin．after Arausio（Orange），and xiii．M．l＇．from it．D＇Anville says that the distance is too great，for it seems that the place is at the passare of the small nver Lez．
［G．1．．］
LECTUN（ $\tau \grave{\wedge} \Lambda \in \kappa \tau \delta \nu$ ），a promontory in the south－west of Troas，opposite the island of Lestos． It forms the south－western termmation of Mount Ida．（Hom．I．xiv．294；Herod．ix．114；Thucyd． viii， 101 ；Ptol，v．2．§ 4 ；lliu．v．32；Liv，xxxvii． 3i．）In the time of Strabo（xiii．p．605，comps． p．583）there was shown on Cape Lectum an altar， said to have beeu erected by Agamemnan to the twelve great gods ；but this very number is a proof of the late oryin of the altar．Under the Byzan－ tine emperors，Lectum was the northernmost puint of the province of Asia．（Hierocl．p．659．）Athe－ naens（iii．p．88）states that the purple shell－fish， found uear Lectum as well as near Sigeum，was of a large size．The modern name of Lectum is Baba， or Susta Maria．
［L．S．］
LECYTHUS（Avíku日os），a town in the peninsula of Sithonia in Chalcidice，not far from Torone，with a temple to Athena．The town was attacked by Brasidas，who took it by storm，and consecrated the entire cape to the goddess．Everything was de－ molished except the temple and the buildings con－ nected with it．（Thuc．iv．115，116．）［E，B．J．］

LEDERAATA or LAEDERATA（ $\Lambda \in \delta \in \rho \dot{\tau} \alpha a$ and Aıтерата＇），a furtified place in Upper Muesia，on the high road from Viminacium to Dacia，on the river Morgus．It was a station for a detacbment of horse archers．（Procop，de Aed．iv，6；Tab．Peut．；Notit， Inpp．，where it is called Laedenata．）Ruins of ancient fortifications，commonly identified with the site of Lederata，are found in the neighbourhood of Kama．
［L．S．］
LEDON（ムe $\delta$ áv：Eth．$\Lambda \in \delta o ́ v t i o s$ ），a town of Phocis，north of Tithorea，the birthplace of Phinlo－ melos，the commander of the Phocians in the Saured Wir．In the time of Pausanias it was abandoned by the inlabitants，who settled opon the Cephissus，at the distance of 40 stadia from the town，but the ruins of the latter were seen by Pausanias．Leake supposes that the ruins at Paleá Fiva are those of Ledon．（Paus．x．2．§ 2，x．3．§2，x．33．§ 1 ； Leake，Northerns Greece，vol．ii．p．89．）

LEDRON（ $\Lambda \hat{\eta} \delta \rho o \nu)$ ，a place in Cyprus，near Leu－ cosia，which the ecclesiastical writers mention as a bishup＇s see．（Sozomen，H．E．v．10；Niceph．Callist． viii． 42 ；Engel，Kypros，vol．i．p．152．）［E．B．J．］

LEDUS，or LEDUM，as Mela（ii．5）names it，a sinall river of Gallia Narbonensis．Festus Avienus （Ov．Marit．590）names it Ledus．Mela speaks of the＂Stagna Volcarum，Ledum flumen，castellum Litera．＂The Ledus is the Lez，which passes by Sextantio，to the east of Montpellier，and flows into the E＂tang de Maguelone or Perols below Latera， uow Lates or Latte．Pliny（ix．8）gives the name of Stagumin Latera to this E＇taing，and he speaks of it as abounding in mullets，and describes the way of taking them．The mullet is still abundant there， Pliny places the Staguum Latera in the territory of Nemansus（Nimes），which is at some distance．But the E＂tang and the Castellum Latera may be among the many small places（Plin．iii．4）which were made dependant on Nemausus（Nemausiensibus attributa）．

LEËTA＇NI．［LAEËTANi．］
［G．L．］
 Pomp．35），a people on the shores of the Caspian， situated between Albanis and the Amazones，and

LEGIO VII．GEMINA．
belonging to the Scythian stock．（Theophancs，ap Strab．l．c．）The name survives，it has been con－ jectured，in the modern Lesghi，the inhabitants of the E．recion of Caucasus．（Comp．Potocki，Joyraye dans les Steps d Astrakhan，vol．i．p．239．）［E．B．J．］

LEGEDIA，in Gallia，is placed by tbe Table on a road from Condate（Rennes）to Coriallum，perhaps Cherbourg．It is 49 Gallic leagues from Condate to Legedia，and 19 from Legedia to Coscdia．None of the geographers agree about the position of Le－ gedia．Walckenaer places it at Tillcbaudon，near Lézcaus，in support of which there is some similarity of name．
［G．L．］．
LEGEOLIUAI，a town in Britain，mentioned in the 1tinerary．At Castle ford，in Yorkshire，the road from Ismium（Aldborough）crosses the river Aire； and in this neighbourhood coins and other antiquities have been dug up．A camp，however，has yet to be discovered．Castleford is generally identified with Legeolium．

Lagecimm is the first station from York on the way to London， 21 miles from the former town，and 16 from Danum（ $=$ Doncaster）．This is from the 8th Itinerary．
In the 5th Legeolium is exactly in the same po－ sition．This identifies the two．［R．G．L．］
LE＇GIO（ $\Lambda \in \gamma \epsilon \omega ́ \nu)$ ，a town of Palestine mentioned by Eusebius and S ．Jerome．Its importance is intimated by the fact that it is assumed by them as a centre from which to measure the distance of other places．Thus they place it $15 \mathrm{M} . \mathrm{P}$ ．west of Nazareth，three or four firom Taanach（Onomast． s．vv．Nazareth，Thaanach，Thanaach Canoma， Aphraim．）Reland（Palacst，s．v．p．873）correctly identifies it with the modern village Legune or el－Lejijun，＂on the western border of the great plain of Esdraelon，＂－which Eusebius and S．Jerome designate，from this town，$\mu$ é $\gamma$ a $\pi \in \delta i o y$ Ae $\gamma \in \omega$ 亩os （Onomast．s．v．「aEa日ivv），－＂where it alrendy be－ gins to tive gently towards the low range of woodel hills whicb connect Carmel and the momtains of Samaria．＂Its identity with the Megiddo of Scrip－ ture is successfully argued by Dr．Rolinson（Bib． Res．rol．iii．pp．177－180．）Mlegiddo is constantly joined with Taanach，and Lejjin is the requisite distance from the village of Taionnúk，which is directly south of it．Both were occupied by Ca naanitish sheikins（Josh．xii．21），both assigned to the half－tribe of Manassel，though lying within the borders of lssachar or Asher（xvii． $11 ; 1$ Charm． vii．29）；both remained long unsubdued（Judges，i． 27）．In the battle between Barak and Sisera＂they fought in Taanach by the Waters of Megiddo，＂－which waters issue from a copious fountain，the strean from which turns several mills，and is an important tributary to the Kishon（Maundrell，Journey，March 22，p．57．）This is polably the place mentioned hy Shaw as the Ras－cl－Kishon，or the head of the Kishon，under tho south－east brow of Mionnt Carmel． Three or four of its sources，he says，lie within less than a furlong of each other，and discharge water enough to form a river lalf as big as the lsis． （Travels，P． $274,4 \mathrm{to}, \mathrm{ed}$.$) It was visited and de－$ scribed by Mr．Wolcott in 1842 ．He found it to Le an bour and $\mathbf{4 0}$ minutes from Ta＇annuik（Bibliotheea Sacra，1843，pp．76－78．）The great caravan road between Erypt and Damascus passes through $L_{e j j u m}$ ； and traces of an old Roman ruad are to be seen to the south of the village．［G．W．］

LEGiO VII．GE＇MINA（Itin．Ant．p． 395 ； Aeviav § 「epuavikí，1＇tul．ii．6．§ 30 ：Leon），；

## LELEGES

Foman city of Asturia，in Ilispania Tarraconemi－ admirably situated at the confluence of two trilu－ taries of the Esla，at the foot of the Asturian moun－ tains，commanding and protecting the plsin of Leon． As its name implies，it grew out of the station of the new 7th legiom，which was raised by the emperor Galba in Hispania．（Dion Cass．iv． 24 ；Tac．Hist． ii．11，iii． 25 ；Suet．Galba，10．）Tacitns ealls the legion Gatmana，to distinguish it from the old Leger VII．Chambla，but this appellation is not found on any genuiue inseriptions．It appears to have receivel the appellation of Gemina（respecting the nse of which，and Gemelfa，see Cacsar B．C． iii．3）on necount of its amalganation liy Vesprsian with one of the German lecions，not improbably the Legro I．Germanica．Its full name was VII． Gemuna Felix．After serving in I＇annonia，and in the eivil wars，it was settled by Vespasian in Hispouia Tarraconensis，to supply the place of the VI．Victrix and X．Gemina，two of the three lections ordinarily stationed in the province，but which hail twen withilrawn to Germany．（Tac，Ilist．ii．11，67， 86．iii．7，10，21－25，iv． 39 ；Inscr．ap．Gruter， p．245，no．2．）That its regular winter quaters， undet liter emperors，were at Leon，we learn from the Itinerary，Ptoleny，and the Notitia Imperii， as well as trom a few inseriptions（Muratori，p． 2037, no．8，A．D． 130 ；p．335，nos．2．3，A．D．I 63 ： p．336，no．3．A．D． 167 ；Gruter，p．260，no．1， A．D．216）；but there are numerons inscriptions to prove that a strong detachment of it was stationed at Tarraco，the chief city of the province．（The following are a selection，in order of time ：－OrAlli， no． 3496 ，А．D． 182 ；no． 4815 ；（irnter，p．365， no．7．）In the inscriptions the legion has the sur－ names of P．F．Antoniniana，P．F．Aleman－ mhana，and P．F．Sibveriana Alexandimana； and its name oceurs in a Greek inscription as AET． Z．$\Delta 1 \Delta r^{\prime} \mu \eta$（C．I．vo！iij．no．4022），while another
 （ $(: . I$ ．vol．i．no．1126．）There is an inscription in which is found a＂Tribunus Dilitum Leg．V1I．Ge－ mixae Felicis in Gierminia，＂from a comparion of wheh with two inseriptions found in Cermany （L．rhene，Schriften，vol．i．nos．11， 62 ；Burghesi， sull．iser．Ram．del lieno，p．26），it has been in－ ferred that the bevin was employed on an expe－ dition into Germany muder Alexander Severns，and that this cireumstance qave rise to the erroneons dresination of $\Gamma$ eppavinín in the text of Polemy． （13i－king，N．I）．｜t．it．pp． 102 b ，seq．；Marquardt＇s Beckir，Röm．Altertham．sol．iii．1t．2，p． 354 ； Gunteford，in Pauly＇s Ratencyllopiuthie，\＆t． Legio．）

The station of this legion in Asturia grew into an improtant city，which resisted the attacks of the Guths till A．D．586，when it was taken by J．eovi－ gildo：and it was one of the few cities which the Goths allowed to retain their fortifications．Daring the strugele with the Arab invaders，the same for－ tress，which the Romans had built to proteet the plain from the inenrsions of the mountaneers，be－ came the advanced post which covered the mountain， as the last refuge of spanish independence．After yidlling to the first ：lasault of the Mours，it was soon recovered，and was restored by Ordino 1．in 850．It was again taken by Al Mhasur in 996， after a year＇s siuge ：but was reconered nfter Al－ Mansur＇s defeat at C＇rlatoñuzor，ahomt A．11．10000； repeopled by Alonso V．，and enlarged by Alonso Xl．， under whose successor，Don Dedro，it carsed to be
the capital of the kingdom of Leon，by the removal uf the court to Sixille．The freater protion of the Roman walls may still be traced．（Ford，Iloudboole of Spain，p．318．）
$\left[\begin{array}{ll}\mathrm{P} & \mathrm{S}\end{array}\right]$
LEHI，or more filly Ramatilienil，a place in the south of Palestine，the name of which is derived from one of Sumson＇s exploits．（Judy．xv．9．14，17； comp．Joseph．Ant．v．8．§ 8；Winer，Bibliseh．Real－ würterbuch，s．v．）

LEIDIONE（ $\left(\in \mu \mu \omega^{\prime} \eta \eta\right.$ ）the later name of the Honeric Elone（＇H $\lambda \omega \bar{\omega} \eta \eta$ ），according to Strabo， was a town of Perrhachia in Thessaly，and was sitnated at the foot of Momit Olynyms，not far from the Titaresius or Eurotas．The Greekn of Elassoum report that there are some remains of this city at Selos．（Hom．Il．ii．739；Strab．ix．p．440；Steph． B．s．v．＇H $\lambda \omega \dot{\nu} \eta$ ；Leake，Northern Greece，vol．iii． p． 345.$)$

LEINUM（ムúävoy），a town of Sarmatia Europaca， Which Itwemy（iii．5．§ 29）places on an affluent of the Borrsthenes，but whether on the Beresina，or some other，is uncertain．Luaita（Aeiavol，1＇tol． iii．5．§ 12），on the Palus Macotis，appears to be the sime place repeated by an oversight．（Schafarik， Slav．Alt．vol，i．p．512．）
［E．B．J．］
LEIPSTDRICM．［ATHCA，p．326，b．］
LELAMNO＇NIUS SINUS，in Britain，mentioned by Ptoleny（ii．3）as lying between the aestuary of the Clota（Clyde）and the Epidian Promontory （Mull of Contyre）$;=$ Locl Fyme．$\quad[$ I．G．I．．］
LELANTUS CAMPUS（ $\tau \dot{\partial}$＾ínavtov $\pi \in \delta i o v$ ）， a fertile plain in Enbrea，between Chaleis and Eretria，which was an uhiect of freguent contention between those cities．［Cualcis．］It was the surject of volcanic action．Suabo relates that on one occasion a turrent of hot mud issucd frum it ； and it contained some warm springs，which were used by the dietator Sulla．The plain was aloo celebrated for its vineyards：and in it there were mines of copper and iron．（Strab，i．P．58，x．p．447， seq．；Hom．Hymin．in Apoll． 219 ；Theogn． 888 ； Leake，Northern Grcece，vol．ii．p．265．）Pliny neentions a river Ledantus in Eubrea，which on unt lave flowed throngh this plain，if it really existed． （Plin．iv．12．s．21．）

LELEAES（ $\Lambda \in \lambda \in \gamma \in s$ ）an ancient race which was spread over Greece，the adjoining islands，and the Asiatic enast．befure the Ilellenes．They were so widely diffused that we most cither suppose that thuir name was descriptive，and upplied to several ditferent tribes，or that it was the name of a single tribo and was afterwards extended to others．Strabo （vii．p．322）regarded them as a mixed race，and was disposed to believe that their name had reference to this（（＇ò бu入入ércous $\gamma$ evovéval）．They may pro－ bably be looked upon，like the Pelas＿ians and the other early inlahitants of Grecce，ns members of the ereat Indo－Enropan race，whe became gra－ dunlly incorporated with the Mrllowes，and thos censed to exist as an independent people．

The most distinct statement of aurient writers on the origin of the Leleges is that of Herodotus，who says thitt the name of L leges was the ancient name of the Carians（Ilirod．i．171）．A later（ireck Hriter considered the L．decers ass standing in the same relation to the Carians as like Illots to the L－vedaemonians and the Penest ne to the Thessalians． （Athen．vi．p．271．）In Homer leth Leleges and Carians appear as equals，and as anxiliaries of the Trujans．（Il．x．428．）The Lelcese are ruled by Altes，the father－in－Law of Iriam，and inhabit a
town called Pedasus at the foot of Mount Ida. (Il. xxi. 86.) Strabo relates that Leleges and Carisns ence occupied the whole of Lonia, and that in the Milesian territory and in all Caria tombs and forts of the Leleges were shown. He further says that the two were so intermingled that they were frequently regarded as the same people. (Strab. vii. p. 32 I, siii. p. 611 .) It would therefore appear that there was some close connection between the Leleges and Carians, though they mere probably different proples. The Leleges seem at one time to have occupried a considerable part of the western cosst of Asia Minor. They were the earliest known inhabitants of Samos. (Atben. xv. p. 672.) The counection of the Leleges and the Carians was probably the foundation of the Megarian tradition, that in the twelfth generation after Car, Lelex came over from Egypt to Megara, and gave bis name to the people (Paus. i. 39. § 6) ; but their Egyptinn origio was evidently an invention later times, when it became the fashion to derive the civilisation of Greece from that of Egypt. A gravdson of this Lelex is said to have led a colony of Megnrian Leleges into Messenia, where they founded Pylus, and remained until they were driven out by Neleus and the Pelasgians from Iolcos; whereupon they trok possession of Pylus in Elis. (Paus. v. 36. § I.) The Lacedaemonian traditions, on the other hand, represented the Leleges as the autochthons of Laconia; they spoke of Lelex as the first native of the soil, from whom the people were called Leleges and the land Lelegia; and the son of this Lelex is sail to have been the first king of Messenia. (Pans. iii. 1. § I. iv, 1. §§ 1, 5.) Aristotle seems to have regarded Leucadia, or the western parts of Acarnania, as the original seats of the Leleges ; for, according to this writer, Lelex was the autochthon of Leucadia, and from him were descended the Tcleboans, the ancient iohabitants of the Taphian islands. IIe also regarded them as the same jeople as the Locriaos, in which be appears to have followed the authority of Hesiod, who spoke of them as the subjocts of Locrus, and as produced from the stones with which Deucalion repeopled the earth after the deluge. (Strab. vii. pp. 321, 322.) Hence all the inlabitants of Mount Parnassus, Locrians, Phocians, Boentians, and others, are sometimes described as Leleges. (Comp. Dionys. Hal. i. 17.) (See Thirlwall, Hist. of Greece, vol. i. p. 42, seq.)

LEMANIS PORTUS (Kauds $\lambda t \mu \hat{\eta} \nu$, Ptol. ii. 3. § 4), one of the chief seaports of Britain, situated in the territories of the Cantii; the site near Lymme, in Kent. The road from Durovernnm to Portus Letaanis (Itin. Anton. iv.) is estant nearly its entire length, and known by the name of Stone Strect.

The larbour or port is no longer to be traced, owing to the silting up of the sea: but it most bave been sitnated opposite to West Hythe and Lymne. The remains of the castrum, called Stutfall Castlc, to the west of West Hythe, and below Lymne, indicate the quarters of the Turnacensian soldiers stationed there in defence of the Littus Saxonicum. (Not. Dig.) Recent discoveries have shown that a body of marines (Classiarii Britannici) were also located at the Portus Lemanis, and at Dubris (Dover). An altar was also found, recording the name of a prefect of the British fleet. (Report on Excavations made at Lymne.) The Portns Lemaois is laid down in the Peutingerian Tables, and it is mentioned by the anonymons Geographer of Ravenna.

The Foman station was situated on the slope of a hill. Like that of Richborough (Rutupiae), it was walled on three sides only; the side facing the sea being snfficiently defended by nature in a steep bank, such as we see at other Roman castra where the engineers have availed themselves of a catural defence to save the expense and labour of building walls. The fortress enclosed about 10 acres. The walls, in part only now standing, were upwards of 20 ft , higb, and about 10 ft . thick; they were further strengthened by semicircular solid towers. The principal entaance was on the east, fracing the site of the village of West Hythe. It was supported by two smaller towers, and, as recent escavations prove, by other constructions of great strength. Opposite to this, on the rest, was a fostern gate, of narrow dimensions. At some remote period the castrum was shattered by a land-slip, and the lower part rwas carried away, and separated entirely from the upper wall, which alone stands in its original position. To this cause is to be ascribed the present disjointed and shattered condition of the lower part. Parts of the wall and the great gateway were completely buried. The excavations alluded to brought them to light, and enabled a plan to be made. Within the area were discovered the walls of one of the barracks, and a large house with several rooms heated by a hypocaust.
[C. R. S.]
LEMANUS or LEMANNLS LACUS ( $\Lambda$ emávos, $\Lambda \in \mu \alpha \dot{\alpha} \eta$ ムi $\mu \nu \eta$ : Leman Lake or Lake of Geneva). Caesar says (B. G. i. 8) that he drew his rampart against the Helvetii "from the Lacus Lemannus, which flows into the Rhone, as far as the Jura:" a form of expression which some of the commentators have found fault with and altered without any reason. The name $\Lambda \mu \dot{\epsilon} \nu \eta$ $\Lambda^{\prime} \mu \nu \eta$ in Ptolemy's text (ii. 10. § 2) is merely a copyist's error. In the Antonive Itin. the name Lansonius Lacns occurs; and in the Table, Losammensis Lacus. Dela (ii. 5), who supposes the Rhodanus to rise not far from the sources of the Rhenus and the Ister, says that, " after being received in the Lemamus Lacus, the river maiotains its current, and flowing entire throuch it, runs out as large as it came in." Strabo (p. 271) has a remark to the same purpose, and Pliny (ii. I03), and Anmianus Marcellinus (xv, 11). This is not the fact, as we may readily suppose, though the current of the Ihone is perceptible for some distance after the river has entered the east end of the lake of Genera. Ausonius (De Clar. Urb. Narbo) makes the lake the chief suurce of the Khodanns:-
Qua rapitur prueceps Rhodanus genitore Lemanno;
but this poetical embellishment needs no remark.
The Lake of Geneva is an immense hollow filled by the Thone and some smaller streams, and is properly described under another title. [Ryodax cs .]
[G. L.]
Lemh'VI. [Gatlaecha.]
LEMINCUM, in Gallia Narbonensis, is pheed in the Table and the Antonine ltin, on a road from the Alpis Graia (Little St. Bernard) to Vienna (J ienne). Lemincum is Lemens, near Chambery, and there is also, according to some anthorities, a Mont Leminc. The nest station to Lemincum on the ruad to Vienna is Labiscum. [Labiscunc.]
[G. L.]
LEMNOS ( $\Lambda \bar{\gamma} \mu \nu \operatorname{sis}:$ Eth. $\Lambda \hat{\eta} \mu \nu i o s)$, one of the larger islands in the Aegaean sea, situated nearly midsay hetween Mount Athos and the Hellespont. According to Pliny (iv. 12. s. 23), it lay 22 miles SW. of Imbros, and 87 miles SE. of Athos; bnt the
latter is nearly double the true distann. Surnal ancient writers, however, state that Mumt Athin cat its shadow upon the island. (Soph. ap). Secteml. ad Theocr. vi. 76 ; Plin. l. c.) Pliny aho rehatis that Lemnos is 112 miles is circuit, which is perhaps not far from the truth, if we rockon all the: windings of the coast. 1ts area is nearly 150 sumare miles. It is of an irregular quadrilateral shapo, being nearly divided into two peninsulas ly two deep hays, Port Parwulise on the N., and I'unt ist. Autony on the S . The latter is a large anl convenient harbour. On the eastern side of the iskal is a huhd rock projecting into the sien, called liy Aeschylos 'Epuaioy 入ítas Mrjuvou, in his desmiption of the beacon fires between Mount Ida and Mycrmac, anDouncing the capture of Troy. (Aesch. Agram. 283 ; comp. Soy h. Philuct. 1459.) Hills, but if no great heicht, cover two-thims of the island : they are baten and rocky, and there are very fer trees. except io sone of the parrow valleys. The whole islond bears the stronsest marks of the effects of voleanic fire; the rocks, in many places, are like tbe bunt and vitrifies scoria of furnaces. Hence we maty account for its ennmection with Hephaestus, who, when hurled from heaven by Zeus, is said to have fallen upon Lemnos. (Hom. Il. i. 594) The inland was therefore sacred to Hephaestus (Nicandr. Ther. 458: Ov. Fast. iii. \$2), whe was frequently ealled the Lemaian god. (Ov. Met. iv. 185; Virg. Aen. viii. 454.) From its voleanic appearance it derived it- name of Acthalcia (Aïdàfea, Polyb. ap.
 related that from one of its mountains, called Mosrctilus (Mbouxhos), fire was seen to blaze firth. (Antimach, ap, Schol. ad Nicandr. Ther. 4 T2; Lycophr. 227; 11.arth.s.v.) In a village in the isfand, maned Chwous, there is a hot-spring. called Thermin, where a commodious bath las been built, with a lowking hume fir strangers, who frequent it for its supposed inedicinal qualities. Thie name of Lemnos ts said to have been terived from the name of the tivat Goddess, who vas called Lemnos by the original mhabitants of the island. (Hecat. ap. Steph. B. s. $v$. )

The arlicat inlathitants of lemmos, aceording to Hower, wete the Sisties (Sivties), a Thracian tribe; a naure, howeser, which probably only sis1:ifins rublers (from oiroual). (Hom. Il. i. 594, Ot. viii. 294: Strah, vii. p, 331, x. p. 457 , xii. p. 549.) When the Areonants landed at lemmos, they are stid to have foond it inhabitud only by women, who hat murdered all their husbands, and had chosen as their queen Hypiprle, the danfliter of Thous, tha tormer King of the island. [Sie hict of Diomp: art. Hypsirvie.] Sione of the Argobants attion here, tand becane lyy the Lemnian wemsu the fathers of the Mrivyae (Mevéat), the later inhabitamta of the island. The Minyae wevt driven ont of the island by the Tyrrlenian Pelasgians, who had levell expelled from Attira. (Heronl. is. 145, vi. 137: Apoll. Rhwl. i. 608, aq4, and Shol. ; Aymllod. i. 9. § 17 , iii. 6. § 4.) It in also related that these livasa bus, out of reveruge, made a descont upout the coast of Attica during the festival of Artemis at Brauron, and carried off some Athenias women, whom they made their conmbines: hit, as the drildrom of these women de-pinel their half-heothere hurn of l'elaseian wo imn, the Pelas fians numbered beth them and their Athenime methers. In eenserpence of the atrocity, and of the fromer mu der of the lommen

épra) became a proverls thronglont Grecce for all atromious acts. (1lerod. vi. 128; Eustath. ad I/. p. 158. 11, all Jionys. Per. 347 ; Zenob. ir. 91.) Lumnos contimued to be inhabited by Pelasgians, wheo it was conquered by Otanes, one of the generals of Darius Hystaspis (Herod. v. 26); but Miltiades delivered it from the l'ersians, and made it sulject to Athens, in whose power it remained for a long time. (1lerod. vi. 137 ; Tbue. iv. 28, vii. 57.) In fact, it was always regarded as an Athenian possession, and accordingly the peace of Antalcidas, which declared the independence of all the Greeian states, nevertheless allowed the Athemians to retain possession of Lemnos, lmbins, and Seyrus. (Xen. It. ll. iv. 8. § 15, v. 1. § 3 t .) At a later perion Lemnos passed into the hands of the Macedonians, but it was restored to the Athenians by the Romans. (Polyb. xxx. 18.)

In the earliest times, Lemnos appears to have contained only one town. which bore the same name as the island (Hom, Il. xiv. 230); but at a later prrind we find two towns, Myrina and llephaestias. Myrina (Mipiva: Eth. Mupivaios) stood on the western side of the island, as we may infer from the statement of Pliny, that the shadow of Mt. Atbos was visible in the forum of the city at the time of the summer solstice. (Plin. iv. 12. s. 23; Herod. vi. 140; Steph. B. s. v.; Ptol. iii. 13. § 4.) Ooits site stands the modern Kastro, which is still the chief town in the place. In contains about 2000 inhabitants; and its little port is defended by a pier, and commanded by a ruinous medineval fortress on the overhaming rocks. Heimaestias, or Hephafstia ('Hфalotias, 'Hфalotia: Eth, 'Hфar$\sigma \tau_{1}$ eus). was situated is the nurthern part of the islund. (Herod., Plin., Ptol. Il. cc.; Steph. B. s. v.) There are cuins of 11 ephaestia (sec below), but none of Mynina, and none Learing the name of the island. (Eckhel, vol. ii. p. 51.)

According to Pliny (sxxvi. 13. s. 19) Lemmos hat a celebrated labyrinth, supported by 150 columns, and with gates so well poised, that a child could open them. Pliny adds, that there were still traces of it in his time. Dr. Hmat, who visited the island in 1801, attempted to find out the ruins of this labyrinth, and was directed to a subterraneous staircuse in an uninhabited part of the island, near a lay, called Porniah. He here finnd extensive ruins of an ancient and strong builaing that seemed to have had a diteh round it communicating with the sea. "The edifices have cuvered about 10 acres of ground: there are foundations of an amazing number of small buildings nithin the outer wall, each about seveo feet square. The walls towards the sea are strong, and con1.med of large square blucks of stone. On an therated spot of ground in one corner of the area, we found a subterraneons staireave, and, after lighting onr tapers, we went down ioto it. The entrance was difficult: it consisted of 51 steps, and about every twelfth one was of marble, the others of common stope. At the bottom is a small chamber with a well in it, by which probably the garrison was supplied: a censer, a lamp, and a few matches, were lying in a corner, for the use of the Greek Christians, in o call this well an A $\gamma i a \sigma \mu a$, or Holy Fountain, and the ruins about it Panagia Coccipce. The peasants in the neighbowlrood had so knowledge of tiny sculpture, or statues, or melals having ever teen found there." It does not appear, however, that these ruius lave any relation to the labyrinth
mentioned by Pliny; and Dr. Hunt thinks that they are probably those of the citadel of Hephaestias.

The cbief production of the island, was a red earth called terra Lemnia or sigillata, which was employed by the ancient physicians as a remedy for wounds and the bites of serpents; and which is still much valued by the Turks and Greeks for its supposed medicinal virtues. It is dug out of a hill, made into small balls, and starned with a seal containing Arahic charaeters.

The ordinary modern name of the island, is Stalimene ( $\epsilon$ is $\tau \grave{\nu} \nu \Lambda \hat{\eta} \mu \nu o \nu$ ), though it is alsocalled by its ancient name.

There were several small islands near Lemnos, of wbich the most celebrated was Cirryse (Xpuán), where Philoctetes was said to have been abandoned by the Greeks. According to Pausanias, this island was afterwards swallowed up by the sea, and another appeared in its stead, to which the name of Hiera was given. (Eustath ad Hom.Il. ii. p. 330; Appian. Withr. 77; Pans. siii. 33. § 4.)
(Rlode, Res Lemnicae, Vratisl. 1829; Hunt, in Walpole's Travels, p. 54, seq.)

coin of hepliaestias in lemnos.
 Ptol. ii. 7. § 10), a Gallic people who were bounded by the Arverni on the east, the Bituriges Cubi and the Pictones on the north, and the Santones on the west. Their chief town was Angnstoritum or Limoges. [Avoustomitur.] The diocese of Li mages, comprehending the diocese of Tulle, which lass been separated from it, represents the limits of the Lemorices ; but the diocesc of Limoges extends somewhat beyond the limits of the old province of Limousin, which derives its name from the Lemovices, and into that province which was called $L a$ Marche. An inscription in Gruter, found at Runcom, in the diocese of Limoges, proves that there was included in the territory of the Lemovices a people named Andecamnlenses; and another Gallic inscription shows that Mars was called Camulus. Camulogenus was a Gallic name (Cacs. B. G. vii. 59,62.)

Caesar (B. G. vii. 4) enumerates the Lemovices among the peoples whom Vercingetorix stirred up against the Romans in n. C. 52 ; they are placed in the test between the Aulerci and Andes. The Lemovices sent 10,000 men to assist their countrymen at the siege of Alesia (B. G. vii. 75) But in the same chapter (vii. 75) the Lemorices are again mentioned: "universis civitatibus quae Oceanum attingunt qqueeque eorum consuetudine Ar . moricae appellantur, quo sunt in numero Cariosolites, Redones, Ambihari, Caletes, O,ismi, Lemurices, Veneti, Unelli, sex millia." Here the Lemovices are placed in a different position, and are one of the Armoric Siates. [Armoncal C'ivitates.] Some critics erase the name Lemovices from Cacsar's text; but there is good authority for it. Davis remarks (Caes, Oudendorp, i. p. 427), tbat all the MSS. (known to bim) have the realing Lemovices, and that it occurs also in the Greek translation. He also observes, that as there were three Aulerci [Aulenci], so there might be two Lemovices; and
we may add that there were two Bituriges, Bituriges Cubi and Bituriges Vivisci; and Volcae Arecomici and Volcae Tectosages. If the text of Caesar then is right, there were Armoric Lemovices as well as the Lemovices of the Limousin; and we must either keep the name as it is, or erase it. The emendation of some critics, adopted by D'Anville, rests on no foundation. Walckenaer finds in the district which he assigns to the Lemorices Armoricani, a place named La Limousiniere, in the arrondissement of Nantes, between Machecoul, Nantes and SaintLéger; and he considers this an alditional proof in favour of a conjecture abont the text of Ptolemy in the matter of the Lemovices; as to which conjecture his own remarks may be read. (Géon. \&.c. des Gaules, wil. i. p. 369.)
[G. L.]
LEMIO'VII, a German tribe, mentioned by Tacitus (Germ. 43) as living with the Rugii on the coast of the Ocean, that is, the Bultic Sea. Tacitus mentions three peculiarities of this and the other tribes in those districts (the modern Pommerania), their round shields, short swords, and obedience towards their chiefs. (Comp. Zeuss, die Deutschen, p. 155. )
[L. S.]
LENTIA (Linz), a small place in Noricum on the Danube, on the road from Laureatcum. According to the Notitia Imperii, from which alone we learn anything about this place, it appears that a prefect of the Legio Italica, and a body of horse archers, were stationed there. (Comp. Gruter, Inscript. p. 541.10 ; Muchar, Noricum, i. p. 284.)
[L. S.]
LENTIENSES, the southernmost branch of the Alemami, which occupied both the northern and southenn borders of the Lacus Brigantinus. They made repeated inroads into the proviuce of Rhaetiq, but were defeated by the emperor Constantins. (Amm. Marc. $\mathrm{xv} .4, ~ \mathrm{xxxi} .10$; Zenss, die Deutschen, p. 309, foll.)
[L. S.]
LE'NTULAE or LE'NTOLAE, a place in Upper Pannonia, on the principal highroad leading through that country, and 32 Roman miles to the south-east of Jovia. (It. Ant. p. 130; It. Hieros. p. 562; Geogr: Rav. iv. 19.) Ptolemy (ii. 15. \&̧ 5) mentions a town $\Lambda$ évtov®ov in the same neighbouthoud, which is perhaps only a slip for Aevrounod. Some identify the place with the modern Bertzentze, and others with Leftichany.
[L.S.]
LEO FLUVIUS. [Leontes.]
LEON ( $\Lambda \in \omega \nu$ ăkpa.) 1. A point on the S, coast of Crete, now Punta di Liondla. (Ptol. iii. 17. § 4 ; Höck, Kreta, vol. i. pp. 394, +13.) [E.B. J.]
2. A promontory of Euboea. S. of Eretria, on the ка入̀े àk át. (1'tol. iii. 15. § 24.)
3. A place on the E. coast of Sicily, near Syracose, where both the Athenians and Romans landed when they were going to attack that city. (Thuc. vi. 97: Liv. xxiv, 39.) [Syracusae.]

LEONICA. [Edernint.]
 Plonenicia, placed by 1'tolemy between Berytus and Nidon (v. 15, p. 137) ; consistently with which notice Stralo places Leontopulis between the same two towns, the distance between which he states at 400 stadia. He mentions no river of this vame, but the Tamyras ( $\delta$ Tapúpas noтa $\hat{\sigma}^{\prime}$ ), the grove of Aesculapius, and Leontopolis, which wonld doubtless correspond winh the Lion river of Ptuleny; for it is obviously an error of Pliny to place "Leontos oppidum" between "Berytus" and "Flnmen Lycos" ( $\mathrm{v}, 20$ ). Now, as the Tunyras of Strabo is clearly
ilentical with Nalr-ed-Dimur, half way between Eeyrit and Saida, Lion's town and river should be looked for south of this, and north of Sidon. The only stream in this interval is A Athr-el-Auly, called also in its upper part Nalor Barik, which Dr: Robinson has shown to be the Bustrenus Fluvius. [130stamenus.] This, therefore, Mannert seemed to have sufficient authority for identifying with the Leontes. But the existence of the Littóny-a name suppused to be similar to the leontes-between Silon and Tyre, is thought to countemance the conjucture that P'tulemy has misplaced the Leontes, which is in fiwt identical with the :annymons river which Strabo mentions near Tyre (p. 758 ), which can be no other thain the Litiny (Roliuson, Bith. Res, vol. iii. pp. 408 -410, and notus). Ningreat reliance, however, can be placed on the similarity of names, as the form Leontos is merely the finflexion of $\Lambda \dot{e} \omega \nu$, which was not likely to be adopted in Arabic. It is far more probable that the classimal gengrapher in this, as in other cases, translated the somitic name. [See Casis and Lyers] Bewites which the Litiny this not retain this mane to the coast, but is here callad Nutherl-Kisimiych, the Casimeer of Mamdrell (March 20, p. 48 ; 1elami, Falaestina, pp. 290, 291.)
[G. W.]
LEONTI'NI (Aeovtivol: Eth. Aeovtivos: Len(imi), a city of Sicily, situated between Syracuse wul Catana, but abint eight miles from the seamact, near a considerable lake now known as the Latyo li Lentini. The name of Lemtini is evidently an ethnic form, signifying properly the people rather than the city itsolf; but it reems to have been the only one in use, and is employed both by Greek and Latin writers (deelinel as a plural adjeetive*), with the single exception of Ptolemy, who ealls the city Acbutlov or Lematium. (1ptol. iii. 4. § 13.) But it is clear, from the melern form of the name. Inatini, that the form leontini, which we find universal in writers of the best ages, continued in common we duwn to a late perived. All ancient writers concur in reprosentinur Lomatini as a Greek coluny, and one of thuse of Chakeidian orivin, being fomuded by Chalridic colonista from Naxis, in the same year with Cat:ma, and six years ufter the parent city of Naxns, b.c. 730 . (Thuc. vi. 3: Sevmu. Ch. 283; Diod. xii. 33 , xir. 14.) According to Tharydilis, the unto had been previomsly ocenpied liy sieuli, hut thene were expollad, and the city became essontially a (ireak colony. We know little of its carly listury ; lut, from the streneth of its pusition and the extreme fertility of its territory (renowned in all ayes for its extraordinary richness), it appears to have varly attained to ereat prosperity, and hecame one of the most considicrable cities in the E. of sirily. The rapidity of its rise is attested by the fact that it was able, in its turn, to fomed the whaty of Eultuea (Stral. vi. 1. 272 ; Seysum. Ch. $2 \times 7$ ), apparently at a very varly period. It is prubablo, aloo, that the three Chaturdic cities, Lemtimi, Nixos, atw C'atan, from the earliest perios adopted the same line of poliey, and made conmon "anse aganst their Worian ncighbours, as we find them con tantly dobing in later tumes.

The government of Lentini was an oligarchy, but it fell at one time, like so many other cition of 'icily, under the yoke of a despot of the name of Panactius, who is said to hase been the first instance of tho

[^5]kind in Sicily. His usmrpation is referred by Eusebius to the 43 rd Olympiad, or B. c. 608 . (Arist. Pol. v. 10, 12; Euseb. Arm. vol. ii. p. 109.)

Loontini appears to have retained its independence till after B. C. 498, when it fell under the yoke of 1lippocrates, tyrant of Gela (1)erol. vii. 154): after which it seems to have passed in succession under the authority of Gelon and Hieron of Syracuse; as we find that, in n.c. 476 , the latter despot, having expelled the inbabitants of Catana and Naxos from their native cities, which he peopled with new colonists, established the exiles at Leontini, the passession of which they shared with its former citizens. (1)iod. xi. 49.) We find no sprecial mention of Leontini in the revolutions that followed the death If Hieron ; but there is no doubt that it regained its independence after the expulsion of Thrasybulus, i. c. 466 , and the Ireriod which followed was proLably that of the greatest prosperity of Leontini, as well :ts the other Chalcidic cities of Sucily. (Diod. xi. 72,76 .) But its proximity to Syracnse becane the source of fresh trombles to Leontini. In B. C. 427 the Leontines found themselves engaged in hostilitico with their more powerful neighbour, and, being unable to cope single-hauded with the Syrasans, they applied for support not only to their Chaledie brethren, but to the Athenians aloo, who sent a fleet of twenty ships to their assistance, under the command of Laches and Charoeades. (Thuc, iii. 86: Diod. xii. 53) The operations of the Athemian thect under Lacies and his successors I'ythotorus and Eurymedon were, however, confined to the part of Sieily adjoining the Straits of Messana : the Lontines received no direct support from them, hut, after the war had continned for some years, they wore included in the general pacification of Gerla, B. C. 424, which for a time sechred them in the pustersion of their independence. (Thuc, iv. 58 , 65.) This, how ver, did not last long: the Syracusans took advantage of intestine dissensions among the Lenutines, and, by espunsing the cause of the oligarely, drove the democratic party into exile, While they adopterl the olicarchy and richer classes as Syrarusan citizens. The greater jart of the latter boxly even abandoned their own city, and mitrated to Syracuse ; hut quickjy returned, and for a time joined with the exiles in holding it out against the puwer of the Syracusans. But the Athenians, to whom they again applied, were unable to render them any eflectual ansistance ; they wero a second time expelled, 1s.c.422, and Leontini became a mere d-pundency of Syracuse, though slways retaining some impartmine as a fortress, from the strength of its position. (Thue, v, 4; Diod, xii. 54.)

In r. e. 417 the Leontinc exiles are mentioned as joining with the Sugestans in urging on the Athebiam expedition to sicily (Diod. xii. 83 ; Plat. Nic. $1: 2)$; and their restoration was mate one of the atuwed objects of the enterprise. (Thuc. vi. 50.) But the fallure of that expedition left them without any hope of restoration ; and Leontini continned in its subordinate and fallen condition till 1. c. 406 , when the Syracusans allowed the unfortunate Agritentines, atfer the captnre of their own city by the Carthagimians, to establish themselves at Leontini. The Gelouns and Camarimaeuns followed their example the next year: the Leontine exiles of Syracnse at itse same time took the opportunity to return to their native city, and declare themselves independent, and the traty of picace concluded by Dionysius with Ilimileo, in s. c. 405 , expressly stipulated for the
freedom and independence of Leontini. (Divd. xiii. 89, 113, 114 ; Xen. Hell. ii. 3. § 5.) This condition was not long observed by Dionysius, who no sooner found limself free from the fear of Carthage than he twrned his arms against the Chalcidic cities, and, after reducing Catana and Nasos, compelled the Leontines, who were now bereft of all their allies, to surrender their city, which was for the second time deserted, and the whole people transferred to Syracuse, B. C. 403. (Id. xiv. 14, 15.) At a later period of his reign (b. c. 396) Dionysius found himself compelled to appease the discontent of his mercenary troops, by giving up to them both the city and the fertile territory of Lcontini, where they established thenselves to the number of 10,000 men. (ld. xiv. 78.) From this time Leontini is repeatedly mentioned in connection with the civil tronbles and revolutions at Syracuse, with which city it seems to have constantly continued in intimate relations; but, as Strabo observes, always shared in its disasters, without always partaking of its prosperity. (Strab. vi. p. 273.) Thas, the Leontines were anoong the first to declare against the younger Dionysius, and open their gates to Dion (Diod, xvi. 16; Plat. Dion. 39, 40). Some years afterwards their city was occupied with a military force by Hicetas, who from thence carried on war with Timoleon (Ib. 78, 82) ; and it was not till after the great victory of the latter over the Carthaginians (в. c. 340) that he was able to expel Hicetas and make himself master of Leontini. (Ib. 82 ; Phut. Timol. 32.) That city was not, like almost all the others of Sicily, restored on this occasion to freedom and independence, but was once more incorporated in the Syracasan state, and the inhabitants transferred to that city. (Iiod. xvi. 82.)
At a later period the Leontines again fignre as an independent state, and, during the wars of Agathocles with the Carthaginians, on several occasions took part against the Syracusans. (Diod. xis. 110, xx. 32.) When Pyrrhus arrived in Sicily, b. c. 278 , they were subject to a tyrant or despot of the name of Heracleides, who was one of the first to make his submission to that monarch. (Id. $x x i i .8,10$, E.cc. II. p. 497.) But not long after they appear to have aqain fallen under the yoke of Syracuse, and Leontini was one of the cities of which the sovereignty was sectured to Hieron, king of Syracnse, by the treaty concluded with him by the Romans at the commencement of the First Punic War, в. с. 263. (Id. xxiii. Exc. H. p. 502.) This state of things continued till the Second Punic War, when Leontini acain figures eonspicnously in the events which led to the fall of Syracuse. It was in one of the long and narrow streets of Leontini that Hieronymus was assassinated by Dinomenes, B. c. 215 (Liv. xxiv. 7; Polyb. vii. 6); and it was there that, shortly after, Hippocrates and Epieydes first raised the standard of open war acrainst Rome. Narcellus hastened to attack the city, and made himself master of it without dirïculty ; but the severities exercised by him on this occasion inflamed the minds of the Symacurans to such an extent as to become the immediate occasion of the rupture with Rome. (Liv, xxiv. 29, 30, 39.) Under the Roman govermment Leontini was restored to the position of an independent municipal town, but it scems to have sunk into a state of decay. Cicero calls it " misera ciritas atque inanis" (Verr. ii. 66); and, though its fertile territory was still well cultivated, this was done almost wholly by farmers from other cities of Sicily, par-
ticularly from Centuripa. (Ib. iii. 46, 49.) Strabo also speaks of it as in a very declining condition, and though the name is still found in Pliny and I'tolemy, it seems never to have been a place of importance under the Roman rule. (Strab. vi. p. 273 ; Mel. ii. 7. § 16 ; Plin. iii. 8. s. 14 ; Ptol. iii. 4. § 13.) Bat the great strength of its position must have always presersed it from entire decay, and rendered it a phice of some consequence in the middle ages. The modern city of Lentina, which preserves the ancient site as well as name, is a poor place, though with about 5000 inhabitants, and suffers severely from malaria. No rmins are risible ou the site ; but some extensive excavations in the rucky sides of the hill on which it stands are believed by the inhabitants to be the werk of the Laestrygones, and gravely described as snch by Fazello. (Fazell, de Reb. Sic, iii. 3.)

The sitnation of Leontini is well described by Polybius : it stood on a broken hill, divided into two separate summits hy an intervening valley or hollow; at the foot of this bill on the $\mathbb{W}$. side, flowed a small stream, which be calls the Lissts, now known as the Fiume Ruina, which falls into the Lake of Lentini, a little below the town. (Pol. vii 6.) The two summits just noticed, being bordered by precipitous clifts, formed, as it were, two natural citadels or fortresses; it was evidently one of these which Thucydides meations under the name of Phoceae, which was occupied in B. C. 422 by the Leontine exiles who returned from Syracuse. (Thuc. v. 4.) Buth beights seem to have been fortified by the Syracusans, who regarded Leontini as an important fortress ; and we find them alluded to as "the forts" (rà фpoúpıa) of Leontini. (Diod. xiv. 5s, xxii. 8.) Diodorus also mentions that one quarter of Leontini was known by the name of "The New Town" ( $\bar{\eta}$ Néc $\pi \dot{\prime} \lambda t s, ~$ xvi. 72) ; but we bave no means of determining its locality. It is singular that no ancient author alludes to the Lake (or as it is commonly called the Bivicre) of Lentini, a shect of water of considerable extent, but stagnant and shallow, which lies immediately to the N. of the city. It produces abundance of tisb, but is considered to be the principal cause of the malaria from which the city now suffers. (D'Orville, Siculet, p. 168 ; Sinyth's Sicily, pp. 157, 158.)

The extraordinary fertility of the territory of Lemitini, or the Leontinus Campe's, is celetrated by many ancient authors. According to a tradition cummonly received, it was there that wheat grew wild, and where it was first brought into cultivation (Diod. iv. 24, v. 2); and it was always regarded as the most productive district in all sicily for the growth of corn. Cicero calls it " campus ille Leontimus nobilissimus ac feracissimus," "uberrima Siciliae pars," "eaput rei frumentariae;" and says that the Romans were acenstomed to consider it is in itself a sufficient resource ayainst scarcity. (Cic. Verr. iii. 18, 44, 46, pro Scaur. 2, Phil. viii. 8.) The tract thus celebrated, which was known also by the name of the Laestrygonn Campi [Lakathygoves], was evidently the plain extending from the foot of the hills on which Leontini was situated to the river Symuethus, nuw known as the Piano di Cutania. We have no explanation of the tradition which led to the fixing on this fertile tract as the abole of the fabulous Laestrygones.

Leontini was noted as the birthplace of the celebrated orator Gorgias, who in B. C. 427 was the head of the deputation sent by his native city to

## LEPONTH．

implore the intervention of Athens．（Diod，sin 35： Plat．Hipp，Mij．p．282．） ［1：．11．B．］

COIN OF LEONTINI．
 town of Achaia，was oricinally not one of the 12．Achaen cities，thungh it afterwards became so， succeeding to the place of Rhypes．It is only men－ tioned by Pulybins，and its position is uncertain． It must，however，have been an inland town，and was probably between Pharae and the territary of Avginm，since we find that the Eleians onder the Aetolian general Earipidas，after marching through the teritory of Pharac as far as that of Aegium． retreated to Leuntium．Leake places it in the valley of the selinus，between the territory of Tri－ taea and that of Acrium，at a place now called $A i$ Audlorea，from a ruined church of that suint near the village of Giuzumistra．Callicrates，the partizan of the Romans daring the later days of the Achaean Lemgue，was a native of Leontimm．（Pol．ii．41， v． 94 ，xxvi． 1 ；Leake，Moren，vol．iii．p．419．）

LEPETYMNTS（Aetéтvuros，called Lepethym－ uus or Lepelhymus by Pliny，v，31．8． 39 ；the Miss． vary），a momutain in the northern part of Lesbos，near Methymna．Plehn states（Lesbiac．Lib．p．9）that it is the highest mountain in the island ：but this does not aypear to be consistent with mudern surveys．Its present name is said to be Mout $S$ ． Theodore．The sepnlebre and tomb of the hero 1＇alamedes are alleged to have been here．（Tzetzes， L．ycopher．Cussundr． 1095 ：Plilostr．IIeroic．p． 716, 1it．Apollon．Tyan．iv．13．150，also 16．154．）In Antigonus of Carystus（c．17）there is a story given， on the authority of Myrsilus the Lesbian，concerning a temple of Apollo and a shrine of the hero Lepe－ tymuns，comnected with the same mountain．Here， also，according to＇Theophrastus（Ire Sign．Phuv，et lent．p．783，ed．Schncid．），an astronamer called Matricetas made his obsertations．
［J．S．H．］
LEL＇INUS MONS is the mane given by Columella （x．131），the only author in whom the name is found，to a monntain near Signia in Latium，pro－ bably one of the underfalls or offshoots of the great mass of the Volscian Apennines．The name of Montes Lepini is frequently applied by modern geo－ sraphers to the whole of the lofty mountain group which separatos the valley of the Sincco from the Poutine Marsbes［Latium］；bat there is no ancient anthority for this．
［E．H．B．］
LEPIDO＇TON－POLIS（ $\Lambda \in \pi \downarrow \omega \tau \bar{\omega} \nu$ そ）$\Lambda \in \pi \leqslant \delta \omega \tau \partial े \nu$ Tódis，Ptol．iv． $5 . \S 72$ ），a town in Upper Egypt， situated in the Pancpulite nome，and on the eastern side of the Nile．It was about four geographical iniles N ．of Chenobostia．Lat． $26^{\circ} 2^{\prime} \mathrm{N}$ ．This was duubtless，the place at which llerototns had heard that the fish lepirlotus was caught in great nam－ bers，and even received divine honomrs（ii．72； comp．Minutuli，p．4t4：Champollion，lEygpte， rol．i．p．248）．Lepiduton－Pulis was probably con－ wected with the 0 －irian worship，for，according to the legend，Isis，in her search lor the limbs of Osiris，who had been cut into ficees by Typhon， traversed the marshes in a boat made of papyrus （Baris），and in whatsuever place she found a member， there she buried it．In the end she discovered all the limbs，excepting one，which lisui been devoured by the fishes phugras and lepidetus．No remains of Lepiloton－Pols have been dixenvered．［W．B．1）．］

LEPO＇NTII（Aŋォobvzon，Ntrab．，l＇tol．），in Al－ pine people，who inhabited the valleys on the sututh side of the Alps，nhent the head of the two great lakes，the Lago di Como and Lago Maggiore． strabo tells us distinctly that they were a Rhaetian trike（iv．p．206），and alds that，like many others of the minor Alpine tribes，they had at one time spread turther into Italy，but had been gradnally driven back into the momutnins．（ $/ \delta$, p．204．）There is some difficulty in determining the position and limits of their territory．C＇aesar tells ns that the Rhine took its rise in the comutry of the Lepontii（B．G．iv．10）， and I＇liny says that the Cheri（or Viberi），who were a trike of the Lequntii，orcupied the sources of the Rhone（Piin，iii，20．s．24）．I＇tolemy，on the eon－ trary（iii．1．§ ：38），plawes them in the Cottian $\Lambda_{p x}$ ；but this is oppmsed to all the other statements， Strabu distinctly connecting them with the Rhae－ tians．Their name oecurs also in the list of the Alpine mations on the trophy of Angustus（ap． I＇in．L．c．）．in a matmer quite in accordance with the statements of Caesar and Pliny；and on the
whole we may safely place thern in the group of the Alps, of which the Mont St. Gothard is the centre, and from which the Rhone and the Rhine, as well as the Reuss and the Ticino, take their rise. The name of Val Levantina, still givea to the upper valley of the Ticino, near the toot of the St. Gothard, is very probably derived from the name of the Lepontii. Their chief town, according to Ptolerny, was Oscela or Oscella, which is generally supposed to be Domo $d^{\prime}$ ' Ossola; but, as the Lepontii are erroneously placed by him in the Cottian Alps, it is perhaps more probable that the town meant by him is the Ocelum of Caesar (now Uxeau), which was really situated in that district. [Ocelum.]
The name of Alpes Lefontiae, or Lepontian Alps, is generally given by modern geographers to the part of this chain extending from Monte Rosa to the St. Gothard; but there is ne ancient autherity for this use of the term.
[E. H. B.]
LEPREUM ( тд Aémpєov, Seyl., Strab., P'olyb.; ムémpeos, laus., Aristoph. Ac. 149; Aémpıoy, Ptol. iii. 16. § 18: Eth. $\Lambda \in \pi \rho \in \alpha \dot{\tau} \eta s)$, the chief town of Triphylia in Elis, was situated in the southera part of the district, at the distance of 100 stadia from Samicum, and 40 stadia from the seat. (Strab. viii. p. 344.) Scylax and Ptoleiny, less correctly, describe it as lying upon the coast. Triphylia is said to have been originally inhabited by the Cauconians, whence Lepreum is called by Callimachns (Hymn. in Jov. 39) Каขк $\omega \nu \omega \nu$ пто入 $i \in \theta \rho o \nu$. The Cancones were atterwards expelled by the Minyae, who took possession of Lepream. (Herod. iv. 148.) Subsequently, and probably scon after the Messenian wars, Lepreum and the other cities of Triphylia were subdued hy the Eleians, who governed them as subject places. [See Vol. I. p. 818, b.] The Triphylian cities, however, always bore this yoke with impstience; and Lepream took the lead in their frequent attempts to shake off the Eleian supremacy. The greater importance of Lepreum is shown by the fact that it was the enly ene of the Triphylian towns which took part in the Persian wars. (Herod. ix. 28.) In в. c. 421 Leprewm, supported by Sparta, revolted from Elis (Thuc. v. 31) ; and at last, in 400, the Eleians, by their treaty with Sparta, were obliged to relinquish their authority over Lepreum and the other Triphylian towns. (Xen. Hell. iii. 2. §25.) When the Spartan power had been broken by the hattle of Leuctra (в. с. 3i1), the Spartans endeavoured to recover their supremacy over Lepreum and the other Triphylian towns; but the latter protected themselres by becoming members of the Areadian confederacy, which bad been recently founded by Epaminondas. (Xen. Hell. vi. 5. §2, seq.) Hence Lepreum is called an Arcadian town hy Scylax and Pliny, the latter of whom erroneonsly speaks hoth of a Leprion in Elis (iv, 5. s. 6), and of a Leprean in Arcadia (iv. 5. s. 10). Pausanias also states that the Lepreatae in his time claimed to be Arcadians; but he elserves that they had been suljects of the Eleians from ancient times, -that as many of them as had been victors in the public games were preclaimed as Eleians from Leprens,and that Aristophanes describes Leprens as a city of the Eleians. (Paus, v. 5. § 3.) After the time of Alexander the Eleians again reduced the Triphylian cities, which therefore were obliged to join the Aetolian league along with the Eleians. But when Philip, in his war with the Aetolians, marched into Iripliylia, the inhabitants of Lepreum rose against the Eleian garrison in their town, and declared in
favour of Philip, who thus ebtained possession of the place. (Polyb. iv. 77, 79, 80.) In the time of P'allsanias the only monument in Lepreum was a temple ot Demeter, built of brick. In the vicinity of the town was a fountain named Arene. (Paus, v. 5. § 6.) The territory of Lepreum was rich and fertile. (Xípa Є̇ं $\delta a i \mu \omega \nu$, Strab, viii p. 345.)

The ruins of Lepremm are situated upon a hill, near the modern village of Strovitzi. These ruins show that Leprenm was a towa of senve size. A plan of them is given by the French Commission, which is copied in the work of Curtins. They were first described by Dodwell. It takes half an hour to ascend frotn the first traces of the walls to the acropolis, which is entered by an ancient gateway. "The towers are square; one of them is ahmost entire, and contains a small window or arrow hole. A transverse wall is carried eompletely across the acropolis, by which means it was anciently divided into two parts. The foundation of this wall, and part of the elevation, still remain. Three different periods of architecture are evident in this fortress. The walls are composed of polygons: sonie of the towers consist of irregniar, and others of rectangular quadrilaterals. The ruins extend far below the acropulis, on the side of the hill, and are seen on a flat detached knoll." (Dodwell. Tour through Girecee, vel. ii. p. 347 ; Leake, Morea, vol. i. p. 56 . Bublaye, Recherches, de. p. 135; Curtius, Peloponnesos, vol. ii. p. 84.)

LE'PSIA (Lipso), a small island of the Icarian sea, in the north of Leros, and opposite to the cuast of Caria. It is not mentioned by any ancient author except Pliny (II. N. v. 34).
[L. S.]
LEPTE ( $\Lambda \in \pi \tau * к \grave{\jmath}$ áкрa, Ptol. iv. 5 ; Plin. vi. 29 s. 34), the modern Ras-el-Auf, in lat. $23^{\circ}$ N., was a headland of Upper Egypt, upon the confines of Aethiopia, which projected into the lied Sea at Sinus Immundus (Foul Bay). It formed the extremity of a volcanic range of rocks abourding in mines of gold, copper and topaz.
[W. B. D.]
LEPTIS, a town of Hispania Bactica, mentioned only in the Bell. Alex. 57, where the word is perhaps only a false reading for Laepa, near the mouth of the Anas.
[P. S.]
LEPTIS * (Liv. xxxiv. 62; Caes. B. C. ij. 38 ; Hirt. Bell. Afr. 6, 7, 9. 62 ; Mela, i. 7. § 2: Plin. v. 4 s. 3), also called by later writers, LEP'TIS MINOR or PARVA (Aéлtis ì pikpa, Ptol. iv. 3. § 10; Leptiminus or Lepte Minus, Itin. Ant. p. 58 ; Tab. Peut.; Geogr. Rav. iii. 5 v. 5 : Eth Leptitani; Lemta, Ru.), a city on the coast of Byzacium, just within the SE. heafland of the Sinus Neapolitanus, 18 M.P. SE. of Hadrumetum, and 33 M. P. NE. of Thysdrus, and one of the most flourishing of the Phoenician colonies on that coast, notwithstanding the epithet Parva, which is merely used by late writers to distinguish it from the still more importunt city of Leptis Magsa. It was a colony et Tyre (Sall. Jug. 19 ; Plin. l. c.), and, under the Carthaginians, it was the most important place in the wealhy district of Emponial, and its wealth was such that it paid to Carthage the daily trbute of a Eubo.c talent. (Liv. l.c.) Under the Rumans it was a libera civitas, at least in Pliny's time : whether it became a culony afterwards depends on the question, whether the coins bearing the uane of Lertis belong to this city or to Lejtis Magna.

[^6]
## LEPTIS MAGAA.

[See below, under Leptis Magxi.] Its ruitr. though interesting, are of no great extent. (Shaw, Tracels, p. 109; Barth, Wombrunyn. Dc. p. 161.)
[P.s.]
l.EPTIS MAGNA (方 Aéntis $\mu \in \gamma^{\dot{d}} \lambda \eta$, Aemti$\mu$ áyva, Procop. B. I: ii. 21 ; also Aemtus. simply; aft. Neároxts; Leptimarnensis Civitas, Cod. Just. i. 27. 2: Eth. and Alj. $\Lambda \in \pi \tau \iota \tau a v o ́ s, ~ J . e p t i t a n n s: ~$ Leblata, large Ris), the chief of the thrree cities which forned the African Tripulis, in the distriet between the Syrtes (lirstios Syrtica, aft. Tripelitama), on the N. const of Airics ; the other two bein! Oet and Sabratia. Lepts was one of the moot ancient Pherencian colonies on this coast, having been founded by the Sidomians (Sill. Jutg. 19, 78); and its site was one of the most fayourable that can be imagined for a city of the first class. It stood at one of those Iarts of the caast where the table-land of the Great D.arrt falls off to the sea by a succession of mountain ridyes, enclosing valleys which are thus slultered from those encruachments of sand that cover the shore where no such protection exists, wlile they lie open to the breezes of the Mediterranean. The country, in fact, resembles, on a small scale. the terraces of the Cyrenaic coast ; and its grent beanty and fertility have excited the admiration alike of ancient and modern writers. (Ammian. Marc. xaviii. 6 ; Della Cella ; Beechy; Barth, \&e.) Each of these valleys is watered by its streanniet, generally very insiguificant and even internittent, but sometimes worthy of being styled a river, as in the case of the CinyPs, and of the snaller stream, further to the west, upon which Leptis stond. The excellence of the site was much eulanced by the shelter afforded by the promontory Hermazem (Ras-al.Ashan), W. of the city, to the roadstead in its front. The ruins of Leptis are of vast extcat, of which a great portion is baried under the sand whith has dnfted orer them from the sea. From what con be tracol, huwever, it is clear that these remains centain the ruins of three different eitins.
(1.) The oniginal city, or Old Leptis, still exhibits in its ruins the charateristics of an ancient Phemician settlemont ; and, in its site, its sea-walls and quays, its harboar, and its defences on the land side, it bears a striking gencral resemblance to Carthage. It was built on an elevated thracue of land, jutting out from the W. bank of the liftle river, the mouth of which formed its port, having been arlificially enlarged for that parpmse. The bauks of the river, as well as the seaward face of the promuntory, are lined with walls of massive masomry, sirsiug as sea-walls as well as quys, and containing some carions vaulted chamhers, which are smppesed to have been ducks for ships which were kept (ax at Carthaye) for a lave revorree, in case the citadd stombld be taken by an enemy. These structure are of a harder stone than the other himilings of the city : the litter being of a light sanditone, which eave the phe a glittering whiteness to the vayaser approwhing it from the sea. (Stadiasm. Mar:, Muty. P. 453, G., p. 297, 11.) (on the land side the isthmus was defiented by three lines of massive stome walls, the porition of each bemg admirably adapted to the nature of the ground; and, in a deprecwions of the gronnd between the outmost and middle line, there seems to have been a canal, connecting the harbour in the month of the river with the roadstead W . of the city. Opposite to this tongue of land, on the F.. side of the river, is a much lower, less projecting. aul more rounded promontory, which could not have
been left out of the system of external works, nl. thuugh no part of the city was built upon it. Accordingly we find here, besides the quays along the river side, and vaults in them, which served for warebouses, a remarkable building, which seems to have theen a fort. Its superstructure is of brick, and certainly not of Plucenician work ; but it probatly stuod on foundations coeral with the city. This is the only example of the use of brick in the ruins of Leptis, with the exception of the walls which surnount the sea-defences already descrihed. From this eastern, as well as from the western point of lund. an artificial mole was built out, to give additional shcler to the port on either side; but, through not permitting a free egress to the sand which is washed up on that coast in vast quantities with every tide, these moles have been the chief cause of the destruction, first of the port, and afterwards of the city. The former event had aready happened at the date of the Stadiasmus, which deseribes Leptis as having no barbour (ải íevos). The larbour still existed, howerer. at the tine of the restoration of the city by Septimins Severus, and small vessels could even ascend to sone distance abore the citr, as is proved by a quay of Joman work on the W. bank, at a spot where the river is still deep, though its month is now lust in the sand- bills.
2. The Old City ( $\pi$ bids) thns described became gradually, like the Byrsa of Carthage, the citadel of a much more extensive New (ity (Nєámoえrs), which grew up beyond its limits, on the W. bank of the river, where its magnificent buildings now lie hidden beneath the snod. This New City, as in the case of Carthaye and several other Ithomieian cities of like growth, gave its name to the place, which was hence called Nearous, not, however, as at Carthage [comp. Canthaco, Vil. I. p. 529. Si i.]. to the diane of the eld name, lempts, which was never entirely lost, and which becane the prevailing name in the later times of the ancient world, and is the name which the ruins still retain (Lebide). I'inder the early enperents both names are fonud almost indifferently; but with a slight indication of the preference given to Nearolis, and it seems pralable that the name Leptis, with the epithet Magna to distinguish it frum Leptis Pania, prevailed at last for the sake of avoiding any confusion with Neapolis in Zeugitana. (Strah. xvii. p. 835,
 i. 7. §5, has Leptis only, with the epithet altera: Pliny, v. 4. s. 4, misled, as nsual, by the abundance of his suthorities, makes Leptris and Neapolis different cities, and he distinguishes this from the other Leptis as Leptis altera, quae cognominatur magma:
 $\mu \epsilon \gamma \dot{d} \lambda$ in: Itin. Ant. P. 63, nnd Tab. I'eut. Lepti Magna Collonis: Sicyl. pp. 111, 112, 113, Gronor. Nica חī̀ıs; Stadiasm. p. 435, Aém its, vils. Aentns, the coins all have the nane larrus sin fly. with the addition, on some of them, of the epithet Coloxis lictrix Julas ; but it is very mecertain to which of the two cities of the name these coins belong: E.ckhel, vol. iv. pp. 130, 131 : Tiacche, s.v.) We learn from Sollust that the commercial intercourse of Leptis with the native tribes had led to a sharing of the conatbium, and hence to an almixture of the language of the city with the Lityan dialects ( (Iug. 78 ). In fact, Leptis, like the neighbouring Tripoly, which, with a vastly inferior site, has succeected to its position, was the great en poriurn for the trade with the Garamautes und Jliazania and the eastern part of

## LERINA.

LELNA.

Inter Libya. But the remains of the Netr City seem to belong almost eatirely to the period of the Ronaan Empire, and especiaily to the reign of Septimius Severus, who restured and beautified this his native city. (Spart. Sev. 1; Aurel. Vict. Ep. 20.) It had already before acquired coosiderable importance under the Romans, whose cause it exponsed in the war with Jugurtha (Sall. Jug. 77-79: as to its later condition see Tac. Hist. iv. 50); and if, as Eckhel inclines to believe, the coins with the epigraph col. vic. icl. lef. belong mostly, if not entirely, to Leptis Mlagna, it must bave been made a colony io the earliest period of the empire. It was still a flourishing and popalous fortified city in the th century, when it was greatly injured by an assault of a libsan tribe, called the Aurestanr (Ammian. xxviii. 6); and it never recovered from the blow.
3. Justioian is said to have enclosed a portion of it with a new wall; but the city itself was already too far buried in the sand to be restored; and, as far as we can make out, the little that Justiaian attempted seems to have amounted ooly to the enclasure of a suburb, or old Libyan camp, some distance to the E. of the river, on the W. bank of which the city itself liad stond. (Procop. de Aed. vi. 4; comp. Barth.) Its ruin was completed during the Arab ennquest (Leo, Afi: p. 435) ; and, though we find it, in the middle ages, the seat of populuus Arab camps. no attempt has been made to make use of the splendid site, which is now occupied by the insiguificant village of Legätah, and the hamlet of El-Hush, which consists of only four houses. (For particulars of the rains, see Lucas, Proceedings of the Association, fo. vul. ii. p. 66, Lond. 1810; Della Cella, Viaggio, ge. p. 40; Beechey, Proceedings, وc. chap. vi. pp. 50, foll.: Russell's Barbary; Barth, Wanderangen, gc. pp. 305-315.)
[P. S.]

COLV OF LEPTIS.
LERENA and LERON. Strabo ( p . 185) says : "After the Stoechades are Planasia and Leron
 and in Leron there is also a Leroam of Leron, and Leron is in front of Antipolis." (Antibes.) Pliny (iii. 5) bas "Lero, et Lerioa adversas Antipolim." Ptolemy (ii. 10. § 21) places Lerone ( $\Lambda \eta \rho \bar{\omega} \nu \eta$ ) before the mouth of the tor. Lerina once bad a town named Vergoanum (Pliny). The Maritime ltin. places "Lero et Lerinas insulae" 11 M . P. from Antipolis.

These two islands are the Lérins, off the coast of the French department of Far. Strubo's Planasia is supposed to be Lerina, because it is flat; Leron must then be the larger island, called Sainte Marguerite; and D'Aaville conjectures that the monastery dedieated to Sainte Margucrite took the place of the Leroum of Lero, which is mentioned by Strabo. The position of these two small islands is
fixed more accorately by the Itin. tban by the geographers. Lerina, from which the modern name Lerins comes, is very small ; it is called St. Honorat, from a bishop of Arles in the fifth century, who was also a saint.
[G.L.]
LERNA or LERNE (Aépya. Aépvg), the name of a marslyy district at the sonth-western extremity of the Argive plain, near the sea, and celebrated as the spot where Hercnies slew the many-headed Hydra, or water-snake. [See Lict. of Biogr. Vol. 1 L. p. 394.] In this part of the plain, there is a nunber of copions springs, which overflow the district and turn it into a marsh; and there can be little doubt that the victory of Herenles over the Hydra. is to be understood of a successful attempt of the ancient lords of the Argive plain to bring its marshy extremity into cultivation, by draining its sources and embanking its streams. The name of Lerna is nsually given to the whole district (Paus. ii. 15. § 5, ii. 24. § 3, ii. 36. § 6, ii. 38. § 1 ; Plut Cleom. 15), bat otber writers apply it more particularly to the river and the lake. (Strab. viii. p. 368.) The district was thoroughly drained in antiquity, and covered with sacred buildings, of which Pausanias has left us an account (ii. 36, 37). A road led from Argos to Leroa, and the distance from the gate of the city to the sea-coast of Lerna was 40 stadia. Abure Lerna is the Mountain Pontinus (Movтivos), which according to Pausanias absorbs the raia water, and thus prevents it from rumning off. On its summit, oo which there are now the ruins of a mediaeval castle, Pansanias saw the remains of a temple of Athena Saitis, and the foundations of the house of Hippomedon, one of the seven Argive chiefs who marched against Thebes. (Afpraia $\delta^{\prime}$ oikeit
 The grove of Lerna, which consisted for the most. part of plane trees, extended from Mount Pontinus to the sea, and was bounded on one side by a river called Pontinus, and on the other by a river named Anymone. The grove of Lerna contained two temples, io one of which Demeter Prosymna and Dionysus were worshipped, and io the other Dionysus Sates. In this grove a festival, called the Lernaea, was celebrated ia honour of Demeter and Dionysus. Pausanias also mentions the funtain of Amphiaraus, and tbe Alcyoaian pool ( $\dot{\eta}^{\prime}$ A $\left.\lambda \kappa v o \nu i ́ a \lambda i \mu \nu \eta\right)$, throngh which the Argives say that Dionysu descended into Hades in order to recover Semele. The Alcyonian pool was said to be unfatbomable, and the emperor Nero in raio attempted to reach its bottom with a sounding line of several fatboms in length. The circumference of the pool is estinated by Pansaoias as only one-third of a stadium: its margio was covered with grass aod rushes. Pausanias was told that, thougb the lake appeared so still and quiet, yet, if any one attempted to swim over it, he was dragged down to the botton. Here Prosymnus is said to bave pointed out to Dionysus the entrance in the lower world. A nocturnal ceremony was connected with this legend: expiatory rites were performed by the side of the pool, and, in consequence of the impurities which were then thrown into the pool, the proverb arose of a Lerna of ills. ( $\Lambda \in \rho \nu \eta \kappa \alpha \kappa \omega \nu$; see Preller, Demeter, p. 212.)

The river Pontinus issues from three saarces at the foot of the bill, and joins the sea north of some mills, after a course of only a few hondred cards. The Amymone is formed by seren or eight copinns sources, which issae from under the rocks, and which are evidently the subterraneons outlet of one of
the katavothra of the Areadian vallies. The river soon after enters a small lake, a fow hundred yards in circmaference, and surroundel with a great variety of aquatic plants; and it then forms a marsh extending to the ses-shore. The lake is now watled in, and the water is diverted into a small stream which tarms some mills standing close to the seashore. This lake is evidently the Alcyonian pool of Pransanias; for althongh he does not say that it is firmed by the river Amymone, there can be no doubt of the fact. The lake answers exactly to the description of Pausanias, with the exception of being larger; and the tale of its being antathomable is still related by the millers in the neighbourhood. Pausanias is the only writer who calls this lake the Alcyonian pool; other writers gave it the name of Lernacan; and the river Amymone, by which it is formed, is likewise named Lerna. The forntain of Amphiaraus can no longer be identified, probably in consequence of the enlargement of the lake. The station of the hydra was nonder a paln-tree at the source of the Anymone; and the numerons heads of the water-snake may perhaps have been suggested by the numerons sources of this river. Amymone is frequently mentioned by the poets. It is said to bave derived its name from one of the daughters of Danaus, who was beloved by Poseidon; and the river gushed forth when the pymph drew ont of the rock the trident of the god. (Hygin. Fab. 169.) Hence Eoripides (Phoer. 188) speaks of
 26, 47: Ov. Met. ii. 240.)
(Dodwell, Classical Tour, vol. ii. p. 225; Leake, Morea, vol. ii. p. 4i2. seq; Bublaye, Récherches, gc. p. 47; Mure, Tour in Greece, vol. ii. p. 194; Ross, Reisen im Pelopomnes, p. 150; Curtins, Peloponnesos, vul. ii. p. 368 , seq.)

LEhOS ( $\Lambda$ épos: Eth. Aeptos: Leros), a small island of the Aevean, and brionging to the scattered islands called sporades. It is sitnated oppasite the Sims lassins, on the north of Calyma, and on the sonth of Lepsia, at a distance of 320 stadia from Cos and 350 trom Myradus. (Stadiusm. Mar. Magni, $\S \S 246,250,252$.) According to a statement of Anaximen sof Lanpasas, Leros was, like Iraros.calonised by Milesians. (Strab. aiv,p.635.) Thiswas prohably done in consequence of a suggestion of Hecataens; for on the breaking out of the revolt of the Ionians against Persia, be advised his countrymen to erect a firtress in the island, and make it the centre of their pperation, if they should be driven from Milctus. (Herol. v. 125 ; comp. Thuced. viii. 27.) Befure its occupation by the Milesians, it was probably ithatited by 1 Mrians. The inhabitants of Lerus were notorions in antignity for their ill nature, whence Phocylides sang of them:-

##  <br> 

(Strab. x. p. 487, \&.c.) The town of Leros was situated on the west of the modern town, on the south side of the bay, and on the slope of a hill; in th s locality, at leat, distinct traces of a town have been discovered by Ross. (Reisen auf $d$. Giriech. Inseln, ii. p. 119.) The plan of 11 ecataeus to fortify Leros does rut seem to have been carried into effect. Leros never was an independent community, but was governed by Miletns, as we must infer from inscriptions, which also show that Milesians continued to inhabit the island as late as the time of the liomans. Leros contained a sunctuary of Artemis l'arthenos,
in whi h, according to mytholocy, the sisters of Neleager were tran formed into guinea fowls ( $\mu$ $\lambda \in a y p i \delta e s ;$ Anton. Lib. 2 ; comp. Ov. Met. viii. 533, \&.c.), whence these birds were allways kept in the sanctuary of the goddess. (Athen. xiv. p. 655.) In a valley, about ten minutes' walk from the sea, a small convent still bears the name of Partheni, and at a little distance from it there are the ruins of an ancient Christian church, evidently built upon some ancient fonndation, which seems to have been that of the temple of Artemis Parthenos, "Thissmall island," says Ross, "though envied on account of its fertility, its smiling valleys, and its excellent harbours, is nevertheless scorned by its neighbours, who charge its inhabitants with nigcardliness " (l. c. p. 122; comp. Böckh, Corp. Inscript. n. 2263 : Ross, Inscript. ined. ii. 188.)
[L.S.]
LESBOS ( $\Lambda$ éobos: Eth and $A$ cj. $\Lambda \dot{e} \sigma$ हbios, ムéabukós, $\Lambda \in \sigma$ biakós, Lesbius, Lesbicus, Lesbiacus: fem. $\operatorname{te\sigma } \sigma$ is, $\Lambda$ eofiás, Lesbis, Lesbias: in tbe middle ages it was named Mitylene, from its principal city: Geog. Rav. v. 21: Suidas. s.v.; Hierocl. p. 686 ; Eustatb. ad Il. ix. 129, Od. iii. 170: hence it is called by the modern Grecks Mitylen or Metelino, and by the Turks Medilli or Medellu Adassi.) Like several other islands of the Aegean, Lesbos is said by Strabo, Plioy and others to bave had various otber names, Issa, Himerte, Lasia, Pelasgia, Aegira, Aethiope, and Macaria. (Strab. i. p. 160, v. p. 128 ; Plin. v. 31 (39); Diwd. iii. 55, v. 81 .)

Lesbos is situated off the coast of Mysia, exactly opposite the opening of the galf of Adramyttiam. Its northern part is separated from the mainland near A ssos [Assos] by a channel about 7 miles broad; and the distance between the south-eastern extremity and the islands of Arginusae [AnginusaE] is about the same. Strabo reckons the breadth of the former strait at 60 stadia, and Pliny at 7 miles: for the latter strait see Strab. xiii. pp. 616,617, and Xen. $H_{\mathrm{t}}$ ll. i. 6. §si $15-28$. The island lies between the parallels of $38^{\circ} 58^{\prime}$ and $39^{\circ} 24^{\prime}$. Pliny states the circumference as 168 miles, Strabo as 1100 stadia. According to Cboisenl-Gonffier, the latter estimate is rather too great. Scylax (p.56) assigns to Lesbos the seventh rank in size among the islands of the Mediterrancan sea

In shape Lesbos may be ronghly described as a triangle, the sides of which face respectively the NW., the NE., and the SIV: The gorthern point is the promuntory of Argennam, the western is that of Sigrinm (still called Cape Sigri), the south-eatern is that of Dalea (now called Zeitoun Bourvoun or Cape St. Mary). But thongh this description of the island as triangular is generally correct, it must be noticed that it is penetrated far into the interior by two gulfs, or sea-lochs as they may properly be called, on the south western side. One of these is Port Hiero or Port Olivier," one of the best harbours of the Archipelago," opening from the saz abont 4 miles to the westward of Cape Malea, and extending about 8 miles inland among the mountans. It may be reasonably conjectured that its ancient name was Portus Hicracus ; since Pliny mentions a Lesbian city called Hiera, which was extinct before his time. The other arm of the sea, to which wo have alluded, is about half-way between the furmer and Cape sigrium. It is the "beantiful and extensive basin, named Port Caloni," and anciently cailed Enripus Pyrrhaeus. From the extreme narrowness of the entrance, it is less adapted for the

LESBOS.
LESBOS
purposes of a harbour. Its ichthyolony is repeatedly mentioned by Aristotle as remarkable. (Hist.Animal. จ. 10. § 2, ₹. $13 . \S 10$, viii. $20 . \S 15$, iצ. 25. § 8.)

The sorface of the island is mountainons. The principal mountains were Ordymnos in the W., Olympus in the S., and Lepethymnus in the N. Their elevations, as marked in the English Admiralty Charts, are respectively, 1780,3080 , and 2750 feet. The excellent climate and fine air of Lesbos are celebrated by lidedorus Siculus (v. 82), and it is still reputed to be the most healthy island in the Archipelago. (P'urdy's Sailing Derectory, p. 154.) Tacitus (Ann. vi. 3) calls it "insula nobilis et amoena." Agates were found there (Plin. xxxrii. 54), and its quarries produced variegated marble (xxavi. 5). The wholesome Lesbian wines ("innocentis pocnla Leshii," Hor. Carm, i. 17, 21) were famons in the ancient world; but of this a more particular account is given under Methyma. The trade of the island was active and considerable; but here again we must refor to what is said concerning its cbief city Mytileve. At the present day the figs of Lesbas are celebrated; but its chief exports are oil and gall-nuts. The populatiou was estimated, in 1816, at 25,000 Greek's and 5000 Turks.

Tradition says that the first inhabitants of Lesbos were Pelasgians: and Xanthus was their legendary leader. Next came Ionians and others, onder Matcareus, who is said by Diodorus (v. 80) to have introduced written laws two generations before the Trojan war. Last were the Aeolian settlers, under the leadership of Lesbus, who appears in Strabo nuder the name Graus, and who is said to have married Methymna, the daughter of Nacareus. Mytilene was the elder daumbter. This is certain, that the carly history of Lesbos is identical with that of the Aeolians. Strabo regards it as their central seat ( $\sigma \chi \dot{\epsilon} \bar{\delta} \circ \nu \mu \eta \tau \rho \dot{\sigma} \pi 0 \lambda t s$, xiii. pp. 616, 622). In mercantile enterprise, in resistance to the Persians, and in intellectnal emineace, the insular Acolians seem to have been favourably contrasted with their brethren on the continent. That which Horace calls "Aeolium carmen" and "Acoliae filks" (Carm. ii. 13. 24, iii. 30. 13) was due to the genius of Lesbos: and Niebuhr's expression regarding this island is, that it was "the pearl of the Aedian race." (Lectures on Ancient Ethnology and Geography, vol. i. p. 218.)

Lesbos was not, like several other islands of the Archiprelago, such as Cos, Chios and Samos, the territory of one city. We read of six Aeolian cities in Leshos, each of which had originally separate possessions and an independent government, and which were situated in the following geographieal order. Merhymisa (now Molivo) was on the north, almost immediately opposite Assos, from which it was separated by one of the previously mentioned straits. Somewhere in its neigbbourhood was Arisus, which, however, was incorporated in the Metlymnaean territory before the time of Herodotns (i. 151). Near the western extremity of the island were Antissa and Eressus. The former was a Jittle to the north of Cape Sigrium, and was situated on a small island, which in Pliny's time (ii. 91) was connected with Lesbos itself. The latter was on the south of the promontory, and is still known under the name of Erissi, a modern village, near which ruins have been found. At the head of Port Caloni was Jymerm, which in Strabo's time had been swallowed up by the sca, with the exception of a suburb.
(Strab. xiii. p. 618 ; sec Plin. v. 31.) The name of Pera is still attached to this district according to Pococke. On the eastern shore, facing the mainland, was Mytilexe. Besides these places, we must mention the following :- Hiera, doubtless at the head of Port Olivier, said by Pliny to have been destroyed before his day: Ag.insede, a village in the neigltbourhood of Pyrrha: Nafe, in the plain of Methymna; Aegirus; between Methymna and Mytilene; and Poluur, a site mentioned by Stephanns B. Nost of these places are noticed more particularly under their reapective names. All of them decayed, and became unimportant, in comparison with Methymna and Mytilene, which were situated on good harbours opposite the mainland, and convenient for the coasting-trade. The annals of Lesbos are so entirely made op of events afficting those twn cities, especially the latter, that we must refer to them for what does not bear upon the general history of the island.
From the manner in which Lesbos is mentioned both in the Iliad and Odyssey (Il. xxiv. 544. Od. iv. 342 ), it is evident that its cities were prpulous and flourisbing at a very early period. They had also very lagge possessions on the opposite coast. Lesbos was not included in the conquests of Croesus. (Herod. i. 27.) The severe defeat of the Lesbians by the Samiaus nuder Polycrates (iii. 39) seems only to have been a temporary disaster. It is said by Herodatus (i. 151) that at first they had nothing to fear, when Cyrus conquered the territories of Croesus on the mainland; but afterwards, with other ishanders, they seem to have submitted voluntarily to Harpagus (i. 169). The sitnation of this island on the very confines of the great struggle between the Persians and the Greeks was so critical, that its fortunes were seriously affected in every plase of the long conflict, from this period down to the peace of Antalcidas and the campaigns of Alexander.

The Leshians joined the revolt of Aristagoras (Herod. vi. 5, 8), and one of the most wemorable incidents in this part of its history is the consequent hunting down of its inhabitants, as well as those of Chios and Tenedos, by the Persians (Hernd. vi. 31 ; Acsch. Pers. 881). After the battles of Salamis and Mycale they boldly identified themselves with the Greek cause. At first they attached themselves to the Lacedaemonian intcrest: but before long they came under the overpowering influence of the naval supremacy of Athens. In the early part of the Peloponnesian War, the position of Lesbos was more favourable than that of the other ivlands: for, like Corcyra and Chios, it was not required to furnish a money-tribute, but only a naval contingent (Thuc. ii. 9). But in the course of the war, Mytilene was induced to intrigue with the Lacedaemonians, and to take the lead in a great revolt from Athens. The events which fill so large a portion of the third book of Thucydides - the speech of Cleon, the change of mind on the part of the Athenians, and the narrow escape of the Lesbians from entire massacre by the sending of a second ship to overtake the first are perhaps the most memorable circumstances counected with the history of this island. The lands of Lesbos were divided among Atherian citizens ( $\kappa \lambda \eta$ poûxot), many of whom, however, according to Boeckh, returned to Athens, the rest remaining as a garrison. Dethymma had taken no part in the revolt, and was exempted from the punishment Aftcr the Sicilian expedition, the lesbiaos again wavered in their allegiance to Athens; but the result was unim-
porfant (Thucyd. viii. 5, 22, 23, 32, 100). It w:a near the coast of this island that the last great naval victory of the Athenians during the war was won, that of Conow over Callictatidas at Arpinusae. On the destruction of the Athenian foree by Lysander at Aerospotani, it fell under the power of Sparta; but it was recovered for a time by Thrasybulus (X.n. Hell. iv. 8, §§ $28-30$ ). At the peace of Autalcidas it was declared independent. From this time to the establishment of the Aluodonion empire it is extremely diffienlt to fix the fluctuations of the history of lesbos in the midst of the varying influences of Athens, Sparta, amil Persia.

After the battle of the Giraumens, Alexander made a treaty with the Lesbians. Memmon the Rhodian took Mytilene and fortified it, and lied there. Atterwards Herelochus reduced the varions cities of the island nded the Macelonian porser. (For the history of these transactinns see Arrian, Exped. Alex. iii. 2; Curt. //ist. Ale.e. iv. 5.) In the war of the Lumaus with l'erseus, Labeo destroyed Antissa for aidine the Macedunians, and incorporated its inhabitauts with those of Methyma (Liv, xlv. 31. Hence perhaps the true explamation of I'liny's remark, l.c.). It the course of the Mothridatic War, Mytileme incurred the displeasure of the Romans by delivering up M. Aquilhus (Vell. Pat. ii Is: Appian, Mithr. 21). It was also the last city which belid out after the close of the war, and w:ss rednced hy ML. Minncins Thermus, -an oceasion on which Julius Caesar distinguished himself, sud earned a civic crown by saving the life of a soldier (Liv. Fpit. 89; Snct. C'res. 2; see Cic. contra Rull. ii. 16). Pompey, huwever, was induced by Theophanes to make Mytilme a free city (Vell. Pat. l. c,; Strab. xiii. p. 617 ), and he left there his wife and son during the eampaisn which euted at Pharsalia. (Appian, B. C. ii. 83; Plnt. Pomp. 74, 75.) From this time we are to resard Lesbun as a part of the Roman province of Avia, with Mstilene distingni-hed as its chief cily, and in the enjoyincut of prosileges more particularly described elsewhere. We may mention here that a few imperial coins of Lesbos, as distinguished from thase of the cities, are extant, of the reigos of M. Amehas and Commolus, and with the legend KOINON AECBI2N (Fichhel, vol.ii.p. 501 ; Mioanet, val. iii. 1, 1, 34, 35).

In the new division of Provinepy under Constantine, Lesbos wia placel in the Prorincia Insularum (Ilirrocl. p 686, ed. Wesmelines). A few detached noticon of its fortmies during the mibdle ages are all What ean len fiven heres. on the 15 th of August, A.D. N(1)2, the empress Iome endelt herextraordinary ithe here in exile. (Sec Le Beau, Ilist du Bas Empiere, vil. xii. 1. 400.) In the thartement century, cansemperamonsly with the first crusade, Lesbos beran t. lue athertent by the Turkish comquets: Tzamblas. Este of Suyrma, succeded in takme Mytilone, bont talent in his attempt on Methyoma. (Aoua Comm. Alex, hib, vii. p. 362, ed. Bonn.) Alexis, however, sent an expedition to retake Mytileme, and was succesoful (16. ix. 1. 425). In the thirtecuth century Lenhos was in the power of the Latin emperors of Constantinuple, but it was recoweral to the Greeks hy Jwume Dueas Vatntaes, emprown of Nicaen (sce lis life in the Dict. of Biagraphy). In the fourteenth century Joannes labarolocus mave his sister in marriage to Francisco Gateluzaio, and the island of Leslums an : dowry; and it contioned in the posserssion of this fomily till its final absorption in the Turki-h empire (Ducas, Hist. By'ant. p. $46, \mathrm{ed}$. Bmu). It
appears, however, that these princes were tributary to the Turks (ib. p. 328). In 1457, Mahomet II. made an unsuceessful assanlt on Methymoa, in conarguence of a suspicion that the Lesbians had aided the Catalan buccancers (1b. p. 338 ; see also Vertot, Hist. de COrdre de Malte, ii. 258). He did not actually take the island till 1462 . The history of the atonalist Ducas himself is closely comected with Lesbos: he resided there after the fall of Constantinople; he conveyed the tribute from the reigning Gateluzzion to the sultan at Adrianople; and the last paragraph of his history is an unfinisbed account of the final catastrophe of the island.

This notice of Lesbos would be very incomplete, unless something were said of its intellectual emineuce. In reference to poctry, and especially poctry in connection nith music, no island of the Greeks is so celebrated as Lesbos. Whatever other explanation we may give of the legend concerning the head and lyre of Onpheus being earried by the waves to its shores, we may take it as an expression of the fact that here was the primitive seat of the music of the lyre. Lesches, the eyclic minstrel, a native of Pyrrlia, was the first of its series of poets. Terpander, though his later life was chiefly connected with the P'eloponnesus, was ahnost certainly a native of Lesbos, and probably of Antissa : Arion, of Methymna, appears to have belonged to his school; and no two men were sa closeiy connected with the early bistury of Greek music. The bames of Alcaeus and Sapplo are the most imperishable elements in the renown of Mytilene. The Jatter was sometimes called the tenth Muse (as in Plato's epigram, $\alpha a \pi p \dot{\omega}$ ムeofiigev ì ठ̀eráty) : and a school of poctesses (Lesbiadum turba, Uvid, Her. xv.) seems to bave been formed by her. Here, without enturing into the discussions, by Welcker and others, conceming the character of Sajpho herself, we must state that the women of Lesbos were as famous for their prufligacy as their beauty. Thicir beanty is celebrated by Homer (1l. ix. 129, 271), and, as regards their profligacy,
 stain to their islaud than кр $\quad$ riל̧et dnes to Crete.

Leslos seems never to have produced any distionuished painter or scnlptor, but Hellamicus and Theophanes the friend of Pompey are worthy of being mentisned among histurians; and l'itactas, Theuphrastus, and Cratippus are known in the anmals of philosopliy and stipnce. Pittacns was famus also as a legislator. These eminent men were all natives of Mytilene, with the exception of Theopirastus, who was born at Eresus.

The fullest account of Lesbos is the treatise of S. L. Plehn, Lesbiacorum Liber, Berlin, 1826, In this work is a map of the island; but the Euglish Admirilty charts should be consulted, especially Nos. 16.34 and 1665 . Forbiger refers to reviews of Plehn's work by Meier in the Wall. Allg. Leit. Zeit. for $1 \times 27$, and by 0 . Muller in the Goctt. Giel. Anz. for 1828 ; also to Lander's Beiträge zur Kunde der Insel Lesbos, 1lamb. 1827. Infornation regarding the madern condition of the island will be obtained from Pococke, Tournefort, Nichter, and Prokeech.
[J.S. H.]
1.E'SORA MONS (1font Insire), a summit of dis Cecennes, above 4800 feet high, is mentioned by Sidomius Apillinaris (Carm. 24,44) as containing the source of the Tamis (Tarn):-
> "Jinc te Lesora Gaucwim Scytharum Vincens aspiciet citusque Tarnis."

The pastures on this mountain produced good cheese in Pliny's time (II.N. xi. 42), as they do now, Mont Losire gives its name to the French department Lozire.
[G. L.]
LESSA ( $\Lambda \hat{\eta} \sigma \sigma \alpha)$, a village of Epidauria, upon the confines of the territory of Argos, and at the foot of Mount Arachnaeum. Pausanias saw there a temple of Athena. The ruins of Lessa are situated upon a hill, at the foot of which is the village of Lylkurio. On the outside of the walls, near the foat of the mountain, are the remains of an ancient pyramid, near a church, which contains some lonic columns. (Paus, ii. 25. § 10; Leake, Morea, vol. ii. p. 419: Boblaye, Récherches, \&̊c. p. 53 ; Curtius, Peloponnesos, vol. ii. p. 418.)

LESTADAE. [Naxos.]
LE'SURA, a hranch of the Mnsella (Mosel), mentioned by Ausonius (Mosella, v. 365). He calls it "exilis," a poor, ill-fed stream. The resemblance of name leads us to conclude that it is the Leser or Lisse, which flows past Wittlich, and joins the Mosel on the left bank.
[G. L.]
LETANDROS, a small island in the Aegaean sea, near Amorgos, mentioned only by Pliny (iv. 12. s. 23).
 donia, which Stephanus B. asserts to have been the native city of Nearchus, the admiral of Alexander the Great; but in this be is certainly mistaken, as Nearchus was a Cretan. (Comp. Arrian, Ind. 18 ; Diod. xix. 19.)
[E. B. J.]

conn of lete.
LETHAET'S (An日aios, Strab. x. p. 478; Ptol. iii. 17. § 4 ; Eustath. ad Hom. Il. ii. 646 ; Solin. 17; Vib. Seq. 13), the large and inportant river which watered the plain of Gurtyna in Crete, now the Malogniti.
[E. B. J.]
LETHAEUS (Aŋ日aios), a small river of Caria, which has its sources in Mount Pactres, and after a short course from north to south discharges itself into the Maeander, a little to the south-east of Magnesia. (Strab. xii. p. 554, xiv. p. 647 : Athen. sv. p.683) Arundell (Seren Churches, p. 57) describes the river which he identitics with the ancient Lothaeus, as a torrent rushing along over rocky ground, and forming many waterfalls.

Lethes Fl. [Gallaecta.]
LETOPOLIS (Aytaùs $\pi \dot{d} \lambda t s$, Ptol. iv. 5. § 46 ; Antoûs, Steph. B. s. v.; Letus, Itin. Anton. p. 156: Eth. A пtomodíns), a town in Lower Egypt, near the apes of the Delta, the chief of the nome Letopulites, but with it belonging to the nomas or prefecture of Merophis. (Strab, xvii. p. 807.) It was probably situated on the banks of the canal of Memphis, a few miles SW. of Cercasorum. Leto, from whom the town and the nome derived their name, was an appellation of the deity Athor, one of the eight Dii Majores of Aecypt. Lat. $30^{\circ}$ N. [W.B.D.]
 town of Pisatis in Elis, situated near the sea, upon the Sucred Way leading from Elis to Olympis, at
the distance of 180 starlia from Elis, and 120 from Olympia. It was said to have been founded by Letreus, a son of Pelops. (Pans. vi. 22. § 8.) Together with several of the other dependent townships of Elis, it joined Agis, when he invaded the territories of Elis; and the Eleians were obliged to surrender tbeir supremacy over Letrini by the peace which they concladed with the Spartans in B. C. 400. (Xen. Hell. iii. 2. $\$ \$ 25,30$.$) Xemophon$ (l. c.) speaks of Letrini, Amphidoli, and Margaweis as Triphylian places, although they were on the right bank of the Alpheins; and if there is no corruption in the text, which Mr. Grote thinks there is (Hist. of Greece, vol. ix. p. 415), the word Triphylian must be used in a loose sense to signify the dependent townships of Elis. The $\Lambda \in \tau p w a i ̈ a t ~ \gamma u ́ a t ~$ are mentioned by Lycophron (158). In the time of Pausanias nothing remained of Letrini except a fow houses and a temple of Artemis Alpheiaen. (Paus. l. c.) Letrini may be placed at the village and monastery of St. Johin, between Pyrgo and the port of Katikolo, where, according to Leake, among many fragments of antiquity, a part of a large statue was found some jears ago. (Leake. Morea, vol, ii. p. 188; Boblaye, p. 130, \&c.; Curtius, Peloponnesos, vol. i. p. 72.)

LEVAC1, a penple in Cacsar's division of Gallia, which was inhabited by the Belgae. The Levaci, with some other small tribes, were dependent on the Nervii. (B. G. v. 39.) The position of the l.evaci is unknown.
[G. L.]
LEVAE FANUM, in Gallia Belgica is placed by the Table on the road from Lugduuum Batavorum (Leiden) to Novionagus (Nymegen). Levae Faoum is between Fletio (J'euten) and Carvo; 25 M. P. from Fletio and 12 from Carvo. [Cisvoro.] D'Anville, assuming that he has fixed Carro right, supposes that there is some omission of places in the Table between Fletio and Carvo, and that we cannot rely upon it. He conjectures that Lerae Fanum may be a little beyond Durstecde, on the bank oppesite to that of the Batavi, at a place which he calls Liven-dael (vallis Levae), this Leva being some local divinity. Walckenaer fixes Levae Fanam at Leersum.
[G. L.]
LEUCA ( $\tau a ̀$ Aevká, Strab.: Leuca), a small town of Calabria, situated close to the Iapygian promontory, on a small hay inmediately to tbe W. of that celebrated headiund. Its site is clearly marked by an ancient church still called Sta. Maria di Leuca, but known also as the Madonna di Finisterra, from its situation at the extreme point of Italy in this direction. The lapygian promontory itself is now known as the Copo di Leuca. Strabo is the only author who meations a town of this name (vi. p. 281), hut Lucan also notices the "secreta littora Leucae" (v. 375) as a port frequented by shipping; and its adrantageous position, at a point where so many ships must necessarily touch, woukl soon create a town upon the spot. It was probably never a municipal town, but a large village or borgo, such as now exists upon the spot in consequence of the duable attraction of the fort and sanctnary. (Eampoldi, Corogr. dell' Italia, vol. ii. p. 442 .)

Strabo tells us (l. c.) that the inlabitants of Leuca showed there a spring of fetid water, which they pretended to have arisen from the wounds of some of the giants which had been expelled by Hercules from the Plılegraean plains, aud who had taken refuge herc. These giants they called Leuternii,

## LEUCAS

and hence gave the name of Lenterinis to all the surronnding district．The same story is told，with some variations，by the psendo－Aristntle（de Mirab． 97 ）：and the name of Leutarnia is found aloo in Lycophron（Alex．978），whose expressions，however， would have led us to supprese that it was in the neighbourhood of Siris rither than of the lapygian pronontory．Tzetzes（ad loc．）calls it a city of Italy，which is evidently only an crroncous mference from the words of his ：uthor．The Laternii of Scylax．＂hom he mentions as one of the tribes that inhabited lapysia，may probably be only anuther form of the same name，though we meet in no other writor with any allusion to their existence as a real people．
［E．H．B．］
LIELCA，the name given by Pomponius Mela（i．16）， to a dintrict on the west of halicarnasus，between that city and Myudus．Pliny（II．V，N．29）mentions a town．Leucopolis，in the sane neighbaurhool，of which，bowever，nuthing else is known to us．［L．S．］
LELCADIA．［LEtcas．］
LEUCAE or LELCE（Аєи̂кat，Aeúcŋ），a smalt town of Ionia，in the neighburhood of Phocaea，was situated，according to Pliny（v．31），＂in pro－ montorio quol insula fuit．＂From serlax（p． 37 ） we leurn that it was a place with harbours．Accord－ ing to Diolorus（xv．18）the Persian admiral Tachos fimuled this town on an eminence on the sea coast，in n．c． 352 ；but shortly atter，when Tachos had died． the Clazomenians and Cymaeans quarrellel about its paswession，and the former succeeded by a stratagem in makiog themselves masters of it．At a later time Leuca lweame remarkable for the battie fought in its neighbomhood between the consul LiciniusCrassus and Aristonicus，B．c．131．（Strab．siv．p．646： Javtin，xaxri．4．）Some have supposed this place to be identical with the Lenconium mentioned by Thucydiles（viii．24）；Eut this is impossible．as this latter place must be looked for in Chios．The site of the ancient Lencie canmit be a matter of doubt． as a village of the name of Lerke，close upon the sea． at the fiot of a hill，is evilently the modern repre－ sentative of its ancient namesake，（Arundell，Secen （hurches，p．295．）
［L．S．］
Ltt＇CAE（Aetikal），a town of Laconia situated at the worthern extremity of the Itain Leuce，now called Phiniki，which extended inland hetween Acriae and Ampux on the castern side of the La－ contian gulf．（1olyb，v．19：Liv，xxsv．27；Strab． viii．p． 363 ：Lrake，Moren，vol．i．p．226，seq．－ Bohlave，Recherches，isc p．95；Curtius，Felopon－ unsus，vil．ii．p．290．）

LEUCAKUM，a tuwn in Britain，mentioned in the Itineraty as beite 15 miles from 1 －ca Dommuni－ orom，and 15 froun Nuhan．The difficulties insolved in thi－list（viz．that of the 12 h Itinerary）are notieed under Mernomans．The Monomentr Britunnicu solyenats lowth filustontury in somerset：hire，and Livethor in Glamorganshive．
［I．（E．L．］
1．ELCAS（Aeukix），a place in Bithypia，on the river Gallus，io the somth of Nieaea，is mentioned inly by Amma Comnena（p．470），but can be easily Shlutified，as its name $L_{\text {t }} /$ ke is still borne by a neat lietle towe in the middle of the beautiful valley of the－fiallos．（Leake．Asia Minor，1甲，12．13．）［L．．．．］

LDE＇（AS，LEF＇CA＇H1．（Aeukás，Thuc．．Xell．． Strab．：Aeukasia，Thue．Liv．：Fith．Aeukd̊ios）， an inland in the Ionian sea，separated by a narrow chomall from the eonast of Asariania．It was ori ginally part of the mainland，and as stech is lexeribed by llouner，who calls it the Acte or $\mathrm{l}^{\text {cuinsinfa of the }}$
mainland．（＇Актクे ク̀neipoto，Od．Exiv． 377 ；comp． Strah．x．pp．451，452．）Homer also mentions if well－fortified town Nemicus（Nipokos，l．c．）Its earliest inhabitants were Leleges and Teleboans （Strab．rii．p．322），bat it was afterwards peopled by Acarnamians，who retained possession of it till the middle of the seventh century n．c．，when the Corinthiads，under Cypselus，founded a new town near the isthmus，which they called Leucas，where thry settled 1000 of their citizens，and to which they romoved the inlabitants of the old town of Nericus．（Strab．l．c．；Sicylax，p．13；Thuc．j．30； ${ }^{2}$ lut．Them． 24 ；Scymn．Chius，464．）Scylax says that the town was first called Epilencadii．The Corinthian colonists dug a canal through this isth－ mus，and thns converted the peninsula into an island．（Strat．l．c．）This canal，which was called Dioryctus，and was，arcording to Pliny， 3 stadia in length（ $\Delta$ tópuктos，P’olyb．v． 5 ：Plin．iv．1．8．2）， was after filled up by deposits of sand ；and in the Peloponnesian War，it was no longer available for ships，which during that period were conveyed across the isthmus on more than one occasion．（Thuc，iii． 81，iv．8．）It was in the same state in B．c． 218 ； for Polybins relates（ v .5 ）that Philip，the son of Demetrius，had his galleys drawn across this isth－ mus in that year ；and Liry，in relating the sicge of Leucas by the Romans in B．C．197，says，＂Leucadia， nunc insula，et vadoso freto quod perfossum manu est，ab Acarnania divisa＂（xxxiii．17）．The sub－ sequent restoration of the canal．and the construction of a stone bridge，buth of which were in existence in the time of Strabo，were no doubt the work of the Romans ；the eanal was probably restored soon after the Roman conquest，when the Romans separateI Leucas from the Acarnanian confederacy，and the bridge was perhaps constructed by order of Augustus， whose policy it was to facilitate communications throughout his dominions．

Leacadia is about 20 miles in length，and from 5 to 8 miles in breadth．It rosembles the Isle of Man in shape and size．It consists of a range of limestone mountains，terminating at its north－eastern extremity in a bold and rugged headland，whence the coast runs in a sonth－west direction to the pro－ montory，anciently called Leucates，which has been ctrrupted by the lalians into Cape Ducato．The name of the cape，as well as of the island，is of course derived from its white cliffs．The southern shore is more soft in aspect，and more sloping and cultivated than the rugged rocks of the northern eoast ；but the most populons and wonded district is that opposite Acarnania．The interior of the island wears everywhere a rugeed aspect．There is but little cultivation，except where terraces have been planted on the mountain sides，and covered with vineyards．The highest ridge of the mountains rises about 3000 feet abwe the sea．

Between the northern coast of Leucadia and that of Acarnania there is at Jresent a lagonn about 3 mile＇s in length，while its breadth varies from 100 yards to a mile and a half．The lagoon is in most parts only about 2 feet deep．This part of the coast requires a more particular description， which will be rendered cleanr by the accompabying Ilan．At the north－eastern extremity of Leucadia a lido，or spit，of sand， 4 miles in length，sweeps out towards Acarnania．（See Plan，A．）On an isolated point opposite the extremuty of this sand－ bauk，is the fort of Santa Maura，erected in the middle ages by one of the Latin princes，but repaired
and molelled both by the Turks and Venetians. (Plan, B.) The fort was connected with the island by an aqueduct, serving also as a canseway, 1300 yards in length, and with 260 arches. (Plan, 5.) It was originally built by the Turks, but was ruined hy an earthquake in 1825, and has not since been repaired. It was formerly the residence of the Venetian gorernor and the chief men of the island, who kept liere their magazines and the cars (äua $\xi a 1$ ) on which they carried down their oil and wine from the inland districts, at the nearest point of the island. The congregation of buildings thus formed, and to which the inhabitants of the fortress gradually retired as the seas became more free from corsairs, arose by degrees to be the capital and seat of government, and is called, in memory of its origin, Amaxichi ('Aua $\xi$ liov). (Plan, C.) Hence the fort alone is properly called Santa Maura, and the capital Amaxichi ; while the island at large retains its ancient name of Leucadia. The ruins of the ancient town of Lencas are situated a mile and a balf to the SE. of Anaxichi. The site is called Kaligoni, and consists of irregular heights forning the last falls of the central ridge of the island, at the foot of which is a narrow plain between the beights and the lagoon. (Plan, D.) The ancient inclosure is almost entirely traceable, as well round the brow of the heigbt on the northern, western, and southern sides, as from either end of the height across the plain to the lagoon, and along its shore. This, as Leake ohserves, illustrates Liry, who remarks (xxxiii. 17) that the lower parts of Leucas were on a level close to the shore. The remains on the lower ground are of a more regular, and, therefore, more modern masonry than on the heights above. The latter are probably the remains of Nericus, which continned to be the ancient acropolis, while the Corinthians gave the name of Leucas to the town which they erected on the shore below. This is, indeed, in opposition to Strabo, who not only asserts that the name was changed by the Corinthian colony, but also that Leucas was built on a different site from that of Neritus. (x. p. 452). But, on the other hand, the town continued to be called Nericus even as late as the Peloponnesian War (Thuc. iii. 7): and numerous instances occur in history of different quarters of the same city being known by distinct names. Opposite to the middle of the ancient city are the remains of the bridge and canseway which bere crossed the lagoon. (Plan, 1.) The bridge was rendered necessary by a channel, which pervales the whole length of the lagoon, and adimits a passage to boats drawing 5 or 6 feet of water, while the other parts of the lagoon are not more than 2 feet in depth. The great squared blocks which formed the ancient causeway are still seen above the shallow water in several places on either side of the deep channel, but particularly towards the Acarnanian shore. The bridge seems to have been kept in repair at a late period of time. there teing a solid cubical fibric of masonry of more modern workmanship erected on the causeway ou the western bank of the channel. Leake, from whom this description is taken, argues that Strabo could never bave visited Lencadia, because he states that this isthmus, the accient canal, the Foman bridge, and the city of Leucas were all in the same place; whereas the isthmus and the canal, according to Leake, were near the modern furt Santu Mraura, at the distance of 3 miles north of the city of Leacas. But K. O. Miiller, who is followed by Buwen and others, belicre
that the isthmus and canal were a little sonth of the city of Lencas, that is, between Fort Alkxander (Plan, 2) on the island, and Paleocaglia on the mainland (Plan, 3). The channel is narrowest at this puint, not leing more than 100 yards across; and it is probable that the old capital would bave been built close to the isthmus connecting the peninsola with the mainland. It has been conjectured that the long spit of sand, on which the fort Santa Maura has been built, probably did not exist in antiquity, and may have been thrown up at first by an earthquake.

Between the fort Santa Moura and the modern town Amaxichi, the Anglo-lonian government have constructed a canal, with a towing-path, for boats drawing not more than 4 or 5 feet of water. (Plan, 4.) A ship-canal, 16 feet deep, has also been commenced across the whole length of the lazoon from Fort Santa Maura to Fort Alexander. This work, if it is ever brought to a conclusion, will open a sbeltered passage for large vessels along the Acarnanian coast, and will increase and facilitate the commerce of the island. (Bomen, p. 78.)

A. Spit of sand, which Leake sopposes to be the isthmus. B, Fort Santa' Matura.
C. Amaxichi.
D. City of Lencas.
E. Site of isthmus, according to K. O. Müler.

1. Remains of Roman bridge.

3. Palecocatha.
4. Nitw canal.
5. Turkish aqueduct and bridge.

Of the history of the city of Leucas we have a few details. It sent three ships to the battle of Salamis (IIerod. viii. 45); and as a colony of Corinth, it sided with the Lacedaemonians in the Peloponnesian War, and was hence exposed to the bostility of Athens. (Thuc, iii. 7.) In the Macedonian period Leucas was the cbief town of Acarnania, and the place in which the meetings of the Acarnanian confederacy were beld. In the war between Philip and the Romans, it sided with the Macedonian monarch, and was taken by the Romans after a gallant defence, B C. 197. (Liv, xxxiii. 17.) After the conquest of Perseus. Lencas was separated by the Romans from the Acarnanian confederacy.

Taygetus, and that the estent of the range is 300 statia. (Comp. Theoplirast. II. P. iii. 11, iv. 1 : Plin. xvi. 33; Callin. IIymn. Dian. 40.) The bold and beautiful outline of the "White Mountains" is still called by its ancient title in modern Greek, toे
 Bouva. Crete is the only part of Greece in which the word öp $\eta$ is still in common use, deaoting the loftier parts of any hiyh mountains. Trees grow on ail these rocky mountains, except on quite the extrene summits. The commonest tree is the prinos or ilex. (Pashley, Trad. vol. i. p. 31, vol. ii. p. 190 ; Hïck, Kreta, vol. i. p. 19.)
[E. B. J.]
Levcinina. [Corcyra, pp. 669, 670.]
LELCOLLA ( $\Lambda$ eíko $\lambda \lambda a$ ), a promontory on the south-cast of Pamplylia, near the Cilician frontier. (Plin. v. 26 ; Liv, xxvii. 23 ; Pomp. Mela, i. 15.) In the Stadiasmus Maris Magni (SS 190, 191) it is called Leucotieium ( $\Lambda$ єuк $\dot{\theta} \theta$ etov). Mela erroneonsly places it at the extremity of the galf of Pamphylia, for it is situated in the middle of it ; its modern nane is Karaburnu. (Leake, Asia Minor, p. 196. )
[L. S.]
LELCOLLA (Aé́кo入入a, Strab. xiv, p. 6S2), a harbour of Cyprus, N. of Cape Pedalium. It is referred to in Athenaeus (v. p. 209, where instead of Küas, Kórpos should be read), and is identified with Porta Armidio e Lucola, S. of Fomagusta (Engel, Kypros, vol. i. p. 97.)
[E. B. J.]
LEUCO'NIUM ( $\Lambda$ eukairov). 1. A place meationed in the Antouine Itinerary (p. 260) in the south of Pammonia, on the road from Aemona to Sirmium, 82 Kuman miles to the north-west of the latter town. Its site is pointed out in the neighbourhood of the village of Rasboixtje.
2. A tuwn of lonis, of uncertain site, where a kattle was fought by the Athenians io B.c. 413. (Thucyd. viii. 24.) From this passage it seems clear that the place camnet he looked for on the mainland of Avia Minor, hat that it must have been situated near Phanae, in the island of Chios, where a place of the name of Leuconia is said to exist to this day. Polyaenus (viii.66) mentions a place, Leucomia, abont the possession of which the Clians were inroived in a war with Erytbrae ; and this Leuconia, which, according to Plutarch (de Iirt. Mful. vii. p. 7. ed. Reiske), was a colony of Chios, was probably situated on the coust of Asia Minor, and nay possibly be identical wlth Leueae on the Hermaean gulf. [Comp. Levcae.] [L.S.]
 Bruttium, remarkable as the extreme SIF. point of Italy, looking towards the Sicilhan sea and the E. cosist of Sicily. It was in consequence generally regarded as the termination of the chain of the A pennines. Pliny tells os it was 12 miles from Rhegrum, and this circumstance clearly identifies it with the modera Capo dell' Armi, where the mountain mass of the southern Apeunines in fact descends to the sea. The whiteness of the rocks composing this headland, which gave origin to the ancient name, is noticed also by modern travellers. (Strah. vi. p. 259; Plin. iii. 5. s. 10; Ptol. iii. 1. § 9 ; Swinburne, Travels, vol. i. p. 355.) It is evidently the same promontory which is callied by Thncydides חetpa $\tau \hat{\eta} s \mathrm{P} \eta \gamma i \eta s$, and was the last point in Italy where Danostheres and Eurymedon tonched with the Athenian armament before they crossed over to Sicily. (Thue. vii. 35.) It was here also that Cicero toucbed on his voyage from Sicily, when, after the death of Caesar, E. C. 4 , be was preparing to re-
pair into Greece, and where he was risited by some triends frum Rhegium, who brought news from Lume that induced him to alter his plans. (Cic. Phil. i. 3, ad Att, xvi. 7.) In the former passace he terms it "pronontorium agri Rbegini:" the "Leucopetra Tarentinorum" mentioned by him ( $\mathrm{ad} A$ Att. xxi. 6), if it be not a false reading, must refer to quite a different place, probally the beadland of Leuca, more commonly called the Iapyginn promontory, [levea.]
[E. H. B.]
LeUCOPHiY's (Aeuzódpus), a torn in Caria, apparently in the plain of the Maeander, on the borders of a lake, whose water was hot and io constant commotion. (Xenoph. Hell. iv. 8. § 17, iii. 2. § 19.) From the latter of the passages here reterred to, we learn that the town possessed a very revered sanctuary of Artemis; bence surnamed Artemis Leucopbryene or Leucoplryne. (Paus, i. 26. § 4 ; Strab, xiv. P. 647; Tac. Ann. jii. 62.) The poet Nicaniter spoke of Leucophrrys as a plare distinguished for its fine roses. (Athen, xv, p. 683.)
Respecting Leucophrys, the ancient name of Tenedos, see Tesedos.
[ L S.]
LEUCO'SIA (A $\operatorname{co\kappa \omega \sigma i}$ a), a small island off the ceast of Lucania, separated only by a narrow cbannel from the headland which furnos the southern boundary of the gulf of Paestum. This headland is called by Lycophron àктخ̀ 'Eviréws, "the promontory of Neptune," and bis commentators tell us that it was commonly known as Posidium Promontorium ( $\tau \grave{\partial}$ Hoctiôtiov). (Lycophr. Alex. 722; and Tzetz, ad loc.) But no such name is found in the gengraphers, and it seems probable that the promontory itelf, as well as the little island of it, was known by the name of Leucosia. The former is still ealled Punta della Licosa; the islet, which is a mere rock, is known as Isola Piana. It is generally said to bave derived its ancieot name from ene of the Sirens, who was supposed to bave heen buried there (Lycophr. l.c.; Strab. l. e.; Plin. iii. 7. s. 13) ; bnt Dionysius (who writes the name Leucasia) asserts that it was named after a female consin of Aeneas, and the same account is adopted by Solinns. (Dionys. i. 53; Solin. 2. § 13.) We learn from Symmachus (E. . . . v. 13, vi. 25) that the opposite promontory was selected hy weallhy Romans as a site for their villas; and the remains of apeient buildings, which have been discorered on the little island itself, prove that the latter was also resorted to for similar purposes. (Romanelli, vol. i. p. 345.)
[Е. H. B.]
LeUCo'sia (Aevkwria, Aeukoutia), a city of Cyprus, which is mentioned only by Hierocies and the eeclesiastical historian Sozemea (II. E. i. 3, 10). The name is preserved in the modern Lefkosiac or Nilosia, the capital of the island. (Engel, Kypros, rol. i. p. 150; Mariti, Viaggi, vol. i. p. 89 ; Pococke. Trav. in the Eust, vol. ii. pt. 1. p. 221.) [E. B. J.]
 the Syriaas inlabiting Cappadocia, by which they were distinguisbed from the more sonthern Syrians, who were of a darker complexion. (Herod. i. 72 , vii. 72 ; Strab. xvi. p. 737; Plin. H. N. vi. 3 ; Enstath. ad Dionys. 772, 970.) They also spread over the westera parts of Pontus, hetween the rivers Iris and Halys. In the time of Xenophon (Arab.v. 6. $\S 8, \&$ e.) they were united with Papblagonia, and governed by a Paphlagonian prince, who is said to have had an arny of 120,000 men, mostly horsemen. This name was often used by the Greeks, even at the time when it bad beceme customary to desig-
nate all the inbabitants of the conntry by their na－ tive，or ratber I＇ersian name，Cappialoces；but it was applied more particularly to the inlabitants of the coast district on the Euxine，between the rivers Halys and lris．（1Iecst．Frogm．194，200，350； Marcian．Heracl．p．72．）P＇olemy（v，6．§ 2）also applies the name exclusively to the inhabitants abont the Iris，and treats of their comntry as a lart of the province of Cappadocia．The Leucosyri were regarded as colonists，who had been plamted there during the early conquests of the Assyrians，and were succes－ sively snbject to Lydia，Persia，and Macedonia； but after the time of Alexander their nane is senrcely mentioned，the people laving become entirely amalgamated with the nations among which they lived．
［L．S．］
LEUCOTHEES FANUM（＾euko日éas $i \in p \delta \nu$ ），a temple and oracle in the district of the Moschi in Colchis．Its legendary founder was Phryxus；the temple was plundered by Pharnaces and then by Mithridates．（Strab．xi．p．498．）The site has been placed near Suram，on the frontiers of Imiretia and Kurtuhlin，where two large＂tumuli＂are now found．（Dubois de Montpereux，Voynge Autour du Cancase，vol．ii．p．349，comp．p．17，vol．iii．p． 171．）
［E．B．J．］
LEUCOTHEIUML，［LEUCOLLA．］
LEUCTRA（ $\tau \dot{\alpha}$ 位ikтрa）．1．A village of Boeotia，situated on the road from Thespiae to Plataca（Strab．ix．．．414），and in the territory of the former city．（Xen．Hell．vi．4．§ 4）．lis name only occurs in history on account of the celebrated battle fought in its neighbourhood between the Spartans and Thebans，B．c．371，by wlich the supremacy of Sparta wis for ever oyerthrown．In the plain of Lenctra，was the tomb of the two dauchters of scedasus，a Leuctrian，who had been violated by two Spartans，and had afterwards slain themselves；this tomb was crowned with wreaths by Epaminondas before the battle，since an oracle had predicted that the Spartans would be defeated at this spit（Xen．Hell．ri．\＆§ 7 ；Diod．xy． 54 ； Paus．ix．13．§ 3 ；Plut．Pelup．ce．20，21）．The city of Leuctra，is sometimes supposed to be repre－ sented by the estensive ruins at Lefka（Aeviкa）， which are situated immediately below the modorn village of Rinokikastro．But these ruins are clearly tbose of Thespiac，as appears from the inscriptions found there，as well as from their importaze；fur Leuctra was never anything more than a rillage in the territory of Thespiae，and hat apparently ceased to exist in the time of Strabo，who calls it simply a 7 бroos（x．p．4／4）．The real site of Lenetra，＂is very clearly marked by a tumulus and some artificial ground on the summit of the ridge which borders the southern side of the valley of Thespiac．The battle of Levetra wav fonght pros－ bably in the vallicy on the northern sile of the tumulus，about midway between Thespiae，and the western extremity of the plain of Ilataca．Clomm－ brotus，in order to avoid the Bocotians，who were expecting hitn by the direct route trom Pluck． marched ly Thisbe and the valleys on the southom side of Mount Helicon；and having thus made his ：＂ppearance suddenly at Creusis，the port of Thespine， raptured that fortress．From thenee，he moved 14．01 Leuctra，where he intreuched himsolf on a boug gromen；after which the Thedens cheamped （f）an opposite hill，at no great distance．The －＇renn of the latter，therefure，wems to have been （2）the ceastern proferstion of the height of Rimú－

## LEUNI．

kastro．＂（L．anke．）The tumulus is probably the plate of sepulture of the 1000 Lacedamonians who fell in the battle．For a full account of this celebrated contest，sec Grote，Hist．of Greece，rol，x． p． 239 ，seq．In ancient times，the neigbbourhond of Leuctra appears to bave been well wooded，as we may infer from the epithet of＂shady＂bestowed
 Paus．ix．14．§ 3）：but ut present there is scarcely a shrub or a tree to be seen in the surrounding country．（Leake，Vorth．Greece，vol．ii．p．480，seq．

2．Or Levetnu＇s（ $\tau$ à $\Delta \in$ ûktpa．Paus．；đò Meïk－ tpov，Strab．，Plut．，Ptol．），a town of Laconia， sitnated on the eastern side of the Messenian gulf， 20 stadia north of l＇ephnus，and 60 stadia south of Cardamyle．Strabo speaks of Lenctrum as near the minor Pamisus，but this river flows into the sea at Pephnus，about three miles sonth of Lenctrum ［PErANT＇s］．The ruins of Leuctrum are still called Leftro．Leuctrum was said to have been founded by Peleps，and was claimed by the Messe－ niams as originally one of their towns．It was awarded to the latter people by Philip in E．c． 338 ， but in tbe time of the Roman empire it was one of the Eteuthero－Laconian places．（Strab．viii．pp． 360， 361 ；Paus．iii．21．§ 7，iii．26．\＆4．seq－； Ilut．Pelop．20；Plin．iv．5．s．8；Ptul．iii．16．§ 9．） Pansanias savs in Leuctra a temple and statue of Athena on the Acropolis，a teniple and statue of Cassandra（there called Alesandra），a marlile statue of Asclepius，another of Ino，and wooden figures of Apollo Carneius．（Pabs．iii．26．§ 4，seq）． （Leake，Morea，vol．i．p．331，Peloponnesiaca， p．179；Boblaye，Recherches，scc．p．93；Curtius Pelopomesos，vol．ii．p．285．）
 Aeinktpav，Pans．），a fortress of the distric：Aecytis， on the confines of Arcadia and Laconia，described by Thacydides（ x .54 ）as on the confines of Lacom．a towards Mt．Lreaens，and by Xenophon（Hell．vi． 5 ． § 24）．It was origimally an Arcadian town，but was included in the territory of Laconis．（Thuc． l．c．）It commanded one of the passes leading into Laconin，by which a portion of the Theban army penetrated into the country on their first invasion under Ep．minoondas．（Xen．l．c．）It was detached from Sparta by Epaminondas，and ndded to the territory of Megalapolis．（Paus．viii．27．§ 4．） It appears to have stond on the direct road from Sparta to Megalopolis，either at or near Leondiri， in which position it was originally placed by Leake； and this seems more probable than the site sub－ requently assigned to it by the same writer，who supposes that both Leuctra and Malea were on the roure from Megalopulis to Carmavium．［Malen．］ （Leake．1forea，vol．ii．P．322，Peloponnesiuca， 1． 248 ：Curtius，Peloponnesos，vol．i．p．336．）

LELCTRLM，［Levitha．］
LELCUS［PYDNa．］
LEvi．［Palafstina．］
LEUXI（Acovou），a tribe of the Vindelici，which Ptweny（ii．13．§ 1）places between the Runicatae and Consuantac．The form ot the name has been the subject of discussion；Mannert maintainiug that it onght to be written $\Lambda a \bar{v} y o b$ ，and that it is the g．neral name of several tribes in those parts，sucis as the Berdauvot and＇A入auvoi．But nuthing cer－ tain can be said about the matter ；and all we know is，that the Louni most have dwelt at the foot of the Alps of Saldourg，in the south castern part of Bavaria．
［L．s．］

LEVO'NI ( $\Lambda \in \cup \tilde{u} \nu O t$ ), a tribe mentionel by I'tolemy (ii. 11. § 35) as dwellipg in the central parts of the island of Scandia. No further particulars are kuown about them. (Comp. Zenss, die Deutschen, p. 158.)
[L. S.]
LEUPHANA (Aevфáva), a town mentioned by Ptulemy (ii. 11. § 27) in the north of Gerouany, on the west of the Elbe; it probably occopied the site of the modern Lineburg. (Wilhelm, Germanien, p. 161.)

## LEUTERNIA or LEUTARNIA. . [LeUca.]

LEUTUOANUM, a place in Pamonia Superior. I2 Roman miles east of Mursa, on the road from A. pileia to Sirmium (It. Hierus. p. 561 ); bence it seems to be identical with the place called Ad Labores in the Peuting. Table.
[L. S.]
LEXO'VII (Anğ́sto , Strab. p. 189; Anğoútiot, Ptol. ii. 8. §2), a Celtic peopie, on the coast of Gallia, immediately west of the mouth of the Seinc. When the Veneti and their neighbours were preparing for Caesar's attack (n. C. 56), they applied for aid to the Osismi, Lexovii, Naunetes, aod others. (B. G. iii. 9,11.) Caesar sent Sabinns against the Unelli, Curiosolites, and Lexovii, to prevent their joining the Veneti. A few days atter Sabinu. reached the country of the Unelli, the Aulerci Eubarovices and the Lexovii murdered their conncil or scnate, as Caesar calls it, because they were against the war; and they joined Viridovix, the chief of the Unelli. The Gallic confederates were defeated by Sabinus, and compelled to sarrender. (B. G. iii. 17 -19.) The Lexovii took part in the great rising of the Galli against Cacsar (n. C. 52 ) ; but their force was only 3000 men. (B. G. vii. 75.) Walckenaer supposes that the territory of the Lexovii of Caesar and Itolemy comprised both the territories of Lisieux and Bayeux, thongh there was a people in Bayeux named Baiocasses; and he further supposes that these Baiocasses and the Viducasses were dependent on the Lesovii, and within their territorial limits. [Barocasses.] The capital of the Lexovii, or Civitas Lexoviorum, as it is ealled in the Notit. Provinc., is Lisieux, in the Frencb department of Calvalos. [Novionhagus.] The conntry of the Lexovii was one of the parts of Gallia from which the passage to Britain was made.
[G. L.]
LIBA (Aiba), a small place in Mesoputamia, meationed by Polybius (v. 51) on the naach of Aatiochns. It was probably situated on the road between Nisibis and the Tigris.

LIBA'NUS MONS (Ai6avos bpos), in Hebrew Lenanon (ijy ${ }^{2}$ ? ), a celebrated monntain range of Syria, or, as St. Jerome truly terins it, "mons Phocnices altissimus." (Onomast. s. v.) Its name is derived from the root $1 \geqslant ?$, "to be wlite;" as St. Jerome also remarks, "Libanus 入єvkaन $\mu \dot{\text { o }}$, id est, 'candor' interpretutur" (Adv. Jovinianum, tom. is. col. 172): and white it is, "both in summer and wioter ; in the former season on account of the natural colour of the barren rock, and in the latter by reason of the snow," which indeed "remains in some places, near the sammit, throoghont the year." (Irby and Mangles, Oct. 30 and Nov. 1.) Allusion is made to its snows in Jer. xviii. 14: and it is described by Tacitus as "tantos inter ardores opacnm fidumque nivibus." (IIst. v. 6.) Lebanon is much celebrated both in sacred and classical writers, and, in particular, much of the sublime imagery of the prophets of the Old Testament is borrowed from this monntain (e.g. I'sal. xxix. 5, 6, civ. 16-18; Cant. iv.

8, 11, 15, v. 15; Isa. ii. 13; Ifos. xiv. 5-7; Zech. xi. 1,2 ). It is, however, chiefly celebrated in sacred listory for its forests of cedar and fir, from which the temple of Solonon was coastructed and adorned. (1 Kings, v.; 2 Chron. ii.) It is clear from the sacred history that Mount Lebanon was, in Solomon's time, subject to the kings of Tyre; but at a later period we find the king of Assyria felling its timber for his military engines (Isa. xiv. 8, xxxvii. 24; Fzek. xxxi. 16); and Diodurus Siculus relates that Antigonas, having collected from all quarters hewers of wood, and sasyers, and slipbuilders, brought down timber from Libanus to the sea, to build limself a navy. Some idea of the extent of its pine forests may be formed from the fact recorded by this historian, that 8000 men were employed in telling and sawing it, and 1000 beasts in transporting it to its destination. He correctly describes the mountain as exteuding along the coast of Trijoli and Byblins, as far as Sidon, abounding in cedars, and firs, and cypresses, of marvellous size and beanty (xix. 58); und it is singular that the other classical geographers were wholly mistaken as to the cuurse of this rearalkable mountain chain, both Ptolemy (v. 15) and Strabo (xvi. p. 755) representing the two almost parallel ranges of Libanus and Antilibanus as commencing near the sea and ruming from west to east, in the direction of Damascus,-Libanus on the north and Antilibanus on the sontly; and it is remarkable that the Septuagint translators, apparently noder the same erroneous idea, frequently translate the Hebrew word Lebanon by 'AvテiגiEavos (e. g. Deut. i. 7, iii. 25, xi. 24 ; Josh. i. 4, ix. 1). Their relative position is correctly stated by Euscbias and St. Jerome (s. v. Antilibanus), who place Antilibanus to the east of Libanus and in the vicinity of Damascus. [Antilibanes.]

Lebanon itself may be said to commence on the north of the river Leontes (el-hissimijeh), between Tyre and Sidon; it follows the course of the caast of the Mediterrancan towards the north, which in some places wa-hes its base, and in others is separated from it by a plain varying in extent: the mountain attains its highest elevation (tuarly 12,000 feet) about half way between Beirut and Tripoli. It is now called by varions names, after the tribes by whom it is peopled, - the sonthern part heing inhatited by the Metowib; to the north of whom, as far as the road from Beirit to Damascos, are the Drases; the Maronites occupying the northern parts, and in particnlar the district called Kesrawan. (Robinson, Eibl. Res, vol. iii. p. 459 ; Burckhardt, Syria, pp. 182-209.) It still answers, in part at least, to the description of St. Jerome, being "fertilissimns et virens," thongh it can be no longer said "densissianis arborum comis protegitur " (Comment. in Osee, c. xiv.): and again,-" Nilul Libano in terra repromissionis excelsius est, nec nemurosius atque condensius." (Comment. in Zachurian, c. xi.) It is now chiefly fruitfnl in vines and mulberry trees; the former celebrated from of old (Hos. xiv. 7), the latter introdnced with the cultivation of the silkworm in comparatively modern times. Its extensive pine forests have entirely disappeared, or are now represented by small clusters of firs of no imposing growth, scattered over the numntain in those parts where the sott saudstone (here of a reddish hue) comes out from betweeo the Jura limestone, which is the pretailing formation of the mountain. Thic cedars so renowned in ancient times, and known to be the patriarchs of all of their specics now existing,

## LIBNIUS

aro found prisupally towards the north of the range (Robinson, Bill. Res. vol. iii. Pp. 440, 441), particnlarly in the vieinity of a Maronite village named Bheden, donbtless identical with the "Elen" of Fizekiel (xaxi. 16), in the neighbourhood of which the finest specimeas of the cedars were even then fonnd. They had almost become extinet, - only eight aneient trees can now he numbered, - when, a few years ago, the monks of a nei-hbonring convent went to the pains of planting some tive bundred trees, which are now carefully preserved, and will perpetuate the tradition of the "eclars of Lebanos" to succeeding generations. The fint remarked by N.. Jerome, of the proper name of the muuntain being synobymous with frankincense, both in Greek and Hubrew, las given rise to the idea that the mountain produced this odoriferous sbrub, of which, however, there is no proof. (Rcland, I Paluestina, p. 313.)
[G. W.]
LIBARNA (Aiszpya), a city of Liguria, which is mentioned by I'liny among the "nobilia oppida" that adorned the interior of that province, as well ats by Ptolemy and the Itineraries, in which its name appears as "Librmum " or "Libariam." (I'lin, iii. 5. S. 7 ; Ptol. iii. 1. § 45 ; Itin. Ant. p. 294; Tab. Peut.) These place it on the road from Genua to Dertona, but the distances given are certainly corrupt, and therefore afford no clue to the position of the town. This has, however, beell of Jate years estublished beyond doubt by the discovery of its remains on the left bank of the Scrivia, between Arquata and Serravalle. The traces still visible of its aneient theatre, forum, and aqueducts, coufirm Pliny's statenent of its flourishing condition; whicb is further attested by several inseriptions, foum one of which it would appear to have enjoyed colonial rank. (S. Quintino, Autira Coloniu di Libarna, in the Mum. dell' Accadem. di Torino, vol. xxix. p. 143; Allini, Lapidd Tücinesi, pp. 120, 139.) [E. H. B.]

LIBETHRA, LIBETHRUM (Aisingpa: Eth. Aibngp:os), a town of Macedonia iu the neighbourhood of Thism. It is mentiozed by Livy (sliv. 5), who, after describing the perilons march of the Homan army under Q. Marcius through a pass in the chain of Olympus,-Carmpecte (the lower part of the ravine of Plutamonu),-says, that after four days of extreme labour, they reached the plain between Libethrum and Heracleia. Pansmais (ix. 30. § 9) reports a tradition that the town was one destroyed. "Libethra," he says, "was situated on Mount Oiympus, on the side of Macedonia. At no great distance trom it stoonl the tomb of Orphens, respeeting which an oracle laad derlared that when the sun beheld the bones of the poct the eity shoutd
 of Libethra ridiented the thing as impossible; but the column of Orpheus's monument harine been accidentally broken, it gap was made by which Jight broke in apons the tomb, when the same night the torreat namel Si's, being prodigionsly swollen, rushet down with violeace from Mt. Olymuits upan Libethra, overthrowing the walls and all the public tand prisate baildiars, and destroying every living criature in its furions course. After this ralamity ther remain- of Orpheas were removel to Jimn, 20 stalia distant from their city towards Olym$1^{1 n s}$, where they erected a monument to him, consi time of an urn of stone upon a columm," In the time of Alesander the Great there wats a statue of ()iphus male of cypress, at Liluet ra, (Plat. Alus. 14.)

The only two torrents which condd have effeeted such havoc as that described by Pausamias are the rivers of Ihutamina and Iatokhoro. As the former was near Heracleia, it may be concloded that the Sus, was the same river as the Enipeas, and that Libethra was sitaated not far from its junction with the sea, as the upper parts of the slope towards Litokhoro, are secared from the ravages of the torent by their elevation above its bank.
It might be supposed, from the resemblanee, that the modern Valathria [DICM] is a corruption of the ancient Libethra: the similarity is to be attributed, perhaps, to the two names laving a common origis in some word of the ancient language of Macedonia. (Leake, Nurthern Greece, vol. iii. p]. 413,422 .)

Strabo (ix. p. 409, x. p. 471) alludes to this place when speaking of Helicon, and remarks that several phaces aromal that mountain, attested the furmer existence of the Pierian Thracians in the Boootian districts. Along with the worship of the Alases the names of mountains, caves, and springs, were transferred from Mt. Olympus to Helicon; hence tbey were surnamed Libethrides as well as Pierides ("Nymphae, nostor anor, Libethrides," Virg. Eel, vii. 21).

LIBETHR1AS, LIBE'THRIUS. [HELICON.]
LI'BlA. [Authigones.]
LIBICII or LIBICL (AEEÉctiol, Pol: AiEncoí, Ptol.), a trike of Cisal pine Gatals, who inhabited the part of Gallia Transpaulana about the river Sesia and the neighbourhood of Vircellae. They are first mentiuned by Polybius (ii. 17), who places them, tugetber with the LAEvi (Adoo), torards the sources of the Padus, and W. of the Insubres. This statement is sufficiently vague: a mure precise ciuc to their position is supplied by P'hyy and Ptulemy, both of whom notice Vercellae as their chief city, to which the latter adds Laumellom aloo. (Plin. iii. 17. s. 21; Ptol iii. 1. §36.) Pliny expressly tells us that they treredesconded from the Sallyes, a people of Ligurian race; whence it would appear probable that the Libicii as well as the Laevi were Ligonan, and not Gaulish tribes [LAEYI], though se thed on the N. side of the Padus. Liry also speaks, but in a passage of which the reading is very ancertain (v. 35), of the Salluvii (the same people with the Sallyes) as crossing the Alps, and settling in Gaul near the La vi.
[E. H. B.]
L.1Blsu'So)NA (cognomine Fornangustama, Plin. iii. 3. s. 4 : Inser. up. Gruter, p. 260. no. 3 ; Lilisona, Coins, ap. Sustini, p. I68; L.fbisosia, Itin. Aut. p. 446 ; Мєєбиิка, Ptul. ii. 6. § 59 ; Lebinosa, Gicog. Iav. iv, 44: Lezusa), a city of the Ovetani, in Hispania Tarracunensis, 14 M. P. NE. of the suurces of the Anas, on the high-road from Lounivium to Caesaraugnota. It was an important place of trade, and, ander the Romans, a colony, belonging to the consentus of Caesaraugusta (Plin. l. c. ; Ukert, val, ii. pt. 1. $p \mathrm{p}, 411,412$ ). [P. S.]

LIBNATII (A‘Evá, AoEvá), generally mentioned in connection with Lachish, from which it could not befar distant [Lachusir]. (Josh. x.29-32; 2Kings, xix. 8.) It belonged to Judah (Josh. x1. 42), and is recognised by lusebias as a village in the district of Eleutheropolis. (Onomast. s.v. Aobavá.) 1)e. Fubinson could not snceed in recovering any traces of its name or site (Bib. Res. vol, ii. p. 389).
[G. W.]
LI'BNIUS, a river in Ireland, mentioned by l'tolemy (ii. 2. §4) as on the west const, $=$ the river
that falls into Sligo Bay ? Killala Bay? Black Sod Buy ? Clew Bay? For the elements of uacertainty sce Vennicnif, Rhubugdit, and Ibernia.
[I. G. L.]
LIBORA. [Avuonk.i.]
LIBRIA or L1R1A, a river of Gallia Narbonensis, which Pliny (iii. 4) mentions after the Arauris (IIerault), and his description proceeds from west to east. It is said (Harduin's Pliny) that all the MLS. have the reading "Libria." Hardnin takes the Libria to be the Les, but this is the Ledus. [Ledus.] It has been conjectured that the Libria is the Lieron, though this river is west of the Arauris. [G. L.]

LIBCI. [LIBICI.]
LIBUM (Aifoy), a town in Bitlynia, distant accordiag to the Itin. Anton. 23, and according to the Itin. Hier. 20 miles N. of Nicaena. (Liban. Itit. suce, p. 24.)
[L. S.]
LIBUNCAE. 「Gallazcia, p. 934, b.]
LIBURNI (A九Gupvol, Scyl. p. خं; Strab. vi. p. 269. vii. p. 317 : Appian, Ill. 12 ; Steph. B.: Scllol. ad Nicand. 607 : Pomp. Mela, ii. 3. § 12 ; Plin. iii. 25 ; Flor. ii. 5), a people who occupied the N. part of Hhyricum, or the district called Liauninia (Aısupvis xúpa, Scyl. p. 7; AıGoupvía, Ytol. ii. 16. §8, viii. 7. § 7; Pliniii. 6, 23,26; Peut. Tab.: Orelli, Inser. n. 664). The Libtrmians were an ancient people, who, together with the Siculians, had occupied the opposite coast of Picenum; they had a city there, fruentum, which had contimued in existence amid all the changes of the population (Pliu. iii, 18). Niebuhr (Hist. of Rome, vol. i. p. 50, traas.) has conjectured that they were a Pelasgian race. However this may be, it is certain that at the time whea the historical acconnts of these coasts begin they were very extensively diffused. Concyra, before the Greeks took possession of it, was peopled by them. (Strab. vi. p. 269.) So was Issa and the neighbonring islands. (Schol. ad Apollon. iv. 564.)

They were also considerably extended to the $\mathrm{N}^{\prime}$, for Noricum, it is evident, had been previously inhabited by Liburnian tribes; for the Vindelicians were Liburniaas (Serv. ad Firg. Aen. i. 243), and Strabi (iv. p. 206) makes a distinction between them and the Breuni and Genauai, whom be calls lliyrians. The words of Virgil (l. e.), too, seem distinctly to term the Veneti Liburnians, for the "inmermost realin of the Liburaians" must bave been the gual at which Aatenor is said to bave mrived.

Driven ont from the conntries between Pamnonia and the Veneti by the Gallic invasion. they were compressed within the district from the Titius to the Arsia, which assumed the title of Liburnia. A wild and piratical race (Liv. x. 2), they used privateers ("lembi," "naves Libnrnicae") with one very large latcen sail, which, adopted by the Romans in their struggle with Carthage (Eutrop, ii. 22) and in the Secoad Macedonian War (Liv, xlii. 48), snjplanted gradually the high-lulwarked galleys which had formerly been is use. (Caes. B. C. iii. 5; Hor. Epud. i. 1.) Liburnia was afterwards incorporated with the province of Dulmatia, and ladera, its cajital, was made a Roman colody, In A. D. 634 Heraclius invited the Chorvates or Chrobati, who lived on the N. side of the Carjathians, in what is now S. Polond or Gallicia, to occupy the province as vassals of the Empire (Const. Porplı. de $A d m$. Imp. c. 31). This comsection with the Byzantine Court, and their oceupation of conntries which had embraced Christianity in the Apostolic age (Titus was in Dalmatia in the time of St. Paul, II. Ep. Tim. iv. J0), na-
turally led to the conversion of these Slavonian strangers as early as the 7th century. (Comp. Schafarik, Slav. Alt. vol. ii. pp. 277-309; Nevgebaur, Die Sud-Staven, pp. 224-244.) Strabo (vi. p. 3I5) extends the coast-line of Liburnin as far as 1500 stadia; their chief cities were IADERA aud the "conventus" or congress of SCAMDONA, at which the inliabitants of fourteen towns assembled (Plin. iii. 25). Besides these, Pliny (l. c.) emmerates the following : - Alvona, Flanona, Tarsatica, Senia, Lopsica, Ortopula, Vegium, Argyruntum, Cunininm, Aenoun, and Civitas Paini.
[E. B. J.]

## LIBU'RNICAE I'NSULAE. [ItLYRICUA.]

LIBURNUM or LIBURN1 PORTUS, a seaport on the coast of Etruria, a litile to the S. of the Portus Pisanns, near the mouth of the Aruns, now callen Livorno. The ancient authorities for the existcuce of a port on the site of this now celebrated seaport are discussed under Poutus Pisanus. [E. H. B.]

LIBURNUS MONS, a mountain in Apolia, mentioned ouly by Polrbius, in his description of Hannilal's march into that country, s, c. 217 (Pol. iii. 100), from which it appears to lave been the name of a part of the Apeanines on the frontiers of Samninm and Apulia, not far from Luceria ; but it cannot be more precisely identified. [E.H. B.]

LI'BYA ( $\bar{\eta} \Lambda(6 \dot{v} \eta$ ), was the general appellation given by the more ancient cosmographers and historias to that portion of the old continent which lay between Aegypt, Aethiopia, and the shores of the Atlantic, and which was bounded to the N. by the Dediterranean sea, and to the S. by the river Ocennos. With the increase of geographical kaowledge, the latter mythical boundary gave place to the equatorial line: but the actual form and dimeasions of Africa were not ascertaiaed antil the close of the 15 th century A.d.; when, in the year 1497, the Portuguese doubled the Cape of Good Hope, and verified the assertion of Herodotus (iv. 42), that Lilaya, except at the isthmus of Suez, was surrounded by water.

From the Libya of the ancients we mnst sabstract such portions as bave alrcady been described, or will hereafter be mentioned, in the articles entitled Aegyptus, Aethiopia. Africa, Atlas, Barea, Cafthage, Cyrene, Marmarica, Matretania, the OAses, SyRtes, \&c. Including these districts, indeed, the boundaries of Libya are the same with those of modern Africa as far as the equator. The limits, however, of Libya Iutcrior, as opposed to the Aegyptian, Aethiopian, Phomician, Grecian, and Roman kiagdoms and commonwealths, were mnch дarrower and less distinct. The Nile and the Atlantic Ocean bounded it respectively on the east and west ; bnt to the north and south its frontiers were less accurately traced. Some geographers, as Ptolemy, conceived that the south of Libya joined the east of Asia, and that the Indian Ocean was a vast salt lake: others, like Agatharchides, and the Alexandrian writers generally, maiatained that it stretched to the equator, and they gave to the nuknown regions sonthward of that line the general title of Agisymba. We slaill be assisted in forming a just conception of Libya Interior by tracing the progiess of ancient discovery in those regions.

Progress of Discovery. - The Lihya of Homer (Od. iv. 87, xiv. 295) and Ilesiod (Theog. 739; comp. Strab, i. p. 29) comprised all that portion of the African contiment which lay west of Lower and Middle Aegypt. They knew it by report ouly, had no conception of its form or extent, and gave its in-
habitants the general name of Aethiopes, the dark or black coloured men. Between B. c. $630-620$, Dattus of Thera, being commarided by the oracle to lead a colony into Libya, inquired anxiously " where Libya was," althougls at that time the position of Aegypt, and probably that of the Phoenician Carthage also, was well known to the Greeks. Hence we may conclude that, in the 7 th century B. C., the name Libya, as the generie appellation of a continent within sight of Sicily, and within a few days' sail from l'elopoanesus, was either partially adopted by or wholly unknown to the Greeks. The I'huenicians were among the first explorers, as they were among the earliest colonisers of Libya ; but they concealed their knowledge of it with true conmereial jealonsy, and even as late as the 6th century B.c. interdicted the Roman and Etruscan mariners from sailing beyond the Fair l'romontory. (P'olyb. iii. 22.) About sixty years before the journey of Herodotus to Aegypt, i.e. в. c. 523 , Cumbyses explored a portion of the westerndesert that lies beyond Elephantine; but his expedition was too brief and disistrous to afford any extension of geographical acquaintance with the interiur. Ilcrodotus is the first traveller whose accounts of Libya are in any way distinct or to be relied upon; and his information was probably derived, in great measure, from the caravan guides with whom he conversed at Memphis or Naucratis in the Delta. By the term Libya, Herodotus understurd sometimes the whole of ancient Africa (iv. 42), sometimes Africa exclusive of Aegypt (ii. 17, 18, iv. 167). He defined its proper eastern boundary to be the isthmos of Suez and the Red sea, in opposition to those who placed it along the western bank of the Nile. In this opinion he is supported by Strabo (i. pp. 86, 174) and Ptolemy (ii. 1. S 6, iv. 5. $\S 47$ ) ; and his description of the Great Desert and other features of the interior prove that his nurative generally rests upon the evidence of travellers in that region. The next step in discovery was made by the Mucedonian kings of Aegypt. They not unly required gold, precious stones, ivory, and aromatics, for lusury and art, and elephants for their wars, but were also actuated by a zeal for the prontion of science. Accordingly, Ptolemy Philadelphus (Diod. i. 37: Plin, vi. 29) and Ptoleny Euergetes (n.c. 283 -222) sent furth expelitions to the coast and mouth of the Red sea, and into the modern Nubia Their investigations, however, tended more to extending acquaintance with the country letween the cataracts of the Nile and the straits of Bub-elMandeb than to the examination of Western Libya.

Absut 200 years before our era, Eratosthenes described Libya, but rather as a mathematician than a geographer. He defines it to be an acnte angled triagle, of which the base was the Mediterranean, and the sides the Red sea, on the east, and on the wist an imacinary line drawn from the Pillars of Hercules to the Sinus Adulitanus.

The wars of Rome with Carthage, and the destruction of that city in n c. 146 , tended considerably to pronnte a clearer acquaintance with Libya Interior. Phlyhus, commissioned by his friend and commander, Suipio Ampilinnus, vi-ited Acgypt and many districts of the northern coast of Africa, and explored its wewtern shores also, as far as the river lambotus, pemhars Capw Von, lat. $28^{\circ} \mathrm{N}$., where he found the crocodile and hippopotamus. Unfortuntely, the 1e ord of his juurney has perisked, although it was (xtant in the Int century A. D, and is cited by I'liny (vi. 1) and Stephanus of Byzantion (s. vv
 lin, Récherches sur les Géographie Ancienne, tom. ii. P1. 1-30).

The events of the Jugurthine War (n. c. 111106) led the lkomans further into the interior. The historian Sallust, when praetor of Numidia, assiduously collected information respecting the indigenons races of Libya. He mentions the Gaetuli as the rade Aburigines, who fed on the flesh of wild beasts, and on the roots of the earth. They dwelt near the torrid zone (" hand procnl ab ardoribus "), and their huts (mapalia) resenibled inverted buats. In 13. c. 24, Aelins Gallus conducted, by the command of Augustus, an expedition into Aethiopia and Nubia, and extended the knowledge of the eastern distriets. The difficulties of the rand and the theachery of his guides, indeed, rendered his attempt unprosperous; but in the year following, Petronius repulsed an inroad of the Aetbiopians, and established a line of military posts south of Elcphautine (Strab. xvii. p. 615 ; Dion Cass. liv. 6). In B. c. 19 , L. Cornelius Balbus attacked the Garamantes with snocess, and ascertained the naunes at least uf many of their towns. (Flor. iv. 12 ; Plin. v. 75.) The information then acquired was employed by Strabo in his aecount of Libya. Again, in Nero's reign, an exploring party was desjatched to the Abyosinian lighlands, with a view of discosering the sources of the Nile. (Plin. vi. 32 ; Seace. Nat. Quaesh. vi. 8.)

But the Romans became acquainted with portions of the Libyan desert, less through regular attempts to penetrate it on either side, than from their desire to procure wild beasts for the amphitheatre. T'nder the emperors, especially, the passion for exhibiting rare animals prevailed; nor have we reaton to suspect that these were found in the cultivated northern provinces, whence they must have been diven by the colonial berdsmen and farmers, even whihe Cyrene and Carthage wer independent states, At the secular games exhibited by the enperor Philip the Arabian (A. D. 248), an incredible number of Libyan wild beasts were slaoghtered in the arena, and the Roman hunters who collected them must have visited the Sâhära at lenst, and the southern slope of Atlas: nor, since the bippopotamus and the alucator are mentioned, is it improbable that they even reached the banks of the Senegal.

Of all the ancient geographers, however, Claudius Ptoleny, who flomished in the secend centary A.1., displays the most accurate and various acquaintance with Libya Interior. Yet, with the works of his predecessors before him, the scientific labours of the Alexandrians, and the Roman surveys, Itolemy possessed a very inadequate knowtedse of the form and extent of this continent. His tables show that its westem coast had been explored as far as $11^{\circ}$ lat. N.; and he was aware of the approximate position of the Furtunate Islands (now the Canaries), since from them, or some point in them, he calculates all his eastern distances or longitades. He was also better acquainted than any of his precunvors with the eatern cuast, and with the tracts which intervened between the left bank of the Nile and the Great Desert. He mentions an expedition conducted by a Loman officer named Maternus, who, setting firth from Tripoli, advanced as for southward as the neighbourhood of the lake Tchad, and, perhajis, even of Timbuctoo. He has also given, with probalile correctness, the posstion of a number of places in the interior, along a river which he calls
the Nistir. Ptolemy moreaver as-igns to Africa a greater extent S. of the equator: hut here his know. ledge becomes inexact, since he makes the land stretch into the Atlantic instead of curving eastward; and he concluded that the southern parts of Libya juined the eastern parts of Asia, and consequently was either incredulous or ignorant of the Periplus of the Phoenicians in the reign of Pharaoh Necho.

Pliny adds little to our information respecting I.itya beyond its northern and eastern provinces, although he contributes to its geography a number of strange and irrecognisable names of places. He had seen an abstract at letst of the journal of Polybius, and he mentions an expecition in A.D. 41 by Suetonius Paullinns, which crossed the Atlas range, and explored a portion of the desert beyond. But both Pliny and Pomponius Nlela are at once too vague and snecinct in their accounts to hare added much to our knowledge of the interior.

The persecntions which were mutually inflicted by the Cliristian sects upan each other in the 3rd and 4 th centuries A. D., the expulsion of the Donatists, Montanists, Circumcellions, \&.c., from the ecclesiastical provinces of the Roman church, drove even beyond the Atlas region thonsands of fugitives, and combined with the conquests of the Arabs in the Th century in rendering the interior more permeahle and better known. Yet neither the fugitives not the conquerors lave materially increased onr ucquaintance with these regions. The era of discovery, in any extensive sense of the term, commences with the royares of the Portugnese at the close of the 15 th and the commencement of the 16 th century. But their observations belong to the geograthy of modern Atrica.
We have reserved an account of the two most memorable expeditions of the ancients for the discovery of the form and dimensions of the Libyan continent. partly on account of their superior iraportance, if they are authentic, and partly because the resnlts of them have been the subject of much discussion.
Herodotus (iv, 42) alleges as one reason for his belief that Libya, except at the jsthmus of Suez, is surrounded by water, a story which he heard of its circumnavigation by the Pboenicians in the reign and by the command of Pharaoh Necho, king of Aegypt. This supposed voyage was therefore made between R. c. 610-594.

According to Herodotus, whose narrative is indeed me:tgre enough, Pbaraoh Necho desired to connect the Mediterranean with the Red sea by a canal from Bubustis in the Delta to the Arsinoite buy near Suez. He abandoned this project at the bidding of the priests, and then ordered his pilots to atternpt the passage from the one sea to the other by a different channel. For this purpose his fleet, manned entirely by Phoenicians, set sail from the Red sea, coasted Aegypt and Aethiopia, and passed into the Indian ocean. At the end of three years they entered the mouth of the Nile, having, as they affirmed, circurnavigated the continent. Twice they landed, - probably at the season of the monsuons,laid up their ships, sowed the fields, and reaped the harvest, and then proceeded on their coarse. They alleged - and their assertion is remarkable, althongh Herodotus did not believe it - that as they were saling westrard the sun was on their right hand.

The probability or improbability of this voyage has been canrassed by Mannert (Geograph. der Griech. und Römer, vol. x. pt. 2, pp. 491-511), by tiosselin (Gcographie des Grecs Analysee, tom.
i. pp. 108, \&c.) Pemell ( (ícogr. of' Herod. wol. ii. Ip. 348-363.), and Heeren (/dici, vil, i. p. 364). We do not consider that its improbalility is by any means fully established; the voyage, himevel; wats too tedious and difficnit to be repeated by the navigators of antiquity, and its results for conmerce and geographical knowledge were accordingly nnimportant. The most striking argument for the cireunnavigation having heen accomplished is the repurted phacnomenon of the sun appearing on the right hand, or to the north of the voyagers: nor were the Illue nician galleys less competent to the voyage than the carrels which conveyed Columbus across the Atlantic, or Di Gama round the Cape. On the other hand, we must adnit the imprubability of some of the circumstances marrated. Herodotas beard the stwy 150 years after the supposed voyage had been made : in that time an extrandinary expedition beyond the Red sea may have been magnified into a coinplete Periplus. Azain. for sowing and reaping on an unknown coast, for laying up the ships, \&c. the time allowed - three years- is too short. Moreover, no account is made for opposition from the inhahitants of the coast, or for the violent winds which prevail at the Cape itself. The notion which Herodotus entertained, and which long afterwaros prevailed, that Libya did net extend so far S. as the equator, is not an argument against the fact of the circumnavigation; for the brevity of Herodotus's statement, in a matter so important to geography, shows that he had taken little pains in sifting the tradition.

A second ancient royage is better authenticated. This was rather an expedition for the promotion of trade than of geographical discovery. Its date is uncertain: but it was undertaken in the most flourishing periad of the Punic Cominonwealth, -i. e, in the interval between the reign of Darius Hy staspes and the First Punic War (b.c. 521-264). Hannu, a suffetes or king, as he is raguely termed. of Carthage (Geogr. Graec. Minor. tom. i. Bernhardy), with a fleet of 60 galleys, having on board 30,000 men, set sail from that city through the Straits of Gibraltar with a commission to found tradingstations on the Atlantic coast, the present empire of Morocco. How far he sailed suuthward is the subject of much discussion. Gosselin (Gieomraph. des Anciens, vol. i. p. 109 , seq.) so shortens Hanno's vogage as to make Cape Non, in lat. $28^{\circ} \mathrm{N}$. . its extrente southern terminus, while Rennell extends it to Sierros Leone, within $8^{\circ}$ of the equator (Geog. of Herol. vol. ii. p. 348). The mention of a river, where he saw the crocodile and the river-hore, renders it probable that Hanno passed the Senegal at least. Of the fact of the voyage there is no doubt. The record of it was preserved in an inscription in the teraple of Kronos at Cartbage. There it was copied and transbated into his own language by some Greek traveller or merchaut. (Bochart, Geog. Sater, i. 33; Canpumanes, Antiq, Moritim. de Carthago, vol. ii.; Dodwell, Dissertat. I. in Gcogr, Graec. Min., ed. Hudson; Bougainville, Descaucertes d Hवuno Mém. de lAcad, des Inscript, tom. xxvi. xxviii.; Heeren, Ideen, vol. i. p. 654.)

A third and much later Periplus is that whith goes under the name of Arrian. It is prubably a work of the first century A.D. It is the record or log-book of a trading-voyage on the enstern ctast of Libya, and is chiefly valuable as a register of the articles of export and import in the markets of the Red sea, of the Arabian and Persian coast, of the VoL. 1 i.
 Atrica. This estreme suthth print of that pogat: the leculland of Rhapta, prokalls the anolem lowion, in lat. $10^{\circ} \mathrm{N}$. (See Vincent's liey. ma of it wham vol. ii. p. it. sect.) With thar impatiect .... quantance with Libya lnterior, and their misconception of its extent, it is not surprising that the more ancient geugraphers should have long hevitatell to which portion of the old continent I.ibya should be assigned. It was sonnctincs resarded is an inilependent division of the earth, and sumetimes is part of Asia, and even of Eurque. (Agathemer. ii. : Herel. iv. 42 ; Varr. L. L. iv. 5 ; sall. l'ell. Jugereth. 17; Lnean, Mhorsal. ix. 411 ; Maltebrun, Geog. i. 27.) As the topagraplyy of the interior is very uncertain, we shall exathme rather the general physical phenomena of this region, tham attempt to assign a local habitation to tribes who roaned over the waste, or to towns of which the names are dombtful and discuised, even when genuine, by the Greek or Roman orthography of their Libyan titles.

1. The Great Desert.-Herodotus (ii. 32, iv. 181) divides Lilya N. of the equator into three re-gions:- (1) The" inherbited, which is described under the several heads of Africa, Atlas, Cabtimae, Cxbexe, se.; ; (2) the willd beast territory [Atlas]; and (3) the Desert. These divisions correspond uarly to the moderu districts of Barbary, Bitedulgerid,
 Herokl. iv. 181) extends from the Atlantic to Aegypt, and is comtinued under the same degrees of latitule through Arabia, Asia, the sontheru provincess of l'ersia, to Moulton in Nirthern India. Contrasted with the vale of Boledulgerid, the rich arable districts of Africa Propria, and especially with the mellwatered Aegypt, the Sithirre is one of the most dreary and intospitable portions of the wolld. To its real barremess and so itule the aucients ascribed also many fabulous terrors, which the resear hes of moden travellers bave dippersed. It was beliered to swarm with serpents, which, by their number and their venom, were able to impele armies in their march (Lacan, Pharsal. is. 765): its tribes shrieked like bats, instead of uttering articulate sounts (Hr.od. iv. 183); its pestilential winds struck with instant death men and aniuals, who traversed then (Arriat, E.rp. Ales. iii. 3); and its eddies of sand buried the slain. These descriptions are, however, numb examerated. The Khamsin or fifiy-days" gale, as the Cupts tern it, the Simouns (semen, pisoil) of the Arahis, blows at the summer - bstice from S, and SE, ower a snifare seorched by no almost vertical sun, and thus arcumulates beat, which dries up all munture, relaves the muscular powers, aul renders respiration diffiealt. But though it enfebbles, it dues nut moee sarily kill. The real peril of the route, which from very renute ages has heen trudden by the earavans, hies in the scanty supfly of water, and in the whlite,ation of the track by the whirlwinds of sand. (Brawh, Tromels, wel. wi. p. 458: Bareklaralt, Niubin, vol. i. P. 207.) The difficulty of passiug the Libyan lesert wats, in fact, imminished by the island, or case, which servei as stepping-stones urross it. Of these mases a more partichlar deceription is given rhmoluri- [OAsts, bat they are too important a feature of thin re, ion to lin quite: omitted from an accont of it. Herolloth (is. 1S1) mentions a chain of thwe patches of werlure extondion foon E. to W. throy.h Litra. Smulons thy are little more than halting-
phes for the caravans.-a spiang of water, surDomied by cate-trecs and a few acres of herbage: shor, like the oasis of El-Rhuryth, are spacious ani! populuns tracts, over wheld nomad bordes \%. uder with their cattle, and a fow form entire pronuces and kingdons, such as $A$ ugila and $F$ ezzun (Regin Phazania of Ptulemy). Onc geological feature is common to them all. They are not clevations of the plain, but depressions of its limestone basis. Into these hollows, which are composed of limestone and clay, the subsoil water percolates, the periodical rains are received, and a rich and varied vegetation springs from the strong and muist earth of the atsis. But even the arid waste itself is not a uniform level. It has considerable inequalities, and even hills of gravel. Probably amid the changes which our globe has undergone, at some perivi anterior to the history, if not the existence of man, the Sühüra, whose level even now is not much above that of the Mediterranean, was the bed of an oceas ruming athwart the continent. Its irregular breadth and ontline fivour this suppasition. It is widest in the western half of N. Africa, betmeen the present kingdom of Morocco and the negro country, anil narrowest between the present states of Tripoli and Khassina, whure it is broken up by watery distriets. As it approaches decypt it becomes again broader. Libyat is, indeed, a land of terraces, ascending gradually from the three seas which bound it to central plateatis, such as the Abyssinian highlands, the Lunae Mloutes, and the Atlas chain.

Before the importation of the camel from Arabia - and this animal never appears in monuments of the Pharaonic times - the iupeliments to large com!anies crossing the Sühüra must have been almost insurmountable. The camel was introduced by the Persians: Darius succeeded in establishing his garrisons in the oases; and in the time of Herolotus they were the stages of a traffic which penetrated Libya nearly from east to west. The Desert, however, was not only a roud for commerce, but itself aiso prodnctive. It exported dates, alum, and mineral salts, which, especiaily in the distriet between El-Siccuk, the ancient Ammonium, and the Natron lakes, cover the soil with an incrustatiun through which the foot of the camel breaks as through a thin coat of ice. The salt was a marketable article with the inhabitants of Nigritia, S. of the Sühara. The components of the salt are muriate, carbonate, and suhphate of soda; and these, both in ancient and modern times, have boch extensively muployed in the operations of bleaching and glassmaking. Libya shows few, if :any, traces of volcanic a ation ; and earthqnakes, except in Acgypt, appecr to have been unknomn. Yet, that the continent has mudergone changes unrecorded in history, is manifest thom ther agatisel mood found on the castern extromiry of the desert in the latitude of Cairo. The Suhir-be-le-Ma, or river without water, is another proof of a change in the elevation of N. Africa. The streams, which once filled its dry hollows, have been violently expelled by stbter rancan action, and thu. silex, agate, and jasper in its neighbourbood indicate the agency of fire. (Newhold, Geolog. off Acgypt, Proceed. of Gcolog. Suciety, 1842.)
it is still an unsettled question whether the ancient geographers were acquainted with the countries S. of the (irest Desert; i. e. with the upper purt of the river (2rorra, conmonly called the Niger. Herodotus (ii. 32) relates, on the authority of some Cyremians, that certain your men of the tribe of

Nasamōnes, who inhabited the syrtis and the district east of it (the present gulf of Sidia), crossed the Desert in a westerly direction, and came to a great river which ran towards the rising sun, and had crocodiles in it, and black nen inhabiting its banks. Notwithstanding some marvellons circumstances, the narrative is probably true in substance ; and, combined with the known activity of the Carthaginian tiade in slaves, gold-dust, ivory, elephants, \&e., renders it likely that the interior was known to the ancients as well as the western coast, within $11^{\circ}$ of the equator. But such knowledge as was acquired by travellers was rarely employed by the Greek gengraphers, who were more intent on accumuliting names of places, than on recording the plysical features, through which alone nanes become instructive.

The mountain and river system of Libya Interior has been partly described in the article Atlas; and the principal featares of its indigenous popalation nuler the heads Gaetuli and Gabamantes. It will suffice, then, to point ont here the effect which the general conformation of the mountains has upon the climate and the rivers. The absence of show on the Atlas range denies to this continent, in its northern portion at least, the privilege of partial refrigeration, although in the loftier regions of the Aethiopian highlands the heat is mitigated by the ice upon their summits. Hence arises the superior volume of the Aethiopian rivers, the tributaries of the Nile, and the milder temperature of the plains surronnding the lake of Dembia, which, although within the tropies, enjoy a perpetual spring. Again, the northern range of Atlas rans so clase to the Mediterranean that the watershed is brief and abrupt, and the rivers are properly mountain streams, which, after a short course, discharge themselves into the sea. The western slope of the Libyci Montes also presents a succession of terraces, which do not propel the rivers with force enough mpon the lowlands to produce a continuous course; so that either they lose themselves in swamps, or are absorbed hy the sands. In some cases, indeed, they cuncentrate themselves in rast inland lakes, which in their turn drain off their superflnous waters in thread-like rivulets. On the southern inclination of Atlas, there is a similar impediment to the formation of large rivers, and not until within a fers degrees of the equator, and in districts beyond the b.unds of ancient Libya, do we meet with majestic streams, like the Senegal, the Quorra, \&ce, rivalling the Nile. On this side, indeed, the irrigated portions of the lowlauds are rich pasture-lands, and the Gireat Desert is bordered and encroacbed npon by luxurious patches both of forest and arable land.

The more remarkable monntains notineluded in the Atlisrange are the following:-On the northern frontier of the Desert, Mons Ater or Niger (Plin. v. 5. s. 5, vi. 30. s. 35), the modern Harusch or Black Mountain, which, rouning from east to west, separated the Oisis Phazania (Fezzan) from Africa Lomana. Westward of this was the Usargala (Oüбápyana opos, Ptol. ir. 6. § 7, \&.c.), the present Adameh-knsuel-uregiad, which ran far into the territory of the Garamantes, and contained the sources of the river Bagrada. This may be regarded as a continuation of the Atlas Major, S. of Numidia and Mauretania. Next, running in a N. direction to the verge of Numidia, and a hranch of the Usargala, Was Mons (irgiri ( $\tau \delta$ ripypt ópos), Tibesti, in which the river Cinyphus arose. Along the Atlantic coast,
and parallel with the fireater Atlas, were the following mountains and luwallards:- Momet Sgapola (ミ̌aүáno入a, I'tol. iv. 6. §̧ 8, icc.), trom which the river Sobus spratig, to SW, of which was Mount Mandrus ( $\tau \delta$ Mavópov ópos), a lung chain of hiills, reaching to the parallel of the Fortunate lslands, and containing the fountains of all the rivers that discharge themselves into the Atlantic, from the Salathus to the Massa, or from (inpe Non to Cape Eojador: Mt. Caphas (Káфas), \& degrees to S., frow which the Daradas flowed, stretched in a SE. direction far into the Desert: Moant Ryssadius
 same name, probably Cape blanco, and in it rose the river Stachir. Of all these mountains, however, the most remarkable as regards the Libyan roek syatem, because it exhibited nuquestionable tokens of rolcanic action, was that denominated the Chariot of the Gods ( $\Theta \in \omega \bar{\nu}{ }^{N} \mathrm{O} \chi \eta \mu \alpha$ ), probably the present Kung, or Sierra Leone. This was the estreme point of sucient navigation on the Atlantic; for the Phocnician leriplas, if it isdeed was actually performed, formed the single exception to the otherwise universal ignorance of the coast befond. As far as modern discoveries have made known the interiur, Libya, from the ocean to the borders of Aegypt, is crossed by a succession of highlands, arising at certain points to a considerable elevation, and sendug forth terraces and spurs tomards the south. It is possible that these may form a continnous chain, but our aequaintance with its bearings is very imperfect. The aveient georraphers distinguished some portions of these highlands by the names of Monnt Bardetus (Bápōŋtoy ópos), west of the Lunac Montes; and in the same lipe, but at a considerable interval, MI. Mesche (Mi $\sigma \chi$ í); Zipha ( $\mathrm{Z}_{\mathrm{i}} \mathrm{a}^{\prime}$ ), north of Mesche; and, appruaching the Atlantic, Mount lon ("Iov ópos), and Dauchis ( $\Delta a \hat{u}$ xcs). In a line with the Chariot of the Gods, and northward of the line of Bardetus, were the elevations Arualtes ( $\delta$ 'Apová $\lambda \tau \eta$ s) and Arangas ( $\delta$ 'Aparyas), the latter of which ran down to the equatorial line. These, with Mount Thala ( $\tau \boldsymbol{\delta}$ ©aiरa bpos), and, further eastward, the serrated range entitled the Garanantic Pharanx or Combe
 of the Acthiopian highlands. That these monntains contain considerable mineral wealth is rendered probable by their feeding the sources of rivers in the gold region, and from the copper pyrites discovered on their flanks. That they were the cradles of innumerable streams is also certain from the rich pasture and woolland which mark the confines of the equatorial region of Libya Interior.
The royage of Hanno was undertaken for the parpose of planting npon the coast of the Allantic trading stations, and to secnre with the regions that produced gold, aromatics, and elephants, a readier communication with Carthage than conld be naintained acruss the Sühüra. That this trale was materially impaired when the Romans became masters of Africa, is probable, hecause the conquering people had little genius for commerce, and becanse they derived the same articles of trade through the more circuitons route of Eggpt and Aethiopia. Yet the knowledge acquired by the Carthaginians was not altogether lost, and the geographers of the empire have left us some inportant information respecting the western coast if Libya as far as $11^{\circ} \mathrm{N}$. lat. According to Ptuleny. the principal promontorics were, beginning from the
N.:-Gannaria (Tavvapía äкра), putul y Cupe.Von: Solö̈ntia ( $\mathbf{\Sigma}$ oduevtia). Cape Bigintion: Arsinarizm (Apgivápoov). Cape Corrviro, the westernmost point of the continent, lying between the mouths of the Daradus and the Stachir ; the healland of Byssidium, Cape Bltuco, a continuation of the mountain ridge of that name, ami a few milos southw:ird of Arsiuarium; the promontorics of Catharom ( $\tau \delta$ Ka日apò hapav). Cape Darra, near the mnuth of the Nia, and of the 1lesprrides, celefrated in fable ('Eanépou kípas, Ptul.; Ile-pertina Cosas, Ilin. s. 1. s. 1), the Cape lierde of the Portuznese : lantly, the term of Hannus voyage, the basultio rock entitled the beadland of Nistium (Noitou kepas). Cape Foxo, or Red Cape, from the cellour of its surfice. Between the two last-mentioned prajections lay the Hesperian bay ('E $\sigma \pi$ '̇pos к $\delta$ रोतo.), which, owing to their misconception of the extent of this continent. the ancients regarded as the ronthern boundary of l.ibya, the point from which it crossed towards Asia, or where the great Southern Ocem commenced.

While enumerating the motntains which concealed their springs, we have nearly exhausted the catalogne of the Libyan rivers which flow into the Atlantic. $1 t$ is a consequence of the terraced conformation of the interior, that the streams would, for the most part, take an easterly or a westerly direction. Those which ran east were the tributaries of the lakes, morasses, and rivers of Aethiopia, and, with the exception of such as fed the Astapus and the Astaboras, have been scarcely explored. On the western side the most impurtant were (Prol. iv. 6. §8) the Subus ( ¿ovisos), the molern Sus, and combining, if not the same, with the Chretes (Xperns) and the Xion ( $\bar{Z}(\hat{a v}$ ) ( (kylax, p. 53). had its source in Mt. Sagapola, and eiterel the Allantic below the furthest western projection of the Greater Atlas. Mt. Mandrus gave birth to the Salathus, at the mouth of which stord a town of the same name: to the Chusarius (Xovodapos), nppriently the Cosenus of Polybius (ap. Plin, v. 1. s. 1); to the Ophiodes (O Oóx'jqs) and Novius (Noíios), between the heallands of Gannalium and Solocis: and, lastly, the Mass3 or Masasat. (lolyb, L. c.) In Mount Capbais arises a more considerable stream than any of the above-mentinned, the modern Rio de Ouro, the meient Daradus ( $\Delta$ ápaঠos,$\Delta a p a r$ ), which containel cricolites, and discharsed itself into the Sinus Nagnos. The appcarance of the erocodile in this river, and the dark population which inhabited its banks in conmon with those of the Niger, led many of the ancient geographirs to imagine that the Nite, wherein similar phenmmenz were observed, took at westerly course S. of Mrene, and, erossing the continent, emptied itself a scond time into the sea in the extreme west. The Acthiopes Hesperii were among the comsequences of this fiction, and were brlieved to be of the sane race with the Aethioptans of the Nile. Niest in order southward was the Ntacbir (EráXeip), which race in Mt. Pys-ndius, and, after forming the Lake Clonia, proceeded in a sE. direction to the bay of the llesperides. The Stachir is probalily represented by the present St. Antonio river, or Rio de (inaon, and stems to answer to the Nalsus of Polyhous (ap. Plin. $l$. c.). The same bay receives the waturs of the Nia, the Bunbotus of Polybins, and the modern Senegal. The river-borse, as well as the croculile, inlmbit its streans. and the lides of the former were esported by the nefshboning tribe of Daratac to Carthage. The Maitlrlus, the pre, ut Ganliat, de-
woun is into the Atlantir finm the Theôn Oetlema, a litth N. of the Hill stome of the Acthipians ( ${ }^{1} 1 \pi \pi \delta \delta \rho о \mu \circ s$ Ai0sorias). or Cape Rorn, with which teminttes the gensrapher I'toleny's limerary of the Lihyan coast. He mentions, inderd, a fers rivers in the interior which have no outlet to the sea, but form vast inland lakes. These are, probabiy, either tributaries of the Miger, or the upper portion of the arns of the Niger itself; but the course of the stroams that flow southward to Vigritia and the Bight of lenin belongs rather to modern than to ancient ecosraphy. It is morthy of notiec, hooreser, that rmuours at least of the din msions of tire Niger must have reached the ears of the old geograu liers (Agathem. ii. 10: Plin. v. 1. s. 1), since they ascribe to the Ger or Gir (Tab. Peutiag. Girin) a course of mote tham 300 miles, with a further curvature to the N. of 100 , where it ends in the li:k chelonides. The direct mainstream was reprowented as diving underground, reaj pearing on the turfice, and fually discharging itself into a lalie callod Nuba.
l.ibya, indend, " is a region of extensive lakes; of whils there appear to be a great number on the hislands of its cast coast, in which many of the rivers from the cllge of the table-land terminate." (Smerville, Pliysicul Geng. wol. ii. p. 9.) In Libira N. of the equatos the following were known to tho ancents :- The Tritmis (Aeschyl. Eumen. 289 Piudar, Pyth. iv. 36 : Sulas. p. 49 : llerod. iv. 178); the lake of the He peri.es (simab. xviii p. 836); the Lilya Palus, which was connected with the Niger by one of its thibutaries: the Clonia, near the eastern Ilank of the Mount Ryssadium ; the Nizritis, into which the upper portion of the Nisir flowed, probably the present $D_{t} h_{1, t h}$ of the Arats, or the Black-Water, SW: of Timbuctoo: the Nubn, in whel the river Ger terninates, and which answers to Lake Tchad, or Nou in Bornon, and whose dimensions almost entitle it to the denonimation of a fren-water sea; and lastly, the cluster of lakes mamed Chelonides, perlaps the modern Fittre, into which an arm of the Ger flows, and which are surrounded with jungle and pastures celelirated for their herls of eleplants. Salt-water lakes abound on the northern extremity of the Sithorra, and the satt obtanned from them has been in every age an article of b:rter with the south, where that necessary of life is wholly wanting. It is obtnisel either fro in these lakes, which, dried up by the summer heat, leave behind a rast quantity of salt, covering extensive patches of the cath, or from large beds, or layers, whicls trequently extend for many miles, and rive into hills. The inhabitants of Nigritia purchase s:lt with gold-dust. A seareity of salt in Kashuia and Timbuctoo is equivalent to a fantine in other Iauds. At such times the priee of salt becones $=0$ extravacant, that Leo Africaws (1. 250) saw an as's load sold at Timbucteo for ei_ lity ducats. The neighbourhood of the lakes is also celebrated for the number and luxuriance of its date trees. To the borderers of the Devert the date tren is what the brad-frnit tree is to the South S:a manders. Its Iruit is food for buth men and cartle : it was capall le of being prescrved for a lons time, and convegel to great distances ; while, from the sap or fruit of the trec (Rommell, Erperd, fo Cyrus, p. 120) was extracted a liquor equally iutuxatating with wine.

Iopulation. - Nervdutus (iv. 16R-199) distinguthes four $n$ ain elements in the population of Libya - (1) the Libyans, (2) the Aethiopitans,
(3) the Phoenicians, and (4) the Greeks. He ennmerates, moreover, a considerable number of indigenous tribes, and his catalogne of them is greatly increased by subsequent writers, e.e. Scylax, Hanno, Pulybius, and Ptolemy. When, however, we wonld assign to these a generic connection, or a local habitation, the insurmountable difficulty meets us which ever attends the description of nomad races; ignorance of their language, of their relations with one another, and their customary or proper districts. The Greek geographers, in their efforts to render the names of bartarians euphonic, impenetrably disguise them for the most part. Again, their information of the interior was principally derived from the merchants, or guides of the caravans : and these persons had a direct interest, even if their knowledge were exact or varions, in concealing it. Moreover, the traveller, even if unbiassed, was liable to error in his impression of these regions. The population, beyond the settled and cultivated districts, was extremely fluctuating. In the rainy season they inhalited the plains, in the hot months the highlands, accordingly as their cattle required change of climate and pasture. The same tribe might, therefore, be reckoned twice, and exhibited under the opposite characteristics of a highland or a lowland people. Savage races also are often designated, when described by travellers, by names accidentally caught up or arbitrarily imposed, and not by their gennine and native appellations. Thus Herodotus, in common with the other geographers of antiquity, gives an undue extension to the name Aethiupes, derived from the mere accident of a black or dark complexion, and bad he been acquainted sith the Caffirs and the Hottentots, he would, doubtless, from their culour, have placed them in the same eategory. The diet of the lehthyophagi was not restricted to fish, since they were also breeders of cattle; but they acquired that appellation from their principal food at one season of the year. The Troglodytes, duing the spring and summer months, dwelt among the low meadows and morasses of Merüe and Aethiopia; but their name was given them because, during the rainy period, they retired to habitations scooped in the rocks. With regard to the native rices of Libya, the only secure presumption is, that they formed one of those sporadic offsets of the human family which remain in, or aequire a lower degree of civilisation, because they have wandered heyond the verge of the great empires and communities in which civilisation is matured. The Libyan continent has, indeed, been in all ages the principal resort of these sparadic tribes. The deserts, which intervene between the cultivated and uncnltivated portions of it, remored much of its population from the neighbourhool of cities; they were liable to no admixtures from other countries ; they were never thoroughly subdued or intermingled with superior races : and though, as in the instance of the Perioeci of the Greek states, the Lily-Phoenicians in the dominions of Carthage, and the subordinate castes of Aegypt, they were not incapable of a high material cultivation : yet, when left to theinselves, they contimed to exist under the simplest forms of social life. Combining the glimpses we obtain from the ancients with the more accurate knowledge of the moderns, we are warranted in ascribing to them, generally, a monarchical form of government, with some control from the priests and assembly of chief men, warlike and migratory habits, debased coudition of the female sex, and the vice of Africa,
in all ages, constant warfare, waged with the sule purpose of supplying the slave-markets of the North and East.

The Fauna of Libra must not be unnoticed. In the northern deserts tawny and grey tints are the prevailing colours, not merely in birds and beasts, but also in reptiles and insects. In consequence of the extension of this barren region from North Africa through Arabia to Persia and India, many similar species of animals are common to both contivents, - as the ass, antelopes, leopards, panthers, and hyaenas. The eat tribe prevails in great beanty and variety: the lion of Mount Atlas is said to be the stronsest and most formidable of his species. The African elephaut is different from the Asiatic, and las always been preferred to it for military purposes. The hippopotamus, which was known to the ancients as the inhabitant of the Senegal and the Upper Nile, appears to be a different species from that which is fonnd in the inter-tropical and suuthern parts of the continent. The magot or Barbary ape was known to the ancients, and is mentioned by the Byzantine writers as imported for the menageries of Constantinople. The giraffe or camelopard is found as far north as the Great Desert. It appears on the monuments of Aegypt, and was exhibited in the imperial triumplis at Rome. The Atlas region contains two kinds of fallow-deer, one of which is the common fallow-deer of Europe. The ox of Nubia, Abyssinia, and Bornou is remarkable for the extraordinary size of its horns, which are sometimes two feet in circumference at the root. Of the Libyan animals generally it may be remarked, that while the species which require rich vegetation and moch water are found in the Atlas ralleys and the phains below them, the Desert abounds in such kinds as are content with scantier herbage,-such as the deer, the wild ass, and the antelope. These being fleet of foot, easily remove from the scorched to the green pasture, and find a sufficient supply of water in the ooze of the river beds.

As regards its Flora, the northern coast of Libya, and the range of the Atlas generally, may be regarded as a zone of transition, where the plants of southern Enrope are mingled with those peculiar to Africa. The Greek and Phoenician colonists built their naval armaments of the pine and onk of Mount Atlas, the Aleppo pine and the sandarach or Thuia articulata, being celebrated for their close grain and durability. The vegetation of the interion has been already in part mentioned. The large forests of date-palms, along the southern base of the Atlas, are its principal woodland. The date tree is indigenous, but improved by cultivation. Of the Desert itself stunted shrubs are the only produce besides the coarse prickly grass (pennisetum dichotomum), which covers large tracts, and supplies fodder to the camels.

For the authorities opon which this acconnt of Libya rests, see, besides the ancjent writers already cited, the travels of Shaw, Hornenumn, Burekhardt; Kitter's Erdkunde, Africr: Heeren, Ideen, vol, i.; Mannert's Géugraplie, Libya; and Naitehrun, Afrique.

L173YCl's Nowos. [Mamatica.]
LHBYPHOENICES (ALeqpownes, sitnctimes spelt Aisoфoivikes) a portion of the population of N. Africa, who ate defined by Livy, in arconlance with the signification of their name, as " mixtum Prmickon Afris ginus" (Liv. xxi. 22). Diodorns gives a somerbat fuller account of thrm, as one of thie font races wha iuhabited the Carthacinian territory in N. Africa, namely, the Punic inhabitants of Carthaze, the Libyphoenieinns, the Libyans, and the Numidians: and lie says that the Libyphoenicians posseneed many of the cities on the seashore, and had the tie of intermantiace with the (arthaginians (Diol. xx. 55), Pliny reatricts them tor the S. part of the ancient teritory of Carthage. (I'lin. v. 4. s. 3: Libyphomices rocanticr qui Byzurciun incolunt) ; and there can be no donbt, from the nature of the case, that the original seat of the race was in the country around Curthaze. It is not, however, equally elear whether the Libyphneniicians of the Carthasimian colonies along the const of Atrica are to be regarded as a race ariving out of the intermarriage of the origioal Ponic settlers with the natives of the sarrounding country, or as the descendants of Libyphomicians from the country round Cartbage, who had been sent out as colonists. The latter is the more proinble, lyath from indications which we find in the ancient writers, and from the will-known fuct that, in all such cases, it is the lall-breed which multiplies rapitly, so as to make it a matter of importance for the members of the prre and domimant caste to bind a vent for the increasing numbers of the race below them. That such was the policy of Cathage with regard to the Libyphoenicians, and moreorer that they were marked by the energy and success which usnally distinguishes such balf-bred races, we liave some interestian prook. The defence of Ast entum asainst the Romans, during the Second Iumic War, was signalised by the skill and energy of Mutines, a Libyphoenician of Ilipponium, whem Livy describes as " vir iupiger, it sub Itennibale m gistro mones belle artes cefoctus" (Liv, xxv, 40). The mention of his native place. Alipponium, on the Bruttian cosst, a city which had been for some simie in the hands of the Cartlapimians, is a pronf of the tendency to make we of the race in their foreign settlements; while the advantage taken by Haunibal of his talents agrees with the fint that he empluyed Libyphoevician cavalry in his arovies. (Polyb, iii. 33; Lir. xxi. 22.) Xicbular has traced the presonce of Libyp hoenicians in the P'u ic setthments in Sordinia, and their further mixture with the iardinians, as attented by Cicero in an intoresting fragment of his speech fior Scaurns. (Luctures mo Anc. Geag. vol. ii. p. 275.) Avionus mentions the " wild Libyphnesicuans" on the S. cosast of Spain, E. of Calpe: (Or, Mar, 419.) Perlup the halftred races of the Spur is colomies in Amectica furnish the closest analogy that can be found to the libyphoenician subjects of Carthure.
[P.S.]
LIBYSSA (Ai6ugaa ir Aifiraa. Pt小. v. 1. \$13: Eith. A(Everacos), a twom ther muth wist of the Sis us Atacenm in Pithynia, un the rand from Ni-

7 : the fla in containing the tomb of the ; eat IIanwhtal. (Plat. Flom, 20 ; Steph. B. s. v., I Ilin. II.N. v. 43 ; Amm. Marc, xxii. 9 ; Eutrop. iv. 11 ; /tin. Ant. p. 139: Itin. IIicr. p. 572.) In J'liny's time the town no longer existed, but the spot was noticel only because of the tumulus of Hannibal. Accordins to Appian (Syr. 11), who evidently did not know the tawn of Libyssa, a river of Phrygia was called Libysus, and lie states that from it the surrounding country received the name of Libysa. The slight resemblance betreen the name Libys:a and the modern Gihebse bas led some geographers to regard the latter as the site of the ancient town; but Leake (Asia Minor, p. 9), from an accurate computation of distances, has shown that the modern Mulliys in is much more likely to be the site of Libyssa,

## [I. S.]

LI'ATII, or LICATTII (Aıкáтьor, or Aıќттioı), a tribe of the Vindelici, dwelling on the banks of the river Licias or Licus, from which they derived their name. (Ptol, ii. 13. § 1.) Strabo (iv. p. 206) mentions them amone the most andacious of the Vimblelian tribes. Illiny (iii. 24), who calls them Licters, enumerates them anong the Alpine tribes sublual by Augustas.
[L. S.]
II'CHADES (ai Ac $\chi$ ábes), a group of three snall islauds between the promontory of Cenaeum in Eubuea snd that of Cnemides in Locris. They are said to have derived their name from Lichas, who was here thrown into the sea by Hercules, when he was suffering from the puisoned garment. (Strah. i. p. 60, is. p. 426 ; Plin. iv. 12. s. 20 ; Lenke, Northern Greece, vol. ii. p. 177.)

LICIAS, LICU's (Askias: Lech), a small river in Vindelicia. (Ptol. if. 12. § 2, 13. § 1 ; Ven. Fort. Iit.S. Mart. iv. 641.) It ussumed the modern form of its name as early as the time of the Lombards (Paul. Diac. Lonqub. ii. 13.) Its ouly tributary of any note was the Virdo or Vindo. It has its ssurrees in the Alps, and, flowing in a northern direction, empties itself into the Dambe, not far from Drusomagus.
[L.S.]
LICIAIANA. [Lusitinia.]
LII)E ( (iō $\eta$ ), a mountain in Caria, in the reighbowhon of Pedastis. In the war of Cyrus azaiust the Carians, the Pedasaeans alone of all the Carians maintained themselves against Harpalus, the Persian commander, by fortifying themselves on Jount Lide ; hat in the end they were also reduced. (Herod. i. 175. viii. 104.)
[L. S.]
LJG.ll\$I, a people of Gallia Narbonensis, mentionel hy Pliny (iii. 4): "Regio Oxubiormm Ligannormuque : super quos Snetri, \&ce." The nest firgio to the east that he mentions is "Regio Deciatium." If we can make a safe conclusion from Pliny's text, the Ligauni must have been close to the Oxyhii, with the Deciates to the cavt, and somewiere between the Argenteus river and AntipolisWalckenaer (Giog. gc. vol. ii. p. 42) places the Lisami in the parts about Saint-1allier, Callian, and Fuyen.
[G. L.]
LIGER, LIGFRIS (Acirmp. Ai yeíp: I.oire), a river of Cidllia, which has the largest basin of all thie French rivers. The orthugraphy seems to be Liger or $\operatorname{Ael}$ gmp (Cacs. iii. 9, wl. Schmeider), though the If mans made both syll:bles short. In Caesar (vii). 55), the uominative " liger" necurs, and the genitive "L geris." In B. G. vii. 5, 11, the accusative "1.igerera," or according to a me editions "Jizerim" oecurs: and "Li_+rith," if it is ri,ht, must have a no: inative "Liguis." The forms " Lagere," " hi-
griti," for the ablative also occur in Caesar's text. The form Aiyetp oceurs in I'tolemy (ii. $7 . \S 2$ ), and in Stephanus Byz. (s. v. Béétip), who has also Airveps ( $s . v$ : Airvpes), with a renark that the ligures, wbo border on the Tyrrbeni, derive their name from the river Ligyrns. Dion Cassius (sxsix. 4i, xliv. 42 ; and the notes of Recimaras), bas the shorter form Airpoos. Lucan (i. 438) is generally cited as authority for the Roman quantity of the word:
"In nebulis Meduana tuis marcere perosus
Andus jum placida Ligeris recreatur ab unda."
But these verses are spurious. (See the Notes in Oudendorp's editition.) According to Straho, the Loive rises in the Cérennes ( $\tau \dot{\alpha}$ Ḱé $\mu \mu \in \nu a$ ), and flows into the ocean. But he is mistaken as to the cuurse of the Loive, for he makes both the Garumna and the Liger flow parallel to the P'yrenees ; and be was further mistaken in supposing the axis of the Pyrences to be south and north. [Gailia TransALrisa, rol. i. p. 949.] He estimates the navigable part of each river at 2000 stadia; but the Loive is a much longer river than the Garonne. He says that the Loire flows past Genabum (Orlians), and that Genabum is situated about baif way between the commencement of the navigable part of the river and its outlet, which lies between the territory of the Fietones on the south, and the territory of the Niunnetes on the north; all whieh is correct enough. (Strab. iv. pp. 189, 190, 191.) He adds that there was a trading place ( $\ddagger \mu$ торtiov), named Corbilo [Cornito], on the river, which Polybins speaks of. It appears that Strabo did not distinguish the Elaver (Allier) from the Loire, for he says: "the Arverni are situated on the Liger, and their ehief city is Nemossus, which lies on the river ; and this river, flowing past Genabum, the trading town of the Carnutes, which is situated about the middle of the navigable part, diseharges itself into the ocean" (p. 191). But Nemossns is near the Allier.

Caesar was aequainted both with the Elaver (rii. 34,35 ) and the river properly called the Loire. He crossed the Elaver on bis marcb to Gergovia. [Gergova.] He remarks that the Allier was not generally fordable before the autumn; and in another place (B. $G$. vii. 55 ) be describes his passage orer the Loire at a season when it was swollen by the melted snow. When Caessar was preparing for his naral warfare with the Veneti, he bad slips built on the Loire. (B. G. iii. 9.) He does nat tell us where he built them, but it may bave been in the country of the Andes or Andecasi, which be held at that timie.

Of the four passages which were made in Strabo's time from Gallia to Britannia, one was from the mouth of the Loire; and this river was one line of commercial conmunieation between the Proxincia and Britannia. Goods were taken by land from the Provincia to the Loire, and then carried down the Loire. (Strab. iv. p. 189.) Pliny (iv. 18) calls the Loive "flumen clarum," which Forbiger explains ly the words "elear strenm;" but this does not seem to be what Pliny means. Tibullus (i. 7, 11) suys,
"Testis Arar Rbodanusque celer magnusque Ga rumina,
Carauti et flavi caerula lympba Liger."
This seems to be all that the ancient gengrayhers have said of the Loire. The Elaver (Allier) rises in Muns Lesnra (Mont Lozire), not very far from
the source of the Loirer, and on the surth-west side of the Ceermms. It flows nurth throngh the fertile Limagne $d$ Ancergne, and after a course of alout 200 miles juins the Loire at Noviolunum or Nuviraum (Nevers). The Loire rises in Jout Mezenc, and flows north to its junction with the Allier in a valley between the valley of the Allier and the basin of the Rhone. From Nivers the course of the Lo ive is north-west to Genabuun (Orlians): and frow Orleans it has a general west course to the occan, wbicb it enters lelow Nantes. The whole length of the river is abore 500 miles. Several large rivers flow into it on the left side below Ortéans; and the Mayenne on the right sille below Tours. The anta of this river-basin is 50,000 square miles, or as much as the area of Eugland. The drainase from this large surface passes througb one cbanacl intc the sea, and when the volume of water is incereared by grent rains it causes inumdations, and does great damage
[G.L.]

## Li'gures. [Ligura.]

## li'gures baebin'ni et corneliani

 [Hmerisi.]LlGU TilA (Aryoupía, Ptol.; but in earlier Greek writers alnays in Aryuacukí: the people were ealled by the Greeks Aíyues, but by later writers Aiguativos: by the Romans Ligures; but the adjective form is Ligustinus), one of the provisces or regions of Northem 1 taly, exteading along the N. coast of the Tyrrhemian sea, from the frontiers of Gaul to those of Etruria. In the more precise and definite sense in which the name was employed from the time of Augustus, and in which it is used by the geographers (Strabo, Pliny, Ptoleay, \&e.), Liguriat was bounded by the river Yarus on the II., and by the Macra on the E., while towards the N . it extended aeross the chain of the Maritime Alps and Ajeanines as far as the river Padus. The Trebia, one of the confluents of the Padus on its right bank, appears to bave formed the limit which separated Liguria from Gallia Cisprulana. In this sense, Liguria constituted the ninth region of 1taly, according to the division of Augustus, and its boundaries were fixed by that 2xonarch. (Plin. iii. 5. s. 7; Strab. v. p. 218; Mel. ii. 4. § 9 ; l'tol. iii. 1. § 3.)

But Liguria, in its original sense, as "the land of the Ligurians," comprised a much more extensive tract. All the earliest authors are agreed in representing the triies that occupied the western slopes of the Maritime Alps and the region which extends from thence to the sea at Massilia, and as far as the mouths of the Rhone, as of Ligurian, and not Gaulish origin. Thus Aeschylns represents Hercules as contending with the Ligurians on the stony plains near the moutlis of the Rhone, Herodotns speaks of Ligurians inhaliting the country above Massilia, and Hecataens distinctly calls Massilia itself a city of Liguria, while he terus Niarbo a city of Gani. Seylax also assigns to the Lizurians the coast of the Mediterranean sea as far as the mouths of the Rbone; while from that river to Enporium in Spain, he tells us that the Ligurians and liberians were intermiogled. The Heli. $\mathrm{y}_{\mathrm{c}} \mathrm{i}$, who, aceording to Avienus, were the earliest inhabitants of the country aronnd Narbo, were, according to Heeataens, a Ligurinn tribe. (Aeschyl, ap. Strah. iv. p. 183; Hecat. Fr. 19, 20, 22, ed. Klausen; Herod. v. 9; Scyl. p. 2. §§ 3, 4; Avien. Or. Marit. 584; Strab. iv. p. 203.) Thucydides also speaks of the Ligurians lhaving expelled the Sicanians, an lberian trive from the bauks of the river Sicanus, in

Iluriu, thas pointing to a still wider extension of thar buwer (Thue, vi. 2.) But while the I cotrian settlements to the W . of the Rhone an butu ober-ure and uncertain, the tribers that extended trana that river to the Maritime $\mathrm{Al}_{\mathrm{p}}$ and the continns of Italy - the Salyes, Oxybii, and Deciatis-are assizned on grool atathority to the lisurian race. (Strab, iv. pr. 202.203; Pol. xxxiii. 7.8.) On their entern frumtier, alsn, the Lizurians were at one time more widely spread than the limits abrive describel. Polybins tulls us that in his time thry occupied the sea-coast as far as lisae, which was the first city of Etruria: and in the interior they held the mountain districts as far as the confines of the Arretines. (1'ol. ii. 16.) In the marrative of their wars with Rone in the 2 nd century B. C, as given in Liry, we find them extending to the same limits: and Lycophron represents them at a much earlier perind ns stretching far down the coast of Etrmia, hefore the arrival of the Tymhenians, who wrestal from them by force of arms the site of Pisace and uther citics. (Lycuphr. Alex. 13.56.) The prpalation of Cursica also is ascribed by Sonea, and probably witl good rason, to a Ligurian stuck. [Consu:A.] On the N. of the Apermines, in like manner, it is probable that the Ligurians were far more willely spread, bef re the settJoment of the Gunls, whonsectipied the fortile plains and drove then back into the mountains. Thus the Laevi and Libici, who occupied the banks of the Ticinus, appear to have been of Li ;-mian rave (Plin, iii. 17. s. 21 ; Liv. v. 35): the Taurihi, who certainly dwelt on both banks of the l'alus, wore unquestionably a Ligmian tribe ; and there storns much reason to assign the same origin to the Sulassi albo.

It regard to the national affinties or origin of the Lifurians themselves, we are alm ist wholly in the clank. We know only that they were not either Jloeians or fatuls strabo tells us distinctly that thoy were of a different race from the Gauls or Celts who inlabited the rest of the $\Lambda$ ips, thouzh they resembled them in their nonde of life. (Strab ii. p . 128.) And the same thing is implied in the marked llistinction uniformly observel by Livy and other I:man writess betwen the Gialish and Lisurian tribes, notwithstadiug their cluse guggraphical proximity, and their frequent alliance in war. Dionysius says that the origin and descent of the Ligurians was wholly muknown, and Cato appears to hase acyuiesed in a similar cumelusions. (Diumys. i. 10; Cato, up. Serv, oul.Acu. xi. 715.) But ial ancient anthors appar to lave agreed in regarding them ats on of the most ancient nations of Italy; and on this accuut Philistus repmesented the Sizulif as it Li uriau tribe, while other authurs assicned the satme ori_in to the Abori_ines of Latium. (Diunys. i. 10, 22.) Several modern writers have maintained the Celtic oricein or afinity of the Ligurians. (Clitver. Itul. pss. $49-51$ : (izotetosid. Alt.-Atalitar, vol. ii. 1f, $5-7$. ) But the suthonsy of straby scems decisive arainst any vose whamtion between the two races: and it is impes ithe, in the abomee of all remains of their lamenate, to form even a reasonable conjectare as to their mome remote aftinities. A fact mentimed by Plutateli (Mom: 19), acomding to whom the Lizurims in the army of Marius catled thomedves in their own lamgnute Ambroms, though curious, is mach tom isalmen and marertan to be reconed as reaterndile promit of a common orisin with the Gatils of that nam:

The name of the Lo matians appeare t liav been
obsemrely known to the Greeks from a very early puriod, for even 11 asiod noticed them, in conjunction with the Seythians and Acthiopians,-evidently as the of the most distant nations of the then known world. (Ilesiod. ap. Strab. vii. p. 300.) But from the time of the foundation of the flourishims Greek colony of Massilia, which speedily extended not only its commerce but its colonics along the shores if Liguria, as well as those of lberia, the name of the Lizurians must have become familiar to the Greeks, and was, as we have seen, well known to Hecataens and Aeschylus. The Ligurians seem also from an early period to have been reaily to engage as mercenary troops in the service of more civilised nations; and we find Ligurian ausiliaries already mentioned in the ereat army of the Carthoginian gencral Hamilcar, in s.e. 480 . (Herod, vii. 165; Diud. xi. 1.) The Greck despots in Sicily continned to recruit their mercematy forces from the same quarter as late as the time of Arathocles. (Diod. xxi. 3.) The Grecks of Massilia founded colonies along the cant of Ligurin as far as Nieaea and the Portus Herculis Mnnoeci, but evidently never establisherl their power for inland, and the mountain tribes of the Ligurians were lelt in the enjoyment of undisturbed indejen lumce.

It was not till the year 237 B. c. that the Ligurians, for the first time, came into contact with the arms of Nome; and $P$. Lentulas Caudinus, one of the consuls of the following year, was the first who celebated a trimmph mer them. (Eutrop, ini. 2 ; Liv. Epit. xa. ; Fust. Capit.) But the surcesses of the Romans at this period were evidently very partial and incomplete, and thongh we find one of the comstul. for severnl years in sucembion sent against the ligurims, and the name of that prople appean three times in the triumphal Fasti (B. C. 233-2.23), it is evident that nothing more was accomplished than to prevent them from keeping the lield and compel tlem to rake refuge in the mountains (Zonar. viii. 18, 19). The Ligurian tribes with whom the limans were at this time engared in hostilities were exelnsively thue on the N . of the Apennines, who arade common canse with the neightorang Gaulish trihes of the Buians and Insubrians. These prtty hostilities were for a time interrupted by the inore important contest of the Second Puuic War. Daring that struggle the Ligurians openly sided with the Cartha_inians: they sent support to Itarnibal, and furnishel an important contingent to the araiy with which Hatadrubal fought at the Metaurus. Ag:ain. bofore the close of the war, when Mago landed in their territory, and made it the base of his oproations against C'isalpine Ganl, the Ligurians eqpotsed his cans: with zeal, and prepared to support lime with their whule furces (Liv. xxii 33, xsvii. 47, xxviii. 46, xxix. 5). After the untimely fate of $\mathrm{D}_{\text {iz }} 5$, and the close of the war, the liomans wore in nu haste to punish the Lignians and Gauls fur their defietion, but those nations were the first to take uj ams, and, at the instigation of the Carthagininn llanilenr, broke out into open hontilities, (s. c. 200), anl atfacked the Roman colonies of Pla entia and Cremonat. (Liv, xaxi. 10.)

From this time commenced the long series of wars between the Romans and Ligurians, which continued with little internission formbove ei, hty years. It would be imponsible to give here any detailed account of these loug protracted, but desultory hostilities ; indeed we jessess, in reality, very litfle information concorning them. So long as the bouks of Livy are pre-
served to us, we find perpetually recurring notices of campaigns against the Ligurians; and while the Roman arms were overthruving the powerful empires of Macedonia and Syria in the East, one, and sometines both, of the consuls were engaged in petty and inglorions hostilities with the hardy mountaineers of Liguria. But the annual records of these camjnigns for the most part throw little light on the true state of the cuse or the progress of the Roman arms. It is evident, indeed, that, not withstanding the often repeated tales of victories, frequently celebrated at Rome by triumphs, and often said to have brea followed by the submission of the whole Ligurian nation, the struggle was really an arduons oue, and it was long before the Romans made any real prouress in the reduction of their territory.

One of the most formidable and powerful of the Ligurian tribes was that of the Arcani, who inliabited the lofty group of mountains bordering on Etruria, and appear to have oceupied the valleys of the Macra and Ausar (Magra and Serchio), while they extended eastwards :ilong the chain of the Apennines to the frontiers of the Arretines and the territory of Mutina and Bononia. To oppore their inrends, the Romans generally made l'isae the head-quarters of one of their armies, and from thence carried their arms into the heart of the mountains : but their successes seldom effected more than to compel the enemy to disperse and take reluge in their villages and castles, of which the latter were mountain fastnesses in which they were generally able to defy the Roman arms. It was not till m.e. 180 that the first effectual step was taken for their reduction, by the consuls Cornelins and Batbius, whe, after having compelled them to a nominal submission, aldpted the expedient of transporting the whole nation (to the number of 40.000 , including women and children) to a distance from their own country, and settled them in the heart of Sannium, where they continued to exist, under the name of "Ligures Corneliani et Baebiani," for centuries afterwards. (Liv. x1. 38, 41.) The establishment of Ruman culoni-s at Pisae and Luca a few years atterwards tended to consolidate the conquest thus obtained, and establisbed the Roman dominion permanently as far as the Macra and the port of Luna. (ld. xl. 43 , xli. 13.) The Fhinintes, a tribe on the N . of the Apemines, near the sources of the Scultenna (Panaro), bad linen reduced to suljection by C. Flaminius in B. C. 187, and the obscure tribes of the Briniates, Garuli, Hercates, and Lapicini apprar to have been finally subdued in B. c. 175. (II. xaxis. 2, xli. 19.) The Ingaeni, one of the most powerful tribes on the coast to the W. of Genua, had been reduced to nominal submiesion as early as n.c. 181, but appear to bave been still very imperfectly subdued; and they, as well as their neighbumrs the Intemelii, continued to harass the territory of the Romans, as well as of their allies the Massiliins, by piratical expecticions. (Liv. xl. 18, $2.5-28,41$.) In b. c. 173 the Statielli were reduced to subjection (1d. xlii. 8, 9 ); and the nane of this people, which here appears for the fisst time, shows that the Romans were gradually, though Nowly, naking gnoi their advance towards the W. From the year 167 n.c., wien we lose the guidance of Livy, we are unable to trace the Ligurian wars in any lletail, but we find triumphs over then still repeatelly reourded, and it is evident that they were still nusubdined. In b.c. 154 the Romans for the tirst time attacked the Ligurian tribes of the Oxybii
and Deeiates, who dwelt W. of the Vanıs, and were therefore not indluded in Italy, according to its later limits. (Liv. Lpit. xlvii.; Polyb. xxxiii. 7.) It was not till more than tbirty years afterwards (B. C. 123-122) that two successive triumplis celebrated the reduetion of the more pawerful tribes of the Vocontii and Sallurii, buth of them in the same neigbbourlond. But while the Ligurian tribes W. of the Maritime Alps were thas brought gradually under the Roman yoke, it appears that the subjection of those in Italy was still incomplete ; and in B. c. 117, Q. Marcius for the last time earned a triumph " de Liguribus." (Fast. Capit.) Even atier this, M. Aemilius Scaurus is said to have distinguished limself by fre-h snccessies orer them; and the construction by him ( $\mathrm{E} . \mathrm{C}, 109$ ) of the Via Aemilia, which extended alung the coast from Luma to Vada Sabluata, and from thence inland across the Apennines to Dertona, may he ronsilered as marking the period of the final subjusation of Ligutia. (Strab. v. p. 217; Aur. Vict. de Virr. Illustr. 72.) But a remarkable expression of Strabo, who says that, after eighty years uf warfare, the Romans only surceeded in securing a space of 12 stadia in breadti for the free pasaaye of public officers, slows that even at this time the subjection of the mountain tribes was but imperfect. (Strab. iv. p. 203.) Those which inhabited the Maritine Alps, indecd, were not finaliy reduced to obedience till the reign of Augustus, B. C. 14. (Dion Cass, liv. 24.) This bad, howerer, been completely effected at the time that Sirabo "rote, and Lignia had been brought under the sane system of alministration with the rest of 1taly. (Strab. l.c.) The perived at which the Ligurians obtained the Foman franelise is unknown : it is pelhaps probable that the towns oltained this privilege at the same tine with those of Cizalpine Gaul ( $\mathrm{n} . \mathrm{c} .89$ ) ; but the monntain tribes, even in the days of Pliny, only enjoged the Latin franchise. ( $\mathrm{I}^{\mathrm{l}} \mathrm{lin}, \mathrm{iii} .20$. - 2.24 .)
In the division of Italy under Angustus, Liguria (in the more linited sense, as alvady detined) constituted the ninth region (1'lin. iii. 5. s. 7), and its bondaries on the E. and W. appear to liave contimued unclanged thronghout the period of the Roman Empire: but the Cottiam $\mathrm{Al}_{\mathrm{q}^{s},}$ which in the time of Augustus still constituted a separate district under their own native chieftain, though dependent upou Rome, and, from the reikn of Nero to that of Constantine, still formed a separate procince, were incorporated by Constantine with Liguria; and from this period the whole of the region thins constituted came to be known as the Alrys Cortiak, while the name of Liguria was thansferred (on what acoount we know not) to the eleventh region, or Gallia Transpadama [ltalia, p. 93]. Hence we find late writers uniturnly speaking of Mediolanum and Ticinum as cities of Liguria, while the real land of the Ligurians bad altogether hest that appellation, and was known only as "the province of the Cintian Alps." (Lib. Prorince. : P. Diae. Ilist. L.ang. ii. 15, 16; Jormand. Got. 30, 42 ; Procop. B. G. i. 14; Bücking, ad Not. Dign. ii. Pp. 442, 443.) It is evident that long betore this clange took place the Lignimis mus: have lost all traces of their distinct nationality, and becone blended into one common mass with the other Italian subjects of Rome.

Ligmia is throughout the greater fart of its extent a mountainuus country. The Maritime $A p_{p}$, which formed the western boundary, descend completely to the sea in the neighbourliood of Nice and

B/oumow, while the main chain of tlu same tomon tains, turning off from the general direction of the enntral ciasin of the Alps near the sumees of the Jor (Varus), is prolnged in a lefty and ruged ranze till it reaches the sea between . Toli and Sorema. The lateral rameses and off hoots which deacend frina these mountiuns to the sea" occupy the whole line of coast from Monaco to Saroria. Hence this line has always been one where there has been much difficulty in making and maintaining a practicable road. It was not till the reign of Ausustus that the Romans carried a highway from Vada Sabbata to Antipolis; and in the middle ages. when the Roman reads had fallen into decay, the whole of this line of coast became proverbial for the difficulty of its commmications. (1)ante, Purg. iii. 49.) From the meighbourhood of Vada Subbata, or Surrona, where the Alps nay be considered to end and the Apennines to begin, the latter chain of mountains runs neally farallel with the coast of Liguria throughout its whole extent as far as the river Macra; and though the range of the Apeunines is far inferior in elevation to that of the Maritime Alps, they nevertheless constitute a mountain mass of a rugged and difficult character, which leaves scarcely any level space between tbe frot of the mountains and the sea. The murthern declivity of the Apemnines is less abrupt, and the mountains gradually subside into ranges of sterp wooded hills as they approach the plains of the Po: but for this very reason the space occupied by the mountainous and billy tract is more extensive, and constitutes a broad belt or band varying from 15 to 30 miles in width. The narrowest portion of the range, as well as ome of the lowest, is mmediately at the back of Gicnoa, and fur that reason the fass from that city to Dertona was in aneient as well as modern times of of the prineipal lines of canmunication with the interior. Anuther natural pras is marked out by a depression in the ridge between the Maritime $\mathrm{Al}_{\mathrm{p}}$ s and Apemines, which is crosed by the road from Sarona to Cira. This line of road commonicates with the flain the the N. for of the Maritime Alpo, extending fom the neighbenrhond of Coni and Jomelori to that of Turin, which is whe of the nost extensive tracts of firtile and level country comprised within the linits of the armient Ligntia. E.. of this, the hills of the Astigiana and Mconfirreat extenil from the fion of the Apmines (of the murthern slopes of whin they are, in takt, a mere contmuation) quite th the bank of the $P^{\prime}$ : but are of mulerate clevation and comstitute a fertile country. Beyond these, asain, another tract of flain occurs, but of less extent: for though it runs fir up into the membains mor Nori, it is som lammeal in again by the hills which descend to Tortona (Drrtona). I'oblara (lria), and Custrygio (Clampilium), su ats to hate but a marrow stip of flain botween them and the bataks of the $P$ o.

The physial features of hiemia naturally exercised a marked influcmer on the clanacter and habits of its inlabitants. It was with the triters who ocenfind the lofty and auged sanges of the Ajenmmes E. of the Mena (where theere numitains rise to a nuoh greater clenation, and assume a much mose Alpine character, than in any jart of likuta perper) that the Fomans waged their longeet and most ib. Amate contosts; but all the nibes who mhalinted the Mfer valles- of the central chain, and the steep and whered dertivities of the Al emminen towands ther sern, jauterk of the same handy and warlike dhatater. On the other hand, the statielli, Vignmi, and other
trilies whon oecmied the mare fertile hills and val ter on the N. dethinty of the Apenmines, were eviden: weluced with comparatively little difficulty. It is to the former portion of the Ligurian people that the character and description of them which we find in ancient writers may be considered almost exclusively to apply. Strabo says that they dwelt in scattered villages, tilling the soil with difficulty, on account of its rugged and barren character, so that they hal almost to quarry rather than dig it. But their cbief subsistence was derived from their berds, which supphed them with flow, cheese, and milk; and they made a kind of drink from barley. Their mountains also supplied timber in great abumdance and of the largest size. Gemua was their principal emporiun, and thither tiey lorought, for export, timber, cattle, lides, and boney, in return for which they received wine and oil. (Stabo. iv. p. 202, v. p. 218 ; Diod. v. 39.) In the days of the gengrapher they produced but little wine, and that of bad quality ; but $l^{\prime}$ liny speaks of the Ligurian wines with commendation. (Strab. p. 202; Plin. xiv. 6. s. 8.) The nature of their country and the life they led inured them to hardships ("assuetum malo Ligurem," Virg. G. ii. 168 ; "Ligures montani duri et agrestes," Cic. de Log. Agr. ii. 35) ; and they were distinguisbed for their agility, which admirably fitted tbem for the clase, as well as for the kind of predatory warfare which they so long maintained against the liomans. Cato gave them the charscter of being treacherons and deceitful-an (plinion which sems to have been generally adopted by the Romans (Sirv, ad Aen. si. 700,715 ), and must naturally bave grown up from the nature of the wars between them; but they appear to have rerved faithfully, as well as bravely, in the serviee of the (ireeks and Carthaginians, as merecharjes, and, at a later perioul, as nuxiliaries in thuse of Thole (Diod. 5. 39; Flut. Mar. 19 ; Tac. Mist. ii. 14.) The troops they furnished were almost exclasively infantry, and, fur the most part, lightarmed: they excelled pouticularly as slingers (Pseudo Arist. Mival. 90) ; but their regular infantry carrivd oblong shithd of brase, resemiling those of the Greeks. (Diod. . c.; Strab. iv. 1. 202.) During the period of their independence, they not only made plandering in ursions by land into the neighbouring comentries. but carrided on piracy by sea to a cunsillerable extent, and were distinguished for their hardiness amb douing as navigatems, as well as in all their wher purstits. (1)ied. v. 39 ; 1.iv. sl. 18, 28.) The momatain tibes reembled the Gatuls and (iermans in the custom of wearing their hair long; on which account the willer tribes, whith were the last to naintain their independeace, were known as the 1. igures Cajillatio (omati (Aíous Koujtal, Dien (ass, liv. 24; Plin, iii. 20. \& 24 ; Lucam, i. 442) ; and the cropfing their hair was regarded as a proof of their sulyection to la-me.

Among the more peculiar natural productions of Ligmia are noticed a lueed of dwarf horses and mules, called by the Goceks giveor ; and a kind of mineral reembling an ber, called $\lambda_{\text {njporpor, which }}$ aIquars to have been confunded by Theophrastns with gemune amber. (stab, iv. 1. 202 ; Theophr. de Luputh. $\S \$ 28,29$ )

The liguitans were dividen, like most nations in a similar state of suciety, into a mumber of tribes, which ayfear to have had little, if any, politiond bund of union luyemd the temporary alliances which they might furni for warlike iljects ; and it is evident, from the account of the wars carricd on ly
them with the Romans, that these leagnes were extremely variable and partial. The nanies of many of the different tribes have been transmitted to us; but it is often difficult, or impossible, to determine with any degree of certainty the situation or limits of their resjective territories. It is prubable, as pointed out by Pliny, that these limits themselves varied much at different times (Plin. iii. 5. s. 6), and many of the ninor tribes, whose names are mentioned by Liry in the history of the Roman conquest of Liguria, scem to have at a later period disajpeared altogether.* The only tribes concerning whom we have any tolerably definite information are: - 1. the Arvani, in the valley of the Macra, and abont the Portns Lunae ; but the greater part of the territory which had once belonged to this powerful tribe was not included in Roman Liquria. 2. The Ficisiates, who may be placed with much probalility in the upper valley of the Scultema, or Ponaro, on the N. slope of the Apennines towards Mlutina (a district still called Frignano) ; so that they also were excluded from Liguria in the later sense of the term. 3. The Buniates may perhops be placed in the valley of the lara, the mont considerable confluent of the Magra, called by Ptolemy the Buactes. 4. The Giveates, known to us only from an inscription [GExE: 1], were obviously the inhabitants of Genua and its immediate neiglibourhood. 5. The Ververi, mentioned in the same inscription, arljoined the Genuates on the W., and were apparently separated from them by the river Porcifera, or Polcevera 6. The more powerful and celebiated tribe of the Ixgacsi may be placed with certainty on the coast near Allenga (Albium Ingamumi), though we camnot fix their limits with any precision. 7. The lntemenir occupied the coast W. of the Jugami : their chief town was Albinm Intemelium, how Fintimiglia. 8. The Vediantii inhabited the country on both sides of the Varus, as their name is evidently retained by the town of I'nce, some miles W. of that river ; while Cemenelimo, about 5 miles to the E. of it, also belonged tu them. (I'lin. iii. 5. s. 7.)

Of the tribes N . of the Apennines, or inhabiting the valleys of that range which slope towards the Jadus, the most conspicnous were:-1. The Viaciexni. whose capital was Augusta Vagiennorum, now Bene, between the Stura and the Tanaro, while tbeir confines appear to have extended as far as the Monte 1'iso and the surces of the Po. 2. The Stafielli, whose pesition is marked by the celebrated watering-place of Aquae Statiellae, now Acqui. 3. The Taukivi, whose capital was August:a Taurinorum, nuw Turin, and who appear to have occupied the whole country on both sides of the Padus, from the foot of the Cottian Alps to the lanks of the Tanarus. 4. The Eeburistes (Flor. ii. 3; Plin. iii. 5. s. 7) may be placed, according to a local antiquary, in the hills of the Astigiona. (Dirandi, Piemoute Cispardono, cited by Walckenacr, Gioogr. des (ianles, vol. i. p. 161.) 5. E. of these must be placed several smaller tribes mentioned by Livy in the history of the Roman wars with Liguria, and of which we know only that they were situated

[^7]on the N . side of the Apennines. These are the Celelates, Cerdiciates, and apparently the livaten also. (Liv. xxxii. 29, 31.) 6. The Epaxtemi are mentioned also by Livy (xxviii. 46) as a trike who occupied the mountains above the lngauni ; but no subsequent mention of them occurs.

In addition to these, Livy notices the Garuli, Hercates, and Lapicini, as situated on the S. side of the Apemaines (xli. 19), but we have no further clue to their pusition. Pliny also enumerates (iii. 5 . s. 7) among the Ligurian tribes on the Italian side of the Alps, the Veneni, Bimbelli, Magelli, Casmonates, and Velciates, of which the last doubtiess oconpied the country around Veleia, the ruins of Which still remain about eightern miles S . of Placentia. The others are wholly unknown, and the names themselves vary so much in the MsS. as to be of very loubtful anthority.

The coast of Liguria, as already described, is bordered closely thronghout its whole extent by the ranges of the Blaritime Alps and Apennines, which for the most part rise very abruptly from the seashore, in other places leave a narrow strip of fertile territory between their foot and the sea, but nowhere is there anything like a plain. This steep coast also affords very few natural ports, with the exception of the magnificent bay called the Portus Lunae (now the Giulf of Spezia) near its eastern extremity, which is one of the most spacions and secure harbours in the Mediterramean. The port of Genua also eaused it to be frequented from the etrliest times as a place of trade (Strab. iv. p. 202), while the Portus Herculis Monoeci (Monatco), though suall, was considered secure. It is singular that the much more spacious and secore harbour of Villafranca, in the same neighbourhood, is not mentioned by any ancient writer, though noticed in the Maritine Itineray under the name of Portns Olivulae. The same Itinerary (pp. 503, 504) notices two small ports, which it places between this last and that of Moraco, under the names of Anao and Avisio, which may probably be placed respectively at S. Ospizio and Ezar. [Nicala.] The lontrs Maurich of the same Itinerary is still called Porto Aluzrizio, a suall town about two miles W. of Oneylia.

The rivers of Liguria are not of much impartance. From the proximity of the mountains to the S. coast, the streams which descend from then to the sea are fur the most part mere mountain torrents, altogether dry in summer, though violent and destructive in winter and after heavy rains. Alnost the only exceptions are the two rivers which formed the extreme limits of Liguria on the E. and W., the Macra and the Vares, both of which are large and perennial streams. Next in importance to these is the Retrisa or Roju, which flowed through the country of the Intem. lii. It rises at the foot of the Col di Tende, in the Maritime Alps, and has a comse of alouve 36 miles from thence to the sea at lintinsiglia. The smaller streams on the S. coast were:- the l.atw (Paglione), which flowed by the walls of Nicaca (Plin. iii. 5. s. 7 ; Mlel. ii. 4. § 9) : the Tavia (Itin. Marit. p. 503) stili called the Taygia, between $S$. Remo and Porto Maurizio; the Meruli (Plin. l. c.), which still retains its name, and falls into tho sea between Oneglia and Allenga; the Porenfuth of I'liny (l. c.), now called the I'olcerera, which flows a few miles to the W. of Genoa; the Ferizur (1b.), on the E. of the same city, now the Bisagno; the Entellas ('tol. iii. 1. §3), which is probably
the Larayma, that falls into the sea at Chiement. tond the Buscres of the same anthor, which can to. so ather than the Fara, the most comsidenable tributary of the Magra. Much more considerable than these, both in the volume of water and length of their course, are the streatns which flow from the N. slopes of the $A_{\text {pennines tawarts the Padus. But }}$ of these, the only mes whose manes are fonnd in any ancient anthor, are the 'Tissazse or Tanuro, one of the most important of the southern tributaries of the Padua; the STUBA, which juins loe Tanamas near Pullentia; and the Tresus, which rism in the Apemins, not far from Gerood, and falls into the P'u near Placentia, formine durine a jart at least of its conrse the bonndary letwest Ligurn and (iallia Cispatana.

The rivers marked in this prut of Italy in the Tabula are so confusel, ausl the manes so cormpt, that it is uacless to attempt to blentify them.

The mative Licmians lived for the most part in mere villages and mountain fastuesam ("costella vicique," Liv. x1. 17; Sirab. v. P. 218), ant laal probably few towns. Even unler the Ifonam govermment there sech to have been few plaves which deserved the name of torvo alone the seaconst, or among the imuer raness of the Apennines; but on the murthern sliges of the same monatains, where they approached or opened out int, the plains, these grew up rapilly and rose to Evat queperity, - so that I'liny says of this part of Liguria in his time, "omuia mobilibus oppidis nitent " (Plin, iii. 5. s. 7). Thuse which he procueds tis enmmerate ate: - Linsmsas (between Argrutut and Serravalle). Dratonit (Tortona). Irais (Ioghera). Banmberavti (ot metertam site), Ismostata (at Montere, on the meht hank of the $I$ 'o), I'oli-

 Ta these must be adied Alfacsti Taumisouse as. which was certainly a Ligurian town, thongh, from its proition on the lett lank of the J'adas, it is cantmerated by Pliny with the citios of the sith recina, on (iallia Transpadana. In the same district were Fonseat Vibn, in the temitory of the Visiemit, and Otki,cM, מow (xeeu, in the valley of finestrelles. begnaio (Sizsu) wat probably of fitulish rather than a Ligurian tawn. In adition to theme may lie mentioned (castinhtM (Cinstegyio), which is exI rossly ealled by Livy a Lhyuran town, though situated on the lianli-l) fromtior, and Cress, now Cera, in the upper valley of the Tanore. Litubinm, mentimed by Livy together with Clastidinu (xxxii. 29), and Carystum, noticed by the same :uthor as a town of the statielli (xhi. 7 ), are otherwive wholly waknown.

Along the coast of Liemria, hroismine from the Varus, the towns emmumated by Pliny or I'talemy

 (/'orto Fimm), Tiablla (probably Tieg/est, sear,
 (I'orfo Vimere), atud Ponstrx Fomets (forivi), hith of then on the Ginlf af'serzint, whin hos wathed as at whole the Pontts Lexay: [1.2 N. $]$. The other names emmerated in the Itnerariss are for the most fart very whocore and uncertain, atal 1usany of
them, from their very form, are obvionsly not the names of towns or even rillages, but of mere starioms or " mutationes," The few which can be deteruined witls any certainty have their modern names annexed in the ltineraries bere given.
J. The casast road from the Varns to the Macrit is thes given in the Tabula Pentingeriana: Varnin fl. (lar).
(conenelinm (C'imize二).
In Alpe Maritima (Turliu),
Albintemeliun ( 1 intimiglin).
Custa Balacnae.
1.urets Jommani.

Albingsatatin (Athr-मya).
Vala sabata (Juedu).
Vivas Viveinis.
Alla Docilia (Allcisula).
Ad Nasalia.
Ilasta.
Ad Figlinas.
fiennit (Getioct).
Ricins.
Alt Sikria (Solaro near Chiurari)
Ad Monilia (. Monegliu).
In Alpe I'entino.
Borun.
Luna (Lami).
2. The same line of route is thus giren (in the contrary direction) in the Itinerary of Antoninus (1.293):-

Luna.
Boxceas (probably Boactes fl. : the Jara).
Bodetia.
Temblata (perdaps identical with the Tigullia of Pliny: Tregus(1).

De!phinis (Portus Dejphini, Plin.: P'orto Fino).
(ivillis ( (iturer) .
Libarimm (Libarnum).*
Dertuns (Tomfura).
Aquar (.Lequi).
Cixia.
Csuaslicum.
Valla sahata (I'acdu).
Pullaphcem.
Albingauntim (Albenga).
Lamens Bomstmi.
Costa Balacoate.
Alhantimelinn ( Fintimiglia).
Lumanem (Mentont).
Alpe simma (furlia).
(xmenelinm (Cimiez).
Virrum flturen ( $\mathrm{I}^{\circ} \mathrm{F}^{*}$ ).
(The distances given along this line of ronfe are in both ltimeraries so eormpt and confinsed that they are omitted above. For a filler duconssion of the routes in question see Walckenaer, (icugrophie des fanlex, vol. iii. PT, 18-21; and sima, Storia dell anticu Liguria, vol, i. 1p. 97 100.)

* It is evident that the Antonine Itimerary here quits the coast road, and makes a soulden turn inland to Dertona, and thewre leak agam by Aguae Statiellac to the cosat at Vada Sabath, from whence it resumes the line of cosist rand. A comumarison with the Tabula (av civou in fac-simile by Manuert), in which both lines ot road are placed siiv by side, will at onec explain how this error orjcinated; and points ont a zouree of corruption and contusion in our existing copues of the Itherary, which has donbtless operated in many orher catses where it catmot now be so distinetly traced.

3. The most important of the rontes in the interior of Liguria, was that leading from Genua ioland by Libamum to Dertona, from whence a braoch communicated, through Iria and Comillomagus, with Placentia; while another branch passed by Aquae Statiellite to the coast at Vada Subata. (The stations on huth these roads have been already given in the preceding route). From Aquae statiellae another braneh led by Pollentia to Augusta Taurinurum. (Tab. Peat.)
[ $\mathrm{B}, \mathrm{H}, \mathrm{B}$.]
LIGU'STICUM MAliE ( тò Aıүưтıkд̀ $\pi \in \lambda a \gamma o s$, Strab. ii. p. 122), was the name given in ancient times to that part of the Mediterranean sea which adjoined the coast of Liguria, and lay to the N. of the Tyrrhenian sea. The mame was applied (iike all similar appellations) with considerable vagueness. sometimes as limited to what is now ealled the Gulf of Genoa,- in whichsense it is termed the Ligusticts Sinus by Florus (iii. 6. § 9), - at uthers in a much wider sense, so that l'liny speaks of Corsica as an island "in Ligustico mari." Some of the Greek geographers included noder the nane the whole extent from the froutiers of Spain to thase of Etruria, comprising the Mare Gallices of the Romans, or the modern Gulf of Lyons. The more limited use of the name seems, however, to have been the more usual, at all events in later times, and is elsewhere adopted by Pliny himself. (Plin. iii. 5. s. 10, 6. s. 12 : Susab. l. c. ; Jtol. iii, 1. § 3: Agathem. i. 3; Dionys. Per. 76 ; Priscian, Per. 80.) [E. H. B.]

LilAEA (Ainaia: Eth. Ai入aleus), a town of lhocis, situated at the foot of Mount Parnassus, and at the sources of the Cephissus, (Hom. Il. ii. 522, Ilymn. in Apoll. 240; Strab. ix. Fp. 407, 424; Paus. ix. 24. § 1, x. 33. § 3: Stat. Theb. vii. 348.) It was distant from beiphi by the road over Iarnassus 180 stadia. (Paus. l. c.) It is not mentioned by Herodotus (viii. 31) among the towns destroyed by the Persians; whence we may conjecture that it belonged at that time to the Diriaos, Who made their submission to Xerxes. (Leake, Northern Greece, vol. ii. p. 90.) It "was destroyed at the end of the Sacred War; but was soon atfenwards restored. It was taken by Demetrius, but subsequently threw off the Macedomian ycke, Pausanias saw at lilaea a theatre, an agora, and baths, with temples of Apollo and Artemis, containing statnes of Athenian workmanship and of Pentelic marhle. (lans. x. 33. § 4 ; see aiso x. 3. § 1, x. 8. § 10; Lyouphr. 1073 ; Steph. 13. s. r.) The ruins of Likaea, called Paleokastro, are situated about half a mile from the sources of the Cephissus. The entire circuit of the furtificatiun exists, partly founded on the steep descent of a rocky hill, while the remainder encompasses a level space at its foot, where the ground is covered with rujas. Some of the towers on the walls are almost entire. The sources of the Cephissus, now called Kefulorrýses (K $\in \notin a \lambda o 6 p \dot{\sigma} \sigma \in t s$ ), are said by Patusunias very often to issue from the earth, especially at midday, with a noise resembling the roaring of a bull ; and Leake found, upon inquiry, that though the present natives had nevermade any such observation at Kefalorryses, yet the water often rises suddenly from the ground in larcer quantities than usual, which cannot but be aceompanied with some noise. (Dodwell, Classical Tour, vol. ii. p. 133; Leake, Northern Grecce, vol. ii. pp. 71. 84.) Ptolemy (iii. 15. § 15) erroneously c.dls Lilaea a town of Doris.

LI'LLIUM or LI'LEUM ( $\Lambda$ if $\lambda \lambda 10 \nu$, Ai $\lambda \in \dot{d} \nu)$, a
commercial place (empotium) on the enast of Bithynia, 40 stadia to the east of Dia ; but no particulars are known about it. (Arrian, Peripl. p. 13 ; Aonnym. Peripl. 3.) It is possible that the place may have derived its name from the Lilaeus, which Pliny (II. N. v. 43) mentions among the rivers of Bithynia.
[L. S.]
LiLYBAEUM (Alגusaiov: Eth. Ai入v6aitns, Lilybatataus : Marsala), a city of Sicily, sitnated on the promontory of the same name, which forms the extreme W. point of the island, now called Capo Boio. The promontory of Lilybaeum is mentioned by many ancient writers, as well as by all the geographers, as one of the three principal headlands of sicily, from which that island derived its name of Trimacria. It was the most westerly point of the inlaod and that nearest to Aftica, from which it was distant only 1000 stadia aceording to Polybins, hat Strabo gives the distance as 1500 stadia. Both statements, however, exceed the truth; the real distance from Cape Bon, the nearest paint of the coast of Africa, being less than 90 geug. miles, or 900 stadia. (Pol. i. 42 ; Strab. ii. p. 122, vi. pp. 265, 267 ; Mel. ii. 7 ; Plin. iii. 8. s. 14; Ptol. iii. 4. § 5; Diod. v. 2, xiii. 54 ; Steph. B. s. $v$. ; Dionys. J'er. 470.) The bearland itself is a low but rocky point, continued out to sea by a reef of hidden rocks and shoals, which rendered the narigation dangerous, though there was a safe port immediately autjoining the promontory. ('ol. l.c.; Virg. Aen. iii. 706.)

Diodorus tells us distinctly that there was no town upon the spot until after the destruction of Motya by Dionysius of Syracuse, in в. C. 397 , when the Carthaginians, instead of attempting to restore that city, settled its few remaining inhabitants on the promontory of Lilybaeum, whieh they fortifird and converted into a stronghold. (Diod. xiin. [4, xxii. 10.) It is, therefore, certaioly a mistake (though one of which we cannot explain the oribin) when that anthor, as early as B. C. 454 , speaks of the Lilyboeans aod Segestans as engaged in war on account of the territory on the bauks of the river Mazarus (Id. xi. 86). The promontory and port were, however, frequented at a much earlier perion : we are told that the Cnidians under Pentathins, who afterwands founded Lipara, landed in the first instance at Lilybaeum (Id. v. 9); and it was also the point where, in s. c. 409, Hannibal landed with the great Carthaginian armament designed for the attack of Selinus. (1d, xiii. 54.) Diudorns tells us (l.c.) that on the promonory was a well ( $\phi$ peap), from whence the city took its name: this was obviously the same with a source or spring of fresle water rising in a case, now eonsecrated to St. Johm, and still regarded with superstitious reverence. (Fazell. re híb. Sic, vii. 1; Smyth's Sicily, p. 22s.)

It is elear that the new eity quickly rose to prosperity, and beeame an important stronghold of the Carthaginian power, sueveeding in this respect to the p sition that Motya had previously held. [Motwa.] Its proximity to Africa rendered it of expecial importance to the Carthaginitus in seeuring their communication, with Sicily, while the dancer which would threaten them if a foreign power were in poscession of such a fortress, immediately opposite to the gulf of Carthage, led them to spare no pains for its security. Hence Lilybaeum twice became the lant bulwark of their power in Sicily. In B. C. 276 it was besieged by Pyrrhus, who had already reduced all the other cities of Sicily, and exjelled the Car-

## LILYBAEUM.

that _inians from all their other strumehals. But they contimed to throw in supplies and reinforcements by sea to Lilybeum, so that the king, after a siege of two houthe, was compellel to abandon the enterprise as hopeless. ( 1$)_{1}$ d. xxii. 10. Exc. 1lvesch. pp. 498, 499.) But it is the memorablo siege of Lilymeum by the Romans in the First Punic Wiar which has given to that city its chiof historical celebrity. When the Romans first commenced the siege in the fiftecnth year of the War, B. c. 2.50, they were already mast iss of the whole of Sicily, with the exception of Lilybaems and Drepanma; and bence they were able to concentrate atl their efforts and employ the armips of both consuls in the attark of the former city, while the Carthaginians on their side exerted all their energies in its defence. They hal just before removed thither all the inlabitants of Selinus (Dova. xxiv. 1. p. 506), and in adlition to the citizens there was a zarriven in the place of 10,000 men. (Pol. i. 42.) The city appears to have aceupied the whole of the promontory, and was fortified on the land side by a wall fluked with towers and protected by a deep ditch. The Romans at first attacked this vigomusly, but all their effints were frustrated by the conrage and utetivity of the Carthaginian enmander Himilen; their battering entines were burat by a sally of the be-ieged, and on the approach of winter the consuls were compelled to curvert the siege into a blockale. This was easily maintained on the land side, but the Romans in rain endeavoured to exclude the besieged from succours by sea. A C.rrthaginian fleet under Hamibal succeeded in making grod its eatrance into the port ; and the skilful Carthagivian eaptains were able to elude the vicilatue of the Roman cruisers, and keep up free communications with the besicged. The 1 i man consuls mext triel to bluck up the entrance of the port with a mound, but this was soon carried away by the viohnte of the waves ; and som after, Alhurbal, the Carthatian com-mander-in-chief, who lay with a large fleet at Drepanum, thtally difeatiol the lioman fleet under the consul 1 '. Claudius 1, e. 249. This disaster was fuilowed by the ahmost total loss of twe Roman flects in sh semion by slipwrerk, and these accumulated misfortnues compelled the limans to abandun the very attempt to tountint the dominion of the sea. But thoush they could not in consepuence wintain any etheient bloch:als, they still comtinued to hem in J.hytacum on the land sile, and their armas comin wit cocampel lotion the city for several years in suececion. It was hot till the tenth year if the siege that the vietory of C . Lutatins Catnlus it the Aegates. B. C. 241, compallen the f'arthacmians to condude peace and to abandon the pose anavian of Lalybumat an l Wopatrum, which up to that time the rontinued effints of the Ronams had fanled in weeture from their lamb. (Poh. i. 41 54,59 62 ; Jud. xxiv. 1, 3. 31, Fixe. 11. 11\%. 506 -509. Eiar. Villes. j. 56is; Lomar. viii. $15-17$; Oras iv. 10.)

Lilybaran now passed intu the cumblition of a Roman provineial thwn: hot it comtomed to be a flomshime and pupahous phoe. Its pasition rendered it now as important a pount to the lomms for the invasion of Afria, ats it hat provicusly been to the Carthacinians for that of Si dy; and hence its name is one of frepuent oceurrome during admost all periods of homan hivery. Thets, at the wuthreak of
 the statton of the Roman fleet under the practor M.

Ambinis, who defeated a Carthayinian force that hand attempted to surprise that important poot. (Liv. $x x i .49,50$.) During the eobrse of the samo war it was the point from whence Roman commanders repeateily made predatory descents with small squadroms upon the coast of Africa; and towards the close of the same memorable content, b.c. 204 , it was from thence that Sipio sailed with the fleet and arnyy which were destined for the conquest of Africa. (Liv. xxy. 31, xxvii. 5, xxix. 24.) In like manoer it was at Lilybamem that the younger Scipio Africamus assembled liss flert and army in s. c. 149, preparatory to passing over into Atrica (Dod. xxsii. 6); and in the Civil Wars Camar made it his beal-yuarters when preparing for his Amean campaign asainst sipion and Juba, B.e. 47. (Hirt. B. Aff: 1, 2, 37: Appran. B. C. ii. 95.) It was also one of the chief naval stations of Sextus Pompeius in his war with Augustus, is. ©: 36. (Appisa, B. C. v. 97,122 ; D.m Cass. xlix. 8.) Nor was the importance of Lilyhaenm confined to these warlhke occasions: it is evident that it was the habitual pont of commmuiration between Sicily and Airca, and must have derived the greatest prosperity from the constant traffic winich arose tron this circumstace. Hence we find it selected as the habitual place of residence of one of the two quaesturs of Suily (1'seud. A coun. in l'irr. p. 100); and Civero, who bad bimself held that office at Lilybacum, calls it "splendidissima civitas" (lierr. v. 5.) It was one of the few eities of Sicily whieh still retained some imporlance in the time of Strabs. (Strab, vi. p. 27.2.) Its continued prosperity under the Iomans Empire is sufficiently attested by insmipLions: from one of these we leam that its population was divided into twelve tribes; a rare mode of municipal organisation. (Turemuzza Inser. Síril. pp. 7, 15, 49; Orell. Inser: 151, 1691, 3718.) in another inscription it bears the title of a colonia: the time when it becane such is meverain; but probably not till the reign of Hadriam, ats Pliny does nut mention it among the five colonies fiumbed by Anqustus in Sceily. (Plin. iii. \&. s. 14; Ptol, iii. i. § 5 ; Itin. -1 $h t$. pp, 86, 89, 96; Zumpt, de Colun. p. 409.)

After the fall of the Roman Einpire Lilybaeum still continecd to be one of the most amportant cities of Siculy. It is mentioned as such muder the suecensive dominion of the Gohis and liandals (I'rocop. B. 1': i. 8, ii. 5) ; and daring the periond of the Arabian dominion in Sieily, that people attached so anmels salue to its port, that they gave it the name of Hursa Alla,-the purt of God,-from whence hats cone its moulern appellation of Marsale. It was not till the 16 th century that this celebrated port wats blorked up with a mole or mound of sumken stones by order of the Emperm Charles V., in order to protect it from the attacks of the Barbary corsairs. From that prefod Trapani has taken its plaer as the prinepal port in the W. of Sicily; but Jacsale is still a considerable towo, and a place of some trade, especially in wine. (Suyth's Sirily. p. 232.) Very few vestiges of the ancient city remam, but muncrous fragments of sculpture, wises, and other felits, ats well :as coins, have been diseovered th the site; and some portions of an ancient aquednct are still visible. The site of the ancient port, thoush now fillel with mud, may be distinctly traced, but it is of small extent, an I could never have had a deptli of wome than 12 or 14 feet. The rocks and shoals, which even in ancient times rendered it diflieult of
approach ( $\left.P_{0}\right]$, i. 42), would now effectunlly prevent it from being used as a port for large vessels. (Sinyth, l. c. pp. 233, 234.)

It is a strong proof of the extent to which Greek culture and civilisation were diffiused throughout Sicily, that, thourh we have no account of Lilybrewn being at any time in possession of the Greeks, but, on the contrary, we know positively that it was founded by the Carthaginians, and continued in their hands till it passed under the dominion of Rone, yet the coins of Lilybaeum are esclusively Greek; and we learn from Cicero that it was possible for a man to acquire a knowledge of the Grcek Enguage and literature in that city (Cie. in Caecil. 12).
[E. H. B.]

Coln of lilfibaeum.
LI'MENAE (Atuévai), also ealled Limnopolis
 which is mentioned only by ecelesiastieal writers (Hieroel. p. 672 ; Concil. Chalced. p. 670 ; Concil. Const. iii. p. 676, where it is called $\Lambda u \mu-$ vaia). The ancient ruins of Galandos, on the east of the lake of Eyerdir, are believed to belong to Linenae. (Arundell, Discov, in Asia Minor, vol. i. 1. 326 ; Franz, Fünf Inschrift, p. 35.) [L. S.]

LIME'NIA (A $\mu \mu v i a$ ), a town of Cyprus, which Strabo (x. p. 683 ) places S. of Soli. It appears from some eeclesiastical documents cited by Wesseling (ap. Hierocl.) to have been 4 M. P. from Soli. Nuw Limnん. (Engel, Kypros, vol. i. p. 77.) [E. H. B.]
LlMild, river and town. [Gilliecta.]
Li'micl. [Gallagerd.]
LIMIGANTES. The ordinary aecount of the Limigantes is as follows. In A. D. $334-337$, the Surmatians, in alliance with the Vandals noder Tisumar, provoke the indignation of Constantine by their inroads on the Empire. He leaves them to the sword of Geberic the Gothie king. Reduced and lumbled by him, they resort to the expedient of arming their slaves. These rebel against their masters, whom they either reduce or expel. Of those that leave their country, some take arms moler the Gotbicking, others retreat to the parts beyond the Carpathians; a third portion seeks the service of Rome, and is established, to the number of 300,000 , in different parts of Pannonia, Thrace, Maredonia, and Italy (Gibbon, c. xviii. with note).

Zeuss (Die Deutschen, yo., s, v. Sarmatae) holds that others were tramplanted to the Rhine, believing that a passage in Ausonius applies to tbem. (Ad Mosell 1. 5-8.) This may or may not be the case. The more important elements of the account are, that the slutes who were thus armed and thus rebelled, are called Limigantes-this being the name they take in (iibbun. Their scene of action was the parts about the present town of Peterwaradein, on the north bank of the Danube, nearly oppusite the Sereian frontier, and in the distriet between the Theiss and the great bend of tbe Danube. Here lay the tract of the Sarmatae, and Jazyges Metanastae, a tract whielı never was Roman, a tract which lay as a March or Boun-
dary, with Pabnonia on one side mad Dacia on the other, but belonging to neither. Olserve the words in Jtalics.

In his note, Gibbon draws special attention to "the broken and imperfect manner" in which the "Gothic and Sarmatian wars are related." Should this remark stimulate the inquiries of the historian, he may observe that the name Limigantes is not found in the authority nearest the time, and of the most importance in the way of evidence, viz. Ammianus Marcellinus. Anmianus speaks only of servi and domini: - "Sarmatae liberi ad discretionem servoram rebellium appellati ( $x$ xix. 6. 15)."

On the other hand, it is only in a work of such inferior authority (at least, for an event A.D. 337) as the Chronicle of Jerome (Chronicon IIieronymi) that the name Limigans is found; the same work stating that the masters were called Arearagont+s.

To say nothing about the extent to which the story has a suspicious similarity to more than one older aecount of the expulsion of the masters by the slaves of the same sort, the utter absence of either name in any other writer is remarkatule. So is their semi-Latin form.

Can the whole account of the slave insurrection be problematical - based upon a confusion of names which will be shown ta be lighly probable? Let us bear in mind the locality of these Limeigantes, and the language of those parts in contact with it which belonged to Rome. The locality itself was a Linees (eminently so), and the contiguous tongue was a Lingna Rustica in which sucin a form as Limiguntes wonld be evolved. It is believed to be the Latin name of the Sumatae ami Jizyges of what may be called the Daco-Paunonian Mareb.

The account of the Servile War is susceptible of a similar explanation. Ammianus is neariy the last of the anthors who uses the name Sarmatae, which will, ere long. be replaced, to a great extent, by the name Serv- ( $\Sigma \in \rho 6-$ ). Early and late, this name hits always suggested the idea of the Latin Servus,-just as its partial equivalent slav-does of the English Slave. It is submitted that these Servi of Ammianus (Limigantes of the Chronicle) are the Servians (Servi) of the Murch (Limes), now be inning to be called by the nano by which they designated themselves rather than by the name by which they were designated by their neigibours. [1.G.L.]

LI'MITES ROMA'NT, sometimes simply Liames or Limites, is the name generally applied to the long line of fortifications cunstructed by the Romans as a protection of their empire, or more directly of the Deeumates agri, against the invasions of the Germans. It extended along the Dambe and the Rhioe, and consisted of forts, ramparts, walls, and palisades. The course of these fortifications, whieh were first commenced by Drusus and Tiberius, can still be traced with tolerable accuracy, as very considerable portions still exist in a pooll state of preservation. Its whole length was about 350 English miles, between Cologne and Ratisbon. It begins on the Danube, about 15 miles to the suthth-west of $R$ misbon, whence it proceeds in a north-western direction under the name given to it in the middle aces of "the Devil's Wall" (Teufelsmauer), or Pfahlrain. For a distance of about 60 miles it was a real store wall, which is still in a tolerable state of preservation, and in some places still rises 4 or 5 feet ahove the ground; and at intervals of little more than a mile, remnants of round towers are tisible. This wall terminates at PJuhlhein in H'urtemberg. From

## LIMOXUM

this point it proceeds in a northern direction, under the name of Tenfelshecke (the Devil's Hedge), as fir as Lorch, and is more or less intermptel. From Lorch onwards it does not present a continnons line, its course being effaced in many parts ; but where it is visible it generally consists of a mound of betwern 6 and 7 feet in breaith, sonctines rising to the height of 10 feet ; and on its castern side there rums along it a ditch or trench, which is called by the pruple the Schwoinegraben, perhaps a cerruptim of Suevengraben (intch of the Simsi). In this rate the limes runs as far as the Oild meald, from which puint it changes its character altozether, for it consists of a succession of furts, which were orizinally comected by palisades. (Spurt. IIvir. 12.) Remains of these forts (castellia) are seen in many parts. At Obernhury this line of fortifications ceases, as the river Main in its northern courve afforled sufficient protection. A little to the east of Aschaffenburg, where the Main takes a western direction, the fortifications recommence, but at first the traces are not continuous, until some miles morth of Nílula it reappears as a continupus mound raised on a foundition of stunes. This lant part is now known by the name of the Pfahlyraben, and its remains in some parts rise to a heisht of from 10 to 12 teet. It can be distinctly traced as far as Rheinbreitbach, in the neighbaurbood of Bomn, where every trace of a northern continuation disqupars behind the Siebengebinge. It is probable, however, that it was contimued at least as far as Cologne, where Tiberius liad commencel the construction of a limes. (Tac. Ann. i. 50.) Some have supposed that it extended even further north, as far as the river Lippe and the Caesia forest ; but from Tacitus (Gerar. 32) it seems clear that it terminated near the river sieg.

This cnormous line of furtification was the work of several generations, and the farts which were first built appear to have been those constructed by Drusus in Mount Taumens. (Tac. Ann, i. $56 ; 1$ Din Cass. liv. 33.) But Tiberius and the otker emperors of the first century constructed the greater part of it, and more especially Traian and Hadrian. ( Yell. Pat, ii. 120 ; Dion Cias. Ivi. 15; Eutrup, viii. 2: Sjart. Hadr. 12.) Lintil the reign of Alesinder Severus thesc limites appear to have effectually protected the Deormates auti; but aftor that time the Al-manai freguently broke throunh the fortifications. (I. Capitol. Marimin. 13; Flat: Vophe. Prob. 13.) His successors, l'osthames. Lullinums, and l'rohus, exerted themwlyes to repair the henewhes; yet after the drath of Probos, it became un! womble to present the murthern barkariatis frono lambone through the fortifications; and ahout the on 1 it the third enntury the loonans for ever lowt shair passessions in Germany sonth of the limes. (Comp. Willoem, Giermanion, p.2\%0, Nic; Bulliner, Reise anf der Teufelsmauer, Fempisburg, 1820.)
[L.s.]
LIAINAE (Aiuvat), a phave on the frontiers of Mexenia and Laconia, contanio to temple of Artemis Limnatis, used jointly by the M-womians and lacedaemotians. All matrace utfonal liy the Merseuinus to sutue Lacedaenumian uruins at the festival of this tenders is aid to have been the cause of the First Messenian Wir. (Nimb. vi. p. 257, viii. p. 362 : 1’aus, iii. 2. §6. iv. 31. § 3.) The possersion of $t$ is temple, ani of the Aser Denthuliatis, the district in which it was situated, was a fooltont shle oet of the diapute betwern the Lacedaemanams ant Meweriatts duwn to the time of the IRenal empetors. (Tike. Aun, iv. 43.) The ruins of the
tronple of Artemis Limnatis have been diseovered by lioss, near the clurch of Panaghia Bolimuietiesa, in the villate of Beilimnos; but the topography of this district requires a more particular description, and will be found under Messienia.

LIMNAE: [SMAKTL.]
LIMNAEA. 1. (Asuvuia: Fith. Aipvaios: Kermostard), a town in Acarnania at the SE. corner of the Ambracint gulf, on the rety frontier of Acarnamia towards Arens, There las been a diapute abont its site, hat the ruins at Kervasare are probably the remains of Limasa: sone molern writers would place it more to the W., either at Lutriki, or at Ruga. The former suppusition, however, appears to be the more correct, since we ham from Thncydides that Limnaea lay on the road from Anbracia and Argos Amphilochicum to Stratus, which condd not have been the cave if Limmaca lay to the W. of Kereasarii. Philip 1II., King of Ma. cednua, flisembarked at Limnaea, when about to invale Aetolia. There is a marsh near Kervasari, two miles in length, from which Limmaea appears to have derived its name. (Thuc, ii. 80, iii. 105 ; Pol. v. 5 ; Leake, Vouthern (irwere, vol. iv. p. 243, seq.)
2. A town of Histiacotis in Thessaly, taken by the Romans in B. C. 191, was probably on the site of Kortikhi. (Lir. xxxvi. 13; Leake, Northern Greece, vol. iv. p. 512.)

LIMNUS, an island off the coant of Jreland, mentimed by Ptolemy (ii. 2), as lying to the east of Ireland, and being uninlabited. 1'liny also mentions it (iv. 30). It is probably Lambay Islund. However, the Monamenta Britamaica not only suggests for Limnos (I'tolemy's Limnus) the molern names of Lambay, Lymen, and Rums $y$. but they also distinguish it from Limmus (Pliny's Limnos) which they make Dalkey.
[ $\mathrm{K} . \mathrm{G}, \mathrm{L}$ ]
LIMOAE: [LemmNe.]
 § 6: Poiticrs), the capital of the Purtones or Pietay; one of the Ceitic nations south of the Loire. The name is first mentioned in the eighth book of the Gallic war (viii, 26, 27.). At a later time, after tha fashion of many other eapital towns in Gallta, it took the name of the penple. Pictavi, whence comes the momlorn uane Pótiers. (Ammianus Marcellinus, xv. 11.) Though De Valuis and others did not admit Limomum to be Poifiers, and tixed Augustoritum the capital of the Lemovices at Limoges, the evidence of the roads shows that Limomm must be Poitiers. Macnun, a writer of the 9 th century, calls Poifiers by The mane of Piotavus Limonam; and inserptions alon fiond at Poitiers contirm the other evidence. There is a place called I'inux P'ritiers, mure than 15 Ruman miles north of Poitiers, but thongh it seens to have been an old town, it is quite a different place from the I vitiers which is the site of Limonum.

The conquest of the Rietavi cost the Romans little trouble, we maty suppose, for little is said of them. In u.c. 51 . C. Caninius, a le_atns of Caesar, came to the relief of Duratius, a Gaul and a Roman ally, who was blockaded in Limomum by Pumatus, the eljo ff of the Ames. The siege was raised, and Dumnacus was suberequently defeated.

The remains of the huge amplitheatre of Limonum are deseribed by M. Dufour, in his IVistoive de Poitou (quoted in the Guila du Voyageur, jar Richard et llocquart). DI. Dufour found the walls of the amplitheatre three feet and a half below the present level of the soil. The walls are seven Firench feet thick. It is estimated that this amphitheatre
would contain 20,000 spectators, from which estimate we must conclude that the dimensions and ontline of the building can be accurately determined. M. Dufour says: "On the level of the present soil, there are some vestiges of the corridors or covered porticoes, which led, by means of the vomitoria, into the different galleries: the part which is least damaged at present is in the stables of the Hotel d'Evreux. A princijal arch, which led into the arena, is still nearly entire, though the interior facings lare been almost completely removed."
[G. L.]
LI'MYRA ( $\Lambda i \mu v \rho a$ or $\Lambda(u v i \rho a)$, a town in the southera part of Lycia, on the river Limyrus, twenty stadia abuve its month. (Strab. xiv. p. 666 ; comp. Scyl. p. 39 ; Ptol. v. 3. § 6 ; Steph. B. s.v.) Velleius Paterculus (ii. 102) states that Caius Caesar, the adopted son of Augustus, died at Limyra. It is often mentioned by Roman writers, as Ovid (Met. ix. 646), Mela (i. 15), and continued to exist down to a hate period. (Basil. M. Epist. 218 ; Hierocl. p. 683.) Ruins of Linıyra were first discovered by Captain Beanfort abore Cape Fineka; but it was reserved for Sir Charles Fellows to explore and describe them more minutely. In his first work (Journal of an Excursion in Asia Minor, p. 214) he only says: "two miles across the little valley, at the foot of the monntains, and up their sides, lay the ruins of the ancient Linyra, its theatre, temples, and walls." But in his later work (Account of Discoveries in Lycia, p. 205, foll.). he fully enters into a description of the remains of the place, illustrated by fine engravings and copies of some of the many inscriptions, both Greek and Lycian, in which the place abounds. In describing the approach to the town, be says, that frost he fonnd a fine stately sarcophagus, with a bilingual inscription. "Hundreds of tombs cat in the rocks, aod quite excavating the long ribs of its protrnding strata, as they curved down the sides of the monntain, soon came in riew. ...The inscriptionswere almost all Lycian,-some few Greek, but these were always inferior in execution, some being merely scratched upon the surface; while the Lycian were cut deeply in the stone, and many richly coloured, -the letters being alternately red and blue, or in others green, yellow, or red." Some of these tombs contain beantiful bas-reliefs, representing stories from Greek mythology. Beyood these tombs lies the city, "marked by many foundations, and by a long wall with towers. Further on is a very pretty theatre, . . . the size of which bespeaks a small population." The whole neighbourhood, however, is filled with tombs cut in the rocks. (Comp. Leake, Asia Minor, p. 186.) [L. S.]

LIMI'RICA. [INDIA, p. 47, a.]
LI'MIRUS ( $\delta$ Miuvpas), a river on the south coast of Lycia, which, after receiving the waters of its tributary Arycandus (Fineka), becomes navigable at the point where Limyra is situated. It falls into the sea, at a distance of 90 stadia west of the holy promontory, and 60 stadia from Melanippe. (Scyl. p. 39; Strab. xiv. p. 666 ; Ptol.v. 3. § 3.) Pliny ( $\mathrm{v}, 28$ ) and Mela (i. 15) call the river Limyrs, and the Stadiasmus Maris Magni (§ 211) Almyrus, which is no donbt a mistake. Leake (Asia Minor, p. 18i) states that both the Limyrus and the Arycandus reach the sea at no great distance from each other; while in the map of Lycia by Spratt the Limyrus is the smaller river, and a tributary to the Arycandus. Both these statements are opposed to the testimony of Pliny, whose words are: "Limyra cum amne in quem Argcandus influit."

LINGONES.
(i. 31), on account of the vituperative and murions language with which the worship was conducted. 'This temple contained a painting of 1leracles by l'arrhasins; and Liudus appears to have pussessed scweral other paintings by the satme artist. (Athen. xii. p. 543, xv, p. 687.) Lindus also was the native place of Clasbinlis, one of the seven Sures of Greece: and Athenacts (viii. p. 360) hins preserved a pretty poem assribed to Cleobulus, and which the lindian boys used to sing as they went round collecting money for the return of the swallows in spring.

The site of Lindus, as described by Strabo, " on the side of a lill, looking towards the sumth and Alexanlria," camnot be mistaken ; and tbe madern neat little town of Lindos is exactly the sp it occupied by the ancient Dorian city. The place and its many ancient remains have often been visited and described, and most recently by Russ in his Reisen auf den Griech. Inseln, vols. iii. and iv., from which it appears that ancient remains are more and more destroyed. There are many tombs cut in the rocks, some of which have had beautiful architectural ornaments; the remains of a theatre at the foot of the hill; and on the acropolis are seen the ruins of two Greek temples, which, to judge from inseriptions, belonged to the Lindian Athena and Zeus Polieus. The mumber of inseriptions found at Lindus is very considerable, (Comp. Ross, l. c. vol. iii. pp. 72 , \&c., vol. iv. pp. 68, \&c. ; Hamilton, Researches, vol. ii. pp. 55, \&c. ; Rhein. . 1fuseum, for 1845, pp. 161, \&c.)
[L. S.]
LI'NGONES (A'ryoves). The form $\Lambda^{\prime} \gamma \gamma{ }^{\prime} \gamma v \in s$ in I'tolemy (ii. 19. §9) maty probably be a confriat's error. In Polybius (ii. 17, et. Bekker), Ai $\gamma \gamma \omega{ }^{2} \in s$ is a correction of Alyopes, which appears to be the MSS. reading, and was doubtless intended to be Miraves. In the oll text of Strato (p. 186) it is said that the Arar (Soone) separates the Suqumi from the Aedui and Lincasii (Açicaroot); hut it is agremel that we oncht to read Lingones, for Strabo natmes the prople Lingenes in two other passiges (1p. 103, 208).

The Lingones occupied the country about the sources of the Marne and wirine, and extended east ward to the Vosegus ( L osy s ) (B. G. iv. IU). Catsar does not state expressly whicther they belonged to Celtica or to Belgica, but we may infer from what lie says that he considered them is includel in Celtion [(ialela Transalimisi, Vol.1. p. 962]. Strabo (p. 193) says: " Abuve or beynud the Helretii and Sequami, the Aolui and lingones dwell to the west : and beyond the Medionatrici dwell the Leaci and part of the Lingones." But the Lenci, whose capital was Tullum (Toul), are between the Mediomatrici and the Lingones, and there is some error in this passage of Strabo. The chief town of the Lingones was Andomatupum, afterwards nauned Linmones, and in the old French, Langune or Languinne, and now Langres, near the source of the Marme. Dibio (Itijon) was aloo in the territnyy of the Lingones, which corresponded to the dionese of Lanyres, befure the diverse of Dijon was taken from it.

Polemy (ii 8) and Pliny (iv. 17) place the Lingoners in Belgica, whieh wits true of the time when they wrote.

The Lingones were one of the Celtic nations, which, accordiog to Roman tradition, sent a detachment to settle in North Italy. [See the mext article.] Luwan (i. 397) represents the Linsones ats warlike, or fond of firthting, for which there is no widence in ('aesar at least :-

## LIPARA.

" Castraqu- quac Vosegi eurvam super ardua rupem 1'ugnares pictis cohibebant Lingones amnis."

After Capsar liad defeated the Ilelvetii in the great battle near Bibracte, the survivors fled into the country of the Liugones; "to whom Caesar sent letters and a message to joform them that they must not supply the IIelvetii with corn, or help them in any way; and that if they did, he would treat them like the Helvetii." (B. G. i. 26.) It is plain from (atesar's narrative that this insolent order was obeyed. When Catesar was at Vesuntio (Besancon) on his march against Ariovistus, the Sequani, Leuci, and Lingones supplied him with corn (B. G. i. 40). During the winter which folluwed the campaign of D. c. 53 , Caesar placed two legions in the country of the Lingones, not to keep thetn in obedience, for they never rose in arms against him, but because it was a gool position (B. G. vi. 44).

It is stated in Tacitus (II ist. i. 78) that Otho gare the "civitas Romana" to all the Lingones : but this passage is not free from difficulty. Galba had lost the fidelity of the Treviri, Lingones, and some other Gallic states, by harsh measures or by depriving them of part of their lands ; and the Lingones and others supported the party of Vitellins in Gallia by offering soldiers, horses, armos and money (Tacit. i. 53, 59). It seems that Otho made the Lingones a present of the "civitas" in order to effect a diversion in his favour ; but it remains to be explained, if Tacitns's text is right, why he omitted the Treviri and others. Pliny calls the Lingones "Foederati." This nation, which during the whole Gallic war was Hanquil, even in the yeur of Vercingetorix's great struggle ( $B$. G. vii. 63), became very restless under the Empire, as we see from Tacitus (IIst. iv. 67). [Galia Transalitiaa, Vol. 1. p. 969.] [G. L.]

LINGONES (Avroves, lol.), a tribe of Cisalpine Gauks, without doubt a coluny or offset of the more powerful Trausulpine tribe of the same name, who, according to Livy, migrated into Italy together with the Boii, and settled with them in the plains between the Apennines and the Padus. We leam from Polybius, that they dreit between the Boii and the Senones, apparentiy occupying the country ahout I Bnomia and as far eastward as the river Utis (1/Von(one), which was the nirthern limit of the Senones. (Liv. v. 35 ; Pol. ii. 17.) They scem to have been in later times so closely associated with the Boii as to be commonly considered as one nation ; bence we do not mect with any suparate mention of their name in history, nor are they noticed by the geographers.

## LINTOMAGUS. [Ltmtomages.]

LINE'S (Aivos), a place on the coast of Mysia, on the Propuntis, between Priapus and Parium ; it is noticed only by strabo (xiii. p. 588), as the spot where the best shails (кoх入iat) were fousd. [L. ..]

LI'PARA (i) $\Lambda \iota \pi \alpha \rho a:$ Lith. Aımapaios. Liparensis: Lipuri), the largest and most important of the group of the Aeolian islands, between the const of Sicily and laty. It had a town of the same name, and was the only one of the wiole group which was inhabited, or at lenst that hat any considerable fopulatina. Hence the other inlands were always dependent on it, and were sometimes called in ancient times, as they habitually are at the present day, the Liparaem islands (ai Aırapaíws vinбor, Strab. vi. p. 275). Strabo correctly tells ns that it was the largest of the seven, and the nearest to the eusst of Sicily except Thermessa or Hiera (I i.l-
cano). Both he and Pliny inform us that it was originally called Meligunis (Mentrouvis); a name that must prohably be referred to the poriod before the Greek colony; although ancient writers affirm that it derived the name of Lipara from Liparus, a son of Auson, who reigned there before Acolus, so that they nost have referred the name of Melignnis to $n$ purely fabulous age. (Plin. iii. 9. s. 14; Diod. v. i.) The name of Aeolus himself is inseparably connected with the Aeolian islands, and there can be no doubt that his abode was placed by the earliest mythological traditions in Lipara itself, though in later times this was frequently transferred to Strongyle. [Aeoliae Insulae, p. 52.]

In the historical period the first mention that we find of Lipara is the settlement there of a Greek colony. This is assigned by Diodorus to the 50th Olympiad (B. C. $580-57 \%$ ); and there seems no reason to doubt this date, thongh Eusebius (on what authority we know not) carries it back nearly 50 years, and places it as early as B. c. 627. (Diod. ,. 9: Euseb. Arin, p. 107; Clinton, F. H. vol. i. pp. 208, 232.) The colonists were Dorians from Cnidus and Rhodes; but the former !eople predominated, and the leader of the colony, Pentathlus, was himself a Cuidian, so that the city was always reckoned a Cnidian colony. (Diod. l. c.; Paus. x. II. § 3; Thne. iii. 88 ; Strah. vi. p. 275 ; Scymn. Ch. 263.) According to some accounts Pentathlus did not himself live to reach Lipara, but the colony was founded by his sons. (Diod. l. c.) Of its history we know scarcely anything for more than a century and a half, but are told generally that it attained to considerable power and prosperity, and that the necessity of defending themselves against the Tyrrhemian pirates led the Liparaeans to establish a naval force, with which they ultimately obtained some brilliant victories over the Tyrrtienians, and commemorated these successes by costly eflerings at Delphi. (Strab. l.c.; Diod. v. 9 ; Pans. x. 11. $\S 3,16 . \S 7$.) It appears, however, that the Liparaeans themselves were sometimes addicted to piracy, aod on one occasion their corsairs intercepted a valuable offering that the Romans were sending to Delphi; but their chief magistrate, Timasithens, insmediately cansed it to be restored and forwarded to its destination, (Diod. xiv. 93; Liv. v. 28 ; Val. Mlax. i. 1. § 4.)

The territory of Lipara, tbough of small extent, was fertile, and produced abundance of fruit: but its more important resonrces were its miaes of alum, arising from the volcanic nature of the soil, and the abundance of thermal sources proceeding from the same cause. The inhabitants of Lipara not only cultirated their own island, but the adjoining ones of Hiera, Strongyle, and Didyme as well; a proof that the population of Lipara itself must have been considerable. (Thuc. iii. 88 ; Diod. v. 10 ; Patus. x. 11. § 4 ; Strab. vi. p. 275.)

At the time of the first Athenian expedition to Sicily under Laches (B. C. 427) the Liparaeans were in alliance with the Syracusans, probably on account of their Dorian descent; for which reason they were attacked by the Athenian and Rhegian fleet, but with no serious result. (Thuc. iii. 88; Diod. xii. 54.) In в. c. 396 they again appear as in friendly relations with Syracuse, and were in consequence attacked by the Carthaginian general Himilco, who made himself master of the city and exacted a contribution of 30 talents from the inhabitants. (Diod. xiv. 56.) It does not nppear that the Carthaginians
at this time retained possession of Lipara; and we subsequently find it in the enjoyment of independence in B. C. 304, when the island was suddenly attacked by Agathocles, in the midst of profound peace, and without even a pretest for the aggression. The invader carried off a booty of 50 talents, which was, however, lost on his voyage to Sicily in a storm, which was naturally attributed to the wrath of Aeolus. (Id. xx. 101.) It could not have been long after this that Lipara fell under the yoke of Carthage, to which city it was subject at the outbreak ot the Fitst Punic Wir (8, c. 264), and from its excellent purts, and advantageons situation for commanding the N. coast of Sicily, became a farowrite naval station with that people. (Id. axii. 13, p. 500.) In the fifth year of the war (B. C. 260), the Roman consul, Cn. Cornelius, having been deceived with the lopes of making himself master of the island, was captured there, with his whole squadron (Pol. i. 21); and in B. C. 257, a battle was fought between the Cartbaginian and Roman flcets in its immediate neighbourhood (Id, 25): but a few years later it was at length taken by the Romans, under C. Aurelius, and remained in their hands from this time, B. C. 251. (Ib. 39: Diod. xxiii. 20 ; Zunar, viii. I4; Oros. iv. 8; Frontin. $S$ (rat. iv. 1. § 31.)
At the commencement of the Second Punic War a considerable Carthaginian squatron was wrecked on the shores of Lipara and the adjoining island of Vulcano (Liv, xxi, 49); but from this time we find no historical mention of it till the war between Octavian and Sextus Pompeius in Sicily, in b. с. 36, when Lipara and the adjoining islands once more appear as a naval station of importance. It was occupied and fortified by Pompeios, but taken by Agrippa, who alterwards established his fleets at the island of I ulcano, and from thence threatened the forces of Pompeins at 11 rlae nnd Messana. (Appian, B. C. v. $97,105,112$; Dion Cass. xlix. 1,7.) There scems no doubt that Lipara continued to elljoy considerable prosperity under the Roman gevernment. Diodorus praises its fertility, as well as the excellence of its ports; and says that the Liparaeans derived a large revenue from the monopoly of the trade in alum. (Diod. v. 10.) Cicero, indeed, speaks of it in disparaging terms, as "parva civitas, in insula inculta tenuique posita" ( (err. iii. 37) ; but this seems to be an oratorical exatggeration, and the immediate reference of the passage is to corn, for the growth of which Lifara could never have been well adapted. But thougin suffering severely from drought in summer (Thnc, iij. 88), owing to the volcauic nature of the soil, the island is, nevertheless, one of considerable fertility, and at the present day prodoces abundance of fruit, wine, and oil. (Smyth's Sicily, p. 265 ; D'Orville, Sicula, p. 18.)

Uoder the Roman Empire Lipara was sometimes used as a place of exile for political offenders (Dion Cass. Ixxvi. 6); and before the fall of the Western Empire it became a favourite resort of monks. At an earlier period of the Empire it was frequented for its hot haths (Plin. xxxi. 6. s. 32 ; Diod. v. 10), which are still in nse at the present day, being supplied from thermal springs : some remains of ancient bnildings, still visible, appear to have been connected with these establishments. A few fragments of walls may also be traced on the hill crowned by the modern castle; and many coins, fragments of sculpture, \&c., have been discovered on the island. (Sinyth's Sicily, p. 262.)

LIPARIS.
Strabo and some other ancient writers speak of rolcanic phenomena as occurring on the i land of Lipuaa itself (Strab. vi. p. 275) ; but thonesh it abounds in hot springs, and outbreaks of voletuic vapour, it dues not ajpear probable that any volcanie cruptions on a latger scale have occursed there within the period of listory. Those of the neighbouring island of Hiera (the Velcani lasula of the Romans, now I ulcano), from its proximity to Lipara, of which it was a mere dependency, are sotuetimes described as if they had ocenrred at Liparat itself. (Oros. v. 10; Jul. Obs. 89.) The volcanic phenomena of the Acolian islands in general are more fully noticed uuder the article Aeotiaf Instlaze.
[E. H. B.]

COIN OF LIPARA.
LI'PARIS ( $\Lambda$ ímapıs), a small river in the east of Cilicia, which emptied itself into the sea at Soli, and was believed to derive its name from the oily nature of its waters. (Elin. v. 22; Antig. Caryst. 150; Vitruv, viii. 3.)
[L. S.]
LIPAXLS (Aimaģas), a tomn of Crusis, or Ciossaon, in Macelonia, mentioned only by Hecatueus (Steph. B. s. v.) and Herolotus (viii 123).

LIPl'Os, AD. [Vhittoses.]
LIPSIDRIUM [ATTICA, p. 326, b.]
LIQUENT1A (Livenza), a considerable river of Verntia, which tive in the Julian Alps to the N. of Opitergium (Oder=0), and flws into the Alriatic nestr Caurle, ahont midwat between the Piave (Plavis) and the Tigfiamentu, (Tilaventum). (Plin. iii. 18. as 22.) It had a port of the same name at its mouth. Servius (ad - 1 ch. ix. 679) correctly places it between Altinum and Cuncordia. The thane is not foud in the limeraries, but Panl/s Diacous mentions the "pous Liquensiae fluminis" on the ruad from Forum Julii thwards Pataviun. (1P. Diac. Ifist. Lang. v. 39 ; Anon. Ravenn, iv. 36.)
[E. H. B.]
LI'RIA. [EnETA.]
LHRPM1R1S (Aptuppis), a town in the north of Gernany, betwen Marionis and Leuphana, about 10 miles to the north of Humburgh. Its exact site, however, is unknown. (Ptol. ii. 11. § 27.) [L. S.]

LIRIS (AEipis: Gariglitno), whe of the prishcijal rivers of central ltaly, flowing into the Tyrrheuian Sea a little below Minturnae. It had its source in the eentral $A_{\text {pemines, }}$ only a few miles from the Lacus Fueinus, if whill it ligs been sometimes, but erroncously, regarded as a subterranean wntlet. It flows at first in a SE. direction through a long troughlike valley, parallel to the general dinection of the Apenmines, until it reaches the city of Surat, where it turas abruptly to the SW., and jursues that course until after its junction with the Trerus or Sacco, clowe to the site of Fregellie: frum theme it $x_{\mathrm{g}}$ aim makes a great bend to the AK., but ultimately resumes its SW . direction before it *uters the sea near Dlintmrmac. Both Strabo and Iliny tell ns that it was oricinally called Clanis, a

## LInsUS.

name wbich appears to have been common to many Italian rivers [ClaNis]: the former writer erroneously assigns its sources to the conntry of the Vestimi; an opinion which is adopted also by Lucan. (Strab. v. p. 233 ; hucan, ii. 425.) The Liris is noticed by several of the Roman poets, as a very gentle and tranquil stream (Hor. Carm, i, 31. 8; Sil. Ital. iv. 348 ), - a character which it well deserves in the lower part of its course, where it is deveribed by a modern traveller as "a wide and woble river, winding under the ohadow of poplars throngh a lovely vale, and then fliding gently towards the sea." (Jinstace's Clussical Tour, vol. ii. p. 320.) But nearer its source it is a clear and rapid mountain river, and at the village of Isola, about four miles below Sora, and jnst after its junction with the Fibrenus, it forms a cascade of abose 90 feet in height, one of the most remarkable waterfalls in Italy. (Craven's Abruzzi, vol, i. p. 93.)

The Liris, which is still called Liri in the npper part of its course, thouch better known by the name of Garigliano, which it assumes when it becomes a more considerable stream, has a conrse altogether of above 60 geographical miles : its most considerable tributary is the Trerus or Sacco, which joins it about three miles below Ceprano. A fer miles higher up it receives the waters of the Fibrenus, so celebrated from Cicero's description (de Leg. ii. 3); which is, however, but a small stream, though remarkable for the clearness and beanty of its waters. [Fibrencs.] The Melfis (Melfu), which joins it a few miles below the Sacco, but fron the opposite bank, is equally inconsiderable.

At the mouth of the Liris near Mintornae, was an extensive sacred grove consecrited to Nlarica, a uymph or local divinity, who was represented by a tralition, adopted by Virgil, as mother of Latinus, while others identified ber with Circe. (Virg. Aen. vii. 47; Lactant. Inst. Div. i. 21.) Her grove and temple (Lucts Maricae: Mapikas ädoos, Plut. Mur. 39) were not only objects of great veneration to the peyple of the neighbouring town of Dinturnae, but appear to have enjoyed considerable eelebrity with the Romans themselves. (Strab. $\mathrm{\nabla}$. p. 233 ; Liv. xxvii. 37 ; Serv, ad Aen. vii. 47. ) inmediately adjoining its mouth was an extensive marsh, formed probably by the stagnation of the river itself, and celebrated in history in connection with the alventures of Marius. [E. H. B.]

LISAE (Aícat), a town of Crnsis or Crossaea, in Macedonia, mentioned only by Heredotus (vii. 123). [Crusis.]

LISINAE, a town of Histiacotis. in Thessaly, on the borders of Athamania. (Liv, Kxxii. 14.)

Llsisa. [Jacuetani.]
LISSA (Ni $\sigma \sigma a$, Procop. B. G. i. 7 ; Itin. Anton.), in island off the coast of Illyricum, placed by Pliny (iii. 30) over against Fadera. Iglian, noted for its marbles, and an island which obtained a momentary importance during the wars of the Venetians, represents Lissa. (Wilkinsm, Dalmatia and Montenegro, vol. i. p. 78.)
[E. B. J.]
Llssus. [hoomtini.]
LISSLS (Aiaros, P'tol. iii. 17. § 3), a tuwn on the S. coast of Crete, which tlee anonymous Coustdescriber places between Suia and Calamyde. (Stadiasm.) The Pentinger Table gives I6 M.P. as the distance between Cantanum and Liso. This Cretan city was an episcopal sce in the time of Hierocles. (Comp. Curnel, Creta Sacra, vol. i. p. 235.) The order in which be mentions it with the other bishoprics
in the W. part of the island agrees very well with the supposition that its site was on the spot now called Ilightio Kyrko. This place occupies a small hollow of the lulls facing the sea, like a theatre, Near the church of the Panaghia are what appear to be vestiges of an ancient temple, consisting of granite columns, and white marble fragments, architraves, and pediments. Further on, appears to have been another temple, and a theatre. The tombs are on the SW. side of the plain. They are worked independent of the rock, with arched roofs. There are perhaps fify of them. (Pashley, Trav. vul. ii. p. 88 ; Mus. Class. Ant. vol. ii. p. 298.)

Of all the towns which existed on this part of the const, Lissus alone seems to have struck coins, a fact which acrees very well with the evidence supplied by its situation, of its baving been a place of some traling importance. The harbour is mentioned by Scylax (p. 18), and the types of the cuins are either maritime, or indicative of the worship of Dictynna. as might have been expected on this part of the island The obverse of one coin bears the impress of the eaps and stars of the Diascuri, and its reverse a quiver and arrow. On the second coin the caps and stars are replaced by a dolphin, and instead of the quiver a female bead, probably that of Artemis or Dictyma. (Comp. Eekhel, vol. ii. p. 315.$)$
[E. B. J.]
LISsUS (Aif $\sigma o s$, Strab, vii. p. 316 ; Ptol. ii. 16. $\S 5$; Steph. B.; Hierocles ; Peut. Tab.), a town of illyricum, at the mouth of the river 1)rilo. Dionysius the elder, in his schemes for estahli hing settlements among the Illyrian tribes, founded Lissus. (Diod. xv. 13.) It was afterwards in the hands of the Illyrians, who, after they had been defeated by the Romans, retained this part, beyond which their vessels were not allowed to sail. (Polyb. ii. 12.) 13. c. 211, Philip of Macedon, having surprised the citadel Acrolissus, compelled the town to surrender. (Polyb. viii. 15.) Gientius, the Illyrian king, collected his forces here for the war against Rome. (Liv. xliv. 30.) A belly of Roman citizens was stationed there by Caesar (B. C. iii. 26-29) to defend the town ; and Pliny (iii. 26), who says that it was 100 M.P. from Lpidaurus, describes it as "oppidum civium Romanorum." (Constantine Porphyrogeneta (de Adm. Imp. c. 30) calls it 'Eגı $\sigma-$ $\sigma$ ós, and it now bears the name of Lesch (Leake, Northern Greece, vol, iii. p. 477; Schatarik, Slav. Alt. vol. ii. p. 275.)
[E. B J.]
LISTA (Níota), a very ancient city of Central Italy, which, accurding to Varro (ap. Dion. Hal. i. 14). was the metropolis of the Aborigines, when that people still dwelt in the mountain valleys around Reate. It was surprised by the Sibines by a night attack from Amiternum; and the inhabitants took refuge in Reate, from whence tbey made several frnitless attempts to recover possession of their city : but failing in this, they declared it, with the surrounding territory, sacred to the gods, and imprecated curses on all who should occupy it. This circumstance protably accounts for the absence of all other mention of it; though it would seen that its ruins still remained in the time of Varro, or at least that its site was clearly known. This has been in modern times a subject of mach dispute. According to the present text of Dionysius, it was situated 24 stadia from Tiora, the ruins of which are prubably thase at Castore near Sta. Anatolia, in the upper ralley of the Salto, 36 miles from Rieti. Bunsen accordingly places it at Sta. Anatolia itself,
where there are sotne remains of an ancient cityBut Holstenius long ago printed out a site ahout 3 miles fiom Reale it-elt, on the ruad from thence to Cirita Drcale, still called Monte di Lesta, wbere there still exist, acoording to a local antiquarian, Martelli, and Sir W: Gell, the remains of an ancient city, with walls of polygonal construction, and a site of considerable strength. The sitnation of these ruins wonld certainly be a more probable position for the capital of the Aborigines than one so far removed as Sta. Anatolia from their other settiements, and would accord better with the natural line of advance of the Salines from Amiternum, which must have been by the pass of Antrodoco and the valley of the Ielino. In this case we must understand the distance of 24 stadia ( 3 miles), as stated by Dionysius (or rather by Varro, whom he cites), as having reference to Reate itself, not to Tiora. (Bunsen, Antichi Stabilimenti Itolici, in Ann. d. Inst. Arch. vol. vi. p 137 ; Gell's Topography of Rome, p. 472 ; Holsten. Not. in Cluver. p. 114.)
[E. H. B.]
LISTRON (At $\sigma \tau \rho \hat{\omega} \nu$ ), a place in Epirus Nova, mentioned by Hierocles with a fortress Alistrats (Aגía pos, Procup. de ded. iv. 4). It is probably represented by the sillage and castle of Klisura, situnted on the river Aons ( Fiösa), which is mentioned by Cantacuzenus (Kえєıбoïpa, ii. 32 ; comp. Auna Cumnena, xiii. p. 390) in the fourteenth century, together with other places which are still to be recognised as having been the chief strongholds in this part of Greece. [Aous.] (Leake, Northern Greece, vol. i. p. 383.) [E. B. J.]

LITA'BRUM. [Vaccaet].
LITANA SILVA. a furest in the territory of the Boians in Gallia Cispadana, memorable for the defeat of the Roman consul L. Postamius, in b. c. 216. On this di-astrous oceasion the consul bimself perished, with his wlale arme, consisting of two Roman legions, augmented by anxiliaries to the amount of 25,000 men. (Liv. xxiii. 24 ; Frontin. Strat. i. 6. § 4.) At a later perind it witnessed, on the other hand, a defeat of the Buians by the Roman consul L. Valerins Flaccus, в. c. 195. (Liv. xxxiv. 22.) The forest in question appears to have been situated somewhere between Bononia and Placentia, but its name is never mentioned after the reduction of Cisalpine Ganl, and its exact site cannot be determined. It is probable, indeed. that a great part of the tract between the Apennines and the marshy ground on the banks of the Pddus was at this time covered with forest.
[E. H. B.]
LITANOBRIGA, in Gallia, is placed by the Antonine Itin. between Caesuromagus (Beauvais) and Augustomagus, which D'Anville supposes to be Senlis. According to his reading, the Itin. makes it xsiii. Gallic leagnes from Caesaromagus to Litanobriga, and iiii. from Litanobriga to Augustomagus. Walckenaer (Géog. fic., vol. iii. p. 55) makes the first distance xvi., and the second iiii. ; and he places Caesaromagus at Ierberie, near the river Autone. The Table mentions no place between Caesaromagus and Aucustomagus, but it makes the whole distance xxii. We may assume that litanobriga was situated at a ford or bridge over a river, and this river is the Oise. D'Anville first thought that Litanobriea might be Pont Sainte-1/axence, for a Roman road from Beaurais, called Brunehaut, passes by Clermont, and joins a road from Pont-Sinint-1 Maxence. But the numbers in the Itins. fall short of the distance between Beaurais and Senlis; and accordingly

D'Anville gave up Pont-Saintr-Mastuce, and fixet Litanobriga at Crril on the Oise, and along this line the distances of the Table agrec pretty well with the real distances. Wadckenaer fixes Litanobriga at I'ont-Saint--Miscence. The solution of this difficulty depends on the position of Augustonagus: or if we are content with the evidence for fixing Litanobriga at Pont Sainte-Marence, we vanot place Augustomagus at Senlis. [Avgestomacins.]
[G. L.]
LITERNUM ( $\Lambda i \tau \in \mu \nu o \nu_{,}$strab. ; $\Lambda \in i \tau \in p \nu o{ }^{2}$, Ptol. : Eth. Liternimus : Tor di Jutria), a town on the sea-cosst of Campania, between the mouth of the Volturnus and Cumace. It was situated at the month of a river of the same name (Strab. v. p. 243: Liv. xxxii. 29), which assumed a stagnant character as it approseled the sea, so as to form a cunsiderable marshy pool or laroon, called the Lrterisa Pales (Sil. Ital. vii. 278 ; Stat. Sill:. iv. 3.66), and bordered on either side by wore extensive marshes. It is not quite clear whether there was a town there at all before the establislment of the Roman coluny : Livy's expres-ion (l. c.) that that culony was sent "ad ostia Literni fluminis," wouhl seem to imply the conttary ; and thoush the name of Liternum is mentioned in the Second Punie War, it is in a manner that does not elearly prove there was then a tom there. (Liv. xxiii, 33.) But the notice in Festus (c. Practicturae), who mentions Liternum, with Capua, Cumae, ant other Compavian towns, among the Pracfecturaw, most protathly refer to a period earlier than the Roman settlement.

It was but till the year n. c. 194 that a colony of Roman citizens was settled at Litermum at thin satne time with one at Viultarmun; they were buth of the class called "coloniae maritimae civiun," but were not mumerous, only 300 colonists being sent to each. (Liv. xxxii. 29, xxxiv, 45.) The situation of Liternum also was batly chosen: the mashy character of the neichbowrhoud rentered it unhalthy, while the adjoining tract on the sea-comst was samiy and barren; hence, it never seems to h.we risen to hi. a place of any importance, and is chicfly noted trom the eircumstance that it was the place which Seipho Atricanus chose for his retirement, when he whitdrew in disctst from putbic life, tand whese he muled bis days in a kind of volmotary exile. (Lis, xxaviii. 52, 53 : Seneca, Jip, 86 ; Val. Max. v. 3. § 1; Orss iv, 20.) At a later period, however, Aucustus settled a fresh colony at Liternum (Lil). Culon, p. 235), and the con atraction hy Domition of the roal leading along the sea-cosist from Sinnewa to G'umae must have tended to remder it more frequentol. But it evidently never rose to le a considenable place : under the Ronan Empire its name is men-
 rarke in combection with ther Vi.t Domitians ahesty notical. (Strab. v. p. 243 ; Mcl it. 4. S 9; Plin. iii. 5. s. 9 ; 1'tul. ini. 1. § 6 ; Itik. Ant. 1. 122; Tab. Ieat.) We luarn, however, that it still existed as a " eivitas" ats late ats the reign of Valentinian 11. (Symmach. Ep. 1 i 5); and it was pubably deatroyed by the Vandals in the fifth century.

The villa of Scipio, where be spent the latter

[^8]pans of in ltsic, was still extant in the days of Scurca, wa has left us a detailed deseription of it, and strongly contrasts the simplicity of its arrangements with the luxury and splendour of those of bis own time. (Ep, 86.) I'liny also tells us, tbat some of the olive trees and myrtles planted by the hands of Sipio himself were still visible there. (Plin. svi. 44. s. 85.) It is certain that his tomb also was shown at Liternmm in the days of Strabo and Livy, though it would appear that there was great donbt whether be was really buried there. The well-known epitaph which, according to Valerins Maximus, he caused to be engraved on his tomb," Ingrata patria, ne assa quidem mea habes,"-could certainly not have been extant in the time of Seneca, who treats the question as one of mere conjecture, though he inclines to the belicf that Africanus was really buried there, and not in the tomb of the Scipios at Rome, (Seneca, l. c.; Val. Max. v. 3. § 1 : Strib. l. c.; Liv $\pm x \times v i i i . ~ 56$.

The site of Liternum is now narked by a watchtower called Tor ali Patria, and a miserable village of the same name: the aljoining Lago di I'atria is unquestionably the Literna Palus, and hence the river Liternns can be nu other than the small and sluggish strean which forms the outlet of this lake to the sea. At the present day the Lago di Patria communicates with the river Clanius or Layno, and is fornad by one of the arms of that stream. It is not iuprobable that this was the case in ancient times alan, for we have no account of the mouth of the Clanins, while the Liternus is mentioned only in connertion with the town at its month. [Clinics] The modern name of Patiris must certainly have been derived from some tradition of the epitaph of Scipis alrealy noticed, though we cannot explain the mukn in whech it arose; but the name may be traced track as far as the eighth contury. There are senredy any ruins on the site of Litermum, but the remains of the atncient bridge by which the Via Domitiana here crossed the river are still extant, and the roul itself may be traced from thence the whole way to Cumac.
[E. H. B.]
LITHRL'S (Aitpos), the name of the northern branch of Momit Paryaires in Pontus, which, topother with Dount Oploclimens in the north-west of Amasia, encloed the extensive and fertile plain of 1'lotarvea. (Strab. sii. p. 556.) Hamilton (Researeves, vol. i. p. 349) believes that these two ancims hill answer to the modern Kemer Dagh aun (Oztap Dagh.
[L. S.]
LIVIANA, in Gallia Natbonensis, is placed by the Table and the Jerusalem Itin. between Carcaso (Curvassome) and Narbo (Nurbome). It is the next station to Carcaso, and xii. from it : the station that fillows Liviana is Usperva, or Usuerna, or llosuerba, The site is uncertain.
[G. L.]
LILS, LiNUS. [Malrberinia].
LIZI\%Is. [Aziz1s.]
LOBETA'N1 (Awsŋtavoi), one of the lesser peoples in the NE, part of Dispuma Tarraconensis, Their position was SE. of the CisLTheERI, and N. of the Bastetani, in the sW. of Arragon. The only city mentioned as belonging to then was Lonetuss ( $\Lambda$ íß $\eta$ ToD $)$, which D'Anville identifies with Requena, but C'kert with Albarracin. (I'tol. ii. 6. §60; Coins ap. Sistini, P. 169; Ukert, vol. ii. pt, 1, pp 322, 464.)
[P.S.]
Lome'TUM. [Lobetani]
LUCORITUM (Aokipitov). a town on the river Main in Germany, and probably the same as the
modern Lohr. (Ptol. ii. 11. §29.) Its name seems to be of Celtic origin. (Comp. Steiner, Das Maingebiet, p. 125.)

LOCRAS. [CORsica, p. 691, a.]
LOCRI EPIC'NEMI'DII, OPU'NTII. [Locris.]
LOCRI O'ZOLAE. [Locris.]
LOCRI (Aoкроi), sometimes called, for distinetion's sake, LOCRI EPIZEPHY'RII ( $\Lambda$ окроl 'E $\pi /$ (eфúpto,,Thuc. vii. 1 ; Pind. Ot.xi. 15 ; Strab.: Steph. B.: Eth. Aokpós, Locreasis : Ruins near Gerace), a city on the SE. coast of the Brottian peninsula, not far from its sonthern extremity, and one of the most celcbrated of the Greek colonies in this part of Italy. It was a colony, as its name obriously implies, of the Locrians in Grecce, but there is much discrepancy as to the tribe of tbat nation from which it derived its origin. Strabo affirms that it was founded by the Lucri Ozolae, under a leader named Euanthes, and censmres Ephorus for aseribing it to the Locri Opontii; but this last opinion seems to have been the one gencrally prevalent. Scymaus Chius mentions both opinions, but seems to incline to the latter; and it is adopted without question by Pausanias, as well as by the poets and later Latin authors, whence we may probably infer that it was the tradition adopted by the Locrians themselves. (Strab. vi. p. 259 ; Scymn. Ch. 313-317; Paus. iii. 19. § 12; Virg. Aen, iii. 399.) Unfortonately Polybius, who had informed himself particularly as to the histury and institntions of the Locrians, does not give any statement opon this point. But we learn from him that the origin of the colony was ascribed by the tradition current among the Locrians themselves, and sanctioned by the authority of Aristote, to a body of fugitive slaves, who bad carried off their mistresses, with whom they had previously carried on an illicit intercourse. (Pol. xii. 5, 6, 10-12.) The same story is alluded to by Diosysins Periegetes (365-367). l'ausanias would seem to refer to a whully different tale where he ssys that the Lacedaemnnians sent a colony to the Epizephyrian Locri, at the same time with one to Crotona. (Yaus. iii. 3. § 1.) These were, however, in both cases, probably only additional bands of rolomists, as Lacedaemon was never regarded as the founder of either city. The date of the foundation of Locri is equally uncertaia. Strabo (l. c.) places it a little after that of Crotona and Syracuse, which he recarded as nearly contemporary, but he is probably mistaken in this last opinion. [Crotona.] Eusebius, on the contrary, brings it down to so late a date as n. c. 673 (or, according to Hieronymus, 683); but there seems good reason to believe that this is much too late, and we may venture to adopt Strabo's statement that it was founded soon after Crotona, if the latter be placed about 710 B. C. (Euseb. Arm. p. 105; Clinton F.H. vol. i. p. 186, vol. ii. p. 410.) The traditions adopted by Aristotle and Polybins represented the first settlers as gaining possession of the soil from the native Oenotrians (wbom they called Sicnli), by a frand not unlike those related in many similar legends. (Pol. xii. 6.) The fact stated by Strabo that they first established themselves on Cape Zephyrium (Capo di Bruzzano), and subsequently removed from theace to the site which they ultimateiy occupied, about 15 miles further N., is supported by the evidence of their distinctive appellation, and may be depended on as accurate. (Strab. l.c.)

As in the case of most of the other Greek colonies in Italy, we have very scanty, and ipperfect jn-
formation concerning the early history of Locri. The first esent in its annals that has been transmitted to us, and one of those to which it owes its chief celebrity, is the legislation of Zaleucus. This was said to be the most ancient written code of laws that had been given to any Greek state; and thongb the history of Zalencus himself was involved in great obsemity, and mixed up with much of table [Zalevcus, Biogr. Dict.], there is certainly no doult that the Lcerians pwssessed a written code, which passed under his name, and which continued down to a late period to be in force in their city. Even in the days of Pindar and of Demosthenes, Locri was regarded as a model of good government and order; and its inhabitants were distingnished for their adherence to established laws and their aversion to all innovation. (Pind. ol. x. 17 : Schol. ad loc.; Strab. vi. p. 260; Demosth. adv. Timoerat. p. T43; Diod. xii. 20,21.)

The period of the legislation of Zaleuens camnt be determined with certainty : but the date given by Eusebius of 01. 30, or n. C. 660, may be received as approsimately correct. (Euseb. Arm. p. 105; Clinton, vol i. p. 193.) Ofits priaciples we know but little; and the quotations from his laws, even if we coold depend upos their authenticity, have no reference to the political institutions of the state. It appears, bowever, that the government of Locri was an aristocracy, in which certain select families, ealled the Hundred Houses, eujoyed superior privileges: these were considered to be derived from the original settlers, and in accordance with the legend concerning their origin, were regarded as deriving their nobility from the female side. (Pol. xii. 5.)

The next event in the history of Locri, of which we have any accouat, is the memorable battle of the Sagras, in which it was said that a force of 10,000 Lucrians, with a small body of auxiliaries trum Phegium, totally defeated an army of 130,000 Crotoniats. with vast slaughter. (Strab. vi. p. 261 ; Cic. de N. D. ii. 2; Justin. xx. 2, 3.) The extraordnary character of this victory, and the exaggerated and fabulons accounts of it which appear to have been circulated, rendered it proverbial among the Greeks ( $\dot{\dot{\alpha}} \lambda \eta \theta \dot{\epsilon} \sigma \tau \in p \alpha, \tau \hat{\omega} \nu \dot{\epsilon} \pi i \quad \Sigma \dot{\alpha} \gamma p \alpha$, , Suid. s. v.) Yet we have no means of assigning its correct place in listory, its date beiag extremely uncertain, some accounts placing it after the fall of Sybaris (n. ©. 510 ), while others would carry it back nearly 50 years earlier. [Crotona.]

The small number of troops which the Locrians are represented as bringing into the field upon this occasion, as compared with those of Crotona, would seem to prove that the city was not at this time a very porrerful one; at least it is clear that it was not to compare with the great republics of Sybaris and Crotona. But it seems to have beeu in a flourishing condition; and it most in all probability be to this period that we must refer the establishment of its colonies of Hipponium and Medma, on the opposite side of the Bruttian peninsula. (Scymn. Ch.. 318 ; Strab. vi. p. 256.) Locri is mentioned by Herodotus in n.c. 493, when the Sumian colonists, who were on their way to Sicily, touched there (Herod. vi. 23); and it appears to have been in a state of great prosperity when its praises were sung by Pindar, in 3.c. 484 . (Pind, Ol. x., xi.) The Lacrians, from their position, were naturally lel to maintain a close connection with the Greek cities of Sicily, especially with Syracuse, their friendship with which would seem to have dated, accordiag to some necounts,
from the period of their very foundation. (Strab. vi. p. 259.) On the other hamd, they were almost constantly on terms of hostility with their neighbours of Rhegium, and, during the rule of Anaxilas, in the latter city, were threatened with complete destruction by that despot, from which they were saved by the intervention of Hieron of Syracuse. (Pind. P'yth. ii. 35 ; and Schol. ad loc.) In like manner we find them, at the perind of the Athemian expeditions to Sicily, in close alliance with Syracusc, and on terms of open enmity with Rherinm. Honce they at first engaged in actual hostilities with the Athenians under Laches ; and thouth they subuequently concluded a treaty of peace with them, they still refusel to admit the great Athenian armament, in E.c. 415 , even to anchor on their coasts. (Thuc. iii. 99, 115, iv. 1,24 , v. 5 , vi. 44 , vii. 1 ; Diol, xii. 54 , siii. 3.) At a later period of the Peloponnesian War they were among the few Italian cities that sent auxiliary ships to the Lacedaemonians. (Thnc. viii. 91.)

Duriog the reign of the elder Dionysius at Syraense, the bonds of amity between the two cities were strengthened by the personal alliance of that monarels, who married Doris, the danshter of Xenetus, one of the most eminent of the eitizens of Locri. (Diof. xiv. 44.) He subseqnently adhered steulfastly to this alliance, which secured lim a footing in Italy, from which be derived great advantage in his wars against the Rhegians and other states of Marna Graecia. In return for this, as well as to secure the continuane of their suppurt, he conferred great benefits upon the Locrians, to whom he gave the whole territory of Canlonia, after the deatruction of that city in B.c. 389 ; to which he added that of 1lipponiuin in the following year, and a part of that of Siylletion. (Diod. xiv. 100, 106, 107 ; Strab. p. 261.) Hipponium was, however, agsin wrested from them hy the Carthagimans in B.C. 379 . (1d. sv. 24.) The same intimate relations with Syracuse continued under the younger Dimysius, when they became the source of great misfortuues to the city : for that despot, after his expulsion from Syracnse (B.c. 356), withdrew to Locri, where he scized on the citadel, and established himself in the possession of dexpotic: power. Hi, utate bere is describut as extremely urbitrary and oppressive, and stained at once by the must excessive atrarice amì unbridled licentiontacts. At length, after : period of six years, the Lomiam took advautage of the absence of Dinnsius, ami drove out his garrison; while they exerelsed a cruel vengeance mpon his unfortunate wite and daughters, who hal fallen iuto their hands. (Instin, $\mathbf{x x i} .2,3$; Strah. vi. P. 259 ; Arist. Pol. v. 7; Clearch. ap. Athen'. xii. 541.)

The Loerians are suid to have suffered severely from the oppressions of this tyrant; but it is probable that they sustained still greater injury from the increasing power of the Bruttians, who were now become nowst formidable neightonrs to all the Greek cities in this part of Italy. Thie Lorrians never appear to have fallen under the yoke of the barbarians, but it is certain that their city declined greatly from its former pro-perity. It is not azain mumbioned till the wats of 1 yrrhas. At that perion? it appears that Locri, as well as Khumentu and other Greek cities, had phaced itself under the frotretion of Rome, and even admitted a Roman garfrown luts its walls. Oa the appraach of l'yrrins they expelled this garrison, and declared themselves in fiwwar of that monarch (Justin, xsiii. 1); but they had soon cause to regrot the change: for the
garrison Jeft there by the king, during his absence in Sicily, conducted itself so ill, that the Locrims rose against them and expelled then from their city. Ou this acconnt they were severely punished by Pyrrhus on his return from Sicily ; and, not content with exactions from the inhabitants, he carried off a great part of the sacred treasures from the temple of 1'ruserpine, the must celebrated sanctuary at Locri. A violent storm is said to have punished his impiety, and compelled him to restore the treasures. (Appian, Sumn. iiji. 12; Liv. xxix. 18 ; Val. Mas. i. 1, Ext. § 1.)

After the departure of Pyrrhas, the Locrians seem to lave stbmitted again to Rome, and continned so till the Second Punic War, when they were among the states that threw off the Roman alliance and declared in favour of the Carthaginians, after the battle of Camae, b.c. 216. (Liv. xxii. 61, ssiii. 30.) They soun after received a Carthaginian force within their walls, though at the same time their liberties were guaranteed by a treaty of alliance on equal terms. (Liv, xxiv. I.) When the fortune of the war begin to turn against Carthage, Loeri was besieged by the Roman consul Crispinus, but withont success; and the approach of Hannibal compelled him to raise the siege, B.c. 208. (Id. xxvii. 25,28 .) It was not till B.c. 205 , that Scipio, when on the point of sailing for Africa, was cmabled, by the treachery of some of the citizens, to surprise one of the forts which commanded the town; an advantage that soon led to the smrrender of the other citadel and the city itself. (Id. xxis. 6-8.) Scipio contided the charge of the city and the command of the garrison to his legate, Q. Pleminius ; but that officer eonducted liusself with sueb cruelty and rapacity towards the unfortnnate Locrians, that they ruse in tumult against hin, and a violent sedition took place, which was only appeased by the intervention of Scivio himself. That general, however, took the part of Pleminius, whom he continucd in his command; and the Locrians were exposed anew to his exactions and crnelties, till they at length took courace to appeal to the Roman semate. Notwithstanding veliement ol position on the part of the friends of scipio, the senate prononnced in favonr of the Lorrians, condemned Pleminius, and restored to the Locrians their liberty and the mjoyment of their own laws. (Liv. xxix. 8, 1622. Diod. xxvii. 4; Appim, Annib, 55.) Pleminins had, on this occavion, followed the esample of Pyrrhus in plandering the temple of Proserpine; but the senate caused restitution to be made, and the impiety to be expiated at the public cost. (Diod. i.c.)

From this time we hear little of Locri. Nutwithstanding the privileged condition conceded to it by the senate, it seems to have suck into a very subordinate position. Pulybius, however, speaks of it as in his day still a considerable town, which was Lound by treaty to furnish a certain amount of naval auxiliaries to the Romans. (Pol. xii. 5.) The Locrians were under particular obligations to that historian (Ib.) ; and at a later period we find them enjoying the special patronage of Cicero (Cie. de Leg. ii. 6), but we do not know the orisin of their conmection with the great orator. From Strabo's acconnt it is ubvions that Loeri still snbsisted as a town in his day, und it is nuticed in like manner by Pliny and P'olemy (Strab. vi. p. 259; P'lin. iii. 5. s. 10; Ptol. iii. 1. S 10). Its name is not tound in the Itiueraries, though they describe this coast in con-
siderable detail; bnt Procopius seems to attest its contimued existence in the 6th century (B. G. i. 15), and it is probable that it owed its complete destruction to the Saracens. Its very name was forgotten in the middle ages, and its site became a matter of dispute. This has however been completely established by the researches of modern travellers, who have found the remains of the ancient city on the sea-coast, near the modern town of Gerace. (Clurer, Ital. p. 1301 ; Romanelli, vol. i. p. 152 ; Cramer, vol. ii. p. 411 ; Riedesel, Voyage dans la Grande Grece, p. 148.)

The few ruins that still remain have been carefully examined and described by the Due de Luynes. (.Ann.d. Inst. Arch. vol. ii. pp. 3-12.) The site of the ancient city, which may be distinctly traced by the vestiges of the walls, occupied a space of near two miles in length, by less than a mile in breadth, extending from the sea-coast at Torre di Gierace (on the left bank of a small stream called the Fiume di S. Ilario), to the first heights or ridges of the Apemioes. It is evidently to these beights that Strabo gives the name of Mount Esopis ('E $\sigma \hat{\omega} \pi t s$ ), on which he places the first foundation of the city. (Strab, vi. p. 259.) The same heights are separated by deep ravines, soas to constitute two separate summits, both of them retaining the traces of ancient furtifications, and evidently the "two citadels not far distant from each other" noticed by Livy in his account of the capture of the city by Scipio. (Liv, xxix. 6.) The city extended from hence down the slopes of the hills towards the sea, and had unquestionably its port at the mouth of the little river S. Ilario, though there could never bave been a harbour there in the modern sense of the term. Numerous fragments of ancient masonry are scattered orer the site, hut the only distinct vestiges of any ancient edifice are those of a Doric temple, of which the basement alone now remains, but several columns were standing down to a recent period. It is occupied by a farm-honse, called the Casino dell' Imperatore, about a mile from the sea, and appears to have stood without the ancient walls, so that it is not improbable the roins may be the remains of the celebrated temple of Proserpine, which we know to have occupied a similar position. (Liv, xxix. 18.) The ruins of Locri are about fire miles distant from the modern town of Gerace, which was previously supposed to occupy the site of the ancient city (Cluver, l. c.; Barr. de Sit. Calebr. iii. 7), and 15 miles from the Capo di Bruzzano, the Zephyrian promontory.

The Locrians are celebrated by Pindar (Ol. ธ. 18, xi. 19) for their deyotion to the Muses as well as for their skill and courage in war. In accordance with this character we find mention of Xenocritus and Erasippus, both of them natives of Locri, as poets of sune note; the lyric poetess Theano was probalily also a native of the Epizephyrian Locri. (Schol. ad Pind, Ol. xi. 17; Bueckh, ad Ol. x. p. 197.) The Pythagorean philosophy also was warmly taken up and cultivated there, though the authorities had refused to adurit any of the political innovations of that philosopher. (Porphys. Vït. Pyth. 56.) But among his followers and disciples several were natives of Locri (lambl. Vit. Pyth. 267), the most emident of whom were Timaens, Echecrates, and Acrion, from whom Plato is said to have inibibed his knowledge of the Pythagorean tenets. (Cic. de Fin. v. 29.) Nor was the cultivation of other arts neglected. Eunomus, a Locrian citizen, was cele-
brated for his skill on the cithara: and the athlete Euthymus of Locri, who gaioed several prizes at Olympia, was scarcely less renowned than Milo of Crotona. (Strab. vi. Pp. 255, 260 ; Paus. vi. 6. §§ 4-11.)

The territory of Locri, during the flourishing period of the city, was certainly of considerable extent. Its grent augmentation by Dionysins of Syracuse has been already mentioned. But previons to that time, it was separated from that of Rhegium on the SW. by the river Halex or Alice, while its northern limit towards Caulonia was probably the Sagras, generally identified with the Alaro. The river Buthrotus of Livy (xxix. 7), which appears to have been but a short distance from the town, was probably the Novito, about six miles to the N. Thucydides mentions two other colonies of Locri (ivesides Hipponium and Medma already noticed), to which he gives the names of Itone and Melae, but no other trace is found of either the one or the other. (Tlime. v. 5.)
[E. H. B.]

COIN OF THE LOCRI EPIZEPHYRIT.
LOCRIS ( (окрis: Eth. Moкрoi; in Latin also Locri, but sometimes Locrenses). The Locri were an ancient people in Greece, and were said to have been descended from the Leleges. This was the opinion of Aristotle; and other writers supposed the name of the Locrians to be derived from Locrus, an ancient king of the Leleges. (Aristot.: Hes. ap. Strab. vii. p. 322 ; Scymnus Ch. 590 ; Dicaearch. I1; Plin. iv. 7. s. 12.) The Locrians, however, must at a very early period have become intermingled with the Hellenes. In the Homeric poems they always appear as Hellenes; and, according to some tradifions, even Deucalion, the funnder of the Hellenic race, is said to have lived in the Locrian towa of Opos or Cynus, (Pind. Ol. ix. 63, seq.; Strab. ix. p. 425.) In historical times the Locrians were divided into two distinct tribes, differing from one another in customs, habits, and civilisation. Of these the eastern Locrians, called the Opuntii and Epicnemidii, dwelt upon the eastern coast of Greece, opposite the island of Euboea; while the western Locrians dwelt opon the Corinthian gulf, and were separated from the former by Moont Parnassus and the whole of Doris and Pbocis. (Strab. ix. p. 425.) The eastem Locrians are alone mentioned by Homer; they were the more ancieat and the more civilised: the western Locrians, who are said to hare been a colony of the former, are not mentioned in history till the time of the Peloponnesian War, and are even then represented as a semi-barbarons people. (Thuc. i. 5.) We may conjecture that the Locriaos at one time extended from sea to sea, and were torn asunder by the immigration of the Pbocians and Darians. (Niebulr, Lectures on Ancient Ethnography, vol. i. p. 123.)

1. Locki Epicnemidi and Opentil (Etuk$\nu \eta \mu i \delta i o t$, 'OTov́vтtor), inhabited a narrow slip upun the eastern coast of Greece, from the pass of Thermopylae to the mouth of the river Cephisous.

## LOCRIS.

Their northern frontier town was $\mathrm{Al}_{1}$ nh, whith bordered upon the Malians, ani their sonfingo (owa tier town was Larymm, which at a lates than belonsed to Bocotia. The Locrims, however, did not inhabit this coast contipuously, bat were separated by a narrow slip of Phocis, which extended to the Euboean sea, and contained the Phocian seaymert town of Daphous. The Locrians north of Daph hums were called Epicnemidii, from Mount Cnemis; and those south of this town were named Opuntii, from Opus, their principal city. On the west the Locrians were separated from Ploocis and Bisentia by a range of mountains, extending from Munt Orta and ruming parallel to the coast. The northem part of this range, called Nunt Cnemois (Strab. is. pp. 416 , 425), now Tilunda, rises to a considerable beight, and separated the Epicnemidii Locri from the Phocians of the upper valley of the Cephissus; the southern portion, which bore no specitic name, is not so lufty as Monnt Cuentis, and separated the Oquotian Locrians from the north-eastern parts of Beeotia. Lateral branches extended from these mountains to the const, of which one terminated in the promentury Cuemides [Csmanes], opposite the islands called Lidhades; but there were several fruitful valleys, and the fertility of the whole of the Locrian coast is praised buth by ancient and modera observers. (Strab, ix. p. 425; Forchhammer, Hellenika, pp. 11 -12; Grote, Ilist of Greme, wol. ii. p. 381.) In consequence of the froximity of the momutains to the coast there was no roms fur any ennsideratio rivers. The largest, which, however, is only a mountain torreot, is the Boacrates (Badypos), called also Mises (Mávns) by Stralu, risime in Mount Cnemis, and flowing imo the sea betwerm Sarpheia and Thrmium. (1lom. 11. ii. 533; Strah. ix. p. 426; 1'tol. iif. 15. § 11 ; Jlin. ir. 7. s. 12; Leake, Worthern Greces, vol, ii. p. 67.) The only other river mentioned hy mane is the I'monanis (Matávios, Paus. ix. 24. § 5) a sumall stream, which flows into the Opuntian gulf near the Benoti:n froutier: it is the river which flows from the muden village of Pruskyná. (Leaki, vol. ii. p. 174.) The
 pi $416.425,426$ ), at the larul of whith stoot the town of Opus, is a considerable bay, shallow at it. inter extremity. In this haty, cluse to the const, is the small island of Atalanta. [Atalanta, No. 1.]

There are three important pasies acros, the dor rian monatains finto Plowis. One leads from the territory of the Epicnemidii, between the summits of Mount Callidromus and Momnt Cuemis, to Tithronum, in the upper valley of the Cephissus: a second across Mount Cnemis to the Phocian tuwn of Elateita; and a third from Opas to Hyampolis, aton a Mhocian town, whence the road ran to Abac and Grebumenos.

The eastern Locrians, as we have alrondy said, are mentioned by Homer, who deseribes them as following Ajax, the son of Oileus, to tho Trojan War in forty ships, and as inhabiting the towns of Cynus, Opus, Calliarus, Beas, Scarpher, Angeine, Tarphe, aud Thronium. (Il. ii. 527-535.) Neither Honier, Herodotus, Thuydiden, nor Ioll bius, make any distinction between the Opuntii and Epicnemidii; mud, during the flourislmes perind of (irceim history, Upus was rectarded as the chinf town of the uastern Locrians. Even Strabo, from whom the distinction is chiefly derived, in one phace describes Upns ths the metropalis of the Epienemidii (ix. p. +16); and the same is confirmed by Phay (iv.
7. L 12) an! Stephanus (s.v.'Oォíts; from L.wake bil.a p. 181). In the Pervian War the Opuntian 1.nerians fought with Leonidas at Thermopylae, and also sent sevon ships to the Grecian fleet. (Herod. vii. 2033, vii. 1.) The Lncrians fought on the side of Sparta in the Peloponerian War. (Thuc, ii. 9.)

The following is a list of the Locrian towns:1. Of the Epicmemidii: along the const from N. to S, Alpinus; Nreael; Scatphe or Scarpheha; Timosecm : Cremus or Cxzmoms: more inland, Talephe, afterwards Pharygae; Augelae.-2. Of the Opuatii : along the coast from N. to S., Arope; Crnes; Ope's; Hasae; Lahmans, which at a later time lelonged to Boentia; more ivland, Callames; Namix Corsela.

COLS OF THE LOCN OPCXTH.
1I. Locra Ozolie ('Oġגat) inhabited a district upon the Covinthian gulf, honnded on the north by Doris and Aetolia, on the east Ly I'hocis, and on the west by Aetolia. This distriet is mountainons, and for the most part mprodnctive. The dechvities if Mount Parmasus from Phucis, atoid of Mount Corax from Actulia, oreupy the greater part of it. The cally river, of whirh the name is mentioned, is the Hylaetans, nous the Momo, which nums in a muth-westerly duection, and falls into the Coninthian grult near Nampartus. The frontier of the Locri Oz lac on the west was cline to the promontory Antirrhium, "pmasite the Io montiry Rhium on the coast of Achaia. Aut rhimm, which was in the twritory of the Lomeri, is sl ken of elsewhere. [Vol. 1. 1. 13.] The eatern tmonter of Loerris, on the enast, was dues to the Ihncian town of Crissa: and Hen ('issusul gulf washed on its western side the Lurim, and an its easteru the Plocian coast. The orivin of the mame of Ualae is uncertain. Various otymolo ins were proprosed by the ancients. (Paus. $\therefore .3 \mathrm{~K} . \$ 1$, seq.) Some derived it from the verb "isenv, "th surd," either foum the stench arising from a sprinus at the foot of Mount Taphiassus, beneath which the centanr Nissus is sail to have been baniel, amb which still retains this property (cf. Strab. ix. p. 427), or from the abundance of asphodel which scrented the air. (C). Arclytas, ap. I'lut. Quasest. (iracc. 15.) Others derived it from tho undressed skins whirll were worn by the ancient inhabitants: and the Locrians thenselves from the
 their country in a marvellous inanner. The Locri Ozolae are said to bave been a colony from the Opuntian Locrians. They first appear in history in the time of the Peloponnesian War, as has been mentiones ahove, when they are mentioned by Thucydidies as a semi-barbarous nation, along with the Aetoliams and Acarnanians. whom they resembled in their armour and mode of fighting. (Thuc, i. 5, iii. 94.) In B. C. 426 the Locrians promised to assist Demasthenes, the Athenian commander, in lis invasiunt of Actolia; but, after the defeat of Icmosthenes, most of tho Locrian tribes submitted
withont opposition to athe Spartan Eurylochns, who marched through their territory from Delphi to Naupactus. (Thuc. iii. 95, seq.) They belonged at a later period to the Aetolian League. (Polyb. xviii. 30.)

The chief and only important town of the Ozolae was Ampresssa, situated on the borders of Phocis. The other towns, in the direction of W. to E., were: - Molicrela; Naupactus; Oexeox; Astictrria or Axtictra; Eupaliem; Erythrae; Tolophon; Hesses; Oeantheia or Oeanthe; Ipacs; Chalaelm: more inland, Aegition; Potidasha; Crocyleicm; Teichiem; Olfae; Messafia; Hyle; Tritaea; Myonia.

On the geography of the Locrian tribes, see Leake, Northern Grecee, vol. ii. pp. 66, seq., 170 , seq., 587, seq.
LOG1 or LUG1 (Aర́yot or Aov̂or), a people in North Britain, mentioned by Ptolemy (ii. 3. § 12) as a population to the sonth of the Mertae, and west of the Cornatiii. This gives the part about the Dornoch, Cromarty, and Murray Firths. [R. G. L.]
LOGIA, a river in Ireland, mentioned by Ptolemy as between the Vinderins and the Rhobogdian promontory. Probahly [see Vinderics] the Lagan, falling into Belfost Lough, name for naune, and place for place.
[R. G. L.]
LONCIUM (Lienz), a place in the south of Noricum, on the right bank of the river Dravus, at the point where it receives the Isel. (Itin. Ant. p. 2\%9.) The whole district about Lienz abounds in Roman antiquities. (Gruter, Inscript. p. 267. 9; Muchar, Noricum, p. 254.)
[L. S.]
LONDI'NIUM (Aovöivov, Ptol. ii. 3. § $2 \pi$; $\Lambda v^{2}$ ồvov, Stepl. B. s. v.; Londinium, Tac. Ann. xiv. 33: Oppidnm Londiniense, Eumen. Paneg.Const. 17; Lundiniunn, Amm. Marc. xx. 1), the capital of Roman Britain. Ptolemy (l.c.) places Londinium in the district of the Cantii; but the correctness of this position has very naturally been questioned. Modern discoveries have, however, decided that the southern limits of the city, in the time of Hadrian and Antoninus Pius, extended a considerable distance into the territory of the Cantii; and Ptolemy, therefore, was not altogether unwarranted in placing Londinium in thins division of Britain. In earlier times the city was confined to the northern bank of the Thames.

The earliest mention of it is by Tacitus, in his well-known account of the insurrection of the Britons in the reign of Nero. As Britain was only fully snbjugated by Claudius, Londinium must have rapinily adranced to the importance it assumes in the narrative of this historian. Although it is not mentioned by Julius Caesar or by other eally writers, the peculiar natural adrantages of the locality point it out as one of the chief places of resort of the merchants and traders who visited Britain from the Gaulish ports and from other parts of the continent. At the comparatively early period in the Roman dumination referred to, Londinium is spoken of as a place of estabished mercantile reputation. The three chief cities of Britain at this period were Verolamium, Camnlodunum, and Londinium. At Camulodunum a colony of veterans had been esta. blished; Verulamium bad received the rights and privileges of a municipium;Londinium, without such distinctions, had attained by home and foreign trade that pre-eminence which ever marked her as the metrapolis of Britain: - "Londinium .... cognomento quidem coloniae non insigne, sed copia negotiatorum et cormeatuum maxime celebre." ( $\mathrm{Iac}_{1} A \eta n$. xiv. 33.)

At this period we mnst infer that Londiniam was withont extemal walls; and this alsence of mural defences appears to have been commion also to Verulamiom and to Camulodunum. The Britons passed by the fortified places and attacked at once the rich and populous cities inadequately defended. Camnlodnnum was the first to fall: Londinium and Verulaminm speedily followed in a similar catastrophe.

The Itinerary of Antoninos, which is probably not later than the time of Severns, affords direct evidence of the chief position which Londininm held among the towns and cities of Britain. It occurs in no less than scren of the itinera, and in six of these it stands either as the place of departure or as the terminus of the routes; no other town is introduced so conspicuously.
The next historical mention of Londininn ocenrs in the panegyric of Eumenius addressed to Constantius Caesar (c. 17), in which it is termed "oppidum Londiniense." After the defeat of Allectus, the victorious Romans marched directly on Londinium, which was being plundered by the Franks and other foreign mercenaries, who made up the greater part of the nsurper's forces.

Ammianus Marcellinus, who wrote at a later period, states that, in his time, Londinium was called Angusta, an honourable appellation not unfrequently conferred on cities of distinction. In this writer we find the word written asit is pronounced at the present day:- " Egressns, tendensque ad Lundinium retus oppidum, quod Angustam posteritas appellavit" (xsvii. 8, comp. xxviii. 3). In the Notitia Dignitatnm we find mention of a "Praepositus Thesaurorum Angnstensium in Britanniis;" and in the Chorography of Ravenna the complete form, Londinium Augusta, is given.
Monumental remains show that Londinium contained bnildings commenswate in grandeur and estent with its bistorical claims. The foundations of the wall which bordered the river, when laid open a few years since, was almost wholly composed of materials used in buiddings wheh were anteriur to the period when the wall was built ; but it was iniposisible to decide the dates of either. The stones of which this wall was constructed were portions of columns, friezes, cortices, and also foundation stones. From their magnitude, character, and number, they gave an imporiant and interesting insight into the obscure history of Roman London, in showing the architectual changes that had taken place in it. Similar discoveries bave been made in various parts of the modern city which more fully developed the debris of an ancient city of importance : other arcbitectural fragments have been fond ; walis of vast strength and thickness have been noticed; and within the last twenty years, at least thirty tessellated pavements bave been laid open, of which some were of a very fine kind. (Archaeologin, vols. xxvii. xxxiii. et seq.) Londinium, unenclosed at first, was subsequently in early times walled; but it occupied only part of the site it exentually covered (Arelaeologia, vol. $x$ xis.). The line of the wall of Roman London is well known, and can still, in parts, be traced. Where it has been excavated to the fonndation, it appears based upon a bed of clay and flints; the wall itself, composed of rubble anil hard mortar, is faced with small squared stones and bonding tiles; its thickness is ahout 12 feet: its original height was probably between 20 and 30 feet; it was flanked with towers, and had a
least seren gates. By the sides of the wiief roals stood the ceneteries, from which enormon-quantities of sepulchral rennains have been, and still we, procured. Anong the inscriptions, are recordo of soldiers of the second. the sisth, and the twentieth legions. (Col. Ant, vol. i.) Wie have no evalence, however, to show that the lesions themselves were ever quatered at Londinium. The only troops which may be comsidered to have been stationel in this city wre a colort of the native Britons (ciol. Ant. vol. i.); but it is not known at what particular period they were here. It is, however, a rather remaikable fact, as it was somewhat contrary to the policy of the Romans to station the ausiliaries in their native countries.

Traces of temples and portions of statues have also been found in London. The most remarkable of the latter is, perhaps, the bronze head of Hadrian found in the Thames, and the large bronze hand found in Thames Street. In reference to the statues in bronze which adorned Londinium and other cities of Roman Britain, the reater may be directed to a curions passuge in Geutlicy of Monmouth. That writer relates (xii. 13), that, after the death of Cadwalla, the Britons enbbalned his budy and placed it in a bronze statne, which was set upon a brome horse of wonderful beauty, and placed over the western gate of London, as a trophy of rictory and as a terror to the saxons. All that we are called upon to consider in this statement is, whether it is at all likely that the writer would have invented the details about the works in bronze ; and whether it is not very probable that the stury was made up to account for some laman work of art, which, for centuries after the Rumans hal left Britain, venained a wonder and a puzale to their successors. Eque trian statues in bronze were erected in Britain by the Romans, as is proved by a fragment found at Livcoln ; but in the subowipent and middle ayes such wirks of art were not f.ibriated.

We have above refforred to the "Prappositns. Thesaurorum Augutensium." Numerous coins are extant of the mat of Lumbiniun. Thove which tuay be cerrainly thus attributed are of Caransius. Allectus, Constantinus, and the Constantine fan ils. (Akernan's Coins of the Rionans reluting to Britain.) With respect to the precise positwon of the public buildings, aud, indeed, of the general disthtLution of the Roman eity, but little is known : it i), howeser, very certain, that, with some fers ex eptions. the course of the modern streets is no guide to that of the aucient. This has also been remarked to bict the case at Trives and other andient cities. [C.B.S.]
 voukpts, Marc. Meraul. p. 43: Berlinguas), a small i. land, and the ouly one, belumging to the jrovime of Lusitania, lay off the promumbery Lexaticas (C) Carcoeiro.)
[P.s.]
LONGANLS (Aorfavós), a river in the A. of Sicily, not far from Mylae (Miluzan), celebrated for the vietory of Hierul, king of Syracuse, over the Hanertines in B. c. 270 (1'ul. i. 9 : Dind. xxii. 13; Exc. H. p. 499, where the name is written Apitavos, but the satre river is undoubtedly meant): Polybius describes it as "in the plain of Mylae"
 with certainty, which of the small rivers that fluw into the sea near that town is the one meant. The Fiowne di Santa Lucia, about three miles southwest of Miluzso, has perlay sh the best claim; thingh b Cluverius fixes on the Fiume di Castru Recle, a
little thare distant from that city. (Clus. Sicit. p. 303.)
[E. HI. B.]
LOAGATICUSI, a town in the S. of Pabnonia Superior, on the road from Aquileia to Emonq. Now Logatecz, according to Nuchar. (It. Anton.; It. Hierus.: Tab. P'eut.; Machar, Noricum, p. 232.) LO.VGOBARD1. [LANGob.ned.]
LONGONES. [SABDHAA.]
LONGOVICUS, a tuwn in Britain, mentioned in the Notitia, and nowhere clse. It was, probably, in the neighbourhood of the C'unberland and Wiestmorelam lakes ; but beyond this it is not safe to go further in the way of identitication; though the Monumcuta Britannica makes it Lancaster. [R. G. L.]

LONGilLA (Aorjoda: Eth, Longnlanus: Buon Ripuso), an ancient city of Latium, which seems to have been insluded in the teritary of the tingacians. It first appears as a Volscian city, whith was taken by assault by the Rman consul, Pootnmus ('mminits in 1s. c. 493. (Liv. ii. 33 : Diunys. vi. 91.) But it was recusered by the Vohscians nuder the command of Coriolamus, in B.C. 488 (Liv. ii. 39 ; 1) ionys, viii. 36) : in both ctases it is described as fallome arn easy frey to the invading amy, and "a- prob, ifly wot a 1 lace of ayy great importance ; indeed Iarys exprestoms would lead us to infer that it was a depententy of Animm. Altor this ir is only incidental!y momtioned : once, as the place where the Loman army under L. Aemilius encamped in the war tyainst the Volscians, B.C. 482 (Dionys. viii.85); and tusain, at a much later period in the sumnite Wars, 3. c. 309. (Liv, ix, 39.) Its name is after this finnd ouly in Pliny's list of the cities of Latium which wre in his time utterly decayed and deserted. (Plin, iii. 5. s. 9.) As he enumerates it among the cities that shared in the vacribices on the Allan Stomet, it would seem to lave been originaliy a Jatin city, thunzt it had fallen into the hands of the Volscians before its name appears in history.

All the ahove passazes would lead us to place Loncula in the nei, hbourlo if of Antium, whrle the two former connect it clumely with Pollusea and Cori h. These are all the data n lich we have for determiniug its pusitius, which must therefore be in some dingree matter of conjectore, especially as that of Pollueca and Corioli is equally meertain. But Nibby has pointed out a lucality which has at all veruts a plausible claim to be that of Longula, in the coasal, or farm-honse, now called Buon Kiposo, on the ri rint of the rad from Rome to Antinm, ahont 27 miles from Rome, and 10 in a straiz It line iron I'orto d'Aluzo.* The farm, or tenuta, of Euon Kijumen 1 es between that of Carroceto on the une side, and Atrdea on the other; while the site occupied hy the crusale itsclf, and which was that of as castle in the middle aters, is described as one of these which is so elearly marked by natural advantages of position that it conld scarcely fail to have been chusen as the site of an ancient city. No ruins remain; but perhal!s these cuuld hardly be expected in the case of a town that ceased to exist at so early a period. (Nibby, vol, i. p. 326 ; Abeken, MittelItalien, p. 72.)
[E. II. B.]

* The position assigned to Buon Riposo on Gell's map dues not accord with this description of the site given by Nibly; hut this part of the map is very imperfect. anil evidently not derived from personal whervation. Gell's own account of the situation of Buon Riposn (p. 185), though Jess precise, agrees with that of Nibly.

## LONGUM PROMONTORIUM.

LONGUM PRONONTORIUM. [SICILIA.]
LONGUS, in North Britain, mentioned by Ptolemy (ii. 3) as a river to the north of the Epidian Promontory (Mull of Cantyre). Identified in the Monumenta Britannica with Lynneloch, Innerlochy, and Loch Melfort.
[R. G. L.]
LOPADUSSA ( $10 \pi \alpha \delta u \bar{\imath} \sigma \sigma a$, Strab. xvii. p. 834 ; Autaōoōra, Ptol. ir. 3. § 34: Lampedusa), a small island off the E. coast of Africa Propria, opposite to the town of Thapsus, at the distance of 80 stalia. according to an ancient Periplus (lisarte, Bibl. Matrit. Cod. Graec. p. 488). Pliny places it about 50 M . P. N. of Cercina, and makes its length about $6 \mathrm{M} . \mathrm{P}$. (Plin. iii. 8, s 14, v. 7. s. 7.) It really lies abont 80 English miles E. of Thapsus, and about 90 NE. of Cercina.
[P. S.]
LOPHIS. [BoEOTIA, p. 413, a.]
LOPOSAGIUM, in Gallia, is placed by the Table between Vesoutio (Besançon) and Epamanduodurwun (Mandeure). It is xiii. leagues from Vesontio. D.Anville supposes that it may be a place called Eaumes-les-Nones : others guess Baumes-les-Dames, or a place near it named Lucial or Luxiol.
[G. L.]
LOPSICA (Aótıкa), a town of Liburnia, which Ptoleny (ii. 16. § 2 ; comp. Plin. iii. 25) places near the month of the river Tedanins (Zermagna): perhaps the same place as the Ospecat of the Geographer of Ravenna.
[E. B. J.]
LO'RIUN, or LAU'RIUN, a village in Southern Etruria aod station on the Via Aurelia, 12 miles from Rome. (Itan. Ant. p. 290; Tab. Peut.) It is chiefly known from the circumstance that the faunly of Antoninus Pius had a villa there, in which that emperor was brought up. and where he afterwards constrncted a palace or villa on a more magnificent scale, which was his place of resideuce at the time of his death. (Jul. Capit. Ant. P. 12; Vict. de Coes. 15, Epit. 15 ; Eutrup. viii. 8.) It was afterwards a favourite place of resort with his successor M1. Aurelius, as we learn from his letters to Fronto (Fronto, Ep. ii. 1s, iii. 20, vi. 3, \&c.); but had already fullen into decay in the time of Capitulinus, who speaks ooly of its ruins No other mention of Lanrium ocenrs except in the Itineraries, by which we are enabled to fix its position with certainty. The 12 th mile from Rome cuincides with a bridge over a small stream between a farm called Buttaccia and the Castel di Guido: here the remains of aacient buildings and sepaichres have been found; and on the high ground above are the ruins of an edifice of a more extetsive and sumptuous character, which, from the style of coustruction, may probably lave belonged to the villa of the Antonioes. (Nibby, vol. ii. p. 271.) The name is variously written Lorium, Lorii, and Laurium, but the first form, which is that adopted in the epistles of Fronto and M. Aurelius, is the best warranted. The place appears to have continued to be inhabited during the early ages of Christianity, and we even meet with a bishop of Lorium in the 5 th century.
[E. H. B.]
LORTMA ( тà Aópvua), a small fortified place with a port, cluse to Cape Cymossema, on the westerumost point of the Rhodian Chersonesus, in Caria. Its harbuur was about 20 Roman miles distant from Rlhodes. (Liv. xxxrii. 17, xlv. 10 ; Steph. B. s. v. : Plin. v. 29 ; Ptol. v. 2, § 11 : Thucyd. viii. 43 ; Snec. Quaust. Not. iii. 19 ; Appian, Bell. Civ iv. 72.) Strabo (xiv. p. 652) upplies the name Loryma to the whole of the rocky district, without mentioning the town. The Larmana of Mela (i.
16) and the Lorimna of the Tab. Pent. perhaps refer to Loryma, although it is also possible that they may be identical with a place called larymna mentioned by Pliny in the same district. Leake (Asia Minor. p. 223) regards the rmins in the west of Port Aplotheca as belonging to the ancient town of Loryma. These ruins are seen on the spur of a bill at the south-western entrance of the port; the town was long and narrow, running from west to east ; on each of its long sides there are still risible six or seven square towers, and one large round one at each end : the round tower at the east end is completely demolisher. The walls are pre. served almost to their entire beight, and built in the best style, of large square blocks of linestone. Towards the harbour, in the north, the town had no gate, and on the south side alone there appear three rather narrow entrances. Io the interior no remains of buildings are discernible, the ground consisting of the bare rock, whence it is cvident that the place was not a town, but only a furt. Sculptores and inscriptions have not been found eitber within or ontside the fort, bit several tombs with bare stelne, and some ruius, exist in the valley at the head of the harbour. (Ross, Reisen auf den Griech. Inseln, vol. iv. pp. 46. \&c.)
[L. S.]
LORNE, a fortress in Mesopotamia, situated on the northern frontier, upon Mount Izala. (Amm. Marc. xix. 9.)
LOSA, a station in Gallia Aqnitania, placed hy the Antonine Itin, on the road from Pompelo (Pampelona) in Spain to Burdigala (Bordeaux). From Segosa (Escoussé or Escoursé) to Losa is xii. (leagues), from Losa to Boii [Bo11] xii., and from Boii to Burdigala xvi. D'Anville coujectures Losa to be at a little canton, as he calls it, named Leche. Walckenaer fixes it at the Bois de Licogas. [G. L.]

LOSO'RIUM (Auのbipioy), a fortress in Lazua, built by Justinian (Procop, de Aled. iii. i), which Dnbois de Montpereux ( Ioyage Autour du Cavcase, vol. ii. p. 360) identifies with the modern villase of Loussiatkheri.
[E. B. J.]
LOSSONUS. [OLOOSOON.]
LOTO'PHAGI (AwToфárou, i. e. lotus-eaters), a people on the N. cnast of Africa, between the Syrtes, who first appear in mythical, but afterwards in bistorical geography. Homer (Od. ix. 84, et seqq.) represents Ulysses as coming, in his wanderings, to the coast of the Lotophagi, who compassed the destraction of his comparions by giving them the lotus to eat. For whoever of then ate the sweet fruit of the lotus, lost all wish to return to his native country, but desired to remaio there with the Lotophagi, feeding on the lutus, and forgetful of return. (The pectical idea is exquisitely wrought out by Tennyson in his Lotos-Eaters, works, vol. i. Pp. 175-184.) The Greeks of the historical period identified the conntry of these Lotus-eaters with the coast between the Syrtes, where they found all indigenous tribe, who nsed to a great extent (Herodutus says, as their sole article of food) the fruit of a plant, which they therefore supposed to be the lotus of Homer. To this day, the aboriginal inbabitants who live in caves along the same coasts eat the fruit of the plant, which is doubtless the lotus of the ancients, and drink a wine made from its juice, as the ancient Lotophagi also dial (Herod. iv. 177). This plant, the Zizyphus Lotus or Rhamnus Lotus (jujube tree) of tise botanists (called by the Arabs Siedra), is a priekly branchine shrub, bearing fruit of the size of a wild plum, of a
saffron colour and sweetish taste (Herodutas likens its taste to that of the date). It must not be confomaded with the celebrated Egyptian lotus, or water-fily of the Nile, which was also used for frod. (There were, in fact, several plants of the name, which are carefully distinguished by Liddell and and Scott, Gr. Lex. s. v.)

The ancient geographers differ as to the extent of coast whicb they ussign to the Lotophaci. Their chief seat was around the Lesser Syrtis, and eastward indefinitely towards the Great Syrtis; but Mela carries them into Cyrenaica. They are also placed in the large island of Mexinx or Lotophagitis, E. of the Lesser Syrtis. ( 11 mm . Herod. 12. ce.: Xen. Anab. iii. 2. § 25; Scylax. p. 47; Mela, i. 7. § 5: Plin. v. 4. s. 4: Sit, iii. 310 ; Hygin. Fab. 125: Sbaw; Della Cella; Bartb; Heeren, Ideen, vol. ii. P. 1. p. 54; Ritter, Erdkunde, vol i. p. 989.) [P'.S.]

LOTUM, in Gallis. is placed by the Antonine Itin. on a raxd from Juliwbona (Lillebonne) to Rotomagus (Rouen). It is vi. leagues from Juliobona to Lotum, and xiii. from Lotum to Rotomagns. The actual distances semn to fix Lotum at or neat Coudebec, which is on the murth bank of the Seine hetween Lilleborne and Rourn.
[G. L.]
LOXA, in Britain, mentioned by Ptolemy (ii. 3) as a river on the western coast of Scotland, north of the Vara (Oúapa) aestuary, i. e. the Murray Firth. 1.leutified in the Ifonumenta Britannica with the Luth in Sutherland; the Lossie, and Cromarty Firth.
[R. (i. L.]
LUANCI. [Gallafecta.]
LDBAENL. [GALIABCIA.]
LLCA (^oûka, Strab., Ptol.: Fth, Lneensis: Iuceca), a city of Etruria, situated in a plain at the foot of the Apennines, near the left bank of the Ausar (Srchio) abont 12 miles from the sea, and 10 NE. of Pisae. Though Lua was included within the limits of Etruria, as these were established in the time of Augustus (1lin. iii. 5. s. 8 ; P'tol. iii. 1. $\S+i$ ), it is very doubtful whether it was ever an Etruscan town. No muntion of it is found as such, and no Etruscan remains have been discovered in its reighbourbood. Put it is probable that the Etruscans at one time extended their power over the level country at the foot of the Apennines, from the Aruus to the Macra, leaving the Ligurians in possession only of the mountains, - and at this period, therefore, Luca was probably subject to them. At a later period, however. it had certainly fallen into the bands of the Ligurians, and being retaken from them by the Romans, seems to have been commonly considered (until the reign of Angmstus) a Ligurian town. For this reason we find it comprised within the province assignoil to Caesar, which included Liguria as well as Cisalpine (Gaul. (Suet. Caes. 24.) The first mention of Luca in history is in B. C. 218. when Livy tells us that the consul Sempronius retired there after his minsuccessful content with Hannibal. (Liv. xxi. 59.) It was, therefore, at this period certainly in the hands of the lomans, though it would seem to lave subsequently fallen again into those of the Ligurians; but it is strange tlat during the long protracted wars of the Romans with that people, we meet with no mention of Luca, though it must have been of importance as a frontier town, "npecially in their wars with the Apnani. The nive notice of it is that of the entablishment there If a lemath colony in m. e. 177. (Vell. 1at, i. 15; liv. xli. 13.) There is, indeed, some difliculty with 1, ard to the ; the Dlss. and editions of Livy vary
between Lnea and Luna; but there is no such discrepancy in those of Velleius, and there seems at leist no reason to doubt the settlement of a Latin colony at Luca; while that mentioned in Livy being a "colonia civium," may, perhaps, with more probability, be referred to Luna. (Madvig, de Colon. 1. 287; Zumpt, de Colon. p. 349 ) That at Luca becane, in common with the other Latin colonies, a municipal town by virtne of the Lex Julia (e.c.49), and hence is termed by Cicero "municipium Lucense." (Cic. ad Fam, xiii. 13.) It appears to have been at this time a considerable town, as we find it repeatedly selected by Caesar during his administration of Ganl as the frontier town of his province, to which he repaired in order to consult with his friends, or with the leaders of political parties at Rume. (Suet. Caes. 24 ; Plut. Caes. 21, Crass. 14, Pomp. 51 ; Cic. ad Fam. i. 9. § 9). On one of these occasions (in B. c. 56) there are said to have been more than 200 senators assembled at Luca, including Pompry and Crasus, as well as Caesar limself. (Plut. I.c.; Appian, B. C. ii. 17.) Luca would seem to have recejved a fresh colony hefore the time of Pliny, probahly under Augustus. (Plin. iii. 5. s. 8 ; Zumpt, de Colon. p. 349.) We hear litule of it under the Roman Empire; but it seems to have continued to be a provincial town of some consideration : it was the point where the Via Clodia, proceeding from Rome by Arretinm, Florentia, and Pistoria, was net by other ruads from Pama and Pisae, (I'lia. l. c. : Ptol, iii. 1. § 47 ; Itin. Ant. pp. 283, 2s4, 289; Tab. Peut.) During the Gutbic wars of Narses, Luca figures as an impurtant city and a strong fortress (Agath. B. G. i. 15.), but it was not till alter the fall of the Lambard monarchy that it attained to the degree of Prorperity and impmotance that we find it enjoying during the middle ages. Inceca is still a fluuralling city, with 25,000 inbabitants: the only velics of antiquity visable there are those of an amphitheatre, considerable part of which may still be traced, now converted into a market-place called the Pinzza del Mercato, and some small remains of a theatre near the church of Sta. Maria di Corte Lavelini.
[E. H. B.]
LICA'NUS, a river of Brattinm. [Brutrir, p. $450, \mathrm{~b}$.

LUCA'NIA (Aevkavia, Strab. The name if the people is written Aeukavol hy strabo and Polybius, but Ptolemy has Aovkavoi, and this is found also on coins), a province or district of Southern lialy, extending across from the Tyrrhenian ses to the gulf of Tarentum, and bounded by the Bruttians on the S., by Sammiurn and Aprolia on the N., and by Cam[x:mia, or the district of the lijentini. on the NW. Its more precise limits, which are fixed with unus nal manimity by the gengraphers, were, the river Silaus on the NW.; the Bradanus, which flows into the gulf of Tarentum, just beyond Metapontum, on the NE.; while the mouths of the Laïs and the Crathis marked its frontiers towards the Bruttians on the two sides of the peminsula. (Strab. vi pp. 252, 253, 255 ; llin. iii. 5. s. 10,11 s. 15 ; 1'tol. iii. 1. Ş 8, 9.) lts northern frontier, from th sumres of the Silarns to those of the Bradanns, must have heess an arhitravy line; but nearly following the main rid, re of the Apemmines in this part of its conrse. It thus eumprised the modern province of the Basilicata, together with the greater purt of the Principato Citeriore and the extreme worthern purtion of Cinlabria.

Lacania is evidently "tbe land of the Lucanians :" but though no territorial designation in Italy became more clearly marked or generally adopted than this appellation, it was not till a comparatively late period that it came into use. The name of the Lucanians was wholly unknown to the Greeks in the days of Thucydides ; and the tract subsequently known as Lucania was up to that time generally comprised under the vague appellation of Oenotria, while its coasts were iocluded io the name of Magna Graecia. Scylax is the earlicst author in whom the vame of Lucania and the Lucanians is found; and he describes them as extending from the frontiers of the Samnites and lapygians to the southern extremity of the Bruttiao peninsula. (Scyl. pp. 3, 4, 5. §s 12, 13.) We are fortnately able to trace with certainty the historical causes of this change of designation.

The earliest inhabitants of the part of Italy afterwards knowo as Lucauia, were the Oenotrians and Chones, tribes whom there is good reason to refer to a Pelasgic stock. [Italia, p. 84. The few particulars transmitted to us concerning them are given under Oenotria.] These races appear to have heen unwarlike, or at least incapable of offering any material opposition to the arms of the Greeks; so that when the latter established a line of colonies along the shores of the Tyrrhenian sea and the gulf of Tarentum, they seem to have rednced the barbarians of the interior to a state of at least nominal subjection with but little difficulty. Thns Sybaris exteoded her power from sea to sea, and fuunded the culonies of Pusidonia, Laüs, and Scidrus on the western coast of Oenotria; while further to the S. Crotona and Locri followed her example. It is probable, bowever, that other means were employed by the Greeks as well as arms. The Pelasgic races of Oenotria were probably assimilated without mach difficulty with their Hellenic rulers; and there seems reason to believe that the native races were to a considerable extent admitted to the privileges of citizens, and formed no unimportant elemeat in the pupulation of the cities of Magua Graecia. (Niebuhr, vol. i. p. 60.) The history of the foundation and rise of the numerous Greek colonies, which gradually formed as it were a belt, encircling the whole southern peninsula of Italy, are more appropriately reserved for the article Magna Graecta. It may here suffice to mention that the period immediately preceding the fall of Sybaris (B.c. 510 ) may be taken as that duriog which the Greek cities were at the leight of their power, and wheo their dominion was most widely extended. But though many of those cities snffered severely from domestic dissensioos, we find no trace of any material change in their relations with the neighbouring barbarians, till the appearance of the Lucanians at once produced an entire cbange in the aspect of affairs.

The Lucamians were, according to the general testimony of ancieut writers, a Sabellian race, -an offshoot or branch of the Samnite nation, which, separating froin the main body of that people, in the same maoner as the Campanians, the Hirpini, and the Frentani bad severally done, pressed on still further to the soutb, and extablished themselves in the country subseqnently knowa as Lucania. (Strab. vi. p. 254; Plin. iii. 5. s. 10.) The origin of their name is mikoown; for the derivation of it from a leader of the name of Lacius ( 1 lin. $x \leq x . l . c . ;$ Etym. Magn. s. v. Aevicavoi) is too ubrioukly a mere ety-
mologieal fiction of late days to deserve attention. Nor have we any distiact information as to the peried of their first appearance and establishment. Strabo describes them, without doubt, correctly, as first expelling (or more properly subduing) the Oenotrians and Chones, and then turning their arms ayainst the Greek cities on the coast. But it is not till they come into contact with these last that we have any account of their proccediags; and we have, therefore, no information as to the commencement of their career. Even their wars with the Greeks are known to us only in a very imperfect and fragmentary manner, so that we can scarcely trace the steps of their progress. But it is probable that it was not till after the conquest of Campania (abont B. C. 420) that the Samnites began to extead their conquests to the southward. Niebuhr has justly observed that the tranquil foundation of the Atherian colony at Thurii. in B. c. 442, and the period of prosperity which allowed it at first to rise rapidly to power, snfficiently prove that the Lucanians had not as yet become formidable neighbours to the Gauls, at least on that side of the feninsula (Nieb. vol. i. p. 96). But they seemed to bave first turned their arms against the Greek cities on the W. coast, and established a permanent footing in that quarter, before they came into collision with the more powerful cities on the Tarentine gulf. (Strab. i. p. 254.) Posidonin was apparently the first of the Greek cities which yielded to their arms, though the date of its conquest is mecertaia. [Pazstum.] It was probably soon after this that the Thurians, under the command of Cleandridas, were eogaged io war with the Lucanians, in which they appeared to have obtained some considerable successes. (Polyaen, ii. 10.) But the progress of the latter was still unchecked; and the increasing danger from their power led to the formation, in E. C. 393 , of a defensive league among all the principal cities of Magna Graecia, with a view of resisting the Lucanians on the N., and the power of Dionysius on the S. (Diod. siv. 91.) They might. reasonably suppose that their combined arms would easily effect this; but ouly three years later, в. с. 390, the forces of the confederates, amoag whom the Tharians took the lead, sustained a great defeat near Laiils, in which it is said that 10,000 of the Greeks perished. (Diod. xiv. 101, 102; Strab. si. p. 253.) After this success, the Lucanians seem to have spread themselves with but little opposition throngh the southern penilisula of Italy. The wars of the elder Dionysius in that region must have indirectly favoured their progress by weakening the Greek cities; and though he did not openly support the Lucanians, it is evident that he looked npon their successes with no nufarourable eyes. (Diod. siv. 102.) Their continued advance towards the south, however, would soon render them is their turn a source of umbrage to the Syracusan despots, who had established a permanent footing in the Italian peninsula; hence we find the younger Dionysins engaged in hostilities with the Lucanians, but apparently with little success; and after a vain attempt to exclude thein from the southermmest peninsula of Bruttium, by fortifying the isthmus between the Hippooian and Scyllacian gulfs, he was obliged to conclude a treaty of peace with them in B. C. 358 . (Diod. xvi. 5; Strab. vi. p. 261.)

This was about the period duriog which the Lucanians bad attained their greatest power, and estended their dominion to the limits which we find assigued to them by Scylas (pp, 3, 4). They

LUCANIA
had not, however, subdued the Greek cities on the coasts, some of which fell at a later period under the yoke of the Bruttians; while others maintained their independence, though for the most part in a decayed and enfeebled condition, till the period of the Romam dominion. [Magna Gramecia.] Shortly afterwards, the Lucanians lost the Bruttian peninsula, their most recent acquisition, by the revolt of the Brattians, who, from a mere troop of outlaws and banditti, gradually coalesced into a formidable nation.
[Brettin.] The establishtuent of this power in the extreme south, confined the Lucanians within the limits which are commonly assigned from this time forth to their territory; they seem to have accuiesced, after a brief struggle, in the independence of of the Bruttians, and soon made common cause with them against the Greeks. Their arms were now principally directed against the Tarentines, on their eastern frontier. The latter people, who had appurently taken little part in the earler contests of the (ireeks with the Lucanians, were now compelled to provide for their own defence ; and successively falled in the assistance of Archidamus, king of Sparta, and Alesander, king of Epirus. The former monareh was slain in a battle against the Lucanians in B. C. 338 , and his whole army ent to pieces (Diod. xvi. 63, 88; Strab. vi. p. 280); but Alexander proved a mure formidable antagonist: lie wefrated the Lueanians (though supported by the Sunuites) in a great battle near Paestum, as well as in several minor encounters, took several of their cities, and carried his arms ioto the heart of Bruttiun, where he ultimately fell in battle near Pandusia, B. C. 326 . (Liv. viii. 24 ; Justin. xii. 2. xxiii. 1; Strah. vi. p. 256.) It would appear as if the power of the Lucanians was considerably broken at this period; and in B. C. 303, when we next bear of them as engaged in war with the Tarentines, the very arrival of Cleonymus frum Sparta is said to have terrified them into the conclusion of a treaty. (Diod, $\leq x .104$.

Neantime the Lucanians had become involved in relations with a more formidable power. Already, in 1s.c. 326 , immediately after the death of Alesander king of Epirus, the Lucanians are mentioned as voluntarily concluding a treaty of peace and alliance with Rome, which was then just cntering on the Second Samnite War. (Liv. viii. 25.) We have no explanation of the canses which led to this change of poliey ; just before, we find them in alliance with the Sannites, and very shortly after they returned once more to their old allies. (Ib. 27.) But though they were thus brought into a state of direct hostility with Rome, it wis not till B. c. 317 , that the course of events allowed the Romans to punish their defection. In that year the consuls for the first time entered Lucauia, and touk the town of Nerulum by assuult. (Liv. ix. 20.) The Lucanians were evidently iscluded in the peace which jut an end to the Sceoud Samnite War (B. c. 304), and fiom this time continum steadfast in the Roman alliance; so that it was the attack made on them by the Samnites which led to the Third Samnite War, e. c. 298. (liv. . . 11.) Thronghent that struggie the Lucanians seem to nave been fuithful to Rone; and were probably admitted to at allince on favourable conditions at its close. But in 1s. c. 286, they having turned their arms auainst Thurii, the Romans took up the cause of the besi ged ei $y$, and dechared war ausinst the Lucanians, over whom I1'. Curins is said to have celebrated an ovation. (Aur. Vict, de

## LLCANIA.

Int Illust. 33); and four years afterwards (B. C. 282) the allied forces of the Lucanians and Samnites, which had again beleaguered Thurii, were defeated in a great battle hy C. Fabricius. (Val. Max. i. 8. §6.) On the arrival of Pyrrhus in Italy (n.c. 281) the Lucanians were among the first to declare in favur of that monarch, though it was not till after his rictory at Heraclea that they actually sent their contingent to lis support. (Plut. Pyrr. 13, 17; Zonar. viii. 3.) The Lucanian anxiliaries are especially mentioned in the service of that prince at the battle of Asculnm (Dionys. xx,$F_{r}$. Didot): but when Pyrrhus withdrew from Italy, he left his allies at the mercy of the Roman arms, and the Lucamians in particular, were exposed to the full brunt of their resentment. After they had seen their armies defeated, and their territury ravared in several suceessive compaigns, by C. Fabricius, Cornelius Rufinus, and M1'. Curius, they were at length reduced to submission by Sp. Carvilins and L. Papirius Cursor in b. c. 272. (\%onsm. viii. 6; Entrop. ii. 14; Liv. Epit, xiji, xiv, Fast. Capit.)

From this time the Lucanians continued in undisturbed subjection to Rome till the Secoud Punic Wir. In the celebrated resister of the Roman forees in b.c. 225, the Lucarians (including, probably, the Bruttians, who are not separately noticed) are reckoned as capable of bringing into the field 30,000 Soot and 3000 horse, so that they must have been still 4 numerous and potverful people. (Pol. ii. 24.) But they suffered severely in the Second Punic War. Having declared in favour of Hannibal after the battle of Cannae (B. C. 216), their territory becane during many successive campaigns the theatre of war, and was ravaged, in tum, by both coatending armies. Thus, in B, c. 214 , it was the scene of the contest between Sempronius Gracchus and Hanno; in the following year Gracchus empluyed the whole campaign within its limits, and it was in Lucania that that general met with his untimely death in the summer of B. C. 212. (Liv. sxii. 61, xxil. 20, xxv. 1, 16.) At length, in B. c. 209, the Lucanians, in conjunction with the Hirpini, abandoned the alliance of Hannibal, and betrayed the garrisons whieh he had left in their towns into the hands of the Romans ; in consideration of which service they were admitted to fasourable terms. (1d. xsviii . 15.) They did not, lowever, yet escape the evils of war; for in the next year their territory was the scene of the campaign of Marcellus and Crispinus against Hannibal, in which both consuls perished; and it was not till after the battle of the Metaurus, in \&. C. 207, that Hannibal withdrew his forces into Bruttimm, and abandoned the attempt to maintain his fuoting in Lucania. (Liv. sxvii. 51, sxviii. 11.)

Strabo tulls os that the Lucanians were punished by the Romans for their defection to Mannibal, by being reduced to the same degraded condition ns the Bruttians. (Strab, ז p. 251.) But this can only be true of those among them who had refused to join in the general submission of the people in B. c. 209 , and elung to Hamsibal to the last: the others were restored to a somewhat favourable condition, and continued to form a consilerable pation; though, if we may trust to the statement of Strabo, they never recoverel from the ravages of this war.

But it was the Social War (B.c. 90-88) that gave the final blow to the prosperity of Lucania. The Lucanians on that occasion were among the first to take up arms; and, after bearing an important part throughout the contest, they still, in conjunction with
the Samuites, preserved a hostile attitude when al the other nations of laly had already snbmitted and received the lomman franchise. (Appian, B. C. i. $39,51,53$.) In the civil yar between Marius and Sulla, which immediately followed, the Lucanians, as well as the Samnites, actively espoused the cause of the Marian party, and a Lncanian legion fought in the great battle at the Colline Gate. They in cunsequence were explosed to the full vengeance of the conyteror; and Lucania, as well as Samnium, was laid waste by Silla in a manner that it never recovered. The remaining inbabitants were admitted to the Roman citizenship, and from this time the Lucanians ceased to be a people, and soon lost all traces of distinct nationality. (Appian, B. C. i. 90 $-93,96 ;$ Strab. vi. pp. 253, 254.)

Of Lucania under the Roman government we hear but little; but it is certain that it had fallen into a state of complete decay. The Greek cities on its coasts, once so powerful and flomrishing, had sunk into utter insignificance, and the smaller towns of the interior were poor and obscure places. (Strab. l.c.) Nor is there any appearance that it ever recovered from this state of depression under the Roman Empire. The Liber Coloniarum mentions only eight towns in the whole province, and all of these were in the subordinate condition of "praefecturae." (Lib. Colon. p. 209.) The malaria which now desolates its coasts, must have begun to act as soon as the population bad disappeared; and the mountain region of the interior was apparently then, as at the present day, one of the wildest tegions of ltaly. Large tracts were given up to pasture, while extensive furests afforded subsistence to vast herls of swine, the tlesh of which formed an important patt of the supplies of the Imperial City. The momitain forests were also fivourite resorts of wild boars, and contained abundance of bears, which were sent from thence to the amphitheatres at Rome. (Hor. Sat. ii. 3. 234. 8. 6; Martial, de Spect. 8; Varr. L. L. v. § 100.) Lucania was comprised together with Bruttium in the third region of Augustus, and the two prorinces continued to be united for administrative purposes throaghout the period of the Roman Empire. Eien after the fall of the Western Empire, we meet with mention of the "Corrector Lacaniac et Brattiorum."

Lucania long continued to acknowledge the supremacy of the Eastern Emperors; and the modern province of the Easilicata is supposed to bave derived its name from the emperor Basilius II. in the 10th century. (Plin. iii. 5. s. 10; Not. Dign. ii. p. 64; Ovell. Inser. 1074 ; Treb. Poll. Tetr. 24; P. Diac. ii. 17; Cassiod. J'ar. iii. 8, 46.)

The plysical characters of Lucania are almost wholly determined by the chain of the Apennines, which enters at its northern frontier, and from thence traverses the province in its whole extent. These monntains form a lofty gronp or knot immediately on the frontiers of Samnium, and from thence the main chain is continued nearly due S . to the frontiers of Bruttium; a little before reaching which, it rises again into the very lofty gronp of Monte Pollino, the highest summit of which attains an elevation of above 7000 feet. Thruaghout its course this chain approaches considerably nearer to the western than the castern coast; but it is not till after Iassing the frontier of Bruttium that it becomes a complete littoral chain, as it continnes for a censiderable distance. In the more northern part of Lucania the space between the central chain and
vol. 11.
Digitized "by "TNicrososotte
the Tyrrhenion sea is almost filled $n p$ with rangers of lofty and rugged mountains, leaving only here and there a small strip of jlain on the sea-coast: but towards the eastward, the monntains sink mheth more gradually as they approach the gulf of Tarentum, constituting long ranges of halls, which gradually subside into the broad strip of plain that borders the gulf the whole way from the mouth of the Siris (Sinno) to that of the Bradanus. It is this tract of plain, in many places marshy, and now desolate and unhealthy, that was celebrated in atucient times for its almost matchless fertility. (Archiloch. up. A then. xii. 25.) Suuth of the river Siris, the off:hoots of the Apennines, descending from the lofty group of Monte Pollino as a centre, again approach close to the shore, filling up the greater part of the space between the mouth of the Siris and that of the Crathis; but once more receding as they approar $\mathrm{h}_{1}$ the latter river, so as to leave a considerable tract of fertile plain bordering its banks on both sides.

The lofty group of mountains just noticed as situated on the frontiers of Lucania and Samnium, sends down its waters towards loth seas, and is the soutce of the most considerable rivers of Lucania. Of these the Silanus (Sela) flows to the gulf of Paestum, receiving in its course the waters of the Taxagers (Tanagro) and Camor (Calore), both considerable streams, which join it from the S. On the other side, the Bradanus (Bradano), which rises to the N. of Potentia, and the Casuentrs (Basiento), which has its source in the Monti della Maddalena, a little to the S. of the same town, flow to the SE:, and pursue a nearly parallel course the whole way to the gulf ot Tarentum. The Acimas (Agri) and the Srris (Sinno), which rise in the central clain further to the S., have also a general SE. direction, and flow to the gulf of Tarentom. The Cnatmen, further down the same coast, which forms near its manth the limit between Lucania and Brattiom, belongs in the greater part of its course exclusively to the latter country. But the Symaris, now the Coscile, a much less considerable stram, immediately to the N. of the Crathis, belones wholly to Lucania. The Acalaximus (Calendro), which falls into the sea between the Sybaris and the Siris, is a wey trifling stream. On the W. coast of Lucania, the only river, besides the Nilarns and its tributaries, wortliy of notice, is the Laüs, or Lao, which forms thic sonthers boumlary of Lucania on this side. Th. Pyxus (Busento), flowing by the town of the same name (Buxentum), is but a trifling stream ; and the Melphes (Molpa), whicl enters the sea by the promontory of Palinurus, though noticed by Pling (iii. 5. s. 10), is not more considerable. The Heles or EleEES, which gave name to Elca or Velia, is somewhat more important, but by no means a large stream. [Velis.]

The westem euast of Lncania is marked by several bold and prominent headlands, formed hy the ridges of the. Apennines, which, as already stated, bere descend quite to the sea, and end abruptly on the comst. The most northern of these, forming the southirn limit of the extensive gulf of Paestum, is called by Lycophron Enipens, but was more commonly kuawn as the Posidium or Posidonimm Promontorium. S. of this was the more celebrated promontory of Palinumes, still called Copo di Palinuro, with : fort of the same name; and beyond this, again, tho promontory of Pyxus (now Capo degli Infreschi), Which bonnds the Gulf of Policastro on the W. Yiewed on a larcer scale, these three headlands may
be recarted as only the salient points of one bure projecting mass which separates the gulf of l'aestun: from that of Policastro. The lateer seens to ham heea known in ancient times as the gulf of Laüs. Opposite to the headland called Prosidium was the sinall islet named by the Greeks letcossis, from which the promontary now derives the name of Punta di Licusa; and a little further S. off the const of Veha, were the two islateds (aho mere rocks) called by the Girels the Oevittinhs. (Strab. vi. p. 25. 2; Plin. iii. 7.s. 13.)

The towns of Lueania may be consenfently mumerated in tro clases :- the first compnianys those along the coasts, whech were almust withont exception of Greek origin ; the other comtaining the towns of the interior, which were f.ir the most part either native Lucauinn settlements, or lammen calonies of a later date. On the W. ciast, procerding atung the shore of the Tyrrhenian sea, from N, to S., were :Posimonia, afterwards called Disstom, a very little way from the mouth of the silarus: Elest or Veash, at the mouth of the Heles (Alintu) : Prxus, called by the Romans Buxextia, nuw Policastro: SiDres, supposed to have occupied the site of Supri; Blanida, now Marated: and Lats, which was at the mouth of the river of that name, in its right bank, Oo the E. cuast, bordering on the gulf of Tarentum, and begiming from the Crathis, stond Tullir, replacing the ancient city of Sybarts, but not occupeing precisely the sume site; Sims, which had in like manner been succeeded by the more recent settlement of Hiraclea, a few miles further N.: and, hastly, Metapostum, on the southern bank of the river Brad anus.

The principal towns in the interior were:- Putentia, still called Potensa, and the capital of the province known as the Basilicata; Amw.1, sill called Atina, in the upper valley of the Tananot ; Voncenas or Volcentem, now Buctino; Nemistho, of uncertain sife, but apmarently in the same neghthorhond; Fisolet (Eboli), which is expressly called by l'liny a Lucanim town, though situated to the N. of the Silarus : B.smina, Banzi, a few miles from Vinusia, on the very fromtiens of Apulia, so that it was sometimes reterred to that comery; Ghimextem (near simponarn), one of the most considerable towns in Lucania: Nemel's, probably at Le Ratondet, and Mreanima still called
 Cosshinum or Coshaves may probably be placed at Putula, in the npper valley of the Tanager, and Teghaves at Ditho, in the same neighbourlaed; while $L a$ lofle, in the same valley, occupies the site of Foncos lorman; Sontas, notiond only hy Pliny, is prohably the place now rallodi Sunza; white the Tergilani aud Urathini of the same author are whally unknown, unless the former natme be corrupted from that of Tegiamm, alacody zuticed. (Dlin. iii. 11. s. 15; Lib. Culon. p. 209.) of the few names mentioned by strabu (vi. p. 2.54), those of Vertinae and ('atasarna are wholly uuknown. The existence of a laranion l'ptedia and I'avsosta, in addition to the Bruttian enties of those names, is a subject of great doubt.

The prineipal lime of hishmad throngh lurania was the lia Popilla (resarded by the lumeruies as a brumth of the Vis Appia), whith, in its course from Capma to Rhegium, traversed the whole provinee from N. to S. The stations on it given in the Auturine Itiocrary, p. 109, wre (proceedng from Nucerial: -

The Tabula gives a place which it calls Viens Mendicolus (?) as the intermedjate station between Marciliana and Nerulum. All these stations ure very doobtful, the exact line of the ancjent rowl through this mountain country laving never been trawed with accuracy. Another rond, given in the Tabula, led from Potentia by Anxia (Anzi) and Grumentum to Nernlum, where it joined the Via Popillia. The other roads in the interior, given in the ltinerary and the Tabnla, are very corrupt; we may, however, areertain that there was a line of rocd proceeding fion Venusia through lotentia to 1lcraclea and Thumi, and another from Potentia to join the Via Popillia at Mareiliana, being probably the direct line of commonication between Potentia and Rone. Lastly, there was always a line of roud along the cuast, following its level shores from Tarcatum by Metapontun and Heraclea to Thurii.
[E. H. B.]

COIN OF RITCANIA.
LUCERTA (Aovkepia, Pol., Strab, : Eth. Moukepivas. Meph. B.; Lucerinus: I.ucera), an ancient nul important city of $A$ pulia situated in the interior of that country, about 12 miles W. of Arpia and 9 N. of Accae (Trojit). It is railed by ancient writers a city of the lhamians, and the tradition current among the Greeks ascribed its foundation, in common with that of Arpi and Canusinm, to Dionred; in proof of which in ancient statue of Minerva, in the tomple of that guddess, was alleged to be the trie Palladium broutht by Diomed himself fiom Troy. (Strab. vi. p1. 264. 284: Plin. iii. 11. s. 16.) Yet all the aceounts of the city from the time that its name appears in history wonld seem to point to its being an (bean town, aill comected rather with the Oscan branch of the Apulians than with the Daunians. Nutling is known of the history of Luceria till the Second summite Wiar, when the Lncerians, who had apparenty joined with the other Apulians, in their allance with Rume in s.c. 326, but had rifused to partake in their subsequent defection to the ramnites, were besieged by the latter people; and the lioman lecgions were on their way to relieve and snceour them, when they susained the great disaster at the Candine Forks. (Liv, ix. 2; Drakenborch, ad len:: Aur. Vict. de Vir. Illust, 30.) It is clear that in consequence of that blows to tho IV man purer, Laceria fell into the hamis of the Sommites, as we are told shortly after that the hostagen given op by the limmans by the treaty at Candium were depesited for safety in that city. (Id. ix. 12.) For this reason its recovery was a great dyject with the Romans; and in in. c. 320 , Papirins Cursor lad siege to laceria with a large army, and,
after : in obstinate recistance, made himself master of the city, which was defended by a garrison of above 7000 Samnites. (Id. ix. 12-15.) Besides recovering the hostages, he ebtained an immense booty; so that Lnceria was evidently at this period a flourishing city, and Diodorns (xix. 72) calls it the most important place in Apulia. A few years after (B. C. 314), the city was again betrayed into the hands of the Samnites ; but was quickly recovered hy the Romans, who put the greater part of the inllabitants to the sword, and sent thither a body of 2500 colonists to supply their place. (ld. ix. 26 ; Vell. Pat. i. 14 ; Diod six. 72.) The possession of so important a stronghold in this part of the country became of material service to the Romans in the subsequent operations of the war (Diod. l.c.); and in B. C. 294, the Sunnites having laid siege to it, the Roman consul Atilius advanced to its relief, and defeated the Samnites in a great battle. According to another account, Luceria afforded shelter to the shattered remnants of the consul's army after he had sustained a severe defeat. (Liv. x. 35, 37.)

Not less important was the part which Luceria bore in the Second Punic War. The establishment of this powerful colony in a military position of the utmost importance, was of signal advantage to the Ronams during all their operations in Apulia; and it was repeatedly chosen as the place where their armies took up their-winter quarters, or their generals established their head-quarters during successive campaigus in Apulia. (Liv, xxii. 9, sxiii. 37, xxiv. 3, 14, 20 ; Pol. iii. 88,100 .) But though it was thus exposed to a more than ordinary share of the sufferings of the war, Luceria was nevertheless one of the eighteen Latin colonies which in B. c. 209 expressed their readiness to continue their contribntions, both of men and money, and which in consequence received the thanks of the senate for their fidelity. (Liv. xxvii, 10.)

From this time we meet with no notice of Luceria till near the cluse of the Roman Republic; but it appears from the manner in which Cicero speaks of it (pra Cluent. 69) that it was in bis time still one of the most considerable towns in this part of Italy; and in the Civil War between Cuesar and Pompey, it is evident that much importance was attached to its possession by the latter, who for some time made it his head-quarters before he retired to Brundusium. (Caes. B. C. i. 24 ; Cic. ad Att. vii. 12, viii. 1; Appian, B. C. ii. 38.) Strabo speaks of Luceria as having fallen into decay, like Canusium and Arpi (vi. p. 284): but this can only be understood in comparison with its former presumed greatness; for it seems certain that it was still a considerabie town, and one of the few in this part of Italy that retained their prosperity under the Roman Empire. Pliny terms it a Colonia, and it bad therefore probably received a fresh colony under Augustus (Plin. iii. 11. 8. 16; Lil. Colon. p. 210 ; Zumpt, de Colon. p. 349). Jts colonial rank is also attested by inseriptions (Monmsen, Inscr. R. N. pp. 50, 51); and from the Tabula it would appear to have been in the 4 th century one of the most considerable cities of Apulia ( $T a b$. Peut., where the indication of a great building with the name "Praetorium Laverianum" evidently points to the residence of some provincial magistrate). Even after the fall of the Loman Empire Luceria long retained its prosperity, and is enumerated in the 7 th century by P . Diaconus among the " prhes satis upulentas" which still renained in A pulia. (P. Diac. ii. 21.) But in A.D. 663 it was taken by
the emperor Constans II. from the Lombards, and utterly destroyed (Id, v. 7). Nor dues it appear to have recovered this blow till it was restored by the emperor Frederic II. in 1227. The modern city of Lucera still retains its episcopal see and about 12,000 inhabitants. It occupies the ancient site, on a hill of considerable elevation (one of the last underfalls of the Apenmines) overlooking the extensive and fertile plains of Apulia. Livy speaks of it as situated in the plain (" urlis sita in plano," ix. 26); but if this was the case with the Apulian city, the Ronan culony must have been removed to the heights above, as existing remains leave no doubt that the ancient city occupied the same site with the modern one. The remains of buillings are not of much inportance, but numerous inscriptions, fragments of seulyture, \&c. have been found there. The inscriptions are collected by Mommsen (Inser. Regn. Neap. P4, 50-54). The neighbourhood of Luceria was celebrated in ancient, as it still is in modern, times for the abundance and excellence of its woul (Hor: Carm. iii. 15. 14), an advantage which was indeed comanon to all the neighbouring district of Apulia. (Strab. vi. p. 284 ; Plin. siii. 48; K. Craven, Southorn Tour, p. 45.)

Ptelemy writes the name Nuceriat and that this is not merely an error of the Mss in our existing copies is shown ly the circomstance that the epithet
 1. $\mathrm{y}^{2} 72$ ), as if to distinguish it from other towns of the name. Appian also writes the name Nouncpia. (B. C. ii. 38): and the same confusion between Nocera and Lucera occurs perpetually in the middle ages. But the correctness of the orthography of Luceria is well established by inscriptions and coins. The latter which have the name Lovceri in Homan characters are certainly not earlier than the establishment of the Roman colony.
[E. H. B.]

## COIN OF LUCERIA.

## LtCEIVM. [Binclum.]

LI CENSES, CALLAİCI. [Gablaecta.]
LUCENTLM (Plin. iii. 3. s. 4 : Lucentia, Mela, ii. 6. § 6; ムounévтot \# $\Lambda$ ои́кevтav, Ptol. ii. 6. § 14: A licante), a city on the sea-coast of the Contestini, in Hispania Tarraconeusis, with the Latin franchise. (Marca, Hisp. ii. 6: Vkert, ii. 1. p. 403.) [P. S.] LUCl'NAE OPPIDEA]. [1ı,Thyla.]
LUCOPIBIA (Аоикотısia), in North Britain, mentioned by Ptolemy (ii. 3) as one of the towns of the Nuvantae (Galloway), Rhetigoninm being the other. Probably, this lay on Luce Bay, in Wigtonshire. The Monumenta Britannica suggests Broughtern, and Whiterne. [R. G. L.]
LUCLE'TILIS MOAS (Monte (iennaro), a mountain in the land of the Sthines, whose name is known to us only from the mention of it by Horace, who calls it "the pleasant I.ucretilis," whose shates could allure Faunus himself from Mount Lycaemm. (Hor. Carm. i. 17.) It is evident from the expressions of the feet that it was in the immediate neigh-

Tsurhood of his Sabine farm; and this is admitted lyy all the old commentatons, who with one accond call it "Mons in Sabinis," but withont giving any firther clue to its prosition. The identification of this must therefore depend upon that of Ilorace's Sabine villa; but this being elearly established near Licenze [Digantin], we cannot refuse to recognise Lucretilis in Monte Gemanro, a lofty mountain mass which rises nearly due W. of Liceriza, standing ont prominnatly towands the plain of the Campagma, si that it is one of the most conspicuous of the Apennires as seen from Rome. On the side towards the plain it rises very steeply and abruptly, but on the reverse or Sabine side it has a much more gentle slope, and tully dererves Hurace's epithet of " amoenus,"- being furrowed by deep vallicys, the sides of which are clothed with woods, while nearer the summit are extensive pastures, much resorted to by cattle in summer. (Gell, Top. of Rome, pp. 270 -273; Nibby. Pintorni, vol. ii. pp. 105-107.) The highest point is 4285 English feet above the sea. Whether the name of Mons Lucretilis was applied to the highest part of the mountain, now called Monte Gennaro, which is so conspicuous from Rome, or was a more local appellation for the peaks nearer the valley of the Digentia, cannot now be determined ; but there is little doubt that the two names belong at least to the same mass or gromp of mountains.
[E. H. B.]
LUCRI'NUS LACUS ( $\delta$ локріуоз кঠллоs, Sitrab: Lago Luerino), a salt-water lake or lagoon, adjoining the gulf of Baiae on the coast of Campania. It was situated just at the bight or iomust puint of the deep bay between P'uteoli and Baiae, and was separated from the outer sea only by a narrow strip or Lank of sand, in all probability of natural origin, but the construction of which was ascribed by a tradition or legend, frequently alluded to by the Ruman poets, to Hercules, and the roan along it is said to have been commonly called in consequence, the Via Herculea or Heraclea. According to Strabo it was 8 stallia in length, and wide enough to admit of a road for waggins. (Divd. iv. 22; Strab. v. p. 245 ; 1.ycopler. Alex. 697: Propert. iv. 18. 4 ; Sil. Ltal. xii. $116-120$.) On the other side, the Lucrine Jake was separated only by a narrow space from the lake Avernus, which was, howeser, of a wholly different character, being a deep basio of fresh water, formed in the crater of an extinet volcano: while the Lacus Lucrinus, in common with all similar lagoons, was very shatlorr, and was for that reasm well adapted for producing oysters and other shell-fish, for the excellence of which it was ectebrated. (Hlor. Eppoch ii. 49, Sat. ii. 4. 32: Juven. iv. 141: Petren. Sat. 14. 424: Martial, vi. 11. 5, xiii. 90 ; Varr. ap. Nom. p. 216.) These ayster-beds were so valuable as tu be farmol out at a bigh price, and Caesar was induced by the contractors to rejair the dyke of Hereules for their protection. (Siorv. ad Gearly ii. 161.)

The Lucrine lake is othorwise knomo chieffy in commection with the Lrent works of Agripsa for the constraction of the so-valled Jobin's Phatis, alluded to in two weil-known passuee of Vircil and Horace. (Virg. Georg. ii. 161-163; Hor. Ars Poet. 63.) It is not casy to understand exactly the nature of these works; but the olject of Agripila was obvionsly to obtain a perfectly secure and land-lacked basin, for auchoring his fleet and for exercising lis newly-raisel srews and rowers. Fir this purpuse he seenis to have opened an cherance to the lake

Arernus by a cut or eanal from the Lu-1.w lake, and must, at the same time, have opened a chamel from the latter into the lay, sufticiently deep for the passage of large vessels. But, together with this work, be stronethened the natural barrier of the Lucrine lake against the sea by an artificial dyke or dam, so as to preveut the waves from breaking over it as they previonsly did during heavy gales. (Strab. v. p. 245 : Din Cass, xlviii. 50 ; Suet. Aug. 16; Vell. l’at. ii. 79; Serv, et Plhilargyr. ad l'irg. l. c.; Plin. xxxri. 15. s. 24.) It is clear from the accounts of these works that they were perfectly successful for a time, and they appear to have excited the greatest admiration; but they were soon abandoned, probably from the natural difficulties proving iosuperable; and, from the time that the station of the Roman fleet was extablished at Misemm, we hear no more of the Julian Port. Eves in the time of strabo it seems to have fallen into complete disuse, for he kays distioctly, that the lake Averons was deep and well adapted for a port, but could not be used as such on account of the Lucrine lake. which was shallow and broad, lying between it and the sea (v. p. 244). And again, a little further on (p. 24.5), he speaks of the latter as useless as a harbour, and accessible only to small vessels, but producing abumlance of oysters. At a later period Cassiodorus (I'ar. ix. 6) describes it in a manuer which implies that a comnonication was still open with the lake Avernus as well as with the sea. The two lakes are now separated by a considerable breadth of low sandy ground, but it is probable that this was formed in great part by the memorable rolcanic eruption of 1538 , when the hill nuw called Monte Wiworo, 413 feet in heigbt and above suou feet in circumference, was thrown up in the course of two days, and a large part of the Lucrine lake filled op at the same time. Heace the present aspect of the lake, which is reduced to a mere marshy pool full of reeds, affords little assistance in comprehending the ancient localities. (Daubeny, On Jolcunors. II. 208-210.) It is said that some portions of the piers of the port of Agripps, as well as part of the dyke or bank ascribed to Hercules, are still visible under the level of the water. [E. H. B.]

LLCES ANGITIAE (Eth. Lucensis: Luco), a place on the W: shore of the lake Fucinns, in the territury of the Massi, originally, as its name im1wists, nothing more than a sanctuary of the goddens Angitia, but which seems to have gradually grown up into a town. This was sometimes called, as we learn from an inscription, Avgrta; but the name of Lacus or Lueus Angitiae mast lave been the more prevalent, as we find the inlabitants styled loy I'liny simply Lucenses, and the modern name of Luce or Lugo points to the same conclusiou. It is evident, both from 1'liny and from the inscription referred to, that it was a municipal town, having its own lucal soayistrates. (1lin. iin. 12. א. 17; Orell. Inser. 115.) Abunt lasif a mile N. of the motern village of Luco, and close to the shores of the lake, are the remains of ancient walls constructed in the polygenal style, but which, from their position, could never lave leen designed as furtitications; and these probibly formed part of the sacred enclosure or Peribulus of the grove and temple. The site is now markel, as is so often the case in Itaty, ly an ancient church. (N:lbyy, I iagyio Antiq. vol. i. P. 210; Class. 3/ks. vol. ii. p. 175, note.) Virgil alludes in a well-known pakage to the "nemus Augitiae" (Acn. vii. 759), where the name of the
goxdless is written in some MSS. "Angitia," in onhers "Angnitia;" bot the authority of numerous inscriptions is decisive in favour of the first form. (Orell. Inscr. 115. 116, 1845.)
[E. H. B.]
LUCUS A'STURUMI. [Astures.]
LUCUS AUG1ISTI, a town in Gallia Narbonensis, and east of the Rhone, which Tacitus (Hist. i. 66) calls "municipium Vocontiorum;" and Pliny (iii. 4) names Vasio ( I aison) and Lucus Augusti the two chief towns of the Vocontii. Lucus is placed in the Itins. on a road from Vapincum (Gap) to Lugdunum (Lyon) : it is the first stage after Mons Simeucus, and lies between Mons Seleucus and Dea Vocontiorum (Die). The name is preserved in Luc. "This town has been destroyed by the fall of a rock, which, having stopped the course of the Drôme, has caused the river to spread out and form lakes which have covered part of its territory: there remains, however, in the neightoon hood and at the outlet of thrse lakes a place which preserves the mame of Lac." (D'Anville, Notice, ge.) It is stated in the Guile du Voyageur (Richard et Hocquart), that "on the mountain called the Pied de Luc, in the commune of Luc-en-Divis, there are considerable remains of old buildings. The column of the public fountain of this little place is a fragment of an old capital, and the basin is a sarcophagus of a single stone." There is an inscription on it in Roman characters.
[G. L.]
LUCUS AUGUSTI (Aô̂rus Aúzov́rtov, Ptol., ii. 6. §24: Lugo), a city in the centre of Gallaecta, in Hispania Tarraconensis, was originally the chief town of the insignificant tribe of the Capon, but under the Romans it was mule the seat of a conventus juridicus, and became one of the two capitals of Gallaecia, and gave its name to the Callaỉei Lucenses. [Gialaecta.] The Conventus Lucensis, according to Pliny, began at the river Navilubio, and contained 16 peoples, besides the Celtici and Lebuni; and though these tribes were insignificant, and their names barbarons, there were among them 166,000 freemen (Plin. iii. 3. s. 4, iv. 20. s. 34). The city stood on one of the upper branches of the Minius (Miño), on the ruad from Bracara to Astenitea (Itin. Ant. pp. 424, 430), and had some famous baths, of which there are now no remains. (Florez, Esp. S. vol. xl., xli.; Ukert, vol. ii. pt. 1. p. 437).
[P. S]

## LUCUS FERO'NIAE. [FERONIA.]

LUCUS HE'CATES (ă $\lambda \sigma$ аos 'Eiát iii. 5. § 7), the westermost point of the peminsula of Hylaea, now the alluvial tongue of land Kinburun.
[E. B. J.]
LUCUS MADI'CAE. [Liris.]
LU'DIAS, LY'DlAs ( $\Lambda u \delta i \eta s$, Herod, vii. 127: AvĒias, Eur. Bacch. 565 ; Scyl. p. 26 ; Ptol. iil. 13. § 15 ; Aouסias, Strab. vii. p. 330), a river of Bottiacis in Macedonia, or discharge of the marshes of Pelli. In the time of Herodotus (l. c.) it joined the Haliacmon, but a change has taken place in its course, as it is now an affluent of the Axius (Jar(dhari). The river which now emerges from the lower end of the lake of Pella is called Karasmik or Maeronéri. The river of Moglená, now called Karalja, by the Turks, Meglesnitj. by the Bulgarians, and by the Greeks Joglenitiko, which falls into the lake of Pella, and which in its course before entering the lake follows the same direction as the Marronéri, was probably called by the ancients the Lydias. (Leake, Nurthern Greece, vol. iii. 111. 270, 437.)

LUEXTINXAI (Aovévtway), in Britain, mentioned by I'toleny (ii. 3) as a town of the Dimetre, Maridunum (Caer-marthen) being the other. The Monumenta Britannica suggests Llan-derybrevy.
[R. Gi. L.]
 Lugdunensis: Lyom), a Roman settlement in Galli., at the junction of the Atar (Suine) and Rhodanus. It was in the territory of the Segusiani, who were the neighbouts of the Aedui (Caes. B. G. i. 10, vii. 64): in Pliny's time the Sugusiani land the title of Liberi. (Pin. H. N. iv. Is.) Ptolemy incorrectly places Lngdunum among the cities of the Aedui; he calls it Lagdunam Metropolis.

The writing of the name does not seem to have been quite fixed. Dion Cassius (xlvi. 50, ed. Reim.) observes that the place was oriminally named Lugudumm (Aovoov́סouvov), and then Lugdunum. In Stephanus (s. v.) the name is Lugdunus, and he refers to Ptolemy; but in I'olemy (ii. 8. §17) it is Lagdunum. It is also written "Lugdunus" in Ammiaus Marcellinus. In the Treatise on Rivers printed among Plutarch's works (Apap, c. 4), the hill of Lyon is named Lugdunus; and it is alded, on the authority of Clitophon, that Lugus neans "a crow" and dunumn "an eminence." Though the explanation of dim is tight, we cannot accept the explanation of the other part of the word.

The colonia of Lugdunum is said to have been settled B. C. 43, by L. Munatius Plancus, and the settlers were the people of Vieana (Jienne) who were driven from their homes by the Allobroges. (Dion Cass. xlvi. 50; Strab. 12. 192, 193.) The position, accurding to Dion, was the place between the Saune and the Rhone. Strabo says that it was " under" a bill, the position of which he determines by referring it to the junction of the two rivers; but this does net show exactly where the town was, and probably strabo did not know. In the passage in Strabo, the worl "under" ( $\dot{\pi}$ ó) has been corrected to "upon" ( $\mathrm{k} \pi i$ ), which may be a true correction. The old tuwn of Lagdunum was on the right side of the Phone, on the slope of a bill named Fourviere, which is supposed to be a corruption of Forum Vetus. The largest part of modern $L y o n$ is between the Suône and the Rhone, but this is a modern addition, not earlier than the time of Louis XII. and Francis I.

In Strabo's time Lugdunum was the most populons of the Gallic towns atter Narbonne: it was a place of trade, and the Roman governors had a mint there for coining gold and silver. Its great commercial prosperity was due to its excellent position, and to the roads which the Romans constructed in several directions from Lugdunum as a centre. [Gallia Transabieina. Vol. I. p. 966.] In the tine of the youncer Pliny there were booksellers at Lugdunum, and Pliny's works might be got there (Plin. Ep, ix. II). The city was destroyed by fire in Seneca's time (Ep, 91), but shortly after it was restored throogh the liberality of the cmperor Nero, to whom the inhabitants of Lugdunum continued faithful when Galla revolted (Tacit. Ann. xvi. 13, Hist. i. 51). Lugdununı was plandered and again burnt by the soldiers of Septimius Severus (A. D. 197), after the defeat of Albinus near the city (Ilemslian, iii. 23). It was an important position under the later Empire, but the name only incurs occasionally in the scanty histories notices of that time. When Julian was governor of Gallia, Lugdunum was near benys surprised by is

## Lugdenem batavorush.

body of Alamanni (Ammian. Mircell. xvi. 11). The place is entitled Copia Claudia Aurusta on some inscriptions, a name probably given to it in the time of the emperor Clandius.

In the angle between the Arar and the Fhodanns was the Ara Augusti, dedicuted to Aurnstus by all the Gallic states. On this large altar there was an inscription which contained the names of the sixty states; and there were as many figures, intended to represent each state. If the figures trere not reliefs on the attar, they may have been statne- placed ronad the altar, or near it The passage of Strabo (p. 192) appeas to be corrupt: but, as it is esplained by (hroskurd (Transl. vol. i. p. 331), there was also a large statite of Angustas, which may have been in the middle of the sisty. There was an annual solemn celebration at this altar, which was observed even when Don Cassius was writing. (Dion, liv. 32.) The time when this altar was huilt is fixed by the Epitome of Livy (Ep, 137) in the year in which there was a disturbance in Gallia on acconnt of the census. This year was B. c. 12. Sinctonins (Cluwd. 2) fixes the dedication of the Altar of Augastas in the consulship of Jalius Antomius and Fabius Africams (в. c. 10), on the first of August, which was the birthday of the emperor Clautias, who was a native of Lugdunm. The first priest of the altar was C. Julias Vercundaridulitus, an Aeduan. The celebration at the altar of Lugduaum is alluded to by Juvenal in the line (i. 44, and Heimich's note), -
"Aut Lugdunensem rhetor dicturus ad aram."
Lugduuum was the seat of a Christian ehurch at an early period. In the time of Marcus Aurelins (about A. D. 172. of perthays A. D. 177, aceording to some comprtations) there was a furinus persecution of the Christians at Lumblumm. The sufferings of the martyrs are told by Eisohius with some manifest absurdities and exaggerations; but, the fact of a cruel persecution camut be disputed. The letter of the churches of Lugdumum and Viema to the charches of $A$ ia and Phregia is preserved by Ensebius (Ilist. Ercles. v. 1) ; and it states that Aurelins, who was thea at kome, was consulted by the tiallic gevernor about the treatment of the Cbristans. The answer was that throse who confessed to being Christians should be pht to death, and that thase who denied it should lie set free. Whe have however only one version of the story, though no exeuse can be male for the loman philisophical emperor, if men were put to death only berause they were Clmistians. Iremats one of the Christian fathers, Was bishop of Lugdunum. He is said to have succeated Pothinns, who perished A. D. 177, in the religtious persecutions at Lugtumum.

The part of ciallia which Cawsar calleal Celtica beratme under Augustur diallia Lagdunensis, of which Lugduman was the eapital : but Luqedmemis was contracted within narrower limits than Celtioa by the extemsion of the province of Aynitania [AqusTavia; Ginhata Teaxis Vol I. 1. 966].

The Rumans covered the soil of $L$ Lyom with lonses, temples, theatres, paises and annemuets. Nature made it to be the site of a large-city. There are few remains of Roman Lagdnnam. Time, the invasion of the barbarian, and the employment of old materials fur other purpusers, have left onle scanty fragments of the works of the most magnifieent of all city-builders. Thure are some remains on the Place des. Minimes which are supped to have been
a thuatre. On the west side of the Suone there are traces of a camp capable of holding several legions. It was bounded and defended on the west by the hills of the Forez, and on the north by the heights of Saint-Dirlier and of the Mont ©OOr. The Seotne defended it on the east side. The camp had no water, but the Romans found a supply in the chain of momtains which bounds it on the west. Water was brought along the valleys and the sides of the hills in a regular slope all the way, and under ground through a distance measured aiong its line of more than 24 miles. In its course the aqueduct collected water from seventeen stre:mus or large sonsees. The height of the channel or passage for the water, measured inside, was near fire feet; the vault or rouf was semicircular. There were openings at intervals by which workmen could go in to elean and repair the channel. It was constructed with great eare, and the two sides were covered with a doubje layer of cement. All this construction was boried in a cutting six feet and a half wide and near ten feet deep; and a great part of this cutting was made in the solid rock. Anther aquednet was construeted from Mont Pilat to the site of the hill of Fourvières, a distance of more than 50 miles along the course of the aqneduct. There were in all fourteen aqueduct bridges along this line: one of them at the village of Champonost still has ninety arclies well preserved. There was a third aqueduct from loont dor.

Two bronze tablets were dug np at $L$ yon in 1529, on which is inscribed the Oratio of the emperor Claudins on the subject of giving the Roman civitas to the Galli. (Tacit. Ann. xi. 24: and Oberlin's edition of Tacitus, rol. ii. p-306: Gabla Teans. Vol. 1. p 968.) There are many modern works on Lyon and its antignitios. The principal are mentioned by Forbiger (Hanrbuch, gic. vol. iii. P. 210.)
[G. L.]

cons of tugadents.
1.JGDU'NUM or CONVENAF, [CONVENAE.]

LUGD) NEAI BATAVO'RUM (Aovyoíearov, Ptul. ii. 9. §4: Leiden). The two elements Lug and clun apprar in the mame of this remote city and In two ntlier Gallic names, which is me evidence of the Celtic race having onee neenpied the fith country abomt the outlets of the Rhine. The Roman Itins. have marked a road rumuing from Leiden throngh Colengne to Vemania (Immenstadt) on the Upper Dumbe Circle of Bavaria. The routes are mut the sarue all through, but the commencement of the roal and the tmanination are the same. This ronte in fiect followed the basin of the Rhine from the Lake of Consturz to the low and sandy shores of tiae Non the Soro.

The words "Caput Germaniarum" placed before the name Lugdunam in the Antonine fitin. probably do not mean that it was the capital of the Germanite, for this avas certainly nut so, but that it was the phint where the two provinces callell Gernamiae commenced on this northern limit. It has been supposed that Leiden in the province of Holland is not the Roman Lugdunum, because no Roman remains have been found there, though the absence of
them would certainly not be conclusive against L-ide $u$. But renaius have been dug up in the neighbourhood of Leiden, and an inscription of the time of Scptimius Severus. (Ukert, Gallien, p. 534.)
[G. l.]
LU'GEUS LACUS (Aoíreon ${ }^{\circ}$ 'ios), a lake in the land of the Lapodes in Hlyriemn, now Lake Zirknita. (Strab. vii. p. 314.)
L.GGIDU'NUM (Aouriôouvov), a town in the east of Germany, the site of which must be looked for in Silexia, cither at Breslau or Liegnitz. (Ptol. ii. 11. § 28.)
[L. S.]

## LU'GII. [Lygil.]

LUG1O'NUM (Aov (iavod), a town in the sonth of Pannonia Inferior, was the captal of a distriet. (P'ol. ii. 16. § 5.) In the Peuting. Table it is called Lugio, and it is, perhaps, to be looked for on the site of the modern Batta, at the entranee of the Sarviz into the Danube. [L. S.]
1.UGUYALLUM, or LUGUVALLIUM (Anton. Itin.), LUGUBALUM (Ravemas), now Carlisle. This town is not nientioned by Ptolemy; ncither does it occur in the Notita. The reason of its omission in the latter work may be, that, althongh it stands upon the line of the Wall, the prosimity of the great castra, as well as its own strength and ppulation, rendered a fised garrison unnecessary, Beda (in IVta S Cuthberti, c. 8) describes Saint Cuthbert on his visit to Lugubalia, as being shown the walls and a fountain built by the Romans: "venit ad Lagubalam civitatem, quae a populis Anglorum corrupto Luel vocatur, nt alloqueretur revinam. Postera autein die deducentibus eum civibus ut videret moenia civitatis, fontemque in ea miro quondan Romanorum opere exstructum." Leland (Itin. vol. vii. p. 54), after speakiog of the Roman architectural and otber renains often brought to light in Carlisle, adds," the hole site of the towne is sore clangid. For wher as the stretes were and great edifices now be vacant and garden plottes." But few remains, if any, of the Roman town are, at the present day, to be noticed; but whenever excarations are made to any considerable depth, the foundations of the buildings of Lignvallum are almost always met with. Very recently a deep drain having been sunk on the nortb side of the castle, the conrse of the Great Wall has been ascertained ; previonsly, the direction it took fron Staneix, where there was a fortified camp, was utcertain, as above ground in the immediate vicinity of Carlis'e, it has been entirely pulleil down. [C R.S.]

LUMBERITA'NI. [Yascones.]
 $\pi{ }^{\pi}{ }^{\prime} \lambda$ ss, Steph. B. : Eth. Luoensis: Luni). a city of Etruria, situated on the left bask of the Macra, a short distance from its mouth, and consequently on the very borders of Liguria. There is indeed considerable discrepancy among ancient authors as to whether it was an Etruscan or a Ligurian city; and it is probable that this arose not only from the circumstance of its position on the immediate frontier of the two countries, but from its having beea successively occupied and held hy both nations. I'liny calls it "the first city of Etruria :" and Strabo begins to reckon the Etrurian coast from thence : Ptolemy also mentions it first in order amung the cities of Etruria; while Mela, on the contrary, assigns it to the Ligurians. (" Luna Ligurum." Mel. ii. 4. § 9; Strah, v. p. 222 ; Plin. iii. 5. s. 8 ; Ptol, iii. 1. § 4.) From the time indeed when the Marra heeame the established limit betiren Liguria and Etruia, there could be no doubt as to Luna being geographically
included within the latter comntry : hut it is certain that when the Rumans first came into collision with the Ligurians, that people was in possession of Luna and the surrounding territory, and iodeed held the whole country from the Macra to the mouth of the Arnus. (Pol. ii. I6; Liv. xxxiv. 56 ; xxxix. 32 , \&c.) Livy, however, tells us that the territory of Luna, in which the Roman colony was founded, and which had been taken by them from the Ligurians, had previously belonged to the Etruscans (Liv. xli. 13), and this seems to be the true explanation of the case. Both Luna and Luca, with the whole of the fertile and level country adjoining them at the foot of the Apennines, seem to have really belonged to the Etruscans during the height of their power, but had fallen into the hands of the Lignrians, before that people came into contact with Rome. We have, however, scarcely any account of Luma as an Etruscan city, no Etrascan remains have been found there, and there is certainly no foundation for the views of some modern writers who have supposed it to be one of the chief cities of Etruria, and one of the twelve that composed the Leagne. (Dennis's Etruria, vol. ii. p. 79.)

The first historical mention of Luna itself (as distinguished from its more celebrated fort) is that of its capture by the Romans uoder Domitius Cal. vinus (Frontin. Strob. iii. 2. § 1) ; but the date of this event, which is not noticed by Livy, cannot he fixed with aby approach to certainty. Hence, the first fact in its history of which we have any positive information, is the establislment there of a Romam coluny in B. C. 177 (Liv. xii. 13), if at least we are to adupt in that passage the readiog of "Lunam" for "Lucam," which has been received by the latest editors of Livy. (Madvig, de Colon. p. 287.) Its territory is mentioned repeatedly in conjunction with that of Pisae, as having been laid waste by the neighbouring Ligurians. (Liv. xxxit. 56, xli. 19, xliii. 9.) It appears that the two districts adjoined one another, 80 that the Pisans, in B. c. 169, complained of the encroachments of the Roman colonists on their territory. (Id. xlv. 13.) But, notwithstanding this coluny, Luma seems not to have risen into any importance: Lucan indeed represents it as in a state of complete decay at the period of the Civil War (desertae moenia Lunae, Lucan, i. 586); and though it received a fresh eolny under the Second Triumvirate, it was still in Strabo's time but a small and incomsiderable city. (Lib. Colom. p. 223 ; Strab. v. p. 222.) No historical notice of it is found under the Roman Empire, but its continued existeuce down to the fifth century is attested by Pliny, Ptolemy, the Itincraries, and Rutilius, as well as by inscriptions found on the spot. (Plin. iii. 5. s. 8 ; Itol iii. 1. §4; Itin. Ant. p. 293: Itin. Marit. p. 501 : Rutil. Itin. ii. $63-68$. ) He leam also that it was celebrated for its wine, which was reckoned the hest in Etruria (Plin. xiv. s. 8. § 67), as well as for its cheeses, which were of vast size, some of them weishing as much as a thonsand pounds. (Plin. xi. 42. s. 97 ; Martial. xiii. 30.) But the chief celebrity of Luna in imperial times was derived from its quarries of white marble, the same now known as Carrara marble, and which was considered equal, if not supe. ior in quality, to the finest Greek marbles. It is first mentioned as employed at Rome for building purposes in the time of Caesar, and from the age of Augustus onward, was rery extensively employed, as may still be seem in the laytheon, the l'yramil of Cains Cestius,
sic. But it was spmaly adoptes fin stat ing pors. phets also, for which it was estecmed a finm raterrial even than the Parian. (Plin. xxavi. 5. s. 4 , 6. s. 7 ; Strab. y. p. 222 : Sil. Ital. viii. 480 : Ruth. l. c.; Stat, Silv. iv. 2. 29, 4. 23.) The buildings of Luna itself, and even its walls, are said to lave bern constracted wholly of it, whence Rutilius calls them "candentia mecnis:" and Cyriachs, an antiquarian of the 15 th century, who visited tie ruins of Luma, attents the same fact.

The period of the final decay of Luna is uncertain. It was taken and plumberel by the Normans in 857, but was probably mot lestryyed ; and Dante, writing :ffter 1300), speaks of Lani as a city that had sumk gradually into complete decay (Par. xvi. 73); which was thoubtless accelerated by the malaria, from which the neighbourhond now suffers severely. When it Was visited loy Cyiaens of Ancona, the ruins were still extensive and in good preservation ; but little it w remains. Fentiges of an amplitheatre, of a armi-circular bnilding which may have been a thentre, of a circus, and pistina, as well as fragments of columns, pedestals, \&cc, are still however visible. All these reumins are certainly of Koman date, and 11.) vestiges of Etruscan antiquity have been found on the spot. The ruins, which are obvioubly thase of a small town, as it is called by Stribo, are situated ainut 4 m . S. of Sarzorna, and little more than a mile from the sea. (Deonis's Etruria, vol. ii. pp. 78-84; Targioni-Tazzetti, Fiaggia in Toscana, v.l. x. pp. $403-466$ : Promis, Menaorie della Citta di I.una, tio. Turm, 1838.)

Far more velebratel in :meient times than Luna iseelf was its part, or rather the memenificent gulf that was known by that nane (Pontis Lixae, Liv., I'lin.,
 of Spezia. This is well described by Strabo as one of the largest and finest harbuurs in the world, containing within it.elf many minor ports, and surrounded by high mountains, with deep water cluse in to shore. (Strab, r. p. 2.2.2: Sil. Ital, viii. 482.) He adds, that it was well alapted for a people that had so long persessect the dominion of the sea.-a remark that must refor to the Etruseans or Tyrrhenians in general, as we have no atlusion to any naval supremacy of Luna in partioular. The great advantages of this port, wheli is so spacions as to be capable of contaning all the mavies of Eurupe, seen to have early attracted the atteution of the Somans; and long tefo.e the suly.jection of the mountain tribes of lig uria "is completed, they were accustomed to make the Lemac Portus the station or rendescous of their fleets which were dentinel citber for sjain or Sarlimia. (Liv, axxis. 8, xxxix. 21, 32.) It must have been on one of these enc:atums (prolably in company with Ml. ('atu) that it wats vivited by Ronuins, who was muele stru-k with it, and eclebrated it in the uppuing of his AmaN- (Ennias, ap. Ders. Siut. vi. 9.) At a later parimi it amons to have been resorted to aloo torr its mild and dilishtfit climate. (P'ers. L.c.) Nis dumbt can esist that the port of Luna is identi al wath the modern Giulf of Spesia: Int it is certainly chrions that it shonh lave derivel that name from the town or city of 1 hasa, which was sitnated on the left bank of the Whigra, at least live miles from the gulf, and separated trom it, mut mily hy the river Magra, but by a considerable range of rocky hills, which divide the Gulf of Spesin from the valley of the . Mayres, so that the galf is mot ceen within si_ It of l.mat itaplf. It is this range of hiils which at their istremity futm a promentory,
 Kikpow, Piol. in. 1. § 4.), now the Parta Bionch. It is tote that siraho places Luna on the right bank of the Macra; but this is a mere mistake, as he is certainly speaking of the Roman town of Luna : it is pessible that the Ditruscan city of that name may not have occuphel the same site with the Roman colony, but may have been situated on the right bank of the Macra, but even then it would have been at sume distance from the port. Ildstenius and some other writers have endeavoured to prove that the port of Luma was situatel at the month of the Macra ; and it is probable that the town may have had a stnall port or landing-place at that point ; but the celchrated Port of Lana, deseribel by Sitrabo and extolled Ly Ennins, can certainly be no willer than the Giulf of' Spezia.

The Gulf of Spezia is about 7 miles in deptls by 3 in breadili: it contains within itself (as justly observed by Strabo) several minor ports, two of which are noticed by Ptolemy under the: names of Porres Veseris ('Aфpoठit $\quad$ s $\lambda 1 \mu \hat{\eta} \nu$ ), still called Porto l'enere, and situatel near the westeru extremity of tho culf; and Porrcus Euicis (Epicŋ̧s kódatos), how Lerici, on the E. shore of the galf. The former name is found also in the Maritime Itinerary. (1'tol. iii. 1. § 3: Llin. Marit. p. 502.) [E. H. B.]

LUXAE MUSTES (亡e入र्भpms úpas Aiblomias, Ptol.iv. 8. §§ 3, 6), from which mountains, and from the lakes formed by their melting snows, I'tolemy derives the sources of the Nile. Their panition is unknown, and if they have any real cxistence, they muss be placed S. of the Equator. [W. 13. D.]

LUNAE POliTLS. [Lix..]
LUNAE PROAONTO'RICAI ( $\Sigma \in$ hóvns ăpos arkpor, Ptol. ii. 5. § 4), a headland on the W. coast of Lusitania, phacel by l'tolemy 10 minntes N . of the mouth of the Tugns, and therefore correspomls to the C. da Roca, near Cintra, where Resendins found ruins of what he took for a temple of the Sua and Soon, with inseriptions (Antiq. Lusit. p. 52). Others, however, ifentify it with the more northern C. Carrociro; and, in fact, the accounts of the hadlands on this coast are given in a confused mamer by the ancient writers.
[P.S.]
LUNARILM PROMONTO'RIUM (Auvaphon äкpor, I'tol. ji. 6. §19: C: Tordera, NE. of Barrelona), a licadland on the coast of the Batetuli, it Hispania Tarraconensis, formed by one of the SE. ajurs of the l'yrences.
[1. S.]

## LU'NGONES. [Astrmes.]

LUNNA, in Gallia, was on a road from Lngdunum (Lyon) tu Augustodunam (Autun). The first station after Lagdrmam is A $\approx$ I'aulini, $15 \mathrm{M} . \mathrm{P}$. from Lugdonum, and then Lunna 15 ML . I'. from Asa Pamlini, acconding to the Antonine ltin. [Asa P.aclani.] In the Table it is $24 \mathrm{M} . \mathrm{P}$. from Lugdumum to Ludnam, as the name is written in the Toble, and A:a P'a limi is omitted. Lunna and Luduam are probably the same place; and the site is the ret.in.
[G. L.]
LL'Plid. [f.erpra.]
 miat, Ptol.: Eith. lapiensis: lacce), an ancient city of the Salentines, in the Roman province of Calabria, situated on the high road from Brandasimin to Hydruotum, and just abunt 25 M.1. distant from each of these cities (Itin. Ant, p, 118). It wats about 8 miles from the sca, whence Strato currectly lescribes it as sitnated, together with Jen whiae, in the interior of Calabria (Suab. v. I. 2:2), th ugh buth I'lmy and

Ptoleny would learl us to suppose that it was a marilime town. (1'lin. jii. 11. s. 16 ; Ptol. iii. 1. § 14.) Appian also speaks of Octavian as lending there on his return to Italy, iumediately after Caesar's death, when he halted some days at Lupiae without ventaring to advance to Brundusium, until he received fresh information trom Bume. (Appian, B. C. iii. 10.) There seems, however, no doubt that the aucient Lupiae occupied the same site as the unodern Lecce, though it may have had a port or landing-place of its own. The above passage of Appian is the only mention of it that oecurs in history; but a tradition preserved to us by Julias Capitolinus (M. Ant. 1.) ascribed its foundation to a king of the Salentines, naued Malemius, the son of Disumus. There is little doobt that it was really a native Salentine city; nor is there any fuundation for supposing it to have received a Greek colony. Pausanias, in a passage which has given rise to much confusion, in treating of the treasury of the Sybarites at Olympia, tells us that Syharis was the sume city which was called in his time Lupia, and was situated betreen Brundusium and Hydruntum. (Paso vi. 19. § 9.) The only reasonable explanation of this strange mistake is, that he confounded I.opia in Calabria (the name of which was sometimes written Lopid) with the Roman colony of Copia in Lucauia, which had in fact arisen on the site of Thurii, and, therefore, in a mauner succeeded to Sybaris. Lut several modern writers (Romanelli, Cramer, \&cc.) have adopted the mistake of Pansanias, and affirmed that Lupiae was previously called Sybaris, though it is evidently of the well-known city of Sybaris that that author is speaking. We hear but little of Lupiae as a Roman town, though it appears to have been a municipal town of some importance, and is meationed by all the geographers. The "ager Lyppietsis" (sic) is also noticed in the Liber Coloniarum; hut it does not appear that it received a colony, aod the inscriptions in which it bears the title of one are, in all probability, spurious. Nor is there any ancient atuthority for the name of Lyeium or Lycia, which is assigned to the eity by several lucal writers: this form, of which the modern mame of Lecce is obviously a corruption, beiog first fiound in documents of the middle ages. (Lib. Colon. p. 262 ; Mel. ii. 4. § 7 ; Itin. Ant. p. 118.)

The modern city of Lecce is a large and popnlous place, and the chief town of the province called the Terra di Otranto. No ancient remains are now visible ; but Galateo, writing in the 15 th century, tells us that there wele then extensive subterranean remains of the ancient city - vast arches, covered galleries and foundations of ancient buildings - upon which the modern city was in great measure built. Numerous vases and other relics of autipuity have also been bronght to light by exearations, and an inscription in the Messapian dialect. (Galateo, de Sit. Iapyg. pp. 81-86: Romanelli, vol. ii. pp. 83-93; Mummsen, Cnter Ital. Dialecte, p. 59.)
[E. H. B.]
LUPODU'NUM, a place on the river Nicer (Veckar) in Southern Germany. (Auson, Mosel. 423 ; Symmachus, p. 16, ed. Niebuhr.) It is probably the same place as the molcra Ladenburg on the Neckar, though some identify it with the fort which the emperor Valentinian built on the banks of the Neckar. (Amm. Marc. xxviii. 2.)
[L. S.]
 north of Germany. (1'tol. î. 11. § 28.) Its site is
generally identified with Wittenberg or Mrissen; but it secms more probable that it was situated near Leipsig, on the river Luppa, from which it may have derived its name.
[L. S.]
LU'PPIA or LE'PIA ( $\delta$ Aourias: Lippe), a lisvigable river in the morth-iseat of Germany, which was well known to the Romans, from its sources to the point where it empties itself iuto the Rline. Its sources are in the interior of tiermany, nut far from those of the Amisia. (Ems.) (Vell. Pat. ii. 105; Tac. Ann. i. 60, ii. 7, IIist. v. 22; Pomp. Mela, iii. 3. § 3: Strab. rii. p. 291 : Dion Cass. liv. 33.) Strabo (l. c.) bad a very incorrect notion of the course of the Lupia, for he describes it as flowing through the country of the Bructeri Minores, aul as discharging its waters, like the Amasia, into the ocean: he, moreover, places it about 600 stadia frum the Rhine. Tacitus (Anr. ii. 7) mentions a Ron:an fort built on its banks.
[L. S.]
LU'PPIA (Aavaria), a place of considerable importance in the north of Germany, between the rivers Albis and Visargis, above Mons Melibucus. (I'tol. ii. 11. § 28 , viii. 6. § 3.) It is generally identificd with the modern tuwn of Lupta.
[L.S.]
LUSI (Mavaó, Paus., Steph. B. s. v.; पoĩcor, Mouббoi, тà $\Lambda v i ̄ \sigma \sigma a$, Schol. ad Callim. Diun. 235 ; comp. Meineke, ad Steph. B. s. v. : Eth. Aov́czos, Mováés, Mourtárys, Steplı. B. : Movaleús, Xwn. Anab. iv. 2. §21), a town is the north of Areadia, originally independent of, lut afterwards subject to, Cleitor. [Clerton:.] Lusi was situated in the upper valley of the Aroanius, and probably on the site of Sudhend, which stands in the NE. corner of the valley at the font of Mt. Khelraos (the anciput Aroanian mountains), and on the road from Tripolitzi to Kalarryta. The upper valley of the Aroanius, now called the plain of Sudhend, consists of two plains, of which the more casterly is the one through which the Aromins flows, the waters of which force their way through a gorge in the mountains into the plain of Cleitor, now Kitzuna, to the south. The more westerly plain of Sudhend is entirely shut in by a range of hills : and the waters of three streams which flow into this plain are carriud off by a katavóthra, after forming an inundation, apparently the Lactus Clitorios mentioned by Pliny (xxxi. 2. s. 13). The air is damp and cold ; and in this locality the best hembok was grown (Theophr. ix. 15. § 8).

Lusi was still independent in the 58 th Olympind; since one of its citizens is recorded to bave gained the rictory in the 11th Pythind. (Paus. viii. 18. § 8.) Its territory was ravaged by the Aetolians in the Social War (Polyb. ir. 18) ; but in the time of Pausanias there were no longer even any ruins of the town. (Paus. l.c.) Its nume, however, was proserved in consequence of its tenple of Artemis Lusia or Hemerasia (the "Soother"). The goddess was so called, because it was here that the dan!hters of Proetus were purified from their madncss. They had conccaled themselves in a large cavern, fiom which they were taken by Melampus, who cured them by sacred expiations. Thereupon their father Proctus founded this temple of Artemis Hemerasia, which was regarded with great reverence throughout the whole Peloponnesus as an inviolable asylum. It was plundered by the Aetolians in the Sucial War. It was situated near Lusi, at the distance of 40 stadia from Cynaetha. (Prus.; l'olyb. ll. cc.; Callim. Dian. 233.) The iuterior of the temple, with the puritication of the daughters of Pruetus, is re-
prenented on an aacient vase. (Millinger, Peintures ite lases, pl. 52 ; Miller, In inkmïler der alt. Kurnst, t. 11.) The ruins, which Dadwell discovered above Lusi towards the end of the plaiz, and on the road to Cynaethn, are probably those of the temple of Artemis Leake discovered some ancient foandations at the middle fountain of the three in the more westerly of the two plains of Sudhena, which he supposes to be the remains of the temple. One of the ollicers of the French Comanission observed a large cave on the westem side of the Aroanian mountains, ia which the imlabitaats of Sudhene were aceustomed to take refuge during war, and whith is probably the one inteaded in the legend of the dinghters of Ponetas. (Dodwell, Classical Tour, v.l. ii. p. 447; Leake, Morea, vol. ii. p. 109, vol. iii. pp. 168. 181; Boblaye, Recherches, \&c. p. 155 ; Curtias, Peloponnesos, vol. i. p. 375, seq.)

LUSITA'N1A (ì Avaıtavia, ท̀ Aurıtavıcín. Strab.; Aovartavia, Hind. Sic., 1'tul., Steph. B.: Eth. Auoifavoi, Lusitaui), originally denoted the country of the Lasitani, but is commonly used in a wider sease, as the aame of one of the three provinces, into which Hispania was divided by Augustus. (Hispanis, p. 108I, Nos. 3, 4).

1. Extent and Boundaries.- Like the modern Portugnt, it lay on the W. side of the peainsula, extendige from its SW. poiat (Sacnum I'r., C. S. $I$ Incent), eastwards to the month of the Ansis (Gradiana), and northwards along the W. coavt; but here, as well as in the interior, the boundiries of the two conntries were very different; Lusitauia occupying only two-thirds of the W. coast, and Portugal more than three-fourths. The former had its N. boundary at the Dustes (Douro), the latter at the. Nivies (Mizo) ; and the Portuguese prowince, callod Entre Douro e Minho, as lying between these rivers, as well as that of Troy or Montes E. of it, were ancient! the part of Gallaecha which belonged to the Callainci Brayarii. But on the E. side, inland, Lustania had a mach wider extent than lortugal. Both rest on the same base, as their S . side, namely the coast between C. S. Vincent and the mouth of the Guadiana, and at first the boundary runs N . nearly along the same line, namely the course of the Guadiana, the slight difference being in favour of Portugal, which has a slip on the E. side of the river. But, from a point on the river, a little below Buthajoz, and a little above its intersection with the Marridian of $7^{\circ} \mathrm{W}$. long., the boundaries diverge ; that of lortugal taking a general direction N. whth a slight bearing to the E, till it strikes the Douro at its great bend from SW. to NW. (where the Aqueda joins it), and ruaning up the river to its great bead in the opposite direction, below the Esla; while that of Lusitanin continued up the Anas eastward, towards the middle of the l'eninsula, to a puint consterably alluw Meteleivem (but not very certainly definel), whence it thllowed a N. direction to the Darius, which it met at a pmint below the river Pistora:a (ahoo not very well defined). Thus, 1 usitania contained, on this side, the N. part of Slanish Eatremudura, and the S. part of Seon ; and the part of the province thus lying E. of Modem Poutnend, corresponit very warly to the territory of the Vetrones. Theic are the boundaries of the leman province, as constituted nader Augustus ; but there are comiderable variations in the extent assigned to the country by various writers, especiatly according as the wond is used, in the wider sentse, for the proviure, or in the harower
meaning, for the country of the Lusitani. In this first and narumest sense, it inchoded only the district between the Tagus and the Durius, from the Atlantic on the W., to abont the present fenatier of Portngal on the E. Next, the supposed or actual comection of these people with their Northom neighbours, the Callatici, "Artabri," and Astures, led to their beine, at least in part, included under the satne name, and accordingly Strabo defiaes Lusitomia as the country N. of the Tacus, bounded on the W. \& N. by the Ocean. (Strab. iii. p. 153.) But just above lie says, that the greater part of the I, usitani, meaning thone N. of the Durius, had wbtained the name of Callaiei ; and elsewhere he expressly states that the whole region N. of the Dutius, which was formerly called Lositania, wins now called Callaïra. (iii. p. 166.) On the E., says Strabo (l.e.), it borlered on the Carpetani, Vettoaes, Vaccaei, and Callaïci, and other tribes of less note ; and he alds that these also were sometimes called Lusitaoj, thas pointing to the exteasion of the nane towards the east. Then, agaia, on the S. of the Tagus, where the country seems oricinally to have belonged to the Turdetani, with an iatermistare of Celtic tribes [Ceitici], the long anal obstiuate wars carried on by the Romans drove many of the Lusitanians and their allies into the district, which thas came naturally to be inchoded under the name of Lusitania. (Strab, iii. p. 139.) Finally, under Augustus, the boundaries were fixed as above stated.
2. Dimensioms. - Agrippa, as quoted by Pliny, assigned to the province. together with Asturia and Gallaecia, a width of $536 \mathrm{MI} . \mathrm{P}$. ; and a length of 540 M. P. (I'lin. jv. 21. s. 35.) Strabo makes its length 3000 stadia, and its width considerahly less (iii. P. 153, as amended by Xylander: it should be remenabered that the wiulth is reckoned, as Stratio expressly says, along the E. side, i. e. from N. to S., in conformity with his general views respecting the form of the peninsula, which are explained under Hispania).
3. Physical Geography.-Straho's description of Lusitania (l. c.) as lufty and rugged on the E. side, and level towarts the sea, with the exception of minor ridges of mountains, is tolerably correct. A more exact account of its relation to the whole furmation of the surface of the peninsula is given moller Mispania (§ v. No. 5. pp. 1085, 1086), together with a description of the coast anu the chief promontories. lts surface is roughly divided by the Mons Heramisius (Sierra de Estrella), which eats in the peninsula of Lishom, into the two great hasins of the Tagus and the Durius ; but it is also iatersected by mamerons offsets from the great central chains of the peninsula. Besides the great river Tacies, which bisects it, there are several others, of more or less importance, which flow in the same gencral direction, and flow into the sea on the W. const; but of these none require special nutice, exexpt the Callipus (Ka入入imuus, Sadao), which flows N. from the M. Cuncus in the extreme S., and falls into the sea, SE, of the Tagns, and the Mt xins (Mondego) aod Viscul (Voniga), between the 'lagus and the Durius.
[^9]The country, being irrigated by these rivers, and 1 -netrated by their navigable streams, as well as eariched by the gold and silver fauml in their beds and in mines, was rich and fertile, Strabo tells ns: but its prosperity was greatly checked by the predatory habits of its people, who neglected the culture of the soil, to give themselves up to war and rolbery. This evil tendency, however, he ascribes chiefly to the mountain ers, by whose attacks the inhabitants of the lowl.ands were involved in the same disorder. (Strab. iii. p. 154.)
4. Population,- The province, as finally constituted, contained the countries of five chief peoples, and of innumerable petty tribes, most of whom, however, may be included among these five. Thus, for example, the 30 (some read 50 ) tribes ( $\mathrm{E} \theta \nu \eta$ ), mentioned by Strabo, between the Tagas and the Artibria, are doubtless but subdivisions of the CalLinici and Lusitani. The five chief peoples of Lasitania (the Roman province) were:-(1.) The Lustrani. on the W. cuast hetween the Durius and the Tagus, and extending aloo (as explained above) S. of the latter river. (2.) E. of them the Vetroyes, between the Durins and the Anas. (3.) S. of these two were the Turduli Veteres, a branch of the ancient population of Batica, who (according to the common opinion of the ancients) had crossed the Anas; but whose presence should perhaps rather be referred to an ancieut occupation of the country up to the Tagus. (4.) S. of them again, in the disstriet between the lower conrse of the Auas and the S. and W. coasts, were a branch of the Turdetani, to whon similar remarks apply. (5.) Lattly, in various positions, we find remnants of the old Celtic pupulation, preserving the name of Celtich. The clief traces of them are on the SE. of the lower Tagus, between it and the great bend of the Anas, where they were mingled with the Turduli; and anong the Turdetani, in the extreme S., wbere they seem to have taken up their pusition in the mountainons district between the termination of the W . cuast and the Anas (Algarbe), which the ancients called Cuneus, and where they bore the distinctive name of Cosil. (Comp. Hisfinta, p. 1087. § rii.) The particulars respecting these peoples, their chief cities, and so forth, are given under the several articles: in this place we hive to deal only with the Lusitauians, properly so called.
5. The Lusitrisi (Auaitavol, Strab.; Aouairavoi, Diod., Ptol.), are designated by Strabo as "the greatest of the nations of lberia, and the one most frepuently and longest engazed in war with the R mans," a distinction which, certainly, not even the Celtiberians could dispute with them. The listory of the wars referred to has been given in outline under Hispasia, and that of their hast great contest may be read in the histories of Rome and under Virlatius (Dict. of Biog.). The incidents of that war seem to prove that though the Lusitani formel a compact state, under one national govern-

ment, its force was impaired by a certain defect of real union anong the muncrons minor peoples of whom Strabo speaks. (Niebuhr, Lectures on Anc. Ethnog. and Greog. vol. ii. p. 297.) The full account of their manners and customs, given by Strabo (iii. pp. 154-156), may be more conveniently studied in the original than repeated here in its many details.
6. Lusitania as a Roman Province.-(Lesitania Provincta, Inser, ap. Gruter, p. 31, No. 383.) The position of Lusitinia, after its conquest by the Romans, first as a part of Hispania Ulterior, and already under. Julins Caesar, tendine to a separate constitution ; its formation into a distinct province, under Augnstus ; its civil and military governments; its three conventus of Ealerita Augusta, Pax Julaa, and scalabis, with the number and rank of the towns included in thern; and its position under the later empire, are all given under Hispania (pp. 1081, 1083.)
7. Cities and Touns - (Those of the Verrones are given under the article.) - The city of Lishon (Port. Lishoa) was, under the same name [Olistro], the ancient capital of the Lusitanians, and though the Romans degraded it from that rank, in farour of their own military colomes, it remained a place of great commercial impurtance. lts political rauk was transferred, nider the Romans, to Scalabis (Santarem), a colony, and seat of a conventus juridicus, higher up the river, on its right bank. But the true Roman capital was Emerma Augusta (Merida) in the SE. of the province, in the riatht bank of the Anas, a colony founded by Augustus. The chief roals lealing throngh the province from Emerita, with the places on them, were as follows: 1. From Enerita, E. and then NE. to CaesarAugusta "per Lusitaniam," as the Itinerary expressly says, althoush it lies entirely S. of the Anas (Itin. Ant. pp. 444.445); thas snggesting a doult whether the boundiary of Lusitania was not carried as far S. as the M. Maroinus (hiema Morena) : the places on the road, which are commonly assigned to Baetica, are: Contosonsa, 12 M1. P. (Alange?) Minobriga, 36 M. P. (Capilla); Sisalone, or Stsapo, 13 M. P. (Almaden); Cabcuvium, 20 M. P. (Caracual?) : Av Tumes, 26 M. P. (Calatrava?), where, if not sooner, the ruads enter the Oretani. 2. From Emerita, due N. to Salmantice (Sitamanca) and Asturica, through the territory of the Vetrones. (Itin. Ant. p. 433: for the places see Vetrones). 2. From Eamerma, SIV. to the Tages, and down the right side of the river to Olisipo (Itin. Ant. pp. 419,420*) : PL.sgramts, 30 Ml . P. (Raposéra, Cortés: El-Commandante, Lapie) ; Ad vil Aras, $20 \mathrm{M} . \mathrm{P}$. (Codesura, Cortés, Arrouches, Mentelle and Lapie); Mostobriga, $14 \mathrm{M} . \mathrm{P}$. (vulg. Mundobriga, Marvoa, Resend. Antiq, Lus. p. 58, Florez, Esp. S. vol. xiii. p. 66, Cortés, Ukert ; Partalegre, Lapie ; it seems to be the Medobriga of the Bell. Alex. 4 s , and the town of the Medubriceuses Plumbarii of Plin. iv. 21. s. 35) ; Franinus, 30 N. P.. on of near the left bank of the Tagus (Amieira, Curtés; I'illa Jelha, Lapie); Tebucce, 32 M1. P. (Abrantes or Punkete?); Scalabis, 32 M. P., a culony and conventus, with the surname l'raesidicm Ju-

[^10]1.йat (Plin. l.c. Senterem, Vlorez, Esp.S. vol. xiii p. 69, xir. p. 171) ; Jerabrigi, 32 al. 1. (Aribrisa, I'lin. $l$. c.; 'ApáSpıra, Ptol. ii. 5. §̧ 7; Alanquer, Florez, Esp. [L.S.]
LUT1'TIA PARISIORUY (Aоикотєкіа, P't.). ii. 8. § 13: पоикотокía, Strabo. p. 194), the city of the Parisii, a Gallic people on the seine. Lutetia is mentioned by Cassar (B. G. ri. 3), who held a meeting of the Gallic states there in the spring of 13. c. 53. He calls it Lutetia Parisiortum ; and in his narrative of the operations of Labienus in B.C. 52, he says (B. G. vii. 57 ) that Lutetia i, on an ishand in the Seguana (Scine). Strabo copies this description from Cacsar. Vibins Sequester (1, 17. ed. Oberlin) also describes Lutecia, as he writes it, as being on an island.

The Parisii were the neighlamrs of the Senones. There had been some kind of pulitieal union betwern the P'arisii and the Senones before Caesar's Gallic campaigns (B. G. vi. 3), but at the time when Cassar mentions then. they spen to have been separate states. When Vercingetorix (B. C. 52) rose against the Romans, the senones, I'arisii, and others poined him immediately ; and the l'arisii sent 8000 men to oppose Caesar at Alesia (B3. (G. vii. 4. 75). Though a part of the little tervitory of the Jarivii was north of the Srine, we must conclude from Caesar's narrative that they were a Celtic people. The diocese of Paris represents the territory of the 1’arisii.

Lutetia, like many other Gallic towns, finally took the name of the people, and was cailed Civitas l'arisiorum, whence the modern uame of larix. Zosimu (iii. 9) calls it Jarisiun. It appears from the Notit. Dign, that the Romans had is fleet at 1'aris ; and from the words in the Notitia, "Praufentus classis Anderitianorom Pavisio," D'Ansille conjectures that the mame "Anderitiani" implins a phace Anderitiom, which he further supposes to be Aubrisi, inmediately below the junction of the Si ine and Oise. An inscription dug up in 1711 :mong other ancient monuments in the church of Notre Dame at Paris, contained the wurds " Nantae l'arsiaci:" and be Valois oberres that as the prople of Paris had always a fleet before their eyes, they may from this circumstance have taken the ship which appears in the arms of the city.

The position of Lutctia :t Paris is determined by the deacription of the place, the name, and the measurements of the roads from Agedinenn (Sens), Rotomaves (Fioulen), and Genalmm (Ortions), which meet at Lutetia. Whens Cacsar held the meeting of the states of Gallia at Lutetia, the turn was con-
fined to the island which afterwards was called $L a$ C'ici (civitas), a name given to the old Roman part of several French towns. But the islamd on which stands the church of Notre Dame was then and for a long time after of less extent than it is now ; for the site of the Place Dauphine was once two small islands which were not joined together and united to the Cite before the sixtcenth century: and the spot called Le Terrein was another addition produced by the ruins of the buildings which were erected in this part of the city. P'aris was never a harge place under the Roman dominion. Aumianus (xv. 11) calls it a Castellum, and Julian (Misopogon, p .340 ) and Zosimus name it a small city (ru入iхขŋ). Zusimus, who was no great gegrapher, places it in Germania. Lutetia may probably have occupied some ground on the north or on the sonthside of the river, or even on both sides, for the island was joined to the mainland by bridges in Caesar's time (B. G. vii. 58), made of wood, as we may assume. Julian spent a winter in laris, A. D. 358, and was proclaimed Augustus there. (Ammian. Marcell. xvii. 2, 8, xx. 4.) The Franks under Clovis took Paris about the close of the fitth century, A. D.; and about A. D, 508 Clovis made Paris is residence.

A. A. The river Sequana ( $S_{c}$ cine).
B. IF. The river Matrona (Mar uc).

1. 1.utetia ( $P^{\prime}$ ar is, on an island.
2. Melodunum (Mclun), ou an island or point. The scate is in Enghish miles.
When Caesar (B. C. 52) was setting out to attack Gergovia, he sent Labientus with four legions acrainst the Senenes and Parisii. ( $B, G$. vii. 34.) Labienus advanced upon Lutetia from Agedincum, where he left his stores. His march was along the left bank of the Keine. The commander of the Gallic forces occupied a marshy tract, the water of which ran into the Seine, and here he waited, with the intention of preventing the Romans from crossing the river (B.G. vii. 57) to Latetio, Labienus attempted to make a road across the marsh, but, finding it impossible, he left his camp silently in the night, and, returning by the route by which he had advanced, he resched Melodunum (Melun), a town of the Senones on an island in the Scine. Ihe there seized about fifty vessels, and easily got prossession of Melun. After repairing the bridge from the
island to the ripht bank of the river, lie carricd over his men to the right side, and marched again upon Lutetia. He took the vessels with him, and nsed them, as we must suppose, for crossing the Matrona (Marme), though the Marne is wat mentioned in the narrative. Bufore Labienus could reach Pari, the Galli set Lutetia on fire, and broke down the bridges which united the island to the main. They also quitted the marsh, and placed themselves on the banks of the Seine opposite to Latetia and to the camp of Labienus, which was on the right side of the river. In the meantime Caesar's defeat before Gergovia was known, and Labienus was threatenel from the north by the Bellovaci in his rear. In front of him, on the opposite side of the river, were the Parinii and their allies. His safety depended on getting to the left bank of the Seine, and he accomplished it by a clever movement. Soon after nightfall he left half a legion in his camp; be ordered another half legion, with their baggage, to march up the river, making a loud noise; and lie sent up the river, in the same direction as the half legion as many boats as he could collect, which made a great splashing with their oars. He sent the ships that he brought from Melodunum four miles down the river, and, soon after despatching the half legion up the river, he marched with his three legions down the stream in great silence, and found his ships. The scouts of the enemy, who were placed all nlong the strem, were surprised and slanghtered, for there was a great storm raging, and they were off their guard. The tbree legions were carried across the river in the vessels. The enemy were coufounded by the unusual noise purposely made in the Loman camp, by the boats moving up the tiver, and by the news of the enemy crossing lower down. Accordingly, the Galli left part of their forces to watch the opposite camp, and sent another part up the river towarls Metiosedum, as it is in Caesar's text, which is either a mistake for Nelodunum, or it is some place ligher up the Seine than Paris. Eitber supposition will explain Caesar: The Galli led the rest of their forces to oppose the three legion which had crossed the Seine with Labiemus, and, after a hard fight, they were defeated and dispersed. Labienus led his troops back to Agedincum, where his stores and bacgage wele. This is the substance of Caesar's narrative, which is correctly explained by 15 Anville (Notice, gc., art. Melodunum), and Ukert (Gallien, 1. 4:6) has done well in fullowing him. Some of the old crities conpletely misunderstood Labienus' movements ; and even, of late years, the passage has been wrongly explained.
The Romans built hoth on the island La Cite aud on both sides of the Seine, but the Roman memorials of Paris are very few. Sume sculptured stones nere dug up under the choir of Notre Dame. The inscriptions were of the time of Tiberius Caesar, and show that the Roman and Gallic deities were worshipped jointly. The remains of a subterranean aqueduct have been discovered both on the north and south sides of the river. The materials of the Roman city were doubtless empluyed for more recent constructions, and thus human Lutetia has disnjpeared.

［E．B．J．］
LI＇CLA（Aukia：Eth．Aúkios），a country on the south coast of Asia Minor，forming part of the recion bom called Tekeh．It is bounded on the west hy Caria．on the north by Pbrygia and Pisidia，and on the north－east by Pamphylia，while the whole of the south is washed by the part of the Medi－ terranean called the Lycias sea．The western frontier is formed by the river Glanons and Nount Dredala（Strab．xiv．p．664），the vorthern by the mage of Jount Taurus，and the eastern one by Hount Climax．The whole extent of the conntry， from east to west，amounts．according to Strabo，to 1720 stadia：this measurewienh，however，mast have beet made alung the line of cuast，for a straight line from east to west does not amount to more than onp－ half that distance．Its extent from the sea to the northern boubdary is different in the difierent farts， but is everywhere smaller than that from east to west．Cntil very recently，Lycia，with its rich remains of autiquity．was almost a terra incognita， －having never been visited by European travellers， until Sir Charles Fellows，in 1s38，and a secord time in 1840，travelled the conntry；since which time it has heen explared and described by several other men of learning and science，whose works will be noticed beluw．

1．Vame of the Country．－The name Lycia and Lyciaus is perfectir fabiliar to Homer，and the puet appears to have been better acquainted with Lycia than with some other parts of Asia Minor，for he knew the river Xanthos and Cape Chimaera． （Il．vi．171．\＆c．，工．430．xii．312．\＆c．．Od．v． $2 \times 2$ ， and elsewhere．）But，according to Herodotus（i． 173）．the ancieut name of the conntry had been Ylilyas（ $\dot{\eta}$ Mchvais），and that of the inhabitauts Solymi（ $\Sigma(\hat{\prime} \lambda \nu \mu o t)$ ，and Irenilae or Termilae（Tpe－ нi入at or Teppuiau）．These latter are said to hare been conquered，and expelled from the coast districts by Sarpedion，the brother of Jlizus，who， with a band of Cretans，invaded the country atd anquered it，but withuut changing either its vame or that of the people．But in his reign，Lyens，the
son of Pamina, beng driven by his hathor A - uns from Aitica, found a place of reluge in Mhlyas, the kinstom of sarpedoa, who now changed the name of his domimion imto Lyeit, to homonr lis triend Lyeus. (Comp. Strab. xiv. j. 667; and Steph. B. s. $r$. T $\rho \in \mu(\lambda \eta$, what states, on the anthority of the historian Alexander. that Bellerophentes chauged the name of Tremilae into that of Leseians.) In later times the mane Milyas still existed, but was enntined to the northeria and more mountainous parts of the country, into which the orisinal inhabitants of the comutry had been driven by the conquerors, and where they were known under the name of the Milyate. [MiLYAs.] Strabo, in his desire to look upon Honer as ans infallible authority in listorical and geograp,bical matters, is inclined to disbelieve the tradation related by Herodotus, as irrecuncilable with the pret, who, he conceives, meant by the Solymi no other prople than that which in later tunes bore the name of Milyae. Whatever we may think of the cunse of the change of natme from Nrilyas to Lycin, it is probable that it must have originated in the conquest of the country by foreingers, and that this conquest belongs to an earlier date than the composition of the Homeric prems. But although the inhabitants of the country hat changed their own name, they continued as late as the time of Herodotus to be called Termilae by their neigbbours.
2. Physical Character of the Country.-All Lycia is a mountainous country, - the range of Mount Taurvs in the porth sending forth mumerous branches to the south, which generally slope down as they approach the sea, and terminate in promontories. The frincipal of these branches are, mounts Daebala, Chmous, Massicytes (riving in some parts to a beight of 10,000 feet), and (himax. But, nutwithstanding its mountainous character, Lycia was by no means an unfertile country, for it jnomuced wine, corn, and all the other fruits of Asia Minor; its cedars, firs, and plane trees, were partienlarly celebrated. (Plin. H N. xii. S.) Among the products pectiliar to it, we may mention a particularly soft kind of sponge found near AutiJhellus, and a species of clalk, which possessed medicinai properties. Lycia also coutained sprimes of naphtha, which attost its voleanic character; of which other proofs alau are mentioned, for, not fir from the rork called Meliktash, there is a perpethal fire issuing from the ground, which is suppesed to have given rise to ther story of the Chimata, but is in reality nothing but a stream of iuflammable gas issuint from the crevicus of the rocks, as is the case in several parts of the Aןeminess. Mast of the rivers of Lyeda flow in a southern direetion, and the num import:ant of them are the Xisrucs, in the went, and the Limintes or Amennides, in the east. It also lias two considemble laken; one, now called Aclan Gule is formed by the comflneme of several rivers, :nmbine, in the mare mulhern part, situated in a hollow anong lught momatains, is called Fizeer Giale.
3. The Inliabitants of I-ycirt.- The most ancient inhabitants of l.yeia, is we have sent ahove, were the Solymi, who are peserally belleved to have been a Phoenician or siskituc race. Wiv are not informed why these Solymi were called Termilae; but the Irechability is that the Solyui and the Termilate Were two duferent trilab ocemping different parts of the enomery at the same time, and that while the Solym were driven into the northern mountains by
the insalnt, the Termilae were suldelved, and received from their conquctors the name of Lycians: This seems clearly to follow from the account of Ilcrodutus and the fragments quated by Stephatus Byzautinus. The Tremilae were no donbt as foreign to the Ilcllenie stock of nations as the Kolymi. The conquerors of the Tremilae, that is the Lycians propec, are said to have come from Crete, which, before its oceupation by the Dorians, was iulabited by barbarous or non-llellenic tribes, whence it follows that the conquering Lycians must likewise have been barbarians. Their struggles with the Solymi appear to have lasted long, and to have been vely severe, for Bellerophon and other mythical herves are described as having fonglit against the warlike Solymi. (Hom. Il. vi. 184, 204, Od, v, 2s:3.) From the receutly discovered Lycian inseriptions, compused in an alphabet partly Greek and partly fireign, it has been inferred that, after the eomynest of Lycia by the Persians, the great body of the nation changed its character, at least in some jarts, which are supposed to have then been occupied by Persiaus; and this theory is believed to derive support from the Lycian inseriptions, which Mr. Sharpe and others believe to contain a languare akin to the Zend. But this hypothesis is deveid of all foundation, for we never find that the Persians colonised the conutries conquered by them, and the Lycian language is as yet utterly monkown. All we can sny is, that the Lycian alpliabet seems to be a variety of the Graeco-Phoenician or Ciraeco-Senitic character, and that there is no evidence to show that in the listorical ages the Lyeians chauged their character ns a nation. They were and remained barbarians in the Greek sense, though they adopted and practised to a great extent the arts and modes of civilised life, such as they existed anomg their Greek reighbours.
4. Institutions, ve. of the I.ycimus. - In the Ilomeric poms the Lycians appar as governed by kings (Ham. 1l. vi. 173 ; Ilict. of Biogr. s. c. Sarpedon); lout in the historical times we find Lycia as a confederation of free cities, with a constitution more wisely framed perhaps than any other in all antiquity: An authentic acconnt of this constitution has beet preserved by Strabo. It was the political unity among the towns of Lycia that made the country stroug, and enabled it to manintain its freedom afainst the encroachnents of Croesus, whike all the survounding mations were compelled to own his sway. When and by whom this federal constitution was devised, we are not informed, but it reflects great aedit upon the pulitionl wisdom of the Lycians. They were a praceable and well-eunducted Ireple, and took no part in the piracy of their maritime ncighomurs, but remained faithful to their ancient institutions, and on this account were allowed the enjuyment of their free constitution by the limans. It was under the dominion of Rome that Strabo saw its working. The contederacy then ennsisted of 23 towns, from which the deputies met in aplace fixed upun each time ly common consent. The six largest towns, Xinthes, P'atara, I'tiaha, Olyapes, Myba, and Tuos, had each three votes at the common diet ; the tuwns of more moderate size had two, and the remaining small jlaces one vote each. The executive of the comtederacy was in the land of a magistrate called Lyciarch (Avк،áp $\chi \eta$ ) ), whose election was the tirst bu-iness of the congress, and after whin the other otlicers of the confederacy were chosen. The judyes, also, as well as the migistrates, were eleeted from each city aecording to the number of
its votes; tasation and other public duties were regulated on the same principle. In former times, the depaties constituting the congress had also decided upon peace, war, and alliances; but this of course ceased when Lycia acknowledged the supremacy of Rome. This lappy constitution lasted antil the time of the emperor Claudius, when Lycin became a Roman province, as is mentioned below. (strab, siv. p. 664, \&c.) The laws and customs of the Lycians are said by Herodotus to have been partly Carias and partly Cretan ; bat in one point they differed from ali other men, for they derived their names from their mothers and not from their fathers, and when any one was asked to give an account of his parentage, be entumerated his mother, grandmother, great grandmother, \&c. (Herod. i. 173.) Herodotus (vii. 92), in describing their armour, meutions in particular, lats with plumes, greaves, short swords, and sickles. Respecting the religion of the Lycians nuthing is knowa, except that they worshipped Apollo, especially at Patara; lut whether this was the Greek Apollo, or a Lycian god identified with him, canoot be said with certainty; though the former is more probable, if we attach any value to the story of Putarus. [Dict. of Fiogr. s. v.] This would show that the Greeks of Asia Minor exercised considerable influence apoo the Lycians at a very early period.
5. Literature and the Arts. - Althonglt we have no mention of any works in the Lyciau Janguage, it cannot be doubted that the Lycians either had, or at least might have had, a literature, as they had a peculiar alphabet of their own, and made frequent use of it in inscriptions. The mere fact, howeser, that many of these inscriptions are engraves io two lanraages, the Lycian and Greek, shows that the latter language had beame so familiar to the people that it was thought desirable, or even necessary, to employ it along with the vemscular in public decrees and laws about and after the time of the Persian wars ; and it must have been this circumstance that stopped or prevented the development of a national literature in Lycia. The influence of Greek litera. ture is also attested by the theatres which existed in alunost every totn, and in which Greek plays nulst have been performed, and lave been understord and enjoyed by the people. In the arts of sculpture and architecture, the Lycians attanised a degree of perfection but little inferior to that of the Greeks. Their temples and tombs abound in the finest sculptures, representing mytholugical subjects, or events of their own military history. Their archilecture, especially that of their tombs and narcophagi, has quite a peculiar character, so mnch so that travellers are thereby enabled to distinguish whether any given place is reaily Lycian or not. These sarcophagi are surmonnted by a structure with pointed arelies, and richly decorated with sculptures. One of these has been bronght to this country by Sir C. Fellows, and may now be seen in the British Nuseum. The entrances of the numerons tonibs cut in the faces of lofty rocks are formed in the same way, presenting at the top a pointed arch, which lias led Sir C. Fellows to compare them to Gothic or Elizabethan architecture. If we exaunine the remains of their towns, as figured in the works of Sir C. Fellows, Texier, and Furbes and Spratt, we eannot avoid coming to the conclusion that, in all the arts of civilised hfe, the Lycians, though Larbarians, were little inferior to the Greeks.
6. History--Lyciat and the Lycians act rather a vol. 1.

Digitized by Microsoft ©
that Lycia enjoyed its highest degree of prosperity， for under the protection of Rome the prople bal sut－ ficient leisure to attend to their own internal aftairs． By a strict and wise neatrality，they escaped the dangers of the Mithridatic Wiars as well as those of the wars against the pinates．（Appian，Mithrid 24． 61 ：Strab．xvi．p．665．）The pro－perity of Lycia，however，received a severe bluw during the war of Brutus and Cisssius，whoattacked the country because it was suspected to favour the paty of Octavianus and Autony．When Brutus advanced against Xanthus，the iuhahitants razed the suburbs to the ground，and offered the mont determinate re－ sistance．After a long and desparate siore，the soldiers of Brutus gained admission by treachery， whereupon the Xanthiaus made away with them－ selves by setting fire to their city．The fall of Santhus was followed by the smremer of Patara and the whole Lycian mation．Brutus levied enor－ mons contributions，and in sume instances ordered the inbabitants to give up all their gold and silver． （Appian，B．C．iv．60，65，75，心e．）Antouy after－ wands granted the Lycians exemptiun from taxes，in consideration of their sufferings，and exhorted them t．rebuild the city of Xantlins．（1bid．v． 7 ；comp． Dion Cass．slvii．34．）But after this time the prosperity of Lycia was sure，and internal dissen－ sions in the end also deprived the imhabitants of their ancient and free constitution ：for the emperor C＇laudius made the conntry a Roman prosince， forming part of the prefecture of Pamphylia．（Dion （ass．1x．17：Suet．Clauf．25．）Pliny（v．28） states that Lycia once contained seventy towns． but that in bis time their number was reduced t， twenty－six．Ptwiemy（v．3），indeed，dexcribes Ly－ cia as a separate province；but it is probable that until the time of Theodesius 11．it remained mnited with Pamplylia，for an inscription（Gruter．Theseur： p．458．6）mentions Porcius as＂procons．I．yciae et Pamplyliae，＂and both countries had only oue governor as late as the reion of Cunstantine．Fut Theodosius constituted Lyeia a separate province； and so it also appears in the seventh centnry in Hiemcles（p．682，\＆c．），with Myra for its capital．

2．The Deltaic Lycopolis（Aukoúnàis，Strab． swit．p． 802 ；Steph．B．s．$v$ ．），was an inconsiderable town in the Sebennytic nome，in the neighbourbood of Mendes，and，from its appellation，apparently founded by a colony of Osirian priests from Upper Egypt．The Deltaic Lycopolis was the birthplace of ihe Neo－Platonic philosopher Plotinus，A．D． 205. （Suidas．p．3015．）
［W．B．1．］
LYCOIE1A．［Det．phi，p．768．］
LICOsU＇RA（Auкóqoupa：E：th．Avкoбovpeús）， a town of Areadia，in the district Parrhasia，at the fout of Mt．Lyeaens，and near the river Plataniston （Gcstritzi），on the road from Megalupulis to Phi－ galeia．It is called by Pansanias the most ancient tuwn in Girece，and is said to have been founded by 1，caon，the son of Pelasgus．It was in ruins in the time of Pausanias，since its imhabitants had been transplanted to Megalopolis upon the foundation of the latter．The remains of this town were first dis－ covered by Dodwell，near the village of Stula，und have since been more accurately described by loss． The ruins are called Palacukrambaros or Sideru－ kastron．（Paus，viii．2．§ 1 ，viii．4．§5．viii． 38. § 1：Dolwell，Tracels in Greecr，vol．ii．p． 395 ； Leake，Morea，vol．ii．1．312；Ross，Rcisen im I＇lo－
ponnes, p. 87; Curtius, Peloponnesas, vul. i. p. 295.)
 पúktios, Aúrtios, Ptol. iii. 17. § 10), one of the most considerable cities in Crete, which appears in the Humeric catalogue. ( 11 . ii. 647 , xvii. 611.) According to the Hesiodic Theogeny (Theog. 477), Rhea gave birth to Zeos in a care of Mt. Aegaeon, near Lyctus. The inhabitants of this ancient Doric city called themselves colonists of suarta (Arist. Pol. ii. 7), and the worship of Apollo appears to have prevailed there. (Caillim. Hymnn. Apoll. 33 ; comp. Miiller, Dorians, vol. i. pp. 141, 227, trans.) In B. c. 344 , Phalaecus the Phocian assisted the Cnossians against their neighbours the Lyctians, and took the city of Lyctas, from which he was driven out by Archidamus, king of Sparta. (Diod. xvi. 62.) The Lyctians, at a still later period, were engaged in frequent hostilities with Cnossus, and succceded in creating a formidable party in the island against that city. The Cnossians, taking adrantage of their absence on a distant expelition, surprised Lyctus, and utterly destroyed it. The citizens, on their return, abaodoned it, and found refuge at Lampa. Polyhios (iv. 53, 54), on this occasion, hears testimony to the high character of the Lyetians, as compared with their countrymen. They afterwards recovered their city by the aid of the Gurtynians, who gave them a place called Diatonium, which they had taken from the Cnossians. (Polyb. xxiii. 15, xxiv. 53.) Lyetus was sacked by Detellus at the Roman coaqnest (Liv. Fpit. xcix.; Flor. iii. 7), hat was existing in the time of Strabe (s. p. 479) at a distance of S0 stadia from the Libyan sea. (Strab. p. 476 ; comp. Steph. B. s. v.; Scyl. p. 18 ; Plin. iv. 12 ; Hesych. s. v. Kapvnaбóroxis; Hierocl.) The site still bears the name of $L \dot{y} t t$, where ancient remains are now found. (Pashley, Trav. vol. i. p. 269.) In the 16th century, the Venetian MS. (Mus. Class. Ant. vol. ii. p. 274) describes the walls of the ancient city, with circular bastions, and other fortifications, as existing upon a lofty mountain, nearly in the centre of the island. Numeruus vestiges of ancient structnres, tombs, and broken marbles, are seen, as well as an immense arch of an aqueduct, by which the water was carried across a deep valley by means of a large marble channel. The town of Arsinoe and the harbuar of Chersonesus are assigned to Lyctus. The type on its coins is usually an eagle flying, with the epigraph $\triangle$ TTTI $\Omega N$. (Eckhel, vol. ̈̈. p. 316 ; Höck, Ǩreta, vol. i. pp. 13, 408, vol. ii. pp. 431, 446 , vol. iii. Pp. $430,465,508$.) [E. B. J.]

coin of tyctes,
LYCU'RLA (Avkoupia), a village in Areadia, which still retai..s its ancient name, marked the boundaries of the Pheneatae and Cleitorii. (Paus. viii. 19. § 4 ; Leake, Morea, vol. iii. p. 143 ; Boblaye, Recherches, q'c. p. 156; Curtius, Peloponnesos, vol. i. p. 198.)

LYCUS ( $\Lambda \dot{\prime}$ rcas), is the name of a great many rivers, especially in Asia, and seems to have originated in the impression made apon the mind of the beholder by a torreat rushing down the side of a hill, which suggested the idea of a wolf rashing at his prey. The fullowing rivers of this name occur in Asia Minor:-

1. The Lycus of Bithynia: it flows in the east of Bithynia in a western direction, and empties itself into the Euxine a little to the south of Heracleia Pontica, which was twenty stadia distant from it, The breadth of the river is stated to have been two plethra, and the plain near its mouth bure the name of Campus Lycaeus. (Sicylax, p. 34; Orph. $A r^{-}$ gon. 720; Arrian, Peripl. p. 14; Anunym. Peripl. p. 3; Newoph. Anab. vi. 2. § 3; Ov. Epist. e.c Pont. x. 47 ; Memnon, ap. Phot. 51; Plin. vi. 1, who erroneon:ly states that Heraclein was situated on (appositum) the river.)
2. The Lycus of Cilicia is mentioned only by Pliny (v. 22) as flowing between the Pyramos and Pinarus.
3. The Lycus of Lydia was a trihutary of the Hermas, flowing in a south-western direction by the town of Thyatira: whether it emptied itself directly into the Hermus, or only alter its juncture with the Hyllus, is uncertain. (Plin. v. 31; comp. Wheler, vol. i. p. 253 ; P. Lucas, Troisieme 10yage, vol. i. p. 139, who, however, confounds the Lyeus with the Hermus.)
4. The Lycus of Plurggia, now called Tchoruk$S u$, is a tributary of the Maeander, which it joms a few miles south of Tripolis. It had its sourecs in the eastern parts of Mount Cadmus (Strab. xii. p. 578 ), not far from those of the Maeander itself, and flowed in a western direction towards Colosiac, near which place it disappeared in a chasnt of the earth; after a distance of fire stadia, however, its waters reappeared, and, after flowing close by Laodiceia, it discharged itself into the Maeander. (Herod. vii. 30 ; Plin. v. 29 ; Ptol. v. 2. § 8 ; Hamilton, Researches, vol. i. p. 508, \&c., and Journal of the Royal Geogr. Suc. vii. p. 60, who re-discovered the chasm in which the Lycus disappears, amid the ruins near Chonas.)
5. Pontus contained two rivers of this name:(a.) A tributary of the Iris in the west, is now called Kulei Hissar. It bas its sources in the hills of Lesser Armenia, and, after flowing for some time int a western direction, it turns towards the north, passing through Nicopolis, and emptying itself into the lris at Magnopolis. The Lycus is almost as inportant a river as the Iris itself (Strab. xi. p. 529, xii. pp. 547, 556; Plut. Lucul. 15; Plin. vi. 3, 4; Ov. Epist. ex Pont. iv. 10, 47 ; Hierocl. p. 703; Act. Martyr. vol. iii. Jul. p. 46). (b.) A tributary of the Acampsis or Apsorrbos, in the eastern part of Pontus, and is believed to auswer to the modern Gorgoro. (Ptol, v. 6. § 7.)
6. According to Curtius (iii. 1), the river Marsyas, which flowed through the town of Celanaae, changed its name into Lycus at the puint where it rushed out of the f rtifications of the place. [L.S.]

LICUS (Aúros), a river of Assyria, also called Zabatus, [Zabatts]

LYCLS ( $\Lambda$ úkos), a river of Syria, between ancient Byblus and Berytus. (Strab. 玉vi. p. 755; Plin. v. 20.). Although hoth these geographers meation the river Allonis as distinct from this, wore to the north, between Palae-Byblus and Byblus, the two rivers have been sometimes confounded. Their

Wolf-river is planly identical with the Dus-aiver of the present day (Nalo el-Kell), about 2 hur, noth of Beyruit; which derives its name, says M.undrell, from an idul in the form of a dog or wolf, which was worshipped, and is said to have pronounced oracles, at this place. It is remarkable tor an ancuent viaduct cat in the face of a rocky promontory immedately on the south of the stream, the work of Antoninus Pias, as a Latin inseription, eopied by Maandrell, and still legilile, records (Journey, March $17, p p, 35-37$ ). Cuneiform inserptions and figures rewembling those fouml at Behistun [Bagispanus Mons] would seem to indicate that the Roman emperor did but repair the work of sume l'ersian king. There are ca-ts of the inscriptions and figures in the Briti-h Mlucem.
[G. W.)
LYCUS (Aúкos), a river of Sarmatia, which flows through the country of the Thyssagetae, and disclaarges itself into the Ralus Macotis. (Herod, iv. 124.) Herolutus was so mach in error about the 1"sition of the Maeotis, that it is difficult to make oat his gengraphy here. The Lycus has been ident:fied with the Lageus of Pliny (vi. 7), or the riper coarse of the Volya. (Comp. Schafarik, Slao. All. vol. i. p. 499.) lemmell (fieog. of llerod. vol. i. p. 119) supposes it maty be the Medereditza. It mast be distingaished from the I yeus of Ptoleng (iii. 5. § 13), which is the modern Kulmius. (Schatarik, l.c.)
[E. B. J.]
LYCUS (Aúkos, Ptol. v. 14. § 2), a river of C'yprus, W. of Amathus. At a little distance inland from Cupo delle Gutte [CrMass] are some salt marshes, which receive an arm of a river corresponding with the Lycus of I'tolemy. (Entel, Kigpros, vol. i. 37.)
[E. B. I.]

## LYDDA. [Dhospolis.]

LY'DIA (Auồa: Eth. Auঠ́ós, Lyydus), a country in the western part of A sia Minor. Its bonndaries saried at different times. Oripinally it was a small kingdom in the east of the lomian colonies; but durime the period of the l'ersian dominion it extruled to tbe south as far as the river Maeander, anh, perhaps, even to Manut Messogis, whenee some whters speak of the Carian towns of Aromata, fralles, Nysa, and Mausure ia on the Maeander, as I.ydian towns, and Sirabo (sii. 1. 575 ) mentiuns the Maeander is the fromtier between Lydia and Ciria. To the east it extended as far as the river Lyeus, so ats to embrace a portion of Plarygin. In the time of Croms. the kincdom of Lydia embraced the whole of A-ia Minot between the Avgean and the river Hallys, with the exception of Cilicia and Lycia. The linits of Lydia doring the loman perion are more definitely fixed; for it bordened in the porth on Mlysia, from which it was sprarated near the coast by the river 11 crums, and in the inland parts by the range of Monnt Temmes; to the east it bordered on Plarggia, und to the south on Caria, from which it was eqgarated by Moment Messugis. To the went it was washed by the Aegean (Plin. v. $10 ;$ Strab. i. p. 5s, ii. p. 130, xii, 111. $572,57 \pi$, \&e.), whenee it is avilent that it embraced the mokern [wnsuce of Sarulikon and the nurthern part of Siglela. This extent of coontry, however, indules alon lomia, or the coast conntry between the month of the llermas and that of the M:wander, which was, properly speaking, no part of Lydia. [losin.]

1. Ihysical Fratures of Lydia.-In the southern and westom paris lod dia was a mountainus coantry, being lomuded on the south by the Mrasogis, and
travened by the range of Taonts, which runs farallel to it, and meludes the valley of the Caystras. In the western parts we have, as contimuntions of Tmolus, Monts Dracos and Olymeus, in the north of which 'rises Mount Siryous. The extensive plains and valleys between these heighrs are traversed in a western direction by the rivers Caystres and Hermus, and their numerous tribntaries. The whole country was one of the most fertile in the world, even the sides of the mountains admitting of caltivation ; its climate was mild and healthy, though the country lias at all times been risited by severe earthquakes. (Nenoph. Cyrop. vi. 2. § 21 ; Strab. i. p. 58.) Its most important productions were an excellent kind of wine, saffiron, and gold. The accomits of the ancients about the quantity of gold foond in Lydia, from which Cruesus was believed to have derived his wealth, are no doubt exaggerated, for in later times the sand of the river Pactolus contained no gold at all, and the proceeds of the goled mines of Mount Tmulas were so small as scarcely to pay for the labour of working them. (Strab. xiij. p. 591.) The flains about the Hermus and Caystrus were the most fertile parts of the country, if we except the coast districts of I mia. The must celebrated of these plains and valleys bore distinct names, as the Chuminias, the Cayetrlay, the Hybcaxhax: and the Catacecucmexe in the north cast. Sume of these plains also contained lakes of considerable extent, the must important of which are the Groaka Lacus, on thie north of the Fiermus, and some smaller ones in the neighbourhood of Lphesus, which were particularly rich in fish. The capital of the country at all times was Sindris.
2. Names and Iuhabitants of the Country. - In the Homeric prems the names Lycia and Lycians do not occur; but the people dwelling about Mount Tmolus and Lake Giygaea, that is the country afterwards calied L.ydia, lear the name Memes or Alacones (Mypoves, $1 /$. ii. 865, v. 43, x. 431 ), and are allied with the Trojans. The earlicst author who mentions the name Lydians is the lyric poet Mimnermus (Fragm. 14, ed. Bergk), whose native city of Culophon was conquered by the Lydians. Herodotus (i. 7) states that the people origimally called Mleones afterwards adopted the name of Lydians, from Lydus the son of Atys: and he accordingly regards' Lydians anal Meonians as the same people. But some of the ancients, as we learn from Strabo (xii. p. 572, xive p. 679), considered them as two distinct races, - a view which is unquestionably the correct one, and bas been adopted in modern times by Niebulor and other inquirers. A change of name like that of Maeonians into Lydians alone suggests the idea of the former people being either subdued or expelled by the latter. When once the name Lydinus had been established, it was applied indiscriminately to the nation that had been conquered by them as well as to the conquerors, and hence it happens that later writers use the name lyylians even when speaking of a time when there were no Lydians in the country, but only Maeoniuns. We shall first endeavour to show who the Maconians were, and then proceed to the more difficult question about the lydians and the tinic when they conquered the Maeonians. The Maeonians unquestionably belonged to the IndoEoropenu stuck of nations, or that branch of them which is generally called Tyrthenian or Pelasgim, for these latter " inhabited Lesbus lefore the (ireeks took possession of those islands (Sirab. v. p. 221,
xiii. p. 621), antl, according to Nenecrates the Elaean, the whole coast of Ionia, berginning from Mycale, and of Aeolis." (Nicbubr, Mist. of Rome, vul. i. p. 32.) They no donbt extended beyond the coast into the interior of the country. The existence of a l'elastrian population is probally also implied in the statement, that the most ancient royal dynasty of Lydia were Heracleidae, and that Lydus was a brother of Tyrthenus. The Lydians, on the other hand, are expressly stated to have had nothing in common with the Pelasgians (Dionys. i. 30), and all we know of them points to more eastern countries as their original home. It is true that Herodotns connects the Heracleid dynasty with that of Assyria, but if any value can be attached to this statement at all, it refers only to the rulers; but it may be as unfutunded as his belief that most of the Greek institutions had been derived from Egypt. The Lydians are described as a kindred people of the Carians and Mysians, and all three are said to have had one common ancestor as well as one common language and religion. (Herod, i, 171.) The Carians are the only one of these three nations that are mentioned by Homer. It is impossible to ascertan what country was originally inbabited by the Lydians, though it is reasonable to assume that they occupied some district near the Maeonians; and it is possible that the l'hrygians, who are said to have nigrated into Asia from Thrace, may have pressed upon the Lydians, and thus furced them to make emuquests in the country of the Maeonians. The time when these conquasts took place, and when tbe Maeonians were overpowered or expelled, is conjectured by Niebuhr (Lect. on Anc. Hist. vol. i. p. 87) to have been the time when the Heracleid dynasty was supplanted by that of the Mermnadae, who were real Lydians. Phis would place the conguest of Maeonia by the Lydians about the year B. c. 720. The Maeonians, however, after this, still maintained themselves in the country of the Upper Hermus, which continned to be called Maeonia; whence Ptolemy ( v. 2. § 21) speaks of Mlieonia as a part of Lydia. Pliny (v. 30) also speaks of the Maemiii as the inhabitants of a district between Philadelphia and Tralles, and Hierocles (p. 670 ) and other ecelesiastical writers mention there a small town called Matomia, Which Mr. Mamilton (Researches, vol. ii. p. 139, \&c.) is inclined to identify with the ruins of Megne, about five miles west of Sandal. To what branch of the human farnily the Lydians belonged is a question which cannot be answered, any mere than that about their original seats; all the Lydian words which have been transmitted to us are quite foreign to the Greek, and their kinsmen, the Carians, are described as a people speaking a barbarous lan. guage.
3. Institutions and Customs - Aithough the Lydians must be regarded as barbarians, and although they were different from the Greeks both in their language and in their religion, yet they were capable, Jike some other Asiatic nations, of adopting or developing institntions resembling those of the fireeks, though in a leaser degree tban the Carians and Lycians, for the Lydians always lived under a monarchy, and never rose to free political institutions. They and the Carians were both gifted nations; they cultivated the arts, and were in many respects little inferior to the Greeks. Previous to their conquest by the Persians, they were an industriuus, brave, and warlike people, and their cavalry was
reqarded as the best at that tine. (Herod. i. 99 ; Mimnerm. L c.) (yrns purposely crushed their warlike spirit, forbade them the use of arms, and caused them to practice dancing and singing, instead of cultivating the arts of war. (Herod. i. 154 ; Jnstin, i. 8.) Their subsequent partiality to mus ic was probably the reason why the Greeks ascribed to them the invention of gymnastic games. (Herod. i. 94.) The mode of life thus forced upin them by their conquerors gralually led them to that degree of effeminacy for which they were afterwards so notarious. Their commercial industry, hewever, continued under the Persian rule, and was a surce of great prosperity. (Herod. i. 14, 25, 51, \&c.) In their manners the Lydians differed but little from the Greeks, though their civilisation was inferior, as is manifest from the fact of their daughters generally gaining their dowries by public prostitutiom. without thereby injuring their reputation. (Herod. i. 93.) The moral character of the Lydian women necessarily suffered from sucb a custom, and it caunot be matter of surprise that ancient Greek authors speak of them with contempt. (Strab. xi. p. 533, xiii. p.627.) As to the religion of the Lydians we know very little: their chief divinity appears to have been Cybele, but they alsu worsinipped Artemis and Bacchns (Athen, xiv. p. 636 ; Dinnys. Perieg. 842), and the phallus worship seems to have been universal, whence we still find enormous phalli on mearly all the Lydian tombs. (Hanilton's Researches, vol. 1. p. 145.) The Lydians are said to have been the first to establish inns for travellers, and to coin money. (Herod, i. 94.) The Lydian coins display Greek art in its highest perfection; they have no inscriptions, but are only adorned with the figure of a lion, which was the talisman of Sardes. We do not know that the Lydians had any alphabet or literature of their own : the want of these things can scarcely have been felt, for the people must at an early period have become familiar mith the language and literature of their Greck neighbours.
4. History.-The Greeks possessed several works on the listory of Lydia, and one of them was the production of Xanthus, a native of Surdes, the capitat of Lydia; but all have perished with the exception of a few insignificant fragments. If we had the work of Xanthus, we should no doubt be well informed on various points on which we can now only form conjectures. As it is, we owe nearly all our knowledge of Lydian history to Herodotus. According to him (i. 7) Lydia was successively govented by three dynasties. The first hegan with Lydus, the son of Atys, bnt the number of its kings is not mentioned. The second dynasty was that of the Heracleidae, hegimning with Agron, and ending with Candaules, whom the Greeks called Myrsilus. The commencement of the Heracleid dynasty may be dated about B. C. 1200 ; they are connected in the legend in Herodotus with the founder of Nineveh, which, according to Niebuhr, means either that they were actually descended from an Assyrian family, or that the Heracleid dynasty submitted to the supremacy of the king of Nineveh, and thas connected itself with the race of Ninus and Belus. Tbe Heracleids maintsined themselves on the throne of Lydia, in unbroken succession, for a period of 505 years. The third d nasty, or that of the Mernmadae, probably the firxt really Lydian rulers, commenced their reign, according to some, in 1., 713 or 716 , and according to Euscbius, twenty-two years later. Ggges,

i.j) IA- L.tmas

Aıg.as). : the general name for a number of small - Fibes in :he n rth-east of Gernany, all of which ivelongeni to the Suevi. (Strab. vii. 1. 290; Ptol. ii. 11. 818: Dion Cass. Ixvii. 5; Tac. (ierm. 43, Amu. xii. 29.30.) The ancients speak of them as a (ierman nation, bat there can be little doubt tbat, properly speaking, they were Slayonians, who had been subdued by the sucvi, and had gradnally become urited and analgamated with them. Their name ontains the rout lug, which in the old German si;nifies a wood or marsh, and still has the same meaning in the Slavonic; it seems, therefore, to be descriptive of the pation dwelling in the plains of the Iistula and the Oder. The Lygii are first mentioned in history as belongins to the empire of Maruboduns, when they were mited with the Marcomanni and Hermunduri, When the Quadi rose against king Vannins, is A. D. 50, the Lygii and Hermunduri were still united, and apposed the intluence of the Romans in Germany. (Tac. Ann. l.c.) In the reign of Domitian, alout A. D. S4, they mace war on the Qaati, their neighburs, who in vain sooght the protectio $n$ of the Romans. (Dion Cass. l. c.) After this time the Lygii disappear from bistory, and it is possible that they may have become lost among the Goths. The different Lycian tribes, which are mentioned by Taritus (Arii, Helvecones, Manimi, Elysii or Helisif, and Naharvali), seen to have been united among one another by a common worship. the principal seat of which was among the Nalarvali. The name of their tro common gols was Alci, who were whrshipped withont images ; and Tacitos observes that their mede of worship was free from all foreign admixture. Ptolemy mentions, as tribes of the Lygii, the Omanni, Duri, and Buri, who are either not noticed by Tacitns at all, or are classed with other tribes. (Conop. Wilhelm, Germaniere, p. 242. Sc.; Zouss, dic Dentschen, p. 124 ; Latham, on Tacit. Girmania, p. 158.) [L. S.]
1.YGOS [Constantinopolis, p. 25\%.]
 Ptol. iii. 13. § 33), the conutry of the Lyxebstak (Avyкクानтia. Thuc. ii. 99, iv, 83, 124 : Strab, vii. pp. 323.326), once a small indepeodent kingdom. and afterwards a proxince of the Macedonian monarely. This district was situated to the S. of the Pescones, and between that people, and the Eordaci. It was watered by the Erigon, and lay in the centre of the Eznatian Way, which e nnected Rome, Citistantinopic, and Jerusalem. The pass which sequrated Lyncestis from Eurdaea, where Philip made his unswecesful stand agairst the $R$ mans, is described by Pulybius (xviii. 反) as ai eis चìv Eopdaiav virep-Goxan,-and Thucydides (is. 83) calls a defile in
 l:ting the attempt of Perdiceas azainst Lynceatis, Which ended in a separate nesutiation betwren his ally Brasidas and Arrlitaems k'es of the Lyncestac. (Thuce iv. ©3.) It was by the same pass in the illowing yeur that [3msidsa cfte ted his skir ul and dume retriat from the united forces of the $l y{ }^{n}$ -te-tae and lily hurs. (11 ne. iv, 124.)

Arconvinz to stration (vii. p. 326), Irtha, the daughter of Arthabaen- (is he writes the name), was mother of Eory flec, who married Amynta, facther of 1'inilip. Ibrongh this comection Lyncostis may lave becume annesed to Macedonia. The gea_raply of this distr' $t$ is well i ustrated by the operations of the consul sulpicin-acainst Plilip, in the campaign of B. C. 210 . (Lis. xxxi. 3?.) From the nariative of Liry, which was un !ou tedly
extracted from Pollhus, as well as from the Itineraries, it would appear that Lyncestis conprehended that part of Upper Maceduria now called Filuirina, aud all the S. part of the basin of the Ehigox, wifh its hranches, the Bevus amd Ospmagus. As it is stated that the first encampment of the Romans was at Lrxets on the river Bevus, and as Lynens is deseribed as a town ly Stephanus B. (thoogb bis description is evidently incorrect), it might be supposed that Heracleis, the chief toirn of this district, was sometimes called lyncus, and that the camp of Sulpicius, was at Heracleia itself. But thoogh the words "ad Lyncum stativa posuit prope flumien Berum" (Liv, l. c.) seem to point to this identitieation, yet it is more likely that Lyneus is here used as synonymous with Lyncestis, as in two other passages of Livy (xxii. 25, xxxii. 9), and in Thaeydides (iv. 83, 124) and Platareb. (Flamin. 4.)
At or near Beinitza are the mineral acidulous waters of Lyncestis, which were supposed by the ancients to possess intoxicating qualities. ( Ov . Net. xv. 329; comp. Arist. Meteor. ii. 3; Theopomp. ap. Plin. ii. 103, xxxi. 2, ap, Antig. Caryst. 1s0, ap. Sotion. de Fhan. p. 125; Vitrav. viii. 3 ; Sen. Quaest. Nat. iii. 20.) They were found by Dr. Brown (Travels in IItengaria, Macedonia, Thessaly, qc. ofc, Lond. 1673, p. 45) on the road from Filiurina to Egri Budja. He calls the place Eccisso l'erbeni; this, which somnds Wallachian, may possibly be a corruption of the name of the Derveni or pass. (Leake, Northern Greece, vol. iii. pp. 305-318.)
[E. B. J.]
LTRBE (Aípb $\eta$ : Eth. Avpbeitys), a thwn of Pisidia, mentionel by the poet Dienysins. There are coins of this place belunging to the reign of Alexander Severus, and it vecurs among the episcopal towns of Pamphylia in the Not. Eecles. It is ciearly the same as the Lyroore ( Avpön) of Ptoleny, thoagl he places the latter in Cilicia Tracheia. (Diwnys. Por. 858 ; Hierocl. p. 68.2 ; Ptol. v. 5. § 9; Cramer, Asia Minor, vol. ii. 1. 313.)
Lipiceia or LYicelem (i) Aipkela, Paus.; Avpreiov, Soph. ap. Strub. vi. p. 271 ; in Stral. viii. p. 376, Aukoúp you is a fabe reading for Avpкeiov, see Firamer's Strab. vol. ii. p. 186), a towa in the Argeia, distant 60 stadia from Argos, atid 60 stadia from Orneae, and situated un the road Climax, which ran from Argos in a north-westerly direction along the bed of the Inachus. [Argos, p. 201.] The town is said to have been originally called Lynceia, and to bave obtained this name from Lynceus, who fled lither when all his other brothers, the sons of Aegyptus, were murdered by the danghters of Danaus on their welding night. He gave intelligence of his safe arrival in this place to his faitliful wife Hypermnestra, by holding up a torch; and she in like mamner informed him of her safety by raising a turch from Larissa, the citadel of Argos. The name of the town was afterwards changed into Lyreeia from Lyrens, a son of Abas. It was in ruins in the time of Pausanias. Its remains may still be seen on a small eleration on the left of the Inachus, at a little distance lnyond Sterna, on the ruad to Argos. (Paus. ii 25. $\$ \$ 4,5$; Apollod. ii. 1. § 5 ; Strab. l. c.; Rioss, Recsen im I'loponnes, p. 138 ; Boblaye, Récherches, pc. p. 45 ; Leake, Morea, vol. ii. p. 414; Curtius, Peloponnests, vol. ii. p. 415.)

## LyRNAS. [Llyraessus, 2.]

LYRNESSUS (Avppqosós: Eth. Avpvíactos or Aupvaios, Aeschyi. Pers. 324). 1. A town often nentioned by Homer (Il. ii. 690, xix. $60, \times 8,92$,
191), and described hy Stephanus B. (s. c.) as one of the eleven towns in Truas ; and Strabo (xiii. p. 612) mentions that it was situated in the tervitory of Thebe, but that atterwards it belonged to Adranyitium. Pliny (v. 32) places it on the river Evenns, wear its sonrces. It was, like Thethe, a deserted place as early as the time of Stralu.c: (Coupp. Strab. xiii. P. 584 ; Died. v. 49.) About 4 miles from Karaváren, sir C. Felluws (Journ. of an Exc. in Asia Minor, P. 39) fond several columns and old walls of good masonry; which he is inclined to regard as remmants of the ancient $\mathbf{L}_{y} \mathrm{r}$ nessus.
2. A place on the coast of Pamphylia, wlich was reported to have been founded there by the Trigin Cilicians, who transferred the name of the Trojun Lyrnessus to this new settlement. (Strab. xir. 676.) The town is also mentioned by Pliny (v. 26), who places it on the Catarihactes, and by Dionysius Periegetes (875). The Stadiamus Maris Mugni (§ 20t) calls it Lyynas, and, according to the French translators of strabo (vol. iii. pt. 2. p. 363), its site is identical with the modern Ernatia,
3. An ancient name of the island of Tenedos. (Plin. v. 39.)
[L. s.]
LI'Rope. [Lyrbe.]
LI'sIAS (Avalás: Eth. Avgáains), a small town in Phrygia, between syunada and Prymnessns. (Strab. xii. p. 576 ; Plin. v. 29 ; Ptol. v. $2 . \$ 23$; Hierocl. p. 677.) No particulara are known abont the place, nor is its site accertained, but we still posisess coins of Lysias. (Eckliel, Doctr. Num. iii. p. 167.)

Lysimachia (Avathaxía or Avarid́xér). 1. A small town in Mysia, mentioned only by Pliny (v. 22), in whose time it no longer existed.
2. An important town on the nortb-eastern extremity of the Thracian Chersonesus, not far from the Sinus Melas. It was built by Lysimachus in B. C. 309 , when be was preparing for the last straggle with his rivals; for the new city, being situated on the isthmus, commanded the road from Sestos to the north and the mainland of Thrace. In order to obtain inhabitants for his new city, Lysimachus destroyed the neighburing town if Cardia, the birthplace of the historian Hieronymur. (Strab. ii. p. 134, vii. p. 331; Paus. i. 9. § 10; Diul. xx. 29; Polyb. v. 34 ; Plin. H. N. iv. 18.) Ly:imarlus ro doubt made Lysimachia the capital of his kingdom, and it nust have rapidly risen to great splendoor and prosperity. After his death the cily fell under the dominion of Syria, and during the wars between Selencus Callinichs and Ptoleniy Energetes it passed from the hands of the syrians into those of the Egsplims. Whether these latter st the tuwn free, or whether it enancipated itself, is uncertain, nt any rate it entered into the relation of sympolity with the Aetolians. But as the Aetolians were not able to afford it the necessary protection, it was destroyed by the Thracians during the war of the Remans against Plilip of Macedonia. Antiochus the Great restured the place, collected rlie scattered and enslaved inhabitants, and attracted colonists from all parts by liberal pronises. (Liv. xxsiii. 38, 40; Diod. Exc. de I Iirt. et Jit. p. 574.) This restoration, bowever, appears to lave been unsuccessfol, and under the donimion of lione it decayel more and more. The last time the place is mentioned under its ancient name, is in a passage of Anmmianus Marcellinhs (xxii. 8). The emperor Justinian rustored it and surrommed it with strong tortifications

I'ricop. de Aerd. iv. 10), and after that time it is spoken of only under the mane of IFexamilium
 now occupying the place of Lysimachia, Ecsemit, derives its name from the Justinianean fortress, though the ruins of the ancient place are more numerous in the meighburing village of Baulur: [L.S.]

conn of mastmacmid in thrace.
 Papadhutes), a town of Actolia, sitnated upon the sonthern shore of the lake furmerly called Hyria or Hydra, and subsequently Lysimachia, after this town. [Respecting the lake, see Aहtolns, p. 64, a.] The town was prolably founded by Arsiacei, and named after her tirst husband L.ysimachus, sioce we know that she enla ged the neighbouring town of Conope, and called it Arsinoë after herself. [CoNope.] The pasition of the town is deternined by the statement of Strabo that it lay between Plenron and Conope, and by that of Livy, who places it on the line of march from Naupactus and Calydon to Stratus. Its site, therefore, corresponds to Popadlates, where Leake divouered some Ildlenic remains. It was deserted in Nerabo's time. (Nitral), p 460 ; I'ol. ए. © ; Liv. xxavi. 11 ; Steph. B. s. v. ; Leake, Nouthern Grome, vol, i. pp. 122. 153.)

LYMMELEIA. [Svancesme.]
LYSiNOE (Avatvón) or LYSINIA (Avowia, Ptol. v. 5. § 5), a small town in the arerth of l'ailia, on the sonth of the A-caniat Lacus, and west of Figalassus. (Polyb. Ere, de Ley 32; Liv, xaxviif. 15; Hievocl. p. 680, who calls it Lysedara, ^uஎท́rapa.)

Ll'SlS, a small river mentioned only by Livy (xxxvihi. 15), which haul its sources near the tinvo of Lazos, in the whot of J'isidia.
1.YSTli. 1 ( $4 \dot{u}=\tau \rho \alpha$ 方, or $\tau \dot{\alpha}$ ), a fown of Lyrabnita or Iamm, which is mentine by l'liny ( $\mathrm{v}, 42$ : Eth, Lyatroni) anl I'tomeny (v. 4. §§ 12), and repeateily in the Now Testament History. (.Icts, xiv. 8, 21 : Timoth. iii. 11 ; comp. Hierocl. p. 675. ) A bishop of Lystra was present at the Cumbil of ('balecton. Leake (1siz Mioner, p. 102) is inclined to plame the tunn at $K$ hutwn Simaí, abont 30 miles smuth of [ennium; but Hamlton (Researrhes, whi. ii. p. 313), with more appearance of probalility, identifies its site with the ruins of Kaarlough, which are genctally believed to be the rematiss of D ethe.
[1.. S.]
L.YRARNIS, a prommory in Northern Eumpe, mentioned by l'liny (vi. 12. 8. 14). 1his text makes the promontory of Lytarnis, at one and the same time, a fortion of the Celtic comntry and the extrewity of the Rhiparaa ratue - the Rhipnean monntains being the l'ralinn - "cxtra con" (i.e. the Soyth.ians), "nltra-pue A.plilomis initia Hymertoreos aliqui posucre, pluribus in Eurnpa dietos. 1'rimum inde mascitur promontorium Celtican Lyytarnis, flnvius Carambucis, uhi lasata com sidernm vi Rphacorum montime deficingt juga." In the eyers of the fhyseal gentajdrex, the extremity of the lecalien chain is rither the ish,und of Toree Kontle or the nust mathera !emtion of the dianict on the west of
the sea of Obi.-the Obi being the Caramlacis. In the usual maps, however, the Dwina is the Caranbucis, and Nmin Xoss, on the cast of the White sica, the Lvtarmis Prom.
[li. G. L.]
LITTUS. [Lictes.]

## M.

MAACAH, BETH-MAACAH v. ABEL BETII-
 a city of Palestine, placed by Eusebins and St. Jerome on the road between Elcutheropolis and Jerusalem, 8 miles from the former, the site of which was then marked by a village named Mechanum. It is char, however, that the Abel Beth Mascah of the sacred writers could not have been situated so far south. It is first mentionad in 2 Samuel, xx. 14. \&cc., as the city in which the rebel Slieba was besieged by Joab. From this passage, however, it may be gathered (1.) that Alel was not identical with Ieth-Marah, for the copula is inserted between the names ("unto Abcl and unto Beth-Mazeah"); (2.) that it was situated at the extrenity of the land of lsrael, for Juab " went through all the tribes of Israel " to come there. Abel then, which was, as "the wise woman" called it, " a city and a mother in Inrael" (ver. 19), was so called from its contiguity to Beth-Maacah, (so Reland, Palaestina, p. 519) ; and this monst have been situated near the enorthern frostier, for it is mentioned with Ijua and Dan. and Cinoeroth and Naphthadi (I Kings, xv. 20), as one of the cities takm by Benhsulaut, king of Syria, from Basha, king of Israel; and two centuries later it was one of the cities of Israel first occupied by Tiglath-pileser, king of Assyria. (2 Kings, xv. 29.) Entebius mentions threc places naned Alel:-1. a village three miles from Philadelphia; 2. a city 12 miles east of tiadara; 3. another between Paneas and Damascus. (Onomast. s. v.) Reland justly remarks ( $l$. c.) that if any one of these is to be taken as Abel of Beth-Mareali it must be the last-named; but that he is more dispused to look for it in Galilee, to the west or south of Paneas, rather than to the east or north, on the Damancus road. This view is perhaps confirmed ly a comparison of 2 (\%ron, xvi. 4, with 1 Kings, xy 20.: the Abel Beth Marah of the latter being called Alel Maim, or "Abel of the Waters" in the latter, probably so named either from the sea of Crmarnth or from the sea of Galilece. Dr. Robiusun surgests its identity with the modern village of $\hat{A} b i l$, or $\hat{I} b e l-+l-K$ amkh or $\hat{A}$ bil or $\hat{\text { Ib }}$ bel el Haura, both situated in the $\mathbf{M}$ ery 11 grm , which lavt name is certainly identical with the ancient Ijon, with which Abel Beth-Mtacah is avsociated in 1 Kings, xv. 20. (Iobinsun, Dih. Res. vol. iii. pp. 344, n. 2. 347. n. 1., and Appendix, 1p. 136, 137, n. 1.)

Masah is used as an adjuact to Syria or Aram in 1 Chron. xix. 6, 7 . bnt its situation is not defined. (Reland, Palarstiva, p. 118.)

The existence of the Mawathites ( $\mathrm{Ma}, \chi \alpha 0 i$ ) on the cast of dordan, apparently between bashan and Mumb Ilermon, contignous to the Geshmites (Irnt. iii. 14: Josh. xii. 5, xiii. 11, 13) iutimat's that another city or district of the name Maneah was situated in that guarter.
[6. W.]
MAAGR-AMNHIM (Macirpapuov, I'twil, vii. 4. § 10 , viii. 28.85 , a considerable town in the island of Taprobane or Ceylon. I'tolemy calls it is
metropulis. It is not now certain where it stood, but some have identified it with Tamankadaue. Some MSS, read Naagrammnm, but Maagrammum must be correct, as its form shows its Sinserit origin Lassen bas supposed it stood at the SE. end of the i.land, and that its ancient name was Mahagrama.

MAARATH, a city of Judaly situated in the monntuins, mentioned only in the list in the book of Joshua ( $\mathrm{x} v, 59$ ). Reland (Paluest. s. v. p. 879) suggests that a lofty mountain, Mardes, near the Dead Sea, may have derived its name from this city.
[G. W.]
MAARSARES. [B.byLoniA, p. 362 , a.]
MABOG. [Hierapolis.]
MACAE (Mdiкat), a perple of Arabia mentioned by Ptolemy (vi. 7. § 14), immediately within the Persian Gulf, as inhabiting the shores of the extensive bay of the Fish-eaters ('I $\chi \theta v 0 \phi \dot{\lambda} \gamma \omega \nu \kappa \boldsymbol{\kappa} \boldsymbol{\lambda} \lambda \pi \sigma \iota$ ). They orcupied apparently the western shore of Cape Musseldom, as Pliny (vi. 26) states that the width of the strait from the promontory of Carmania to the opposite shore and the Macae, is 50 miles. They were bounded on the east by the Naritae ( $\mathrm{N} \alpha-$ peitai) [Epraanaxitae]. Mr. Ferster considers the Nacae of Ptoleny is a palpab'e contraction of the Namachaei of Pliny, and that this tribe is recovered in the Juwaser Arabs, the most famous pirates of the Persian Gulf. (Geog, of Arabia, vol. ii. p. 225.) It is clear that the "Naumachaeorum promontorium " of Pliny (vi. 32) is identical with the modern Cape Musseldom, at which he places the Macae. (Comp. Strabo, p. 765.) He mentions a remarkable story in connection with this place: that Numenius, who had been appointed prefect of Mesena by King Antiochus, gained a naval victory over the Persiams, and on the same day, on the tide receding, conquered them in a cavalry engagement, and erected on the same spot two trophies, -one to Neptune, the other to Jupiter.
[G. W.]
IIACAE (Ма́каı), one of the aboriginal tribes of the Regio Syrtica, on the N. Coast of Libya, on the river Cinyps, according to Herodotus, who describes their customs (iv. 175 ; comp. Scyl. p. 46; Diod. iii. 48 ; Plin. vi. 23. s. 26 ; Sil. iii 275 ; Ptol. iv. 3. § 27, calls them Makaiot or Máкаt, Euptika.). Polybins mentions Maccaci in the Carthaginian ariny. (Pol. iii. 33.)
[P.S.]
MACALLA (Máка入入a), an ancient city of Bruttium, where, according to Lycophron, was the sepulehre of Philoctetes, to whom the inhabitants paid divine bonours. (Lycophr. Alex. 927.) The author of the treatise De $1 /$ irabilibus, ascribed to Aristotle, mentions the same tradition, and adds that the hero had deposited there in the temple of Apollo Halius the bow and arrows of Herenles, which bad, however, been removed by the Crotoniats to the temple of Ayollo in their own city. We learn from this auth r that Macalla was in the territory of Crotona, about 120 stadia from that city ; but its position cannot he determined. It was douhtless an Uenotrian town : at a later period all trace of it disappears. (Psend-Arist. de Mirab. 107; Steph. B. s. r. ; Schol. ad Lycophr. l.c.) [E. H. B.]

## MACANITAE. [Marretania.]

NACARAS. [Bragadas.]
MACATEAE (Maкаре̇at: Eth. Makaptés), a town of Arcadia, in the district Parrhasia. 22 stadia from Mecsalopolis, on the road to Phigaleia, and 2 stadia from the Alpheius. It was in ruins in the
time of Pansanias, as its inbabitants liad been removed to Negalopolis upon the fonudation of the latter. (Pans, viii. 3. § 3, viii. 27. § 4, viii. 36, § 9 ; Steph. B. s. r.)

MACA'RIA (Maкарі́, Ptol. v. 14. § 4), a town on the N. coast of Cyprus, E. of Ceryneis. (Engel, Kypros, vol, i. p. 83.)
[E. B. J.]
MACA'R1A (Maкapla), that is, "the blessed (island)," a name given by the puets to several islands, such as Crirus, Lesbos, and Ruodes ; but also occurs as a yroper name of an island in the south of the Arabian galf, a little to the north of the gulf of Adule.
[L. S.]
MACATU'TAE (Maкatoutal), a people is the extreme W. of Cyrenaica, on the border of the province of Africa, above the Velpi Montes. (Ptol, iv. 4. § 10.)
[P.S.]

## Macchurébl. [Matretania.]

MaCCOCALINGAE. [Calingae.]
Maccu'raE. [Mauretania.]
MACEDO'NLA ( $\bar{\eta}$ Maкe $\delta$ ovia), the name applied to the conutry occupied by the tribes dwelling northward of Thessaly, and Mt. Olympus, eastward of the chain by which Pindus is continned, and westward of the river Axins. The extent of country, indeeri, to which the name is generally given, embraces later enlargements, but, in its narrowest sense, it was a very small conntry, with a peculiar population.

## I. Name, race, and original seats.

 as they are called by all the ancient poets, and in the fragments of cpic pretry, owed their name, as it was said, to an epmymous ancestor; according to some, this was Maceduus, son of Lycaon, from whom the Areadians were descended (Apollow, iii. 8. \$ 1), or Macedon, the brother of Magnes, or a $=0$ n of Aeolus, according to Heriod and Hellanicus (ap. Const. Porph, de Them, ii. 2 ; comp. Aelian. II. A. x. 48 ; Eustath. ad Dion. $P .247$; Steph. B.). These, as well as the otherwise unsupported statement of Herodotus (i.56), of the original identity of the Duric and Macednian (Macedonian) peoples, are merely various attempts to form a genealogical cminection between this semi-barbarous people and the rest of the Hellenic race. In the later poets, they appear, sometimes, under the name of Macetaie (Sil. Ital. xiii. 878, xiv. 5, xvii, 414. 632: stat. Sil. iv. 6. 106; Anton. de Clur. Crbb. ii. 9; Gell, x. 3). And their country is called Macetia (Maneria, Hesych. s. v.: Eustath. od Dion. P. l. c.).

In the fashion of wearing the mantle and arranging their hair, the Macedonians bore a great resemblance to the Illyrians (Strab. vii. p. 327 ), but the fact that their language was different (Polyb. xxviii. 8) contradicts the supposition of their IIlyrian descent. It was also different from Greek, but in the Macedonian dialect there occor many grammatical forms which are commonly called Aeolic, together with many Areadian and Thessalian words; and what perhaps is still more decisive, several words which, though not found in the Greek, have been preserved in the Latin language. (Comp. Müller, Dorians, vol. i. p. 3, trans.) The ancients were unanimous in rejecting them from the true Hellenic family, but they must not be confoundel with the armed plunderers-Illyrians, Tbracians, and Epirots, by whom they were surromded, as they rescmble more nearly the Thessalians, and other reder memliers of the Grecian name.

These tribes, which differed as much in ancient

## MACEDUNT.

times as they do now. a ceordingly ta they datt in mumtain or plain, or in soil or climate nore or less Kindly, thongh distinguished from each other, by having substantive names of their own, ackomstedyed one common natimality. Finally, the varions sections, such as the Elymiotae, Urestace, Lynemiae, and others, were swallowed up by those who were pre-eninently known as the Macedomians, who had their orieinal centre at Acgac or Edessa, (Comp. Grote, Mist. of (ivcece, c. Nav.)

Macedonia in its proper sechse, it will be seen, did not touch upon the seit and mast be distinguished into two parts. - Upesi: Maembonta, inhabited by prople about the W. rauge of mountains extending from the N. as far as l'indus, and Lower MLsceinsxin about the rivers which tlow into the Axius, in the earlier times, not, however, extending as far as the Axius, but only to Pellia. From this district, the Macedonians extended themselves, and partly reprosed the original inhabitants. The whole of the sea-cuast was occupied by other tribes who are mentioned by Thucydiles (ii. 99) io his episode on the expedition of the Thraciaus against Macedonia. There is some little difficulty in harmonising his statements with those of Herodutus (viii. 138), as to the original series of occupants on the Thermaic Enlf, anterior to the Macedunian eonquents. So far as it can be made out, it wouh seem that in the swenth century B. c., the narrons strip betwren the Peneius and Haliacmon, was the oririnal abude of the lierian Thracians; N. of the l'ierians, from the mouth of the Haliacmon to that of the Axius, dwelt the Buttiaeai, who, when they were expelled by the Maculonians, went to Clabeidice. Neat follicwed the Patemians, who uccupied both banks of the Strymon, from its source duwn to the lake near its mouth, but wese pualed away from the coant towards the interior. Myghlmia. the lower comutry fi, of the Axius, alunt the Thermaie gulf, was, previously to the extension of the Maceldmians, inlahited ley Thracian Edoniaus. Wlule Epper Naterif mia never attained to any impurtance, Lower Macedonia hats hen famous in the history of the world. This was owing to the energy of the royal dynasty of Elco-a, whan callof themedres fleracheids, and traced their desent to the Temmidae of Agros. Respecting this fanify there were two legendasaconding to the ome, the kings were deacmend fron C'aranus, ambaceoring to the othor fr m l'endicuas: the latter tale whith is given hy Jerod tus (vini. 137-I39), bears much more the mank of a penmine loonal thadition, than the wher which camont be trawed hisher than Theopumpus. (1) sij put up. Synet Il. p. 262) Alter the lesem 1 of the 1 maldina of the Marsdunian kinghan. thene is matheng bat a lomis blank, until the wish of hine Amynas (about 52()-500 1.c. ), and his som Ahes:mider (ahout $480 \mathrm{HI} . \mathrm{C}$ ). Herulatus ( $1, c_{2}$ : cmmp, ' lhan. ii. 100) gives a list of five sance-aive hiass liothen the fomeder l'endicess and Aleazaher-Perdiceas, Arearns, Mhilippus, Ä̈ropas, Aloutac, Amgntas, and Aicsamder, the contempenary, wnd to a sentain extent ally, of Xerxes. Duning the raig of thate tho lant princts, wha were on fromily tems with the l'eisistratilae, and afterwarts with the emameripated Alhenims, Mavelunia becomes inylicated in the athairs of cheece. (Herod. i. 59, v. 94 , vii. 136.)

Muy harbarons customs, such as that of tattooins, whid prewaled amone the Thacims and Illyt. ine, thet lave fall on into dione at a vely early perionl. Even the usage of the ancient Jneedonians,
that evers peroon who had nut killed an enemy, should wear some diagracefnl budee, had been discontinned in the tine of Aristotle. (Fol. vii. 2. § 6.) Yet at a very late date no one was permitted to lie down at table tho had not slain a wild boar without the nets. (Ile esander, ap. Athen. i. p. 18.) On the other hand, a military disposition, personal valur, aad a certain freedom of spirit, were the mational characteristics of this people. Lonse before Philig organised his phalanx, the cavalry of Macedon was greatly celebrated, especially that of the hi-hlands, as is shown by the tetradrachms of Alesander 1. In smaller numbers they attacked the clase array of the Thracians of Sitalees, relyiug on their skill in horsemanship, and on their defensive armour. (Thuc. ii. 100.) Teleutias the Sjartan also admired the cavalry of Elimea (Xen. IJell. v. 2. $\S 41, ~$ v. 3. § 1); and in the days of the conquexts of Asia, the custon remained that the king could not condemn any person without having first taken the soice of the people or of the army. (I'olyb, v. 27; Q. Curt. vi. 8. § 25, vi. 9. § 34.)

## II. Macedonia in the historic period till the death of Alexander.

Tbis kingdom had acquired considerable power even before the outbreak of the l'ersian War, and Grecian retinement and civilisation must have gainel emsiderable ground, when Alesander the Plallzellene offered himself as a combatant at the Olympic games (Herod. v. 2. ; Justin. vii. 12), and honoured the poetry of Pindar (Solin, ix. 16). After that war Alesander and his son Perdiceas appear gralually to lave exteuded their dominions, in consequence of the fall of the Pernian power in Thrace, as far as the Strymon. Perdiccas from being the ally of Atheus became her active enemy, and it was from his intrigues that all the difficulties of Athens on the Thracian coast arose. The faithless Perdiceas, was succeeted by his son Archelatus, who first extablished fortre-ses alil ruals in his dominons, and formed a Stacedonian army (Thuc.ii. 100 ), and even intended to procure a navy (Sulin. ix. 17), and hal tragedies of Euripides acted at his court under the direction of that poet (Ael. I:II. ii. 21, xiii. 4), while his palace was adtarned with paintings by heuxis (Acl. 1. II. xir. 17). In R. ©. 399, Archelaus perished by a violent death (1)iod, xiv. 37; Arist. Tol. v. 8 , 10-13; 1'lit. Alcibind. ii. p. 141, D.). A list of kings foll mss of whom we know little but the names. Urestes, sum of Archelans, a child, was placed upon the throme, under the guardianship of Airmpus. The l:the, however, after about four rears, wade away with hos ward, and reigned in his stead for twn yars; he then died of sickness, and was succeeded Ly his sun Pausanias, who, after a reien of ouly oue gear, was assassinated and succeedel by Amyntas. (1houl. xiv. 84-89.) The power of Mawedonia so dellined with these frequent dethronements and as-sa-inutions of its kings, that Amyntas had to cede to Olynthus all the country about the Thermaic gulf. (Dod. xiv. 92, xv. 19.) Amyntas, who was dependant on, if not tributary to, Jason, the "tagns" of thessaly, died nearly about the sane time as that prince (Diod, xy. 60), and was succeeded by his ywsthful son Alexander. After a short reign of two years, n. C. 368 , Alexander perished by assassination, the fate that so frequently befell the Macedoniam kings. Eurgdice, the willow of Amyntas, was leit with ber two younger chillren, Perdiceas, now a young man, and Plill F , yet a youth; I't lenacus of

Alorus, one of the murderers of Alexander, was regent, and administered the affairs of the widowed queen, and those of her children, against Pausanias, a man of the royal lineage and a preteader to the throne. (Diod. xvi. 2 ; Aeschin. Fals. Legat. pp. 249, 250 ; Justin. vii. 6.) 1 phicrates declared in favour of Eurydice, who would have been forced to yield the country to Pausanias, and acted so vigorously against him as to expel him from Macedonia and secure the sceptre to the family of Annyntas. (Corn. Nep. Iphicrat. 3.) When Philip succeeded his brother Perdiceas, slain iu battle with the Illyrians, B. c. $360-359$, no one could have foreseen the future conqueror of Chaeruncia. and the destroyer of Grecian liberties. In the very first year of his reign, though only 24 years old, he laid the foundations of the future greatness of a state which was then almost annihilated. His bistory, together with that of the other Macedonian kiags, is given in the Dictionary of Biography. At his death Macedonia had already lecome a compact empire; its boundaries had been extended into Thrace as far as Perinthus; and the Greck coast and towns belonged to it, while Macedonian ascendancy was established from the coasts of the Propontis to those of the lonian sea, and the Arnbracian, Messenian, and Saronic gulfs. The empire of Alexander became a world-domiaion. Matcedonian settlements were planted almost everywhere, and Grecian manners diffiused over the immense region extending from the Temple of Ammon in the Libyan Oasis, and from Alexandria on the westero Delta of the Nile to the northern Alesandria on the Jaxartes.

## III. Later History till the Fall of the Empire.

At the death of Alexander a new Macedonian kingdom arose with the dynasty of Antipater ; after the murder of the king Philippus 111. (Arrhidaeus) and Eurydice by the queen Olympias, Cassander the son of Antipater, after baving murdered the king Alexander Aezus, and his mother, ancended the throne of Macedon ; at his death his three sons, Philip, Antipater, and Alexander. successively occupied the throne, but their reigns were of short duration. Plilip was carried off by sickness, Alexander was put to death by Demetrius Poliorcetes, and Antipater, who had fled for refuge to Lysimachus, was murdered by that prince. When the line of Cassander became extinct, the crown of Macedon was the prize for which the neighbouring sovereigns struggled, Lysimachus and Pyrrbus. kings of Thrace and Epeirus, with Denetrius, who still retained Atheas and Thessaly, in turos, dispossessed each other of this disputed throne. Demetrius, however, at last overcane the other competitors; and at his death transmitted the kingdom to his son Antiguns, and the dynasty of the Antigenidae, after many vicissitudes, finally established their pewer. The three great mrruptions of the Gauls, who made themselves masters of the N . parts, and were established in Thrace and Upper Macedonia, fell within this puriod. Antigonus Gonatas recovered the throne of desolated Macedonia; and now secured from the irruptions of the Gauls, and from foreign rivals, directed bis policy against tireece, when the formation of the Aetolian, and yet more important Achaean league, gave rise to entirely new relations. Autigonus, in the latter part of his reign, had recourse to various means, and more especially to an alliance with the Aetolians, for the purjuse of counterpoising the Achaeans. He died in fris cightieth year, and was succeeded by his son

Demetrius 11., who waged war upon the Aetolians, now, however, supported by the Achacans; and tried to suppress the growth of the latter, by favouring the tyrants of particular cities. The remainder of the reign of this prince is little more than a fap in history. Demetrias' son, 'lbilip, was passed over, and his brother's son, Autigonus 11. surmamed Doson, was 1 aised to the throne. This king was occupied most of bis time by the events in Greece, when a very remarkable revolution in Sparta, raised up a formidable enemy against the Achneans; and so completely altered the relative position of affairs, that the Macedonians from having been opponents became allies of the Aclaeans. Philippus V., a young, warlike, and popular prince, was the first to come into collision with Kome, - the war with the imperial city (в. c. 200-197), suddenly burled the Macedonian power from its lofty pitch, and by laying the foundation of Roman dominion in the Enst, worked a change in almost all the political relations there. T. Quinctios Flaminius, by offering the magic spell of freedom, stripped Philip of his allies, and the battle of Cynoscephalae decided everything. Soon after, the freedom of Greece was solemoly proclaimed at the Isthmian games; but loud as the Greeks were in their triumph, this measure served only to transfer the supremacy of their country from Macedonia to Rome. On the 22 ad of June, в. C. 168 , the fate of Macedon was decided on the field of Pydna by ber last king Perseus.

According to the system then pursned at Rome, the conquered kinglom of Macedonia, was not immediately converted into a province, but, hy the fammus edicts of Amphipolis issued by the authority of the Roman senate, the year after the conquest, was divided into fuur districts. By this decree (Liv. slv. 29), the Macedonians mere called free,each city was to govern itself by magistrates annually chosen, and the Rumans were to receive half the amount of tribute formerly paid to the kings, the distribution and collection of which was probably the principal business of the councils of the four regions. None but the people of the extreme frontiers towards the barbarians were aliowed to detend themselves by arms, so that the military power was entirely Roman. In order to break up more effectually the national uoion, no person was allowed to contract marriage, or to purchase land or buildings but within bis own region. They were permitted to smelt copper and irun, on paying balf the tax which the kings bad received; but the Romans reverved to themselves the right of working the mines of gold and silver, and of felling naval timber, as well as the importation of salt, which, as the Third Region only was to have the right of selling it to the Dardani, was probably made for the protits of the conquexors on the Thermaic gulf. No wonder, that after such a division, which tore the race in pieces, the Macedonians should compare their severance to the laceration and disjointing of an snimal. (Liv, xlv. 30.)

This division into four districts did not last longer than eighteen years, but many tetradrachms of the first division of the tetrarchy coined at its capital, Amphipolis, are still extant. B. C. 149 Audriscos, calling bimself 1'bilip son of Perseus, reconquered all Macedonia (Liv, Epit. xlix), but was defented and taken in the following year, by Q. Caecilius Metellus; after which the Macedonians were made tributary (Porphyr. ap. Eiuseb. ('Irem, p. 178), and the country was probably governed by a "practor,"
like Achaia, after the destruction of Counth, which wecurred two years afterwards, B.e. 146. From that time to the reign of Augustus the lionnas had the troublesotme duty of defending Macelonia, arainst the people of llyricun and lhace; dixing that period, they cstablisbed colonies at Philippi, Pella, Stobi, and Diuin.

At the dirision of the provinces, Macedonia fell to the senate (Dion ('ass. liii. 12 ; Sirab. xvii. p. 840). Tiberius, united the proviners of Achaia and Macedonia to the imperial govermment of Moesia, in order to deliser them from the weight of the proconsular administration (Tac. Aun. 176-80, v. 10), and this continued till the time of Clatdius (Suet. Clavel. 25 Hion Cass, 1x. 24). Afterwards it was again umber at "propraetor," with the title "prucunsal" (Orelli, Inscr. n. 1170 (Vespasian); n. 3851 (Caracalla), while mention often occurs of " legate" (Orelli, л. 3658 ) and "quastores" (Orelli, mu. 822, 3144). Thessalonica, the most populous city in Alacedonia, was the seat of government, and virtually the capital of Greece and Illyricum, as well as of Macedonia. Under Constantine, Macelonia, was one of the two guvernments of the prafecture of Illyricum, and con-isted of six provinces, A llaea, Macedonia, Crete, Thessaly, Oli Epirus, and New Epirns (Marpuardt. in Beeher. Rum. Alterthim, vol, ini. pt. i. pp. 115 119). The ravages inflicted by the northern natiuns on the frontier provincess were so continual that the inhabitants of Thrace and Macedonia were greaty dimivished, the uncultivated plains were traversed by armed bands of Sclavoni.ns, who gradually settled iii great numbers in Macedonia, while many mountainous districts, and most of the fortified plues still matined in the prosecsion of the Greeks, who were driven into the Clabeidic peninsula, or into the low gromids near the sea, where the marohes and rivers which intersect them, offered means of revistance; but the existence of the ancient race may be said to terminate with the reign of Heraclius. (Comp. Schafarik, Slar. Alt. vol. ii. pp. 153-164.) The emperors of Constantinople attempted to remedy the depupulation of their empire by transporting Asiatic colonies. Thus a colony of Persians was established oin the banhs of the Axius (Vavdar) as early tas the reisn of Themphilus, A.12. 829-842, and it long continued to formish recruits for a cohort of the insprial gnard, which bore the name of Vardariots. In A.1. 1065 a colluty of Lze, was zettled ia Macedonia, whose chiefs rose to the rank of senators, and filled high official situatims at Constantinople (Siylit\%. ad calc. Celreni, p. 868 ; Zomar. vol. ii. p. 273 ; Am. Comn. p. 195). Ama Connena (pp. 109, 315) m-utions col thieh of Tuks established nar Achrida before the reikn of her father (A.1). 1081). These and other nations were often inchuied umier the genusal name of Torks, and indeed most of then were descended from Turkish tribes. (Finlay, Mctiaecal Grecce, p. 31.)

## IV. Physical and Comparative Geagraphy.

The large space of country, which lies to the N . of the Cambuniat chain, is m great part mountainons, occupied by latera! rilgets or elesations, which connect themelves with the main liue of Scandus. It ahon comprises thrue wide alluvial havins, or plains which are of great extent, and well alapted to cultivation: the northernmost of the three, coutains the soures and early murse of the Axius, now the phin of Tittoro on Kitkindele: the second is that of Bitolit, e inciding to a great extent, with that of
ancient Pelagonia, wherein the Erigon flows tuwards the Axius; and the larger and more undlulating basin of Grevend and Anaseltiza, containing the Upper Haliaemon with its confluent streams. These plains, though of ligh level above the sea, are yet very fertile, each generally bounded by mountains, which rise precipitously to an alpine height, and each leaving only one cleft for drainage by a single river, the Axius, the Erigon, and the Haliaemon respectively. The fat rich laud to the E. of Pindus and Scardus is deseribed as forming a marked contrast with the light calcareons soil of the Albanian plains and valleys on the W. side (comp. Grote, Ilist. of Greece, (xxv.).

Upper Macedonia was divided into Elimela, Eordaea, Orestis and Lincestis; of these subdivisions, Elimeia comprehended the modern districts of Grevena, Jerija, and Tjersembic; Eordaea those of Budja, Sarighiul, and 'Ostrovo; Orestis those of Gíramista, Anaselitza, and Kastoria ; and Lyncestis Filiurina, and all the S. part of the basin of the Erigon. These seem to have been all the districts which properly belonged to Upper Macedonin, the country to the N. as far as Illyricum to the W, and Thrace to the E, constituting Pobonia, a part of which (prohably on the Upper Axius) was a scparate kingdom as late as the reign of Cassander (Diod. x. 19), but which in its widest sense was the great belt of interior country which covered on the N. and NE. both Upper and Lower Macedonia; the latter containing the maritime and central provinces, which were the earliest acquisition of the kings, namely, Pieria, Bottiaeis, Emathia and Mygomis.

Pieria, or the district of Katerina, liorms the slape of the range of mountains of which Oiympus is the lighest peak, and is separated from Magnesia on the S. by the Peneius (Salamuxria). The real Ematbia is in the interior of Mitcedonia, and did nut in its proper sense extend towards the sea, from which it is separated by Pieria and part of the ancient Bottiaeis. Mygdonia comprehended the plains around Scloniki, together with the valleys of $\bar{K}$ lisali and Besikia, extending westward to the Axius, and including the lake Balbe to the E The name Chalcidice is applied to the whole of the grat peninsula lying to the S . of the ridge of Mt. Khortiatzi.

An account of these subdivisions will be fonnd under their different heads, with a list of the towns belonging to each.

Macedonia was traversed by the great military roal - the Via Egnatia; this route las been already described [Vol. JI. p. 36] as far as Heascleia Lyncestis, the first town on the confines of lllyricum: pursuing it from that point, the following wre the stations up to Anphipolis, where it entered Thrace, properly so called:-

Heraeleia.
Cellae

- 'Ostrovo.

Edcessa - - Vodhená.
Pella
Mutatio Grephyra

- Alaklisi.

Thersalonica

- Bridge of the I'ardhari.

Melissurgis

- Salomiki.
- Melissurguis.

A pollonia - - Pallina.
Amphipolis - - Neokhoiria.
From the Via Egnatia several roads bramehed off to the N. and S., the latter leading to the S prorinces of Dacelouia and to Thessaly; the former into Paeonia, Dardania, Muesia, and as far us tho Danube.

The Peutinger Table fumishes the following route from I＇ella to Larissa in Thessaly ：－

Pella．

| Beruea | －Verria． |
| :---: | :---: |
| Ascordus | ＂ |
| Arulus | ＂ |
| Buala | ＂ |
| Auame | －＂ |
| Hatera | －Katerina． |
| Bium（Dium）－ | －Malathria． |
| Sabatiun－ | －＂ |
| Stenas（Tempe） | －Lykístomo． |
| Olympum－ | －＂ |

Two roads led to Stohi in Paeonia，the one from Heraclcia Lyncestis，the other from Thessalonica． According to the Table，the stations of the former are－

```
Heracleia.
Ceramie.
Euristo (Andaristus).
    Stobi.
Of the latter -
Thessalunica.
\begin{tabular}{lll} 
Gallieum & － & －Golliki． \\
Tauriana & － & －Dö̈rün． \\
Idomenta & － & － \\
Stomas（Stena） & －Demirkupi． \\
Antigonia & － & －＂ \\
Stobi
\end{tabular}
```

From Stobi again two roads struck off to the NW． and XE．to Scopi（Stopia），at the＂débouche＂from the lltyrian mountains into the plains of Paeonia and the Uper Asius，and to Serdica：－

## Stubi．

Trampara．

（Cousinéry．Foyage dans la Macedoine， 2 vols．Paris， 1831 ；Lake，Trucels in North Greece， 4 vols．Lon－ don，1835：Aıni Boué．La Turquie d Europe， 4 vols． I＇aris，1840；Griesbach，Reise durch Rumelicn unid Nach Brusa， 2 vols．Göttingen， 1841 ；Jos．Miller， Albanien Rumelien，und die Osterreichisch－Mon－ tenegrische Grenze，Prag．1844：Kiepert，General－ Karte der Europaischen Turlei， 4 parts，Berlin． 1853 ；Niebuhr，Lect．on Anc．Ethinng．and Geag． vol．i．pp．275，297；Hahn Albanesische Studicn， Jena 1854．）

Though the Macedonians were regarded by the Grecks as a semi－barbarous people，the execution of their coins would not lead to that inference，as they are fine and striking pieces，boldly executed in high， sharp，relief．The coin of Alexander I．of Macedon， B．c． 500 ，is the first known monarchic coin in the world that can be identified with a written name， and to which，consequently，a positive date can be assigned．It has for＂type＂a Macedonian warrior leading a horse；he bears two lances，and wears the Macedonian hat．The coins of the princes who fol－ lowed hirn exhibit the steps towards perfection very graphically．

With Philip II．a new era in the Macedonian coinage commences．At this period the coins had becone perfect on both sides，that is，had a＂reverse＂ equal in execution to the＂，bverse．＂During his reign the gold mines at Mt．Pangaeus were worked． He issued a large gold coinsge，the pieces of which went by his name，and were put forthi in such abun－ dance as to circulate throughout all Greece．The
series of coins，from Plailip JI．to the extinction of the monarcly，exhibit the finest period of Greek monetary art．（Comp．H．N．Humplrey＇s Ancient Coins and Meduls，Landon，1850，pp．58－65．） During the tetrarchy there are numerous existing coins，evidently struck at Amphipolis，bearing the bead of the local deity Artemis Tauropolus，with an ＂obverse＂representing the commun Macedonian ＂type，＂the club of Hercules within a garland of oak，and the legend Maкєסiviw $\pi \rho \omega i \tau \eta s$ ．（Connv． Eckliel，vol．ii．p．61，foll）
［E．B．J．］

COIN OF MLICEDOSLA．
MACELLA or MAGELLA（Máкє入入a：Maceliaro）， a town in the NW．of sicily，which is noticed by Polybius（i．24）as being taken by the foman con－ suls，C．Duillius and Cn．Cornelins，as they returned atter raising the siege of Segesta，in B．c． 260 ．It is interesting to find the same circumstance nuticed， and the name of this otherwise obscure town men－ tioned，in the celebrated inscription on the rostral column which records the exploits of C．Duillius． （Orell．Inser．549．）It would seem from Diodorus， that at an earlier period of the same war，the Rumans had besieged Macella without success， which may account for the importance thus attached to it．（Diod，xxiii．4．p．502．）The passage of Polybius in reality affirds no proof of the position of Macella，though it has been generally rectived a）an evidence that it was situated in the neighbourhomed of Segesta and Panormus．But us we find a town still called ．／acellaro，in a strong position on a hill about 15 miles E．of Segesta，it is probable that this may occupy the site of Macella．The only other mention of it in listory occurs in the Sceond Punic War（b．c．211），among the towas which re－ volted to the Carthaginians after the departure of Marcellus from Sicily．（Liv．xxvi．21．）As its name is here associated with those of Hybla and Murgantia，towns situated in quite another part of the island，Cluverius supposes that this must be is distinct town from the Macella of Polybius；Lnt there is clearly no sufficient reason for this as－ somption．The name is written in the old editions of Livy，Magella；and we find the Magellini emume－ rated by Pliny among the stipendiary towns of the interior of Sicily（Plin．iii．8．s．14），while Ptolemy， like Polybius，writes the natne Máкe入入a．（P＇tol，iij． 4．§ 14．）The orthography is therefore dubious，as the authority of so ancient an iuscription as that of Duillius is of nu avail in this case．The coins which have been ascribed to Macella are of very dubious authenticity．
［E．H．B．］
MACE1HRACTA（Ammian．xxiv．2），a small town of Babylonia mentioned by Ammianus Jarcel－ linus．It was situated apparently on the Euphrates， to the W．of Sittace，not far from the place wlirre the Roval Canal，or Nahr－malka，joined the Eu－ plarates．
［ V.$]$
MACESTU＇S or MECESTUS（Máкєб $\sigma$ os or M－ neotos），a tributary of the river Rhyndacus：it tork
its niticia in a lake near. Ancyra, anm, after foovan Sor some distance in a western direction, it tunarl northward, and joined the Rhyndaws a little to the north of Miletopolis. (strat. xii. p. 526 ; Plin. v. 40.) It srems to be the same river as the one called hy Polyhius Megistus (v.77), though the Scholiast on Aprollomins Rhodias (i. 1162 ) remarks, that in his time the Rhyndacus itself bore that name. The lower part of the river now bears the name Susu or Susugherli, while the upper part is called Simaul-Su. (Hamilton's Rescarchers, vol. ii 15. 105. 111.)
[L. S.]
maceta (Máketa, Xiarch. Peripl. p. 22
C. Musseldum), a promentory of Arabia, at the entrance of the P'ersian zulf, opposite thie promentory Harmozon in Carmain. (Strab. xv. P. $\mathbf{2} 26, \mathrm{xvi}$. p. 765.) It was on the ceast of the Macata, and is, therefore, called by Strabo (xvi p. 765) a promontory of the Marae, without grving it any special name. It formed the NW, extremity of the monntains of the A:ali, and is, therefore, called by $\mathrm{P}^{\text {to- }}$ lemy (vi. 7. § 1.2), т̀ 'A $\sigma \alpha \beta x y$ ӑкроу.
MA'CETAK, MACE'TLA. [Macemonia.]
MaChatilis's (Maxatpoós: Eth. Maxatplons, Juseph.), a strong fintress of Peraea, first mentioned ly Josephus in comection with Alexander the son of liyrenuns I ., by whom it was oniginally built. (Ant. xiii. 16. § 3; Bell. Jued. vii. 6. § 2.) It was deJivered by his widasy to her sun Aristobulus, who first fortified it against Gabinius (.1nt. siv. 5. § 2.) to whon he afterwarils surrendered it, and by whom it was dismantled (§ 4, Strab. xri. p. 762). On his escape from Kume Ailitobulns arain attempted to fortify it ; but it was taken after two days' siege (vi. 1). It is hawever celebrated in the history of Herod the Tetrarch, and st. Jolun the Baptist. It was situated in the mountains of Arabia (npoेs rois 'Apaziois öpeav) (5. § 2), atul on the contines of Herol's jurisdiction and that of Aretas king of Arabia, his father-in-law, but at this time the historian expressly states that it belonged to the latter (xviii. 6. § 1.), being the southern extremity of Peraed, as Pella was the northern. (B. J. iii, 3. § 3 , iv. 7. S5.) When Herod's first wife, the duughter of Aretas, first surpected her luasbund's guilty passion for Herodias. his Urother Philip's wife, she dissembled ber indiynation. and requested to be sent to Machaurns, whace she immediately proweeded to Petra, her fathur's capital. The fact of Machaerus beine then sulject to the juriscliction of Aretns presunts an insuprable difficulty to the reception of Jouplhus's statement that it was the place of it. John the Baytist's martyrdom : for sufiering, as be dud in oue view, as a martyr for the conjugal rights of the daughter of Areta, it is impassibie to believe that Herod could have had porser to order his execution in that fortress. (sviii. 6. §s? 1, 2.) It beld ont against the Romans after the fall of Jerusalem, and the accont of its suge and reduction by the lientrmant I.ucilius Bassus furnishes us with the thont detailed soc onnt of this remarkable fortress, which Pliny (v. 15) reckons second to. Jerusalem for the streength of its works. Juseplus's account is as fillows. It was situated on a very high hiill, anl surrounded with a wall, trenched abont on all kill's with valleess of enormous depth, so as ta defy embankments. lis westem side was the hizhest, aut on this quarter the valley extentel 60 stadia, as far as the 1head sea. oi the nortio and south thic valleys were not so steep, but still stech as to renser the fortress massailable, and the eartern
valley had a depith of 100 cubits. It liad been anlected by Herod, on account of its proximity tu the Arals and the natural advantages of its pusition, and he had enclosed a large space within its walls, which was strengthened with towers. This formed the city: but the summit of the hill was the acropolis, surrounded with a wall of its own: flauked with corner towers of 160 eubits in leiglht. In the middle of this was a stately palace, laidout inlarge and beautiful chambers, and furnished with numerous reservoiss for preserving the rain water. A shrab of rue, of portentons size, grew in the palace yard, equal in height and bulk to any fig-tree. A large store of missiles and military engines was kcpt there so as to enable its garrison to endure a protracted siege. Bassus proposed to assail it on the east side, and commenced raising banks in the valley, and the garrison, baving left the city and its inhabitants to their fate, betook thenselves to the acropolis, from which they made a succession of spirited sallies aynainst the besiegers. In one of these a youth named Eleazar, of iufluential conncections, feli into the hands of the Romans, and the garrison capitalated on condition that bis lite was spared, and he and they allowed to eracuate the place in safety. A few of the inhabitants of the lower city, thus abandoned, succeeded in effecting their escape: but 1700 males were massacred, and the women and children sold into captivity. (B. J. vii. 6.) Its site has pot been recovered in molern times; but it is certainly wrongly placed by Pliny at the Sonth of the Dead Sea (vii. 16; Reland, s. v. p. 880). The account given by Josephus of the copions hot springs of bitter and sweet water, of the sulphur and alum mines in the valley of Baaras, which he places on the north of the city of Machaerus, seems rather to point to one of the ruined sites, poticed by Frby and Maurles, to the northern part of the Dead Sia, in the vicinity of Callirrloe, where these phaenomena are still fuond ; but not the peculiarly noxious tree, of the same name as the valley, which was deadly to the gatherer, but was a specific against daemoniacal possession. [Callirrhoe.] (Irby and Mancles, Tracels. pp. 464, 465.) [G. W.]
MACHAETE'GI (Ma又airnyoi; some MEss. read Maxayevof, l'tol. iv. 14. § 11 ), a peeple of " Seythia intra Imaum," near the listak:
[E. B. J.]
machelo'Nes (Maxenēves, Artian, Peripl. p. 11 ; Anon. p. 15), a subdivision of the Colchian tribes sitnated to the S . of the Phasis. Anchialas, pince of this prople, as well as of the Heniochi, subunitted to Trajun. (Dion Cass. Lxviii. 19: Ritter, Erdlkude. vol, x. p. 116.)
[E. B. J.]
MA'CHLYES (Máxגues, Herod. iv. 179; I'tol. iv. 3. § 26. rully. Máxpues), a Lityyn people, in the S. of Atrica Propria (Byzacena), on the river Triton, and separated by the lake Tritonis from the Lotuphayi, like whom they fed upon the lotus. (Comp. Ilin. vii. 2.)
[P.S.]
Machúles. [Maunztima.]
Macilsit. [Mavretanla.]
MACHYNi (Méxuot), a people of Africa Propria, whom I'toleny places S . of the Libyphornicians, as far as the Lesser Syrtis and the Macmave, (Ptok. iv. 3. \$\$ 22.26 .) [P.S.]
MAC1SA (Макиท́), a ilistrict of Aralia, mentioned only by Strabo (xvi. p. 766) as nearest to Babylonis, bounded on the one side by the desert of Arabia, on another lyy the marshes of the Chaldacans, formed by the overflowing of the Euphrates, and ou a third by the Persian Gulf. Its elimate
was heavy nad fogeg, showery and bot, but producing excellent fruit. The cultivation of the vine was jeculiar. They were planted in the marshes, the soil necessary for their sustenance being placed in wicker baskets. They would sometimes drift from their moorings, and were thrust back to their places with poles.
[G. W.]
MACISTUS or MACISTUM (Mákađтos, т̀̀ Mák:octov: Etth. Makioteos), a town of Triphylis, in Elis, said to have been also called Platanistus. (платаvaroous, Strab. viii. p. 345.) It was originally inlabited by the Paroreatae and Caucones, wbo were drixen out by the Minyae. (Strab, l. e. ; Herod. iv. 148.) It was afterwards subdued by the Eleiaus, and became one of their dependent townships whose history is given under Lepreum. In the time of Strato, it was no longer inhabited (viii. p. 349). Macistus was situated upon a lofty hill in the north of Triphylis, and appears to have been the chief town in the north of the district, as Lepreum was in the south. That Macistus was in the north of Triphylia appears from several ciremmstances. Strabo describes its territory, the Macistia, as bordering upon Pinatis. (Strab. viii. p. 343.) Agis, in his invasion of the tervitory of Elis, in A. c. 400, when he entered Triphylia through the Aulon of Blessenia, was first joined by the Lepreatae, next by the Macistii, and then by the Epitalii on the Alphcius. (Sen. Hell. iii. 2. § 25.) Stephamus phaces Macistus to the westward of the Lepreatis (Sieph. B. s. v.); but this is obviously an error, as Arcalia borderel upan the Lepreatis in that direction. Macistus would appear to have been io the neighbourhood of Samicum upon the coast, as it had the snperinteudence of the celebrated temple of the Sminim losecidon at this place. (Strab, viii. p. 343.) From these circunastances there can be little doubt that Macistus was situated upon the beights of Khaiiaffa.

It is worthy of notice that Pausanias and Polybius mention only Samicum, and Xenophon only Macistus. This fact, taken in comection with the Macistians having the superintendence of the temple of the Samian Poseidon, has led to the conjecture that npon the decay of Samos upon the coant, the Minyans built Macistus upon the heights above; hat that the ancient name of the place was afterwards revived in the form of Sanicum. The Macistians had a temple of Herenles situaited upon the coast near the Acidon. (Strab. viii. p. 348.)
(Leake, Morea, vol. ii. p. 206; Peloponnesiuca, p. 217; Boblaye, Récherches, y'., p. 135; Curtius, Peloponnesos, vol. ii. p. 83.)

MACNA (Makra), an inland town of Arabia Felix, according to Ptolemy (vi. 7.), who places it in lat. $67^{\circ}$, long. $28^{\circ} 45^{\prime}$, near the Aelanitic gulf of the Red Sea, now the Gulf of Akaba. [G. W.]

MACORABA (Makopaba), an imland city of Arabia Felix, placed by Ptoleny in lat. $73^{\circ} 20^{\circ}$, long. $22^{\circ}$, universally admitted to be the ancient classical representative of the modern Melka or Mecea, which Mr. For-ter holds to be an idiomatic abbreviation of Machoraha, identical with Arabic " Mecharab," " the warlike city," or " the city of the Harb." (Geog. of Arabia, vol. i. pp. 265, 266.) A very high antiquity is claimed for thus city in the native traditions, but the absence of all authentic notices of it in the ancient geographers must be alluwed to disprove its claim to notoriety on acconnt of its sauctity at any very remote period. The territory of Mekka was, according to universal

Arabian history or tradition, the central seat of the kingdon of Jorham and the Jorhamites, descendants of the Johtanite patriarch Sherah, the Jerah of the book of Gencsis (x, 26), who in the earliest times were the sovereigns of Melka, the guardians of the Caaba, and the saperintendents of the idolatrous sacrifices in the valley of Mina, from whence they derived their classical synonym Minael. It is quite uncertain when they were superseded by the Ishmaelite Arabs of the family of Kedar, whose descendants, according to immemorial Arabic tradition, settled in the Hedjaz; and one tribe of whom was named Koreish (collegit undique), "quod cirta Meceam, congregati degerent." (Canus ap. Golium, in roce, cited by Firster, Geog. of Arabia, vol. i. p. 248, n.) This tribe, however, from which Mohammed sprung, hail been for centaries the guardians of the Caaba, and lords of Mekka, prior to his appearance : for if the very plansible etymology and import of the classical name, as above given, be correct, and the Beni-Harb was, as Mr. Forster has elaboratels proved, a synonyin for the sons of Kelar, it will follow that they bad succeeded in fixing their name to the capital some time before it aypeared in P'toleny's list, nor can any traces of a more ancient name be discovered, nor any noticres of the uncient city further than the bare mention of its name by the Alcxandrian geographer:
"Mekka, sometines also called Bekka, which words are synonymous, and signily a place of great conconrse, is certainly one of the most alcient cities in the world. It is by some thought to be the Mess of Scripture (Gen. x. 30), a name not unknown to the Arabians, and supposed to be taken from one of Whmael's sons" (Gen. xxv. 15). (Sale's Koran, Preliminary Discourse, sect. i. p. 4.) Its situation is thus described by Burckhardt:-"The town is situated in a vallcy, narrow and sandy, the main direction of which is from north to south ; but it inclines towards the north-west near the southern extrenity of the town. In breadth this valley varies from one hundred to seven hundred paces, the chief part of the ciry being placed where the valley is most broad. The town itself coners a space of about 1500 paces in length ; $\ldots$. but the whole extent of ground conpreliended under the denomination of Nekka" (i. e. including the suburbs) "amounts to 3500 paces. The mountains enclosing this valley (which before the town was built the Arabs had named Wady Mekka or Bekka) are from 200 to 500 feet in height, completely barren and destitute of trees. . . . Must of the town is situated in the valley itself; but there are also parts built on the sides of the mountains, principally of the eastern chain, where the primitive babitations of the Koreysh and the ancient town appear to bave been placed." It is described as a handsome town; with streets broader, and stone houses more lofty, than in other Eastern cities: hut since the decline of the pilgrimage "numerous buildings in the outskirts have fallen completely into ruin, and the town itself exhibits in every street houscs rapidly decaying." Its population has declined in proportion. The results of Burckbardt's inquiries gave "between 25,000 and 30,000 stationary inhavitants for the population of the city and suburbs, besides from 3000 to 4000 Abyssinians and black slaves: its habitations are capable of containing three times this number." This estimate, however, shows a considerable increase within the last thrce centuries; for "in the time of Sultan Selym 1. (in A. in. 923, i. e. A.d. 1517) :

## MACROBII.

ronas was taken, and the number fonnt to br 12.000 men, women, and el ildinu." In eariur times the pppulation was much more considerable ; for * when Abou Dhaker sacked Mehka in A. n. 314 (A.D. 926) 30,000 of the inhabitauts were killeit by lisiserociuus soldiers." Ali Bey'sestimatein A.v. 1 S07 is much lower than Burkhaudt's in A. D. 1814. Yet the former satys "that the propulation of Mekkat diminishes sensibly. This city, which is known to have contained anore than 100,000 suthls, dues tut at present shelter mu re than from 16,000 to 18,000 ;" and conjuctures that "it will be reduced, in the course of a century, to the tenth part of the size it thw is." The evlebrated Kaiba demands a cursory totice. It is situated in the midst of a great court, which forms a parallelogram of about 536 feet by 356 , surroumied by a double piazza. This sanctuary, called, like that of Jerusalem, El-Haram, is situated near the midlle of the city, which is built in a narrow ralley, having a considerable slope from wirth to south. Iu order to form a level area for the great court of the temple, the ground bas evidently been hollowed out, subsequently to the erection of the Kaaba, which is the ouly ancient edifice in the temple. The building itself (called by the natives Beit-l'llah, the House of God), probably the mast ancient sacred building now existing, is a quadrilateral tower, the sides and angles of which are unequal. Its dimensions are 38 feet by 29 , and its height 34 feet 4 inches; built of squarelewn but unpulished blucks of quartz, schorl, and mica, brought fron the neigbbuuling mountains. The black stone, the most sacred object of reneration, is built iato the angle furmed by the NE. and SE. sides, 42 inches above the pavement. It is beliered by the Muslems to have been presented to Alraliam by the angel Gabriel, and is called "the heavenly stone." Ali Bey says that "it is a fragwent of volcanic basalt, sprinkled thronghout its circumference with small. pointed, coloured crystals. and varied with red feldspath upon a dark black ground like coal." The famous well of Zemzem, in the great mosk. is 56 feet deep to the surface of the water, fed by a copions spring ; but its water, says Burckliadt, "however huly, is heary to the taste. and impedes digetion." Ali Bey, on the contrary. says that it is wholesome, thoneth warmer than the air even in that hot clinate. The town is further suphlied with rain-water jreserved in cisterns: but the best water in Makka is brought by a conduit from the vicinity of Asaat, six or seven hours distant." (Ali Bey. Trarels, vol. ii. pp. 74-114; Durvkhardt, Trwaels in Arabia, pp. 94, \&e.) [G.W.
MACRA (8 Mákprs, Strab.; Ptolemy has the corrupt form Makpi入入a: Marra), a considerable river of Northern Italy, risug in the Apennines and fluming into the Tyrrhemian sea noar Luka. It was under the liman dimines the established limit between Liztuia and Etruria ( Pl lin. iii. 5. s. 7; Flor. i. 3. §̧ 4; Strah. v. 1, 222: Vib. Seq. p. 14) ; but at an earlier perfind the Tiumrian tribe of the Apmani oceupied the conntry on futh sides of it, and it was not till after a long struggle with that pegle that the Romans were able to carry their arms as far as the banks of the Mams. (Liv, xxxix 32, 21, 41.) The Marra is one of the in st considerable of the rivers on the Jigurian coast, but it still retains the elaracter of a in matain toment, at thaes very violent and impetuns, at others so shathons as to be whilly unft for mati,ation (Lucan, ii. 426). The rums of Luma are situated on the lefe tank of the

1/is, , albut a thile from the sea, what the celebrated Port of humat (the Gulf of Speza) is some miles distant to the W., and separated from it by an intervehing range of hills [Lixa]. About 10 miles from its mouth the Magra receives from its IV. bank the waters of the Vara, also a formidable torrent, which is in all probability the Boares of l'tuleny (iii. I. § 3).
[E. H. B.]
MACRA CODE, a place mentioned by Lisy (xxsii. 13) along with Spurchiae. Its position is uncentain, but it was perhaus a town of the Aenianes.

MACR1S, an island off the coast of Attica, also ealled Helena. [Heleva.]

MACEO'BH (Herod. iti. 17-25; Plin. vi. 30. s. 35, vii. 1. s. 2 ; Sulin. $30 . \S 9$; Mela, iii. 9 . §1), or the loug-lived, might lave been briefly enumerated among the numerous and obscure tribes which dwelt above Philae and the second cataract of the Nile, were it not for the conspicuous position assigued to them by Herodotus. He describes the Matrubii as a strong and opulent nation, remarkable for its stature, beauty and longevity, and, in some reapects, as highly civilised. According to this historian, a rumour of the abundance of gold in the Macrobian territory stimulated the avarice of the Perian king, Cumbyses, who led a great army against them: but in his haste he omitted to provide his bost with food and water, and the city was distant many days' journey, and between the MacroLiau land and Egypt lay sandy wastes, and the Persians perished tbrough drought and hunger, Cambyses alone and a small residue of his army returning ti Egypt. In the description of Herodotus, the most imporlaut point is the geographical position assigned to them. It is in the farthest south ( $\overline{\epsilon l} \tau \boldsymbol{\tau} \hat{i}$ voring
 linits of the babitable world according to the knowledge of Herodutus. The Mlarobian land was accordingly beyoud the Arahian (iulf, on the shores of the hudian ocean. and in that undelined snd illimitable region called Barbaria by the ancient cosmographers.

Travellers and writers on geography have advanced several theories respecting their position in Africa. Bruce (Travels, vol. iv, p. 4.3) supposes the Macrobii to have been a tribe of shansalla or lowland blakks. Rennell (Geoyr. System of Herod, ii. p.29, 2nd edit.) identifies them with the Abyssimians; Heeren (African Nations, vol. ii. pp. 321-338) believes them to have been a hratich of the Semaleb who occupied the maritime distriet around Cape Gnardafui: while Niebuhr (Ifissertation on the Geog. of Herod. p. 20), objects to all these surmises, as taking for granted too nuch knowledge in Herodotus himself. In the story, as it stauds, there is one insurmountable objection to the position in the far south assigned to them by the historian, and too readily accepted by his modern commentators. No army, much less an oniental army with its many incuubrances, could latve marched from Egypt into Abyssinia without priviunsly sending forward maguzines and securing wells. There were neither rads, nor tanks of water, nor cors land nor berbage to be fomm in a considerable portion of the ronte ( $\Psi a \dot{\mu} \mu \circ$ s, c. 25). Eiven at the present day no direct commanication exints between Aggypt and the land of the Nubians of Sumâleh. No single traveller, no cararan, could alventure to proceed by land from the cataracts to Cupe Guarlafini. An army far inferior in numbers to the alleged Loat of Cambyses would in a tew days calumst the grass and the millet of Nu-
bia wherein the only prodnctive soil for some hnndreds of miles south of Philae consists of narrow slips of ground adjacent to and irrigated by the Nile. From the sonthern frontier of Egypt to the nearest frontier of Abyssinia the only practical road fur an army lies along the river bank, and the distance to bo traversed is at least 900 miles.
We must therefore abanden the belief that the Miacrobians dwelt in the farthest south. But there are other suspicions features in the narrative. Similar length of days is ascribed by Herodotus to the Tartessians (i. 163; comp. Anacreon, ap. Strab. iii. 2), nor should it be overlooked that the Hyperboreans in the extreme north are also denominated Macrobii. We may also bear in mind the mythical aspect of Homer's Aethiopians (Iliad, i. 423) in which passaze the epithet "faultless" (ă $\mu \dot{\mu} \mu о \nu \in s$ ) implies not moral but physical superierity (comp. Herod, iii. 20:
 as Dr. Kenrick justly remarks, " groaning under the burden of the social state, have in every age been prone to indulge in such pictures of ease and abundance as Herodotus, in the passages cited, and Yindar (Pyth. x. 57) draw of countries beyond the limits of geographical knowledge and of times heyond the origin of bistory."

If, then, we do not yield up the Macrobii to myth or fable altogether, we must seek for them in some district nearer Aegypt. Whatever tribe or region Cambyses intended to subdue, gold was abundant, and brass, or rather copper, scarce among them. Now the modern inbabitants of Kordufan ( $15^{\circ} 20^{\prime}$ $10^{\circ} \mathrm{N}$. lat., $28^{\circ}-32^{\circ} \mathrm{E}$. long.) are commonly called Nobah, and Nob is an old Aegyptian word for gold. Again, the Macrobii were singularly tall, well propurtioned and bealthy; and Kordofon has, from time inmemorial, supplied the valley of the Nile with able-bodied and comely slaves of beth sexes (Hume, ap. Walpole, Turkey, p. 392). Moreover, the caravans bear with then, as marketable wares, wrunght and unwrought copper to this district. In 182I Mohammed Ali achieved what Cambyses failed in attempting. With less than 7000 men, half of whom indeed perished through fatigue and the climate, be snbdued all the countries contiguous to the Nile as far as Sernaar and Kordofan inclusive: and the objects which stimnlated his expedition were gold and slaves. We shall therefore perbaps not greatly err in assigning to the Macrobii of Herodotus a local habitation much nearer than Alyssinia to the sonthern frontier of Aegypt, nor in suggesting that their name, in the language of the Greeks, is a corruption of the Semitic word Magrabi, i. e. the direllers in the west. A position west of the Nile would account also for the knowledge possessed by the Ichthyophagi of Elephantis (Bojah or Bisharye Arabs) of the langnages of the Macrobii.
The modern Bisharyes occupy the country east of the Nile from Aegypt to Abyssinia; and their trade and journeys extend from the Red Sea to Kordafan. If then we regard the Macrobii (the Magrabi) and the Ichthyophagi (the Bisharye) as respectively seated on the east and west banks of the Nile, the latter people will have been the most available guides whoin Cambyses ceuld employ for exploring the land of the Macrubians.

It should he remembered, however, that Herodotus ảerived his knowledge of the Persian expedition either from the Persian conquerers of Aegypt, or from the Aegyptian priests themselves; neither of whom would be willing to disclose to an inquisitive
VOL. II.
foreigner the actual sitnation of a land in which gela was se abundant. By placing it in the far south, and exaggerating the hardships endured by the army of Caubyses, they might justly hope to deter strangers from prying into the recesses of a region from which themselves were deriving a profitable monopoly.
Upon the wonders of the Macrobian land it would be hardly worth while to dwell, were they not in singular accordance with some knewn features in the plysical or commercial character of that region. In the sonthern portion of Kordufan the hills rise to a considerable height, and iron ore in some districts is plentiful. The fountain of health may thus bave been one of several mineral springs. The ascription of extrense longevity to a people who dwelt in a hot and by no means healthy clunate may be explained by the supposition that, whereas many of the iastoral tribes in these regions pat to death their old people, whea no longer capable of moving from place to place, the Macrobians abstained from so crnel a practice. The procerity of the king seems to imply that the chieftains of the Macrobii belonged to a ditferent race from their subjects (compare Scylax, ap. Aristot. vii. p. 1332). "The 'Jable of the Sm" is the market-place in which trade, or rather barter, was carried on with strangers, according to a practice mentioned by Cosmas, the Indian mariner, who describes the annual fairs of sonthern Aethiopin in terms not unlike thase employed by Herodutus in his nccount of the Macrobians (pp. 138, 139). [W. B.D.]

MACROCE'P'HALI (Maкрикє́фалоt), that is, "people with long heads." (Strab. i. p. 43.) The Siginni, a barbarous tribe about Mount Caucasns, artificially contrived to lengthen their heads as mach as possible. (Strab. xi. p. 520; comp. Hippocr. de Aer. 35.) It appears that owing to this custom they were called Macrocepbali ; at least Pliny vi. 4), Pomp. Mela (i. 19), and Scylax (p. 33), speak of at nation of this name in the north-east of Pontus. The anonymous author of the Peripl. Pont. Eux. (p. 14) regards them as the same peopie as the Macrenes, but Pliny (l. c.) clearly distinguishes the two.
[L. S.]
MACRO'NES (Mánpoves), a powerful tribe in the east of Pontus, about the Moschici monntains. They are described as wearing garments made of hair, and as using in war wooden helmets, small sbields of wieker-work, and sbort lances with leng points. (Herod. ii. 104, vii. is; Xenoph. Anab. iv. 8. § 3, v. 5. § 18 , vii. 8. § 25; comp. Heeat. Fragm. 191; Scylax, p. 33; Dionys. Perieg. 766 ; Apollon. Phod. ii. 22 ; Plin. vi. 4 ; Joseph. c. Apion. i. § 22, who asserts that they observed the custom of circumcision.) Strabo (sii. p. 548) remarks, in passing, that the people formerly called Macrunes bure in his day the inme of Sanni, though Pliny ( $l$. c.) speaks of the Sanni and Macrones as two distinct peoples. They appear to have always been a rude and wild tribe, uutil civilisation and Christianity were introduced among thein in the reign of Justimian. (Procop. Bell. Pers. i. 15, Bell. Goth. iv. 2, de Aed. iii. 6.)
[L. S.]
MACRON TEICHOS (Makpòy $\tau \in \tilde{\chi}$ रos), also called "the wall of Anastasius," was a fortification censtructed in A.D. 507, by the emperor Anastasins 1 . of Constantinople, as a meaus of defence against the Bulgarians: it consisted of a stroug wall runuing acress the isthmus of Constantinople, from the coast of the Propoutis to that of the Euxine.

Some parts of this wall，which at a later perion proved useful against the Tukk，are still existing． （Prneup．de Aed．iv．9；comp．Dict．of Bingr．Vol． 1．p．159．）

MAEA（Maîa，Sladiasm．Mar．Magn．§§ 74，75；
called 「aía or Pala by Ptol．iv．3．§46），an island off the coast of Africa Propria， 7 stadia S．of the island Pontia．

MAEANDER（Maiavópos：Meinder or Boyuk Meinder），a celebrated river in Asia Minor，has its sources not far from Celienae in Pbrygia（Xenoph． A nub．i．2．§7），where it gushed furth in a park of Cyrns．According to some（Strab．xii．p．578； Maxim．Tyr．viii．38）its sources were the same as those of the river Marsyas；but this is irreconcilable with Xenophon，according to whom the sources of the two rivers were only near each otber，the Mur－ syas rising in a royal palace．Others，again，as Pliny（v．31），Solinus（ $40 . \S$ §），and Martianus Capella（6．p．221），state that the Maeander flowed out of a lake on Mount Aulocrene．Col． Leake（Asia Minor，p．158，\＆c．）reconciles all these apparently different statements by the remark that both the Maeander and the Marsyas have their origin in the lake on Mount Aulocrene，above Ce－ laenae，but that they issue at different parts of the mountain below the lake．The Maebnder was so celebrated in antiquity for its mumerous windings， that its name became，and still is，proverbial．（Hom． Il．ii． 869 ；Hesiod，Theog． 339 ；Herod．vii． 26 ， 30 Strab．xii．p． 577 ；Paus，viii．41．§ 3；Ov． Met．viii． 162 ，\＆c．；Liv，xxxviii．13；Senec．Here． Fur．683，\＆．c．，Phoen．605．）Its whole course has a south－western direction on the south of the range of Mount Messogis．In the south of Tripolis it receives the waters of the Lycus，whereby it becomes a river of some importance．Near Carure it passes from Phrygia into Caria，where it flows in its tor－ tuons course through the Maeandrian plain（comp． Strab．xiv．p．648，xy．p．691），and finally dis－ clarges itself in the lcarian sea，between Priene and Myus，opposite to Miletus，from which its month is only 10 stadia distant．（Plin．l．c．；Paus．ii．5．§ 2．） The tributaries of the Maeander are the Oroyas， Marsyas，Cledreus，Lethaeus，and Gaeson，in the north；and the Obrimas，Lycus，Harpastes， and a second Marsyas，in the south．The Maeauder is everywhere a very deep river（Nic．Chonat．p． 125 ； Liv．l．c．），but not very broad，so that in many parts its depth equals its breadth．As moreover it carried in its waters a great quantity of mud，it was mavi－ galle only for small craft．（Strab．xii．p．579，xiv．p． 636．）It frequently overflowed its banks；and，in consequence of the quantity of its deposits at its mouth，the coast has been pushed aoout 20 or 30 stadia further into the sea，so that several small inlauds off the coast have become united with the mainland．（Paus．viii．24．§ 5 ；Thucyd．viii．17．） There was a story about a subterraneous connection between the Maeander and the Alpheins in Elis． （Paus．ii．5．§ 2；comp．Hamiltou，Researches，vol．i． p． 525 ，foll．，ii．p． 161 ，foll．）
［L．S．］
MAEANDER（ $\delta$ Maiavópos，Ptol．vii．2．§§ 8，10，11），a chain of mountains in Eastern India， comprehended，according to Ptolemy＇s subdivision， in the part called by him India extra Gangem． They may be best considered as an utlyiug spur from the Bepyrrhus M．（now Jarrow），extending in a sontherly direction between the Ganges and the loanas towards the sea coast．Their present name seems to he Muin－Mura．
［ V ．］
MAEANDRO＇POLIS（Maıarópoúmo入ts），a town of uncertain site，though，as its name seems to indi－ cate，it mast lave been situated somewhere on the Maeander，and more especially in the territory of Magnesia，as we learn from Stephanus B．（s．v．；
comp．Plin．v．29），from whom we may also infer that the place was sometimes calledMaeander．［L．S．］

MAEATAE（Matátat），a general name given by Dion Cassius（lxxv．5，lxxvi．12）to the British tribes nearest to the Roman vallum，the Caledonif dwelling beyond them．（Cemp．Jornandes，de Reb． Get．e．2．）

MAED1（Maioí，Maî̃ol，Thuc．ï．98；Polyb．x． 41）．a powerful people in the west of Thrace， dwelling near the sources of the Axius and Margus， and upon the southern slopes of Mt．Scomius． （Leake，Northern Greece，vol，iii．p．4i2．）Strabo says that the Maedi bordered eastrard on the Thu－ natae of Dardania（vii．p．316），and that the Axius flowed through their territory（vii．p．331）．The later was called Maedica（Matठءкท，Ptol．iii． 11. § 9；Liv．xxvi．25，x1．22）．They frequently made incursions inte Macedonia；but in B．c．211，Plilip V．invaded their territory，and took their chief town lamphorina，which is probably represented by V＇raniá or Icorina，in the upper valley of the Margus or Morara．（Liv，xxvi．25．）We also learn from Livy （x1．22）that the same king traversed their territory in order to reach the summit of Mt．Haemus；and that on his return into Macedonia he received the submission of I＇etra，a fortress of the Maedi．Ameng the other places in Maedica，we read of Phragandae （Liv．xxvi．25）and Desudaba，probably the modern Kuminoro，on one ef the contluents of the upper Axius．（Liv．xliv．26．）The Naedi are said to bave been of the same race as the Bithynians in Asia，and were bence called Maedobithyni（Steph．B．s．v． Máठoi ；Strab．vii．p．295）．（Comp．Strab．vii． p． 316 ；Plin．iv．11．s．18．）

MAENACA（Mawairy），a Greek city on the S． coast of Hispania Baetica，the most westerly colony of the Phocaeans．（Strab．iii．p．156；Scymn．145，et seq．）In Strabo＇s time it liad been destroyed；but the ruins were still visible．He refutes the error of those who confounded it with Malaca，which was not a Greek，but a Phocnician city，and lay further to the W．；but this error is repeated by Avienus（Or． Marit．426，et seq．）．The place seems to be the Mácr of Stephanus．
［P．S．］
MAE＇NALUS．1．（Maírados，Strab．viii．p． 388 ； Schol．ad Apoll．Rhod．i． 769 ；Maivaגov，Theocr．i． 123；т̀̀ Maıvá入tov opos，Paus．viii．36．§ 7；J／ae－ nalus，Virg．Ecl．viii．22；Mel．ii． 3 ；Plin．iv． 6. s． 10 ；Mcenala，pl．，Virg．Ecl．x． 55 ；Ov．Met．i． 216），a lofty mountain of Arcadia，forming the western boundary of the territories of Mantineia and Tegea，It was especially sacred to the god Pas， who is hence called Macnatius Deus（Ov．Fast，iv． 650．）The inhubitants of the mountain fancied that they had frequently heard the god playing on his pipe．The two highest summits of the monn－ tain are called at present Aidin and Apano－Khrepas the latter is 5115 feet high．The mountain is at present covered with pines and firs ；the chief pass throngh it is near the modern town of Tripolitza． －The Roman poets frequently use the adjectives Maenalius and Maenalis as equivalent to Arcadian． Hence Maenalii versus，shepherds＇songs，such as were usual in Arcadia（Virg．Ecl．viii．21）；Jfaenalis ora，i．e．Arcudia（Ov．Fast．iii．84）；Maenalisnympha， i．e．Carmenta（Ov．Fast．i．634）；Maenalis Ursa， and Maenalia Arctos，the constellation of the Bear， into which Callisto，daughter of Lyeaon，king of Arcadia，was said to have been metamerphosed．（Ov． Trist．iii．11．8，Fast．ii．192．）
2．（Maíva入os：Eth．Masvá入ıos，Maıva入ítทs，Mat＊
va入eús），a town of Arcalia，and the capital of the district Maunalit（Mava入ía，Thuc．v．64：Pans． iii． $11 . \S 7, v i .7 . \S 9$ ，viii． $9 . \S 4$ ），which formed part of the territory of Nteqalopolis upon the fonn－ dation of the latter city．A list of the torns in Mae－ nalia is given in Vol．I．p．192．The town Maenalus was in ruins in the time of Prusanias，who mentions a temple of Athena，a studium，and a hippodrome，as belonging to the place．（Paus．viii．3．§ 4， 36. § 8 ；Steph．B．s．v．）Its site is uncertain．Ross supposes that the remains of polygonal walls on the isolated hill，on the right bank of the river Helisson and opposite the villace Dutaia，represent Manalus； and this appears more probable than the opinion of Leake，who identifies this site with Dipaea，and thinks that Msenalus stood on MIt．Apano－khreipa． （Ross，Reisen in Pelopomers，vol．i．p． 117 ；Leake， Horea，vol．ii．］．52，Peloponnesiaca，p．243．） ［Dip．nes．］

MAENARIAE INSULAE，a cluster of little Aslands in the gulf of l＇alua，off the coast of the Greater Balearis．（1Plin．iii．5．s．11．）［P．S．］

MAE＇NOBA（Mela，ii．6．今 7；Plin．iii．1．s．3； Múnosa，Ptol．ii． $4 . \S 7$ ；Mexovi，ftin．Ant．p． 405 ： Feles Maluga ，a town of the Bastuli Poeni，on the S． chast of Buetica， $12 \mathrm{M} . \mathrm{P}$ ．E．of Malaca，on a river of tlie same name（Felez）．Strabo（iii．p．143）also men－ tions Maenoba（Maivosa），with Astra，Nabrissa，Onoba， and Ossonoba，as towus remarkable for their situation on tidal estuaries；whence Ukert argues that，since nut only all the other places thus mentioned were outside of the Straits，but also Strabo＇s description necessarily applies to an estuary exposed to the tides of the Atlantic，we must seek for his Maenoba else－ where than on the tideless Mediterranean．Accord－ ing＇ly，he places it on the river Maenoba or Menuba （Gimurliamar），the lowest of the great tributaries of the Baetis，on its right side，mentioned both by l＇liny （iii．1．s．3），and in an inseription found at San Lu － cor la Mayor（Caro，ap．Florez，Esp．S．vol．ix．p． 47 ）， up which river the tide estends to a considerable distance．（Ukert，vol．ii．pt．1，pp．288，349．350．） This argument，though，doubtton，has certainly some torce，and it is adopted by Spruner in his Aths．
［P．S．］
MAE＇NOBA（Ma＇voga），rivers．［MAEMOBA．］
MAENOBURA（Mavvobúpa），a town of the Mavtiani，in the S．of Spain，mentimed by Hecataens （ap．Steph．B．s．r．），scems to be identical with Maenobi on the S．erast of Baetica．［P．S．］．

MAEO＇NLA（Maov：a），an ancient name of Lydia． ［Lvina．］There was，also，in later times a town of this name in Lydia，mentimed by Pliny（v． 29. s．30），Hierocles（p．670），and in the Episcopal No－ titia；and of which several coins are extant．Its ruins have boen found at a place called Megne， 5 English miles W．of Sundal．（IIanilton，Rescarches，vol．it． p．139．）

cors of MAEOXIA．
MAEO＇TAE（MatŵTat，Scyl．p． 31 ；Strah，si． Pp． 492,494 ：Plin．iv． 26 ；Mineutici，Pomp．Mela， i．2．$\S 6$, i．19．§ 17 ；Plin，vi． 7 ），a collcetive name which was given to the peyples about the Palus

Maentis as early as the logographer Hellanicus （ $\mathrm{p} . \mathrm{i8}$ ），if we read with bis editor Sturz（fur Ma－入ıїтaı），Maı̄̄ta．．According to Strabo（l．c．）they lived jartly on fish，and partly tilled the land，hat were no less tarlike than their nomad neighbours． He enumerates the fullowing subdivisions of the Macotae：Sindi，Dandarii，Toreatae，Agri，Arrechi， Tarpetes，Obidiaceni，Sittaceni，Dosci，and many others．These wild hordes were sometimes tributary to the factory at the Tanais，and at other times to the Bosporani，revolting from one to the other．The kingdom of the Cimmerian Bosporus in later timex， especially under Pharnaces，Asunder，and Polemon， exterided as far as the Tanais．
［E．B．J．］
MAEO＇TIS PALUS，the large body of water to the NE．of the Eusine now called the Sca of Azov， or the Azik－deniz－i of the Turks．This sea was usuaily called＂Palus Maeotis＂（方 Maw̃as 入i $\mu \nu \eta$ ， Aesch．Prom．427），but sometimes＂Maentica＂or ＂Mieotia Palus＂（Plin．ii．67；Incan，ii．641）， ＂Maeotius＂or＂Maentis Lacus＂（Plin．iv．24，vi． 6），＂Maentium＂or＂Macoticum aequor＂（Avien． v． 32 ；Val．Flac．iv．720），＂Cimmeriae Paludes＂ （Claud．in Eutrop．i．249），＂Cimmericum＂or＂Bus－ poricum Mare＂（Gell．xvii．8），＂Scythicae Undae， Paludes＂（Ovil．IIer．vi．107，Trist．iii．4．49）．The genitive in Latin followed the Greek form＂Mue－ otidis，＂but was sometimes＂Macotis＂（Ennins，ap． Cic．Tusc．r，17）．The accusative has the two forms Maî̃ty＂Mreotim＂（Plin．又．10），and Matútiঠa ＂Maeotila＂（Pomp．Mela，i．3．§ 1，ii．1．§ I）． lliny（vi．7）has preserved the Scythian name To－ merinda，which he translates by＂Mater Maris．＂

The Maentic gulf，with a surface of rather more than $13,000=q u a r e$ miles，was supposel by tho an－ cients to be of far larger dimensions than it really is．Thus Herodotus（iv．86）beliered it to be not much less in extent than the Euxine，while Scylax （p．30，cd．Itudson）ealculated it at half the size of that sea．Strabo（ii．p．125，comp．vii．pp．307－ 312，xi．p．493；Arrian．Perip．p．20，ed．Hudum； Acrathem．i．3，ii．14）estimated the circumference at somewhat more than 9000 stadia，but Polybius（iv． 39 ）reduces it to 8000 stadia．According to l＇liny （iv．24）its circuit was reckoned at $1406 \mathrm{M} . \mathrm{I}^{2}$ ．，or， according to some， 1125 M．P．Strabo（vii．p．310） reckons it in length 2200 stadia between the Cins－ merian Bosporns and the month of the Tanais，and therefore came ncarest amongst the ancients in the length ；but be seems to have supposed it to carry its width on towards the Tanas（comp．Renndll， Compar．Geog．vol，ii，p 331）．The length accord－ ing to Pliny（l．c．）is 385 M ．P．，which agrees with the estimate of Polemy（v．9．§§ 1－7）．Polybins （l．c．）confidently anticipated an entire and speedy choking of the waters of the Maeotis；and ever since his time the theory that the Sea of Azov has con－ tracted its boundaries bas met with considerable support，though on this point there is a material discordance among the various authorities；the latest statement，and approxitnation to the amount of its cubie contents will be found in Admiral Sinyth＇s work（The Mediterranean，p．148）．The nncienta appear to have been correct in their assertion about the absence of salt in its waters，as，although in SW． winds，when the water is highest．it becomes brackish， yet at other times it is drinkable，though of a disa－ greeable flarour（Jones，Trav，vol ii．p．143；Journ． Geog．Soc．vol，i．p．106）．
［E．B．J．］
MAEPHA（Maíф а $\mu \eta \tau \rho \delta \sigma_{0} \lambda / s$ ），an inland city of Arabia Felix，placed by l＇tolemy in long． $83^{\circ} 15^{\prime}$ ，

Iat． $15^{\circ}$ ，the capital，no donbt，of the Maphoritae， whom he places above the Homeritae and Adramitae of the sonthern coast．［Maphomitae．］The situation of this tribe is still marked by the wide and very fruitful IIady Mayfoh，in the midst of which＂the very extensive villace named Mayfah， situated at the eastern base of the Hummarees，＂ perlaps marks the site of the Maepha metropolis． Mr．Forster，however，identifies it with the ruined site of Nakab－el－Hajar，discovered and described by Lient．Wellstead in 1834，the situation of which is thus stated by that officer：－＂Nakab－el－Hajar is sitnated north－west，and is distant forty－eight miles from the village of＇Ain［on the coast］，which is marked on the chart in latitnde $14^{\circ} 2^{\prime}$ north，and longitude $46^{\circ} 30^{\circ}$ east，nearly．＂It stands in the centre of the Wady Meifach，nearly 20 miles north of the village of that name，and was evidently a place of considerable importance in ancient times． The inscription over the gateway，in the ancient Aralic character，commonly known as the Hadran－ matic，would doubtless throw light on the history of this castle：and it is curious that while the at－ tempted decipherments of Professor Roediger and Mr．Charles Forster have so little in common，both would agree in identifying it with Mreplin；for while the former discovers the name Mêfa twice in the first line of the inscription，the latter，who pro－ nounces that this name＂las no existence in the in－ scription，＂compensates for this disappeintment by discovering a list of proper names，which serve to comect it with several historical personages，among whom are an Arabian patriarch，Mohâreb，son of Korcish，＂belonging to a period certainly prior to the Christian era；＂and Cbaribaël，＂that king of the Homerites and Sabacans celebrated by Arrian （Periplus Maris Eryth．pp．13．14，apud Hudson Geographici Minores），whose alliance in the reiun of Clautius was assiduonsly courted by the Ro－ mans．The inscription further mentions many of the buildings described by Lieut．Wellstead．（Forster vol．ii．pp．193－204，383－393．）
［G．W．］
MAERA．［Mintineia．］
MAESIA SILVA，a forent of Etruria，in the ter－ ritory of the Veientines，which was conquered from thern by Ancus Marcius．（Liv．i．33．）Its site cannot be determined with certainty，but it was pro－ bably situated on the right bank of the Tiber， hetween Rome and the sea－coast．Pliny also no－ tices it as abounding in dormice．（Plin．viii．58．s． 83．）
［E．H．B．］
MAESOLIA（方 Maı $\sigma$ 入ía，Ptol．vii．1．§ 15 ； in Peripl．p．35，Ma $\sigma \alpha \lambda(\alpha)$ ，a district on the eastern coast of IIindostan，along the Bay of Bengal，corre－ sponding to that now occupied by the Circars and the upper part of the Coromandel coast．Ptolemy mentions two towns in its territory which he calls Emporia，namely，Contacossyla（probally the pre－ sent Masulipattane）and Allosygna．The district was traversed by a river of considerable size，the Macsolus（now Godivari），which flows into the Bay of Bengal，after giving its name to the sur－ rounding country．It was from one of the ports of Maesolia that merchants were in the habit of taking ship and crossing the Bay of Bengal to the Aurea Chersonesus．The people were called Maesoli（Mat－ $\sigma \dot{\omega} \lambda o u$ ）．（Vincent，Peripl．vol，ii．p．521．）［V．］
maESÓLUS（ $\delta$ Matoẁos，Itol．vii．1．§§ 15， 37 ），a river of considerable size，which rises in the Decean or midland part of Hindostin，and flows in a course at first SE．，and then nearly E
till it falls into the Bay of Bengal in lat． $18^{\circ}$ ．N． There laas been some dispnte among geographers as to its modern representative，some making it the same as the Kistna，and some as the Goddrari． The latter is probably the most correct supposition． Ptolemy places its source in the Orndii or Arnedi mountains，which would seem to be part of the chain of the western Ghaits．

MA＇GABA（Kurgh Dagh），a considerable moun tain in the central part of Galatia，W．of the river Halys，and E．of the city of Ancyra，which was only 10 Roman miles distant from it．In e．c． 189 ，when Nanlius was carrying on war against the Galatians， the Tectosagi and Trocmi took refuge on Mlt．Magaba， and there defended themselves against the Romans， but were defeated．（Liv．sxaviii．19，26；Flor．i．11．） According to Rufus Festus（11），this mountain was afterwards called Modiacus．
［L．S．］
MAGABULA，a place mentioned in the Peuting． Table in Pontus Polemoniacus，on the road from Comana to Nicopolis，at a distance of 23 miles from the former city．There can be no doubt but that it is the same place as Megalula（Mєүá入ou入a）men－ tioned by Ptolenn（v．6．§ J0）；but its exact site cannot be ascertained．
［L．S．］
MAGARSA，MAGARSUS，or MEGARSUS（Má－ रapба，Má $\gamma \alpha \rho \sigma o s$, Mé $\gamma a \rho \sigma o s)$ ，a town in the eastern part of Cilicia，sitnated on a height cluse to the mouth of the river Pyramus．（Strab．xiv．p．676．） Alexander，previous to the battle of Issus，marched from Soli to Mezarsus，and there offered sacrifices to Athena Megarsis，and to Amphilochns，the son of Amphiaraus，the reputed founder of the place． （Arrian，Anab．ii．5．）It seens to have formed the port of Mallus（Steph．Byz．s．v．Má $\mathbf{y}$ apoos；Lycoph． 439；Plin．I．N．v．22）．The hill on which the town stood now bears the name of Karadash，and vestiges of ancient buildings are still seen upon it． （Leake，Asia Jlinor，p．215，foll．）
［L．S．］
MAGDALA（Marja入á：Eth．Marja入 $\eta \nu \dot{o} s$ ），a town of Galilee，chicfly noted as the birthplace of that Mary to whom the distinguished name of Mag－ dalene is ever applied in the Gospel．The place itself is mentioned only by S．Matthew（xv．39），where
 sented in the parallel passage in S．Mark（viii，10） as $\tau \alpha ̀ \mu \dot{\rho} \rho \eta \Delta \alpha \lambda \mu \alpha \nu o v \theta \alpha ́$. ．As neither does this name occur elsewhere，we have no clue to the sitnation of the town；althongh，a modern writer says，＂it seems to follow from the New Testament itself that it lay on the west side of the lake．＂The argument is，that，on leaving the coast of Magdala，our Lord embarked again，and＂departed to the other side，＂－ ＂an expression which in the N．T．is applied al－ most exclusively to the country east of the lake and of the Jordan．＂（Robinson，Bib．Res．vol．iii．p．278．） There can，however，be no difficulty in identifying it with the site of the modern village of Mejdel in the SE．corner of the plain of Gennesaret；where there certainly existed an ancient town of the name，no－ ticed in the Jerusalem Talmad，compiled in Tibe－ rias，from which it is not more than 4 or 5 miles distant，on the north：probably identical also with Migdal－el，in the tribe of Naphtali．（Josh．xix．38．） It is a small and insignificant village，＂looking much like a ruin，though exhibiting no marks of antiquity．＂（Robinson，l．c．）Pococke＇s argument against this identification is unintelligible：－＂This does nut seem to be Magdalum mentioned in Scrip－ ture，because that is spoken of with Dalmanutha， nin．was to the east of the sea．＂（Observations
re 3
m Palestine, Travels, vol. ii. p. 71.) How this last assertion is to be proved does not applear. The authority of Josephus has been quoted for a Magdala near Gamala, and consequently on the east of the sea (Vita, § 24); but the reading is corrupt. (Robinsnn, l. c. p. 279, note.) [G. W.]

MAGDOLUM (Má Oodona", Herod. ii. 159 ; but $^{\text {in }}$ Md́y $\delta \omega \lambda o \nu$ in LXX.; the Miglol of the Old Testament ( Krod. xiv. 2: Numb. xxxiii. 7; 2 Kings, xxiii. 29; Jerem, xliv. 1, xlvi. 14; Ezek. xxix. 10, xxs. 6; It. Anton. p. 171), a town of Lower Acgypt which stow about 12 miles S . of Peltusium, on the coast-road between Aegypt and Syro-l'hoenicia. Here, according to llerodutus, (l. e.) Plan-raoh-Necho defeated the Syrians, about 608 t. c. Eusebius (Praepar. Evang. ix. 18), apparently referring to the same event, calls the defeated ariny "Syrians of Judah." That the Syrians should have adranced so near the frontiers of Egypt as the Deltaic Magdolum, with an arid desert on their flanks and rear (comp. Ilerod, iii. 5) seems extraordinary; meither is the suspicious aspect of the Battle of Magdolus diminished by the conquest of Cadytis. a considerable city of Palestine, being represented as its result. The Syrians might indeed have pashed rapidly along the coast-road to Aegypt, if they bad previously secured the aid of the desert tribes of Arabs, as Cambyses did before lisis invasion of Argypt (comp. Herod. iii. 7). Calmet's Dict. of the Bible, s. v. Mfegiddo ; Winer, Bibl. Realuörterbuch, vol. ii. p. 93, note 2; Champollion, L'Egypte, vol. ii. p. 79 .
[W. B. D.]
MAGELLI, a Ligurian tribe, mentioned only by Pliny (iii. 5. s. 7). They have been supposed to have ocenpied the Val di Mrugello, in the Apennines, N. of Florence; but though it is certain that the ligurians at one time extended as far to the E as this, it is very improbable that Iliny should have included such a tribe in his description of Roman Liguria. The name of the Mugello is found in Procogius (B. G. iii. 5) whore he speaks of a place ( $\chi \omega$ phov) called Mncella (Movkéᄉıl $\alpha$ ), sitnated a day's journey to the N. of Florenee. [E. H. B.]

MAGETO'BRLA or ADAIAGETOTRLA, in Gallia. Probably the true name ended in -brica or -brigue Ariovistus, the German, defeated the forces of the Galli in a fight at this place. (Caes, B. G. i. 31.) The site of Magetobria is unknown. The resemblance of mame induced D'Anville (Notice. \&-c.) to fix it at Moigte de Broie, near the confluence of the Ognon and the Suône, a little atbove Pontartier. There is a story of a broken urn, with the inseription sageton, having been found in the Saine in 1802. But this story is of dombtful credit, and the urn cannot be found now. Walckenaer suppnses Amage on the Brenchin, which is west of Fancogney and east of Luxeuil, to correspand hest to the indications in Caesar's text. But Caesar dues not cive us the least indiention of the pusition of Magetubria.

MAGI. [MLDm.]
MAGIOVINTLA or MAGIOVINIUM, in Britain, a station placel in three of the itinera of Antoninus at the distanee of $2+$ miles to the N. of Verulamiun. Its site is generally supposed to be at Fenny, Stratfind.
[C. R. S.]
MagNA (It.Ant. p.484: Geogr Ravorn.). 1. A town or station in Britain, the site of which is now oecupied by Kenchestior, in llerefordshire. In both of the above works the word is in the plusal form, Margnis, most probably for Magnis Castris. Indeed,
the extraordinary extent of the place, as ascertained by its remains, renders this suggestion more than probahle. The walls, now nhnost entirely destroyed, enclosed an area of from 20 to 30 acres. Leland, speaking of Kenchester, says :- "Ther hath ben fownd 'nostra memoria lateres Britannici ; et ex eisdem canales, aquae ductus, tesselata pavimente, fragmentuin catenulae aureae, calcar ex argento, byside other stramng things." The tesselated pavements, mentioned by Luland, have, of late years, been partially laid open. The only lapidary inseription which appears on record, as discovered at Kenchester, is a fragment with the name of the enperor Numerian ; but coins and miscellaneous mntiquities are still, from time to time, plonghed up.
2. A station in Britain, on the line of the Roman Wall, mentioned in the Notitia; it also occurs in Geng. Ravenn. ; and probably on the Rudge Cup, as Muiss. 1ts site is that of Carvoran, a little to the S. of the Wall, on a high and commanding position near the village of Grcenhead.

There scems but little doubt of Carvoran being the site of this Magna; although, unlike many of the Notitin stations on the Wall, its pnsition bas not been identified by inscriptions. The Notitia places at Magna the second cohort of the Dalmatians. At least tro inscriptions fom here mention the Hamii, but none name the Dalmatians. The Hamii do not appear to be recorded in any other inscriptions, and they are not mentioned by that name in the Notitia, Hudgson (Roman 1Fall and Sinuth Tindale, p. 205) considers that these anxiliary troops were from Apamenia in Syria, at the confluence of the Orontes and Marxyas, 62 miles from Aleppo, which is still a large place. and called Hamah, and, in ancient times, Hama. This conjecture seems fensible, as the Notitiz nentions the Cohors Prima Apamenorum as quartered in Eyypt ; and also as some altars dedicated to the Syrian goldess have been diseovered at Cartoran.
[C. R.S.]
MAGNA GRAE'CIA ( $\grave{\eta} \mu \epsilon \gamma \alpha d \lambda \eta$ 'E入入ás), was the name given in ancient times by the Greeks themselves to the asscmblage of Greek colonies which eneircled the shores of Southern Italy. The name is not found in any extant anthor earlier than Polsbius: but the latter, in speaking of the cities of Dlagna Graecia in the time of Pythagoras, uses the expression, "the country that was then called Magna Graecia" (Pol. ii. 39) ; and it appears certain that the name must have arisen at an early period, while the Greck colonies in Italy were at the height of their power and prosperity, and before the states of (ireece proper had attained to their fullest greatness. But the omission of the name in 1lerodotus and Thucydides, even in passaces where it would have been convenient as a rengraphical designation, seems to show that it was not in their time generally recognised ns a distinctive appellation, and was probably first adopted as such by the historians and geographers of later times, though its origin must bave been derived from a mach earlier age. It is perhaps still more sienifieant, that the name is not found in Scylax, though that author attaches particular inportance to the enumeration of the Greek cities in Italy as distinguished from those of the barbarians.

Nor is the use of the term, even at a later period, very fixed or definite. Strabo scems to imply that the Greek cities of Sicily were included under the :1ppellation; but this is certainly opposed to the more general usage, which confined the tern to the colo-
nies in Italy Even of these, it is not clear whether Cumae and its colonies in Campania were regarded as belonging to it : it is certain at least that the natae is more generally nsed with reference only to the Greek cities in the south of Italy, including those on the shores of the Tarentine gulf and the Bruttian peniosula, together with Velia, Posidonia, and Laiis, on the W. cuast of Lucania. Sumetimes, indeed, the name is confined within still narrower limits, as applying only to the cities on the Tarentine gulf, from Locri to Farentum (Plin. iii. 10. s. 15; Itol, iii. 1. § 10); but it is probable that this distinction was introduced only by the later geographers, and did not correspond to the original meaning of the term. Indeed, the name itself sufficiently i:uplies (what is expressly stated by many ancient writerx) that it was derived from the number and importance of the Greek colonies in Suuthern Italy, and must, therefure, naturally have been extended to them all. (Strab. vi. P. 253; Scymm. Ch. 303; Pol. ii. 39, iii. 118 ; Athen. xii. F. 523 ; Justin, xx. 2; Cic. Tusc. iv. 1, v. 4, de Or. iii. 34.) It must be added that the name was never understond (except perhaps by late geographers) as a territorial one, including the whele of Sonthern Italy, but applied merely to the Greek cities on the cnasts, so as to correspond with the expression "Graecorum omnis ora," employed by Livy (xxii. 61). The same anthor in one passage (xxxi. 7) uses the phrase "Graecia Major," which is fonnd also in Festus (p. \&34, ed. Müll.), and employed by Justin and Ovid (Justin, b.c.; Ov. Fast. iv. 64); but the common form of expression was certainly Graecia Magna (Cic. ll. cc.)

There could obviously be no ethnic appellation which corresponded to such a term; but it is important to observe that the name of 'Ita入iêtat is unirersally used by the best writers to designate the Greeks in Italy, or as equivalent to the phrase of
 founded with that of "I $\alpha a \lambda u s$, or the Italians in general. (Thnc. vi. 44 ; Herod. iv. 15, \&.c.) Polybius, however, as well as later writers, sometimes loses sight of this jistinction. (Pol, vi. 52.)

The geographical description of tbe country known as Magna Graecia is given under the article It ilia, and in more detail in those of Brettit, Lecania, and Calabria ; hat as the bistory of these Greek culonies is to a great extent separate from that of the mother country, while it is equally distinct from that of the Italian nations which came early io contact with Rume, it will be convenient here to give a brief summary of the history of Magna Graecia, bringing together under one head the leading facts which are given in the articles of the several cities.

The general testimony of antiqnity points to Cumae as the most ancient of all the Greek settlenents in Italy; and thongh we may reasonably refuse to admit the precise date assigned for its foundation (B. C. 1050), there seems no sufficient reason to doubt the fact that it really Preceded all other Greek colonies in Italy or Sicily. [Cumae.] Eut, from its remote pasition, it appears to have been in great measure isolated from the later Greek settlements. and, together with its own colonies and dependencies. Dicaearcbia and Neapolis, formed a Jittle gronp of Greek cities, that had but little connection with those further sonth, which here form the immediate subject of consideration.

With the single exception of Cumae, it scems
certain that none of the Greek colonies in Italy were more ancient than those in Sicily; while there seems goorl reason to suppose that the greater part of them were founded wibhin the half century which fullowed the fist commencement of Greck colonisation in that quarter. (n. c. 735-685.) The causes which just at that period gave so sudden an impulse to etnigration in this direction, are noknown to us: bat, though the precise dates of the foundation of these colonies are often uncertain. and we have no record of their establishment equal either in completeness or authority to that preserved by Thucydides conceming the Greek cities in Sicily, we may still trace with tulerable certainty the cuurse and progress of the Greck colonisation of 1taly.

The Achaeans led the way; and it is retnarkabie that a people who never plaved more than a subordinate part in the affairs of Greece itself should have been the fuunders of the two mont powerful cities of Magna Graecia. Of these, Syeans was the earliest of the Achaean colonies, and the most ancient of the Greek settlements in Italy of which the date is known with any approach to certaiaty. Its fonndation is ascribed to the year $720 \mathrm{~B}, \mathrm{c}$. (Seymm. Ch. 360 ; Clinton, F. I. vol. i. p. 1.4) ; and that of Crotosis, according to the hest autherities, may be placed abont ten years later, , , c. 710 . [Crotosa.] Within a very fers yeas of the same period, took place the settlerent of Tarestism, a Spartan colony founded afier the close of the First Messenian War, abont 708 D.c. A spirit of rivalry between this city and the Achaean colonies seems to have early sprung up; and it was with a riew of checking the encroachments of the Tarentines that the Achaeans, at the incitation of the Sybarites, founded the colony of Mexapontum, on the inmediate frontier of the Tarentine territory. The date of this is very uncertain (though it may probably be placed between 700 and $680 \mathrm{~B}, \mathrm{C}$.) ; but it is clear that Metapontum rose rapidly to prosperity, and became the third in importance among the Achaeao colonies. While the latter were thus extending themselves along the shores of the Tarentine gulf, we find subsisting in the midst of them the Ionian colony of Siris, the history of which is extremely obscure, but which for a hrief period rivalled even the peighbouring Sybaris in opulence and luxary. [Sikis].

Further towards the S., the Locrians from Greece fonnded near the Cape Zeplyrium the city which was thence known by the name of Locmi Erizephymit. This settlement is described by Strabo as nearly contemporary with that of Crotona (n.c. 710 ), though some anthorities would bring it down to a period thirty or forty years later. [Locisi.] The next important colony was that of Rhegress, on the Sicilian straits, which was, according to the general statement, a $\mathrm{C}^{2}$ Ilcidic colony, fonnded snbsequently to Zancle in Sieily, but which, from the traditions connected with its foundation, would seens to have been more ancient even than Sybaris. [Rifagiem.] The Greek cities on the Tyrrienian sea along the shores of Bruttium and Lucania were, with the single exception of VElis, which was not fuunded till ahout $540 \mathrm{~B}, \mathrm{c}$., all of them colonies from the earlier settlements already noticed and not sent out directly from the mother country. Thus Possdonia. Laüs and Scideres, on the Tyrrhenian sea, were all colonies of Sybaris, which in the days of its greatness undonbtedly extended its dominion from sea to sea. In like manner, Crotona had fonnded Terisas on the W. coast of the Bruttian peninsula, as well
as Cauronia on the E. const, but convilambly mowe to the S. Locri, also, hat abtablished tho coluthes on the W. coast, Intronira and Menan; neither of which, however, attained to any areat importance. Several other places which at a later period assumed more or less of a Greck character, were probably only Oenotrian towns, which had become gradnally Ildilenised, but withont ever receiving Greek colonies. Such were Pandosia. I'felela, Trakesa, and prohably sorametism slon, though this is frequently called an Athenian coluny.

We bave very littic infumation as to the early history of these Greek citics in Italy. All accounts acree in representing them as rising rapidly to a high state of prosperity, mal att aining to an amount of wealth and power which far exceeded that enjoyed at so early a period by any of the cities of the mother country. The Achaean colonies, Sybaris, Crotona, and Motapontum. seem to have been the first to attain to this flourishing condition; and Sybaris enpecially hecame provertial for its wealth and the luxurinas hatits of its citizens. [Symalas.] There ean be no doubt that the extraordinary fertility of the distriet in which thrse colonies were founded was the primary canse of their prosperity; but they appar, also, to have carrical on an extensive foreign commerce; and as they increacel in Jower they sought to estend their territorial pussessions, so that we are told that sybaris, in the ditys of its greatriess, ruled over trenty-five depmatent cities, and fonr mations or tribes of the neighburing Oenotrians. (Strab. vi. p.263.) It is remarkable how little we hear of any wars with the barbarians of the interior, IIr of any check to the progress of the Greek cities arising from this catte; and it seems prohable, not anly that the Pelaspic origin of these tribes [OEvotras] caused them to assimilate with comparative farility with the Hellenic settlers, but that many of them were almitted to the full rights of citizens, and amaleamated into me body with the fureisn col-nists. This we know to have been the case with Lacri in particular (l'ol. xii. 5): and there can he little doubt that the same thing tork place more or leas extensively in all the other cities. (Ihiud. xii, 9.) It is, inteed, impossible, on any nther supposition, to explain the rapility with which these rose to an amount of wenlth and jopulation at that time unexampled in the Hellenic world.

It seems certain that the period of about twe cen$t$ uries, which clapsed from the first settlement of the (irretk colonies till after the fall of Sybaris (B.C. 710 -510 ), was that during which these cities rose to the lhight of their power: and probably the half rentury preceding the latter event (1.. C. 560-510) may he taken as the cnlminatiny point in the prosperity of the Achaean cities ( (imote, vol. iii. p. 522.) T'ntirtunatciy, it is precindy for this period that we are the most ahsolutely duficient in historical information. The luss of the early bows of Diodorus is especially to be regretted, as they would undonbtedly lave prosorved to us many interesting notices concerning the early fortunes of the Groek cilies, and at the same time have affordul as a the to the choondogical arrangement of the frow scattreed facts that have been perservel to us. The want of this renders it impossable to connect the extant notices into anything like a historical marrative.

Aung tho earliest of these tray probally be placed the leagne of the three great Achamn cities, Crotoms, Sybaris, and Mctapuntum, for the expulsion of the Ionians from their colony of Siris, - an union
whin appears to have led to the eapture, and perhanp. the destruction, of that eity. (Justin, xx .2 .) But the date of this event is almost wholly umcertain [Sms], and searcely less so is that of the much more celebrated battle of the Sagras, which Justin connects with the fall of Siris; while other authors wonld bring it down to a much later period. [Sigiras.] According to all aceounts, that fanons battle, in which it is said that 120,000 Crotoniats were defeated by 10,000 , or at most 15,000 , of the Locrians and Rhegians, inflicted for a time a severe blow upon the prosperity of Crotona : but Strabo is certainly in error in representing that city as never recovering from its effects. [Ceurosa.] Justin, on the contrary, describes the period of depression consequent on this disaster as continuing only till the time of Pythazoras (xx. 4); and it is certain that in the days of that plitosopher, Crotona, as well as the neiglibouring Achaean cities, appears in a state of great prosperity.

It was about the year r.c. 530 that the arrival of Pythagoras at Crotona gave rise to a marked change in the cities of Magna Graecia. The extraordinary influence which he speedily acquired, wats not confined to that eity, but extended to Sybaris and Metapontum also, as well as to Thegium and Tarentum. And it was so far from bring limited to the proper sphere of philosophy, that it led to the introduction of great political changes, and for a time threw the chief asceadency in the state into the hands of the Pythagoreans. [Crotosa.] Their power was ultimately overthrown by a violent revoLuthon, which led to the expulsion of Pythngoras limself and his followers from Crotoma; and this seems to have been followed by similar disturbances in the other cities. We are very imperfectly informed as to the circumstances of these revolutions, but it seems certain that they gave riee to a period of disorder and confusion throughout the cities of Magna Graecia from which the latter did not fully recover for a considerable period. (Pol. ii. 39; Justin, x. 4: Iambl. Vit. Pyth. 25S-264; Porphyr. I.P. 54-58.)

It was apparently before the expulsion of the Pythagoreans, and while their inflnence was still paramount at Crotona, that the final contest arose between that city and Sybaris, which ended in the total destruction of the latter, r.c. 510. On that occasion we are told that the Crotoniats brought into the field 100,000 men, and the Sybarites not less thao 300,000 ; and though these numbers cannot be received as historically accurate, they sufficiently prove the opinion entertained of the opulence and power of the rival cities. The decisive victory of the Cuotoniats on the banks of the river Traeis was folluwed by the capture and total destrnction of Sybaris, - an event which scems te have produced a profound sensation in the Hellenic world (11erod, vi. 21), and must have cansed a great change in the political relations of Magna Graccia. Unfortunately, we have no means of tracing these ; we know only that a part of the surviving Sybnrites took refuge in the colonial cities of I.an̈s aul Scidrus, while another portion settled thernselves on the banks of the Traeis, where they maintained themselves for a considerable period. (Herod. l.c.; Strab. vi. pp. 263, 264.)

The civil dissensions arising from the expulsion of the l'ythagoreans may perhaps have been the cause of the renarkable circumstance (which we are otherwise at a loss to account for), that none of the states of Mayna fraecia sent assistance to the Greeks at the
time of the Persian invasion. It is still more remarkable, that even when the Athenians and Lacedaemonians sent an embassy to Sicily to invoke the assistance of Gelon, we do not hear of any similar application to the Greek cities in Southern Italy.

While the Achaean cities were thus declining from their former prosperity, Rhegium, the name of which is scarcely mentioned in history at an earlier period, was raised to a position of considerable power and importance under the rule of the despot Anaxilas (i.c. 496-476), who nnited under his anthority the city of Messana also, on the opposite side of the straits, and thus became involved in connection with the politics of Sicily, which had been hitherto very distinct from those of Magna Graecia. Nicythus, the suecessor of Anaxilas in the government of Rhegium, was remarkable as the founder of the colony of Pyxus (afterwards called Busentum), on the Tyrrhenian sea, in B. c. 471. (Diod. xi. 59.) This was the latest of the Greek settlements in that quarter.

Ahout the same time (n.c.473) we find mention of a disastrous defeat, which must, for a time, bave given a severe check to the rising power of the Tarentines. That people appear to have taken little part in the disputes or contests of their Achacan neighbours ; but after their ineffectual attempt to oppose the founding of Metapontum [Metapontim], would seem to have been priacipally engaged in extending their commerce, and in wars with the neighbouring barbarians. Here they found, among the lapygians or Messapians, a more formidable opposition than was enconntered by the other Greek cities. After repeated contests, in many of which they hal come off victorions and reduced many of the lapygian towns, the Tarentines were defeated in a great battle by the Iapygians, with such heavy loss that Herodotus tells us it was the greatest slaughter of Greek citizens that had happened within his know?edge. Three thousand Rhegian anciliaries, who had been sent to the support of the Tarentines, perished on the same oceasion. (Herod. vii. 170 ; Diod. xi. 59.)

The period between the Persian and Peloponnesian Wars witnessed the establishment of the two latest of the Greek colonies in Southern Italy - Thurit and Herachea. Both of these were, however, but a kind of renewal of prerionsly existing settlements. Tharii was founded in B. c. 443, by a body of colonists, of whom the Athenians seem to have taken the lead, but which was composed, in great part, of settlers from other states of Greece [Thuri] ; with whom were united the remaining citizens of Sybaris, and the new colony was established within two miles of the site of that city. The new settlement rose rapidly to prosperity, but was soon engaced in war with the Tarentines for the possession of the racant district of Siris; until these hastilities were at length terminated by a compromise, according to which the two rival cities joined in establishing a new colony, three milus from the site of the ancient Siris, to which they gave the name of Heraclea, 1. c. 432 . (Strah. vi. p. 264 ; Diod. xii. 23, 36.) Bat though thus founded by common consent, the Tarentines seem to have had mach the largest share in its establishment, and Heraclea was always considered as a colony of Tarentum.
During the Peloponnesian War the cities of Magna Graecia seem to have studioosly kept aloof from the c ntest. Even when the Athenian expedition to Sicily (B. C. 415) involved the whole of the Greek citics in that island in the war, those on the coasts of

Italy still endeavoured to preserse their neatrality, and refused to admit the Atheaian furces within their walls, though they did not offer any obstruction to their progress. (Thuc. vi. 44 ; Diod. xiii. 3.) At a later period, however, the Thurians (among whom there was naturally ao Athenian farty) and the Metapontines were induced to enter into a regular alliance with Athens, and supplied a small firce to their assistance. (Thre. vii. 33,35 ; Diod. xiii. 11.)

At this period the cities of Magna Graecia seem to have been still in a prosperous and flourishing condition; but it was not long after that they began to feel the combinet operation of two causes which mainly contributed to their decline. The first danger which threatened them was from the south, where Dionysins, tyrant of Syracuse, after having established his power over the greater part of Sicily, began to seek to extend it io Italy also. Hitherto the cities of Italy had kept aloof in great measure from the revolutions and wars of the neighbouring island: Rhegium and Locri alone seem to have maintained closer relations with the Sicilian Greeks. The former, from its Chalcidic origin, was naturally friendly to the colonies of the same race in Sicily; and when Dionysius turned his arms against the Chalcidic cities, Naxos, Catana, and Leontini, be at once brought on himself the eamity of the Rhegians. Hence, when he soon after applied to conclnde a matrimonial alliance with them, the proposal was indignantly rejected. The Locrians, on the other hand, readily accepted his offer, and thus secured the powerful assistance of the despot in his subsequent wars. (Diod, siv, 44, 107.) From this time his efforts were mainly directed to the humiliation of Rhegium and the aggrandisement of the Locrians. His designs in this quarter soon excited so much alarm, that, in B. c. 393 , the Italian Greeks were induced to conclude a general league for their matnal protection against the arms of Dionysius on the one side, as well as those of the Lncanians on the other. (Id. 91.) But the result was fir from successful. The combined forces of the confederates were defeated by Dionysius in a great battle at the river Helleporns or Helorus, near Caulonia, B. c. 389 ; and this hlow was followed by the capture of Caulouia itself, as well as Hipponimm, both of which places were reduced to a state of dependence on Locri. Not long after, the powerful city of Rhegium was compelled to surrender, after a siege of nearly eleven months, B. c. 387. (Dind. xiv. 103-108, 111.)

While the more southerly cities of Manna Graecia were suffering thus severely from the attacks of Dionysius, those on the northern frontier were menaced by a still more formidable danger. The Lucanians, a Sabellian race or branch of the Samnite stock, who had pressed forward into the territory of the Oenotrians, and had gradually expelled or rednced to subjection the tribes of that people who inhabited the mountain districts of the interior, next tnrned their arms against the Greek cities on the coast. Posidonia, the most northerly of these settlements, was the first which fell uader their yoke (Strab. vi. p. 254); and thongh we eamnot fix with aceuracy the date of its conquest, it is probable that this took place some time before we fiad them engaged in wars with the cities on the Tarentiae gulf. If, indeed, we can trust to the uncertam chronology of some of these events, they would seem to have been already engaged in hostilities with the

## MAGNA GRAECIA.

rising colony of Thurii at an early period of i' existence (Polyaen. ii. 10); but it was not till affer 400 B. C. that their power assumed a formitath. aspect twasds the Greaks in general. The territory of Thurii was the first olgeet of their hostilities, but the other cities were not insmasible to their danger; and hene the general leagne of the Italian Greeks in 1. C. 393. as already mentioned, was directed as much against the Lucanians as arainst Dionysius. Uufortumately, their arms met with equal ill strecus in both quarters : and ill n. c. 390 the confederate furces were defeated by the Lucanians with grent slanghter near Laüs. (1)iod. xix. 101, 102; Strah. vi. p. 253.) That city lad slready fallen into the hands of the invaders, who now prossed in towards the south, and seen to have spreal themsolves with great rap pility thronghont the whole of the Bruttian peninsula. Here they became so formidable that the younger Dionysius was compelledt to alandon the policy of his father (wloo hail courted the alliance of the Lucaniant, and even woulered them active assistance), and torn his arms : cainet them, though with little effect. A period $\because$ e ereat cuntusion and disorder apjears to have en:tiol, and the rise of the Brattian people, which took place at this perind (B. c. 356), thongh it in sone measure broke the power of the Lucanians, w.ts so far from giving nay relief to the Greek cities that they soon found the Bruttians still more formidable neighbours. The flourishing cities of Terina and Ifipponium were conquered by the harbarians (Diod. xvi. 15 ; Strab. vi. p. 256): Hhagiun and Lneri, though they maintained their nationality. suffered almost as severcly from the oppressions and esactions of the younger Dionysius; while Crotona, long the most powerful city in this part of Italy; seems never to have recovered from the bluw inflicted on it by the elder despot of that name [Cnotona ] and was with difficulty able to defend itself from the repented attacks of the Bruttians. (Diod. xis. 3,10 .)

Meanwhile, the Lucanians lad turned their arms acainst the more northerly cities on the Tarentine gulf. Here the Thurians scem, as before, to have borne the brunt of the attack; bnt at leagtb Tarentum itself, which had hitherto stood aloof, and had apparently not even juited in the leapue of p. c. 393, was rompelled to take up arms in its own diefence. The Tarentines cund have suffered comfaratively but little from the canses which had so reverely impaired the prosperity of the other cities of Magua Graeia : and Tarentum was undonbtedly at this time the most opulent and porrerful of the Gireck cites in Itals. But its citizens were alreadiy enervated by indolente and luxury ; and then they found themselves threatened by the forees of the Lucanians, combined with their old enemies the Mossapians, they mistrnsted their otra resources, and applind to their parent city of Sputa for assistance. Archidamus, king of sparta, aecepted the iuvitation, and proceeded to ltaly with a cousiderable force, wher lie appears to linve carried on the war for some yeass, that was finatly defeated and shain in a battle near Mandaria, H. C. 33s. (Diod. xvi. 63, 88.) Only a few years afterwarls, is. C. 33:2, Alexander king of E.]ifus was invited over to Italy for the same purpene. The listory of his expedition is, unfortnately, very imper eetly known to Hs; though it is clear that his milhary oper,tions were attended with mach success, and mast have exercised considurable influence apon the furtunes of
the Greek cities. Though invited, in the first instance, by the Tarentines, he subsequently quarrelled with that people, and even turned his arns against them, and took Heraclea, their colony and dependency. At the same time he defeated the combined forces of the Lucanians and Bruttians in several successive battles, retook Terina, Consentia, and several other towns, and penetrated into the heart of Brottium, where he was slain by a Lucanian exile, who was serving in his own army, b. C. 326. (Liv. viii. 17, 24: Justin, xii. 2.)

After his deatl, the wars between the Tarentines and Lucanians appear to have continued witb little intermission; thungh we have no further account of them till the year 303 n. C ., when the forner prople ngain sued to Sparta for assistance, and Cleonymus, the uncle of the Spartan king, repaired to Tarenthm with a large mercenary force. So formidable did this armament appear that both the Messapiats and Locanians were spetdily induced to sue for peace; while Metapontum, which, for some reason or other, had oppused the views of Cleonymus, was reeluced by force of arms. (Diod. xx. JO4.) The Spartan prince, however, soon alienated all his allies liy his luxury and rayarity, and quitted Italy the ohject of universal contempt.

We have very little iuformation as to the wars of Agathocles in Bruttionn; though we learn that he made hinself master of Hipponium and Crotona, and occupied the latter city with a garrison. It is evident, therefore, that his designs were directed as much against the Greck cities as their barbarian neighbors ; and the alliance whicb he concluded at the same time with the lapygians and Pencetians could only have been with a view to the humiliation of Tarentum. (Diod, xxi, 2,8.) His ambitious designs in this quarter were interrupted by his death, р. C. 289 .

Only a fer years later than this took place the celctrated expedition of Pyrrbus to Italy (B. c. 281 - 274 ), which marks a conspicuons era in the history of Magna Graceia. Shortly before that event, the Thoriaus, finding themselves hard pressed and their city itself besieged by the Lacanians, had conclnded an alliance with the Romans, who raised the siegre and defentel the assailants, n. C. 282. (Applian, Surn. 7 ; Val. Max. i. 8. § 6.) This was the first occtision that brought the lionan power down to the shures of the Tarentine gulf; and here they almost immentiately after came into collision with the Tarentines themselves. ['arentem.] That people, ennscions of their iunbility to resist the porver of these pew encmies, now invoked the assistance of Pyrrhas, king of Epirus, at the same time that they concluded a league with the Lucanians and Samnites, so long the inveterate enemies of Rome. Hence, when Pyrrhas landed in Italy, he found himself supported at the same time by all the romaining Greek cities in thit country, as wrll as by the barbarian nationa with whon they had heen so long at war. It is unnecessary to enter into a detailed acconnt of his campaigns: notwithstanding his first successes, his alliauce proved of no real advantage to the Greeks, while his risit to Sicily in n. c. 278, and his final departure in b.c. 274, left them at the merey of the victorious Romans. Tarentum itself was taken ly the consuls in 18. ©. 272. Crotona and Locri had previonsly fallen into the hands of the immans; while Rhegium, which was held by a revolted body of Campanian troops, aniginally placed there as a parriven, was finally reduced to suljection in B. c. 271.

There can be no donbt that the citics of Magna Graecia lad suffered severely duting these wars : the foreign troops placed within their walls, whether Roman or Greek, appear to have given way to similar excesses ; and the garrisons of Pyrrhns at Locri and Tarentum were gnilty of exactions and cruelties which alnost rivalled those of the Campanians at Rheginm. In addition to the loss of their independence, therefore, it is certain that the war of Pyrrhns inflicted a mortal blow on the prosperity of the few Greek cities in Sonthern Italy which had survired their long-continued struggles with the Lucanians and Bruttians. The decayed and enfeebled condition of the once powerful Crotona (Liv. xxiii. 30) was undoubtedly common to many of her neighbours and furmer rivals. There were, however, some exceptions: Heraclea especially, which had earned the favour of Rome by a timely submission, obtained a treaty of alliance on onusually favourable terms (Cic. pro Balb. 22), and seems to have continued in a flourisbing condition.

But the final blow to the prosperity of Magna Graecia was inflicted by the Second Punic War. It is probable that the Greek cities were viewed with unfavourable eyes by the Roman government, and were naturally desirous to recover their lost independence. Hence they eagerly seized the opportunity afforded by the victories of Hanuibal, and after the battle of Cannae we are told that almost all the Greck cities on the S. coast of Italy (Graecorum omnis ferme ora, Liv. axii. 61) declared in favour of the Carthaginian cansc. Some of these were, however, overawed by Roman garrisons, which restrained them from open defection. Tarentum itself (still apparently the most powerful city in this part of Italy) was among the number; and though the city itself was betrayed into the bands of the Carthaginian commander, the citadel was still retained by a Roman garrison, which maintained its footing until the city was recovered by Fabius, n. c. 209. (Liv. xxv. 8-11, $5 x v i i .15,16$.) Tarentum was on this occasion treated like a captared city, and plundered without mercy, while the citizens were either put to the sword or sold as slaves. Metapontum was only saved from a similar fate by the remoral of its inbabitants and their property, when Hamibal was compelled to abandon the town ; and at a later period of the war Terina was ntterly destroyed by the Carthaginian general. (Liv, xxrii. 51 ; Strab. vi. 256.) Locri and Crotona were taken and retaken : Rheginm alune, which maintained its filclity to Rome inviolate, though several times attempted by a Carthaginian torce, seems to have in great measure escaped the ravages of the war.

It is certain that the cities of Marna Graecia never recovered from this long series of calamities. We have very little information as to their condition under the government of the Roman Republic, or the partienlar regulations to which they were subjected. Bot it is probable that, until after the complete subjugation of Greece and Macedonia, they were looked upon with a jealous eye as the natmal allies of their kinsmen beyond the seas (Liv, xxxi. 7); and even the colonies, whether of Roman or Latin citizens, which were settled on the coasts of Sontbern Italy, were probably designed rather to keep down the previous inhabitants than to recruit the exhausted population. One of these colonies, that to Posidonia, now known as Paestum, had been established at a period as early as B. C. 273 (Liv. Epit. xiv. ; Vell. Pat. i. 14) ; and Brundusium,
which subseqnently rose to be so important a city, was also settled before the Second Punic War, n. c. 244. (Vell. Pat. l. c.; Liv. Epit. six.) But, with these exceptions, all the Roman colonies to the coasts of Lucania, Bruttium, and Calabrin, date from the period subsequent to that war. Of these, Buxentum in Lucania and Tempsa in Bruttium were settied as carly as B.c. 194 ; and in the same year a body of Roman colonists was established in the once mighty Crotona. (Liv, xxxiv. 47.) Shortly afterwards two other colonies were settled, one at Thurii in Lucania, in B. c. 193, and the other at Hipponium or Vibo, in Bruttiam, b. c. 192. (Liv. sxxiv. 53 , xxxr. 9,40 .) The last of these, which nnder the name of Vibo Valentia became a flourishing and important town, was the only one of these colonies which appears to bave risen to any considerable prosperity. At a much later period (B. c. 123), the two colonies sent to Scylacium and Tarentum, under the names of Colonia Mlinervia and Neptunia (Vell. Pat. i. 15), were probably designed as an attempt to recruit the sinking population of those places.

But all attempts to check the rapid decline of this part of Italy were obvionsly unsuccessful. It is probable, or indeed almost certain, that malaria began to make itself sererely felt as soon as the population diminished. This is noticed by Strabo in the case of Posidonia (v. p. 251); and the same thing must have occurred along the shores of the Tarentine gulf. Indeed, Strabo limself tells us, that, of the cities of Magna Graecia which had been so famous in ancient times, the only ones that retained any traces of their Greek civilisation in his day were Rlegium, Tarentum, and Neapolis (vi. p. 253); while the great Achaean citics on the Tarentine gulf had almost entirely disappeared. (Ib. p. 262.) The expressions of Cicero are not less forcible, that Magna Graecia, which had been so flourishing in the days of Pythagoras, and abounded in great and opulent cities, was in his time sunk into utter ruin (nunc quidem deleta est, Cic. de Amic. 4, Tusc. iv. 1). Sereral of the towns which still existed in the days of Cicero, as Metapostum, Heraclea, and Locri, gradnally fell into utter insignificance, and totally disappeared, while Tarentum, Crotona, and a few others maintained a sickly and feeble existence through the middle ages down to the present time.

It has been already observed, that the name of Magna Graecia was never a territorial designation; nor did the cities which composed it ever constitute a political nnity. In the earliest times, indeed, the difference of their origin and race must have effectually prevented the formation of any such union anong them as a whole. But even the Achaean cities appear to have formed no political leagne or union among themselves, until after the tronbles growing out of the expulsion of the Pythagoreans, on which occasion they are said to have applied to the Achacans in Greece for their arbitration, and to have founded by their advice a temple of Zens Homorius, where they were to hold conncils to deliberate upon their common affairs and interests. (Pol. ii. 39.)

A more comprehensire league was formed in B. c. 393 , for matual protection against the attacks of Dionysius on one side, and the Lncanians on the other (Diod. xir. 91) ; and the cities which composed it must have had some kind of general council or place of meeting. It is probable tbat it was on this occasion that the general meetings of the Italian Greeks, alluded to by Strabo (vi. p. 280), were first instituted ; though it is highly improbabie
that the Tarentine colony of Heraclea was sti: hai in the first instance for the place of assembly, on lyou Tarentioes seem at first to have kept aloof from the coutest, and it is very donbtful whether they were iacluded in the league at all. But it was natural that, when the Tamentines assumed the Jeading position among the allied cities, the councils should he transferred to their colony of Heraclea, just as Alexander of E:pirns af:ermards songht to transfer then fr m thet e to the river Acalandras in the Thurian territory, as a mark of emmity towards the Tarentines. (Strab. l.c.)
[E. H. B.]
MAGNATA. [Nagnatae.]
MAGNE'SIA, MAGNE'TES. [THESSALIA.]
 A city in Iunia, generally with the addition $\pi \rho d s$ or émi Maáu 0 pw (ad Maeandram), to distinguish it frum the Lydian Magnesia, was a considerahle city, situated in the slope of monnt Thorax, on the banks of the small river Lethaeus, a tuibutary of the Maeander. Its ditance from Miletus was 120 stadia or 15 miles. (Strab. siv. pp. 636, 647; 1llin. 8. 31.) It was an Acolian city, said to lave been fornded by Magnecians from Europe, in the east of Thessaly, who were joined by some Cretans. It snon attained great porver and prusperity, so as to be able to cope cren with Ephesus (Callinns, ap. Strab, xiv. p. 647.) At a later time, however, the city was taken and destroged by the Cimmerians; perlaps about s.c. 726 . In the year following the deserted site was occupied, and the place rebailt by the Milesians, or, according to Athenseus (xii. p. 525), by the Ephesians. Themisto-les during his exite took up his residence at Magnesia, the tomn haring been assigned $t$ him by Artaxerxes to supply him mith bread. (Nepos, Themist. 10; Liod. si. 57.) The Perian satraps of Lydia aloo oceasionally resided in the place. (Herod. i. 161, iii. 122.) The tertitory of Jugnesia was extremely fertile, and irw duced excellent wine, figs, and cucu, ibers (Athen. i. p. 29. ii. p. 59, iii. p. 78.) The town contained a temple of Dindymene, the mother of the grde; anl the wite If Themistocles, or, necording to others, his dauglter, was priestess of that divinity; but, says Strabo ( $1.647^{\text {) }}$, the temple no longer exists, the f,won laving lieed transferred to another place. The new town which the engrapher sam, mas most remarkable for its temple of Artemis Lencopliryenc, which in size and in the qumber of its treamres was indeed surpassed by the teruple of Ephesus, but in beauty and the harmony of its parts was superior to all the temples in A-ia Minor. The change in the site of the town alladed to by Strabo, is not noticed by any other a thor. The tertple, as we learn frum Vitruvius (vii. Praefat.), was built by the architect Hermogenes, in the 1 mi style. In the time of the liomans, Marnesia was added to the kinglom of Pergamus, after Antiochms had tiren d'iven eastwarel beynd Mennt Tanns. (Liv, sxxvii. 45, xxxviii. 13.) After this time the fown verons t, have decayed, and is rarely momion sel. though it is still notice 1 by Pliny (v. SI) and Tacfus (Ann. iv. 55). Hierncles (p. 659) tur. is it aheng the Pishepries of Asin, an I later docnuentis cepm th ithly that at one time is bure the name of Nueat Irandis. (Concil. Cobstantin. ii. p. 666.) The existence of the town in the time of the emperors Aurclius and Galliet is is attested by cuins.

Formerly the site of Magnewia was ilentifind with the If wleru Guzel-hisiar ; but it is $n$ w generally adnitted, that Iuek-bazar, where ruins of the temple
ii' Artemis Leneophryene still exist, is the site of Alnancient Magtiesia. (I.eake. Asia Minor, pp. 242, 1. Il. ; Armdell, Seren Churches, pp. 58, foll. ; Cramer, Asia 3/inor, vol. i. pp. 459, foll.)

COIN OF MAGNESLA AD SHAEANDRUM.
2. A town of Lydia, ustally with the addition
 it from Jagnesia on the Maeander in Jonia, situated on the north-western slope of Moant Sipylus, on the s uthern bank of the river Hermus. We are not informed when or by whom the town was founded, but it may bave been a settlement of the Mugnesimns in the east of Thessalr. Magnesia is most celebrated in bistory for thie victory gained ander its walls ly the two Sipios in B. C. 190, orer Antiachus the Great, whereby the king was for ever diven from Western Asia. (Nirab, xiii. p. 622; Plio, ii. $93 ;$ Ptcl. v. 2. § 16, viii. 17. § 16 ; Scylax, p. 37 ; Liv, xxxvii. 37, full.; Tac. Ann, ii. 47.) The town, after the victory of the Scipios, surrendered to the Rumans. (Ayian, Syr. 35.) During the war against Mitbridates the Jlagnesians defended themselves bravely against the king. (Paus, i, 20. §3.) In the reign of Tiberias, the town was nearly destroyed by an earthquake, in which several other Astiatic cities perished; and the emperor on that occasion granted liberal sums from the treasary to repair the loss sustained by the inbabitants (Strab. xii. p. 579 ; siii. p. 622: Tac. l.c.) From coins and other sourere, we learn that Magne-ia continued to flourish down to the fiflh century (Hierocl. p. 660); and it is often mentioned by the Byzantine writers. During the Turkish rule, it once was the residence of the Sultan; bot at pre-ent it is much reduced, though it preserves its ancient name in the corrupt form of Janissa. The ruins of ancient buildings are not very considerable. (Chandler, Travels in Asia, ii. p. 332; Kppel. Travels, ii. P. 295.) The accompanying cin is remarkable by having on its obverse the head of Cicero, though the reason why it appears here, is unkuown. The legend, which is incorrectly figured, should be, MAPKOE TYMAIOE KIKEPRN. [L.S.]

COIN OF MAGNESLA AD STPYLUM,
MAGNOPOLIS (Maүvómodts) a town in Pontns, at the confinence of the rivers Lycus and Iris, was fiunded by Mithridates Eupator, who called it Fogatoria: but it was con pleted by Pompey the Great, who changed its name into Marnopolis (Strab. xii. p. 556). The town seems to lave fallen into
decay at an early period, as it is not mentioned by any late writer. Appian (Mithrid. 78, 115) speaks of it under both names, Eupatoria and Magnopolis, and Strabo in one passage (xii. p. 560) speaks of it under the name of Megalopolis. Ruins of the place are said to exist some miles to the west of Sonnisa, at a place called Bughaz Hissan Kaleh. (Hamilton, Researches, i. p. 340.)
[L. S.]
MAGNUM PROMONTORIUM ( $\tau \delta \quad \mu \epsilon \hat{\gamma} \alpha$ а́кр $\omega$ Th́ptoy, Ptol. vii. 2. § 7 ; Marcian, Peripl. p. 28), a promontory which furms the southern termination of the Chersonesns Aurea, in India extra Gangem, on the western side of the Sinns Magnus. Its modert pame is C. Romania. Some have supposed that the Prom. Magn. represents another cape, either considerably to the NW., now called C.Patani. Ptolemy's account of these far Eastern places is so douhtful, tbat it is impossible to feel sure of the evidence for or against the position of any place in the Aurea Chersonesus.
[V.]
MAGNUM PROMONTORIUM, a promontory on the west coast of Lusitania (Mela, iii. 1. § 6), probably the same which Strabo (iii. p. 151) and Ptolemy ii. 5. § 1) call тò Bap\&ápıov ḱkpov, near the moutì of the Tagus. The passage in Strabo is corrupt; but according to the correction of Coray, approved of by Groskurd, the promontory was 210 stadia from the mouth of the Tagns, which makes it correspond with C. Espichel. Phay also calls it Magnum or Olisiponense, from the town in its vicinity ; but bestrangely confounds it with the Prom. Artabrum, on the NW. of the peninsula (iv. 21. s. 35).

MAGNUM PROM. MAURETANLAE. [MaUbetania.]

MAgNUS PORTUS. 1. (חóptos $\mu a ́ \gamma \nu o s, ~ P t o l . ~$ ii. 4. § 7; comp. Marcian. p. 41), a port-town of Hispania Baetica, between the town Abdara and the Prom. Charidemi.
2. (Mé $\gamma$ as $\lambda_{t} \mu \dot{\eta} \nu$, Ptol. ii. 6. § 4), a bay on the coast of the G.llaeci Lucenses, which is evidently the same as the Artahrorum Sinus. [Vol. 1. p. 226, b.]
 bour in Britain, opposite the island of Vectis, corresponds to Portsmouth.
4. (Mópros Má ${ }^{\nu}$ vos, Ptol. iv. $2 . \S 2$; Mela, i. 5 ; Plio. v. 2; It. Anton. p. 13), a port-town of Mauretania Caesariensis, on the road between Gilva and Quiza, described by Pliny as "civium Romanorum oppidum." It is identified by Forbiger with Oran, of which the harbour is still called Mars-el-Kibir, i. e., the great Harbour.
5. (Měás At⿲inp, Ptol. iv. 6. §6), a port on the west coast of Libya Interior, between the mouth of the river Daradus and the promontory Ryssadium.

MAGNUS SINUS ( § нé $\gamma a s$ кó̀лтos, P'tol. vii. 2. $\S \S 3,5$; A(rathem, i. p. 53), the great gulf which runs up to the middle of the present kingdom of Ara, and is known by the name of the Gulf of Siam. The ancient geographers correctly placed China on the east of this gulf, thongh they had no very accurate notions relative to its latitnde or longitude. On the west side was the Aurea Chersoncsus.

Magu. [Baleabes, p. 374, a.]
MAGON ( $\delta$ Ma $\bar{\omega} \nu$, Arrian, Ind. c. 4), a river mentioned by Arrian as flowing into the Ganges on its left bank. It has been conjectured that it is the same as the present Ramguna.

MaGontiacum. [Mogastiacum.]
MAGORAS, a river of Syria, under mount Libanus, meutioned by Pliny (v. 20) apparently be-
tween Sidon and Berytus, and probably identical with the Tamyras of Strabo (xvi. p. 756), now Nahr-ed-Damur; though Dr. Robinson suggests the Nahir-Beirút. (Bib. Res, vol. iii. pp. 433, 439.) [TAMYRAS.]
[G. W.]
DIAGORUJ SINUS (Ma $\bar{\omega} \nu \kappa \delta \lambda \pi o s$ ), a bay on the Arabian coast of the Persian Gulf, in the country of the Themi, who joined the Gerraci on the north. (Ptol. vi. 7. §54.) It is still marked by the modera town of Magas, and the ancient name ia accounted for by Mr. Forster by the fact that "the ancient Themi are the Magian tribe of Beni-Temin, in all ages of Arabian history inhabitants of the gulf and city of Magas,-a deep bay, with its chief town of the same name, immediately above the bay of Katiff?" (Geogr. of Arabia, vol. ii. p. 215.) He maintains that the Magi of S. Matthew (ii. I) were of this tribe, and from this country (vol. i. pp. 304-307). [Themi]
[G. W.]
MAGRADA, a small river on the N. coast of Hispania Tarraconensis, now Uresmea. (Mela, iii. 1. § 10. )

MAGYDUS (Máyuōos: Eth. Mayuס̄eús; called Máaŋŋoos by Scylax, p. 39), a town of Pamphylia, on the coast between Attaleia and Perge, and subsequently of episcopal rank, is probably the Mygdale (Muy $\delta \dot{d} \lambda \eta$ ), of the Stadiasmus. There are numerous imperial coins of Magydus, hearing the epigraph MAГऽ $\triangle E \Omega N$. Leake identifies it with Laara, (Ptol. v. 5. § 2; Hierocl. p. 679 ; Studiasm. §§ 201, 202; Leake, Asia Minor, p. 194 ; Cramer, Asia Minor, vol. ii. p. 278.)

MAHANAIM (Mavaip, LXX.), a place, and afterwards a town, on the east side of the Jordan, so named from the incident related in Genesis (xxxii. 2), where the word is translated, both by the LXX. and Josephus, $\Pi a \rho \in \mu G a \lambda a i$, and also by the latter Өeoû $\sigma \tau \rho a \tau 6 \sigma_{\pi} \in \delta o \nu$ (Ant. i. 20. § 1). The following notices of its position occur in the Old Testament:It was north of the brook Jabbok (Gen. l. c., comp. v. 22), in the borders of Bashan (Josh. xiii. 30), atterwards in the tribe of Gad (xxi. 38), but on the confines of the balf-tribe of Manasseh (ziii. 29) assigned to the Levites. (1 Chron. vi. 80.) It was the seat of Ishbosheth's kingdom, during the time that David reigned in Hebron (2 Sam. ii.), and there he was assassinated (iv.). When David fled from Absalom, he was maintained at Mahanaim by Barzillai, the aged sheikh of that district (2 Sam. xvii. 27 , xix. 32); and it was apparently in the vicinity of this city that the decisive battle was fought in the wood of Ephraim between the royal troops and the rebels (xviii). A ruined site is mentiuned in the Jebel 'Ajlun, under the name of Mahneh, wbich probably marks the position of Mahanaim. (Robinson, Bib. Res. vol. iii. Appendix, p. 166.) [G.W.]

MAIS, a station in Britain, so called upon an engraved bronze cup fonnd at Rudge, in Wittshive. From this name occurring with those of fonr other stations, all on the line of the Great Wall, it is supposed to be identical with Magna, or Magnis. [C. R. S.]

MAlS (Mals), a river of India intra Gansem, flowing into the Sinus Barygazenus, now the Maht. (Nearch. p. 24 ; Arrian, Periptus Muris Erythruei.)

MAKKEDAH (Maкךōá, LXX., Euseb.; Makхıōá. Joseph.), a city of the Canaanites in the sonth part of the tribe of Judah (Josh. xv. 41), governed by a sheikh. It was the first city taken by Joshna after the hattle in Gibeon; and there it was that the five confederate lings were found hid in a cave, which
was mithe then whine after fory exectumen （Josh．x．16－28．）it is placed by Ensectus （Onomast．s．v．） 8 miles east of Eleutheropolis． ［Bernogabris．］
［U．W．］
MALA（Md́גa，Má入 $\eta$ ），a totru in Colelis，which Scylax（p．32），in contradiction to other writers， makes the birtlyilace of Nedeia．
［1：B．J．］
MALACA（Máлака，Strab．；Ptol．ii．4．§ 7 ； Ma入ákq，Steph．B．s．v．：EEth．Maגakıtavós ：Miv－ Zaga），an important tomn upon the cost of Hispania Baetica，east of Calpe，which was equidistont from Gadeira and Motacn．（Stral，iii．p．156．）Ac－ cording to the Autovine Itinerary（ $p, 405$ ），the dis－ tance from Gadura to Malaca was 145 miles ；ac－ cording to Strabo（iii．p．140）the distance from Gadeira to Calpe was 750 stadia．Malaca stood upon a river of the same name，now Guadalmedina． （Avien．Or．Mar．426；Malaca cum fluvio，Plin．iii． 1．s．3．）Straloo says（l．c．）that Malaca was built in the Phoenician fashion，whence we may conclude that it was a Pboenician colony．Accordingly sone modern writers bare supposed that the name was derived from the Phoenician word malcha，＂royal；＂ but Humboldt says that Malaca is a Basque word， signifying tbe＂side of a mountain，＂Under the Romans it was a fuederata civitas（Plin．l．c．），and had extensive establishments for salting hish．（Strab． l．c．）Avienus says（l．c．）that Malaca was for－ merly called Maenaca；but Strabo had alrealy no－ ticed this error，and observed not ouly that Mrenaca was further from Calpe，but that the ruins of the latter city were clearly Hellenic．Malaca is alm mentioned in Strab．iii．pp．158，161，163；Hirt． B．Alex．46；Geogr．Rinv．iv，42．There are still a fer remains of Roman architecture in Malagu．

MALACHATH（Maлađá $\theta$ ），a city of Libya In－ terior，which Ptolemy（iv．6．§．25）phaces in the country above the Niseir，in E．long． $20^{\circ} 20^{\prime}$ ，and N．lat． $20^{\circ} 15^{\prime}$ ．
［E．B．J．］

MALCOAE：［ANDHES．］
MA＇LEA（Ma入éa），a town in the district of Aegytis in Arcadia，the iulkahitants of which wero transferred to Me calopolis upon the fomudation of the latter city．（1＇aus，viii．27．§4．）Its territory was called the Maleatis（i，Madearrs）．Xenophon describes Lenctra as a fortress situated above the Maleatis；and as Lenctra was probably at or near L－ondari，Malea must have been in the same neigh－ bmarhood．［Le．uctra．］Leake，however，conneeting Malea with the river Malus（Ma入oüs，Pans，viii， 35．§ 1），a tributnry of the Alpheins，places tho town on this river，and on the road from Slezalo－ polis to Carnasium（Leake，Pelopmuncsiaca，p．248）： but this is not probahle．The plure Minfa（Miña） mentioned by Nimophon（IIell．vii．1．§ 28）is pro－ bubly a corrupt form of Malea．（Curtius，Delopan－ nesos，vol．i．p．336．）
－MA＇LEA（Maxéa，Steph．B．s．v．et alii：Mareat， Herod．i．82；Strab．viii．p．368），still called Mulia， a promontory of Laconia，and the most southinly point in Greece with the exception of Tacnarum． For details see Vol．11．p． 114.
MA＇LEA（Ma入є́a，Thucyd．iii．4，6；Xen，Hell．i． 6．§§ 26， 27 ；Ma入ía，Strab．siii．p．617；Mavia， Ptol．v．2；see Schol．ad Aristoph．Ran．p．3．3），the southernmost point of the island of Lesses，reek－ oned by Strabo to be 70 stadia distant from Myti－ lene， 560 staulia from Cape Sigrium，and 340 from Methymna．Immediately opposite，on the maioland． were the point of Caxe and the islands of Ass：r－ Nt＇site［see those articles］．The modern name of Males is Zcitoun Bouroum，or Cape St，Mary，and it is a bigh and conspicuous point at sea．Xino－ phon says（l．c．）that the fleet of Callicratidas oc－ cupied this station before the sea－fight off Arginusac． There is some obscurity in Xenophon＇s topography in reference to this place；and the Malea of Thncy－ dides（l．c．）can hardly bave been C．S．．Mary， unless there is sme error in his relation．He sats distinctly（c．4．），that Maklea lay to the forth of Mytlene，and（ $6 ; 6$ ）that the Athenims lial their market there，while bessieging the city．The first statement is inconsistent with the position of Cope S\％．Mary，and the second with its distarce from Mytilene．Possibly the Malea of Thucylide hal some connection with the sanctuary of $\mathrm{Ap}_{\mathrm{p}}$ io Malamis．（Fec the notes of Arnold and Poppo，and Thirlwall＇s fircece，vol，iii．p．173．）［J．S．H．］
MA t．EA（Ma入éa，or Ma入aia boos，P＇ol．vii． 4. § 8），a large group of mountains in the southern part of the ancient Taprohame or Ceylon．Thare can lee little doult that ii comprehends the mountain thact now kinwn by the anato of Necera Ellia，ono of the chief munntains of which is called，from the Arab－，Adam＇s Rakk，by the natives Sripada．I＇tu－ lemy states，that it is the water－sbed of three riven， which he calls the Soanas，the Azanus，and the Baraces，and describes with remarkable trnth the present condition of the island，when he adds that in the low grouml below it，towards the sea，are the pastures of the elepbants．l＇liny speaks of a moun－
tain in the interior of India，which he calls Mons Maleus（vi．19．s．22）．It has been supposed that be nay refer to the western Ghats；bat as Malens is evidently derived from the Sanscrit malo，a moun－ t：in，this identification cannot，we think，be main－ tained．

MALECECA．［Lusitasis，p．220，a．］
MALE＇NE（Ma入প́p $)$ ，a place near Atarneus， where Ilistiaeus was defeated by the Persians，is not mentioned by any ancicat author except Herodotus （vi．29）．
［L．S．］
MALETHUBALON（Man $\in \theta o \dot{v}^{\prime} s a \lambda o \nu$, P tol．iv． 2. § 15；Nobbe，ad loc．reads Ma入є $\operatorname{loú6a\delta ov}$ ），a moun－ tuin of Mauretania Caesariensis，which is ideutified with Jebel Nadür in the Süharra．（Shaw＇s Travels， p．56．）
［E．B．J．］
MaLeventum．［Benetentum．］
MA＇LEUM P．（Ma入 $\in \dot{\omega} \not{ }_{k}^{k} \kappa \rho \nu \nu$, Ptol．vii．I．§ 4），a promontory wbich forms the southern termination of Sirastrene（aow Cutch）．It separated the gnilfs of Canthi（the Runn of Cutch）and Barygaza（Cam－ buy）．
［V．］
MA＇LIA（Ma入ia ：Eth．Ma入tsús），a tomn in Hispania Tarraconensis，near Numantia，but of which aothing more is known．（Appian，Misp． 77．）

MALIACUS SINUS（ $\delta$ Ma入tak̀̀s кó $\lambda \pi \sigma$ ；M $\eta$－ גaak $\delta$ s，Thuc．iil． 96 ；Strab．ix．p． $403 ; \delta \mathrm{M} \eta$－ גteùs kó̀ $\pi o s$, Herod．iv． 33 ；Pulyb．ix． 41 ：Gulf of Zitumi），a long gulf of the sea，lying between the southern coast of Thessaly and the northern coast of the Locri Epicnemidii，and which derived its name from the country of the Malians，situated at its bead．At the eatrance of the gulf is the north－ westero promontory of Euboea，and the islands Li－ chades，and into its furthest extremity the river Spercheins flows．The gulf is called Lamicus sixis（ $\delta$ 几apuakds кí入лоs）by Pausanias（i． 4. § 3，vii．15．§ 2，x，1．§ 2），from the important torm of Lania；and in the same way the gulf is now called Zituni，which is the modern name of Lamia．Livy，who usually terms it Maliacus Sinus， gives it in oue place the name of Aenianum Sinus （xxwiii．5），which is borrowed from Polybins（ $x$ ． 42）．（Comp．Leake，Northern Greece，vol．ii． p．4．）
MaliarpHA（Ma入ıápфa，Ptol．vii．14），a place of considerahle commerce in the territory of the Arvarni，on the western coast of the Bay of Bengal，between the mouths of the Godarari and the Kistna．It is represented now by eitber Ma －

MALICHI INSULAE（Ma入ixou v n̄ool，Ptol． vi．7．§44），tro islands in the Sinus Arabicus，off the sonth const of Arabin Feliz．One of them is the modern Soknr．

MALIS（ $\grave{\eta}$ Ma $\lambda i_{s} \gamma \hat{\eta} ;$ Mi $\eta \lambda i s$ ，Herod．vii． 198 ：Eth． Maxteús，M $\eta$ 入ueús），a small district of Greece，at the head of the Maliac golf，sorrounded on all sides by mountains，and open only in the direction of the sea． The river Spercheius flowed through it．The limits of Malis are fixed by the description of Ierolotus．It extended a alitle north of the valley of theSpercheius to the narrowest part of the straits of Thermopylac． Alticyra was the northernmost town of the Nalians （Ilerud．vii．198）；the boundary passed between Lamia and Anticyra．Anthela was their southern－ most torra（vii．176，200）．Inland，the Anopiea， the path over Mount Oeta，by which the Persims turned the army of Leonidas，in part divided the territory of the Trachinian Malians from that of the

Oetareans（vii．217）．A more particular description of the locality is given under Tmermopyiaf．
 Nalians derived their name from a town Dalieus， not mentioned by any other ancient author，said to have been founded by Malus，the son of Arpphic－ tyon．The Malians were reckoned among the Thes－ salians；but althoagh tributary to the latter，they were genuine Hellenes，and were from the earliest times members of the Amphicytonic council．They were probably Dorians，and were always in close connection with the acknowledged Doric states． Hercules，the great Doric hero，is represented as the friend of Ceys of Trachis，and Mount Oeta was the scene of the hero＇s death．Diodorus（xii．59）even speaks of Trachis as the mother－tomn of Lacedaemon． When the Trachinians were bard pressed by their Oetaean neigbbours，about the commencernent of the Peloponnesian War，they applied for assistance to the Spartans，who founded io consequence the colony of Heracleia near Trachis．（Thuc，iii．92．）

Scglas（p．24），who is fullowed by Diodorus （xviii．11），distinguishes between the Minleîs and Màueis，the former extending along the northern coast of the Maliac golf from Lamia to Echious； but，as no other writer mentiuns these towns as be－ longing to the Lamians，we ought probably to read Аa $\mu \mathrm{Eis}$ ，as K．O．Nüller observes．Thucydides mentionis three divisions（ $\mu \epsilon \cdot p \eta$ ）of the Malians，called Paralii（ Пapádiot），Priests（＇ifpp̂s），and Trachinii （Tpaxivoot）．Who the Priests were is a matter only of conjecture：Grote supposes that they may bave been possessors of the sacred spot on which the Amplictyonic meetings were held；while Leake imagines that they were the inhabitaats of the Sacred City（iepdे $\alpha \sigma \tau v$ ），to which，according to Callimachus（Hymn．in Del．287），the Hyper－ borean offerings were sent froun Duduna on their way to Delus，and that this Sacred City was the city Oeta mentioned by Stephanus B．The names of the Paralii and Trachinii sufficiently indicate their position．The Malians admitted every man to a share in the government，who either had served or was serving as a IIoplite（Aristot，Polit．iv． 10. § 10）．In war they were chiefly famous as slingers and darters．（Thuc．iv．100．）

Tracurs was the principal town of the Malians． There were also Asticyra and Asthela on the coast；and others，of which the names only are pre－ servel，such as Colacela（Theoporm．ap．Athen． vi．p．254，f．），Aegoneta（Lycophr．903；Steph．B． s．v．），and Irus（Schol．in Lycophr．l．c．；Steph．B． s．v．）．（Müller，Dorians，vol．i．P． 50 ；Grote， Greece，vol．ii．p．378；Leake，Northems Greece， vol．ii．p．20．）

MALLAEA，MALLOEA，or MALOEA，a town of southein Pervaebia is Thessaly，perhaps repre－ sented in name by Molighhusta，which Leake con－ jectures to be a corruption of Dalluea，with the addition of Augusta．But as there are oo remains of antiquity at Molöghusta，Leake suppases Malloen to bave occupied a height on the opposite side of the river，where are some vestiges of ancient walls． （Liv．xxxi．4I，xxxvi．10，13，xuxiz． 25 ；Leake， Northern Greece，vol．iv．p．311．）

MIALLI（Máдлot，Arrian，Anab．vi．7．8，14）， the inhabitants of the south part of the district now known by the name of the Panjib．There was probably in ancient times a city from which they derived their name，though the name of the torn is not given by ancient authors．（Arrian，l．c．；Strab．
xv．p． 701 ；Curt．ix．4．）The people occupied the space between the Accsines（Asikmi）and Ifyarotis （lrivati），which both enter the ludus at no great distance．There can be little doubt that the name represents at once the country and the town of the Malli，heing itself derived fiom the Sanserit Mitla－ stlaini．Pliny speaks of Malli quorvon Mons Mallus（vi．17．s．21）．It his locality corre－ sponds with that of the other Reographers，the pame night be taken from the monotain which was con－ spicnous there．It is not，however，possible from 1＇liny＇s brief notice，to determine anything of the pasition of his Malli．It was in this country，and not inprobably in the actual town of the Malli（as Arian appears to think）that Alexander was neatly Nain in cumbat with the ludian tribes of the Panjáb．

MALLUS（Ma入入ós：Eth．Ma入入 $\omega$ т $\quad$ s），an ancient cily of Cilicia，which，according to tradition，was fuunded in the Trojan times by the sonthsayers Mopsus and Amphilochus．（Strab．siv．p．675，\＆c． Arrian，Anab，ii．5．）It was situated near the mouth of the river Pyramus，on an eminence opposite to Megarsus，as we must infer from Curtius（iii．7）， who states that Alexander entered the town after throwing a bridge across the Pyramus．Mallus therefore steod on the eastern bank of the tiver． According to Scylax（p．40）it was necessary to sail up the river a short distance in order to reach Mallus； and Mela（i．13）also states that the town is situated close upon the river；whence Ptolemy（v．8．§ 4） inust be mistaken in placing it more than two miles away from the river．Nallos was a town of consi－ derable importance，thouch it does not appear to have possessed any particular attractions．1ts port－ town was Magarsa［Migarssi］，though in later times it seems to have had a port of its own，called Portns Palorum（Geugr．Nub．p． 195 ；Sanut．Secret， Ficl，ii．4，26，whence we learn that in the middle ages it continuel to be called Malo；comp．Callims． Frogm，15：Appian，Mithrid．96；Dionys Per． 875 ； I＇tol．viii． 17 § 44 ；Plin．If．N．v．22；Stachism． Jfar．M．S§ 151， 152 ；Leake，Asir Minor，pp． 216 ， scc．）

MANDROCILTI [Carthago, Vol. I. p.551, a.]
MANDRUANI (Plin. vi. 16. s. I8), a people mentioned by Pliny as occupying a part of Western Bactriana, nnder the spurs of the Paropamisus. They are now, like several other tribes whose names are given by that geographer to the same locality, no longer to be identified.
$[\mathrm{L}$.
Мауб́ро́-
MANDRU'POLIS (Mavסoómoגes or Mavopómodis), a town in Mysia (Hierocl. p. 664), now called
Menduria or Mendreghora, at the foot of Muant Temnus. Stephanus of Byzantium (s.v.) erroneously places the town in Phrygia. There seems to be little doubt but that Mandrupolis is the same town as Mandropus or Mandrupium, mentioned by Livy (xxxviii. 15).
[L. S.]
 one of the chief mountains of Libya, from whence Hlow all the streams from Salathus to Massa; the middle of the mountain has a position of $14^{\circ} \mathrm{E}$. long. and $19^{\circ}$ N. lat., assigned to it by Ptolemy (iv. 6. §8). Afterwards (\$ 14) be describes the river Nigeir as uniting, or yoking together (ent $\leqslant \in v-$ gvóve), Mount Mandrus with Mount Thala. [ Ni geir.] (Comp. London Geogr. Journ. vol. ii. p. 19; Donkin, Dissertation on the Niger, p. 81.) Ptolemy ( $\$ 17$ ) places the following tribes in the neighbourhoud of this motntain: the Ranir ('Pábivt), the

MANDUBII.
257
Malcoae (Ma入kóaı), and the Mispomi (Mázסороt).
[E. B. J.]
MANDU'BII (Mavōoúbiot), a Gallic people wbom Strabo (iv. p. 191) erroneously calls the neighbours of the Arverni. When Caesar (n. c. 52) was marehing through the territory of the Liugones, with the intention of retreating through the Sequati into the Proviucia, he was attacked by the confederate Galli under Vercingetorix (B. G. vii. 68). The G.illi were defeated, and Vercingetoris, with his men, tuvk refuge in Alesia, a town of the Mandubii. The site of the battle is not indieated by Caesar, but the position of Alesia is at Alise, or Alise Scuinte Reine, as it is also called, in the department of the Cöte d'Or. The railroad from Paris to Dijon crosses the bills of the Cote d'Or, of which Alesia and the lieights around it are a part. The Mandubii were a small people who fed tbeir flocks and cattle on the grassy hills of the Cóte eOr, and cultivated the fertile land at the foot of Alesia. Before the bluckade was formed, they had driven a great quantity of their animals (pecas) within the walls. (B. G. vii. 71.)

The Mandubii who had received their conntrymen into the city, were turned out of it by them, with their wises and children, during Caear's blockade, in order that the scanty supply of prosisions for the troops might last longer. The Komans refised to receive the Mandubii and give thens food. The certain conclnsion from Caesar's narrative is, that these onfortunate people died of hunger between their own walls and the Roman cireumvallation (B. G. vii. 78; Dion Cass. x1. 41). Caesar's description of Alesia is true; and the operations of his army about the place (B. G. vii. 69-90) are easily understood.

This plan of Alesia and the surrounding country is taken from Cassini's large map of France. The city of the Mandubii, or Alesja, was "on the summit of a hill, in a very elevated position," as Caesar correctly describes it. This hill stands alune, and, except on the west side, where there is a plain, it is surrounded by hills of the same height, which are separated from Alesia by valleys. In the flat valley

on the north side of Alesia, and in the narmower valloy at the east end, is the railroad from Paris to Dijum. The nearest railway station to Alcsia is Les L.numes.

The summit of Alcsia is not quite flat : bat the irrecularities are inconsiderable. The sides of the hill beneath the plateau are steep and rocky; and the upper part of the ascent to the summit is not easy. Below the plateau, and below this sterpascent, there is a narrow level piece of ground, which appears to have leen tridend a little by the labour of min: and below this level part there is sunther descent, which in some parts is steep. The tine plain (planitins) at the western foot of Alesia, which Caesar describes, is sem well from the mestem end of the lewl summit. This is the part which Caesar (c. 84) calls the "Arx Alesiae." The surface of the plateau rises a little tewards the western extremity, and then falls away abruptly, terminating in a recky promontury, something like the head of a boat. A cross, with a small tree on each side of it, stands at the chice of the brow, and exactly marks the place from which Vercingetorix looked down on the plain of Alenia (c. 84). Beneath the Ars Alesiae is the small town of Alise, on the westem and south-western sl ipe of the hill. It occupies a different place from the old town of the Mandubii, which was on the sumanit level. The hill is a mass of reck. The plateau has a thin soil, and the ferr pauts which are not cultivated are covered with a short grass like that on the Bri hton downs. It appear, that the town of the Mandubii ncerpied all the larye plateau, the length of which is shown by the scale, thoueh we must assume that it was not all built on. The Arx, as alrealy explained, was at the west end, commanding a view of the plain. The city wall seems to have been carried alt round the margin of the plateau. Ctassar says ( $B . G$. vii. 69): " under the wall, that part of the hill which looked towards the east, all this space the forces of the Calli lind filled, and they had formed in their front a ditch and a wall of stomes (maceria) six feet high." This is the place markeld A. in the plan, the orly part of the hill of Alesia which is connectel with the neighbouring heights. It is a st all neck of land which separates the ralless of the Lose and the Lozerain. This is the part where the platean of Alesia is m st aecessible, which Vercinestwris first ascupied when he retired to Alesia, and where he emstructed the wall of loose stones (maceria). Thure are plenty of stones on the spot to construct anuther such wall, if it were wanted.

At the cantem end of the ylatean, just inder the stummit there is a sourep of water, which is now - serot uver with a sunall building." The water is 1 in carried in piju frumb the linil, to supply the hi chith of Alise. which is (F.) on the went side of the bill on the slope Wiator is got at Alise by digdus Weils in tho small terel befors the phateatu ; and (a) the (ialli holl this pert of the mountain during the blouk whe, they may have got water from wells, b. Whey wr doubt dill from the spring on the platean.
('u-ar") lumes were formol all romed the hill of Alowa, and there crowed the moek (A.) which con1, is this hill with anntrer hill (B.) on the sonth"ast side. Thie "castra" of Camar (cc. 69, 80) 3f ro on B. C. D. E., on all the bio hts around Alr:3it. 'Fhese hills have a sterp ide turnel to Alenia. and flat tops. They arr bo noar to Alewis that Cacesar conhl not be safi against all attaw from the outsille, unless he oecupied them. The v.d ys bitween Alesia and 1. C. 1). are narrow. On the north and
north-west sicu the valley is wider. There is a good source of water on the hill B.

The hill of Alesia is well defined on the north and the sonth by the salleys of the two streams whidh Carsar mentions (B. (i. vii. 69), and on the west side by the plain in whill these rivers meet. Caesar estimates the width of this plain from north to south at three loman miles ; and it is that width at least even in the part which is only a little distance from the foot of the hill. It extends much further in a NW. direction on the road to Montbard. This plain is a perfect level, covered in summer with fine wheat. As we go from the foot of the hill of Alcsia to Les Laumez, the Arx Alesiae is a conspicnous object.

Caesar made two lines of circnmrallation round Alesia. The circuit of the inner lines was eleven Roman miles ; and we may infer from his words that this circumvallation was entirely in the plain and the valleys, except that it must hare passed ever the small elevation or neek of land between A. and B. In making the onter lines, which were fourteen Roman miles in circuit, he followed the level as far as the ground allowed (c, 74); from which we conclude that some parts of the outer line were on the high grounds upposite to the hill of Alesia; and the form of the surface shows that this must have been so. The upper part of the bill west of C'ressigny, part of which bill appears in the north-west angle of the plan, was crosed by the lines; and the camp of Reginus and Rebilus (c. 83) was on the slope of this hill which faces Alesia. Ore of the ditches (firssue) of the interior lines was biled with water from the river (c. 72). The lines of eleven and fourteen miles in circuit are no cxaggeration. No less circuit would encluse the hill and give the Romans the necessary space. The buldness of the undertaking may be easily conceivel by the aid of numbers; but the sicht of the work that was to be dune before Vercingetorix and his troups, to the number of 80.000 men, could be shut in, can alone make us fully comprehend and admire the daring genius of the Ioman proconsul.

There was a cavalry fight in the great plain before Cacsar haif completed his works. The Galli were driven back from the plain to their camp under the east end of the hill, and took refuge within Alesia. After this dufeat Vercingetorix sent his cavalry away, and mate preparation for holding out till the Gallic confederates sloulid come to his aid. (B.r. 70, 71.) When the forees of the confederates (vii. 75) came to raise the blockade of Alesia, they ponted themsclives on the hills where the nanie Jussy appears ; and in the battle which is described in vii. 79 , the Gallic cavalry filled the plain on the west side of the hill of Alcsia. while the infantry remained on the heichts abont Mussy. The Gallic horse wroc beaten back to their call p (c. 80) but on the following nidht they renewed the attack on that part of the lines which crossed the plain. This attark also friled The next night the Gallic confederates sent 60,000 men under Vergasillannus to the porth, to the back of the hill (E.), on the south sluye of which Reginns and Rebilus had their camp. Their orders nere to full on the limans at midday. The Gauli got to the back of the hill at daybreak, and waited till near noon, when they be an their attack in the camp. At the same time the cavalry of the confederates came against the Fines in the plain: and Viecingetorix descen led from the heights of Alcsia to attack the lines from
the inside. The Galli failed to furce the lines both on the inside and the outside. But the attack on the camp of Reginus and Rebilus was desperate, and Labicnus was sent to support thern. Neither ramparts nor ditches could stop the fierce assault of the euemy. Labienns summoned to bis aid the soldiers from the nearest posts, and sent to tell Caesar what he thought ought to be done. His design was to sally out upon the enemy, as Caesar had ordered him to do, if he could not drive them off from the lines.
The place where the decisive struggle took place is easily seen frum the Arx Alesiae ; and it is accuratcly described by Caesar (B.G. 83, 85). This is the Lill (E.) which slopes down to the plain of the Lose. The upper part of the slope opppsite to the Arx Aleniae is gentle, or "leniter declivis" (c. 83); but the descent from the gentle slope to the plain of the Loze, in which the railway runs, is in some parts very steep. Caesar could druw his lines in such a way as to bring them along the gentle slope, and comprise the steep and lower slope withio them. But there would still be a small slope downwards from the upper part of the bill to the Roman lines; and this is this gentle slope downward which he describes is c. 85 , as giving a great advantage to the Gallic assailants under Vergasillannus ("Exigunm loci ad declivitatem fastigium magnum habet nomentum ").

The mountain behind which Vergasillaunus hid himself after the night's march is the part of the mountain west of Cressigny. The camp of Rezinus and Rebilis being on the south face turned to Alexia, they could see nothing of Vergasillamnus and his men till they came over the hill top to attack the lines. Vercingetorix, from the Arx Alesine (c. 84), could see the attack on Reginus' camp, and all that was going on in the plain. He could see everything. Caesar's position during the attack of Vergasillannus was one (idoneus locus) which gave him a view of the fight. He saw the plain, the "superiores munitiones," or the lines on the mountain narth-west of Alesia, the Arx Alesiae, and the ground beneath. He stood therefore on the bill sunth of Alesia, and at the western end of it.

Caesar, hearing from Labienus how desperate was the attack on the apper lines, sent part of his cavalry runnd the exterior lines to attack Veryasillaunos in the rear. The cavalry went round by the east end of Alesia. They could not go ruand the west end, for they would have crossed the plain outside of the linees, and the plain was occupied by the Galli. Nor could they have gat up the hill on that side without some trouble; and they would nut have conne on the rear of the enemy. It is certain that they went by the cast end, and upon the heights round Alesia, which would take a much kmger tine than Caesar's rapid narrative would iead us tos suppose, if we did not know the ground.
When Ciesar sent the cavalry round Alesia, he went to the aid of Labienus with four cohorts and some caviliry. The men from the higher ground could see him as he came along the liwer ground (cc, 87,88 ). He came from the bill on the south of Alesia, between his lines along the plain, with the Arx Alesia on lis right, from which the men in the tuwn were looking down on the furious battie. The scarlet cloak of the proconsul told his men and the evemies who was coming. He was received with a shout from hoth sides, and the shout was answered from the circmarallation and all the lines. The

Roman soldier throws his pila aside ; and the sword begins its work. All at unce Caesar's cavalry appears in the rear of Vergasillaunus: "other colorts approach; the enemy turn their backs; the cavalry meet the fugitives; there is a great slanghter; "and the victory is won. The Galli who were on the outside of the fortifications desert their caun, and the next day Vercingetmis sarrenders Alesia. The fight of Alesia was the last great effort of the mitesi Galli acainst Ciesar. They never recovered from this defeat; and from this tine the subjugation of Gallia, though not yet quite completed, was near and certain.
Alesia was a fown during the Roman occupation of Gallia; but the platean has long since been deserted, and there is not a trace of buiding upun it. Many medals and other antiquities have been found by grubbing on the plateau. A vigneron of Alise possesses many of these rare things, which he has found; a fine gold medal of Nero, some excellent bronze medals of Trajan and Faustina, and the wellknowu medal of Nemausus (Nimes), called the "pied de biehe." He has also a stelyard, keys, and a variety of other things.
The plan of Cassini is tolerably correct; correct enough to make the text of Caesar intelligible [(i.L.]
manduessedual, a lioman station in Britain (It. Ant. p. 470), the site of which is supposed to be ocupied by Maneester in Warurichshire. [C. R. S.]
MANDU'RIA (Mavòupov, Steph. B.: Eth. Mavסvpivos: Mandurin), an ancient city of Calabria, in the territory of the Salentines, situated at the distance of 24 miles E . of Tareotum. Its name has obtained some celebrity from its being the scene of the death of Arclidamus, king of Sparta, the son of Agesilaus, who bal been invited to Italy by the Tarentines, to assist them against their neiglibums the Messapians and Lucanians; but was defeated and slain in a battle nuder the walls of Manduria, which was fought on the same day with the more celebrated battle of Chneronea, 3rd Aug., B. c. 338 . (Plut. Ages. 3, who wites the name Mavoinav; Theopomp. ap. Athen, xii. p. 536; Diod. xyi. 63, 88 ; Pans. iii. 10. § 5.) This is the first notice we find of the name of Mlanduria: it would appear to have been a Messapian (or rather perhaps a Salentine) city, and apparently a place of considerable inportance; but the only other mention of it that occurs in history is in the Second Punic War, when it revolted to the Carthaginians, but was taken by assault hy Fabins Maximns, just before he recovered Tarentum, B. c. 209. (Liv. xxtii. 15.) We haro no accomnt of its fate on this occasion, butt it would seem certain that it was severely pmished, and either destroyed or at least reduced to a degraded condition; for we find no mention of it as a municipal town under the lamans; and Pliny omits its name in his list of towns in this part of Italy, though he elsewhere (ii. 103. s. 106) incideutally notices it as "oppicum in Salentinu." The name is again found in the Tabula, which places it at the distance of 20 M . P. from Tarentum, an interval less than the truth, the actual distance being 20 geog. miles, or at least 24 Roman miles. (Tab. Peut.)

The exinting rains are considerable, especially those of the ancient walls, great part of the circuit of which is still preserved : they are built of large rectangular blocks, but composed of the soft and porous stone of which the whale neiyhbouring country consists; and in thoir original state apperr to have formed a double circtit of walls, with a
browd street or way between the two, and a ditch on the outside. At present they are nowhere mure than six feet in beight. The madern town of Wanduria (a flowrishing place, with about 6000 inhabitants) dons not occupy the sire of the aucimat city; the latter haviug been destroyed by the Saracens, the few remaining inhatitants settled at a place called Casal Nuoro, which appellation it retansed till towards the close of the eighteenth century, when, having grown into a considerable town, it resumed, by roval licernse, its ancient name of Munduria. (Sirinburne, Travels, vol. i. p. 222 ; Romauelli, vol. i. 1. 53 ; Giustimani, Dis. Gengr. vol. v. p. 338.)

Pliny mentions the existence at Manduria of a well or aring of water, which was always finll to the brim, and conld not be either increased or diminished in quantity. This natural curiosity is still shown by the inbabitants of Manduria, and has been deseribed by sereral recent travellers: it is said that it preserves a cons'ant equality in the level of its waters, nutwitbstanding any addition that may be made to them or any quantity that may be witbilrawn,-a statement exactly coinciding with that of Pliny. (Plin. ii. 103. s. 106; Swinburne, Travels, vul. i. p. 223; K. Craven, Travels, pp. 165-167.) The expression nsed by that autbor, who calls the basin or reservoir of the water "lacus," has given rise to the erroneous notion that there existed a lake in the neighbourhood of Manduria, for which there is no foundation in fact. [E.H.B.]

MANIMI, a tribe of the Lygii, in the north east of Germany (Tac. Germ, 43). They occupied the conutry south of the Burgundiones, and sppear to be the stime as the Omanni ('Ouanvoi) of P'tulemy (ii. 11. § 18; Zeniss, Die Deutschen, p. 124). [L. S.]

MANI'TAE (Mavīta!), an inland tribe of Arabia Frlix, situated west of the Thaunctac, anl south of the Salaprti, north of the "inner trankincense"
 pasition of 1toblemy's "Manitace," we:t of his Katanitae, and of Zrumes Mus, tozether with the near rescmblance of name, inoplies thoir being the same with the Musumpe of Burckhardt, the most eastern of the Horb tribes, situated on the borders of Karym In the line of country between Medina and Derayeh. (Firster, Groy. of Arabia, vol. ii. p. 249.) [G. W.]
M.1'NIUS siNUS (Mávios róntos, Scyl.p. 8), that pert of the sca off the coast of Dalmat a into which the river Naro diseharged irsell, and in which the Liburnian group of islands is situated. In mahleril times it bears no distmotive name. [E. B. I.]

MANI.IA'NA) Mavalava i) Map入iara, Pol. iv. 2. 825 ), an inlad town of Maretania, upon the pasition of which tihere is a great disurgeement between Ptoleng and the auther of the Itinetrary. The first places it 10 to the W. of Ormona Novus, and the latter 18 M . P. to the E. of that place. The mundern Milima, on the shopes of the Lesser Attres, preserving the anciont naure, may be presumed to reprosent the old town, buth of I'tolmy and the Itinelary, in which a Christian comumnity was cothblibil. (Augustin. Epp. cexxxvi.; Moreelli, - Ifvica (Turistiana, vul. i p. 211.) Shaw (Trarils, 14, 62-64) found remains of Roman architecture, and a "cippus" with an inscription which hee refers to sume of the descendants of ('u. Ponpeius (Barth, 11 anderungen, pp. 58, 20.)

MANLALA, a place in Gallin Narbonensis. on the ruad from Vienna (Vienne) to Darantasia (Moutiers en Tarentaise). It is the next station after Lemincuin [Lemixeum], and $16 \mathrm{M} . \mathrm{P}$. from it. The Antonime Itin. und the Table agree as to the prasition of Mantala. The site of the station Mantala may be, as D'Anville suggests, at a place on the Isire, named Gressi, which is commanded by an old builling named Montailleu.
[G. L.]
MANIIANA LACUS. [ARsiss.1.]
MANTINELA (Mavtipeta: Eth. Maprıpeús, Mantinensis: Paleopoli), one of the most ancient and powerful towns in Arcadia, situated on the borders of Argolis, S. of Orchomenus, and N. of Tegea. Its territory was called Maxtinice (Maytivikh) . Tho city is mentioned in the Ilomeric catalogue as Mav. тьve $\eta$ Épare $\omega \nu^{\eta}$, and, aceording to tradition, it derived its name from Mantineus, a son of Lycaon. (Hom. Il. ii. 607 ; Pol. ii. 56 ; Paus. viii. 8. § 4.) Mantineia eriginally consisted of four or five distinct villages, the inhabitants of which were collected into one city. (Xen. Hell. v. 2. §6, seq.; Strab. viii. p. 337 ; Diod. xv. 5.) If Strabo is correct in stating that this incorporation was brought about by the Argives, we may conjecture, with Mr. Grote, that the latter adopted this proceeding as a means of providing some check upon their powerful neighbours of Tegea. The political constitution of Mantineia is mentioned by Polybius as one of the best in antiquity; and the city had acouired so great a reputation at an early perind, that the Cyrenneans, in the reign of Battus 11f. (B. c. 550-530), when weakened by internal seditions, were recommended to apply to the M: Mntineians, who sent to them Demonax to settle their constitution. (Pol. vi. 43; llerol. iv. 161.) Some time before the Persian wars, Mantineia, like the other Arcadian towns, had acknowledged the Spartan supremacy; and accordingly the Mantineians fought against the Persians as the allies of Sparta. Five hundred of their citizens fought at Thermopylae, but their contingent arrived ain the ficld of Plataca immediately after the battle. (Hrod, vii. 202, ix. 77.) In the Peloponesian War, Mantineia was ut first a member of the Pelopoonesian confuleracy; but several causes tended to estrauge her from the Spartan alliance. Mantincia and Tegeat were, at this time, the two mest important Aremilian states, and were frequently engaged in hostilities. In B. c. 423, they fought a blonly and inlecisive battle, which is mentioned by Thueydides (iv. 134). Tegeas, being oligarchically guverued, was finmly attached to Sparta; whereas Mantineia, from her prasessing a hemorratical constitution, as well as from ber hatred to Tegea, was di-posed to desert Sparta on the first favourable opportunity. In addition to this, the Mantineians had receotly extended their dominion over the Parrhasians and had garrisoned a fortress at Cypsela, near the site where Megalupolis was afterwards bailt. Well uware that the Lacedaemonians would not allow them to retain their recent acquisitions, as it wats the poliey of sparta to prevent the increase of any political power in the l'elopmesus, the Manti-
neians formed an alliance with Argos, Elis, and Athens, in B. C. 421, and thus became involved in war with Sparta. (Thuc. v. 29, 33, 47.) This war was brought to a close by the decisive battle fought near Mlantineia, in June, 418 , in which the Argives, Mantineians, and Athenians were defeated ly the Lacedseronians under Agis. This battle wis fongbt to the S. of Mantineia, between the city and the frontiers of Tegea, and is the first of the five great battles bearing the name of Mantineia. The Mantineians now concluded a peace with Sparta, renouncing their dominion over the districts in Arcadia, which they had conquered. (Thuc. v. 65, seq., 81.)
Mantineia continued an unsilling ally of Sparta for the next 33 years; but in the second year after the peace of Antalcidas, which had restored to the Spartans a great part of their former power, they resolved to crash for erer this obnusious city. Accordingly, they required the Mantincians to raze their walls; and upon the refusal of the litter, they marched against the city with an army under the command of their king Agesipolis (B. c. 385), nlleging that the truce for 30 years had expired, which had been concluded between the two states after the battle of 418 . The Mantineians were defeated in battle, and took refuge in their city, prepared to withstand a siege; but Agesipolis baving raised an embankment across the river Ophis, which flowed through Mantineia, forced back the waters of the river, and thus caused an innndation around the wails of the city. These walls, being built of unbaked bricks, soon began to give way; and the Mantineians, fearing that the city wonld be taken by assault, were obliged to yield to the terms of the Spartans, who required that the inhabitants should quit the city, and be dispersed anong the villages, trum the coalescence of which the city had been originally formed. (Xen. Hell. v. 2. §§ 6. 7; Diod, xv. 5; Ephorus, ap. Harpocrat. s. v. Mavivict боикк $\boldsymbol{\mu}$ ós ; Pol. iv. 27; Paus. viii. 8. § 7, seq.) Of the furces of Mantinei: shortly before this time we have an account from the oratur Lysias, who suys that the military population or citizens of Mantineia were not less than 3000 , which will give 13,000 for the free population of the Mantineian territury. (Lysias, ap. Dionys. p. 531; Clinton, $F$. $H$. vol. ii. p. 416 .)

The Mantineians did not long remain in this dispersed condition. When the Spartan supremacy wis overthrown by the battle of Lenctra in 371 , they again assembled together, and rebuilt their city. They took care to exclude the river from the new city, and to make the stone substructions of the walls higher than they had been previously. (Xen. Hell. vi. 5 . $\S 3$; Pans. viii. 8. § 10; Leake, Jforea, vol. iii. p. 73.) The Mantineians took an active part in the formation of the Areadian confederacy, and in the foundation of Megalopolis, which followed imne. diately after the restoration of their own city; and one of their own citizens, Lycomedes, was the chief promoter of the scheme. But a few years afterwards the Mantineians, for reasons which are not distinctly mentioned, quarrelled with the snpreme Arcadian government, and formed an alliance with their inveterate enemies the Spartans. In order to pat down this new coalition, Epaminondas marched into the Feloponnesus; and Mantiveia was again the seene of anotber great battle (the second of the five alluded to above), in which the Spartans were defeated, but which was rendered still more meno-
rable by the death of Epaninondas. (Xen. Hell. vii. 5; Diod. $\mathbf{x v}$. 84.) The site of this hattle is described below. The third and fourth battles of Mantineia are orly incidentally mentioned by the ancient writers: the third was foucht in 295 , when Demetrius Poliorcetes defented Archidamms and the Spartans (Plut. Demetr. 35) ; the fourtb in 212 , when Aratus and the Aclueans defasted the Sjartans under Avis, the latter falling in the battle. (Pans. viii. 10. § 5, seq.)
Mantineia continued to be one of the most porrerful towns of Arcadia down to the time of the Achaean Leaguc. It at first joined this league : but it subsequently deserted it, and, togetlier wih Orchomenns and Tegea, became a member of the Aetolian confederacy. Thene three cities at a later time renounced their alliance with the Aetoliars, and entered into a close union with Sparti, abont e. c. 228 . This step was the immediate canse of the war between the Achaeans and the Spartans, nsually called the Cleomenic War. In 226, Aratus surprised Mantineia, and compelled the city to recrive an Aclaean garrison. The Mautineians suon afterwards expelled the Achaeans, and again joined the Spa tans ; but the city was taken a second time, in 222, by Antigunus Doson, whom the Achaeans had invited to their assistance. It was now treated with great sererity. It was abandoned to plunder, its citizens were sold as slaves, and its name clanged to Antigoneia ('Avziróveta), in compliment to the Macedonian monarch (Pol. ii. 57, seq.; Plut. Arat. 45 ; Paus viii. 8 . § 11). In 207, the phain of Mantineia was the scene of a fiftl great battle, between the Achaean forces, comunanded by Plilopoemen, and the Lacedaemonians, nnder the tyrant Machanidas, in which tbe latter was defeated and slain. An account of this battle is given by Polybins, from whom we learn that the Achaean arniy occupied the entire breadth of the plain S. of the city, and that their light-armed troops occupied the bill to the E. of the city called Alesium by Pausanias. The Lacedaemonians were drawn up opposite to the Achaeans ; and the two arnies thns occupied the same poition as in the first battle of Mantiveia, fought in the Peloponnesian War. (Pol. xi. 11.) The Mantineians were the only Arcadian people who fought on the side of Augustus at the battle of Actium. (Paus. viii. 8. § 12.) The city continued to bear the name of Antigoneia till the time of Hadrian, who restored to it its ancient appellation, and conferred apon it other marks of his favour, in bonour of his favourite. Antinous, because the Bithynians, to whom Antinous belonged, claiued descent from the Mantineians. (Pius. viii. 8. § 12 , viii. 9. § 7.)

The territory of Mantineia was bumnded on the W. by Mt. Maenalus, and ou the E. by Mt. Artemisium, which separated it from Arcolis. Its northern frontier was a low narrow ridge, separating it from Orchomenia; its southern frontier, which divided it from Tegeatis, was formed by a narrow part of the valley, hemined in by a projecting ridge from Itt. Naenalus on the one side, and by a similar ridge from Mt. Artemisius on the other. (See below.) The territory of Nantineia forms pait of the plain now cailed the plain of Tripolitzu, from the modern town of this name, lying between the ancient Mantincia and Teger, and which is the priscipal place in the district. This plain is ahout 25 English miles in length, with a breadth varying from 1 to 8 , and includes, besides the territory of Nantinei:, that ol

The territory of Mamin，cia is frequently described by the an ient writus，from its havige been so often the sat of war ；bat it is dificult，and almost im－ pesi le，to identify any of the loralities of which we fil ！thation，from the disapparance of the sanc－ tuarime and monuments by wf L spots are irdicated， a．In in of m the pature of the pwin，the ：oporraphy of whi h must have beem fremaet tly altored hey the
 a tew words are neceasary．The plain of Tripelt hei，
（f whith Mantinice formed part，is one of those valles：in Arcadia，which is so completely shut in by moutains，that the streams which flow into it have nu．outlet except through the chasms in the moun－ tains，ealled katavóthra．［Arcadna．］The part of thie plain，which formed the territory of Mantineia， i．so complete a level，that there is not，in some parts，a sulficient slope to carry off the waters ；and the land would he overflowed，unless trenches were made to assist the course of the waters towards some one or other of the katavothlura which nature bas prorided for their discharge．（1＇ol．xi．11．）Niot only nuust the direction of these trenehes bare been sonetimes changed，but even the course of the streams was sometimes altered，of which we have an interesting example in the history of the campaign of 418 ．It appears that the regulation of the noun－ tain torrent on the frontiers of Mantinice and Tege－ atis was a freqnent subject of dispute and even of War between the two states ：and the one frequently inundated the territory of the other，as a means of amnuyance．This was done in 418 by Agis，who let the waters orer the Ilain of Mantineia（Tluc，v．65）． This river can only be the one called Ophis by the Geozraybers of the French Cotumission．It rives a little N．of Tegea，and after flowing through Tesc－ atis tillis now into a katavitlora yorth of the hill scope．In general the whole plain of Mantineia bears a very different arpect from what it jresented in antiquity ：instead of the wood of oaks and cork－ trees，described by Pausanias，there is now not a sin le tree to be found；and no poet would now think of giving the epithet of＂lovely＂（éparemin） to the naked plain，covered to a great extent with stagnant water，and shut in by gray treeless rocks． （Rins，Reisen im Poloponnes，p．128．）

Ahout a mile N ．of the ruins of Mantineis is an isolated hill called Gurtzill；noth of which again， also at the distance of about a mile，is anotber bill． The latter was probably the site of the ancient Man－ tineia，and was therefore called Prous（Hтódıs）in the time of Pausanias（riii．12．§ 7）．This appears to have been one of the fixc villages from the inha－ bitants of which the city on the piain was peopled．

There were several roads leading from Mantincia． Two of these roads led north of the city to Orchome－ nus：the more easterly of the two passed by Ptolis，just mentioned，the fountain of Alalcomeneia，and a de－ serted rillage named Mabra（Maipa）， 30 stadia from Ptolis：the read on the west passed over M1t．Anchi－ sia．on the northern sl pe of which was the temple of Artemis Hymuia，wbich formed the boundary be－ tween Mantinice and Orchomenia．（Paus．viii． 12. § 5 －9．comp．riii．5．§ 11．）

A road led from Blantineia on the W．to Methy－ driusn．It passed through the plain Alcimedon， Which was 30 stadia from the city，above which was Mount Ottracina ；then by the fountain Cissa， and．at the distance of 40 stalia from the fountain， by the small place Pritcosaca（i）Пeтробג́ка）， which was on the confurs of the Mantineian and Dlegalopolitan territ ries，（Pans，viii．12．§§ 2－4）

Two ronds led from Mantimeia southwards，－the me SE．to Trgea，and the other SII．to Pallan－ tium．On the left of the road to Tegea，cal！ed Xexis（ミev／s）！y Polybius（xi． 11. §5），just outside the eates of Mantineia，was the hippodrome，and a little further on the stadiun，above which rose Mount Al sivn ：at the sput where the noountuin cea el wav the tos ple of Puseritun llippins，which was 7 stalia from the cify，as we learn from Poly－

plain of mastivela.

## MANTINEIA

Ind Privt ：（Mpivos）and Climax（Kגíma！）． ＂Ladder，＂reapectively．（Paus．viii．6．§ 4．） I latter was so called from the steps eut unt of tion rock in a part of the road ；and the Prinns pro－ tonty derived its name from passing by a large thentrak（mpivos），or a small wood of holm－oaks； but the ruads do not appear to lave borne these names till they entered Mantimice．There are only two pirses through the mountains，which separate the Argive plain from Dlantivice，of which the southern and the shorter one is alung the course of the river Charadnas，the northern and the lunger one alne the valley of the lnachus．Buth Ross and Leake agree in making the Prinus the sonthern and the Climax the northern of these two roads， contray to the conclusions if the Freachs survegors． Buth roals quitted Argos at the same gate，at the hill called Deiras，but then inmediately parted in diffirent directions．The Prast＇s，after crossing the Charadrus，passed by Ocnui，and then ascended Mount Artemisium（Maleros），on the sumnit of which，by the road－sile，stood the temple of Alteunis． and near it were the sources of the luacl us．Here were the boundaries of Mantinice and Argolis． （1＇aus，ii．25．§s 1－3．）On descending this moun－ tain the rad entered Mantiviee，first crossing through the lawest and mast marslyy part of the＂Argon，＂ or＂Lireultivated llain，＂so ealled because the waters from the momutains collect in the plain and rowder it unfit for cultivation，althou，h there is a katavithra to carry thetn off．On the left of the 1hnin were the temains of the camp of Phillip，son of Auyntas，and a village called Nestase（Neoraivy）， probably num the modern village of Tzipiand． Noar this spot the waters of the plain entered the katavothra．and are said not to bave made their esit till they reached the sea off the coast of the Argeia．Below Nestane was the＂Dancing－ place of Maera＂（Xopòs Maipas），which was orily the southern arin of the Argon Plain，by means of which the latter was connected with the great Man－ tineiar plain．The road tben crossed over the foot of Mount Alesium，and entered the great Mlantineian plain near the fountain Arne at the distance of 12 stadia from the citr．From thence it passed into the city by the suuth－eastern or Tegeatan gate． （l＇aus．viii．6．§ 6－viii．8．§ 4．）
the other road，called Chimax，ran from Argos in a nurth－westerly direction along the course of the Inachus，first 60 stadia to Lyrceia，and again 60 stidia to Orneae，on the frontiers of Sicyonia and Milimia．（Paus，if．25．$\$ \S 4-6$ ．）It then crossed the $n$ untain，on the descent of which into Dantinice were the steps cut out of the rock．The road en－ tered Mlantinice at the upper or northern corner of the Argon l＇lain，near the moderis village of Sanga． It then ran in a south－westerly direction，along the western side of Nount Alcsium，to a place called Melangeis（ тà Me入a water was conducted by an aqueduct to Mantineia， of which remains were ubserved by Ross．It cor－ responds to the modern village of Pikerni，which is

CU $\underset{\text { N }}{ }$ UP MANTISELA．
said to signify in the Albanian languace " alounding in springs." The road nest passed by the fonntain of the Meliastae (Mexazoral), where were temples of Dionysus and of Apbrodite Melaenis: this fountain was 7 stadia from the eity, opposite I'tolis or Old Mantiucia. (Pans, viii. 6. §s 4,5 .) The preceding account is rendered clearer by the map on p. 263.
(For the geograpby of Mantinice, see Leake, Morea, vol. i. p. 100 , sej, vol. iii. p. 44 , seq. ; Peloponnesinca, p. 369, sect-; Ross, Reisen in Peloponnes, vol. i. p. 121, seq.; Curtius, Peloponnesas, vol. i. p. 232, seq.)

MA'NTUA (Mávrova: Eth. Mantnanns: Mantora), a city of Cisalpine Gaul, situated on the river Mincins, on an island furmed by its waters, about 12 miles above its confluence with the Padns. There seems ao doubt that it was a sery ancient city, and existed lowg before the establishment of the Gauls in this pmit of Italy. Virgil, who was naturally well acquainted with the traditions of his mative place, tells us that its population was a mixed race, but the bulk of the people were of Etruscan origin; and Pliny eren says that it was the only city beyond the Padus which was still inlabited by an Etruscan people. (Virg. Aen. x. 201-203; Plin. iii. 19. s. 23.) Virgil does not tell us what were the other aational elements of its population, and it is not easy to understand the exact meaning of bis expression that it consisted of three "gentes," and that each gens comprised four "populi ; " but it scens certainly probable that this relates to the internal division of its oun territory and popolation, and bas no reference (as Miiller has supposed) to the twelve cities founded by the Etruscans in the valley of the Padus. (Willer, Etrusker, Fol. i. p. 137; Niebulr, vol. i. p. 296 , note 757.) The Etruscan origin of Mantus is confirmed by its name, which was in all probability derived from that of the Etruscan divinity Dantus, though another tradition, adopted by Tirgil bimself, seems to have deduced it from a prophetic nymph of the name of Manto. (Serv, ad Aen. l. c.; Schol. Veron. ad loc. p. 103, ed. Keil.) According to one of the oldest scholiasts on Virgil, both Verrius Flaccus and Caecina, in their Etruscan histories, ascribed the fundation of Mantua to Tarchon bimself, while Virgil represents Ocnus, the son of Manto, as its fuuder. (Virg. Aen. x. 200; Schol. Veron. l.c.) The only historical fact that can be considered as resulting from all these statements is that Mantua really was an Etrascan settlement, and that for some reason (probably from its pecaliar and inaccessible situation) it retained mach of its Etruscan cbaracter long after this had disappeared in the other cities of Cisalpine Gaul.

After the settlement of the Gauls in Northern Italy, Mantua was probably included in the territory of the Ccnomani (Ptol. iii. 1. § 31); but we fud no mention of its name in history, nor do we know at what period it passed uader the Roman dominion. From an incidental notice in Livy (xxiv. 10) during the Second Punic War, we may probably infer that it was then on frieudly terms with Rome, as were the Cenomani and Veneti ; and as its name is not mentiunet during the subsequent wars of the Romans in Cisalpine Gaul, it is probable that it passed gradually, with the other towns of the Cenomani, from a state of alliance to one of dependence, and ultimately of subjection. But even under the Roman diominion the name of Mantua scarcely appears in
bistory, and it is clear that it was far from possessing the same relative importance in ancient times that it did in the middle ages, and still retains. It was undoubtedly a municipal town, and is inentioned as such by all the geommphers, as well as in inscriptions, but both Strabo and Martial speak of it as very inferior to the neighbouring city of Ver na, in comparison with which the latter terms it "parya Mantna." (Strab, v. p. 213 ; Plin. iii. 19. s. 23 ; Ptol. iii. 1. § 31 ; Martial, xiv. 195.) During the civil wars after the death of Caesar, Mantua suffered the loss of a part of its territory, for Octavian having assigned to his discbarged soldiers the lands of the neighbouring Cremona, and these having proved insufficient, a portion of the territory of Mantua was taken to make up the necessary amount. (Virg. Ecl. ix. 28, Georg. ii. 198; Serv, ad loc.) 1t was on this occasion that Virgil was expelled from his patrimonial estate, which he however recowered by the favour of Augustus.

The chief celebrity of Mantua under the Roman Empire was undoubtedly owing to its baving been the birthplace of Virgil, who has, is consequence, celelurated it in several passitges of his works; and its name is noticed on the same account by many of the later Roman poets. (Virg. Gorg.iii. 12; Ovid, Amor. iii. 15. 7 ; Stat. Silc. iv. 2. 9 ; Sil. Ital. viii. 595 ; Martial, i. 62. 2, siv. 195.) According to Donatus, however, the actual birtlplace of the poet was the village of Andes in the territory of Mantua, and not the city itself. (Donat. Fit. I irg. 1; Hieron. Chron. ad ann. 1947.)

After the fall of the Roman Empire, Mantua appears to bave become a place of importance from its great strength as a fortress, arising from its peculiar situation, surrounded on all sides by broad lakes or expanses of water, formed by the stagnation of the river Mincius. 1t, however, fell into the bands of the Lombards uoder Agilulf (P. Diac. iv. 29), and after the expulsion of that people was governed hy independent counts. In the middle ages it beame one of the most important cities of the N. of Italy ; and is still a popnlous place, and one of the strongest fortresses in Italy. It is still so completely surrounded by the stagnant waters of the Mincio, that it is accessible only by canseways, the shortest of which is 1000 feet in length.

Mantna was distant from Verona 25 miles; so that Procopius calls it a day's journey from thence. (Procop. B. G. iti. 3.) It was sitnated on a line of road given in the Tabula, which proceeded from Mediolaoum, by Cremona and Bedriacum, to Mantua, and thence to Hostilia, where it crossed the Padus, and thence proceeded direct to Ravenoa. (Tab. Peut.) Dantua was distant from Cremona by this road about 40 miles. It would appear from one of the minor poems ascribed to Virgl (Catalect. 8. 4), that this distance was frequently traversed by moleteers with light vebicles in a single day. [E. H. B.]

MANTZICIERT (Mavt そikiépt, Const. Porph. de Adm. Imp. c. 44), a fortress of great importance upon the Armenian frontier. In A. D. 1050, it offered so determined a resistance to Togrul $\mathrm{B} t i \boldsymbol{i}$, the founder of the Seljukian dynasty, that be had to give up all hope of breaking through the harrier of fortresses that defended the limits of the empire, and retired into Persia. (Cedrea. vol, ii. p. 780; Le Beaa, Bas Empire, vol. xiv. p. 367 ; Einlay, Byzantine Empire, p. 523.) It is identified with Melusgerd or Manaskhert, situated to the NW. of lake I'an, and the
remarkable voleatic cone of Sip in Tigh．（St． Martin，Mém．sur l＇Armenic，sol．i．p．105：litter， Errkunde，vol．ix．p．99．4．）

［L．S．］

MA'RATIION (Mapa日ढ́v : Eth. Mapa日ف́ptos), a small plain in the NE. of Attica, containing four places, named Mamation, Pronalinthes (חpogd-

 otos), and Oevoe (Oivón: Eth. Oivaios), which originally formed the Tetrapolis, one of the 12 districts into which Attica was divided before the time of Theseus. Here Xinthns, who married the daughter of Erechthens, is said to have reigned; and here the Heracleidae took refuge when driven out of Peloponnesus, and defeated Eurysthcus. (Strab. viii. p. 383 : Steph. B. s.v. Teт ároخıs.) The Marathonii claimed $^{\text {a }}$ to be the first people in Greece who paid divine honours to Hercales, who possessed a sanctuary in the plain, of which we shall spealk presently. (Paus i. 15. § 3, i. 35. § 4.) Marathon is also celebrated in the legends of Thiseus, who conquered the ferocinus bull, which used to devastate the plain. (Plut. Thes. 14; Strah. is. p. 399 ; Fans. i. 27. § 10.) Marathon is mentioned in the llomeric poems in a way that implies that it was then a place of importance. (Od. vii. 80.) Its name was derived from an eponsmous hero Marathon, who is described by Pansanias as a son of Epopens, king of Sieyon, who fled into Attica in consequence of the cruelty of bis father (Paus. ii. 1. § 1, ii. 6. § 5, i. 15. § 3, i. 32. § 4). Plutarcb calls him an Arcadian, who accompanied the Disscuri in their expedition into Attica, and voluntarily devoted bimself to death before the battle. (Thes. 32.)

After Thesens united the 12 independent districts of Attica into one state, the name of Tetrapolis gradually fell into disuse; and the four places of which it consisted became Attic demi, - Marathon, Tricorythus, and $O$ enoë belonging to the tribe Aeantis, and Probalinthus to the tribe Pandionis; but. Marathon was so superior to the other three, that its name was applied to the whole district down to the latest times. Hence Lucian speaks of "the parts of Marathon about Oenoë" (MapaỀvos тà $\pi \in \rho i \tau \grave{\eta} \nu \mathrm{Oivó} \mathrm{\eta}$, Icaro-Menip. 18).

Few places have ohtained such celebrity in the history of the world as Marathon, on account of the victory which the Atbenians here gained over the Persians in B. c. 490 . Hence it is necessary to give a detailed account of the topography of the plain, in which we shall follow the admirable description of Colonel Leake, drawing a little additional information from Mr. Finlay and other writers.

The plain of Marathon is open to a hay of the sea on the east, and is shut in on the opposite side by the heights of Brilessus (subsequently called Pentelicus) and Diacria, which send forth roots extending to the sea, and bounding the plain to the north and south. The principal shelter of the hay is afforded by a long rocky promontory to the north, anciently called Crnosura (Kunóroupa, Hesych.. Phot., s. v.) and uow Stómi. The plain is about 6 miles in length and half that breadth in its broadest part. It is somewhat in the form of a half-moon, the inner curve of which is bounded by the bay, and the outer by the range of mountains already described. The plain, described by Aristophanes as the "pleasant mesd of Marathon" ( $\lambda \in \iota \mu \hat{\nu} v a$ т̀̀v दpóevтa MapaOwivos, Aves, 246), is a level green expanse. The hills, which shut in the plain, were covered in ancient times with olives and vines (Nonn. Dionys. xiii. 84, xlviii. 18). The plain is bounded ut at its southern and nerthern extremities by two marshes, of which the southern is not large and
is almost dry at the con:lnsion of the great lipats; while the northern, which is much larger, offers sereral parts which are at all seasons impassable. Buth, however, have a broad, firm, sandy besch between them and the sea. A river, now called the river of Marathona, flows throngh the centre of the plain into the sea.

There are four roads leading ont of the plain. 1. One runs along the coast by the south-western extremity of the plain. (Plan, ac.) Here the plsin of Marathon opens into a narrow maritime plain three miles in length, where the mountains fall so gradually towards the sea as to present no very defensible impediment to the communication between the Marathonia and the Mesogaea. The road afterwards passes through the valley between Pentelicus and Ilymettus, through the ancient demus of Pallene. This is the most level road to Athens, and the only one practicable for earriages. It was the one by which Peisistratus marched to Athens after landing at Maratbon. (Herod, i. 62.) 2. The second road runs through the pass of Vrand, so called from a small rillage of this name, situated in the southern of the two valleys, which branch off from the interior of the plain. (Plan, bb.) This road leads through Cephisia into the nortbern part of the plain of Athens. 3. The third road follows the vale of Murathona, the northern of the two valleys already named, in which lies the village of the same name, the largest in the district. (Plan, co.) The two valleys are separated from one another by a hill called Kotroini (Plan, 3), very rugged, but of no great height. This third roaid leads to Aphidna, from which the plain of Athens may also be reached. 4. The fourth road leaves the plain on the north-east by a narrow pass (Plan, $d d$ ) between the northern marsh and a round naked rocky height called Mt. Koraiki or Starrokoróki. (Plan, 4.) It leads to Rhamnus; and at the entrance of the pass stands the village of Lower Sili. (Plan, 12.)

Three places in the Marathonian district particularly retain vestiges of ancient demi. 1. I'raná, which Leake supposes to be the site of the demus of Marathon. It lies upon a height furtified by the ravine of a torrent, which descends into the plain after flowing betreen Mts. Argaliki and Aforismó, which are parts of Mt. Brilessus or Pentelicus. (Plan, 1, 2.) A little below Iraná are seen four artificial tumoli of earth, one considerably Larger than the others; and in a pass at the back of the hill of Fintront. which leads from the rale of Irand into that of Marathoina, there are some remains of an ancient gate. Ncar the gate are the foundations of a wide wall, 5 feet in thickness, which are traced for nearly 3 miles in circumference, ellclosing all the upper part of the valley of Frond. These ruins are now known by the name of $\dot{\eta}$ $\mu a ́ \nu \delta ̊ p a ~ \tau \hat{\eta} \mid$ रpaías (the old wornan's sheepfuld). Near the ruined gate Leake observed the remains of three statnes, probably those which were erected by Herodes Atticus to three favourite servants. (Philostr. Sopk. ii. 1. § 10) Marathon was the demus of Herodes, who also died there. The wall mentioned above was probably built by Herodes, to enclose his property; for it would seem from Pliny that Jlarathon no longer existed as a town or villace a centary before the time of Herodes. (" Phamnus pagus, locus Marathon," Plin. iv. 7. s. 11.) The early disappearance of the ancient town of Marathon would casily cause its name to be
transferred to another site：and it was natural that the celchated name shonld be sives to the prin－ cipul place in the district．Thres－quarters of a mile to the south－east of the tumuli of livaná there is a rising ground，upon whith are the traces of a llellenic wall，appanoutly the peribolus of a temple．This was probally the temple of IJer－ cules（Рlan，10），in whese sacred enctesure the Athenians were encanoped bufore the battie of Ma－ rathon．（1lerod．vi．108．）

2．There are several frasments of anti nity situated at the head of the vall $y$ of Marathinue at a spot called Inöt．which is tow dombt the site of the ancient Orame，one of the four deni of the district．The retired situation of Ocmoe secomets for its omission by Stabo in his ennmeration of the demi sitnated near the con－t（ix．p．399）．

3．There are also evident remains of an ancient demns sitnated upon an insulated height in the plain of Sili，near the entrance of the pass leading out of the Marathonian plain to Suli．These ruins are probably those of Tercorytures，the situation of which acres mith the order of the matitime deni in Strabo，where Tricorythns iumedintely preveles Hiamnus．We learn from Ari－t phanes and Suidas that Tricorythus was tormented by gnats from a neichturing marsh（eunis iatuv Fion Tpikopuria，Aristoph．Lysistr．1032：Sulas，s．v． éurs）；and at the prevent day the inhaitants of Later ．Suli in the summer are driven by this plaque and the hal air into the upper vilage of the sathe name．The torn was probahly called Triourythos from the triple peak on which its citadel was built．
The site of Pronalmyturs is uncertain，but it should probably be placed at the somuthest ex－ tremity of the Marathonian plain．This mizht be inferred from Strabo＇s emmeration，tho mentions first Probalinthus，then Marathon，and lastly Tri－ eorythus．Between the southern marsh and Mt． Arpaliki there are fommlations of buills at a plate calted Valari，which is，perhapk，a comptition of I＇rohalinthus．Close to the sea，upon a rising ground in the mash，there are some anrient re－ mains，which may，perhatre，be those of the temple of Athena Hellotia（Plan，11），which epithet the enddess is said to bave derived from the markh of Marathon，where the temple was built．（Schul．ad Pind．Ol．xiii． 56 ；Etym．M1．s．r．＇E入入 $\quad$（ís．）

The principal monument in the Narathonian plain was the tumulus ere ted to the 192 Athenians who were slain in the butte，and whose names were inceribed upon ten pillars，one for each tribe，placed upon the tonn．There was alwo a second tumntus for the Platacans an！slaves，an 1 a separate mom－ ment to Miltiades．All these monuments were spen be 1＇ausanias 600 years after the battle（i．32．\＆3）． The tumulus of the Athenians still exist：It stauds in the centre of the plain，alunt lalf a mite frim the sea－shore，and is known by the nane of Suro（ $\delta$ Sopós），the tomb．（1lan，13．）It is about 30 feet high，and 200 yards in circuuference，composed of a light mould mixed with sand，amidst which have been found many brazen heads of arrowz，abont an inch in length，of a trilateral form，and piered at the top with a round hole for the recepton of the Naft．There are abo found in atill ercater num－ bers，fraguents of black fout，radely shayed by art， which have been usnally considored fragments of the surow－heals used by the lersian arcliers；but this opini ne cant ot be rectived，as foits of the sane

## MARATHON．

kind alound in other parts of Greece，where no I＇esian is reputed to have set bis foot；and，on the other hand，nons have been found citber at Thermo－ pylae or Platma．At a very small distance from this tomulus Lerke moticed a small heap of earth and stones，which is，perhaps，the tomb of Plataeans and Athenian slaves．At 500 yards north of the great tumulus is a roin ealled Pyrgo（ $h$ ipyos）， consisting of the foundation of a square monument， constructel of large blocks of white marble；it is ：a）arently the monament erected in honour of Jiil－ tiades．（Plan，14．）

We learn from Plilochorus that there was a temple of the J＇ythian Aprollo at Marathon（ap．Schol．ad Soph．Oed．Col．1047）；and Demosthenes relates that the sacred vessel was kept on this coast，and that once it was carricd off by Philip．（I＇hil．i． 1．49．）
l＇ausamias（i．32．§ 3．seq．）mentions in the plain several natural cubjects，some of which have been notired already．The lake at the northern extremity of the plain he describes＂as for the most part mashly，into which the flying barbarians fell through their ignorance of the ways ；and here it is said that the principal slaughter of them occurred． Beyond the lake（ $\dot{v} \pi \dot{\varepsilon} \rho$ тìv $\lambda i \mu \nu \eta \nu$ ）are seen the stables of stone for the horses of Artaphernes，to－ getber with restiges of a tent upon the rock．A river flows out of the lake which，within the lake， atfiods water fit for cattle to drink；but，towards the phace where it enters the sea，becomes salt and full of sea－fishes．At a little distance from the plain is a mount：an of 1 ＇an，anu a cavern worthy of inspection：the entrance is narrow ；but within are ajartments and baths，and that which is called the gont－s＇and（ainó入ov）of Pau，together with rocks very much resenbling goats．＂Leake observes that the $n$ arsly lake，and the river，which，becoming salt towards the mouth，produces sea－fishes，are precisely as fausanias deacribes them．The marsh is deepest towards the foot of MIt．Koraiki，where several springs issue from the foot of the rocks on the ripht side of the road leading from the great plain to Lencer Suili．These springs are appareutly the fions ain Marama（Plan，8），which P＇ansanias mentions just before his description of the marsh． It derised its name from Macaria，a daugliter of Hercoles，who devoted herself to death in behalf of the Heraclidae before the victory which they gained over the Argives in the plain．（Comp．Strab．viii． p．3：7．）A small stream，which has its origiu in these springs，is traced through the marsh into a snall salt lake（Plan，9）．supplied by subterraneous murces，and situatmi on the south－eastern extremity of the narih，unler a rocky ridge，the centinuation of C Couni．Both the ridge and salt lake are known by the name of Dhrakonéria（тà $\Delta \rho a k \omega-$ vepia，i，e．the monster－waters，so called from its size，since $\delta$ páko is a common exp ression anong the modern Greeks for any marvellons objeet）．On the eastern side of the great marsh Leake noticed a small eavern in tbe side of MC．Dhrakonéria，which is perhaps the place called by Pausanias＂the stables of Artapliemes．＂Leake supposes that the peman commaters were encaroped in the adjoin－ ing plain of Tricurythns．The mountain and casern of Pan have not yet been discovered．They would appear，fry in tbe description of fausanias，to have bent a little further removed from the plain than the marsh tand salt lake．Hence they may be placed in 11t．Ǩuráki．

The exact ground occupied by the Greek and Persian armies at the battle of Mazathon can only be a matter of conjecture. Col. Leake, whose arcount is hoth probable and consistent, thongh Mr. Firlay differs from him, supposes that the Athenian camp was in the valley of I'rand near its opening intu the plain; that on the day of battle the Athenian line extended from a little in front of the Heracleivm, at the foot of Mt . Argatiki, to the bend of the river of Marathona, below the village of Seferi; and that the Persians, who were 8 stadia in front of them, had their right resting on Mt Koraki. and their left extending to the southern marsh, which prevented them from having a front much greater than that of the Athenians. (See I'lan, AA, BB.) When the Persians defeated the Athenian centre, they pursued the latter up one or both of the two valleys on either side of Mt.

Kotróni, since Herodotus says that the porsuit continued quite into the interior (is $\tau$ ìv $\mu \in \sigma$ óyalav). Nearly at the same time the Persian left and right were defeated; but instead of pursuing them, the Athenians returued tuwards the field to the aid of their own centre. The Persian right fled towards the narrow pass Jeading into the plain of Tricorythus; and liere numbers were forced into the marsh, as Pausauias relates.
(Leake, The Demi of Attica, vol. ii. pp. 77, 203, originally published in Transactions of the Royal Socirty of Literature, 1829, vol. ii.; Finlay, Ibid. vol. iii. p. 363: Wordsworth, Athens and Attica, p. 44: Mure, Journal of a Tour in Creece, vol. ii. p. 101; Thitwall, Hist. of Greece, vol. ii. p. 239: Grote, Ilist. of Greece, vol. ii. p. 466: Mure, Hist. of Grech Literatare, vol. iv. pp. 510, 549, 550; Blakesley's Herodotus, vol. ii. p. 172.)

MARATHUS (Mápa日os: Eth. Mapâqraios al. Mapatijpos), a eity on the coast of Syria, north of Aralus, placed by Ptolemy in the district of Cassiotis, which extended as far north as Antioch. It is joined with Enydra, and was a rnin in Strabo's time. It was on the confines of Phevice, and the
district was then under the dominion of the Aradians (Strab. xvi. p. 753 ; comp. Plin. v. 20), who had been foiled in a former attempt to reduce it to their power. The story, as given in a fragment of Diodurus (iib. sxxiii. vol. x. p. 76-78, ed. Bipont ; vol. ii. p. 593, ed. We s.), is as follows. The people of Aradns having
seized what they considered a favourable opportunity for the destruction of the people of Marsthus，sent privately to Ammodius，prime uinister of Alesander Balas，the king of Syria，and bribed him with the offier of 300 talents to deliver up Marathus to them． The unfortonate inhabitants of the der ited city attempted in vain to appiase their enemics．The Aradians violated the common laws of supphiants， broke the very acient images of the local deities， －which the Maratheni had brouglt to add solemnity to their embassy，－stoned the ambassadors，and cast them into prison：according to another account，they murdered some，and forged letters in their names， which they sealed with their seals，promising suc－ cour to Marathus，with a view of introducing their troops into the city under this pretence．But dis－ cosering that the citizens of Marathus were informed of their design，they desisted from the attempt． The facts of its final subjugation to Aradus are not preserved．Pling（v．20）places Marathus opposite to the island of Aradus，which he says was 200 parsus（ $=\mathbf{1 0 0 0}$ Roman feet）from the coast．Dio－ dorus（ $l$ ．c．）states the distance between Aradus and Marathus to be 8 stadia；which need not be incon－ sistent with the statement of Pliny，as the latter may be supposed to measure to thie point on the mainland pearest to Aradus，the furmer the distance between that island and the town of Marathus．The fact，bowever，is，that even the statement of Diodorns is too short for the ncarest point on the coast；for this island is，according to Maundrell（Marel 7，p． 19），＂about a league distant from the shore．＂And Pococke，who crussed the strait，says＂it is reckoned to be about two miles from the continent． （Obsercations on Syria，p．201．）The 20 stadia of Strabo is therefure much more correct than either of the other authorities．He says that the island lay
 between its port（Caraous lege Camos）an 1 Marathus： and what was the respective situation of these towns he intimates in anotber passage，where，reck ming from the north，be enumerates Balamaea，Carnos， Enydra，Marathus．Pococke take，Tortosa to be ．without doubt Caranus（Carmos）the port of Aradus on the continent；＂and as this is two miles worth of Aradus，he properly louks for Marathus to the south，－identifying Enydra with Ein－el－Hye （the Serpuits Fountrin）．＂directly opmaite to Aradus（p．203），and succestius that sume ruins which he observed on at raved groand，at the northern extremity of a plain，abont $z$ miles somth of Tintosu，＂minsht prosibly he Marathus＂（p．204） These conjectures may be admitted with some slight monditications．Thns，e．g．，instead of iden－ tiffine Tortosa with Carnons，this naval aromal of the Arvadites must be pheeed about $2 \frac{1}{2}$ miles north of Tortusa，where a lati traveller has disc wered＂ex－ tensive ruins，callod by the Arab pessants Carmon， －the site，dumbloos，of the Camos or Caramss of the andents．The people fr m Aryad sill quarry stanes from these ruins；and ladow it．on the north， is a small harhour，which appars to hate been forti－ fied like that of Tiothas．＂（Thomgron，in Bibliwtheca Sacra，vol．e．p．25：）A fr sh－waters spring in the sea，is menti ged by Strato ；and a mile to the south，between Carmous and Tortasa，＂a few rols from the shori，on inmen ee fonntin，called At in Inrahim（Abrataur＇s fownoin）．In up fr in the botom．＂Tortowe，thris， $\mathrm{m}_{2}$ be，as many me－ dioceal writ To mant．inerd，Antaralns，woi t＂Alabic geogrtphers write Antartus and At wher ；whence
the commen Arabic name Tartus，in Italian Tortosa＂ （I．c．p．247，n．1）．＇Jin－el－Miveh，written by Pococke Ein－el－Hye，is certainly the Enydra of strabo ；the geographer，or liis infurmant，having in this，as in so inany other instances，retained the first half of the native name，and translated the latter half．－En being the usual Greek and Latin equivalent for the Smetic ${ }^{*} \mathrm{~A} y n=$ fountain，and the hydra a sufficiently cluse representative of the Smetic Higeh＝serpent． South of this fountain are very extensive quarries，five or sis miles to the sonth of Tortosa．＂This neigh． bourhood is called by the Arabs Amreed or Moabed Amreet＇the fane of Amreet．＇This name the Greek．s probably changed into Marathus，and the old vaults， foundations．sarenplagi，\＆．c．，near＇Aive el－Iliyeh （Serpent＇s Fountain），may mark the precise locality of ancient Marathus．＂（Thompson，l．c．p．250．） Pococke describes bere a ruck－hewn temple，and monulithic house and chambers ；besides a kind of semicircle，which be thinks＂might serve for some sports to divert the people of Aradus and Antaradus， or of the aveienr Marathus，if that was near．It was probably a circus＂（p．203）．

It was the more nccessary to identify these sites， as D＇Anville placed the ancient Marathus at the modern Marakiah，which is，doubtless，the repre－ sentatise of＂Mutatio Maraccas＂of the Jeruselem Itinerary，on the confines of Syria and Pb －nice， 13 M．P．south of Balaness（now Baneas），and IO M．P．north of Autaradus：and this error is per－ yetuated in Arrowsmith＇s map．［G．W．］

DARATHUS（Má，a日os）．I．A small town in Phocis，near Anticyra，mentioned only by Susabo （is．p．423）．Perhaps represeated by the remains at Sicl iro－kafl：hio．（Leake，Northern Greecc， rol．ii．p．549．）

2．A town of Acarnanis，of nnknown site，men－ tioned only by Steplanus B．（s．v．）

MARA＂THitsA an inland city of Crete，mentioned by Pliny（iv． 12 ；comp．Tzechucke，ad Pomp．Mét． ii．7．\＆13；Höck．Kreta，vol．i．p．434．）［E．B．．J．］

MARATHUSSA（Mapd́禺的a），a small island of the Aegaean sea，off the cuast of Imin，near Clazomenae．（Tluc．viii． 31 ：1＇lin．v．31．s．38．）

MarCI，a place mentioned in the Not．Imp，as on the Sison shore，and as a station of some Dalmatian eavalry under the command of the general of Belgica Secur la．D＇Anville supposes，with De Vahns，tliat it may be Marts brtwean Calais and Grarelines ： but the site is uncertain．
［G．L．］
MARCIAR：［G．M．t．MECIA，p．934，b．］
MARCIA＇NA SILVA，a mountsin furest in the south－west of Gertany，probaty the whole or a portion of what is now called the Black Forest （Amm．Marc．xxi．8：Tub．I＇euting．）The orizin of the name is not known，Cluver regarling Marciana as a corruption of sch－$r z$ ，and others connecting it with marsh and murch，which is still used in the blect：Forcst as a name tor a moor．［L．S．］

MaRCIANO＇POLIS（Mapctavoútodis，Procop． de Aed．iv．7）．a city if Muesia， 18 N．P．from Ohlesmis（ Farna）（tiat．Auton．；Pent．Tab．；Ilierocl．）， nhich derivel its name from Marciana，sister of Trajan．（Amm．M re．xxxii．6．§ 12；Jorumad．do lib．Get．16．）Claudius II．simnally defeated the Guths in several lattle near this town．（Trebell． P Ill．Claud．9：7．vim．i．42．）Gibbon（（．．xxvi．；comp． 1．Beau，Bers Einpire，vol．ir．p．105：Greenwoud， Ilistury of the Giermutus，London，1836，p． 329 ； Art do fer．Les Duttes．v－1，i．p，358）has thet the stury of the accidental quarrel between the Visiguth

Fritigern and the Roman governor of Marcianmpolis, Lupicinus, - which became the signal of a long and destructive war. (Amm. Marc. xxsi. 5. § 4, Zozim. iv. 10, 11.) Marciaoopolis afterwards became P'eristhlaya or Presthlava (Перı $\sigma \theta \lambda \dot{6} \sigma \alpha$ ), the capital of the Bulgarian kingdom, which was taken A. D. 971 by Swiatoslaff the Russian, and again reduced hy John Zimisces, when 8500 Russians were put to the aword, and the sons of the Bulgarian king rescued from an ignominious prison, and invested with a nominal diadem. (Gibbon, c. Iv.: Schafarik, Slav. Alt. vol. ii. pp. 187, foll. 216; Finlay, Byzautine Empire, pp. 408-413.) The site of the ancient town must be sought for in the neighbourhood of Praradi. For coins of Marcianopolis, both autonomous and imperial, see Eckhel, vol. ii. p. 15. [E. B. J.]

MARCILIA'NA, a station on the Via Popillia, in Lucania, where, according to the Tabnla, that road (which led directly S. from Campania into Bruttinm) was joined by a brauch from Potentia. The pame is corrapted both in the Tabula and in the Antonine Itinerary; but there can be uo doubt that the place meant is the same called by Cassiodorus "Marcilianum," which was a kiod of suburb of the town of Consilinum, where a great fair was annually held. (Itin. Ant. p. $110 ;$ Tab. Peut.; Cassiod. I'arr. viii. 33.) The site is still called Marciliana, in the valley of the Tanagro, between La Sala and Padula. (Romanelli, vol. i. p. 405 .)
[E. H. B.]
MALCI'NA (Mapkiva), a town of Campania, in the district of the Picentini, zitnated on the N. shore of the gulf of Posidonia, between the Sirenusac Insulae aad the month of the silarus. (Strab.v. p. 251.) It is mentioned by no writer except Strabo, who tells us that it was a colony founded by the Tyrrbecians, but subsequently occupied, and in his day still inhabited, by the Saranites. As he adds that the distance from thence through Nuceria to Pompeii was not more than 120 stadia ( 15 Roman miles), he appears to bave regarded this as the point from whence the passage of the isthmus (as he calls it) between the two bays began; and it may therefore be placed with some plausibility at I"ietri. (Cluver, Jtal. p. 1190; Romanelli, vol. ini. p. 614.) Some ancient remains bave been discovered there, though these may seem to indicate the site of Roman villas rather than of a town.
[E. H. B.]
MATCEIUS MONS ( $\tau$ d Mápktov ópos) was, according to Plutarch, the name of the place wbich was the scene of a great defeat of the Volscians and Latins by Camillus in the year after the taking of Rome by the Gauls n. c. 389 . (Plut. Camill. 33, 34.) Dindorus, who calls it simply Marcius or
 ns it was 200 stadia from Rome; and Livy, who writes the name "ad Mecium," says it was near Lanuvium. (Liv. vi. 2.) The exact site cannot be determinied. Some of the older topographers speak of a hill enlled Colle Marzo, but no such place is found ou modern maps; and Gell suggests the Colle di Due Torri as the most probable locality. (Gell, 'top, of Rome, p. 311.)

MALCODAYA (Mapkófava, Ptol. iii. 8. §7), a town of Diwia, the renuins of which have been found near Thorda. (Sestini, V"aggio, p. lu5.) [E.B.J.]

Mafconu'sum, in North Gallia. Sothe of the cohorts of the Ubii were ent to pieces by the troops of Civilis at Marcodurum, which as Tacitus obserres (Hist, iv. 28) is a long way from the bank of the Whine. The termination durum indicates a place on a river; and Marcodurum seems to be Dïren on the

Roer. The Frank kinus are said to have had a palace there, numed Duria Villa or Dura. [G. L.]

MALCOMAGUS, a place in North Gallia on a riad fiom Augusta Trevirornm (Trèves) to Agrippina Ciritas (Cologre). It appears both in the Antonine Itin, and in the Table. Marcomagns is Marmagen. It is 28 or $31 \mathrm{M} . \mathrm{P}$. from Colugne, fur the numbers are not certain.
[G. L.]
MARCOMANNI (Mapкоцávvot, Mapкоццàvot, or Mapкоцауoi), a naine frequently occurring in the ancient listory of Germany, sometimes as a mere appellative, and sometimes as a proper name of a distiact nation. Its meaning is border-mea or march-men, aod as such it might be applied to any tribe or tribes inhabiting and defending a border country. Hence we mnst be prepared to find Marcomanni both on the western and southern frontiers of Germany; and they might also have existed in the east, or on any other frontier. Marcomamni are first mentioned in history among the tribes with which Ariovistus had iovaded Gaul, and which were defeated and driven back across the Rline by J. Caesar, B. c. 58 (Caes. Bell. Gall. i. 51). These Marcomanni, therefure, appear to have been the marchmen on the Rhenish frontier, perhaps about the lower part of the Main. They are again mentioned during the campaigns of Drusus in Germany, from в. c. 12 to 9 , by Florus (iv. 12), who seems to place them somewhat further in the interior: Only a few years later, we hear of a porrerful Marcomannian kingdom in Boiohernum or Bohemia, governed by Maroboduus; and we might be iaclined to regard these Marcomanni as quite a different people from those on the Rhine and Moin,that is, as the marchmen on the southern frontier,were it not that we are expressly told by Tacitus (Germ. 42), Paterculus (ii. 108), and Strabo (rii. p. 290), that their king \laroboduus had emigraied with them from the west, and that, after expelling the Celtic Boii from Bohemia, he established himself and bis Marcomanni in that country. (Comp. Ptol. ii. 11. § 25.) If we remember that the kingdom of the Marcomanni in Boheonia was fully organised as early as A.D. 6, when Tiberius was preparing for an expedition against it, it must be owned that Maroboduus, whose work it was, piust have been a man of unusual ability and energy. Henceforth the rame of the Narcomanni appears in bistory as a national name, though ethnologically it was not peculiar to any particnlar tribe, but was given to all the different tribes which the Marcomannian conqueror had united under his rule. The neidhbouring nations whom it was impnssible to autulue were secured by treaties, and thus was formed what may be termed the great Marcomannic confeleracy, the ohject of whieh was to defend Germany aguinst the Romans in Panonia. But the Marcomanoi soon also came into collision with another German confederation, that of the Cherusci, who regarded the powerful empire of Maroboduns as not leas dangerous to the liberty of the German tribes than the aggressive policy of the Romans. In the ensuing contest, A. D. 17, ihe Narcomanni were humbled by the Cherusci and their allies, and Maroboduvs implored the assistance of the emperor Tiberius. The aid was refused, but Drusus was sent to mediate peace between the hostile powers. (Tac. Ann. ii. 45, 46.) During this mediation, however, the Fomans scem to have stirred up other enemies agninst the Marcomanni; for two years later, A. D. 19, Catualda, a young chicl of the Gothones,
invaded ant manored their comsary. Mambelaris fled, and derumate: the protection of Tibation shan offered to hime asfe retreat in $1: 01 \mathrm{l}$. He ellire spent the remainum "izhteen years of his lifi, while the throne of the Marcomami was left to Catuala. [Dict of Biogr. art. Manomoners.] But the latter. ton, was soon expelled by the Ilermamburi, and ended his lift in exile. (Tac, Ann, ii. 62, 63.) The Marcomanni, however, like the Quadi, continued to be govertied by kings of their onnt, though thoy were not quite independent of the Remans, who cften supported them with money and more rarely with traops. (Tae Germ, 42.) They appear to have gradually extended their duminion to the banks of the Danube, where they eame into hostile collision with the Romans. The emperor Domitian denanded their assistance against the Dacians, and this being refused, he made war against them. But be was deteated A.D. 90 . and cbliged to make peace with the Dacians. (Dion Cass. Isvii. 7.) Trajan and Hadrian kept them in check; but in the reign of M1. Anrelius hatilities were reconmenced with fresh energy. The Marcomanni, allied with the Quadi and others, partly from hatred of the Romans, and partly urged on by other tribes pressing upon them in the north and east, invaded the Ruman provinces A. D. 166 ; and thus commenced the protracted war commonly called the Marcomannic or German War, which lasted until the accession of Commodus, A. D. 180, who parchased peace of them. During this war, the Marcomanni and their confederates adranced into Jhaetia, and even penetrated as far as Aprifcia. The war was net carried on minterruptedly, but was divided into two distinet contests, laving heen interrupted by a prace or truce, in which the flaces conqueped on both sides were restored. The second war broke ont turails the end of the reign of M. Aurelius, about A. D. 178. (Dion Cass. Fragm. lib. Ixxi,, Ixsii., 1xxvii. pp. 1178 , foll., 1305, ed. Reimat.: Eutrup. viii. 6: J. Capitol. Jf. Antun. Philos. 12, \&c. 17, 21. 22, 25, 27; Amm. Dlare. xix. 6; Herodian, i. init.) In consequence of the pnsillan imity of Commodus the Marcomannians were so muthembuldened, that, soon after and thr uzh out the third century, thers continued their inroals into the Rumail provinces, e-vecially Rhaetia and Xoricum. In the reign of Aurelian, they penetrated into Italy, even as far as Ancona, and excited grat alamn at Rome. (Vopisc, Aurel. 18,21.) But afterward they cease to act a proninent part in hivtury. Tlinir name. Lowerer, is still mentioned occasionally, as in Jornatuden (22), who speaks of them as dw-ling on the west of Tram-slvania. (Comp. Amm. Marc. xxiii. 3, xxix. 6, sxsi. 4.) It the Nititia lmperii, we lave mention of "H ariani Mareomanii serfores" and "/uf ives" among the Roman ansil suries. The last oceasion on which their natue orecurs is in the listery if Autila, armoug whoe homblo Marcumanni are mentioned. (Comp. Willelm, Curmanien. p. 212, foll.: Zruss. Ihie Deutschon. p. 114, foll.; Latham, Tarit, (Arm. Proles. p. 53, foli.)

MARiJ, a bath of th is powerfl and warlike jat ple were foust in Armerifa to the E. of Murdtuston (hke 1iim). (1'tul. v. 13. 5.20 : Tac. Arn. Nis. 23; coup. Anquatil Duperrou, Men. de l'tead. ./.s Ihser whi, xir, p, 87.)
[1. B. J.]
 6. beet of antioit Peris, wiah, aecerding to I'uluy, extended to the sea-ecoast. The name is
probatly invitul fiom some of the far eatended nomen te trilow of sha. Mardi or Aurardi. (Hermb, i. 125: Astral. 2.. . . 524 .) [V.]
MAlRDYENI (Mapjumvof, Ptol. vi. 32 § 4 ), a tribe who ocerpiod the lower part of the Sigdian monntains in Sidiana. There can be mo donbet that these perple are the remains of a once very numerous rave, whon traces we find spread over a wile extent of country from the Caspian to tho I'rsian Gulf, and from the Oxus to the Caspian. We find the names of these tribes preserved in different authors, and attributed to very different places. llence the presumption that they were to a great extent a nomade tribe, who pressed onward from the N. and E. to the S. Thus we find them under the form of Mardi in Hyrcania (Diod. xvii. 76; Arrian, Anab. iii. 24, iv, 1s: Dionys. Perieg. v. 732; Curt. si. 5), in Margiana accurding to Pliny (vi. J6. s. 13), in Persia (Herod. i. 125; strab. xi. p. 524; Ptol. vi. 4. § 3; Curt. v. 6), in Armenia (P'tol. v. 13; Tacit. Ann. xiv. 23), on the clstern side of the Poutns Euxinns (Plin. vi. 5), under the form Amandi in Scythia intra linamm (Mela, iii. 5, is. 6 ; Plin. vi. 17. s. 19), and lastly in Bactriana. (Plin. vi. 16. s. I8.)
[V.]
MAREIA or MA'REA (Mapéa, Herod. ii. 18, 30 ; Mapeia, Thnerd. i. 104: Mápeia, Stept. Byz. s. r.;
 5. §34), the modern Mariouth, and the chief town of the Mlareotic Nome, stood on a peninsnla in the south of the lake Dareotis, nearly dne sunth of Alcxandreia, and adjacent to the munth of the caual which connected the lake with the Canopic arm of the Nile. Under the Pharalis Dlareia was one of the principal froutier garrisons of Aegypt on the side of Libya; but from the silence of Herodotus (ii. 30) we may infer that the Persians did not station troups there. In all ages, however, until it was eclipsed by the neighbouring greatness of Alexandreia, Mareia, as the nearest place of strength to the Libyan desert. must have been a town of great importance to the Delta. At Mareia, according to Diodorus (ii. 681). Amasis defeated the Pharaol-Apries, Hofra, or Psammetichus; althon_ 4 Herodotus (ii. 161) places this defeat at Nomemphis. (Herod. ii. 169.) At Marcia, alsn, according to Thnce dides (i.104;comp. Herol. iii. 12), liarus, the son of Psammetichus, reigued, and orga1fin I the revolt of LoverAegypt against the l'ersians. Uuder the Ptolemies, Marcia continued to floarish as a haubour : but it declined under the Romans, and it the age of the Antonines - the second century A.D. -it had dwindled iatoa vilage. (Comp. Atbeni. 25, 1. 33, with Eustath. ad IIomer. Odyss. ix. 197.)

Mareia was the principal depot of the trade of the Narmotic Lake and Nume. The vinerards in its vicmity produced a celchrated wine, which Athenacus (i. c.) deseribes as "remarkable for its sweetness, white in oflutr. in quality excellent, light, with a fraterant bouquet : it was by no means astringent, and did not athect the heed. ${ }^{\text {F }}$ (Comp. Plin. xiv, 3; Strab. xvii. p. 796.) Some, lowerer, deemed the Marentic wine inferior to that of Anthylla and Tenia; and Columella (R.K. iii. 2) says that it was too thin fir ltalian falates, aceustomed to the fuller-bodied Falemian. Vir it (fiourg. ii. 91) describes tho Narcotic grape as white, and growing in a rich soil ; yet the soil of the vineyards around the Mareatic Lake was principally composed of gravel, and lay beyond the reach of the alluvial deposit of the Nile, whi hs is ill suited to viticultare. Strabo (xvii. p. 794) ascribes to the wine of Marcia the additional
merit of keeping well to a great age; and Horace (Od. j. 37 ) mentious it as a favourite beverage of Cleopatra.

Mareid, from its neighbourbood to Alexandreia, was so generally known to Roman travellers, that among the Latin poets, the words Mareia and Mareotic became synonymous with Aegypt and Aegyptian. Thus Dlartial (Ep. xiv, 209) calls the papyrus, "cortex Mareotica" (comp.id. Ep.iv. 42) : and Gratius (Cynegetic. v. 313 ) designates Aegyptian luxury as Mareotic : and Ovid (Met. ix. v. 73) employs " arva Mareotica" for Lower Aegypt. [W. B. D.] MAREO'TIS or MAREl'A (方Mapeŵt 15 or Mapeia入ípvך, Strab. xvii. pp. $789-799$; Mápeta, Steph. B. s. v. ; Mareot is Libya, Plin. v. 10. s. 11 ; Justin. xi. 1), the modern Birket-el-Mariout, was a considerable lake in the north of the Delta, extending sonth-westward of the Canopic arm of the Nile, and running parallel to the Mediterranean, from which it was separated by a long and narrow ridge of sand, as far as the tower of Perseus on the Plinthinetic bay. The extreme western puint of the lake was abont 26 miles distant from Alexandreia ; and on that side it closely bordered npon the Libyan desert. At its northern extremity its waters at one time washed the walls of Alexandreia on their southern side, and before the foundation of that city Mareotis was termed the Lake above Pharus. In breadth it was rather more than 150 stadia, or about 22 English miles, and in length nearly 300 stadis, or ahout 42 English miles. One canal connected the lake with the Canopic arm of the Nile, and another with the old harbour of Alexandreia, the Portus Eunostus. [AlexAxDHELi.] The shores of the Mareotis were planted with olives and vineyards ; the papyrus which lined its banks and those of the eight islets which studded its waters was celebrated for its fine quality ; and around its margin stood the country-houses and gardens of the opulent Alexandrian merchants. Its creeks and quays were filled with Nile boats, and its export and import trade in the age of Strabo surpassed that of the most flourishing havens of Italy.

Under the later Caesars, and after Alexandreia was occnpied by the Arabs, the canals which fed the lake were neglected, and its depth and compass were materially reduced. In the 16 th century A.D. its waters had retired about 2 mles from the city walls; yet it still preseated an ample sheet of water; and its bauks were adorned with thriving date-plantations. The lake, however, continued to recede aud to grow sballower ; and, according to the French traveller Savary, who risited this district in $\mathbf{1 7 7 7}$, its bed was then. for the most part, a sandy waste. In 1801 the English army in Aegypt, in order to annoy the French garrison in Alexandria, bored the narrow isthmes which separates the Birket-el-Mariout from the Lake of Mudieh or Aboukir, and re-admitted the sea-water. About 450 square miles were thus converted into a salt-marsh. But subsequently Dlehemet Ali repaired the isthmus, and again diverted the sea from the lake. It is now of very noequal depth. At its northern end, near Alexandreia, it is abont 14 feet deep, at its opposite extremity not more than 3 or 4 . Westward it forms a long and shallow layoon, separated from the sea by a bar of sand, and ruuning towards Libya nearly as far as the Tover of the Arabs. The lands surrounding the ancient Mareotis were designated as the Mareotic Nome (Mapeẃrगs Nípos, Ptol, iv. 5. §§8, 34); but this was probably not one of the established Numes nf Pharaonic Aegypt,
[W.B.D.]
MARES (Mapes), a tribe on the coast of Pontus,
in the nelghbourhood of the Mosynoeci. (Hecat. Fragm. 192; Herod. iii. 94.) Their armour, when serving in the army of Xerxes, is described by Herodotus (vii, 79) as baving consisted of helmets of wicker-work, leather shields, and javelins. Later writers do not mention this tribe.
[L. S.]
MARESHAH (Map $\sigma a ́, ~ L X X ., ~ E u s e b . ; ~ M a p i \sigma \sigma a, ~$ Joseph.), a city of Judah, "in the ralley," enumerated with Keilah and Achzibs in Joshua (xv. 44). In Micah (i. 15), where it is again joined with Achzib, the LXX. have substituted $\Lambda a \chi$ eis. Lachish, however, is found in the list of Joshna, independent of Naresha (xp. 39), so it could aot be a synonym for Mareshah. It was one of the cities fortified by Rehoboam against the Philistines and Egyptians (2 Chroa. xi. 8) ; and there it was that Asa encountered Zerah the Ethiopian, "in the valley of Zephathah at Mareshah" (xiv. 9), and gained a signal victory over him. In the time of Judas Maccabaens it mas occupied by the Idumaeans (2 Maccab, xii. 35), but Judas took and destroyed it. (Joseph. Ant. sii. 8. §6.) Only a few years later it is again reckoned to Idumaea; and Hyrcanus I. took it, and compelled its inhabitants, in common with the other Idumaeans, to practice circnmcision, and conform to the law, as a condition of remaining in that country (xiii. 9. $\S 1,15 . \S 4$ ). It was one of the cities restored to Aretas king of Arabia by Hyrcanns II, as the price of his services (xiv. 1. §4): soon after which it was rebuilt by Gabinius (5. §.3) ; shortly after sacked and destrosed by the Parthians in their invasion of the country, in the time of Herod the Great (xiv, 13. §9); and probably never recovered its former importance, as this is the latest historical notice. It is placed by Eusebins and St. Jerome 2 miles from Eleutheropolis; it was then a ruin. Dr. Robinson conjectures that "Eleutheropolis (at first Betogabra) had sprung up after the destruction of Maresha, and had been built with its materials," and that "the foundations which be discovered on the sonth-eastern part of the remarkable tell, south of the place, were remains of Maresha. The spot is admirably adapted for a furtress; it lies about a Euman mile and a half from the ruins of Beit Jebris." There are no other ruins in the vicinity. (Bib. Res, vol. ii $\mathrm{pp} .422,423$.) [G. W.]

MAPEU'RA or MALTHURA (Mapєoupa $\mu \eta-$
 § 24), is place of some importance in the upper part of the Aurea Cbersonesus in India extra Gangem. It is not possible now to identify it with any existing place.
[V.]
MARGANA or MARGALAE (Máp $\gamma a v a$, Diod.;
 Steph. B. s. v.), a town in the Pisatis, in the district Amphidolia, was supposed by some to be the Homeric Aepy, (Strab. viii. p. 349.) The Eleians were obliged to renounce their supremacy over it by the treaty which they made with Sparta in B. C. 400 (Xen. Hell. iii. 2. § 30), on which occasion it is called one of the Triphylian towns: as to this statement, see Letrini. It is mentioned as one of the towns taken by the Arcadians in their war with the Eleians in B. c. 366 . (Xen, Hell. vii. 4. § 14 ; Diod. xv. 77.) Its site is uncertain, but it was probably east of Letrini. Leake places it too far north, at the junction of the Ladun and the Peneius, which is in all probability the site of the Eleian Pylas, (Leake, Peloponnesiaca, p. 219 ; Boblaye, Recherches, 9c. p. 130 ; Curtius, Pelopersnesos, vol. i. p. 73.)

MARG1A'NA (方 Mapytav', Strab. xi. p. 5I6, Ptol. vi. 10; Plin. vi. I6. as. I8), a district of considerable extent in the western part of Central Asia, which was bounded on the W. by Hyreania, on the N. by Seythia and the Oxns as far as Bactriana, on the E. by Bactriana, and on the S. by Ariana. At present the country is called Khorisan, and compreliends also some part of the territory occonpied by the Turkonian tribes. like most of the districts at a great distance from Greece or Rome, it was but partially known to the ancients; bence its limits are variously stated by ancient authors. Thins Strabo makes it the province next to Parthia, to the N. of the Sariplii mountains, and gives the same boundaries to the W., N.. and 1E, as the other geographers (xi. p. 516). Iliny places it in the same direction, but adds that a desert of 120 M.P. must be crossed before it could be reached (vi. 16. s. 18). Buth Strabo and Pliny speak of the great fertility of its land, and the fineness ol its climate; the former stating that the vines were often so large that a man coald not embrace their stems in his arms; the latter, that it was the only district in that part of the world which produced grapes. The accounts of the ancients are in this particular confirmed by modern and by Muhammedan writers. Acorrding to the latter, it would seem to have comprehended the territory from Bumjurd en the west, to Merv and the $M u r g h-a b b$ in the east, a tract remarkable for its beauty and fertility. (Hilson, Ariana, p. 149.) The principal river of Margiana, from which, too, it probably derived its name, was the Margus (now Murgh-äb). Various races and tribes are nuticed in different autbors as occupving parts of Margiana. All of them may be considered as of Seythian or Títar origin;-indeed, in this part of Asia, the population has remained nearly the same to the present day which it was in the classical times. The principal of these were the Dereiccae or Derrices (Steph. P. 23; Strab, xi. p. 508 ; Dinnys. v. 734), who lived to the N, near the mouth of the Oxus; the Massagetae, the Parni, and the D.siv. who lived to the S. of the former along the Caspian and the termination of the Margus, which luses itself in the sands before it reaches the Caspian; and the Taperi and Mardi. The chief towns were. Antrocheta Manglana (certainly the present Merv). Nisaes or Nesiea, Ariaca, and Jisonim. [See these places under their respective names.]
[V.]
MARGIDUNUB1, in Britain (Itin. Anton. pp. 477, 479). It is supposed by Camden, Stukeley, Honcley, and others, to have been situated at or near Fast Bridgrford, about eight miles from 1 HilLoughty.
[C.R.S.]
MAlkGUM or MARGT'S (Md́pyov, Mápyos), also callel MURGUM. a city of Mosia, at the confluence of the Margus and Dambe. It was termed "Margum planum" on account of the level character of the surrounding country. (Jornand. de Reb. Gct. c. 58 ) It was here that the emperor Carinus was totally defeatec' by Diocletian. (Entrop. ix. 13, x. 20; It. Ant. p. 132; It. IFieros. p. 564.) [A. I..]

MARGES (Máp oos, Strab, vii. p. 318 ; Margis, Plin. iii. 26. s. 29), an important river of Moesia, whiclt fluws into the Daumbe, near the town of Margum. now the Morara. Stralo says (l.c.) that it was also called Bargus, and the same appears in Horodotus (iv. 44) under the form of Brongus (Boóryos). It is the same river as the Muschins (Múó $\chi^{\text {ass }}$ ) of I'tulemy (iii. 9. § 3). [A. L.]

MARGUS (Mápyos, Strab. xi. p. 516; Ptol. vi. 10. $\$ \$ 1,4$ ), the chief river of the province of Margiama, which in all probability derives its name from it,-now the Murgh-aib or Merv Ruid. It is said hy Ptolemy to have taken its rise in the Sariphi mountains (now Mazardis), a western spur of the great range of the 1'aropamisns, and, after a northern conrse and a junction with another small stream, to have flowed into the Oxus. The travela of Sir Alcxander Burnes havo demonstrated that the Murgh-ab no longer reaches the Oxus, but is lost in the sands abont 50 miles NW. of Mere (Burnes, vol. ii. p. 35) ; but it is probable that as late as the time of Ion Hatukal (about A. D. 950) it still flowed into the Jihon (De Sacy, Mém, sur deux Prov. de la Perse, p. 22). The Margua passed by and watered Antiocheia Margiana, the capital of the province.
[V.]
MARIABA (Mapiaba). There seem to have been several cities of this name in Arabia, as there are still several towns or sites of the name, scarcely modified. How many distinct cities are mentioned by the classical geographers, antiquarians are not agreed, and the various readings bave involved the question in great perplexity. It will be well to eliminato first those of which the notices are most distinct.

1. The celebrated capital of the Sabaei in Yemen, is known both in the native and classical writers. It is called the metropolis of the Sabaei by Strabo (xvi. 4. \& 2). which tribe was contiguous to that of the Minaei, who bordered on the Red Sca on one side, and to the Catabaneis, who reached to the straits of Bab-el-Mandeb. [Sabaif; Minafi; CaTabini.] It was situated on a well-wooded mountain, and was the royal residence. It seems difficult to imagine that this was distinct from the Mariaba of Pliny, who, bowever, assigns it to the Atramitae, a branch of the Sabaei, and places it on a bay 94 M. P. in circuit, filled with spice-bearing islands; wbile it is certain that the Mariaba of the Sabaeans was an inland city. It is heyond all doubt the Maarib of the Arabian historians, built according to their traditions by 'Abd-schems, surnamed Saba, third only in succession from the patriarch Koktan or Juktan, son of Eher. Abulfeda says that this city was also called Saba; and that, in the opinion of some, Maarib was the name of the royal residence, while the city itself was called Saba. Its fuunder also constructed the stupendons embankment so renowned in history, forming a dan for confining the water of seventy rivers and torrents, which be conducted into it from a distance. (Abulfeda, Ilistoria Ante-Islamica, bib. iv. ap. init.) The object of this was not only to supply the city with water, but also to irrigate the lands, and to keep the subjugated conntry in awe, by being masters of the water. The water rose to the height of almost 20 fathoms, and was kept in on every side by a work so solid, that many of the inhabitants had their houses built upon it. it stool like a mountain above the city, and no danger was apprehended of its ever failing. The inundation of Fl-Arem (the mound) is an acra in Arabic histury, and is mentioned in the Koran as a signal instance of divine judgment on the inhabitants of this city for their pride and insolence. A mighty flond broke down the mourd by night, while the inbabitants were asleep, and carried awny the whole city, with the neighbouring towns and people. (Sale, Koren, cap. 34, vol. ii. p. 289, netes, and Prelininary Discourse, sect. 1. vol. i p. 33 ;

Questions Proposies, par M. Michaelis, pp. 183188.) This catastrophe seems to have happened about the time of Alexander the Great, though some chronologies place it subsequently to the Christian aers. Sale places the city three days' jonrney from Sanaa (note, in loc. cit.). The notion of the identity of Mareb with Sheba, mentioned by Abulfeda, is still maintained by some natives; and Niebulir quotes for this opinion a native of the town itself (Description de lArabie, p. 252), and justly remarks that the existence of the remains of the famous reservoir of the Sabaeaos io the vicinity of Jareb serves to identify it with the capital of the Sabaeans. To account for the capital not bcaring the name of the tribe, as was nsnal, he snggests that the Sabaeans may have derived their name from another town, and theo have built this stapeadous reservoir vear Mariaba, and there have fixed the residence of their kings. But a fact elsewhere mentioned by him, will perhaps lead to a more satisfactory silution. It seems that the great reservoir is not sitoated before Mareb , oor close to it, but at the distance of an hoor, and on the side of it. This may accoont for its preservation on the bursting of the embankment. May not the inundation have occasioned the otter destruction of the neighbouring city of Sheba, as the tralitions relate, while the royal residence at Jareb escaped, and formed the nucleus of the modern towu? We have seeo from Abulfeda that some native anthorities maintain that Maarib was the royal residence, while the capital itself was called Saba. The name Mariaba (al. Jlariva) signifying, according to the etymology of Pliny, "dominos omnium," wonld well suit the residence of the dominant family (vi. $28 . \$ 32$ ).

Mareb is now the principal town of the district of Dsorf, 16 German leagues ENE. of Sana, containing only 300 houses, with a wall and three gates; and the ruins of a palace of Queen Balkis are there shown. The reservoir is still much celebrated. It is described by a native as a valley between two chains of mountains, nearly a day's journey in length ( $=5$ German leagnes). Six or seven small streams, flowing from the west and sonth, are united in this valley, which contracts so mach at its east end, by the cuavergence of the monntains, that it is not more than 5 or 6 minntes wide. This space was closed by a thick wall, to retain the superfluous water during aod after the rains, and to distribute it over the fields and gardens on the cast and north by three sluice-gates, one over the other. The wall was 40 or 50 feet high, built of enormous blocks of hewn stone. and the rnins of its two sides still remain. It precisely resembles in its construction the Bends, as they are called, in the woods of Belgrave, oear Buliterie, on the Bosphorus, which supply Constantinople with water, ouly that the work at Mareb is on a much larger scale. (Niebuhr, l. c. pp. 240, 241.)
2. Mariaba Baramalacum. A eity of this name in the ioterior of Arabia is mentioned with this distingnishing appellation by Pliny (vi. 32) as a coosiderable town of the Charmaei, which was one division of the Mixiet: he calls it "oppidum xve. mill. pass. . . . . et ipsum non spernendums." It is supposed by some to be identical with the Baraba metropolis (Bápa6a al. Ma$\mu \dot{\alpha} \rho a \quad \mu \eta \tau \rho o ́ \pi o \lambda \iota s$ ) of Ptolemy (vi. 15, p. 155), which he places in long. $76^{\circ}$, lat. $18^{\circ} 20^{\text {. . Forster }}$ has found its representative in the modern Taraba, whose situation corresponds sufficiently well with
the Baraba metropolis of Ptolemy (Geog. of Arabia, vol. i. p. 135, ii. p. 256); but his acconnt of the designation Baramalacum (quasi Bar-Amalacum, equivalent to "Merab of the sons of Arnelek ${ }^{\text {¹ }}$ ) is inadmissible according to all rules of etymology (vol, ii. pp. 43, 47). Taraba, pronounced by the Bedouins Toroba, is 30 hours (about 80 miles) distant from Tayf io the Hedjaz, still a considerable town," as large as Tayf, remarkable for its plantations, which furnish all the surrounding country with dates; and famons for its resistance against the Turkish forces of Mohammed Ali, until Jaonary, 1815 , when its inhabitants were compelled to submit. Taraba is environed with palmgroves and gardeus, watered by numerous rivulets." (Burekhardt, Travels in Arabia, Appendix, No. iv. p. 451.) A more probable derivation of Baramalacum from Bahr-u-malkim = the Royal Lake, would identify it with the preceding, No. 1. (Vinceot, Periplus, p. 307.)
3. Mariaba, another inland city of Arabia, is mentioned also by Pliny (l. e.) as the capital of the Caliogii, 6 M.P. in circumference, which was, according to him, one of the eight towns taken and destroyed by Aelius Gallus. He has perhaps confounded it with the Marsyabae which Strabo fixes as the limit of his expedition, and the siege of which he was forced to abandoo; but it was remarked before that this name was according to Pliny equivalent to metropolis, - though the etymology of the name is hopelessly obscure: - so that it is very pussible that, besides the Marsyabae mentioned by Strabo, a Mariaba may have fallen io with the line of that general's march, either identical with one of those above named, or distiact from both; possibly still marked by a modern site of one of several towns still preserving a modification of the name, as El Marabba, marked io Kiepert's map in the very leart of the country of the Wabibites; and a Merab marked by Arrowsmith, in the NE. of the Nedjid country. [Marsyabae.]
[G. W.]
MALIAMA (Maptá $\mu \alpha$ ), an inland city of Arabia, mentioned only by Ptolemy (vi. 15), who places it in long. $78^{\circ} 10^{\prime}$ and lat, $17^{\circ} 10^{\prime}$, and therefore not far sontli-east from his Baraba or Maraba metropolis [Mapiad., 2]. Mannert (Geographie, pt. vi. vol. i. p. 66) suggests its identity with Maribba, marked in Niebuhr's map towards the north-east of Iemen, which is, however, the name of a district, not of a town, its capital being oamed Aram (Description de l.Arabie, p. 228); but this would nut agree with the position above assigned to Mariaba Baramalacum. (Bitter, Erdkunde von Arabien, vol. i. p. 283.) [Mansyade.] [G. W.]

MARIAMME (Mapiá $\mu \eta$ ), a city of Syria, subject to Aradus, and surrendered with Aradus and its other dependeocies, Marathus and Sigon, to Alexander the Great by Straton, son of Gerostratus, king of Aradus. (Arrian, ii. 14. §8.) It is placed by Ptolemy in the district of Cassiotis (v. 15), and by Hierocles in the second eparchy of Syria (apud Wessching, ftineroria, p. 712). [G. W.]
MARIANA (Maptavin, Ptol.), a city on the E. coast of Corsica, which, as its name imports, was a Roman coloay, founded by the celebrated C. Marius. (Plin. iii. 6. s. 12; Ptol. iii. 2. § 5; Mlel. ii. 7. § 19; Seoec. Cons. ad Helv. 8.) Nothing more is known of its history, but it is recognised as holding colooial rank by Pliny and Mela, and appears to hare been one of the two principal cities in the island. Jt is a plausible conjecture of Clnverius that it was founded
on the site previously occapied by the Greek city of Nicaea mentioned by Diodoras（Diod．v．13；Clu－ ver．Sicil．p．50s）．Its name is prentioned in the Antoninc Itinerary（p，85），which erroneously reck－ ons it 40 tniles from Aleria；the ruins of Mariana， which are still extant under their ancient name at the mouth of the river Golo，being only about 30 miles N．of those of Aleria．They are 15 miles S． of the modern city of Bustia．The ancient remains are inconsilerable，but a ruined cathedral still marks the site，and gives title to the bisbop who now re－ sides at Bastia．（Rampoldi，Diz，Geagr．vol．ii． p．589．）
［E．H．B．］
MARIA＇NA FOSSA．［Fossa MABmava．］
MARLAND）Y＇NI（Mapuavovvoi，Mapravómboi，or Macuavסvort，an ancient and celebrated tribe in the north－east of Bithynia，between the rivers San－ gavius and Billacus，on the east of the tribe called Thyni or Bithyni．（Scylax，p．34；Plin．vi．1．） According to Scylar，they did not extend as far west as the sangarius，for according to him the river Hypius formed the boundary between the Bithyni and Mariandyni．Strabo（vii．p．295）expresses a belief that the Mariamlyni were a branch of the Bithynians，a belief to which he was probably led by the resemblance between their names，and which cannot be well reconciled with the statement of Herodutus（iii．90），who clearly distinguishes the Mariandyni from the Thracians or Thyni in Asia． In the l＇ersian army，also，they appear quite sepa－ rated from the Bithyni，and their armour resembles that of the Paphlaconians，which was quite dif－ ferent from that of the Bithyni．（Herod．vit．i2，75； comp．Strab．vii．p．345，xii．p．542．）The chief city in their territory was Heraclea Pontica，the in－ habitants of which reduced the Mariandyni，for a tine，to a state of sersitude resembling that of the Cretan Mnoae，or the Tbessalian Penestae．To what race they belonged is uncertain，though if their Thracian oriyin be given up，it must probably be admitted that they were akin to the Paphlagonians， In the division of the Persian empire they formed part of the third Persian satrapy．Their country was called Mariandynia（Mapravsuvia Steph．B． 8．v．），and Pliny speaks of a Sinus Mariandyuas on their cnast．（Comp．Hecat．Fragm．201：Aeschyl． Pirs． 932 ；Xen．Anab．vi 4．§ु t．Cyrop，i． 1. § 4 ；Piol．r．1．§ 11 ：Scymu．Fragm． 199 ；认）Myys．Parieg． $\mathrm{F} 88 ;$ Meln，i． 19 ；Athen．xir． p．620；A pellen．Argon，ii．724；Constant．Porpb． Fhem．i．：．）

MARTANTS MUXS（ $\tau$ M Maplavor ópas，Petol． ii．4．§ 15 ；Mons Mariurum，lt．Anton．p．432： Sir ron Morena），a mosntain in Hispanis Baetica， It perly only a western offshoot of the Orospeda， wil jurobably the muntain which Strabo describes， （1．p．142），without mentioning its name，as smations parallel to the river Bactis，and full of motr－Hence Pliny（xxxit．2）speaks of＂aes Matzumm，quad et Corduhense dicitur．＂The eastern part of this movntain was called Saltus Cantulonensis．［Castulo．］
MARICAE LECTS［LmAS］
MARIDE（Ammian，xwiii．6），a castle or forti－ fied town in Mesopotamia，mentioned by Ammiamus Marcellinus in his account of Constantius．There can be no doult that it is the same tis the present Mardin，wlich is seated on a consi leatable eminence lonking snuthward over the plains of Mesopota－ min．

M．SPLDLNUM（Mapîour r．［mb．ii．3．S23），in

MALMTIMA．
Britain，a town in the country of the Demelae，now Carnarthen．In the time of Giraldus Cambreasis the Roman walls were in part stauding（＂est igitar haee urhs antiqua coctilibus muris partem adhuc extantibus egregie clausa，＂Itin．Camb．lib．i．c． 10）．
［C．R．S．］ Marinia NA，also called Muurlava（It．Ifieros． p．562），a town in Pannonia，on the frontier between Upper and Lower Pannonia，on the road from Jovia to Murss．（It．Ant．p．130．）It is possible that the place may have been the same as the one called by Ptolemy（ii．14．§ 6）Mayviava．（Conyp．Geogr． Kav．iv． 19 and Tab．Peut．）
［L．S．］
MARIO NIS（Maptevis）．Two towns of this name are mentioned by 1＇toleny（ii． $11 . \S 27$ ）in the nortb－ west of Germany．As the name seems to indicate a maritine tomn，it has been iuferral that one of them was the modern Hamburg，or I／arne at the munth of the Elbe，and the other Lubeck or Wismar．But nothing certain can be said about the matter．［L．S．］

## Malls．［Marmses．］

MARISLS（Mápıбos，Strab．vii．304；Mápıs， Herod．iv． 49 ；Marisia，Jormand．de Reb．Get． 5 ； Giengr．Rav．），a river of Dacia，wbich both Herodntus （l．c．）and Strabo（l．c．）describe as falling into the Danube；it is the same as the Marosch，which falls into the Theiss．（Heeren，Asiat．Nations，vol．ii． p．10，trans．；Schafarik，Slar．Alt．vol．i．p． 507．）
［E．B．J．］
MAPITHI MONTES（ Tà Máprta or Mápetoa $\left.\ddot{\sigma}_{0} \neq \eta\right)$ a mountain chain in the interior of Arabia， the middle of which is placed by Ptolemr，who alone mentions thent，in long． $80^{\circ} 30^{\prime}$ ，lat． $21^{\circ} 30^{\prime}$ ， and round which be groups the various tribes of this part of the peninsula，viz．，the Melangitae（Meגa $\gamma$－ خїтa）and Dachareni（al．Dacharemoizae，$\Delta a \chi \alpha \rho \eta-$ $\nu_{0 i}$ ），on the north；the Zeritae（Zetpitai），Bliulaei （B入ıou入aîo），and Oranitae（＇О $\mu a \gamma \kappa i t a i)$ ，on the south；to the east of the last were the Cattabeni， extendiag to the Muntes Asaborum．［Melines Montes．］（Ptol．vi．7．§ 20．）They appear to correspond in situation with the Jebel＇Athal，on the south of Wady－el－Aftân，in Ritter＇s map． （Forster，Geog．of A Arabia，vol．ii．p．266．）［G．W．］
MAR1＇TlMA，a tom of Gallia Narbunedsis on the coast．Mela（ii．5）says，that＂between Massilia and the Rhodanns Maritima was close to the Avati－ coram stagnums ；＂and he adds that a＂fossa＂dis－ charges a part of the lake＇s water by a navigable month．Pliny in a passage before quoted［Fossa M．s－ mass．Vol．i．p．912］，also calls＂Maritima a town of the Avatici，above which are the Campi Lapidei．＂ Ptolemy（ii．18，§8）places Maritima of the Avatici east of the eastern tranch of the Rhone，and he calls it Colonia．The name is Aratici in the Greek tests of Ptolemy that are now printed，but it is Anatili in the Latin text of Pirckeym，and perhaps in other Latin texts．It dues not seem certain whieb is the true reading．Walckenaer（Geog．fc．nol．i．p． 188）asstmes that Anatili is the true reading in P＇toleny．

D＇Anville conchudes that Maritima was between Marseille and the caual of Marius，and that Mur－ tigues is the site ：hut there is no reason for fixing on Martigues，except that it is between the Rhone and Marseille，and that there is some little resem－ blance between the two names．It is said that no traces of remains lave been found at Martigues， which．however，is not decisive agaiust it，if it is true：and it is not trne．Martigues is mear the outlet

there bas been found at Citis or Saint－Blaise，on the borders of the same lake，an inscription which mentions＇Curator Maritimae，Sextumvir Augustalis Avaticorum，＂and he would fix the Maritima Avati－ corum of Pliny at this place．But he thinks that the Maritima Colonia of Ptolemy is a different place from the Maritima Avaticorum of Pliny ；and he says that the measures of Ptolemy for Maritima Colonia fix the Anatili，whose capital this town was， between the months of the Rhone．Pliny also speaks of the Anatili（iii．4），and Walckenaer says that he places them where Ptolemy does，or rather where he says that Ptolemy places them．But this is not so． l＇liny places them east of the eastern branch of the Rioue，if his text can be understood．Nor is it true that Ptolemy places the Anatili or Avatici，what－ ever may be the true name in his text，between the months of the Phone；for Ptolemy places them east of the eastern branch of the Rhone，where Pliny jlaces the Avatici．Walckenaer can find no place for I＇tulemy＇s Maritima Colonia，except by hazarding a guess that it may have been Heraclea［Heracles ］ at the mouth of the Rhone；but Ptolemy places the Maritima Colonia half a degree east of the eastern mouth of the Rhone．Walckenaer＇s examination of this question is very badly done．The site of Maritima at Saint－Blaise seems probable，for it is certain that a Roman tomn was there．Many re－ mains，Ronan bricks，and coins have been found at Saint－Blaise；and＂there are wharves on which there are still iron rings to fasten ships by＂（Ukert，Gal－ lien，p．421）．Ukert＇s authority seems to be the Stalistique du Départ．des Bouches－du－Rhône；bnt one can hardly sappose that any man can believe that iron rings exposed to the weather could last so long．
［G．L．］

## MARITIMA INSLLA．［AEgAtes．］

MARI＇TINAE STATIO AES（ ${ }^{\circ}$ Tфa入os ${ }^{\circ} p \mu o r$ ， Ptol．iv．4．§3），a place on the coast－line of the Great Syrtis，a little to the N．of Automala （Braiga）．The pusition of Tabilba，where there are ruins，and inscriptions in the running hand of the Greeks of the Roman Empire，corresponds exactly with these naval stations．（Beechey，Expedition to the N．Const of Africa，pp．230－237．）［E．B．J．］

MA＇RIUM．［ARSINOE，p．225，b．］
MA＇RIUS（Mapies），a town of Laconia，belonging in the time of Pansanias to the Elenthero－Lacones， was situated 100 stadia east of Geronthrae．It contuined a sanctuary of all the gods and one of Artemis，and in each there were copious springs of water．It is represented by Mori，which stands on the roid from Gikerdiki（Geronthrae）over the moun－ tains to Kremasit；but，according to the French Commission，its real distance from Geronthrae is from 73 to 80 stadia，and not 100 ，as is stated by Pan－ sanias．There are ruins of the ancient town about a mile and a half to the sonth of the modern village， and the place is still characterised by its abundant formtaios．（Pans．iii．21．$\S 7,22$ ．§ 8 ；Boblaye， Recherches，gic．p． 96 ；Leake，Peloponnesiaca， p． 362 ；Curtius，Peloponnesos，vol．it．p．303．）

MARMA＇RICA（ $\eta$ Mapuapak $\eta^{\prime}$ ），the sandy and barren district，which extends along the S．coast of the Mediterranean，from the valley of the Nile to the Cyrenaica，and is now called the Desert of Barkal，and divided by no certain line of demarca－ tion between the Pasha of Aegypt and the ruler of Tripoli．The Matmaridae（ai Mapuaplסau）， a Libyan tribe，gave their name，which Niehuhr （Lect．on Anc．Ethnog．and Geng．vol．ii．p．336）
derives from the word＂Mar＂$=$ salt，with a re－ duplication common to these languages，to the region they occupied．They appear as the principal indigenons tribe to the W．of Aegypt，between the age of Philip of Macedon，and the third century of the Christian aera（Scylax，c．107，ed．Klausen ； Strab．ii．p．131，xvii．pp．798，825， 838 ；Plin． v．5；Joseph．B．J．ii．16．§ 4：Vopisc．Vit．Prob． c．9），but are not mentioned by Herodntns；it is protable that they were pushed into the interior of the country，by the Greek colonists of Cyrene，and afterwards recovered their ancient seats．In the reign of Magas of Cyrene，the Mamaridae revolted． and compelled that prince to give up his intention of attacking Ptolemy Philadelphos，and the Aegyptian frontier．（Paus．i．7．§§ 1，2．）The ancients dif－ fered considerably in the limits they assigned to the Marmaridae：Scylax（l．c．）places them between Apis，and the Gardens of the Hesperides：Pliny （l．c．）between Paractoniom，and the Greater Syrtis； while Strabo（xvii．p．838）extends their frontier to the S．as far as the Oasis of Ammonium（Sirah）． Ptolemy（iv．5．§§ 1－10）bounds the district Marmarica，on the E．by the Plinthinetic gulf，and on the W．by a line which is drawn through the town of Damis（Derna）；be divides this region－ according to the arrangement made by the Ptolemies when Cyrenaica became a dependency of Aegypt－ into two parts，the E．of which was called Libycus Nomos（Aibúns vóhos，§ 4）and the W．Mar－ maricus Nomos（Mapuoр：кท̂s vómos；§ 2）；the line of separation was made by the Catabathmis Magnus（Kad́da日uos ú́zas，Polyb．xxxi． 26 ； Strab．pp．791，798，825，838；Stadiasm．p． 440 ； Sall．Jug．19；Mela．i．8．§ 2 ；Plin．v．5；Oros． i． 2 ；Steph．B．）This elevation，which rises to the height of 900 feet，aceording to some authors separated Argypt from Cyrenaica，and extends from the coast in a SSE．direction toxards the Oasis of of Ammoninm．Edrisi（rol，i．p．125，ed．Jaubert．） calls it＇Akiabah el Sullom，or staircase descent， whence the port Solom and Soloume of most of the earlier＂Portulani；＂the modern name is＇Akabah el Kibir．Further to the E．，near Paraetonium， was the smaller inclination Catabathmes Minor （Strab．p． 838 ；Solin．30），now called＇Akabah el Sgir，the height of which is 500 feet．Shooting out into the sea，in the headland Ras el Kanaüs，it takes a direction from N．to S．to the Oasis of Gkara．In the sea－board of this arid space，following the coast from E．to W．，were the promontories of Deris（el Heyf）；Hermaeum（Ras el Kiaanis）；the harbour of Gyzis or Zygis（Mahadah）；Paraetonium（Ras el Harzeit）；Apss（Boun Ajoubah）；the little rocks called Scopuli Tyndaret（el Chaity）；Plyni Ps．（Ras Halem）；Paxorau＇s（Marsnh Saloum）； Andinis Prom．（Ras el Mellah），with the adjoin－ ing liarbour Menelai Ps；Antifyegos（Tobrùk）； Petras Parvus（Magharat el Menbés），with its harbour Batrachus；Aedonia Ps．（Ain el Gha－ zik），with the islands Aedonla and Platea （Bomba），and Chersonesus（Ras et Tin．）Along the whole of this coast a road ran，the stations on which are given in the Peutinger Table．（Segm． viii．）Ooe river．the Paliures（Ma入ioupos， Ptol．iv．5．§ 2：el Zemminéh），watering the district of Azrais，discharges itself into the sea at the Gulf of Bomba．The interior，which was occupied by the tribes of the Adyramacmidae and Gili－ gamanae，is described under Oasis．Taposime， Aris，and P＇araetoniem were the chief towns，of

## MARRUCINI.

which the ruins still remain. Throughont the whole of Marmarica no vestiges of Acgyptian architecture hefore the Greek perionl bave been found. The seaonion, "scilla maritima," aml madder, "rubin," which cover the phains, remind the traveller of what Herodotus (iv. 189, 190) says about the practice of the Libyan women dying their goat-skins with red, and of the portable honses constructed of stalks of asphodel, intertwined with rushes. Now, as then, the "jerbea" (oinous, Herud. is. 192) is common. The few coins of Marmaric towns, such as those of Apis and Batrachms, are of the same workmanslip as the Acryptian mints. (Eckhel, vol. iv. p. 116.)

Ptoleny (iv. 5. § 22) enumerates the following tribes in Marmarica:- In the Lybian nome, along the coast, the Zyguitae (Zuypitai), Chattini (Xatravoi), and Zygeoses (Zuyeis); further to the S, in the interior, the Buzerses (Bouseis) and Ogdaemi. In the district of Anmonium (\$ 23), the Anigombri ('Aváyou8por), Iobacch ('Ioban$\chi$ oi), and Ruadtaf (Povaiital). In the Marmaric nome, to the N ., on the coast, the Liby archae (Aigud́p Xal), the Averitae ('Avppitai), and Passichitae (Baбaxitai); to the S. of these, the Augilae (AúviAat), Nisimones (Na $\sigma \alpha \mu \bar{\omega}$ $\nu \in s)$, and Burtae (Bakáтa:); then the Auschis.ie (A $\dot{v} \sigma \chi i \sigma \alpha_{l}$ ), who belong more properly to Cyremaica; Taplinitae (Tanavitai); and further to the s.ibe Sentites (¿ivtites), Obilae ('OBiAa), and Aezaini (Aľapor).
(Pachi, Voyage dans la Marmarigue. pp. 1-SI ; Barth, H:underungen, pp. 499-5.6.) [E. B. J.j

MARMA'RIUN. [Canrstus.]
MARIOLITIS. [Pafhlagonia.]
MAROBU DEAI (Map6fouסuv), a town of the Mareomami in Bohemia (Ptol. ii, 11. § 29), and unduubtedly identical with the royal residence of Maroboduus, with a fortress attached to it, mentioned Ly Tacitus. (Ann. ii. 62.) The same place, or rither the fortress, is called by Strabo (vii. p. 290) Bulacmon, and is identified with the modern Budiveis, in IShemia.
[L. S.]
MARONE1A (Mapóvela : Eth. Mapovteítrs), a sich and powerful city of the Cicones, in Thrace, Nunated on the Acrean sea, not far from the lake Innaris. (Herod. vii. 109.) It was said to have been founded by Maron, a son of Dionysus (Eurip. C.ycl. v. 100, 141), or, according to some, a comijamion of Usiris (Diod. Sic. i. 20); but Scymnus (675) relates that it was built by a colony from Chus in the fourth year of the fifty-ninth Olympiad (b. c. 540). Pliny (iv. 11. s. 18) tells us that the aumiont intmo was Ortarturea. The people of Marouea veneratel binnysus in an especial manner, as we leam from their coins, probably on acconnt of the auperior character of their wine, which was cele1. attut as carly as the days of IIomer (Od. i. 40). 1 ans wine was universally estemed all over the whent world ; it was said to possess the odour of An...ur (Numnts, i. 12, svii. 6, xix. 11), and to be matle of mixture with twenty times its quantity 4. water (11ons. (dd. ix. 197); and, arcording to Hlmy, on an experment being m:ule by Mhcianns, who etonbed the truth of Ilwmer's statement, it was fiund to bear even a larger proportion of water. (Plin, xiv. 4. s. 6 ; comp. "Victa Maronco foedatus lumint Bacthe" Tibnll. iv. 1. 5\%).

Maroncia was taken by Philip V. of Macedon in B.c. 200 ; and when he wat orderol by the Romans to evaruate the towns of These, he wentel his mage by slanghtering a great number of the inlabitonts of
the city. (Liv. xxxi. I6, xxxix. 24 ; Polyb. xxii. 6,13, xxiii. 11, 13.) The lomans subsequently granted Maroneia to Attalus; but they ahnast inmediately afterwards revoked their gift, and declared it a free city. (Polyb. xxx. 3.) By Constantine Porphyrogenitus (Them. ii. 2), Maroneia is reckoned among the towns of Maccdon. The modern name is Marogna, and it has been the seat of an arebbi hopric. (Comp. Ptol. iii. 11. § 2 ; Seylax, p. 27; Strab. vii. 331 ; Amm. Nare, xxii. 8 , xxvii. 4 ; Hierocl. p. 643; Tzetz. ad Lycophr: p. 818; Theophil. ad Autol. xi. p. 86.)
[A. L.]

COLN OF MARONELA.
MARONSA (Máp $\omega v \sigma a, 7$ 7sim. iii. 28), a small village in Mesopotamia, at which the amy of Julian arrived, just before the combat in which he fell. It is probably the same which Ammiaous calls Maranga (xxv. 1), but its exact locality camot now be determined.
[V.]
MARPESSA (Má $\pi \eta \sigma \sigma \alpha$ ) a mountain in the island of Faros, from which the celebrated Parian marble was obtained. (Steph. B. s. v. Máp $\quad \eta \sigma \sigma a$. [Pakos.] Hence Virgil (vi. 471) speaks of " Darpesia cautes."

MARPESSISS. [Mermesses,]
MARRU'BIUM. [Mantevims.]
MARRLCI'NI (Map̧ovkivot, Pol., Strab.; Map. Soukuvof, Ptol.), a nation of Central ltaly, inhabiting a narrow strip of territory on the S. bank of the river Aternus, estending from the Adriatic to the ridge of the Apennines. (Strab, v. p. 241.) They were bounded on the N. by the Vestini, from whom they were separated by the Aternus, and on the S . by the Frentani, while to the W. and SW. they apparently extended inland as far as the lofiy mountain barriers of the Majella and the Morrone, which separated them from the Peligni, and effeetnally cut them off from all intercourse with their neichbours on that side, excopt by the valley of the Atcrnus. The southern limit of their territory is not stated by any ancient anthor, but was probably formed by the river Foro, which falls into the Adriatic about 7 miles from the mouth of the Aternus ( $I_{t \text { scara) }}$. Pliny, indeed, extends the district of the Frentani as tir as the Aternus (Plin. iii. 12. s. 17), thas cutting off the Marrucini altogetber from the sea; but there seems little doubt that this is erronenus. [Fmentasi.] The Marrucini were, undoubtedly, like the other tribes in their immediate neighbourhood, of sabine origin, and appear to have been closely connected with the Marsi; indeed, the two names are little more than diflerent forms of the same, a faet which appears to have been alrcady recognised by Cato (ap. Priscian. ix. p. 871 ). But, whether the Marrucini wero an offset of the Marsi, or both tribes were separately derived from the conmon Sibine stock, we have no information. The Marrucini atpear in history as an independent people, but in almu-t constant allime with the Marsi, Meligni, and Visti. i. There is, indend, little doult that the four mations formed a kind of !argue for mutual defence
(Liv. viii. 29; Niehuhr, vol. i. p. 101); and hence we find the Marrucini gcoerally following the lead and sharing the fortunes of the Marsi and Peligui. But in B. C. 311 they appear to have taken part with the Samnites, though the other confederates remained nenter; as in that year, according to Diodorus, they were engaged in open hostilities with Rome. (Diod. xix. 105.) Ne mention of this is fuund in Livy, nor is their name noticed in B. c. 308, when the Marsi and Peligni appear in hostility to Nome; but a few years after, B. c. 304, all three nations, together with the Frentani, united in seading ambassadors to sue for peace, and obtained a treaty of alliadce on favourable terms. (Liv. ix. 4I, 45 ; Diod. xx. 101.) From this time the Marracini hecame the firm and faithful allies of Rome; and are repeatedly mentioned among the auxiliaries serving in the Romaa armies. (Dionys. xx. Fr. midot.; Pol. ii. 24 ; Lix. xliv. 40 ; Sil. Ital. viii. 5I9.) During the Second Punic War their fidelity was unshaken, though their territory was repeatedly traversed and ravaged by Hannibal (Liv, xxii. 9, xxvi. 11 ; Pol. iii. 88); and we find them, besides furnishing their usual contingent to the Roman armies, proriding supplies for Claudius Nero on his mareh to the Metaurus, and raising a force of vohnteers to assist Scipio in his expedition to Africa. (Liv. xxvii. 43, xxviii. 45.) In the Social War, however, they followed the example of the Marsi and Peligni, and, though their name is less often mentioned than that of their more powerful neighbours, they appear to have borne an important part in that momentous contest. (Appian, B. C. i. 39, 46; Liv. Epit. 1xxii.; Oros. v. 18.) Thus Herius Asinius, who is called by Livy "practor Marrucinerum," and was slain in one of the battles between Marius and the Marsi, is particularly noticed as one of the chief leaders of the Italian allies. (Liv, Epit. Ixxiii.; Vell. Pat. ii. 16; Appian, B. C. i. 40.) But before the close of the year 89 в. с. they were defeated, and their territory ravaged by Sulpicius, the lieutenant of Pompeius, and soon after reduced to submission by Pompeius himself. (Liv. Epit. 1xsvi.; Oros. v. 18; Appian, B. C. i. 52.)

The Marrucini were at this time admitted to the Roman franchise, and became quickly merged in the ordinary condition of the Italian subjects of Rome. llence their name is from henceforth rarely found in history; though it is incidentally noticed by Cicero, as well as by Caesar, who traversed their tervitory on lis march from Corfinium inte Apulia. (Cic. pro Cluent. 19; Caes. B. C. i. 23, ii. 34.) In b. ©. 43 , also, they were among the most prominent to declare themselves against Antonius. (Cic. Phil. vii. 8.) From these notices it is evident that they still retained their municipal existence as a separate people; and we learn from the geographers that this cootioned to be the case under the Roman Empire also; but the name gradually sank into disuse. Their territory was comprised, as well as that of the Vestini, in the Fourth Region of Augustus; in the subsequeat distribution of the provinces, it is not quite clear to which it was assigned, the Liler Coloniarom iacluding Teate among the "Civitates Piceni, ${ }^{\text {, }}$ while P. Diaconus refers it, tegether with the Frentani, to the province of Samnium. (Strab. v. p. 241; Plio. iii. 12. s. 17; Ptol. iii. 1. §60; Lib. Col. p. 258: P. Diac. ii. 20.)

The territory of the Marrucini (ager Marrucinus, Plio.; 方 Mappoukiv $\eta$, Strab.), though of small extent, was fertile, and, from its situation on the E. of the

Apennines, sloping towards the sea, enjoyed a mueh milder climate than that of the ncighbouring Peligni. Hence it produced oil, wiae, and corn in abundance, and appears to have been neted for the excellence of its fruit and vegetables. (Plin. xv. 19. s. 2 I ; Columell. x. 131.) It would appear to have been sulject to earthquakes (Plin. ii. 83. s. 85 , xvii. 25. s. 38); and hence, probably, arose the apprehension expressed by Statius, lest the mountains of the Marrucini shoold be visited by a catastrophe similar to that which had recently occurred in Campania. (Stat. Silv. iv. 4. 86.)

The only city of importance belonging to the Marracini was Teate, now Chieti, which is called by several writers their metropolis, or capital city. At a later period its municipal district appears to have comprised the whole territory of the Marracini. Interipromicm, known ooly from the Itineraries, and situated on the Via Valeria, 12 miles from Corfinium, at the Osteria di S. Valentino, was never more than a village or vicus in the territory of Teate. Pollitium, mentioned by Diodorus (xis. 105) as a city of the Marracini, which was besieged by the Romans in B. C. 311, is wholly puknown. Aternus, at the mouth of the river of the same name, served as the port of the Marrucini, but belonged to the Vestini. (Strab. v. p. 241.) [E. H. B.]

MARRU'VIUM or MARRU'BIUM (Mapovion, Strab.: Eth. Marruvius: S. Benedetto), the chief city of the Marsi, situated on the eastern shore of the lake Fucibus, and distant 13 miles from Alba Fucensis. Ancient writers agree in representing it as the capital of the Marsi : indeed, this is sufficiently attested by its name alone; Marruvii or Marrubii being evidently only another form of the name of the Marsi, and being thus used by Virgil as an ethnic appellation (Marmuria de gente, Aen. vii. 750). Io accordance with this, also, Silius Italicus represents Marruvium as deriving its name from a certain Marrus, who is evidently only an eponymous hero of the Marsi. (Sil. Ital. viii. 505.) We have no account of Marrovium, however, previous to the Roman conquest of the Marsic territory ; but under the Ronan Empire it was a flourishing municipal town ; it is noticed as such hoth by Strabo and Pliny, and in inscriptions we find it called "splendidissima civitas Marsorum Marruvium." (Strab. v. p. 241; Plin. iii. 12. s. 17 ; Nommsen, Inscr. R. N. 5491, 5499; Orell. Inscr. 3149.) It seems, indeed, to have been not unfrequently called "Civitas Marsornm," and in the middle ages "Civitas Marsicana:" heoce, even in the Liber Coloniarum, we find it called "Marsus municipium." (Lib. Colon. pp. 229, 256.) It is noticed in the Tabula, which places it 13 M. P. from Alba; but it was not situated on the Via Valeria, and must have communicated with that high-road by a braoch from Cerfonnia, (Tab. Teut.) Marruvium continned through the middle ages to be the see of the bishop of the Marsi ; and it was not till 1580 that the see was removed to the neigbbouring town of Pescina. The site is now known by the name of S. Benedefto, from a cenvent erected oa the spot. Considerable ruias of the aocient city still remain, incloding portions of its walls; the remaios of an amphitheatre, \&c., and numerons inscriptions, as well as statues, have been discovered on the site. These ruins are situated close to the margin of the lake, about two miles below $P$ escina. (Holsten. ad Cluver. p. 151 ; Romanelli, vol. iii. p. 180-186; Kramer, Fuciner See, p. 55 ; Hoare's Class. Tour,
vol. i. 1 p. $35 \mathrm{i}-361$. The inseriptions are collected by Mummsen, I. R. N. pp. 290-294) The little river Giozenco, which flows into the lake close to the site of the ancient city, is probably the stream called by the ancients Pitosits, concerning which they related many marvels. [Pucincs Laces.]

Dunysius montions (i. 14) a town called Maruvimu (Mupoúzov) among the ancient settlements of the Aborigines in the neighbourbood of Reate, which is certainly distinct from the above, but is otherwise wholly unknown. [Abouigines,]
[E. H. B.]

## MARSES. [Babylonia, p. 362.]

MARst (Múpoot: Adj. Mapoukùs, Marsieus), an ancient nation of Central Italy, who inhabited an inland and monntainous district aronnd the basin of the lake Fucinus, where they burdered on the Peligni towards the E., on the Sabines and Vestini to the N. and on the Aequians, Hernicans, and Volscians, to the W, and S. There can be no doubt that they were, in common with the other inlabitants nf the upland valleys of the central Apennines, a race of Sabiue orjgin; through we have no direct testimony to this effect. Indeed the only express statement which we find concerning their descent is that which represents them as sprung from a son of Circe, obviously a mere mythological fable arising from their peculiar customs. (Plin. vii. 2: Solin. 2. § 27.) Another tradition, equally fabulous, Lut obscurely known to us, seems to have ascribed to them a 1. dian origin, and derived their name from Marsyas. (Gellianus, ap. Ilin. iii. 12. s. 17: Sil. Ital. viii. 503.) But the close connection of the four nations of the Marsi, Marrucini, Peligni and Vestini, can leave no reasonable doubt of their common origin: and the Sabine desceat of the Peligni at least is clearly attested. [Pelagns] It may be addell that the Marsi are repeatedly 1:entioned by the P man pocts in a manner which, without distinctly affirming it, certainly seems to imply their connction with the Saline race (IItr. Epod. 17. 29; Jut iii. 169; Vires. Genrg. ii. 167.) That the Marsi and the Marmeni were clowly related is sufficiently evident from the resemblance of their names, which are in fact only $t$ wo forms of the same; the ald form Marrutii or Marravii. retained by Virgil (Aen. vii. 750) as the mame of the people, as well as preserved in that of their capital city, Marnuhum, being the connecting link hetween the two. (Niebubr, vol. i. p. 100.) This connection seems to have been already perceived by Cuto (ap. Priscian. ix. p. 871), though he mixed it up with a strange etymological fable. But we have no lint rical accomm, or even tradition, of the origin or separation of these clacely connected tribes, which appear in history tourctier with the Peligni and Vistini, as notrly rolated, hut still distinct, nations.

The Mansi are first noticed in Roman history in n. ©. 341), at which thue they as well as the Yeligni, were ou friendly terns with the Bumans, and gramted a free pasage to the consuls who were proceeding with their armies through Samminn into Campania. (liv. viii. 6.) At the comm neement of the Second Sumnite War they appear to have remained neutral; and even when their kinsmen and allies the Vestini were assiled by the Roman arms, they did not, as had been expected, take up arms in their defence. (14. viii. 29.) It was not till b. c. 30 s that we first find them enoraed in bo vilities wi:l R me, and we have no explanation of the circumetanees which then indued them to take part with the Summites. (1d. jx. 41.) It is indeed singular that while Livy netices
this campaizn as memorable from its being the first occasion on which the Romans were opposed to the Marsians. Diodorus gives a wholly different acconnt, and represents the two nations as in alliance against the Sumnites. (Diod. xx .44 .) There is, however, every probability that the account given by Livy is the more correct one, at we find shortly after (B. C. 304) a special treaty concluded with the Marsi, Marrucini, and Peligni, immediately after the defeat of the Aequians. (Liv. ix. 45 ; Diad. xx. 10I.) But a few years later (B. C. 301) the Marsi again took up arms (this time apparently single-h:inded) to oppose the foundation of the Romsn colony at Carseoli, on the immediate frontiers of their territory. They were, however, easily defeated; three of their towns, Ilestina. Milionia, and Fresilia, were taken; and they were compelied to purchase peace by the cession of a part of their territory. (Liv. x. 3.) With this excrption, they obtained farourable terms, and the former treaty was renewed.

From this time the Marsi, as well as their confederate tribes, the Marrucini, Peligni, and Vestini, became the faithful and constant allies of Rome, and occupied a prominent position among thie "socii" whose contingents bore so important a share in the Roman rictories. The names of the four nations are sometimes all mentioned, sometimes one or other of them omitted; while the Frentani, who appear. thoogh of Samnite origin, to have maintained closer political relations with their porthern peighbours, are, in consequence, often associated with them. Thus Polybius, in enumerating the forces of the several Italian nations in B. C. 225, classes the Marsi, Marrucini, Vestini and Frentani, under one head, while be omits the name of the Pelizni nltogether. (Pol. ii. 24.) Dionysius, on the other hand, notices by name only the Marrucini, P'cligni, and Frentani, atn ros the Roman allies at the battle of Asculun, omitting buth the Mlarsi and Vestini; while Silius. Italicus enumerates them all among the Roman allies at the battle of Cnmae. (Dionys. xx. Fr. Didot; Sil. 1tal. viii. 495-520.) Ennilis aloo associated together the "\$laras manus, Peligna cohors, Vestina viram vis." (Enn. Fr. p. 150.) During the Second Punic War they snffered severely for their fidelity to Rume, their territory being repeatediy ravaged by Hannibal. (Liv. xxii. 9. xxvi. 11.) Nevertheless, towards the close of the same war, they were among the foremost to offer voluntecrs to the fleet and army of Scipio in B. C. 205. (Id. xxtiii. 45.)

Daring this period the Marsi appear to have earned a high reputation among the Roman allies for their courage and skill in war: a character which they shared in coumon with the neighbourine tribes. But their chief celebrity was derived $f$ um the piominent part which they touk in the great stru_- le of the ltalinn allies agninst Rome, commonly called the Social Wiar, but which appears to have been more frequently termed by the IVomans thenselves the Marsic War. (Bellum Marsicum, Fast, Capit.: Vell. 1'at. ii. 21: Cic. de Drr. i. 44. \&̌e: © Maporkós калои́uevos $\pi \delta \lambda \epsilon \mu о 5$, Strah, v. p. 241.) Pompaediчs Siln, who is termed by Livy one of the chief anthors of this memorable contest, was himself a Manian: and it was probably at bis instigation that the Marsi were the first to take up arms after the outbreak of the Picentes at $A$ sculum: thus at once imparting to the impending contest the character of a natimal war. (Vell. 1'at. ii. 15: Strab. v. p. 241; Diod. xxxvii. 2.) Their example was immediately followed
by their neighbours and kinsfolk the Peligni, Marrucini, und Vestini, as well as by the Sumnites, Frentani, and Lucanians, (Appian, B. C. i. 39; Liv. Epit. lxxii.; Oros. v. 18.) During the military operations that followed, imperfect as is our information concerning them, we may clearly discern that the allies formed two principal groups; the one composed of the Marsi, with their immediate neighbours already mentioned, as well as the Picentes, and probably the Frentani; the other of the Samnites, with the Lucanians, Apulians, and some of the Campanians. The Marsi appear to have stood, by common consent, at the head of the former section; and hence we frequently find their name alone meationed, where it is clear that their confederates also fought by their side. At the first outbreak of the war (b, C. 91), they laid siege to Alba Fucensis, a Roman colony and a strong fortress (Liv. Epit. $1 \times x$ ii.), which appears to have at first defied all their effurts. But the Roman consul P. Ratilins, who was sent against them, proved unequal to the task. One dirision of his army, noder Perpenna, was cut to pieces at the ontset of the campaign; and somewhat later the consul bimself was defeated and slain by the allied forces under Vettins Cato. (Appian, B. C. i. 43; Liv. Epit. lxxiii.; Oros. v. 18.) C. Marius, who was acting as legate to Rutilins, is said to have retrieved this disaster; and afterwards, in conjunction with Sulla, achieved a decisive victory over the Marsi, in which it is said that the allies lust 6000 men, and the leader or practor of the Marracini, Herius Asinius, was slain, But notwithstanding this advantage, it appears that Marins himself was unable to keep the field, and was almost blockaded in his camp by Pompaedins Silo; and when at length he ventured on a third battle, it had no decisive result. Meanwhile, bis colleagne in the command, Q. Caepio, was totally defeated and ent to pieces with his whole arny by the Marsi; while an advantage gained by Ser. Sulpicius over the Peligni appears to have led to no important result. (Liv. Epit. Ixxiii. lxsiv.; Appian B. C. i. 46 ; Plut. Mfar. 33; Oros. r. 18.) The next campaign (в. c. 89) proved at first scarcely more favonrable to the Roman arms; for though the consul L. Porcius Cato obtained some successes over the Marsi and their allies, he was himself slain in a battle near the lake Fucinus. (Appiau, B. C. i. 50; Oros. v. 18.) But it is probable that the policy adopted by the Romans in admitting to the franchise all those of the allius who were willing to suhmit had a great tendency to disarm the coofederates, as well as to introduce dissensions among them; and this cause, combined with the snccessful operations of the conssl Cn . Pompeins Strabo and his lieutenant Sulpicins, effected the subnission of the Marrucini, Vestini, and Peligni before the close of the year. The Marsi for a time still held ont, though single-handed; but repeated defeats at length compelled them also to sue for peace. (Liv. Epit. Ixxvi; Oros. v. 18.) Notwithstanding their obstinate resistance, they were admitted to favonrable terms, and received, in common with the rest of the Italians, the foll rights of Ruman citizens.

From this time the Marsi as a nation disappear from history, and became merged in the common condition of the Italians. They however, still retained much of their national character, and their existence as a separate tribe is acknowledged by many Roman writers, both of the Republic and Empire. In the eivil war between Caesar and

Pompey they appear to have been at first farourably disposed to the latter; and the twenty cohorts with which Domitius occupied Corfinium were principally raised among the Masi and Peligni, or their immediate neighbours. (Caes. B. C. i. 15, 20.) In like manner, the Marsi are mentioned as declaring themselves, as a people, in favour of Vespasian during the civil war between him and Vitellius. (Tac. Hist. iii. 59.) In the days of Cicero, the Marsi and Yeligni, as well as the Sabines, were comprised in the Sergian tribe (Cic. in Tatin. 15; Schol. Bob. ad loc.); and at a later period all three were included in the Fourth Region of Augustus, which, accurding to Pliny, was composed of the bravest nations of all Italy. (Plin. iii. 12. s. 17.) In the later division of the Empire, the territory of the Marsi (Marsorom regio) was included in the province named Valeria. (P. Diac. ii. 20; Lib. Col. p. 229.) It appears to have early formed a separate ecclesiastical diocese; and in the middle ages the bishop of Marrnvium bore the title of "Episcopns Marsorum," which is still retained by the bishops of Pescina, to which place the see has been transferred. (Bingbam's Ecclesiastical Antiquities, Look ix. ch. 5. § 3.) The distriet comprised within it is still familiarly called "the land of the Marsi," and the noble Roman family of Colonna bears the title of Connts of the Marsi. (K. Craven's Abruzzi, vol. i. p. 144.)

The Marsi appear to have been always celebrated in ancient times, even beyond their hardy and warlike neighbours, for their valour and spirit in war. Virgil adduces them as the first and most prominent example of the "genns acre virum" which Italy was able to produce: and Horace alludes to the "Marsic colorts" as an almost proverbial expression for the bravest troojus in tbe Roman army. (Virg, Georg, ii. 167; Hor. Carm, ii. 20. 18, iii. 5. 9.) Appian also tells us that a proverbial saying was current at the time of the outbreak of the Social War, that no triumplh hal ever been gained over the Marsi or without the Marsi (Appian, B. C. i. 46). The historical accuracy of this saying will not bear examination, but it sufficiently proves the high character they had earned as Roman auxiliaries. In common with the Sabines and other mountain tribes, they retained down to a late period their rustic and frugal babits ; and are cited liy the Roman poets as examples of primitive simplicity. (Juv. iii. 169, xiv. 180.)

But the most remarkable characteristic of the Marsians was their pecaliar skill in magieal charms and incantations,-especially in charming venomous reptiles, so as to render them innoxions. This power, which they were said to bave derived from their ancestress Circe, or from the local divinity Angitia, who was described as her sister, was not confined to a few individuals, thongh the priests appear to have principally exercised it, but, according to silius Italicus, was possessed by the whole body of the nation. ( Virg . Aen. vii. $750-758$; Sil. ) tal. viii. $495-501$; Plin. vii. 2, xxi. 13. s. 25 , xxviii. 3. s. 6 ; Solin. 2. § 27 ; Gell, xvi. 11; Lamprid. Heliogab. 23.) 1t is worthy of notice that the inhabitants of these regions still pretend to possess the same occult powers as their ancestors: and are often seen as wanderers in the streets of Naples carrying boxes full of serpents of varions sizes and colours, against the bites of which they profess to charm hoth themselves and the spectators. (Craven's Abruzzi, vol. i. p. 145.)

The physical characters of the land of the Marsi have been aiready described under the article of the lake Fecines; the basin of which, surrounded on
all sides by lofty, or strongly marked mountain ridges, may be considered as constituting the natural limits of their territory. But towards the NE. we find that Albat Fucensis, though certninly belonging to this natural district, and hence semetimes described as belonging to the Marsi (1'tol. iii. 1. § 57 ; Sil Ital, viii. 507), was more properly an Aequian city [Abra Fecessiss] ; while, on the other hand, the apper vally of the Liris (though separatel from the lake by an intervenine mountain ridye) was incluldel in the Marsic territory, as Antinum (Civitie d. Autino) was unquentionably a Miasiam city. [AxTISCM.] On the N. the Mani were separated from the sitiues and Vestini by the lufty group of the Monte I'elino and its neighbours; while on the S. another mountain group, of almost equal eleration, separated them from the northern valleys of Samnium and the sources of the Nagras (Singro). On the b., a ridge of very inferior beight, but forming a stron:ly macked harrier, divided them from the l'ehani, who occupied the valley of the Giiio, a tributary of the Aternus. Firom its preat elevation above the sea ( 2176 feet at the level of the lake), even more than from the mountains which surrounded it, the land of the Marsi had a cold and ongenial climate, and was ill adapted for the growth of corn, but produced abundance of fruit, as well as wine, thoneh the latter was considered harab and of inferior quality. (Sil. Ital, viii. 507 ; Athen. i. p. 26 ; Dlartial, xiii. 121 , siv. 116 .)

The principal town of the Marsi mas Mannevils, the ruins of which are still visible at $S$. Benedetto, on the E. shore of the lake Fucinus. This was indeed (if Alba Fucensis be excluded) probably the only place within their territory which denerved the name of a city. The others, as we are told by Silius ltaliens, though numerous, were for the mest part obscure places, rather fortified villages (castella) than towns. (Sil. 1tal. viii. 510.) To this ciass belonged, in all probability, the three places mentioned hy Livy ( $x, 3$ ) as having been taken in p. c. 301 hy the dictator M. Valerius Maximus,-Milinnia, Plestima, and Frexilia; all three names are otherwive wholly unknown, and there is no clue to their site. I'ling, howeser, assigns to the Marsi the follusing towns:-Anxantla (Anxantini), the name of which is found also (written Axxatisi) in an inscription, and must have been situated near Andrussuno or Siurgoln, in the immediate neighbourhoud of Alba (Hore's Classical Tour, vol. i. p. 367; Mommen, Inser: R. ... 5528) ; Axtixurs (Antinates), now (Cirita d'Antino; Lucts (Lucenses), more properly Lecea Axompine, still called Lago, on the W. lank of the lake; and a "populus" or community, which he terms Fucenses, whe evidently derived their name from the lake; but what part of its slonres they ithabited is uncertain. Besides these he notices a tralition, mentioned also by solinus, that a town named Archippe, founded by the mythical Marsyas, had been swallowed up in the waters of the lake. (Plin, iii. 12. s. 17 ; Sulin, 2. §6.) Fron the number of inseriptions found at Trusacco, a villase near the S. end of the lake, it wonld appuar to have been certaunly an ancient site : but its name is unknown. (Mnnmsen, l. c. p. 295.) The only town of the Marsi mentioned by I'tom? (iii. 1. S5 5i) besides Alla Fucen is, is a place which lic calls Arx (ATE), a name in all probability corrupt, for which we should perlaps read "Avga, the Ausatia or Ansuntia of Iliny. Cempesma, a place known only from the Itineraries, was situated
on the Vis Valeria, at the foot of the pass leading over the Mons Imeus into the valley of the Pelieni. This remarkable pass, now called the Forcadi Caruso, must in all ages have formed the principal line of communication between the Marsi and their eastern neigbbonrs, the Peligni and Marrucini. Another natural line of communication led from the basin of the Fucinus near Celano to the valley of the Aternus near Aquila, It must be this line which was followed by a route ob:cnrely given in tbe Tubula as leading from Areia throngh a place called Frusteniae (?) to $\mathrm{Alb}_{3}$ and Jarruvinm (Tub. Peut.).
[E. H. B.]
MAlISIGNI, a German tribe, mentioned only by Tacitus (Germ. 43), probably eccupying the north of Bokenia, about the L'pper Elle. In langunge and manners they belenged to the Suevi. (Comp. Zeuss, Die Deutschen, p. 124.)
[L.S.]
MARSO'NIA (Mapirovia), or MARSU'NILJ (Tab. Peut.), a place in L'pper Pannonia, south of tho river Savus, on the road between Siscia andServitium; is icentified by some with the tomn of Issenoviz, at the menth of tho Cnna into the Save. (Ptol. ii. 16. § 7: Geogr. Rav. iv. 19.)
[L. S.]
MARSYABAE (Mapovasai), a town of the Ihamanitae, an Arabian tribe, mentioned by Strabo as the utmost limit of the Roman expedition under Aelius Giallus, the siege of which he was obliged to abandon after six days for want of water, and to commence his retreat. The only direct clue afforded by Serabo to the pocition of the town is that it was tive days distant from the Frankincense country ; but the interest attaching to this expedition-winieh promises so much for the elucidation of the classical geography of Arabia, but has hitherto served only still furtber to perplex it - demands an investigation of its site in connection with the other places named in the only two remaining versions of the narrative. It will be convenient to consider,-(I.) the texts of the classical authors. (II.) The commentaries and glosses of modern writers on the subject. (1II). To effer such remarks as may serve either to reconcile and harmonise ennficting views, or to indieate a more satisfactory result than has hitherto been arrived at. In order to stady brevity, the conclusions only will be stated; the arguments on which tbey are supported must be sought in the writings referred to. I. To commence with Strabo, a personal friend of the Roman general who commanded the expedition, and whosie account, scanty and unsatisfactory as it is, has all the anthority of a persanal narrative, in which, however, it will be advisable to omit all ineidents but such as directly bear on the geography. [Dictionary of Biograply, Galles, Aelius.] After a voyage of 15 days from Cleopatris [Ansinoe, No. 1], the expedition arrived at Leuce Come ( $\Lambda є \kappa \kappa \grave{\jmath} \kappa \dot{\mu} \mu \eta$ ), a considerable seaport in the country of the Nabathneans, under whove treacherous escort Gallus had placed his armament. An epidcmic ameng the troops obliged him to pass the summer and winter at this place. Setting out acain in the spring, they traversed for many days :t barren tract, throngh which they had to carry their water on cancls. This bronght thetn to the territory of Aretas, a kinsman of Obodas, the chief sheikh of the Nabathaei at the time. They took thirty days to pass throngh this territory, nwing to the obstructions placed in their way by their guide syl. lacus. It produced spelt and a few palms. They next came to the nomad country named Ararena ('Apupचví), under a sheikh named Sabus. This it
took them fifty days to traverse，throngh the fault of their guide；when they came to the city of the Agrani（＇A ppavai），lying in a peaceful and fruitful country．This they took；and after a march of six days，came to the river．Here，after a pitched battle， in which the Romana killed 10,000 Arabs，with the loss of only two men，they took the city called Asca （＂А $\sigma к a$ ），then Athrulla（＂A $0 \rho o u \lambda \lambda a$ ），and proceeded to Marsyabae of the Rhamanitae，then governed by llasnrus，from which，as already mentioned，they coramenced their retreat by a much shorter route． Nine days brought them to Anagrana（＇Avá $\gamma \rho a \nu a$ ）， where the battle had been fought；eleven more to the Seven Wella（＇EnTè фjeava），so called from the fact；then to a village named Chaalla （Xća入入a），and another named Malotha（Ma入ó $\theta a$ ）， －the latter situated on a river，－and through a desert with fow watcring－places to Nera or Negra Come（ $\mathrm{N} \in \rho \bar{\alpha} \kappa \omega \dot{\mu} \mu \eta$ ），on the sea－shore，subject to Obodas．This retreat was accomplished in sixty days；the advance had occupied six months．From Nera they sailed to Myos Hormus（Mud̀s őpuos） in eleven days．Thus far Strabo（xvi．p．782）． Pliny is much more brief．He merely states that Gallus destroyed towns not mentioned by previons writers，Negra，Amnestrum，Nesca，Magusa，Tam－ macum，Labecia，the above－named Mariaba（i．e． the Mariaba of the Calingii，3），and Caripeta，the remotest point which be reached．（Hist．Nat． vi．28．）The only geographical point mentioned by Dion Cassius，who dwells chiefly on the sufferings of the army，is that the important city of Athlula （＇A日入oú̀a）was the limit of this disastrous expe－ dition．（Dion Cass．liii．29．）

II．The variations of commentators on this nar－ rative may be estimated by these facts：Dean Vincent maintains that，＂as Pliny says，that places which necur in the expedition of Gallus are not found in authors previous to his time，the same may be ssid of subsequent writers；for there is not one of them，ancient or modern，who will do more than afford matter for conjecture．＂（Peripl．pp．300，301．） Mr．Forster asserts，＂Of the eight cities named by Pliny，the names of two most clearly prove them to be the same with two of those mentioned by Strabo；and that seven out of the eight stand，with moral certainty，and the eighth with good proba－ bility，identified with as many Arab towns，still actually in being．＂（Geogrophy of Arabia，vol．ii． p．310．）D＇Arville and M．Fresnel（inf．cit．）con－ duct the expedition to IIadramaut，in the soutbern extremity of the peninsula；Gosselin does not extend it beyond the Medjaz．（Récherches sur la Géogra－ phie des Anciens，tom．ii．p．il4．）But these va－ rious theories require more distinct notice．1．D＇An－ ville，following Buchart（Chanaan，i．44），identifies Leuce Come with the modern Haur or El－Haura， on the Ked Sea，a little north of the latitude of Melina，justifying the identification by the coinci－ dence of meaning between the native and the Greek names．Anagrana he fixes at Nageran or Negran （Nidjran），a town in the NE．of Yemen；con－ sistently with which theory he makes the Marsyabae of Strabo identical with the Mariaba of the same geographer；though Strabo makes the latter the capital of the Sabaei，and assigns the former to the Rhamanitue．Finally，D＇Anville places Chaalla at Khä̈lan（El－Chaulan），in the NW．extremity of Yemen，and，tberefure，as he presumes，on the Roman line of retreat between Anagrana and the seil．（D＇Anvillc Géographie ancienne abrégée，
tom．ii．pp．216，217，223，224）．2．Gosselin，as before noticed，maintains that the expedition did not pass beyond Arahia Deserta and the Hedjaz；that the Negra of Pliny＝the Negran of Ptolemy $=$ the modern Nokra or Maaden en－Nokra（in the NW．of Nedjd）；that Pliny＇s Magusa＝Mcgarish－ uzzir（which he marks in his map NW．of Negra， and due East of Moilah，his Leuce（pp．254，255）， perhaps identical with Dahr el－Maghair in Ritter＇s map ；that Tammacum in Pliny＝Thaema in P＇to－ lemy $=$ the modern Tima（which he places nearly due north of Negra，between it and Magnsa）＝ Teima in Ritter，between Muaden en－Nokra and Dahr el－Maghair；that Labocia＝Laba of Ptokemy， which he does not place ；that Atbruila＝Iathrippr ［Lathripra］in Ptolemy＝Mcdineh；that Ma－ riaba in Pliny＝Marsyabae in Strabo，Macoraba in Ptolemy $=$ Mecca ；and lastly，that Caripeta，the extreme poirt according tn Pliny，$=$ Ararene in Strabo $=$ modern Cariatain，in the heart of El－Nedjd． （Gosselin，l．c．pp．113－116．）3．Dean Vincent＇s opinion on the difficulty of recorering any clue to the line of morch has already been stated；but he ventures the following conjectures，partly in agree－ ment，and partly in correction，of the preceding． He adopts the Leuce Come of Gosselin，i．e．Moilah； the Anagrana or Negra of D＇Anville，i．e．Nedjran of Yemen；nond thinks that the country of the no－ mades，callecd Arauene，has a resemblance to the territory of Midina and Mccca；and that the space of fifty days employed in passing it，is some con－ fimation of the conjecture．Marsyabae，he thinks， could not be Mariaba of the Tank；but takes it as the general name for a capital，－in this case of the Minêans，－which he suggests may correspond with the Caripeta of Pliny，the Carna or Carana of Strabo， the capital of the Dlinêans，and the Carni－peta，or Carni－petra of modern geographers．The fact that Strabo speaks of Carna as the capital of the Minaei， and places Marsyabae in the territory of the Rha－ manitae，is disposed of by the double hypothesis，that if Ilasar is the king of this trihe，whether Calingii， Rhamanitae，or Elaesari，all three were comprehended under the title of Minêans．Of Nera，the termina－ tion of the expedition，he remarks，that it being in the country of Obodas，it must be within the limits of Petraea；but，as no modern representative offers， it should be placed as far below（sonth of）Leuce Come as the province will ndmit．（Vincent，Periplus of the Erythrean Sea，vol．ii．pp．290－311．） 4. M．Fresnel，long a resident in the country，thinks that the Marsyabae of Strabo must be identical with the Mariaba in lliny＇s list of captured cities，the same writer＇s Baramalacum，and Ptolemy＇s Mariama； and that the Rhamanitae of Strabo are the Phamnei of Pliny，the Manitae of Ptolemy，one of the divi－ sions of the Minaei，to which rather than to the other division，the Charmaei，Mariaba Baramalacum should have been assigried．In agreement with Vincent，he finda the Marsyabae of Strabo in the capital of the Minaei，i．e．the Carana of Strabo and the Carnan Regia of Ptulemy，which he however finds in the modern Al－Ckarn in the Wady Doán or Dawan （Kurein and Grein in Kiepert＇s and Zimmerman＇s maps），six or seven days＇journey north of Mouk－ allah，and in the heart of Iladramaut．（Fresnel，in Journal Asiatique，Juillet，1840，3me série，tom．x． pp．83－96．177，\＆c．）He fancied tbat be reco－ vered the Caripeta of Pliny in the site of Khour－ aybah，also in the vicinity of Moukallah（Ib． p．196）．5．Destergers prefers the identification
of Leuce Come witi El-IIaura, proposed by D'Anville, to the Moilah of Gioseln and Vineent. In cmmon with DAnville and Vincent, he finds the tosn of Anagrana (which he writes "la ville des Nejranes ") in the molern Vedjran, and donbtingly fises Marsabae at Mireb in Yemen. The Manitae of Ptolemy he identifies with the Rhamanitue of Strabn,-suggesting an ingenions eorrection to Jamanitar = the people of Yemen (L'Univers. Arabie, pp. 58, 59). 6. Jomard, one of the lighest anthorities on Aratian geography, has offered a ferr valuable remarks on the expedition of Gallus, with a view to determine the line of march. He thinks the name Marsyabac an evident corruption for Mariaba, which he assumes to be "that of the Tank," the enpital of the Minaei, now Maireb. Negranes cxactly correcusuls with Nedjrän or Negràn, sine days' joumer NW, of Mïreb. He fixes Leuce Come at Moilak, and Negra or Nera opposite to Cosegr, in the 26 th degree of latitule. His argument for determining the salne of a day's march is ingenious. The whole distance from Mareb to the place indicated would be 350 lexgues of 25 to a degree. From Mariaba to Negra was 60 days' march: Negrùn, therefore, which was nine days from Mariaba, is og ths of the whole march, and ITidy Xerjroin is 52 leagues NWI, of Mareb. The distance of the Seven Wells. eleven days from. Vegrin $=\frac{11}{6}$ this of the narch $=117$ leagues from Mariaba: and the sume analogy might hare been applied to Chaalla and the river Malothas, had Strabo indicated the distances of these two stations. The troops, in order to reach the sea, on their retreat must bavetraversed the province of $A$ syr, a district between Yemen and the Hedjaz (whose geugraphy has been recently restored to us by 31, Jontar!), and one of the elevated plains which separate the mountain chain of Yemen from that of the Medjaz. "The road," he snys, "is excellent, and a weak body of tronps could defend it against a numerons army." Having thus disposed of the line followed in the retreat, be briefly considers the advance:-"The country governed by Aretas, and the next mentioned, Ararene, correspond with Thomoud and .Vedjd, and the southern part of the latter province approaching Nelljrun has always been a well-peopled aod cultivated district. Asca, on the river, and Atbrulla, tise last. naned station before Nariaba, cannot he exactly deternined, as the distances are not stated ; and the line between Nedjran and Mureb is still but little known." (Jomard, up. Mengin. Histoire de l'Eotppte, dc.. pp. 383-389.) 7. Mr. Forster las investigated the march with his usnal diligence, and with the partial buccess and failure that must almost necessarily attarh to the investigation of so difficult a subject. To take first the three main points, viz., Lenme Come, the puint of departure; Marsyabne, the extreme limit: and Nera, the point at which they embarked on their return. He accepts D'Anville's identification of IHurira as Lence Come, thinking the coincidence of name decisive; Marsyabac he finds in Sabbin, the chief city of the province of Subie, a district on the nothern confines of Yemen. 100 miles S. of Brishe, the frontier and kuy of H (men: and Nira, in I'mbo, the ser-port of Itidina. The line of march on their advance he makes very circuituns. as Strabo intimate ; cenducting them first through the leart of Neiljel to the provinece of El-Ahse on the I'crian Gulf, and then azaun through the sume provisce in a SWI. direction to Femen. On their rotreat, he brings them direct to Aidjrein, then due we:t to the sea, which they caat in far north as

Iembo. To be more particnlar: he thinks fhat "is difference in distance on the advance and retreat, commensurate, in some reasonable degree, with the recorded difference of time, i.e. as 3 to 1, must be found ; that the caravan road from Haûrce by Medina and Kassym, into the beart of Nedjed, was the line followed by Gallns (the very route, in fact, travered by Captain Sadlier in 1819: Transactions of Lit. Soc. of Bombay, vol. x. pp. 449-493), and thence by one of the great Nedjd roads into Yemen, the description of which in Burckhardt agrees in many minnte particulars with the hrief notices of Strabo. He further finds nearly all the towns named by Pliny as taken by the Romans, on this line of march : Mariaba of the Calingii in Merab, in the NE. extremity of Nedjd, within the province of Hagar or Balurein-in the former of which names he fiuls the Ararena or Agarena of Strabo. Caripeta he identifies, as Gosselin bad done, with Cariatain in Nedjet; but be does not attempt to explain hur Pliny conld call this the extreme limit of the expe-dition.- "quo longissime processit." The Tammacus of Pliny $=$ the Agdami of Ptolemy $=$ the wellknown town of Tayf. Magusa (Ptolemy's Magulaha) presents itself in Korn el-Maghsal, a place situated ahout half-way between Tayf and Nedjrän, which last is with him, as with all preceding writers except Gosselin, the Anagrana of Strabo, the Negra of Pliny. "Labecia is the anagram, with the sligbtest possible inversion, of Al-Beishe $; "$ and this is called by the northern Bedoains "the key of Yemen,"-the ouly pass, according to Burckhardt, for beary-laden camels going from Mekka to Yemen, "a very fertile district, estremely rich in date-trees." The river at which tine battle with the Arabs was fonglit is the mudern Sancan, "which, taking its rise in the Herfaz momntains near Korn el-Maghsal, after a southern course of somewhat more than 100 miles, is lost in the sands of the Tehamah, to the westward of the monntains of Asyr:" The Asca of Strabo, the Nesca of Pliny, are "obviously identical with Soncan, the present name of a town seated on the Sancan river, near its termination in the sands." Athrulla, next mentioned by Stıabo, is again Lahecia, i. e. Beishe; and this lypothesis "implies a conntermarch," of wbich there is no bint in the anthors. Lastly, " if Amnestus may be supposed to have its representative in $1 b n$ Macn (tbe Marambis of Ptolemy), a town abont halt-way between Beishe and Sabbia, all the cities enumerated by Jliny occur on the route in question."

As to the retreat of the army. From Marsyabae to Nedjruin, a distance of from 140 to 160 miles, was accomplished in nine days; thence to the Seren Wells, eleven days from Nedjrân, brings us to $\mathrm{Z:7}$ Hasbia (in Arabic "the Seven"), a place ahout 1.50 miles due west of Nedjran, and then to Chaalla, the modern Chaulan (according to Forster as well as D'Anville, the chief town of the province of the sume name), and thence to Malotha, situated on a river, the same as that crossed on the advance, i.e. the Suncan. The Malotha of Strabo is plainly identified, by its site, with the Tabala of Burckhardt, a town on the Sancan, at this point, on the caravan road to Ifedjaz, a short day's march from El-HIasba. From Malotha to Nera Come, i. e. throngh the Tehamah, there are two routes described by Barckhardt; one along the eoast, in which only one well is found between 1) jidda and Leyth,-r dintance of four days; another more castern, somewhat monntainous, yielding plenty of water, five days' journey between the same two
towns. Now as Strabo describes the lattor part of the retreat through a desert track containing only a few rells, it is obrious that the coast-road was that followed by the Romans as far as Yembo, already identified with Nera Come; "the road-distance between Sabbia and Yembo (about 800 English miles) allowing, for the entire retreat, the reasonable average of little more than thirteen miles a-day." (Forster, Geogr. of Arabia, vol. ii. pp. 277-332.)

1iI. Amid these various and conflicting theories there is not perhaps one single point that can be regarded as positively established, beyond all question; but there are a few which may be safely regarded as untenable. 1. And first, with regard to Leuce Come, platusible as its identification with El-Haura is rendered by the coincidence of name, there seem to be two inseparable objections to it; first, that the author of the Periplus places the harbour and castle of Leuce two or three days' sail from Myos Ilormus (for Mr. Forster's gloss is quite inadmissible), while El-Haura is considerably more than double that distance, under the most favourahle circumstances; and secondiy, that the same author, in perfect agreement with Strabo, places it in the country of the Nalathaei, which never could have estended so far south as Haura. Mr. Forster attempts to obviate this objection by snpposing that buth Leuce Come and Nera were sea-ports of the Nabathaei beyond their own proper limits, and in the hastile territory of the Thamudites (1.c. p. 284, note *). But this hypothesis is clearly inconsistent with the author of the Periplus, who implies, and with Strabo, who asserts, that Leace Cume lay ia the territory of the Nabathaei ( $\bar{\eta} \kappa \in \nu$ єis $\Lambda \epsilon u \kappa \bar{\eta} \nu$
 ment which is further confirmed by the fact that Nera Come, which all agree to have heen south of Leuce, is also placed by Strabo in the territory of Obodas, the king of the Nabathaei ( $\kappa \sigma \tau \iota \delta \dot{\epsilon} \tau \bar{\eta} s^{\prime}$ OSo $\delta \alpha$ ). Leuce cannot therefore be placed further sonth than Moiloh, as Gosselio, Vincent, and Jomard all agree; and Nera must be sought a littie to the south of this, for Jomard has justly remarked that Strabo, in contrasting the time occupied in the advance and in the retreat, evidently draws his comparison from a calculation of the same space (l.c. p. 385). 2. With regard to the site of Marsyabae, it may be remarked that its identification with Mariaba, the metropolis of the Sabaei, the modern Maireb, maintained by D'Anville, Fresnel, and Jomard, is inadmissible for the following reasons: first, that distinct mention having been made of the latter by Straho, it is not to be sapposed that be would immediately mention it with a modification of its name, and assign it to another tribe, the Rbamanitae: and it is an uncritical method of remoring the difficulty suggested by M. Jomard without the authority of MISS., - "il faut lire partout Mariaba; le mot Marsiaba est corrompu évidemment." Secondly, whether the Mlariaba Baramalacum of Pliny be identified with Strabo's Marsyabae or no, and whatever hecomes of the plausible etymology of this epithet. suggested by Dean Vincent (quasi Bahr em-1IAlac=the royal reservoir), the fact remains the same, that the Murisba of the Sabaeans was abundantly supplied with water from numerous rivulets collected in its renowned Tank; and that therefore, as Gosselin remarks, drought was the last calamity to which the liomans wonld have been exposed in such a locality. 3. With regard to Anagrana and Negra, on the identity of which with the molern Jerljrin
there is a singular agreement among all commentaturs, there seems to be an insuperable objection to that also, if Strabo, who it nust be remembered had his information direct from Gallus bimself, is a trustworthy guide ; for the Anagrana of the retreat (which is obvionsly also the Negra of Pliny), nine days distant from Marsyabac, was the place where the battle had been fonght on their adrance. But he bad said before that this battle was fought at the river; and there is no mention of a river nearer to Nedjran than the Sancan, which is, according to Mr. Forster, 170 miles, or treive days' journey, distant. It is certainly strange that, of the writers who have commented on this expedition, all, with one exception; have overlooked the only indication furnished by the classical geographers of the direction of the line of march,-clearly pointing to the west, and not to the sonth. The Mariaba taken by the Fomans was, according to Pliny, that of the Calingii, whom be places in the vicinity of the Persian Gulf; for he names two other towns of the same tritie, Pallon and Urannimal or Moranimal, which he places near the river by which the Eupbrates is thought to debouche into the Persian Gulf (vi. 28), opposite to the Bahrein islands. (Forster, vol. ii. p. 312.) This important fact is remarkably confirmed by the expedition having landed near the month of the Elanitic gulf of the Red Sea, and commeocing their march through the territory of Obodas and his kinsman Aretas, two powerful sheikhs of the Nabathaei, who inhalited the northern part of the Arabian peninsula from the Euphrates to the peniosula of Mount Sinai [Nabsthaes], and there can be little doubt that the Mariaba of Pliny is correctly identified with the Merab, still existing at the eastern base of the Nedjd momntains. [Marlabsh, No. 3.] Whether this be the Marsyabae of Strabo, or whether future iuvestigations in the eastern part of the peninsula, bitherto so imperfectly known, may not restore to us both this and other towns mentioned in the lists of Strabo and Pliny, it is impossible to determine. At any rate, the very circuitous route through Nedjd to Yemen, marked out by Mr. Forster, and again bis line of the retreat, seem to involve difficulties and contradictions insurmunntable, which this is not the place to discuss; and with regard to the supposed analogy of the modern names, it may be safely assumed that an equal amount of ingenvity might discover like analogies in any other parts of Arabia, even with the very scanty materials that we at present have at cummand. In conclusion, it may be remarked that the observation of Strabo that the expedition kad reached within two days' journey of the country of the Frankincense, is of no value whatever in determiniag the line of march, as there were two districts so designated, and there is abundant reason to donbt whether either in fact existed; and that the reports brought home by Gallus and jreserred by Pliny, so far as they prove anything, clearly iadicate profound isnorance of the nature and produce of Yemen, wbich some authors sappose him to have traversed, for we are in a position to assert that so much of his statement concerning the Sabaei as relates to their wealth-" silvarum fertilitate odorifera, auri metallis "-is pure fiction. The question of the confosion of the various Mariabas, and tbeir cognate names, is discussed by Pitter with his nsual ability. (Erdlunde von Arabien, vol. i. pp. 276-284.)
[G. W.]
MA'RSYAS (Mapotias). 1. A tributary of the Macander, having its sources in the district catled

Idias, that is in the neighbourber? of Stratoniceia, and flowing in a north-weatern direction pat Alabamba, dischared its waters into the Nlacander nearly opposite to Tralles. On its banks were the Newkal $\sigma \tau \bar{j} \lambda$ at, near which the Carians held their mational mectings. (IIerol, v. 1I8.) The modern name of this river is Tshina, as is clearly protel by Leake (Asiut Ninor, p. 234, \&c.); while earlier geographers generally confound this Marsyas with the Harpasus.
2. A small river of Plortria, and, like the Carian M.ursyas, a tributary of the Maemder. Herodotus (vii. 25) calls it a кarap.pakros; and according to Xinophon (Anab. i. 2. §8) its sources were in the market-place of Celaenae, below tbe acropolis, where it fell down with a great nuise from the rock (Curt. iii. 1.) This perfectly agrees with the term applied t. it by Herodotus; but the description is apparently THrosed to a statement of Pliny (v. 41), accordin; to whom the river touk its origin in the valley of Aulocrene, ten miles from Apamea. (Comp. Strab. xii. p. 578: Max. Tyr. viii. 8.) Strabo, again, states that a lake above Celanae was the source of both the Maeander and the Marsyas. " Comparing these accounts," sars Col. Leake (1sin 1/inor, p. 160), " with Liry (xexriii. 38), who probably copied from Pulybius, it may be inferred that the lake or pool on the summit of a mountain which rose abuve Celacnite was the reputed ; urce of the Marsyas and Maeander; but that in fact the two rivers issued from different parts of the monntain below the lake." By this explunation the ditijculty of reconeiling the different statements seems to be removed, for Anlocrene was probably the name of the lake, whicb inaparted its umb aame to the plain mentioned by Piny. The Marsyas juined the Maeander a little way belum Celanae. (Comp, MapanDER; and Hatuiltun's Rescurches. i. p. 499.) [L.S.]

MAlislis (Maporias), a river of Coclesyria, mentimed only by Pliny (r. 23) as dividing Apameia from the tetrarchy of the Nazerini. It was probably the river mentioned - withont its name-by Alnulfeda as a tributary of the Orontes, which, rising below Apa neia, falls into the lake synnaynous with that city, am? so joins the Orontes. Tise modern name Formukh is given by Pucucke, who flaces it in his thep on the cast of the Orontes. (Abuifeda. Titbula Darite, ed. Kochler, ple, 151, 152: Pocowke, Dhscrip(i) "1 $f$ the Erest, vol. ii. p. 79.) It dondthess gave its nutne to Marsyas, a distriet of Syria, menti-ned by Straho, who joins it with Itursea, and defines its situation by the following notes:-It adjoined the Mhera Campus, on its east, and had its commencement at Ludiceia ad Libanmm. Chalcis was, as it were, an acropolis of the district. This Chalcis is joined with lleliopolis, as nader the power of P'tolemy, onll of Mennsus, who ruled over Marsyas and Ituraca. (Strab. xvi. 11p. 753, 755.) The same geoसtapher speakn of Chalcidice ànò тố Mapoúou naө̂́-$1600^{-\alpha}$ (p.153), and extends it to the sources of the
 (p. 155), now the Btkaa. From these various notices it is evident that the Marsyas comprehended the valley of the Oroutes from its rise to Apmeia, where it was 6 -unded on the north probably by the river of the same name. But it extended westward to the Maera Camptas, which burdred on the Mediterranean. (Munuct, Geogrophit von Syrin, pp. 326. 363.) [TTURAEs; Ohostas.] [6.W.]

A1ARTA, a river of Etruria, still called the Marta, which has its source in the Lake of Bolsena
(Lacus Vulsiniensis), of which it caries off the snp -rfluous waters to the sea. It flowed under the N . side of the hill on which stood Tarquinii; but its name is known only from the ltineraries, from which we learn that it was crossed by the Via Aurelia, 10 miles from Centumeellae (Civita Vecchia). (Itin. Aut. p. 291; Tab. Peut.)
[E. II. B.]
MartiaE. [Gilliaecia. p. 934, b.]
MARTLA'LIS, a place in Gallia, near to, and northwest of Auqustonemetum (Clermont en Auvergne), which Sidonius Apollinaris, once bishop of Clernont, names Pagus Violvasemsis, with the remark that it was in a previous age named Martialis, from laving been the winter quarters of the Julian legions. The tradition may refer to Caesar's legions. The place is now Volric (1)Auville, Notice, gc.) [G. L.]

MARTLA'NE (Maptiavin, Ptol. vi. 2. §今 2. 5), a lake placed by Ptolemy (l.c.) in Atropatene, and probatly the same as that called spauta by
 (Meim. sur CArmenic, vol. i. p. 5i) has ingenivosly conjectured that the uane Spauta that is applied to it in our MSS. of Strabo, is an error of some copyist for Caputa, a word which answers to the Armenian Galwid and Persian Kabid, signifying " blue," and which, in allusion to the coloar of the water, is the title usually assigned to it by the Oriental geogiaphers. It is identified with the lake of Crumigah in Azerbaijuin, remarkable for the quantity of salt which it retains in solution. This peculiarity has been noticed by Strabo (l.c.), where, for the unintelligible reading кuтaпорш日eĩos, Groskurd (ad $l o c$.) has substituted the $\kappa \alpha \pi v \rho \omega \pi \theta \in \bar{i} \sigma a \nu$ of the Miss. and older editions. (Journ. Gieog. Soe vol. iii. p. 56, vol. x. pp. i-9; Ritter, Erdhumde, vol, ix. p. 782; Chesuey, Euplirut. vol. i. pp. 7i, 97.) [E. B. J.]

MAKTIXI (Maptivot or Maptnvoi), a people of Arabia Petraea, near Babylonia (1'tol. v. 19. § 2), the exact positiou of which it is now impossible to fis. (Forster, Geog. of Arabia, vel. ii. pp. 238, 239.)
[G. W.]
MARTIS, AD, a mansio marked by the ltins, on the road from Taurini (Turino) to Brigantio (Brizncon) in Gallia Narbonensis, and the next station to Bricantio. The Antonine Itinerary makes it aviiii. 11. P. between Ad Dlartis and Brigantio, omitting Gesdao [Grsidolo]. The Table gives the same distance between Ad Martis and Brigantio, thus divided: from Ad Martis to Gaseido (Gesdao) viii., to Alpis Cottia, s., to Brigantio vì; and the Jerusalem 1tin. makes the distauce between Ad Martis and Brigantio the same. Ad Martis is fixed at Houlx or Oulc, on the road from Susa to Briançun. Ammianus Marcellinus mentions this place " nomine Martis" (x): 10), and be calls it a statio. [G. L.]

MARTYROLOLIS (Maptupótoגis). a towu of Soplanene in Armenia, near the river Nymphacus, which, according to the national traditions, was founded towarls the end of the 5th century by the Lishop Maroutha, who collected to this place the relies of all the martyrs that could be fonnd in Armenia, P'ersia, and Syria. (St. Martin, Mem. sur l'Armenie, vol. i. p. 96.) Armenia, which as an independent kingdon, had long formed a slight counterpoise between the Roman and Persian empires, was in the reign of Theodosius 11. partitioned by its powerful neighbours. Martyropolis was the capital of Roman Armenia, and was made by Justitiian a strong fortress. (Procop, de Aed, iii. 2, B. P. i. 17̈; Le Beau, Bas Empire, vol. ix. p. I35; Gilbon, c. \1.) It is represented by the modern

Miifarékyn (Mıєфєркє́ $\mu$, Cedren, vel. ii. pp. 419, 501, e3. Bekkers Ritter, Erdkunde, vel. x. pp. 78, 40. 1087, vol. xi. pp. 67, foll.)
[E. B. J.]
MARU'CA. [Sogdinna.]
DAABVINGI (Mapoul $\gamma$ yot), a German tribe on the east of Moas Abnoba, betwcen the Suevi and the Danube. (Ptol. ii. 11. § 22.) The town of Bergium (the modern Bamberg) was probatly the capital of the Marvingi. (Ptol, ii. 11. § 29.) [L.S.]
MARUNDAE (Mapoûvסat, Ptol. vii. 2. § 14), a people who hived in India extra Gangem, along the left bank of the Ganges, and adjoining the Ginagaridae [Ganganidae]. They are probably the same as those whom Pliny calis Molindae (vi. 19. s: 22), and may perhaps he considered the same as the native Indian l'arendrt.
[V.]
MARUS, a tributary of the Danube, into which it flowa from the north. Betweea it and the Cusus a band of exiled Marcomannians received settlements from the Romans under Tiberius, (Tac. Ann. ii. 63: Plin. H.N. iv. 25.) It is generally believed that this river is the same as the March in Moravia; but it is more probably identical with the Marosch, which the ancients generally call Marisus. [MAmerses.]
[L.S.]
MARU'SIUM, a town which the Jerusalem Itiverary fixes at 13 M. P. from Clodiana, and 14 M1. P. from the river Apsus, on the road to Apollonia. Colonel Leake's map identifies it with Lusjna.
[E. B. J.]
MARU'VIUM. [Marruvtur.]
MASADA (Mardsa), a very strong fortress of Palestine, mentioned by Strabo and Pliny, but much more fully described by Josephus. Strabo mentions it in connection with the phaenemena of the Dead Sen, saying that there are indications of volcanic action in the rugged burnt recks about Moasada (Moááda). Pliny describes it as situated on a rock not far from the lake Asphaltis, (Strab. xri. p. 764; Plis. v. 17.) The description of Josephus, in whose histories it plays a conspicnous part, is as follows:-A lofty rock of considerable extent, surrounded on all sides by precipitens valleys of frightful depth, afforded difficult access only in two parts; one on the east, towards the lake Asphaltis, by a zigzag path, scarcely practicable and extremely dangerous, called "the Serpent," from its sinnosities; the other more easy, towards the west, on which side the isolated rock was more nearly approached by the bills. The summit of the rock was not pointed, but a plane of 7 stadia in eircainference, surrounded by a wall of white stone, 12 cubits high and 8 cabits thick, fortified with 37 towers of 50 cubits in height. The wall was joined within by large buildings counected with the towers, designed for barracks and magazines for the enormous stores and monitions of war which were laid up in this fortress. The remainder of the area, not oconpied by buildings, was arable, the soil being richer and more genial tban that of the plain below; and a further provision was thas made for the garrison in case of a failure of supplies from without. The rain-water was prescrved in large cisterns excavated in the solid ruck, A palace on a grand scale occupied the north-west ascent, on a lower level thad the fortress, but connected with it by covered passages cat in the rock. This was adorned within with porticoes and baths, supported by monelithic columns; the walls and floor were covered with tesselated work. At the distance of 1000 enbits from the fortress a massive
tower guarded the western approach at its narrowest and most difficult point, and thus completed the artificial defences of this most remarkable site, which nature had rendered almost impregnable. Jonathan, the high-priest, had been the first to occopy this rock as a fortress, but it was much strengthened and enlarged by Herod the Great, who designed it as a refuge for himself, both against his own disaffected suljects, and particularly against the more dreaded designs of Cleopatra, who was constantly importuning Antony to pat her in passession of the kingdom of Judaea by removing Herod out of the way. It was in this fortress that the unfortunate Mariamne and other members of Herod's family were left for security, ander his brother Joseph and a small garrison, when he was driven from Jerusalem by Antigonus and his Parthian allies. The fortress was besieged by the Parthians, and Joseph was on the point of surrendering for want of water, when a timely shower filled the cisterns and enabled the garrison to bold out until it was relieved by Herod on his return from his successfnl mission to Rome. It next figures in the history of the Jewish revolt, having beea occupied first by Manahem, son of Judas the Galilean, a ringleader of the sicarii, who took it hy treachery, and put the Roman garrison to the sword; and afterwards by Eleazar and his partisans, a rival faction of the same marderous fanatics, by whom it was held for some tinie after Jerusalem itself bad fallen; and here it was that the last scene of that awful tragedy was enacted under circumstances singularly characteristic of the spirit of indomitable obstinacy and endurance that had actuated the Jewish zealots throughout the whole series of their trials and sufferings. It was the only strooghold that still held out when Flavins Silva sncceeded Bassus as prefect in Judaea (A. D 73). The first act of the general was to surrouns the fortress with a wall, to prevent the escape of the garrison. Having distributed sentries along this line of circumvallation, he pitched his own camp on the west, where the rock was mast nearly approachid by the mountains, and was therefore more open . 0 assault ; for the difficulty of procuring provisions and water for his soldiers did not allow him to attenpt a protracted blockade, which the enormous stores of provisions and water still found there by Eleaar would have enabled the garrison better to endure. Bebind the tower which guarded the ascent wa: a prominent rock of considerable size and height, thongh 300 cabits lower than the wall of the fortriss, called the White Cliff. On this a bank of $: 00$ cubits' heipht was raised, which formed a base fir a platform ( $\beta \bar{\eta} \mu a$ ) of solid masonry, 50 cubits in w dth and heigbt, oo which was placed a tower similer in construction to those invented and employec in sieges by Yespasian and Titus, covered with pates of iron, which reached an additional 60 cubits, $s 0$ as to dominate the wall of the castle, which was quickly cleared of its defenders by the showers of missiles discharged from the scorpions and balistac. The onter wall sonn yielded to the ram, when an inner wall was discorered to have been constructed by the garrison-a framework of timber filled with soil, which became more solid and compact by the concussions of the ram. This, however, was speedily fired. The assault was fixed for the morrow, when the garrison prevented the swords of the Romans by one of the most cold-blooded and atrocions mazacres on record. At the instigation of Eleazar, they first slew every man his wife and childrea; then baring
cullected the property into one heap, and destroyed it all by fire, they cast lots for ten men, who should act as executioners of the otbers, while they lay in the embrace of their slaughtered familics. One was then selected by lut to slay tho other nine survivors : and he at last, having set fire to the palace, with a desperate effurt drove his sword completely through his uwn body, and so perished. The total number, including women and children, was 960. An old woman, with a female relative of Eleazar and five clildren, who had cuntrived to conceal themselves in the rescrviirs while the massacre was being perpetrated, survived, and narrated these facts to the astonished Romans when they entered the fortress on the following morning and had ocular demonstration of the frightful tracedy.

The scene of this catastrophe has been lately recovered, and the delineations of the artist and the description of the traveller base proved in this, as in so many other instances, the injustice of the charge of exaggeration and extravagance so often preferred against the Jewish historian. Mr. Eli Suith was the first in modern times to surcest the incutity of the modern Sebbeh with the M:isada of Junephus. He had ooly viewed it at a distance, from the cliffs aboue Engeddi, in company with Dr. Rohinson (Biblical Researches, vol. iii. p. 242, n. 1); thet is was risited and fally explored, in 1842, by Messrs. Woolcot and Tipping, from whose descriptions the following notices are extracted. The first view of it from the west strikingly illustrates the tecuracy of Strabo's description of its site. "Rocky secipices of a rich reddish-brown colour surounded ns ; and before ns. across a scorched and cesulate tract. were the cliff of Sebbeh, with its pins, the adjacent lwight with rugged defiles betreen, and the Dead Sea lying mutionless in its bed bocath. The aspect of the whole was that of lucly and stern grandeur." Su on quitting the Npot they found the ground "sprinkled with voleanic atules." The bave of the cliff is separated from the water by a shoal or sand-tank; and the rock prijuts beyond the alountain range, and is comWhedy isolated by a valley, even on the west side, whre al one "the rock can now be climbed: the pass on the east described by Josephus seens to lave beet swept away. The languaye of that historian respecting the loftinnss of the site, is not very extrangant. It requiris firm nerves to stand over its stee est sides and lowk directly dorn. The depth at these points camuet be less than 1000 fect.... The whule area we estimated at three-quarters of a mile in len th from N. to S., and a third of a mile in broadth. On appasaching the rock from the Went. the 'white punoutory; as Josephus appropriately call-it, is sech on thas sile near the northern end. This is the puint where the singe was pressed and carried. of 'the wall built round about the entine top of the hill by King Herod,' :hl the lower part remains. Its colour is of the same dark red as the rock, though it is atid to have been 'conposed of white stone ;' but on breaking the stone, it "upeared that it was naturally whitish, and ladd been burnt broms by the sum." The ervund-plan of the storelunuses and barracks can still betraced in the foundations of the buildings on the summit, and the cistrons extavated in the natural rock are of enormous dimensions: one is mentionel ax menrly 50 feet A-ap, 100 lonst, and 45 bruad; its wall stili covered suh a white cement. The foudations of a round town to or 50 fect bstiw the prothem suumit,
may have been connected with the palace, and the winduws cut in the ruck near by, which Mr. Wooleot conjectures to have belonged to some large cistern, now covered up, onay pussibly have lighted the rockhern gallery by which the palace communicated with the fortress. From the summit of the rock every part of the wall of circumvallation could be traced,-carried along the low ground, and, wherever it met a precipice, commencing again on the high summit above, thus making the entire circuit of the place. Connected with it, at intervals, were the walls of the Roman camps, opposite the NW. and SE. corners, the former being the spot where Josephus places that of the Roman general $\Lambda$ third maly be traced on the level near the shore. The ontline of the works, as seen from the beights above, is as conplete as if they had been but recently abandoned. The Roman wall is 6 feet broad, built, lake the fortress walls and buildings above, with rough stones laid loosely together, and the interstices filled in with small pieces of stone. The wall is half a mile or more distant from the rock, so as to be without range of the stones discharged by the garrison. No water was to be found in the neighbourbood but such as the receat rains had left in the hollows of the rocks; confirming the remark of Josephus, that water as well as food was brought thither to the Roman army from a distance. Its position is exactly opposite to the peninsula that runs ioto the Dead Sea from its eastern shore, towards its southern extremity. (Bibliotheca Sacra, 1843, pp. 62-67; Traill's Josephus, vol, ii. pp. 109-115: the plates are given in vol. i. p. 126, vol. ii. pp. $87,23 *$.) It must be admitted that the identification of Sebbeh with Masida is most complete, and the viodication of the accuracy of the Jewish histurian, marvellous as his nurrative appears without confirnation, so entire ns to leave oo doubt tbat he was himself familiarly acquainted with the fortress.
[G. W.]
MASAITICA (Maraïiкخ), a river the "einbouchure" of which is placed by Arrian (Peripl. p. 18) on the S. coast of the Euxine, 90 stadia from the Nesis. Kennell (Comp. Geog. vol. ii. p. 325) bas ilentified it with the Kamuslar. [E. B. J.]

MASANI (Maravoi), a people of Arabia Deserta, mentioned only by Ptolemy (\%. 19. § 2), situated aluve the Rhabeni (Forster, Goog. of Arabia, wol, i. pp. 284, 205.)
[G.W.]
MAscAS (Markâs, Xenoph. Anab. i. 5. § 4), a strall river of Mesopotamia, mentioned by Xeneplion in the march of Cyrus the Younger through that country. It flowed round a town which he calls Cursote, and was probably a tributary of the Euplates. Forbiger inagines that it is the some as the Suturas of 1'tolemy (v. 18, § 3), which bad its rise in the neighbourhood of Nisibis.
[V.]
MASCLACLIS, a plave in Rhaetia, on the road lending from Veldidena to Pons Aeni (It. Ant. p. 2.59), ideatified with Gimind on the Tegernsee, or with Matzen, near Rattenberg.
[1. S.]
MASCLIANA or MASCLIANAE, a town in Dacia, which the Peutinger Table fixes at $11 \mathrm{M} . \mathrm{P}$. from (iagana. The Geographer of Ravenna calls it Marschunis; its position must be sought for near $\hbar$ aransebes.
[E. B. J.]
MIASDORINI (Ma 1 (Mopavol or Masapavol), a wild tribe who ocempied the monntain range of Masdoranus, between Parthia and Ariana, extending SWI. towards the desert part of Carmania or Kirman. (1'tol. vi. 17. §8.)
[V.]
M.LSDORA'NUS (Maróẃpayos), a cbain of monntains which divided Parthia from Carmania Deserta, extending in a S . direction. They must be considered as spurs of the Sariphi monntains (Hazarais), which be to the N. of Parthia (Ptol. vi. 5. § 1).
[V.]
MasES (Máons, خ̀ Máoŋtos, Steph. B.: Eth Maनท̂rios), an ancient city in the district Hermionis, in the Argolic peninsula, mentioned by Homer along with Aegins. In the time of Pausanias it w:as used as a harbour by Hermione, (Hom. Il. ii. 562 ; Strab. viii. p. 376 ; Paus. ii. 36 . § 2 ; Steph. B. s.v.) It was probably situated on the western coast of liermionis, at the head of the deep bay of Kiludhia, which is protected by a small island in front. The possession of this harbour on the Argolic gulf must have been of great advantage to the inhabitants of Hermione, since they were thus saved the navigation round the peninsula of K-onidhi. The Freuch Commission, however, place Mases more to the south, at port Khell, which we suppose to have been the site of Ilalice. [Halice.] (Leake, Morea, vol. ii. 1.463, Peloponnesiaca, p. 287 ; Boblaye. Récherches, sic. p. 61 ; Curtius, Peloponnesos, vol. ii. p. 462 .)

MASICES. [Mauretania.]
MA'slus ( тd̀ Máaton ópos, Strab. xi. pp. 506, 527 ; Ptol. v. 18. § 2), a chain of mountains which form the northern boundary of Mesopotamia, and extend in a direction nearly east and west. They may be considered as connecting the great western monntain known by the name of Amanus, hetween.Cilicia and Assyria, and the Niphates, on the eastern or Armenian side. The modern name is Karja Baghlar. Strabo states, that M. Masius is in Armenia, because he extends Armenia somewhat more to tbe W. and S. than other geographers. A southern spur of the Dlasian clain is the inountain clistrict round Singara (now Sinjerr).
[V.]
MA'SPIl (Máomiot, Herod. i. 125), one of the three tribes mentioned by Herodotus, as forming the first and most honourable class among the ancient Persians.

MASSA (Mánaa, Ptol. is. 6. § 6: Mlasntat, Polyb. ap. Plin. v. 1), a river of Libya, which joined the sea not far to the N. of the Daras (Senegal), and to the S. of Soloeis (Cape Blanco) in E. long. $10^{\circ}$ $30^{\prime}$, N. Lat. $16^{\circ} 30^{\prime}$.
[E. B. 1.]
MASSA, surnamed Massa Veternensis, a town of Eiruria, situated abont 12 miles from the sea, on a hill overlooking the wide plain of the Maremma: hence it is now called Massa Marittima, In the middle ages it was a considerable city and the see of a bishop; but it is not mentioned by any ancient anthor earlier than Amınianus Mareellinus (xiv. 11. §27), who tells us that it was the birthplace of the etnperor Constantius Gallus. From the epithet Veternensis, it would seem probable that there was an Fitruscan city of the name of Veternum in its neighbourhood; and, according to Mr. Dennis, there are signs of an Etruscan population on a hill called the Poggio di Vetreta, a little to the SE. of the modern town. (Dennis, Etruria, rol. ii. p. 218.)
[E. H. B.]
MAssabatica. [Messabatae.]
 Ptoleny (vi. 14. $\S \S 9,11$ ) in the extreme N. of Scythia, near the mountains of the Alani, or the N. part of the Ural chain.
[E. B. J.]
MASSAESYLI. [Numpla.]
MASsAG. 1 ( rà Máooraya, Arion, Anab. iv. 25, 39), a strongly fortified town in the NE. part of

India, between the Cophes and the Indus. It is stated by Arrian (l.c.) to have made a desperate defence, and to have withstood Alexander for four days of continued assault. It had been the residence of the Indian king Assacanus, who was recently dead when Alexander arrived there. (Curt. viii. 10). This name is written differently in difierent authors. Thus, Strabo writes it Macóza (xr. p. 698); Steph. Byz. and Diodorus, Maəनáka (xvii. Prooem.) ; and Curtios, Mazaga (l.c.). It is doubt. less the same as the Sanscrit, Magaka, near the Guraeus (or Gauri). Curtius himself mentions that a rapid river or torrent defended it on its eastern side. (Lassen's Map of India.) [V.]

MASSA'GETAE (Maбoayérai), a numerous and powerfol tribe who dwelt in Asia on the plains to the E. of the Caspian and to the S. of the Is edones, on the E. bank of the Araxes. Cyrus, according to story, lost his bfe in a bloody fight against them and their queen Tomyris. (Herod. i. 205-214; Justin. i. 8.) They were so analogons to the Scythians that they were reckoned as members of the same race by many of the contemporaries of Herodotus, who has given a detailed account of their labits and manner of life. From the exactness of the geographical data furnished by that historian, the situation of this people can be made out with considerahle precision. The Araxes is the Jaxartes, and the immense plain to the E. of the Caspian is that "steppe" land which now includes Sungaria and Mongolia, touching on the frontier of Eygur, and extending to the chain of the Altoi. The gold and bronze in which their conntry abounded were found in the Altoi range. Strabo (xi. pp. 512514) confirms the statements of the Father of History as to the inhuman practices and repulsive habits of these earliest specimens of the Dlongolian race. It may be observed that while Niebuhr (Klein Schrift. p. 362), Bückh (Corp. Inser. Graec. ph. xi. p. 81) and Schafarik (Slav. Alt. vol. i. p. 279) agree in assigning them to the Mongol stock, Von Humboldt (Asie Centrale, vol. i. p. 400) eonsiders them to have belonged to the Indo-European family.

Alexander came into collision with these wandering hordes, during the campaign of Sogdiana, B. c. 328. (Arrian, Anab. iv. 16, 17.) The Massngetae ocear in Pomponius Mela (i. 2. §5), Pliny (vi. 19), and Itolemy (vi. 10.§2, 13. § 3): afterwads they appear as Alani. [Alani.] [E. B. J.]

MASSALLA (Marनa入ia), a river of Crete,which Ptolemy (iii. 17. § 3) places to the W. of Psychiont (Kiastrí), now the Megâlo-pótamo. (Höck, Kreta, vol, i. p. 393.)
[E. B. J.]
MASsA'LIA. [Missilia.]
MASSALIO'TICUM OSTICM. [Fossa MaRIANA.]

MASSANI (Maббayof, Diod. xv. 102), a people of India, who are said by Diodorus to have lived near the months of the lndus, in the district called Pattalene.

MASSAVA, in Gallia, is placed by the Table between Brivodurum (Briare) and Ebimum, which is Nevirnum (Nevers) on the Loire. The distance is marked the same from Massava to Brivedurum and to Nevirnum, being xvi. in each case. Massara is Mesce or Métes, a place where the sniall river Masau fluws into the Loire; but the numbers in tle Table do not agree with the real distance, as D'Anville says, and he would correct them in his usual wiy.

MASSIA'NI (Macotavoi, Strab. xx. p. 693), a people who dwelt is the NE. part of India, Leyond the Panjab, between the Cophes and the Indus. They are meationed by Strabo in comnection with the Astaceni and Aspasii, and most theretore bave dwelt along the mountain range to the N . of the Kibul river.
[V.]
MA'Ssicts mons (Monte Mussica), a mountain, or rather range of lills, in Campania, which formed the limit between Campania properly so called and the portion of Latium, sontis of the Liris, to which the rame of Latium Novim or Adjectum was sumetimes given. (Illin, iii. 5, s. 9.) The Massican Hills form a range of inconsiderable elevation, which extends from the foot of the mountain group near Suessa (the Mte di Sta. Croce) in a SW. direction, to within 2 miles of the sea, where it ends in the hill of Mondragone, just above the ancient Sinuessa. The Maxsican range is not, like the mure lofty group of the Mte. di Sta. Croce or Roces Monfina, of volcanic origin, but is composed of the ordinary limentune of the Apennines (Danbeny On Folcanoes, f. 175). But, from its immediate proximity to the wolcanic fumnations of Campania, the soil which c wers it is in great part cornpesed of such products. and hence probably the excellence of its wiae, which was one of the most celebrated in Italv, and vied with the still mure noted Fuleruian. (Virg, Georg. ii. 14.3, A८n. vii. 724: Hor. Carm. .. 1. 19, iii. 21. 5: Sil. Ital. sii. 20; Martial, i. 27.8, siii. 111 ; Plin. xiv. 6. s. 8; Culumell. iii. 8.) Yet the whole of this celchrated raoge of hills does nut exceed 9 miles in Jencth by about 2 in breadth.
[E. H. B.]
MANSLCYTES, MASSYCITES, or MASSICY. TUS (Maбनikytos), a mountain range traversing western Lycia from nerth to snuth, issuing in the north, near Xysa, from Mount Tauras, and ronning almost parallel to the river Santhus, thongh in the muth it turns a little to the east. (Ptol. ₹. 3. \& 1 ; Plin. v. 28; Quint. Smyrus. iii. 232.) [L. S.]

cons of massicytes.
MASSIE'SA. a town, mentioned ooly by Arienus ((1)r. Marit. 450, seq.), situated on the senth coast of Ilispania Turnemensis, from which the Sinus Masienus derived its name. It is the bay S . of Ci Proterne between (: Palos and C. Gata.
 Ma $\alpha \sigma \alpha \lambda t \eta$ int नàw̄̄rs; Masiliensis: the molern name, Marsvill is from the corrupted Latin, Marsilia, which in the Provençaf beame Marsillo). Masalia, which that Romans wrote Mussilia, is a town of (i.tlia Narbonensis, on the coant, east of the Rhene. Its pasition is repreventel by the French eity of Barallte in the tapatument if Bowhes-dr-Rhone. I'tulome (ii. 10. s s) calls Ma-alia a city of the Comur ini, whan territory lie extembs along the cuast
 M1. -alia in $43^{2} 5^{\prime} \mathrm{N}$. lat. : and her make the lemeth of the Joucest day 15 h hurs, 15 mime io ; which diess not ditfer mas monuted from the lenth of the longest day a- welaend from th. trablu latitude of Sarscille, iwlich is about $43^{2} 18^{\prime} \mathrm{N}$. lat.

## MASSILIA.

The territory of Marseille, tbough pror, produced some gool wine and oil, and the sea aboundea in fish. The natives of the country were probably a mixed race of Celtae and Ligures ; or the Ligurian population may have extended west as far as the Rhene, Stephanus (s.v. Mafaa入ia), whose authority is nothing, except we may underitand him as correctly citing Henataeus, describes Massalia as a citr of Ligystice in Celtice. And Strabo (iv. p. 203) observes, "that as far west as Massalin, and a little further, the Salyes inhabit the Alps that lie above the coast and some parts of the coast itself, mingled with the Hellenes." This is doubtless the meaning of Strabe's text, as Grokkord remarks (Transl. Strab. vol. i. p. 350). Strabo adds, " and the old Greeks give to the Salyes the name of Ligyes, and to the country which the Massaliots possess the name of Ligystice ; but the later Greeks name them Celtoligyes, and assign to them the plain eouutry as far as the Rholanus and the Druentia." Massalia, then, appears to bave been built on a coast which was occupied by a Ligurian people.

The inhabitats of the lovian tomn of I'bocaea in Asia, one of the most enterprisidg maritime states of antiquity, showed their countrymen the way to the Adriatic, to Tyrrhenia, Iberia, and to Tartessus. (Herod, i. 163). Herodotus says nothing of their risiting Celtice or the conntry of the Celtae. The story of the origin of Massalia is preserved by Aristotle (ap. A then. siii. p. 576) in his bistory of the polity of the Massilienses. Enseous, a Phocaean, was a friend of Namus, who was the chief of this part of the coast. Nam ns, being about to marry his daughter, invited to the feast Eusenus, who happeaed to have arrived in the conntry. Now the marriage was after the following fashion. The young woman was to enter after the feast, and to give a cup of wine and water to the snitor whom she preferred; and the man to whom she gare it was to be her husband. The maid corning in gave the cup, either by chance or for some reasod, to Eusenus. Her name was Petta. The father, who cunsidered the giving of the cup to be according to the will of the deity, comsented that Euxems should have Petta to wife ; and Enxenus cave her the Greek name Aristoxena. It is added, that there was a family in Massalia, up, to Aristotle's time, nampd Protiadae, for Protis was a son of Euxenus and Aristosena.

Justio (xliii. 3, \&c.), the epitomiser of Trogus Pompeius, who was either of Gallic or Lizurian orizif, for his ancestors were Vocmentii, tells the story in a somewhat different way. He fixes the time of the Phocaeans coming to Gallia in the reign of Tarquinins, who is Targuinius Privens. The Phocacuns first entered the Tiber, and, naking a treat with the Boman king, contimed their voyage to the furthest hays of Gallia and the mouths of the Rhone. They were pleased with the country, and returning to Phocaca, induced a greater nuniber of Phocaeans to ge with them to Giallia. The commanders of the fleet were Simos and Protis. Platarch also (Solon, c. 2.) names Protos the founder of Nassalia. Simos and Protis introduced themselves to Nannus, king of the Sugubrii or Segubrigii, in whase territories they wishud to build a city. Nannus was busy at this time with preparing for the marriage of his daughter Csptis, and the strangers were politely invited to the marriage feast. The clocire of the young woman for her hushand fell in Protis ; but the cup which she uffered him contai wed only water. From this fact, iusignilicant in itsedf, a modern writer deduces the
conclusion, that if it was wine and water, the wine came from foreign commerce, and commerce anterior to the arrival of the Phocaeans; "for the vine was not yet introduced into Ganl." But the rine is a native of Gallia Narbonensis, and king Namus may have lad wine of his own making. The l'hocaeans now built Massalia; and though they were continually harassed by the Ligurians, they beat them off, conquered freoh territories, and built new cities in them. The time of the settlement of Massalia is fixed by Scymans Chins 120 years before the battle of Marathon, or B. C. 600.

Strabo (iv. p. 179) foupd in some of his anthorities a story that the Plocaeans before they sailed to (iallia were told by an oracle to take a guide from Artemis of Ephesus ; and accordingly they went to Ephesns to ask the goddess how they should obey the oracular order. The goddess appeared to Aristarche, one of the women of noblest rank in Eplesus, in a dream, and hade her join the expedition, and take with her a statue from the temple. Aristarche went with the adventurers, who built a temple to Artenis, and made Aristarche the priestess. In all their colonies the Massaliots established the worship of Artemis, and set up the same kiad of wooden statue, and iastituted the same rites as ia the mothercity. For thongh Phocaea founded Massalia, Ephesus was the city which gave to it its religion. [Epiesus, Vol. 1. p. 834.]

The Galli, as Justin calls them, learned from the Massaliots the usages of cirilised life (Justin, xliii. 4), to cultivate the grousd, and to build walls round their cities. They learned to live under the rules of law, to prune the vine, and to plant the olive. Thus Greek civility wis imported into barbaric Gallia, and France still possesses a large and beautiful city, a lasting memorial of Greek enterprise.

Nannms died, and was succeeded by his son Comanns, to whom a cumoing Ligurian snggested that Dassalia would some time ruia all the neighbouring preople, and that it onght to be stifled in its infancy. He told him the fable of the bitch and her whelps, which Phaedrus has (i. 19); but this part of the old story is hardly credible. However, the king took advantage of a festival in Massalia, which Justin calls by the Roman name of Floralia, to send some stont mes there under the protection of Massalict hospitality. and others in carts, concealed in hampers covered with leaves. He posted himself with his troops in the nearest mountains, ready to enter the city when his men should open the gates at night, and the Massaliots were sunk in sleep and filled with wine. But a woman spoiled the plot. She was a kiusman of the kine, and had a Greek for her lover. She was moved with compassion for the handsome youth as she lay in his arms : she told him of the treachery, and urged him to save his life. The man reported it to the magistrates of the city. The Liguriaos were pulled out of their hiding-places and massacred, and the treacherous king was surprised when he did not expect it, and cut to pieces with 7000 of his men. From this time the Nassaliots on festal days shut their gates, kept good watch, and exercised a vigilaut superintendence over strangers.

The traditions of the early history of Massalia lave an appearance of truth. Ererything is natural. A woman's love founded and saved Massalia. A woman's tender beart saved the life of the noble Enclishuan who rescued the infant colony of Virginial from destruction ; and the same gentle and
heroic woman, Pocahontas, by marrying another Englishman, made peace between the settlers and the savages, and secured for England a firm footing in Chesajeake Bay.

Livy's story (v. 34) of the Phocaeans landing on the site of Massalia at the time of Bellovesus and lif Celts being on the way to invade italy, is of no value.

When Cyras invaded Ionia (B, c. 546 ), part of the Phocacans left Phocaea and sailed to Alalia in Corsica, where the Phocaeans had made a settlement twenty years befure. Herodotus, who tells the history of the e adventurers at some Jength, says nothing of their settlement at Massalia. (i. J $63-167$.) Strabo (vi. p. 252), on the authority of Antiochus, names Creontiades as the commander of the PLuncaeans who fled from their country on the Persian invasion, and went to Corsica and Massalia, whence being driven away, they founded Velia in Italy. It is generally said that the exiles from Phocaea formed the second colony to Massalia ; but though it seems likely enough, the evideace is rather imperfect. When Thucydides says (i. 13) that the Phocaeans while they were founding Massalia defeated the Carthaginians in a naval battle, we get nothing from this fact as to the second settlement of Massalia. We only learn that the Carthaginians, who were probably looking out for trading posts on the Gallic shore, or were already there, came into conflict with the Phocaeans; and if we interpret Thucydides' words as we ought to do, he means at the time of the settlement of Massalia, whenever that was. Puusanias, who is not a careless writer (x. 8, § 6), states that the Massaliots were a Phocaean colony, and a part of those who fled from Harpagus the Mede ; and that having gained a vietory over the Carthaginians, they got possession of the country which they now have. The Phocaesns dedicated a bronze statue to Apollo at Delphi to commemorate the rictory. There seems, then, to have been aa opinion enrrent, that some of the exiles at the time of the Persian iavasion settled at Massalia; and also a confusion between the two setllmuents. Justin, following Trogus, speaks of the Massaliots having great wars with the Galli and Ligures, and of their often defeating the Carthaginian armies in a war that arose out of some fishing vessels being taken, and granting them peace They also were, he says, in alliance with Rome almost from the time of fonuding their city; but it scems that he had forgotten what he said a little befure, that it was not almest from that time, but even before. They also contributed gold and silver to pay the ransom when the Gaili took Rome, for which they received freedom from taxation (immunitas), and other privileges: which is very absurd, and certainly untrue. The bistorical connection of Nome and Massalia belongs to a later time.

Massalia was built on rocky ground. The harbour lay bencath 2 rock in the form of a theatre, which looked to the south. Both the harbour and the city were well walled, and the city was of considerable extent. On the citadel strod the Ephesium, and the temple of Delphinian Apollo, which was a common sanctuary of all the lonians, but the Ephecium was a temple of Artemis of Ephesus. The Massaliots had ship-houses (véwoorcor) and an armoury ( $\delta \pi \lambda_{0} \theta$ भiк $\eta$ ) ; and in the time of their prosperity they had many vessels, arms, and stores of anmunition both for havigation and for the siege of cities; by which means they kept off the barbarians and gained the friendslip of the Romans. (Stral. Pp.
iv. 179, 180.) Caesar, who knew the site well, describes Massalia as washed be the sea almost along three parts of its cxtent; the fourth part was that by which the city was connected with the mainland; and here also the part that was necupied by the citalel was protected hy the nature of the ground fand a vory deep valloy (B. C: ii. 1). He speaks of an island opymmite to Massalia. There are three small islatuds nearly opposite the entrance of the present port. It was comected with the mainhand, as Eumonius describes it, "by a space of fifteen hundred paces." D'Anville observes that these fifteen bundred paces, or a Luman mile and a half, considerably exreed the actual distance from the bottom of the prot to the place called the Grande Pointe ; and ho supposes that we must take these to be single paces, :unl sur relace the spice to half the dimensions. W:alckenaer (Géog. y'c. vol. i. p. 25) supposes Fnmenius to mean that the tongue of land on which Mansilia stuod was 1500 paces long. At present the port of Marseille is turned to the west; but the whl port existed for a long time after the Roman leriod. This old port was named Lacydon (Mela, ii. 5), a name which also appears on a medal of Masnalia. The houses of Mhssalia were mean. Of the public buildings not a trace remains now, though it scems that there were not very long ago some remains of aupeducts and of baths. Medals, urns, and uther antiquities have often been dug up.

The friemlship of Rome and Massalia dates from the Second Punic War, when the Massaliots gave the 1thoams aid (Liv. xxi. 20, 25, 26), and assisted them all through the long struggle. (Polyb. iii. 95.) In r.e. 208 the Massaliots sent the Romans intellizenee of Avdrubal haring come into Gallia. (Liv. xxvii. 36.) Missalia was never safe against the Licurians, who eten attacked them by sea (Liv. x1. 18). At last (b. c. 154) they were obliged to ask the Romans for aid azainst the Oxybii and Deceates, who were defeated by Q. Opimins. The story of the establislument of the Romans in Routhern Gallia is told in another place [Gallia Tieans. Aluivis. Vol. J. p. 953.]

K. Jomegnes I.

By the sirtory of the Romans orer the Ligurians ther Miaswh to got sinne of the Licurian lands: and after the dete.at of the Teutunes ly C. Marius (it. C.
102) near Aquare Sextiae (Air), the Roman cotnmander gave the Mitssaliots the canal which he had constracted at the eastern outlet of the Rhone, and they levied tolls on the ships that ased it [Fossa Mabinas]. The Massaliuts were faithful to the Romans in all their campaigns in Gallia, and furmished them with supplies. (Cic. pro Font. c. 1.) Cn. Pompeins gave to the community of Massali: lands that had belonged to the Voleae Arecomici and the Helvii ; and C. Julius Caesar increased their revenue by fresh grants. (B. C. i. 35.)

When Cuesar (1. C. 49) was marching from Italy into Spain ayainst the legati of Pompeius, Massalia shut her gates against him. The excuse was that they would not side with either party ; but they showed that they were really facourable to Pompeius by admitting L. Domitius within their walls and giving him the command of the eity (B.C. i. 34-36). At the suggestion of Pompeins the Massaliots also had made grcat preparations for defence. Caesar left three legions under his legatns C. Trebonius to besiege Massalia, and he gave D. Brutus the command of twelve ships which he had constructed at Arelate (Arles) with great expedition. While Caesar was in Spain, the Massaliots having manned seventeen vessels, eleven of which were decked ships, and put on board of them many of the neighbouring nountaineers, named Albici, fought a battle with Brutus in which they lost nine ships. (B. C. i. 56-59.) But they still held out, and the narrative of the siege and their sufferiogs is one of the most interesting parts of Caesar's History of the Civil War (B. C. ii. 1-22; Dion Cassins, xli. 25). When the town firally surrendered to Caesar, the people gave up their arms and military engmes, their shigs, and all the money that was in the public treasury. The city of Massalia appeared in Cuesar's triumph at Rome, "that city," seys Cicero, "without which Rome never triumphed over the Tramsalpine nations" (Philipp. viii. 6, $d t$ (ffic, ii. 8). Still it retained its freclom (aivovopia), or in Roman language it was a Lihern Civitas, a term which Strabo correctly explains to signify that the llassaliots "were not under the governors who were sent into the Provincia, neither the city its-clf, nor the dependencies of the city." Pliny names Mis aulia a "foederata civitas" (iii. 4), a term which the listory of its early connection with Rome explains.

The constitution of Massalia was aristocratic and its institutions were gond (Strab, iv. p. 179). It had a comncil of 600 , who held their plates for life, and were named Timuchi ( $\tau, \mu \circ \hat{v} \chi o t)$. The council had a committee of fifteen, in whose hands the ordinary administration was: three out of the fifteen presided over the conmittce, and lind the chief power: they were the executive. Strabo's text here becomes corrupt, and it is doubtful whether he means to say that no man could be a Timuchus, unless he had children and unless he could trace his descent for threc generations from a citizen, or that no man could be one of the fifteen unless he fulfilled these conditions. (Sice Groskurl, TransI. Strabo, rol. i p. 310.) Their laws were Ionic, says Strabo, whatever this means; and were set up in public. Probably we may infer that they were not overloaded with legislation. Aristotle ( Pol. v. 6) seems to say that Massalia was once an oligarely, and we may conclude from this and other authorities that it became a Timacracy, that is, that the political power came into the hands of these who had a certain amount of wenlth. Cicero (de Rep. i. 27, 28) in
lis time speaks of the power being in the hatuls of the "selecti et principes," or as he calls them in another place the "optimates;" and though the administration was equitable, "there was," he says, " in this condition of the 'populus' a certain resemblance to servitude." Though the people had little or no power, ao far as we can learn, yet the name lemus was in use ; and probably, as in most Greek towns, the official title was Boule and Demus, as at Nome it was Senatus Populnsque Romanus. The division of the people was into Phylae. The council of the 600 probably subsisted to a late period, for lacian, or whoever is the author of the Toxaris (c. 24) mentions it in his story of the friendship of Zenothemis and Menecrates.
Some writers have attempted, out of the fragments of antiquity, to reconstruct the whole polity of Massalia; an idle and toolish attempt. A few things are recorded, which are worth notice; and though the authority for some of them is not a critical writer, we can hardly suppose that he invented. (Valer, Maxim. ii. 6.) Poison was kept under the c.re of the administration, and if a man wished to die, he must apply to the Six Hundred, and if be made out a good case, he was allowed to take a dose; and " herein," says Valerins, " a manly investigation was terupered by kindness, which neither allowed any one to depart from life withont a canse, and wisely gives to him who wishes to depart a speedy way to death." The credilility of this usage has been doubted on various gronnds; but there is nothing in it contrary to the notions of antiquity. Two coffins always stood at the gates, one for the the slave, one for the freeman; the bodies were t:aken to the place of interment or burning, whichever it was, in a vehicle: the sorrow terminated on the day of the funeral, which was followed by a domestic sacrifice and a repast of the relations. The thiog was done cheap: the undertaker would not gruw rich at Massalia. No stranger was allowed to enter the city with arms: they were taken from him, and restored when be went away. These and other precautions had their origin in the insecurity of settlers among a warlike and hostile population of Ligurians and Galli. The Massaliots also had slaves, as all Greeks had; and thongh manumission was permitted, it may be inferred from Valerius, if he has not after his fashion confounded a Greek and Roman usage, that the slare's condition was hard. A supply of slaves might be got from the Galli, who sold their own children. Whether the Ligurian was so bave, may be donbted. We read of Ligurians working for daily hire for Massaliot masters. This luardy race, men and women, used to come down from the mountains to earn a scanty pittance by tilling the ground; and two ancient writers have preserved the same story, on the eridence of Posidotios, of the endurance of a Ligurian woman. who was working for a Massaliot farmer, and being seized with the pains of childbirth, retired into a wood to he delivered, and came back to her work, for she would nut lose her hire. (Strab. iii. p. I65; Dindor, jv. 20.) It is just to add that the emploger paid the poor woman her wages, and sent ber off with the child.

The temperance, decency, and simplicity of Massaliot manners during their best period, before they had long been subjected to Roman rule, are commended by the ancient writers. The women drank no wine. Those spectacles, which the Romaus called Mimi, coarse, corrupting exhibitions, were prohibited. Against religious impostors the Nassa-
liot shut his door, for in those days there were men who made a trade of superstition. The lighest sum of money that a man could get with a woman was a hundred gold pieces: he must take a wife for what she was worth, and not for her money. She had five gold pieces for ber dress, and five fur her gold ornaments. Thia was the limit fixed by the sumptuary laws. Perhaps the Massaliot women were bandsome enough to want nuthing more.

Massalia cultivated literature, though it did not produce, as far as we know, either phets or historians. An edition ( $\delta$ top $\theta \omega \sigma t s$ ) of the Homeric poems, called the Massaliot edition, was used by the Alexandrine critics in settling the text of Fimer. It is not known by whom this ediion was made; but as it bore the name of Massalia, it may be supposed that it came from this city. The name of Pytheas is inseparably connected with the maritime fame of Massalia, but opinions will always differ, as they did in antiquity, as to the extent of his vojages aod his veracity. (Strab. ii. p. 104.) Tbat this man, a contemporary of Alexander, navigated the Atlantic Ocean, saw Britain, and explored a large part of the westem coast of Europe, can hardly be doubted. There was nuthing strange in this, for the Phoenicians had been in Britain centuries before. Pliny (ii. 97) records a statement of Pytheas as to the high tides on the British coast. Strabo (ii. p. 71) states that Hipparchus, on the authority of Pytheas, placed Massalia and Byzantiom in the same latitude. But it appears from another passage of Strabo (ii. p. 115), that Hipparchus said that the ratio between the gnomon and its shadow at Byzantium was the same that Pytheas said it was at Massalia; whence it appears that the conclusion is Hipparchos' own, and that the error may lave been either in the latitude of Massalia, or in the latitude of Byzantium. As for the voyages of anotber Massaliot, Euthymenes, there is too little authority to enable us to say anything certain.

As the Massaliots planted their colonies along the south coast of Gallia and even in Spain, we may conchude that all the places which they chose were selected with a view to commerce. The territory which Massalia itself bad, and its colonies, was insignificant. Montesqnien (Esprit des Lois, xx. 5) justly estimated the consequences of this city's position: " Marseille, a necessary port of refuge in the midst of a stormy sea; Marseille, this place where the winds, the sea-banks, the form of the coast, bid the mariner touch, was frequented by maritime peoples. The sterility of its soil determined commerce as the pursuit of the imhabitants." The Massaliots were noted for their excellent ships and their skill in constructing machinery. They carried on a large trade by sea, and we may conclude that they exported the products of Gallia, for which they could give either foreign produce or their own wine, oil, domestic utensils, and arms. The fact that in Caesar's time the Helvetii used the Greek characters, is in itself evidence of the intercourse between the Grecks on the coast and the Galli. When we consider also that the Greeks were settled :all along the southern coast of Gallia, from which the access was easy to the basin of the Giaronne, it is a fair conclusion that they exchanged articles, either directly or through several hands, with the Galli on the Western Ocean ; and so part of the trate of Britannia would pass throngh the Greek settlements on the south coist of France. [Gallia, Vol. I. p. 963.$]$

The med ils of Masealiat are mumerons, and sume of them are in gool tante. It is probable that they also coinel for the cialli, for the (Galli hand coined muney of their own lomg before the Cluristian aera with Greek characters. The comunon types of the Massalit medals are the lion thd the bull. No gel.f eoins of Masvalia have yet been found; but them are eoms of other metal covered over with gold or silver, whith are generally supposed to be base com: and bave or false coin implies true cuin of the same kind and denomination. It lats been also sil proed that the frand was practioed by the Masshints themselves, to cheat their customers; a supwaition which gives them no credit for honesty and intle for serse.

The suttlements of Massalia were all made very early: indord some of them may have heen settlenumts of the nuther city Phocaea. One of the earliest of these colonies was Taurocis or Taurnentum (: dunhtful presition), whigh Ches,ar (B. C. ii. 4) calls "Castellum Massiliensium." The other setthements east of Massalia were Olbia (Eoubes or Fiouho), Athenopolic [Athexorolis], Antipilis (.1ntitus), Nieast (Vizsa), and the islands along this coast, the stwechades, and Lero and Lerina. West of Massalia was Agatha (Ague), on the: Arauris (Hirault), doubtful whether it was a colony sectled by Phocaea or Massalia. Rhoda (Rnsms), within the limits of Hispania, was eitber a Mhodian or Mhensaliot crilony; even if it was Phodian, it was nturwarls under Massalia. Emporiae ( $A$ mpurias), in Hispania, was also Jassaliot; or even Phocaean (Liv. zxyi. 19) originally. [Emporlae]. Strabo speaks of three small Massaliot settlements further south on the poast of Hispania, between the river Sucro (Jucar) and Carthago Nova (iii. p. 159). The chief of them, he says, was Hemeroscopium. [Dinxient].

The fuzthest Phocaean settlement on the south cotct of Spain was Maenace (iii. p. 156), where remains of a Greek town existed in Strabo's time.

There may bave been other Massaliot settlements on the Gallic cuast, sueh as Heraclea. [Her.acles]. Siephams, indeed, mentions some other Massaliot cities. but nothing can be made of his frasmentary matter. There is no good reason for thinking that the Massaliots fuunded any inland towns. Aculate (. Irles) would seem the most likely, but it was not a (ireck city: and as to Avenin (Avignon) and Cabelli., (Caraillon), the evidnce is tom strall to enable us to rerkon them among Mh.ssaliot settlements. There is also the great improbability that the Massalota either wanted to make inland settlements, or were able to do it, if, contrary to the practice of their nation, they had wished it. That Massalint rorndhents visited the interior of Gallia long before the loman conguest of Gallia, may be assomed as a fatt.

I'rubably the downfal of Carthace at the end of the Third l'umic War, and the alliance of Masalia with Rome, increased the commerrial prowerity of this eity: but he Massalints never beeame a great power like Carthage, or they would not have called in the Rumans to holp them against two sumall 1igurian tribs. The foumation of the liowan colony uf Narbo (Narbonne), on the Atax (Auh), in is portion which commanded the ruad into Syuin and to the mouth of the Garonne, must have been detrimental to the commercial interests of Massalia. strabo (iv. p. 186) mentions Narlo in his time as the chief trading $p^{\text {lace }}$ in the Provincia. Duth before

Cansar's time and after Massalia was a place of resort for the Romans, and sometimes selected by exiles as a residence. (Tae. Ann. iv. 43, xiii. 47 .) When the Roman supremacy was extablished in Gallia, Massalia bad no longer to protect itself acuinst the natives. The people having wealth and keisure, applied themselves to rhetoric and phitosoply; the place became a school for the Galli, who studied the Greek language, which came into such common use that contracts were drawn up in Greek. ln Strabo's time, that is in the time of Augustus and Tiberius, some of the Romans who trere fond of learning went to Massalia instead of Athens. Agricola, the eonqueror of Britaunia, and a native of Forum Julii, was sent whea a boy by a careful mother to Massalia, where, as Tacitus says (Agric. c. 4), "Greek civility was united and tempered with the tlmifty hahits of a provincial tomn." (Sce also Tac. Ann. iv. 44.) The Galli, by their acquaintance with Massalia, hecame fond of rhetoric, Which has remained a national taste to the present day. They had tearhers of rhetoric and philosophy in their honses, and the towns also hired teachers for their youth, as they did physicians; for a kind of inspector of health was a part of the economy of a Greek tutro. Cirmmstances bronght three languases into use at Massalin, the Greek, the Latin, and the Gallic (1.id. $\mathrm{x} v .$, on the zuthority of Varro). The studies of the youth at Massalia in the Roman period were both Greek and Latin. Medicine appears to have been cnltivated at Massalia. Crimas, a doctor of this town, combined physic and astrology. He left an enormons snm of money for repairing the walls of his native town. He made his fortune at Rone ; but a risal came from Massalia, named Charmis, who entered on his career by condemning the practice of all his predecessors. Charmis introdnced the use of cold baths even in winter, and planged the sick into ponds. Mea of rank might be seen shivering for display under the treatment of this water doctor. On which Pliny ( xxix. 2) well observes that all these men hanted after repttation by bringing in some novelty, while they trafficked away the lives of their patients.

The history of Massalia after Caesar's time is rery little known. It is said that there are no imperial meitals of Massalia. Some tombs and inseriptions are in the Musenm of Marseille.

A great deal has been written about the history of Massalia, but it is not worth much. The following references will fead to other anthorities: liaoulHochette, Histoive des Colonies Grecques, a very poor work: II. Ternans, Historia Reipublicue Massilienstum a Primurdiis ad Xcronis Tempora, which is usetnl for the references, but for nothing else; Thierry, llistoire des Gautuis.
[G. L.]

COIS OF MAGSILIA.
NASS1THOLIS (Maбनieo入os), a river of Libya, the source of which l'meny (iv, 6. § 8), places in the mountain called Thwon Ochema, and its "embouchure ${ }^{7}$ (§ 9) in the Hesperian bay, between Hesjeriun Ceras and the Hypodromus of Aethiupis,
in E．long． $14^{\circ} 30^{\prime}$ ，N．lat． $6^{\circ} 20^{\prime}$ ．It has been ilentified with the Gambia，which can be no other than the ancient Stachir or Trachir；one of the rivers which flow into the Atlantic，between the Kama－ ranca and the Mesurado，is the probable repre－ sentative of the Massitholus．
［E．B．J．］
MASSYLi．［Numida．］
MASTAURA（Mácтavpa），a town in the north of Caria，at the foot of Mlount Messogis，on the sinall river Chrysaoras，between Tralles and Tri－ polis．（Strab．xiv．p．650；Pǐn．v．31；Steph．B． s．v．；Hierocl．P．659．）The town was not of any great repute，but is interesting from its extant coins，and from the fact that the ancient site is still marked by a village bearing the name Mastaura， year which a few ancient renains are found．（Ha－ milton，Researches，i．p．531．）
［L．S．］
MASTE（Má $\neq \eta$ öpos，Ptol．iv．7．§ 26），a moun－ tain forming part of the Abrssinian highlands， a little to the east of the Lunae Montes，lat． $10^{\circ} 59^{\prime}$ N．，long． $36^{\circ} 55^{\prime} \mathrm{E}$ ．The sources of the Astapus， Buhr－el－Azrek，Blue or Dark river，one of the ori－ ginal tribataries of the Nile，if not the Nile itself，are supposed to be on the N．side of Mount Maste． They are three springs，regarded as holy hy the natives，and though not broad are deep．Bruce， （Travels，vol．iii．p．308）risited Mount Maste，and was the first European who had ascended it for seventy years．The tribes who dwelt near the foun－ t：uns of the Bahr－el－Azrek were called Mastitae （Ma $\mathrm{\sigma}$ îrue，Ptol．iv．5．§ 24，7．§ 3 I ），and there was

［W．B．D．］
MASTIA＇NI（Maatavol），a people on the sonth const of Spain，east of the Pillars of Hercules，to whom the town of Mastis（Madtia）belonged． They were mentioned by Hecataeus（Steph．B．s．$v$ ． Maəтiavoi＇）and Polybius（iii．33），but do not oc－ cur in later writers．Hannibal transported a part of them to Afric．（Polyb．l．c．）Mastia appears to be the same as Massia（Maroía），which Theopom－ pus described as a district bordering upon the Tartessians．（Steph．B．s．v．Maocoia．）Hecataeus also assigned the following towns to this people ： Maemonora（Steph．B．s．e．Mawósupa），pro－ batly the same as the later Maenoba；Suxcs（（xitus， Steph．B．s．v．），probably the same as the later Sex， or Hexi ；Molrmdana（MozubSáva，Steph．B． s．v．）；and Sxalis（Zúaxis，Steph．B．s．v．），pro－ bably the later Suel．

MASTRA＇MELA（Ma $\sigma \tau \rho a \mu \epsilon ́ \lambda \eta$ ，Steph．B．s．v．）， ＂a city and lake in Celtice，＂on the authority of Artemidorus．This is the Astromela of the Miss． of Pliny［Fossa Mariana，p．912］．The name Mastramela also occurs in Avienus（Ora Maritima， r．692）．It is one of the lakes on the eastern side of the Delta of the Rhone，but it is uncertzin which it is，the E＇tang de Berre or the E＇tang de Mar－ tigues．It is said that there is a dry part of some size in the middle of the E＇tang de Caronte，and that this dry part is still called Malestraou．
［G．L．］
MASTU＇SIA（Naatovaía Kapa：Capo Greco）， the promontory at the southern extremity of the Thracian Chersonesus，opposite to Sigenm．A little to the east of it was the town of Elaens．（Ptol． iii．12．§ I；Plin．iv．18；Mela，ii．21；Tzetz，ad Lycoph．534，where it is called Magouria．）The mountain in lonis，at the feot of which Sayrma was built，likemise bore the name of Mastusia．（Plin． v．31．）
［L．S．］
MASU＇RA（Máoovpa），a place betwecn Attalia
and Perge in Pamphylia（Stadiusm．$\$ \$ 200,201$ ）， and 70 stadia from Mygdala，which is probably a corruption of Magydus．［M．acyoves．］［L．S．］
matala PR．［Matala．］
miAta＇LiA（Mataxia，Ptol．iii．17．§ 4），a town in Crete near the headland of Matali（Máтa入a， Stadiasm．），and probably the same place as the naval arsenal of Gortyna，Mexallum（Méta入入oy， Strab．x．p．479），as it appears in our copies of Strabo，but incorrectly．（Comp．Groskurd，ad loc．） The modern name in Mr．Pashleg＇s map is Mátula． （Höck，Kiveta，vol．i．pp．399， 435 ；Mus．Chass．Antiq． vol．ii．p．287．）
［E．B．J．］
MATEOLA，a town of Apalia，mentioned only by Pliny（iii．11．s．16）among the inland cities of that province．It is evidently the same now called Ma－ tera about 12 miles from Ginosa（Genusiom），and 27 from the gulf of Tarentum．It is only about 8 miles from the river Bradanus，and must there－ fore have leen closely aljoining the frontier of Lucanis．
［E．H．B．］
matayo，or matayonichi，as D＇anville bas it，in Gallia Narbonensis，is placed hy the Antonine Itin．on a rond from Forum Voconii［Fo－ rem Vocosn］to Massilia（Marseille）， 12 M．1． from Forum Voconii and 14 from Ad Turres （Tourves），between which places it lies．It is alsn in the Table，but the distances are not the same． Matavo is supposed to be Tins．
［G．L．］
MATERENSE OPPIDUM，one of the thity free towns（＂oppida libera，＂Plin．v．4）of Zeugitana．It still retains the ancient name．and is the modern Matter in the govermment of Tunis，－a small vil－ lage situated on a rising ground in the middle of a fruitul plain，with a rivulet a listle below，which empties itself into the Sisara Palus．（Shav，Trat． p．I65：Barth，Wanderungen，p．206．）［E．B．J．］

MATE＇RI（Marn̂pou：some MSS．read Marîvou， Ptol．v．9．§ $1 \overline{7}$ ），a people of Asiatic Sarmatia，to the E．of the river Rba．
［E．B．J．］
MATERNUM，a town of Etruria，known only from the Tabula Peutingerizna，which places it on the Via Clodia，between Tuscania（Toscanella）and Saturnia， 12 miles from the former，and 18 from tho latter city．It probably ocenpied the same site as the modern village of Farnese．（Cluver．Ital．p．517； Dennis，Etruria，sol．i．p．463．）［E．H．B．］
MATIA＇NA（Mariaún，Strab．ii．p． $\boldsymbol{7 3}$ ，xi．p． 509 ； Steph．B．：Matinvin，Herod，v．52：Eth．Maтiavós， Mazinvós），a district of ancient Media，in the south－western part of its great subdivision called Media Atropatenc，extending along the mountains which separate Armenia and Assyria．Its bound－ aries are very uncertain，and it is not possible to determine how far it extended．It is probably the same as the Maptuuy of Ptolemy（vi． 2. §5）．［Marthane．］Strabo mentions as a pe－ culiarity of the trees in this district，that they distil honey（l．c．）．The Matiani are included by Herodotus in the eighteenth satrapy of Dareius （iii．94），and served in the army of Xerxes，being armed and equipped in the same manner as the Paphlagonians（vii．i2）．Herodotus evidently con－ sidered them to occupy part of the more widely extended territory of Armenia．
［ I.$]$
 i．189．202，v．52），the ridge of mountains which forms the lack－bone or centre of Matiana，doubtlesa part of the monntaio range of Kurdistin，in the neighbourhood of Vian．Herodotus makes them thio watershed from which flowed the Gyndes and the
 from N. to S. (1. 1*9, 202).

MATILO, in Gallia Bolgica, is plaw - by the Tahle on a ronte which ran from Lugduman (Le ilen) along the Whine. The first place from Latelumum is $\mathrm{I}^{\prime}$ ractoriam Agrippinae (Roomburg), and the nest is Matilo, suppresel to be Rhignenburg. [G. L.]

MATI'LICA (Eth. Matilicas, -ätis: Mutilica), a municipal town of Umbria, situated in the Apennimes, near the sources of the Aesis, and close to the contines of P'icenum. It is mentioned both hy I'liny atil the Liber Coboniarum, of which the latter includes it amony the "Civitates I'iceni." Towards the close of the liontan Empire it appears as an episcopal see, incinded in the province then termed " l'icenum Suburhicarium." (1lin. iii, 14. s. 19 ; Lib, Colon. p. 257 : Bingham's Eiccl. Antiq. book ix. ch. 5. § 4.) Muttilica is still a cousiderable town, and retains the ancient site as well as name. [E. H. B.] MATINLS MONS. [GimGants.]
MATIsCO, a place in Callia Celtica, in the territory of the Acdui in Catsar's time, and on the Saone. (B. G. vii. 90.) After the capture of Alesin, 1. U. 52. Caestar placed P. Sulpicius at Matisco with a legion during the winter, to look after the supply of corn for the amy. (B. G. viii. 4.) The pasition of Mutisco is fixed by the name, its site on the river, and the Itins. The name, it is said, was written Mastico by a transposition of the letters; and from this furm came the name Mascon, and by a common change. Mricon. The form Mastisco occars in the Table. (1)Anville, Notice, $f \mathrm{c}$. ) [G. L.]

MATITAE, [Nigenk.]
MA'TIUN, a maritime city of Crete, nest to the E. of Apollonia in Pliny's list (ir. 12), and opposite to the island of Dia,-"Coutra Matium Dia" (l.c.). The modern Mrgilo-Kástron occupies the ancient site. (Pashley, Trav, vol. i. 1p. 172, 261; Höck, Krita, vol. i pp. 12, 403.)
[E. B. J.]
MATRICEM. AD, a considerable town in llyricunn, which the Peutinger Table places between Listhe Vetus and Bistue Nuta, 20 M. P. from the former, and $25 \mathrm{M} . \mathrm{P}$. from the latter. It inust be identical with Mostur, the chief town of Itersegorina, standing on both hanks of the Narenta, conriected by the beautiful bridge for which it has always been celchrated. The towers of this bridge arc, according to tradition, on Roman substructions, and its construction is attributed to Trajan, or, according to some, Hadrian. The word " most" "star," signifies "old bridge." (Widkinson, Dalmatia, vol. ii. jp. 57-63; Neigebuur, Dic Sud-Slaren, p. 127.)
[E. B. J.]
MATRI'NTS (Matpinus), a river of Picenum, flowing into the Adiatic, now called La Piomba. Strabo describes it as flowing from the city of Adria, but it is in reality intermediate between Adria (Atri) and Anguhs (Civita S. Augelo). According to the same writer it hal a town of the same name nt its mouth, which servel as the port of Adria. (Sitab, v. p. 241.) Prelenay also mentions the month of the river Matrinus next to that of the Aternos, from which it is distant about 6 miles (Ptol, iii. 1. § 20), but he is certainly in ertor in assignine it to the Marrocini.
[E. II. B.]
MATRONA or MATRONAE MONS is the mame given by later Jatin writers to the pits of the Mont Gemerer, from Nignsio (Suan) to Brigantia (Briancon), which wis more commonly known ly the gemeral appellation of the Alpes Cottiae. The pass is described in some detail by Amminnus, from whom
it appears that the name was applied only to the higher part, or actual pass of the mountain : and this is confirmed by the Jerusalem Itinerary, which gives the name of Alpes Cuttiac to the whole pass from Librodunum (E'mbrun) to Signsio, and confines that of Matrona to the actual monntain betreen Brigantia (Bruzngon) and Gesdao (Ccsanne). (Itin. Hior. p. $556 ;$ Amm. xv, 10.§ 6.) [E. H. B.] MA'TRONA. [SEquana.]
MATTIACI, a German tribe, perhaps a branch of the Chatti, their eastern neightours, probably occupied the modern duchy of Nassau, between the rivers Lahn, Main, and Whine. They are not mentiened in history until the time of the emperor Claudius; they then became entirely subject to the liomans (Tac. Germ. 29), who built fortresses and worked the silrer mines in their country. (Tac. Aun. xi. 20.) In A.n. 70, during the insurrection of Civilis, the Mattiaci, in conjunction witb the Clastti and other tribes, besieged the Roman garrison at Mogantiacum (Mayence: Tac. Hist. iv. 37) ; and after this event they disappear from bistory, their country being ocoupied by the Alemani. In the Notitia lmperii, however, Mattiaci are still mentioned among the Palatine legiuns, and in connection with the cohorts of the Batavi. The country of the Mattiaci was and still is very remarkable for its many hot-springs, and the "Aquac Mattiacae," the modern Hiesbaden, are repeatedly referred to by the Romans, (Plin. xxxi. 17 ; Amm. Mare, xxix. 4 ; Aqual Mittiacae.) From Martial (xiv. 27 : Mattiacae Pilae) we learn that the Romans imported from the country of the Mattiaci balls or cakes of soap to dye grey hairs. The name Mattinci is probably derived from matte, a meadow, and ach, signifying water or bath. (Comp. Orelli, Inscript. Nos. 4977 and 4983; Zeuss, Die Deutschen, p. 98 , foll.)
[L. S.]
MATTLACUM (Matтıakob), a town in the north of the country of the Mattiaci. (Ptol. ii. 11. § 29.) Some writers believe this town to be the same as the Nattinm mentioned by Tacitus (Amn. i. 56), as the capital of the Chatti, which was set on fire in A. D. 15, during the war of Germanicus. But a careful examination of the passage in Tacitus shows that this cannot be ; and that Mattiacum is probably the modern town of Marburg on the Lalin (Lotana), whereas Mattium is the modern Maden, un the right bank of the Eder (Adrana). (Comp. Wilheln, Germamien, p. 188.)
