It was at length obliged to surrender througin fature of provisions in E. C. 379; and Ayesilans appointed a conncil of 100 menbers (half trom the exiles and half from the benieged), with puwers of lite and death over the citizms, and authorisel to frame a new contitution. (Xen. Hell. v, 3. \& 10 , seq.; Plut. Ages. 24; Divi. xv. 20.) From this time the Pbliasians remaned faithful to sparta through. ont the whule of the Theban War, though they had to suffer much from the devastation of their territory by thuir hostile neighbours. The Argives occupied and fortitied Tricarammabove Pllius, and the Sicyonians Thyamia on the Sieyonian frontier. (Xen. Hell. vii. 2. § 1.) In A. c. 368 the city was nearly taken ly the exiles, who no doubt belonged to the democratieal party, and had been driven into exile after the capture of the city by Acesilans. In this year a body of Arcadians and Eleinns, who were mareliug through Nemea to join Epaminondas at the Isthuns, were persuaded by the Plliasian exiles to assist them in cafturing the city. Duriug the night the exiles stole to the foot of the Acropolis; and in the morning when the scouts stationed by the citizens on the hill Tricaranum announced that the enemy were in sight, the exiles seized the opportunity to scale the Acropolis, of which they obtained possession. They were, however, repulsed in their atteupt to force their way into the town, and were eventually ubliged to abandon the citadelaloo. The Areadians and Argives were at the same time repulsed from the walls. (Xen, Hell. vii. 2. Ss 5-9.) In the following year Phlius was expoued to a still more firmidable attack from the The ban conmander at Sicyon, assisted by Euphron, tyrant of that city. The main huly of the army descended from 'Tricarsuum to the Herseum which stood at the finct of the mountain, in order to ravage the Phliasian plain. At the same time a dictachment of Sicyomians and Peilumians were pasted NE. of the Acrupolis bu-fore the Comiuthian gate, to hituler the thliasians from attarking them in their rear. But the nasin bekly of the troms was repulsed; and being umable to fuin the detarhment of Sicyonians and leallonians in consequence of a ravin ( ¢apárg), the Phliasians attacked and defeated them with loss. (Xen. Hell. vii. 2. § 11 , seq.)

After the teath of Alexander, Phlins, like many of the other Pelogonnemian cities, became subject to tyrants: but upon the organisation of the Acharan Leagne by Aratus, Cleonymus, who was then tyrant of Phtius, voluntarily resigned his power, and the city j mare the leyguc, (I'olyb. ii. 44.)

Plilins is celebrated in the hivtory of literature as the larsiplace of Pratinas, the inventor of the Satyric drama, and who contended with Aeschylus for the prize at Athens. In the agora of Plulins wns the tomb of Aristias, the son of Pratinas. (l'atus. ii. i.3. § 6.)

Pamsanias says that on the Acropalis of Phlins w.ts a temple of Hebre or Ganymeda, in a cypress grove, which enjoyed the rizht of asylum. (Comap. Strab. viii. p. 3s2.) There was also a temple of Demeter on the Acropolis. On descenting from the citadel there stoon on thie right a temple of Asclepius, and below it the theatre and another temple of Demeter. In the agorn there were ubo other pothlie buiklings. (Pans, ii. 13. \& 3 seq.) Tho priucipal place at present in the Phliasia is the villase of St. Gemrge, sitnatem at the southern foot of Tricarannen, a mountain with three summits, which bounds the plain to the NE: The ruins of Phlitts

PIILYA.
are situntel three quarters of an honr further west, on one of the spurs of Tricaramm, above the rigbt bank of the Asopus. They are of considerable extent, hat prement little more than foumdations. On the sionth-western slope of the lheight stands the church of our Laty of the Hill (Mavaria 'PaxićTiఠनa), from which the whole spot is now called
 of the temple of Asclepius. Rooss found here the remains of several Doric pillurs. Five stadia from the town on the Asopus are some ruins, which Jons considers to be those of Celeae ( $K \in \lambda \in a t$ ), where $D+$ meter was worshipped. (Paus. ii. 14. § 1.) Leako supposed Plilins to be represented by some ruins on the western side of the monntain, now calied Pulyfengo; but these are more correctly assigned by lins to the ancient city of Arnethyrea; and their distance from those already described corresponds to the 30 stadia which, according to Strabo, was the distance from Arsethyrea to Phlius.

Oti Mt. Tricnranum are the remains of a small Hellenic fortress called Paleokastron, which is probahly the fortress erected by the Argives on this mountain. (Xen. Hell. vii. 2. §今 1, 5, 11, 13; Dem. Megal. p. 206: Harpocrat. s. v. Tpukápavov; Steph. B. s. v. Tpudqava.) Tlyyamia, which tho Sieyonians fortified, as already narrated (Xen, Hell. vii. 2. § 1), is placed by Ross on the lofty hill of Spiriia, the northern prolongation of Triearaum, between the villages Stimanga and Skrapani; on the summit are the remains of a large ronnd tower, probably built by the Franks or Byzantines. In the southern part of the Phliavia is the Dioscurion ( $\Delta$ ororкoiptov), which is mentioned only by Polybins (iv. 67, 68, 73), and which lay on the road from Corinth over the monntain Apelauron into the Stymphalia. (Leake, Morea, vol. iii. p. 339, seq.; Rons, Reisen im Peloponnes, p. 25, seq.; Curtins, Peloponnesos, vol. ii. p. 470 , seq )

PHLYA. [ATTICA, P. 332, 1.]

## PHLYGONIUM.

PIILYGONIUM ( $\Phi \lambda v$ yónov), a city of Placis, of unknown site, destroyed at the end of the Phocian War. (Paus. x. 3. § 2 ; Steph. B. s. v.) Pliny calls it Phlygone, and erroneously represedts it as a city of Boentit (iv, 7, s. 12).

PHOCAEA (Фஸ́каıa: Eth. Фмкаıєús or \$ $\omega$ naeús), the most northern of the Ionian cities in Asia Minor, was situated on a peoinsula, between the Sinus Cymaeus and the Sibus Hermaens, and at a distance of 200 stadia from Smyrna. (Strab. xiv. p. 632: Plin. v. 31 ; Pomp. Mela, i. 17.) It wais said to have been founded by emigrants from Phocis, under the gnidance of two Athenian chiefs, Philogenes and Damon. (Strab, l. c. p. 633 ; Paus. vi. 3. § 5.) The first settlers did not conquer the territory, but received it as a gift from the Cumaeans. The town, however, did not become a member of the Ionian confederacy until it placed princes of the line of Codrus at the bead of the government. It had twn excellent barbours, Naustathmus and Lampter, and before the entrance into them was situated the little island of Baccheion, which was adorned with temples and splendid buildings (Liv. xxxviii. 22); and owing to this favourable position, and the enterprising spirit of its inhabitants, the town soon rose to great eminence among the maritime cities of the ancient world. Herodotus (i, 163, \&c.) states that the Phocaeans were the first Greeks who andertook distant voyages, and made themselves acquaiated with the coasts of the Adriatic, and the Tyrrbenian and Iberian seas; and that they were the first to visit Tartessus. Arganthonius, king of the Tartessians, became so attached to them as to try to prevail upon them to quit lonis and settle in his own dominions; but on their declining this, be gave them a large sum of money to fortify their own city against the Persians. The Phocaeans accordingly surrounded their city by a wall of several stadia in circumference, and of a very solid construction. In the war of Cyrus, Phocaea was one of the first towns that was besieged hy the urmy of Cyrus, under the command of Harpagus. When called npon to surrender, the Pbocaeans, conscious of being unable to raist the enemy much lonver, asked and obtained a truce of ore day, pretending that they would consider bis proposal., But in the interval they embarked with their wires and clildren and their most valuable effects, and sailed to Cbios. There they endeavoared by purchase to obtain passession of the group of islands called Oenussae, and belonging to the Chians; but their request being refused, they resolved to sail to Corsiea, where etwenty years before these occurrences they had plated the colony of Alalis. Before setting out they landed at Phocaea and put the Persian garrison to the swerd. They then bound themselves by a solemn aath to abanilon their native country; nevertheless, bowever, one half of their number, unable to overeome their feelings, remained behiad. The rest proceeded to Corsica, where they were kindly received by their colunists. Soon they became formidable to the neighboaring nations by their piracy and depredations, so that the Tyrrhenians and Carthaginians united to destroy their power. The Phocacans succeeded indeed in defeating their enemies, but their loss was so great that they despaired of being able to continue the enntest, and proceeded to Rhegium, in the south of Italy. Not long after their arrival there, they were induced to settle at Elaea nr Velia, in Lucania, which, in the course of time, became a flourisbing town. Ainong the numeroas colonies of

PHOCIS.
6.2
the Phocaeans the most important was Massilia or Marseilles, in the south of France, and the most western Maenaca, in Mispania Baetica. After the emigration of balf the population, Phocaea continued to exist under the Persian dominion; but was greatly reduced in its commerce and prosperity, as we may infer from the fact that it furnished only three ships to the fleet of the revolted Ionians at the battle of Lade; but their commander was nevertheless the ablest man among the lonians. (Herod. vi. 1117.) After these exents Phocaea is little mentioned (Thucyd. i. 13, viii. 31 ; Hom. Hymun. i. 35 ; Scylax, p. 37); but some centuries later, in the war of the lomans against Antiochus, when Pbocaea was besieged by a Roman fleet, Livy (xxxvii. 31) describes the place as follows: - "The town is situated in the inmost recess of a bay; its shape is obloog, and its walls enclose a space of 2500 paces; they afterwards unite so as to furm a narrower wedge: this they themselves call Lampter, and it is about 1200 paces in lreadtb. A tongue of land ruming ont into the sea a distance of 1000 paces, divides the bay nearly into two equal parts, and forms on ench side of the narrow isthmus a very safe port. The one towards the south was culled Xanstathmus, from its being able to contain a great number of ships, the uther was situated close to the Lampter." On that occasion the town was taken by the Romans, after a desperate resistance, and given up to plonder by the prsetor Aemilius, though the inbabitants had voluntarily opened their gates. The town with its territory, however, was restored to the inbabitants by Aemilius. (Liv, l. c. 32 ; Polyb. xxii. 27, comp. v. 77, xxi. 4 ; Liv. xxxviii. 39.) At a still later period the Phocaeans offended the Romans by supporting the cause of Aristonicus, the claimant of the throne of Pergamum; aud they would have beea severely punished had not the inbabitants of Massilia interceded in their bebalf. (Justin, xxxvii. 1, xliji. 3: Strab. p. 646.) The existence of Pbocaea can be traced throughout the imperial period from coios, whicb extend down to the time of the Pbilips, and even througb the period of the Lower Empire. (Hierocl. p. 661.) From Michael Ducas (Ann. p. 89) we learn that a new town was built not far from the ancient city by some Genoese, in A.D. 1421 . This latter, situated on the isthmus mentiooed by Livy, not far from the rains of the ancient city, is the place now called Foggia Nora: the ruins bear the name of Palaro Foggia. (Chandler, Travels, p. 96 ; Aruadell, Seven Churclies, p. $294 ;$ Hamilton, Researches, ii. p. 4; Eckbel, Doctr. Num. ii. p. 53, \&c.; Rasche, Lex. Rei Num, iii. 2, p. 1225, \&c.; Sestiai, p. 83; Thisquen, Phocaica, Bonn, 1842, 8 vo .)

Ancther town of the same name in the peninsula of Mnunt Mycale, in Caria, is mentioned by Stephanos B. (s.v.).

COIN OF PHOCAEA.

## PHOCEAE. [Leontint, p. 159, b.] <br> PHO'CICUM. [Phocis.]

PHOCIS ( $\grave{\eta}$ Факis: Eth. $\Phi \omega \kappa \epsilon$ ús, Phocensis), a small country in central Greece, boonded on the N. by Dotis, on the NE and E. by the Locri Epienemidiii and Opuntii, on the SE. by Boeotia, on the W. by the

Ozolian Locriams, and on the S . by the Corintlian golf. The l'hocians at one period of their history possessed a sea-port. Daplinus, on the Eubocan sea, intersening between the Locri Epictemidii and Opuntii (Strab. x. Yj. 424. 425.) Plocis is a mountainous country. The greater part of it is occupied by the lofty and rugced rance of I'arnassus, the lower portion of which, named Cirphus, descends t. the Corinthisn enlf between Cirrha and Anticyra: below Cirphis was the fertile valley of Crissa, extending to the Corinthian gulf. On the NE. and E. were the locrian mountains, lofty and difficult of access on the side of the Eprienemidii, but less precipitons on the sifte of the Opuntii. [Locris.] Between Mount l'arnassus and the Luerian mountains flowed the river Cephissus, which empties itself into the lake Copais in Bueutia. [Bozotia, p. 410 , seq.] In the valley of the Cephissus are some narrow but fertile plains. The only other rivers in Plocis, besades the Cephissus and its tributaries, are the 1 leistus, flowing by Delphi [Detphi], and the Heractuins, flowing into the Cornthian gulf near Bulis. [Brels.]

Phocis is said to have been originally inhabited by several of those tribes $n$ ho tormed the population of tireece hefore the appearance of the Hellenes. Among the earliest inhabitants we find mention of Leleges (Dicaearch. p. 5), Thratjans (Strab. ix. p. 401 ; Thuc. ii. 29 ; comp. Pans. i. 41. § 8), and Hyantes. (Strab. l. c.) The ahoriginal inhabitants were conquered by the Phlegrae from Orchomenas. (Pans viii. 4. §4, x. 4. § 1.) The country around Tithorea and Delpha is said to have been first called Phocis from Phocus, a son ot Ornytion, and grandson of Sisyphus of Coriuth; and the name is said to have heen afterwards istended to the whole cumntry from Pbocns, a son of Aeacus, who arrived there not long afterwards (Paus, ii. 29. § 3, x. 1. § 1.) This statement would seem to show that the Phocians were Lelieved to be a mised Acolic ard Acharan race, as sisyphus was one of the Acohic beroes, and Acacus one of the Achaean. In the Trojan War the inhabitants appear under the name of Pbocians, ath were led acainst Troy by Schedius and Epis. twoulhus, the suns of 1 phitus. (Hom. Il. ii. 517.)

Phocis owes its chicf imprtance in history to the celelrated oracle at Dejjhs, which originally belonsed to the Phocians. But sfter the Dorians bad wbt.uined possession of the eemple, they disowned their connection with the Phocians ; and in historical t.l ies a riolent antipathy existed between the 1 hoL.ath und Dephians. [Deurath, p. 762.]
lhe I'lucians proper dwelt chiefly in stall towns sitnated पron criber side of the Cephissus. They fort iet an ancinnt confeleration, which assembled in a builfing named Phocicum, near Daulis. (l'aus. 2. 5. § 1.) They maurained their independence against the Thessilians, whe made several attempts to suldue the in hefone the l'ersian W.ar, and upon one occasion they intlited a severe loss upon the Thessalias re ilyat! ths (Hen 1, vit. 27, veq: : l'aus X. 1.) Whin Xerses invaded (ireece, the Thessaliass wete at le to wrok thei wengean e nipn their ancent enemies. They conducted the Persum army into l'ive is, at \& twelve of the Phe cian eities were deatroyed by the in caders. The iuhabitmits had previonsly estap its the summits of l'arna-sus or across the mountains mono the teritory of the Luret Ozolae. (Herod. viti. 32, srif) Sume of the 1'hucians were subhequently comp-lial to serve in the any of Mardonins, but :lise who lad taken ref ge
on Mlt. Parmassns sallicd from their fastnesses and annoyed the Persian arny. (1lerod. ix. 17, 31; Paus. x. 1. § 11.)

It has been already remarked that the oracle at Delphi originally belonged to the Photians. The latter, though dispossessed by the Delphians, had never relinquished their claims to it. In B. c. 450 the oracle was again in their possession; the Lacedamomians sent an army to deprive them of it and restore it to the Delphians; bnt upon the retreat of their forces, the Atbenians marched into Phocis, and handed orer the temple to the Phocians. (Thuc, i. 112.) In the Peloponnesian War the Pbocians were zealous allies of the Athenians. (Comp. Thuc, iii 95.) In the treaty of Nicias (1. C. 421), however, it was expressly stipulated that the Delphians should be independent of the lhocians (Thuc. v. 18); and from this time the temple continued in the undis: puted passession of the Delphians till the Sacred War. After the battle of Leuctra (в. c. 371), the 1 hocians became subject to the Thehans. (Xen. Hell. vi. 5. § 23.) After the death of Epaminondas thicy deserted the Thehan alliance; and the Thebans, in revenge, induced the Aimplictyonic Cuuncil to sentence the Phocians to pay a heary fine on the pretext of their having cultivated the Cirrbaean plain, B. c. 357 . Upon their refusal to pay this fine, the Aluphictyonic Council consecrated the Phocian ternitory to Apollo, as Cirrha had been tre:ited two centuries before. Therenpon the Phocians prepared for resistance, and wero persuaded by Philomelns, one of their chief cirizens, to seize the temple at Delphi, sind appropriste its treasures to their own defence. Hence arose the celebrated Sacred or Phocian War, which is narrated in all histories of Greece. When the war was at length bronglt to a conclusion by the aid of Philip, the Amphictronic Council wreaked its vengeance upon the wretched l'bocians. It was decreed that all the towns of Phocis, twenty-two in number, with tho exception of Ahse, should be destroged, and the inhabitants scattered into villages, containing not more than fifty houses each; and that tbey should replace by yearly instalments of fifty talents the treasures they had taken from the temple. The two votes, which they bad had in the Amphictyonic Council, were taken away from them and given to Philip. (Diod. svi. 60; Paus. x. 3; Dem. de Fals. Leg. p. 385.) The Phocians subsequently rebuilt several of their cities with the assistance of the Atherians and their old enemies the Thebans, who had joised the Athenians in their opposition to Philip. The l'hocians fuught on the side of Grecian independence at the battle of Chaeroneia and in the Lamiac war; and at a later period they resisted the Gauls, when they attempted to plander the temple at Delphi. (1’aus. x. 3. § 3.)

The chief town in 1'locis, excepting Delpir, was Et.atela, situated upon the left bank of the Cephissus, on the higbroad from Locris to Boeotia, in the natural march of an arny from Thermopylae into central Greece Nest in importance was Abae, also to the left of the Ceplissus, upon the Bureotian frontier, celwbrated for its ancient oracle of Apollo. 'The other towns of Phocis may be enumerated in the folluwing order: Left of the Cephissus from … to S. Dhymafa, Erochins, Tithmonica, Thitaka, Ilxustrolls. Ikitht of the Cephissus, and between this river and Mumi l'arhassus, Lilaea, Chaleamia. Abhricaea, Ledon, Neos. which was suppained by Tithonea [sce Neon], Pakapotamit.

## I'HOE'BIA. [BUPHIA.]

PHOENICE (Фоivikク), a city of Chamia in Epeirus, sitnated a little inland north of Buthrotum (Strab, vii. p. 324), upon a river, the ancient name of which is not recorded. It is deseribed by l'olybius, in e.c. 230 , as the strongest, most powerful, and richest of the cities of Epeirus. (Polyb, ii. 5, 8.) In that year it was captured by a party of lilyrians, assisted by some Gallic mercenaries; and the Epirots, who had marched to the rescue of the place, were surprised by a sally of the Illyrians from the city, and put to the rout with great slaughter. (Polyb. L.c.) Phoenice contimsed to be an important city, and it was here that a treaty of peace was negotiated between Philip and the Romans towards the close of the Second Punic War, B, c. 204. (Liv. Exix. 12; Pulyb. xxvi. 27.) Phoenice appears to lave escaped the fate of the other Epeirot cities, when they were destroyed by order of the seaate, through the influeace of Charops, one of its citizens. (Polyb, axxii. 22.) It is mentioned by Ptolemy (iii. 14. Sु 7) and Hierocles ( p .652 ), and was restored by Justinian. (Procop. de Aedif. iv. 1.) Procopins says that it was situated in a low spot, surrounded by marshes, and that Justinian built a citadel upon a ueighbouring hill. The remains of the ancient city are found upon a hill which still bears the name of Finiki. "The entire bill was surrounded by IIellenic walls. At the south-eastern extremity was the citadel, 200 yards in length, some of the walls of which are still extant, from 12 to 20 feet in height.

About the middle of the height is the emplacenent of a very large theatre, the only remains of which are a small piece of rough wall, which encircled the back of the upper seats; at the bottom, in the place of the scene, is a small circular foundation, apparently that of a town of a later date. Between it and the north-western end of the citadel are the remains of a Roman construction, built in couses of tiles." (Leake Northern Greece, vol. i. p. 66.)

PHOENIC1A, a conntry on the coast of Syria, bounded on the E by Mlount Lebanon.

## I. Nime.

lts Greek name was $\Phi$ orvikn (Hom. Od, iv, 83; Hernd. iii. 5; Thucyd. ii. 69; Strab. p. 756 ; Ptol. v. 15. § 21, \&c.), which in the best Latin writers is literally rendered Phoenice (Cic. Acad. ii. 20; Tac. II. v. 6; Mela, i. 12; Plin. v. 13, \&e.), and in later authors Phoenicia (Serv. ad Värg. Aen. i. 446 ; Mart. Capell. vi. 219,8 c.), and once in a suspected passage of Cicero. (Fin. iv. 20.) The latter form bas, bowever, prevailed amony the moderns. By the Phoenicians themselves, and by the lsraelites, their laod was called Canaan, or Chna; an appellation which embraced the whole district between the river Jordan and the Mediterracean. In Genesis the name of Canaan occurs only as that of a person, and the country is described as "the land of Canamn." In the tenth chapter of that book the following tribes are mentioned; the Arvadites, Sinites, Arkites, and Zemarites, whose sites may be identified with Aradus, Sinna, Arca, and Sinyyra; whilst the name of Sidon, described as the firsthorn of Canaan, marks one of the most important of the Phoerician towns. The abbreviated form Chnat ( $\mathrm{X} \nu \hat{a}$ ) occars in a fragment of Hecataens (Fragm. Histor. Graec. p. 17, Paris, 1841), and in Stephanus Byzantinus (s. v.) : and the translation of Sanconiatho by Philo, quated by Eusebius (Praep. Erang. i. p. $8 \overline{7}$, ed. Gaisford) records the change of this appellation into Phoenix. The Septaagint frequently renders the Hebrew Canaan and Canaanite by Plioenicia and Phoerician. In Hebrew, Chna or Canaan signifies a low or flat land, from VJJ. "to be low," in allusion to the low land of the coast. Its Greek name $\Phi_{0} \nu_{l} \xi$ has been varionsly deduced from the brotber of Cadmus, from the palm-tree, from the purple or blood-red dye. фorvós, which formed the staple of Phocoician commerce, and from the Red Sea, or Mare Erythracum, where the Phoenicians are supposed to have originally dwelt. (Steph. B. s. v.; Sil. 1:al. i. 89 ; Hesych. s. v. фow $\begin{aligned} & \nu \\ & ;\end{aligned}$ Ach. Tatins, ii. 4 ; Strab. i. p. 42, \& c.) Of all these etymulogies the second is the most probable, as it accords with the practice of antiqnity in many other instances.

## 11. Phystcal Geograpiry.

The boundaries of Pboenicia are not very clearly laid dows in ancient writers. The Mediterrauean sea on the W. and Lehanon on the E. form natural limits ; but on the N. and S. they are variously fixed. According to Herodotus the N. boundary of Phnenicia was the bay of Myriandrus, whilst on the S. it terminated a Jittle belorv Mount Carmel, or where the territory of Judnea touched the sea (iii. 5, iv. 38, vii. 89). Strabo makes it extend from Orthosia on the N., to Pelusium in Egypt on the S. (xvi. p]. 753, 756). But Phoenicia, considered as a pulitical e infederation, neither reached so far N. as the boundary of Herodotus, nor so far S. as that of Strabo. Myriandrus was indeed inhabited by Phoenicians; bot it appears to have been only a colony, and was separated fronı Ybenicia, properly so called, by an intervening tract of the Syrian coast. (Xenoph. Anab, i. 4. § 6.) The more accurate boundaries of Phoenicia, and which will be adopted here, are those laid down by Pliny (v. 17), which include it between Aradus on the N., and the river Chorseas or Crocodilon on the S . The same limits are giren in Ptolemy (v. 15. §4), except
that he makes the river Elcutherns the N. boundary, and does not mention Aradus, which lay a little to the N. of that stream. There can be no question, bowerer, that Aradus belonged to Phoenicia. So, too, at the southern extremity, the town of Dors was unquestionably Pherenician. whilst Caesarea, the first tomn S. of the Chorsens, belonged to Palestioc.

Phoenticia, as thns defined, lies betreen lat. $32^{\circ}$ $38^{\prime}$ and $34^{\circ} 52^{\circ} \mathrm{N}$., and long. $35-36^{\circ} \mathrm{E}$. It forms a narrow slip of land abunt 120 miles in length, and seldom more, but frequently less, than 12 miles broad. The range of Libanns, which skirts the greater part of its eastern side, throws out spurs which firm promuntories on the coast, the most remaiksile of which are Theu-prosopon (A $\in$ ove $\pi \rho o \sigma \omega \pi o \nu$ ) between the towns of Trieris and Botrys, and the Promontorium Album between Tyre and Ecdippa. Farther to the S. Mount Carmel forms to ther buld promontory. The whole of Phoenicia presonts a succession of hills and ralleys, and is iraversed by muncrons small rivers which descend from the mountains and reuder it well watered and fraifful. The coast-line trends in a south-westerly duev tion; so thet whilst its northern extremity lies thasly under long. $36^{\circ}$, its southern one is about whier $35^{\circ}$. Araulus, its most northerly town, lies in :m island of the smne name, between 2 and 3 in Is from the mainland, and nearly opposite to the authern extremity of Muunt Bargylus. On the co.st over azainst it lay Antaradus. From this priat to Tripolis the coast forms an extensive bay; into which several ifers fall, the priticipal being the Eleutherus (Nohe-cl-Kihir), which flows through the valley between Monnt Bargylus and Libanus. To the N. of the Eleutherus lie the towns of Simyra and Marathus; to the S. the principal town before arriving at Tripolis was Orthosia, clove to the seashore. Tripulis stands on a promontory about half a mile broad, and rumning a mile into the sea. It is wanhed by a little river now casled El-Kadisha, "the boly." Tripolis derived its name from being the fodioral town of the three leading Phoenician atios, Tyre, sidon, and Aralus, eath of which had lime its syparate quarter. To the S . of Tripolis the mantry ises into chalk hills, which press so closely Wht the sea as to leave no room for cultiration, and Dhewly even fur a road, and which form the bold Timbinitury already mentioned of Thenprosopon. (Nitsens-Shl keah.) The chief towns of this district are Calamos and Trieris. To the S . of Thenpromip on the hills recude a little from the sea, but at a distance of between 20 and 30 miles finn another lifty promontory called Climax (Ras II'alta Sillan), from the circumstance that the steepness of the cliffs rendered it necessary to ent steps in them. Along this tract several rivers dessend into the +es, the principal of which is the Alonis (Naher-el-Ibrahim). The chief towns are Botrys, 7 miles S. of thenyresopon, and Byblns, a little S . of the Alonis. Palai-hyblus lay still further S., but its site is urknown. Aj haca, noted for its licentious worsthip of Veas, was seated in the interior, at the source of the river Adonis in Libanus. The prono atory of Clinas formel the $\mathcal{N}$. puint of the ba", now called Kesruan, the S. extremity of which, at a distance of about 12 miles, is formed by the headland Ras-en-Vahr-el-Kelb, on which the town of Berytus formerly stock. At ahout the middle of this byy the river L,ycus (Valirel-Kelb) discharges itselt into the sed through a larrow chasm the
nearly perpethintar cliffs of which are 200 feet in height. At the eastern extremity of the valley of the Jycus rixes the Gebel el-Sannin, the highest summit of Libanus. The southern side of tbis valley is enclosed by steep and almost ioaccessitle cliffs, up the face of which traces of a road are still visible, made probahly by the Egyptians daring their wars in Palestine. A tower and broader roal of inore gradual ascent was constructed by the emperor M1. Aurelins. To the S. of this spot, the phain between Libanns and the sea at Berytus is of greater length than in any other part of Phoenicia. The land, which consists of gentle undulations, is very fertile, and produces orange and mulberry trees in abundance. This plain extends sonthwards as far as the river Tamyras, a distance of about 10 miles. Berytus (Beirout) is washed by the river Magoras. From the headluwd on which it stands the manst projecting point in Phemicia - the coast again forms a long curve down to Sulun. On this part of the const stand the towns of Platanus and Porphyrium. A little to the N. of Platanns is the river Tamyras (Damour), already mentioned, and between Porphyrium and Sidon the river Bostrenus (Auraleh). To the S. of the Tamyras the country again becomes rogged and barren, and the hills press closely ppon the sea. The narrow $\mathrm{p}^{\text {hain }}$ of the Bostrenus, bowever, about 2 miles broad, is of the bighest fertility, and produces the finest fruits in Syria. Sidon stands on at small promontory about 2 miles $S$ of the Bestrenus. From Sidon a plain estends to a distance of about 8 miles S . as far as Sarepta, the Zarepthalh of the Book of Kings ( 1 Kings, xvii. 9), which stands on an eminence near the sea From sarepta to Tyre is aboot 20 miles. Nine miles to the $\mathcal{N}$. of Tyre the site of the ancient Ornithonopolis is supposed to he marked by a place called Adnon or Adloun. At this place the plain, which bad expanded after passing Sarepla. again contracts to about 2 miles, and runs along the coast in gentle undulations to Tyre, where it expands to a width of about 5 miles. The hills which bound it are, however, of no great beight, and are cultivated to the sammit. At about 5 miles N . of Tyre this plain is crossed by the river Kasimich, supposed to le the aucient Leoutes, the most cumsilerable of Ploenicia, and the only one which makes its way through the barrier of the meantains. It rises in the valley of Bekas, between Libams and AntiHibanus, at a height of 4000 feet above the level of the sea. The upper part of its course, in which it is known by the name of El-Litani, is consequently precpitous and romautic, till it forces its way throush the defiles at the soutbern extremity of Libanus. Sudden aud violent gusts of wind frequently rosh down its ralley, rendering the navigation of this part of the coast very dangerous. Frum Tyre, the site of which will be found deseribed under its proper bead, the coast rons in a westerly direction for a distarke of about 8 miles, to the Promontorium Album ( Kas-el-Abiadi), before mentioned,-a bluff headland coassting of white perpendicular cliffs 300 fect ligh. The road from Tyre to its snumit seems originally to have consisted of a selies of steps, whence it was called Climax Tyriorum, or the Tgrian staircase; but subsequently a road was laboriously cut throngh the rock, it is said, by Alcsander the Great. Frum this promubtory the ceast proceels in a straight and alnoost sontherly direction to l'tolemnis or Acco (Acre), a distance if between 20 and 30 miles. About midway lay

Ecdippa, now Zeb, the Achzib of Scripture (Josh. six. 29), regarded by the Jews after the captivity as the northern boundary of Jodaea. I'tolemais stands on the right bank of the river Belus (Naaman), but at a little distance from it. To the SE. a fertile plain stretches itself out as far as the hills of Galilee. From Ptclemais the coast forms a deep bay, about 8 miles acrass, the further extremity of which is formed by the promontory of Caimel. It is now called the bay or gulf of Khaifa. The bold and lofty headland of Carmel is only a continuation or spur of the mountain of the sane name, a range of no great heigbt, from 1200 to 1500 feet, which runs for 18 miles in a direction from SE. to NW., gradually sinkiog as it approaches the coast. A convent near the cape or promontory is about 582 feet above the ses. On its NE. side flows the Kishon of Scripture, which, when not swollen by rains, is a smail stream finding its way through the sand ioto the sea. Towards the bay the sides of Carnel are steep and rugged, but on the sonth they slope gently and are more fertile. Carmel was celebrated in Hebrew song for its beauty and ferthlity ; and thuagh its orchards and vineyards no Jonger exist, the richness of the soil is still marked by the profusion of its shrubs and the loxuriance of its wild-flowers. From the promontory of Carmel the caast gradually sinks, and at its lowest point stands Dira, a town celebrated in ancient times for the manufacture of the Phoenician purple. Beyond this point we shall not parsue the description of the coast; for althongh between Dora and Egypt some towns are found which were inbabited by Phoenicians, yet in their geograpbical distribution they belong more properly to Palestine.

Tbat part of the Mediterranean which washeu the const of Phoenicia was called by the Greeks

 Mare Phoenicium. (Plin. v. 13, ix. 12, \&c.) Its southern portion, as far as Sidon, is affected by the curients which carry the alluvial soil brought down by the Nile to the eastward; so that towns which were once maritime are now become inland, and the famous harbonrs of Tyre and Sidon are nearly choked with sand.

Tbe climate of Phoenicia is tempered by the vicinity of Lebanon, which is capped with snow during the greater part of the year, and retains it in its ravines even durng the heats of summer. (Tac. Hist. v. 6.) Hence the temperatnre is mucb lower than might be expected from the latitude. At Beirout, which lies in the centre of Phoenicia, the usual summer beat is abont $90^{\circ}$ Falirenheit, whilst the winter temperature is rarely lower than $50^{\circ}$. In the mountains, however, the winter is severe, and heavy falls of snow take place. The rainy spason commences towards the end of October, or beginning of Nuvember, from which time till March there are considerable falls of rain or snow. From May till October rain is very mnusual.

As Phoenicia, though small in extent, is, from its configuration and natural features, sulject to a great variety of climate, so its vegetahle productions are necessarily very various. The sides of Lebanon are clothed with pines, firs, and cypress, hesides its farfamed cedars. The lowlands produce corn of all sorts, peaches, pomegranates, grapes, oranges, citrons, figs, dates, and other fruits. It also yields sugar, cotton, tobacco, and silk. The whole country is subject to earthquakes, the effect of volcanic agency;
from which cause, as well as from the action of the currents already mentioned, both Tyre and Sidon have suffered changes which render them no longer to be recognised from ancient descriptions. Insumie places the coast has been depressed by earthquakes, and at the mouth of the river Lycus are traces of submerged quarries. (Berton, Topogr. de Tyr. p. 54.) In like manner, the lake Cendevia, at the foot of Carmel, in which Pliny (v. 17) describes the river Belus as rising, has now disappeared; though Shaw (Trae. ii. 33) mentions some pools near its source. The geological structure of Pboenicia is recent, and consists of chalk and sandstune, the higher mountains being formed of the Jura limestone. The only metal found is iron, which occurs in considerable quantities in the hills above Beirout. In the sandstone of the same district, bituminoos wookl and brown coal are found, but in small quantities and impregnated with sulphur.

## Ill. Ethnological Relations of the lhoemictans.

The Phoenicians were called by the Greeks Фoivikes (Hom. Od. iv. 84 ; Herod. i. 1; Thacyd. i. $8, \& c$.), and by the Iomans Phoenices (Cic. N. D. ii. 41 ; Mela, i. 12 ; Plin. r. 13, \&c.). They were a branch of the great Semitic or Aramaean race. The Scriptures give no intimation that they were not indigenous; and when the Hebrews settled in Canaan, Sidon and Tyre were already flourishing cities. (Josh. xix. 28, 29.) By classing, however, the Phoenicians, or Canaanites, among the descendants of Ham (Genesis, x. 15), the Scriptures imply an immigration. The reason of this classification, was probably their culour, the darkness of their complexion indicating a southern origin; yet their inguage, a safer criterion, marks them, as we have said, for a Semitic race. This, though not strictly identical with the Hebrew, was the nearest allied tc it of all the Semitic tongues. St. Jerome (Comm. in Jer. xxv. 21) and St. Augustine (Tract. 15 in Evang. Joon.) testify that the Punic language resembled the Hebrew. The same affinity is ob. servable in l'unic words preserved in Greek and Roman writers; as in the Poenulus of Plautus, expecially since the improvement of the text by the collation of Mai. The similarity is also evinced by biliugual inscriptions discovered at Athens, where many Phoencians were settled, as will be related in the sequel. But perhaps one of the most remarkaole proofs is the inscription on the Carthnginian tablet discosered at Marseilles in 1845, of which 74 words, out of 94 , ocenr in the Old Testament.

Profane writers describe the Pheenicians as immigrants from the borders of the Persian Gulf. Thos Herodotus (i. 1, vii. 89) asserts that they originally dwelt on the Erytbravan sea; an appellation which, ill his langunge, as well as in that of other ancient writers, embraces not only the present Red Sea, bat also the Persian Gulf and Indian Ocean. To the same purpose is the testimony of Strabo (xvi, p. 766), who adds that there were in the Persian Gulf two islands, Tyrus and Aradus, the inlahitants of which had temples resembling those of the lhoenicians, and who claimed the likenamed islands on the coast of the Mediterranean as their colonies. Heeren (Researches, vol. ii. p. 56, Eng. trans.), who admits that traces of Ploenician workmanship and buildings have lately been discovered in these islands, reverses the parentige, and

## PHOENICLA.

makes thens to be colonies of their more cutubrated namesakes, in opposition to the testimony of Straho. and withont producing any counter authority. The isle of Tylus or Tyras is likewise mentioned by Pliny (vi. 32). The accuant given by Justin is in harmouy with these authorities (xviii. 3). Ife describes the Tyrians as laving loeen disturbed in their wative seats by an earthquake, and as migrating thence, first to what he calls the "Assyrian lake," and subsequently to the shores of the Mediterranean. A recent writer (Kurick, Phuenicia, p. 47) takes thin Assrrian lake to bave heen Gemuesaret or the Dead Sua, as there was no other collection of waters in \&. Assyria to which the term could be applied. This would have formed a natural resting-place in the journey of the emigrants. It must not, bowever, be concealed, that the account of these writers has been rejected by several very eminent anthors, as Bochart, Hengstenberg. Heeren, Niebuhr, and others, and more recently by Mosers, a writer who has paid wreat attention to Phoenician bistory, and who has dhscussed this question at considerable length. (Die Phonizicr, vol. ii. pt. i. pp. 23-62.) His priacipal arguments are, that the Phoenician traditions, which go back to the primitive chaos, represent even the gods, as well as the iurention of all the arts of life, as indigenous; that the Scriptures, whose te-timony is preferable, botb on account of its tuiliquity, and hectuse it arose ont of the bosom of the people themselves, make no mention of any sowh inmugration, though at that time its meuwry could not have been obliterated had it really occurred, and thongh it monld have served the purpose of the Jews to represent the Canaanites as intrulers; and that the name of the people, being derivel from the character of the land, as well as the appellations of defferent tribes, such as the Gibli at B. blus, the Sidonians at Sidon, \&cc., mark them as indigenous. But it may be observed, that the I'hoenieian traditions rest on the equivocal authority of the pretended stoconiatho, and come to us in so questionable a shafe that they may evidently be made to serve any purpose. Thus Movers himself yuntes a passage from Sanconiatho (rol. ii. pt. i. p. 2 S ), to the effect that the Tyrians invented sbipluilding, because it directly contradicts the state-ur-nt that they were the descendants of a sea-faring peuple on the shores of the Persian Gulf ; althougb he had previnusly cited the same passarge (vol. i. p. 143) in proof of the Enhemerism of Philo-sanconiatho, who, it is there suid, attributed the invention If uavigation to the Cabiri merely because the Phuewh ian mariners considered themselves as sailing under the protection of their deities. Can such testimony be compared with that of the "loyalhearted and truthful Herodotns," as Movers characterises hin (vol. i. pt. ii. p. 134), who, be it ubservel, alsu foumis his account on the fraditions of the I'homicians (ís airoi $\lambda$ erouoh. vii. 89), and who could have had no possible interest in misrepresenting them? Nor could the natural vanity of the I'fencticians have found any gratification in mislewdfirs lim on this point, since the tradition lessened, rather than emhanced, the splendour of their origin. The testimony of the Scriptures on the subject is merely negutive; nur, wele it otherwise, could they bo taken as a certain suide in ethnological inquiries. They were not written with that viow, and we have already adverted to a di crepaucy in their treatment of this subject. The question, inwever, is too long :u be fally disensed in thas i we. Wic have merely
adverled to some of the principal heads, and they who wish to pursue the inquiry further are ruferred to the passage in Muver's work already indicated, and to Mr. Kenrick's I'hoenicia (cbasp, iii.).

## IV. History.

Our knowledge of Phoenician history is only fragmentary. Its native records, both literary and monumental, Iave almost utterly perisbed ; and we are thus reduced to gatber from scattered notices in the Old Testament and in the Greek and Roman authors, and sometimes to supply by inference, the annals of a country which stands the second in point of antiquity, which for some thonsands of yrars playcd a considerable part in the world, and to which Europe owes the germis of ber civilisation.

If we accept the authority of Herodotus, the Phoenicians must bave appeared upon the coasts of the Mediterranean at least twenty-seven or twentyeight centuries before the birth of Cluist. In order to ascertain the age of Hercules, respecting which the Egyptian chrooology ditfered very widely from the Greek, that conscientious historian resolved to inquire for bimself, and a condingly sailed to Tyre, where be bad beard that there was a famous temple of Herenies. It was, therefore, expressly for the parpose of settling a chrodologiesl point that he was at the trouble of making this voyage, and it is natural to suppose that be did not adopt the information which he received from the priests without some examioation. From these be learned that the temple had existed 2300 years, and that it was coeral with the fonndation of Tyre (ii. 43, 44). Now, as Herudotus fluurished about the midale of the fifth century before our aera, it follows that Tyre must bave been fonnded about 2750 years B. C. The high antiquity of this date is undoubtedly startling, and on that account has been rejected by several critics and bistorians. let it dues not appear why it should be regarded as altogether improbable. The chronology of the Jews is carried back more than 2000 years B. C.; yet the Jewish Scriptures uniformly intimate thie much higher, and indeel immemorable, antiquity of the Canaanites. Again, if we look at Egypt, this aera would fall under the 14 th dynasty of its kings* ( $2750-2631 \mathrm{~B} . \mathrm{C}$.$) , who had bad an listorical ex-$ istence, and to whom many conquests are attribated before this period. This dynasty was followed by that of the Hyksos, who were probably Cunamites, and are described by lianotho as skilled in the art of war, and of fortifying camps and cities. (Sync. Pp. 113, 114 ; Schol. in Platon. Tim. vol. vii. p. 2Ss, ed Tauchn.)

If sidon was older than Tyre, and its mothercity, is it clamed to be, this wouid add some difficulty to the question, by carrying back the chronology to a still higher jeriod. But even this objection cannot be reyarded as fatal to the date avsigned to Tyre. Cities at so short a distance might easily have been planted by one thother withus a wery brief space of time from their origin ; and the enntest between them in ancient times for priority, not only shows that the question was a very ambiguous one, but also leads to the inference that the diflerence in their dates could not bave been very great. The weisht of ancient evidence on either side of the question is pretty nearly balanced. Ou

* This is the date assigned by Movers ; but by sume authorities it is phated later.
onc side it is alleged that Sidon is styled in Scripture the eldest born of Cauaan (Gen. xlix. 13), whilst Tyre is not mentioned till the invasion of Palestine by the Israelites. (Josh. xix. 29.) But in the fonner passage there is nothing to connect the person with the city ; and the second argument is at best only negative. It is further urged that the name of Tyre does not once occur in Homer, thoogh the Sidonians are frequently mentioned; and in one passace (Od. xiii. 285) Sidonia is nsed as the general name of Phoenicia. This, however, only shows that, in the time of Homer, Sidooia was the leading city, sand does not prove that it was founded before Tyre. The same remark may be applied to the silence of Scripture. That Tyre was in existence, and must have been a flowrishing city in the time of Homer, is unquestionable; since, as will be seen further on, she founded the culony of Gadeira, or Cadiz, not long after the Trojan War; and many years of commercial prosperity must have elapsed before she could have planted so distant a possession. Poets, who are not bound to historical accuracy, will oftell use one name in freference to another merely because it is more sonorous, or for some similar reason; and Strabo (xvi. p. 756), in commenting upon this very circumstance of Homer's silence, observes that it was inly the poets who glorified Sidon, whilst the Phoenician colonists, both in Africa and Spain, gave the preference to Tyre. This passage lias been cited in proof of Strabo's own decision in favour of Sidon; but, from the ambignous wording of it, bothing certain can be concluded. Mlovers (ii. pt. i. p. 118) even constrates it in favour of Tyre; but it must be confessed that the opposite view is rather strengthened by another passage (i. p. 40) in which Strabo calls Sidon the metropolis of the Phoenicians ( $\tau \grave{\eta} \nu \mu \eta \tau \rho о ́ \pi о \lambda \iota v a v i \tau \omega \hat{\nu}$ ). On the other hand, it may be remarked, that all the most ancient Phoenician traditions relate to Tyre, and not to Sidon ; that Tyre is called $\mu a \tau \epsilon e^{\rho} \alpha$ 中orvikov by Meleager the epigrammatist (Anth. Graec. vii. 428.13 ), who lived before the time of Strabo; that an inscription to the same effect is found on a coin of Antiochus IV., B. c. 175-164 (Gesen. Mon. Phoen. i. 262); and that the later Roman and Greek writers seem unanimously to have regarded the claim of Tyre to superior antiqnity as preferable. Thus the emperor Hadrian settled the ancient dispute in favour of that city (Suidas, s. $v$. Mavinos Túpios), and other testimonies will be found in Orosins (iii. 16), Ulpian (Dig. tit. xxv.), and Eunapius (v. Porphyr. p. 7, ed. Wytt.) It may also be remarked that if the Phoenicians came from the Persian Gulf, the name of Tyre shows that it must have been one of their earliest settlements on the Mediterranean. This dispute, however, was not confined to Tyre and Sidon, aud Byblus and Berytus also claimed to be regarded as the oldest of the Phoenician cities.

But however this may be, it seems certain that the latest of the Phoenician settlements in Syria, which was, perhaps, Hamath or Epiphaoia on the Orontes, preceded the conquest of Canaan by the Jews, which event is nsually placed in the year 1450 в. c. The expedition of Joshua into Canaan is one of the earliest events known in the history of the Phoedicians. In order to oppose his progress, the king of Hazor organised a confederacy of the Canaanite states. (Josh. ii. 10.) But the allies were orerthrown with great slaughter. Hazor was taken and destroyed, and the territory of the con-
vol. II
federate kings, with the exception of a few fortresses, fell into the power of the Israelites. The defeated host was pursued as far as Sidon; but neitber that nor any other town of Phoenicia, properly so called, fell into the hands of the Jews, nor on the whole does the expedition of Joshua seem to have had much effect on its political coudition. Yet there was a constant succession of bostilities between the Phoenicians and some of the Jewish tribes; and in the book of Judges ( x .12 ) we find the Sidonians mentioned among the oppressors of Israe].

Sidon, then, must have early risen to be a powerful kingdom, as may indeed be also inferred from the Homeric poems, in which its trade and manofactures are frequently alluded to. Yet a year before the captuie of Troy, the Sidociaos were defeated by the king of Ascalon, and they were obliged to take refuge-or at all events a great proportion of them -at Tyre. (Justin, xviii. 3.) We are ignorant how this conquest was effected. The oame of Ascalon probably represents the whole peotapolis of Philistia; and we know that shortly after this event the Philistines were powerful enoogh to reduce the kingdom of Israel to the condition of a tribntary, and to retain it as such till the time of David. Justin, in the passage just cited, speaks of Tyre as founded by the sidonians (condiderunt) on this occasion. This expression, however, by no means implies a first foundation, since in the nest chapter lie again uses the same word to denote the restoration of Tyre by Alexaoder the Great. It has been already said, as will appear at greater length in the account of the Phoenician colonies, that Tyre mast have been a city of considerable importance before this period. The acconnt of Justio is corroborated by Josephus, who, in allusion no doobt to the same event, places the foundation of Tyre 240 years before that of Solomon's temple. (Ant. viii. 3.) If Justin followed the computation of the Pariao marble, the fall of Troy took place in the year $1209 \mathrm{~B}, \mathrm{c}$.; and if the disputed date of Solomon's temple be fixed at 969 B. c., the aera adopted by Muvers (Phön. ii. pt. i. p. 149 ), then $969+240=1209$. Josephus, in the passage cited, uses the word ournots, "a dwelling in," and coald no more have meant the original foundation of Tyre than Justin, since that city is mentioned in the Old Testament as in esistence two centuries aod a half before the building of the temple.

From the period of the Sidonian migration, Tyre must be regarded as the bead of the Phoenician nation. During the headship of Sidon, the history of Phoenicia is mythical. Phoenis, who is represented as the father of Cadmus and Europa, is a mere persooification of the country; Belus, the first king, is the god Baal; and Agenor, the reputed founder both of Tyre and Sidon, is nothing but a Greek epithet, perhaps of Hercules. The history of Tyre also, bef re the age of Solomon, is unconnected. Solomon's relations with Hiram, king of Tyre, led Josephus to search the Tyrian histories of Dius and Menander. Hiram succeeded Abibal; and from this tione to the foundation of Carthage there is a regular successioo of dates and reigns.

Tyre was in fact a double city, the origioal town being on the continent, and the new one on an island about half a mile from the shore. Wheo the latter was fonnded, the original city obtained the name of Palae-Tyrus, or Old Tyre. The island, however, was probably used as a naval station from the very earliest times, and as a place consecrated to the 1: l
worship of the national Geities Astautc, Belus, and particulaty Melcarth, or the Tyriun Hercules. According to Justin, indeed, the oldest temple of llercules was in Palne-Tyrus (xi. 10, comp. Curt. iv. 2); but this assertion may have heen made by the Tynams in order to evade the request of Alexander. who wished to gain an entrawe into thmir ialad city under pretence of sacrificing to that deity.

IIram succereded to the crown of Tyre a little before the builling of Solomon's temple (is. c. 969). He added to and improved the new city, and by means of sulstructions even gained space enough to build a large square or place, the curychorus. He mainained fricudly relations with king David, which were confirthed by commerce and by intermarriates. Hiram furmished the Jewish munarch with cedarwond :und workmen to construct his palace, as well as materials for his proposed temple, the bnilding of which, however, was reserved for his son. The Phoenicians, on the other hand, imported the corn atod oil of Judah. Under the reign of Solomut this intercourse was cemented by a furmal treaty of commerce, by which that monarch engaged to furnish warly 20,000 cors of wheat*, and the like quantity of oil. fir the use of Hiram's household, while Hiram, in return, supplied Sulomon with workmen to cut and prepare the wood for his temple, and others skilful in working metal and stone, in encraving, dyलing, and manfiuturing fine linen. Solomon also ceded to Tyre a district in Galilee containing twenty towns. (i Kiugs, ix. 13; Joseph. Ant. viii. 5.) In these transactions we perceive the relations of a commercial and an agricultnral people; but Hitam was aloo of eroat assistance to Sulomom in his maritime and commercial enterprises, and his searches atter the gold of Ophir, when his victories over the Edomites had giveo hius the command of the Aclanitic, or eastern, gulf of the Red Sca. The pilnts and mariners for thene waces were furnished by Hiram. Except, however, in connection with the lsraclites, we know little concerning the reign of this mooarch. He appears to have undertakeu an expedition against Citiun in Cyprus, probably a revolted colony of the Phanicians, and to have established a festival in honour of Melcarth, or Hercules. (Joseph. l.c.) By his great works at Tyre he entalifed an enormons expense upon the peinle; and his splendid reign, which lasted thirty-four ycars, was followed at no great interval by political croubles. His dyoasty was continued for seven years in the gerson of his son Balcnzar, or Buleastartus, and nine years in that of his erandswn Ablastartus. The latter was put to death liy the four sons of his nurse, the eldest of whom biaurped the supreme power for a space of twelve years. This rivolution is connected by Movers (ii. pt. i. p. 342) with the secont of the servile insurrection at Tyre given by Justin (xviii. 3), who, however, with his usual niellect of chronology, has pheml it a great deal too late. This interregnum, Whelh, acoording to the account adopted, was a complate rejen of terror, was terminated by a counterrevolution. The usurper, whese name is not mentinsed, either dind or was depored, and the line of Ilram was restored in the person of Astartus, -the Strato of Justim,-a son of Balastartus. This prince reigneal twelve years, and was succeeded by his brother Astaryinus, or A erymus, who ruled nine years. The latter was murdered ly another brother, Phales, who after reigaing a few months was in turn assas-

[^22]sinated by Ithobaal, a priest of Astartc. Ithobaa! is the Etlabaal of Scripture, father of Jezebel, the wife of Ahah, who endeavoured to restore the worslip of Baal and Ashtoreth in the kingdom of her hasband. (1 Kings, xvi. 31.) In the reign of Itolibaal Phopnicia was visited with a remarkable drought, which also prevailed in Judaea in the time of Alab. (Joseph. Ant, viii. 13. \& 2; 1 Kings, c. xvii. 7.) We knowr nothing further of 1 thobalal's reign, except that he founded Botrys, on tho coast N. of Sidon, and Auza in Numidia. (Joseph. viii. 7, 13. § 2.) He reigned thirty-two years, and was tho lounder of a new dynasty. Badezor, his son, succeeded to the throne, and after a reign of six years was followed by Matten, or Mutt, who ruled for thirty-two years. The reign of his successor. Pygmalion, brings us into contact with classical history aod tradition, through the foundatics of Carthage by his sister Elisa, or Dido, which took place not long after his accession. lrobably, however, this was only a second foundation, as in the case of Tyre itself. The whole story, which indicates a struggle between an aristocratical and sacerdotal party aod the mooarchical power, has been obscurnd by mythical traditions and the embellishments of pocts; but it need not be repeated here, as it will hie tound in the Dictionary of Biography and Mylhology, s. v. Divo.
l'ygmalion occupied the throne forts-sceven years, and after his reign there is a gap in the histery of Tyre. When we can next trace the Phoenicians in thie Seriptures, we find them at war with Isracl. The propleet Joel, who flourished about the beginning of the cighth century B. C., bitterly complains of the outrages committed by Tyre and Sidon on the coasts of Judaen, and his complaints are repeated by Amos, a contemporary prophet. This was the chief period of the maritime ascendency of the Phnenicians, and their main offence seems to have been the carrying off of youths and maidens and seling them into slarery. Towards the end of the same century we find 1saiah prophesying the destruction of Tyre. It was about this period that the A*syrians lecan to grasp at the conotries towards the west, and to seek an establishment on the sta-buard of the Mediterrasean : a policy which was continued by tho succeeding empires of the Bahylonians, Medes, and Persians. The expedition of Shalmaneser, who, after reducing the kingdom of Isracl, turned his arms against Phoenicia, is recoroded by Josephus from the history of Menander: (Ant. ix. 14.) After overruoning the whole of Phoenicia, he retired without attemptiog any permanent conquest. He seems to have been assisted by several Phocnician cities, as Sidon, Ace, and even Palae-Tyrus, whith were oppressed by the domination of Elulacus, king of Tyre. These cities furnished him with sixty ships for a second nttempt upon Tyre: but this Hleet wats defented by the Tyrians with only theoty vesscis. Shalmaneser blockaded them on the land side for a space of five years, and preveoted them from having miny fresh water cxcept what they could preserve ia tanks. How this blockade ended we are not informed, but it was probably fruitless We have no further accounts of Elulaeus, except that he had reluced to obedience the revolted town of Citimen in Cyprns previonsly to this invasion. After his reign another long gap occurs in the history of Phoenicia, or ratber of Tyre, its head. This silesce would seems to indicate that it was enjoying the blessiugs of peace, and consequently increasing in properity. The l'boenician alliance was courted
by the Egyptian monarchs, and an extensive commerce appears to have been carried on with the port of Naucratis. The next wars in which we find the Phoenicians engaged were with the Babylonians ; thongh the account of Berosus, that Nabopalassar, who reigned towards the end of the seventh century b. c., beld Ploenicia in subjection, and tbat his son Neluchadnezzar reduced it when in a state of revolt, must be regarded as doubtful. At all events, however, it appears to have been in alliance with the Chaldeans at this period; since we fird it related that Apries, king of Egypt, when at war with that nation, conquered Cyprus and Phoenicia. (Herod. ii. 161 ; Diod. i. 68.) When Nebuchadnezzar ascended the throne, we find that, after quelling a revolt of the Jews and reducing Jerusalem (i. C. 587), he marched into Phuenicia, took Sidon appareatly by assault, with dreadful carmage, and proceeded to invest Tyre. (Ezekiel, axvi.) For an account of this siege, one of the most memorable in ancient history, we are again indebted to Josephus (x. 11), who extracted it from Tyrian annals. It is said to have lasted thirtten years. Another lthobaal was at this time king of Tyre. The description of the siege by Ezekiel would seem to apply to Palae-Tyrus, thougb it is probable that insular Tyre was also attempted. (Grote, Hist. of Greece, iii. p. 355 , uote.) The result of the siege is by no means clear. Berosus, indeed, affirms ( $a p$. Joseph. c. Apion. i. 20) that Nebuchadnezzar subdued all Syria aud Phoenicia ; but there is no evidence of an assault upon Tyre, and the words of Ezekiel (sxix. 17) seem to imply that the siege was unsuccessful. The same dynasty centinaed to reign. Ithobaal was succeeded by Baal; and the subsequent changes in the government indicate internal revolution, but not subjection to a foreigo power. The kings were superseded by judges or suffetes, and after a few years the royal line appears to have been restored; but whether by the spontaneous act of the Tyrians, or by compulsion of tbe Babylonians, is a disputed point.

Exckiel's description of Tyre at the breaking out of the Babylonian war exhibits it as the head of the Pluenician states. Sidon and Aradns are represented as furnishing soldiers and mariners, and the artisans of Byblus as working io its dockyards. (Eeck, xxvii. 8.9,11.) But that war was a severe How to the power of the Tyrians, which now began to decline. Cyprus was wrested from them by Amasis, king of Egypt, though a branch of the regal family of Tyre appears to bave retained the sovereiguty of Sulumis for some generatious. (Herod. v. 104 ; Isocr. Evag. p. 79. 1, 2, 28.) Merbalus was succeeded by bis brother Eiramus, or Hiram, doring whose reign Cyrus conquered Babylon ( 538 в. c.). When the latter monarch permitted the Jens to rebuild Jerusalem, we find Tyre and Sidon again mssiatiog in the work (Ezra, iii. 7), a proof that their commerce was still in a flourishing state. Xenophon (Cyropaed. i. 1. § 8) represents Cyrus as ruling over Phoenicia as well as Cypros and Egypt; and though this is not confinned by any collateral proof, they mast at all events have very soon submitted to lis son Cambyses. (Herod. iii. 19.) The relations with Persia seem, bowever, to hare teen those of a voluntary alliance rather than of a torced subjection; since, though the Phoenicians assisted Cumbyses against the Egyptians, they refosed to serve against their colonists the Carthaginians, Their fleet was of great assistance to the

Persians, and enabled Darius to make limiself master of the islands off the coast of Asia Minor. (Thacyd. i. 16 ; Ilat. Menex. c. 9.) Phoenicia, with Palestine and Cyprus, formed the fifth of the twenty nomes into which the empire of Darius was divided. (Herod. iii. 91.) These bomes were, in fact, satrapies ; but it does not appear that they interfered with the constitutions of the several conutries in which they were established; at all events native princes continued to reizo in Phoenicia. Altbough Sidou Lecame a royal Pensian residence, it still had its native king, and so also had Tyre. (Herod. viii. 67.) When Darius was meditating his expedition against Greece, Sidun supplied two triremes and a storeship to enable Denocedes to explore the coasts. (ib. iii. 136.) Subsequently the Phoenicians provided the Persians with a fleet wherewith to reduce not only the revolted lonian cities, but even their own former colony of Cyprus. In the last of these enterprises they were defeated by the lonian fleet ( $\mathrm{tb}, \mathrm{v} .108,112$ ); but they were the chief means of redncing the island of Miletus (b. ri. 6), by the dcteat which they inflicted on the lonians off Lade. (Ib. c. 14.) After the subjugation of the Asintic islands, the Phoenician fleet proceeded to the Thracian Chersonese, where they captured Metiochus, the sor of Miltiades (lb, c. 41), and subsequently arpear to bave scoured the Aegean and to have ravaged the coasts of Boeotia. (Ib. c. 118.) They assisted Xerxes in his expedition against Greece, and along with the Egyptians constructed the bridge of boats across the Hellespont. (Ib, vii. 34.) They helped to make the canal over the inthmus of Momnt Athos, in which, as well as in other engineering works, they displayed a skill much superior to that of the other nations employed. (1b, c. 23.) In the naval review of Nerxes in the Hellespont they carried off the prize from all competitors by the excellence of their ships and the skill of their mariners; whilst anong the Phoenicians themselves the Sidonians were far the most distingnished (lb. ce. 44, 96), and it was in a ressel belonging to the latter people that Xerxes embarked to conduct the review. (Ib, c. 100.) The Mhoenician ships composed nearly half of the fleet which Xerxes had collected; yet at the battle of Artemisium they do not appear to bave played so distinguished a part as the Egyptiaus. (Ib, viii. 17.) When routed by the Atheaians at Salamis they complained to Xerses, who sat overlooking the battle on his silver-footed throne, that their ships had been treacherously sunk by the lunians. Just at this instant, bowever, extraordinary skill and valour were displayed by a Samothracian vessel, and the Great King, charging the Phoenicians with having falsely accused the lonians in order to screea their own cowardice and ill-conduct, caused many of them to be beheaded. (Ib. c. 90.) At the battle of the Eurymedon (v. C. 466), the Ploenician fleet was totally defeated by the Atheniaus under Cimon, on which occasion 100 of their vessels were captured (Diod. xi. 62), or according to Thucydides (i. 100) 200, who, however, is probably alluding to the whole nuaber of their fleet. Subsequently the Athenians obtained such naval superiority that we find them carrying on maritime operations on the coast of Phoenicia itself; though in their unfortutate expedition to Egypt fifty of their triremes were almost entirely destroyed by the Phocnicians. (Thucyd. i. 109.) This disgrace was wifed out by the Athenians under Anaxicrates in a great victory gamed over
the Plonenicians off Salanis in Cypras, B. c. 449, when 100 of their shije were taken, many sunk, and the remant purnund th their own harbours: (1b. c. 112.) A cessation of hostilities now ensued between the Greeks and l'etsians. The L'hoenician mavy continued to be employed by the latter, but was no linger exposed to the attacks of the Athenians, In n.e. 411 the Phomicians presared a Heet of 147 veachs, to assist the spartans ageinst Athens ; but after adrancing as far as Aspendus in 1'amphylia it was suddenly recalled, either because the demuntration was a mere ruse on the part of Tissaphernes, or that the Thocnicians were oblized to defend their own coast, now threatened by the Egyptians. (Thucyd. viii. 87, 108 ; Diod. xiii. 38. 46.) They next appur as the ansiliaries of the Atherians against the 'Spatans, who had gaired the naval suprenaty by the lattle of Acgospotami, at preponderance which hal changed the former policy of Persia. The allied flect was led by Conon and Pharmabazns, and after the defeat of the Sjartans the l'hencicien seamen were enpluyed in rebuilding the walls of Athens. (Diod. xiv. 8; Nep. Con. c. 4.) Tbese events led to a more intimate cimnecturt between Phoenicia and Ahens; Phocnieian tralers appear to have settled in that city, where three Phothivian inscriptoms have been docuvered of the date apparently of abont $380 \mathrm{~B} . \mathrm{C}$. (Giestu. Mur. Dun. 1. 111.) A lew years later, a decree was jassed by the Athenian senate, establishing a prosenia between Sirate, king of Sidon, and the Athemase; whilst an mmunity from tbe usual hurthens imposed on aliens was gromted to Sidonians sottling at Athens. (15iwkh, Comp. Inscr: i. 126.) About the same time we find the Phocaicians, as the subjects of Persia, enorued in at thastrous war with Evagoras, priuce of Sulamis in Cypulis, who ravaged their coasts, and, according to 1socrates (Erag. p. 201) and Dindorus (xiv. 98, 110, xv. 2), captured even Tyre itselt. Bot in 386 н.c. Lvagoras was defeated in a great nav.il engarement, and sulsequently became $a$ tributary of Persia. (Ib. xv. 9.) Durine all this period Sudom appears to have been the most wealthy and prosperons of the l'hemiean citics. ( I , xvi. 4. ) The nest important event in the history of the Plownicians is them revolt from Persia, which ended in at disistrons nammer. Sidon had been uppresed by the sitraps and generals of Artaxerses Ochus; and in a gereeral atsombly of the Pheemeinis at Tripulis, in U.C. 352, it was resolved to throw off the l'erian yoke. The royal residence at Sulun was de-tnyed and the l'ersians massacred. The Phometans then fortified sidon, and iusited Notamplas, king of Eyypt, to assist them. In the following year Uchas made great preparations to quell thas revolt, and particularly to pmuish Sidon; when Temnes, king of that city, alarmed at the fate whirh menaced him, treacheransly neeotiated to botray it to the l'ersians. He invesigled 100 of the leading citizans into the enemy's cann, where they were pat to death, and then persuaded the Egyphan mercenaries to abnit the Pervians into the city. The Sidonians, who hal burnt their theet in orler to prevent any cosape from the commen danger, being thas rednced to despair, shat thenselves up with their wives and children, and set lire to their houses. Including slaves, 40,000 persuns are suid to have perished on this uccasion. Temes, however, niffered the merited reward of his treamon, and was either jut to death by Ochus or committed sucte. This calamty

## PHOENICIA.

was n great, bnt not a fatal, blow to the prosperify of Sidon, which even to a mucb later period retained a cousiderable portion of ber opulence. (Drod. xvi. 41, sqq.; Melu, i. 12.)

The cruelty of the Persians left a lasting remembrance, and was not wholly unrequited. When about twenty years afterwards Alexinder entered Phoenicia, Sidon havtened to open ber gates to him. The defeat of lharins at Issus, B. c. 333 . opened the wholo coast of I'buenicia to the Greeks. On his march Alexander was met by Strato, sun of Gerostratus, king of Atadus, who surrentered that ishind to him, as well as some towns on the mainland. As he proceeded southatards he received the subuission of Byblus, and entered Sidon at the invitation of the inhalitants. He deposed Strato, their king, a vassal of the P'ersians ; and Abdeloninnus, who was related to Stato, but who at that time followed the humble occupation ot a gardener in the suburbs of the city, was numinated to the vacant throne by Alexander's general Ilephaestion. (Curt. iv. 4.) The Tyrians now sent an embasy, professing submissien to the Macedonians, but withunt any real design of giving up their city. (Arrian, ii. 15.) It was impossible, however, for Alexander to proceed on lis intended expedition, whilst so important a place lay in his rear, at hest a doubtful frtend, and, in ease of reverses, soon, perbaps, to becume a declared enemy. With a dissimulation equal to that of the Tyrians, he sought to gain possession of their town by requesting permission to enter and sacrifice to Hercules, the progenitor of the royal race of Nacedon, as well as the tutclary god of Tyre. But the Tyrians perceiving bis design, directed him to another temple of Hercules at Palac-Tyrus, where he might sacrifice in all liberty and with still greater eflient, as the fanc, they asserted, was more ancient and venerable than that of the new city in the island. Alexander, however, still harkered after the latter, and maule preparations for besieging the new town. (Arrian, ii. 15, 16 ; Curt. iv. 7, seq.) The means by which he succeeded in reducing Tyre will be fund described in anther phate. [Tymes.] It will suffice here to say, that by means of a cau-eway, and after a seven months' siege, the city of merchant princes yielled to the arms of Alesander, who was assisted in the enterprise by the ships of Sidon, Byblus, and Aradus. The city was burnt, and must of the inhabitants either killed or stid into slavery. Alexancier repeopled it, principally, prihaps, with Carians, who seem to have been intinately comnected with the I'hoenicians, since we find Caria called Phoenice by Corinna and Bacelbylides. (Athen. iv. p. 174.) Atter the battle of Arbeli, Alexander incorpurated I'hoenicia, Syria and Cilicia into ore province. With the true commercial -pirit the Phoenicians availed themselves of his conquests to extend their trade, and their neerchants, following the track of the Macedonian anny, carriel home myrrh and nawd from the deserts of Gedrusia. (Arrian, vi. 22, Indic. 18.) Alexander en.ployed them to man the ships which were to sarl down the Hydaspes to the Indian Ocean, as well as to build the vessels which were ennveyed oterland to Thapsacus on the Euphrates, with the view of descending to Bahylon. (Ib.) By these means be intended to colonise the islands and coasts of the Persian Gulf; lont his schemes were frustrated by his death, is. C. 323 . After that event Pteleny, to whom Jigypt bald fallen, amexed Plomenicia, togethar with Syria aud l'alestine, to his kingdom.
(Diod. xvi. 43.) But in the year 315 n. c. Antigonus, returning victorinus from Babylonia, easily expelled the garrisons of Ptolemy from all the Phoenician towns except Tyre, where he experienced an obstinate resitance. Eighteen years had sufficed to restore it in a considerable degree to its ancient weaith and power ; and although the mole still remained it was almost as impregnable as before, and was not reduced till after a siege of fifteen months. From this period down to near the end of the third centary B. C. there was an almost constant succession of struggles for the possession of Phoenicia between the Ptolemies on one side and the Selencidae on the other. Ptolemy Euergetes succeeded in reducing it, and it was held by him and his son Philopator down to the year 218 B. C. ; when Antiochus the Great, taking advantage of the indolent and sensual character of the hatter, and the consequent disorders of his administration, undertook its recovery. Tyre and Ace were surrendered to him by the treachery of Theodotus, the lieutenant of Philopator, and the Egyptinn army and fleet were defeated and driven to take refnge at Sidon. In the following year, however, Philopator defeated Antiochus at Raphia near the frontiers of Egypt, and regained possession of Phoenicia and Syria, which he retained till bis death, B. c. 205. The reign of bis infant son again tempted the ambition of Antiochus. He succeeded in reducing Phoenicia, and after repulsing an attempt of the Egyptians to regain it in в.c. 198, firmly established his dominion, and bequeathed it to his aons.

Notwithstanding these struggles, Tyre appears to have still eajoyed a considerable share of commercial prosperity, in which, however, she had now to encounter a formidable rival in Alexandria. At first, iodeed, that city did not much interfere with her prosperity; but the foundation of Berenice on the Led Sea by Ptolemy Philadelphus, the making of a road between that place and Coptos, and the reopening of the canal which connected the golf of Suez with the Pelosiac branch of the Nile (Strab. p. 781) inflicted a severe blow upon her commerce, and converted Alexandria into the chief emporium for the prodncts of the East.

The civil wars of the Seleucidae, and the sufferings which they entniled, induced the Syrians and Phienicians to place themselves under the protectiou of Tigranes, king of Armenia, in the year $83 \mathrm{~B} . \mathrm{C}$. (Justio, xI. 1; Appian, Syr. 48.) Ace, or I'tolemais, was the only city which, at the instigation of Selene, queen of Antigonos, refused to open its gates to Tigranes. That monarch held Phoenicia during fourteen years, when the Seleucidae regained it for a short time in consequence of the victories of Lucullus. Four years later Pompey reduced all Syria to the condition of a Roman province. During the civil wars of Rome, Phoenicia was the scene of many struggles between the Roman generals. Just previonsly to the battle of Philippi, Cassius divided Syria into several small principalities, which he sold to the highust bidders ; and in this wny Tyre had again a king called Marion. Antony presented the whole country hetween Egypt and the river Elentherus to Cle spatra, but, in spite of ber intreaties to the contrary, secured Tyre and Sidon in their ancient freedom. (Juseph. Ant. xv. 4. § 1.) But when Augustus visited the East, B. c. 20, he deprived them of their liberties. (Dion Cass, liv. 7.)

Although the Roman dominion put an end to the political existence of Tyre and Sidon, they retained
their manufuctures and commerce for a considerable period. Mela, who probably wrote during the reign of Claudins, characterises Sidon as "adhuc opulenta" (i. 12); and Pliny, at about the same period, adverts to the staple trade of Tyre as beiny still in a flourishing condition ("nunc omnís ejus nobilitas conchylio atque purpura cons(at," v. 17). At the instance of the rhetorician Paulas, Hadrian, ns we have already mentioned, granted to Tyre the title of metropolis. It was the residence of a prucunsul, and the chief naval station on the coast of Syria. During the contest of Septimius Severos and Pescennius Niger for imperial power, A. d.193, Berytus favoured the cause of Niger, Tyre that of Septimius; in consequence of which, it was taken and burnt by the light Mauritanian troops of Niger, who committed great slaughter. (Herodian, iii. 9. § 10.) Severus, after his success, recruited the population of Tyre from the third legion, and, as a reward for its attachment, bestowed on it the Jus Italicum and the title of coluny. (Ulpian. Dig. Leg. de Cens. tit. 15; Eckhel, vol. iii. 12.387.) In the time of St. Jerome, towards the end of the fourth century, it was still the first commercial city of the East (Comm. ad Ezek. xxri. 7, xxvii. 2); and after the destruction of Berytus by an earthquake in the reign of Justinian, it monopnlised the maoufactore of imperial purple, which it had previously shared with that city. Beyond this period it is not necessary to pursue the history of Ploenicia. We shall only add that Tyre continued to flourish under the mild dominion of the caliphs, and that, in spite of all the violence which it suffered from the crusaders, its prosperity was not utterly amilhilated till the conquest of Syria by the Ottoman Torks, A. D. 1516 ; a result, however, to which the discovery of the New World, and of a route to Asia by the Cape of Good Hope, likewise contributed.

## V. Polimical Cosstitution.

Phoenicia consisted of several small independent. kingdoms, or rather cities, which were sometimes pnited with and sometimes opposed to one another, just as we find Canaan described at the time when it was invaded by the loraelites. (Strab. xri. p. 754; Joshua, x.) We have but Jittle information respecting the constitution of these kingdoms. The throne was commonly hereditary, but the people seem to have possessed a right of election. (Justin, sviii. 4.) The chief priests exercised great power, and were next in rank to the king. Thos Sicharbas, or Sichaens, chief priest of the temple of Hercules, was the husband of Dido, and conseqnently the brother-in-law of king Pygmalion. There seems also to have been a powerful aristoeracy, bot on what it was fuunded is unknown. Thus a body of nobles, who are called senators, accompanied the emigration of Dido. (Justin, l.c.) Daring the interregnum at Tyre after the servile insorrection, the government was carried on by elective mayistrates, called judges or suffetes. (Joseph. c. Ap. i. 21.) This instutation also obtained at Gades and Carthace, and probably in all the western colonies of Tyre. (Liv. xxviii. 37; comp. Muvers, ii. pt. i. p. 534.) Kings existed in Phoenicia down to the time of Alexander the Great. (Arrian, ii. 24.) The federal constitution of Phoenicia resembled a Grecian hegemony: either Tyre or Sidon was always at the head, though Aralus and Byblus likewise bad kings. During the earliest period of its history, Sidon nppears to have been the leading eity; but after its capture by the king f: I: 3
of Ascalon, and the emigration of Its inhabitant , as already related, Tyre became dominatot, and retained the supremacy till the Persian conquest. Confelerations anong the Phoenician cities for some common object were frequent, and are mentioned by Joshua as eurly as the time of Moses (xi.). Siliscquently, the great council of the Phoenicians assembled on theac occasions at Tripolis (1)iod. xui. 41), where, as we have already satid, the three leading towns, Sidons: Tyre, and Aradus, had earh its scparate quarter; from which circumstance, the town derived its name. Aradts, bowever, does not appear to lave obtaincl this priviluge till a late period of Phoenician history: as in the time of Fzekiel it was subordinate to Tyre (xxvii. 8, sqq.) ; and Byblus, though it had its own king, and is sometimes mentioned as farnishing mariners, seems never to have had a voice in the confederate conncils. The population of Phoenicia consisted in great part of slaves. Its military foree, as might be supposed from the nature of tbe country, was chiefly naval; and in nrder to defend themselves from the attacks of the Assyrians and Persians, the Phoenicians were compelled to employ mercenary troops, wito were perhaps mustly Africans. (Diod. l. c.; Esektel, xavii.)

## VI. Religion.

The nature of the Phoenician religion can only be rathered from iscidental allusions in the Greek aud L-man writers, and in the Seriptures. A fow coins and idols have been found in C'yprus, but connected otrly with the local Pboenieian religion in that island. The most systematic account will be found in the Praeparatio Evangelica of Eusebias, where there are extracts from Namconiatho, protessed to have been translated into Greek by I'bilo of Byblus. It would be too long to enter here into bis fanciful cosmozony, which was of an atheistic nature, and wis characterised chiefly by a personification of the elcments. From the wind Kol-pia, and Baau, his wife, were pruduced Aeon and Protogonus, the first mortals. These had three sons, Light, Fire, and Flame, who produced a race of giants from whom the mountains were named, - as Casius, Libanus, Antilibanus and Brathr, - and who with their descendants discovered the vanous arts of life. In later times a buman origin was assigned to the gods, that is, they were regarded as deified men; and this new thenkeg was absurdly grafted on the old cosmogony. Fllim and his wife Berath are their progenitors, who dwelt near Byblus. From Eliun dencends Garatoos (IIeaven), who weds his sister Ge (Earth), and has by her four sons, llus (or Cronas), Betutus, 1)amon, and Atlas : and three daughters, Astarte, Khea, and Dione. Cronos, grown to man's estate. depnses his father, and puts to death his own son Sadid, and onte of his daughters. Onranos, retarniug from banishment, is treacherously put to death by Cromos, who afterwardis travels about the world, entablishing Athena in Altica and making Traut king of Esypt. (Ketuick, Ihoen. p. 295.)

Baal and A:htaroth, the two chief givinities of Pheenicia, wen the sun and monn. The name of Baal was applied to Phoenticine kings, and Belus is the first king of Asyria and llbowicia. At a later period Baal berame a distact supreme Giod, and the sua ohtained a separate worship (2 Kings, 玉xiii. 5). As the supreme tod, the Grocks and homams identified him with their Zuas, or Jupiter, and not with Apolln. Bet or Baal wasalso identitied with the planet suturn. We find his name prelised to that of other
duities, as Baal-Phegor, the god of licentionsness, Batal-Zebub, the god of flies, \&c, as well as to that of many places in which he had temples, as BanlGam, Bazl-Hamon, \&ce Groves on elevated places were dedicated to his worship, and human victims were sometimes offered to hinu as well as to Muloch. (Jerem, xix 4,5.) Ife was worshipped with falatical rites, his volaries crying aloud, and cutting themselves with knives and laucets. Ashtaroth or Astarte, the principal female divinity, was identified by the Greeks and Ramans sometimes with Junu, sometimes with Venus, though properly and origiually she represented the moon. The principal seat of her worhip was Sidon. She was symbolised by a beifer, or a figure with a heifer's bead, and borns resembling the crescent moon. The name of Astarte was Phuenician (Ps. Lacian, de Dea Syr. c. 4); but she does not appear with tbat appellation in the early Greek writers, who regard Aplirvdite, or Venus Urania, as the principal Phoenician guddess. Herodotus (i. 105,131 , iii. 8 ) says that her worship was transferred from Ascalon, its oldest seat, to Cyprus and Cythera, and identifies her with the Babylunian Mylitta, the character of whose worship was onequivocal. Her orginal image or symbol, like that of many of the oldest deities, was a conical stone, as in the case of the Paphian Venus (Tac. H. ii. 3.; Max. Tyr. Diss. 38), of the Cybele of Pessinus (Liv. xxix. 11), and others. In Cypros her worship degererated into licentiousuess, but the Cyprian coins bear the primitive image of the cunical stone. In Carthase, on the contrary, she appeared as a virgin, with martial attributes, and was worsbipped with severe rites. She must be distinguished from Atargatis, or Derceto, who had also a temple at Ascalon, and was represented as balf wuman, half fish. It is characteristic of the religion of the I'hoenicians, that though they adored false gods, they were not so much idolaters as the Egyptialls, Greeks, and Romans, since their temples had either no representation of the deity, or only a rude symbol. The worship of Astarte scems to have been birst corrupted at Babylon. Adonis, who had been wounded by the boar on Lebanon, was warshipped at Aphaca, abont 7 miles E. of Byblos, near the source of the stream which bears his name, and which was said to be annually reddened with his bluod. (Zasim. i. 58; Ps. Lacian, de Itea Syr. c. 9.) By the Pluveticuans Adonis was alo regarded as the san, and has death typilied the winter. His rites at Aplaca, when abolished by Constantine, were polluted with every species of abomination. (Euseb. H. Const. iin. 55.)

Cronos, or Saturn, is said by the Greck and Latim writers to have been one of the priticipal I'hemiciandeities, but it is not eas-y to identify him. Human victims formed the most striking feature of his worship; but he was an epicure difficult to please, and the most acceptable offering was an moly child. (Porphyr. de Abs. ii. 56; Euseb. L.und. Const. i. 4.) His image was of bronze (Diod. xx. 14), and, according to the description of Diodurns, resembled that of Moluch or Dhicom, the gol of the Ammonites; but human sacritices were utiered to several Phoencian deities.

The gods hitherto described were common t all the I'boenicians; Melkarth*, whose name literally

* It is singular that the name of Melcarth read buekwards is, with the exception of the second and last letters, identical with llerades.
derotes "king of the city," was peculiner to the Tyrians. He appears in Greek mythology nader the slightly altered appellation of Melicertes. Cicero ( $\mathcal{N} . D . \mathrm{iin} .16$ ) calls the Tyrian Hercnles the son of Jupiter and Asteria, that is of Baal and Ashtarotb. There was a festival ut Tyre called "Tbe Awakening of Hercules," which seems connected with his character as a sun-god. (Joseph. Ant. viii. 5.) In his temple at Gades there was no image, and his symbol was an ever-hurning fire.

Atother Phoenician deity was Dagon, who had a fish's tail, and seems to have been identical with the Oannes of Babylonia.

The Ploenician goddess Onca was identified by the Greeks with Athena. One of the gates of Thebes was named after her, and she was also worshipped at Corinth. (Euphor. ap.Steph. Byz.s. v.; Hesycb. s. v.; Tzetz. ad Lycoph. Cass. 658.) It is even probable that the Athena Polias of Athens was derived from Thebes. The Palladium of Troy was also of Phoenician origin.

As might be expected among a maritime people, the Phoenicians had seteral marine deities, as Poseidon, Nerens, and Pontus. Poseidon was worslipped at Berytus, and a marive Jupiter at Sidon. The present deities of araigation were, however, the Cabiri, the seat of whose worship was also at Berytus, and whose images, under the name of Pataeci, were placed on the prows of Phoenician ships. (Herod, iii. 37.) They were the sons of Hephaestos, or the Egyptian Phta, and were represented as ridiculous little pigmaic figores. By the Greeks and Romans they were identified with their Anaces, Lares, and Penates. Aescrlapius, who was identified with the air, was thcir brother, and also had a temple at Berytus, (Pans. vii. 23. § 6.)

We know bnt little of the religious rites and sacred festivities of the Pboeniciaus. They practised circamcisiod, which they learned from the Egpytians; but, owing to their intercourse with the Greeks, the rite does not seem to have been very strictly observed. (Herod. ii. 104; Aristoph. Av. 504.) We are unable to trace their speenlative opinions; hut, as far as can be observed, they seem to have been material and atheistic, and, like the other Semitic nations, the Phoenicians had no idea of a future state of existence.

## VII. Minners, Literiture, and Abt.

The commercial habits of the Phoenicians did not impair their warlike spirit, and Chariton (vii. 2) represents the Tyrians as ambitions of military glory. Their reputation for wisdom and enterprise peeps ant in the jealons and often ironical bitterness with which they are spoken of by Hebrew writers. Their wealth and power was envied by their neighbonrs, who made use of their services, and abased them in return. (Ezel. xxxviii. 2, 12; Isaiah, xxiii. 18.) The Greeks expressed their opinion of Phoenician subtlety by the proverb $\mathbf{~ \Sigma i ́ p o t ~ \pi p o s ~ \Phi o f - ~}$ kukas (Suid.), which may be reodered by our "Set a thief to catch a thief;" and their reputation for veracity was marked by the saying $\psi \in \hat{\nu} \sigma \mu \alpha$ \$ow кıко́v, "a Phoenician lie." (Strab. iii. p. 170.) But a successful commercial nation is aiways liable to imputations of this description. In common, and sonetimes in confusioo, with Syria, Phoenicia was denonnced by the Romans for the corruption of its morals, and as the nursery of monntebanks and musicians. (Hor. Sat. i. 2. 1; Juv. iii. 62, viii. 159 ; A:hen. $\Sigma v .53$.) The mimes of Tyre and Berytus

Were renowned far and wide. (Exp. tot, Mundi, Indson, Geogr. Min. iii. p. 6.)

Ancient anthority almost unanimonsly nttributes the invention of an alphabet to the Phorwicians. Lacan (Phars. iii. 220) ascribes the bse of writing to them before the invention of the papyrus in Egypt. The Phoenician Cadmus was reputed to have introduced the use of writing among the lorians; and Herodotus says that be suw the Cadmean lerters at Thebes. (Herod. v. 58, 59; Plin. vii. 57; Diod. v. 24 ; Tac. Ann. xi. 14 ; Mela, i. 12, \&e.) The inscriptions found in Thera and Melos exhibit the oldest forms of Greek letters bitherto discovered; and these islands were colonised by Pbuenicians. No inscriptions have been found in Pboenicia itself ; but fiom several discovered in Phoenician cotonies - nooe of which, bowever, are older than the fourth centary B.c.the Phoeoician alphabet is seen to consist, like the Hebrew, of twenty-two letters. It was probably more scanty at first, since the Greek alpbabet, wbich was borrowed from it, consisted originally of only sisteen letters (Plin. l. c.); and, according to Jrenaens (ado. Haeres. ii. 41), the old Hebrew alphabet bad only fifteen. The use of bieroglyphics in Erypt was, in all probability, older. (Tac. L. e.) The comnection of this Phonetic system with the Phoenician alphabet cannot he traced with any certainty; yet it is probable that the latter is only a more simple and practical adaptation of it. The names of the Pboenician letters denote some natural olject, as aleph, an ox, beth, a house, daleth, a door, \&c., whence it has beeo conjectured that the fignres of these objects were taken to represent the sonnds of the respective letters; but the resemblance of the forms is rather faociful.

Babylonian bricks, inscribed with Phoenician characters, have long been known, and indicate the residence of Phoeniciaus at Babylon. In the recent discoveries at Nineveb other bricks have beeo fonnd with inscriptions both in the Phoenicianavd cuneiform cbaracter. Phoenician inscriptions have also been discovered in Egypt, but in an Aramaean dialect. (Gesen. Mon. Phoen. lib. ii. c. 9.) The purest examples of the Phoenician alpbabet are found in the inscriptions of Malta. Athens, Cypros, and Sardinia, and on the coins of Phoenicia and Sicily.

The original literature of the Pheenicians has wholly perished, and even in Greek translations bot little has been preserved. Their earliest works seem to have been chiefly of a philosophical and theological nature. Of their two oldest writers, Sanchoniatho and Mochus, or Moschus, of Sidon, accourts will be found in the Dictionary of Biograplyy and Mythology, as well as a discussion of the question respecting the gennineness of the reniains attribnted to the former; on which suhject the reader may also consult Lobeck (Aghophamus, ii. p. 1264, sq9.). Orelli (Sanchemiathonis Fragm. p. xiii. sqq.). (reuzer (Symbolik, pt. i. p. 110, 3rd edit.). Movers (Die Phonizier, i. p. 120, sqq.; and in the Juhrbücher für Theologie u, christl. Philosuphie, 1836, vol. vii. pt. i.), and Kenrick (Phoeniciu, ch. xi.). Later Phoenician writers are known only under Greek names, as Theudotus, Hypsicrates, Mhilostratus, \&c., and blend Greek legends with tbeir native authorities. We learn from Josephus (c. Apion. i. 17) that there were at Tyre public records, very carefully kept, and estending throngh a long series of years, upon which the later histories seem to have been founded; bot unfortunately these have all perished. Thus we are deprived of the
annals of one of the oldest and nost remarkable people of antiquity; and, by a perverse fate, the inventors of letters have been deprived of that benctit which their discovery has lustowed on other, and often less distinguished, nations which have borrowed it.

The arithmetical system of the Phoenicians resembled that of the Esyptians. The onits were marked by simple strukes, whilst 10 was denoted cither by a horizontal line or by a semicircle; 20 by the letter $\mathbf{N}$; and 100 had also a special mark, with strokes for the units denoting adilitional hundreds. (Gesen. Mon. Phoen. i. I. c. 6.) Their weights and measores were nearly the same as those of the Iesws.

The Phentians, and more particalarly the Si donians, excelled in the glyptic and plastic arts. Their driaking vessels, of gold and silver, are frequently mentioned in Homer: as the silver vase which Achilles proposed as the reward of the victor in the funeral games in honour of Patroclus (Iliad, xxiii. 743), and the bowl given to Telemachus by Menclaus. (Od. iv. 618 : comp. Strab. xvi. p. 757.) The Phoevicians probably also manufactured fictile and glass sases; but the origin of the vases called Phoenician. found in Southern ltaly, rests on no certain authority. They particularly escelled in works in bronze. Thus the pillars which they cast for Sllomon's temple were 18 cubits in height and 12 in circumference, with capitals 5 cubits high. From the nature of their country their architecture must have consisted more of wood than of stone ; but they must have attained to great art in the preparation of the materials, since those designed for the ternple of Solumon required no further labour, but only to be put together, when they arrived at Jerusalem. The internal decorations were carvings in olive-wond, cedar, and gold. The Phoenicians do not appear to have excelled in sculpture. This was probably owing to the nature of their religion. Their iduls were not, like those of Greece and Rome, elaborate representations of the human form, but mere rude and shapeless stones called Baetuli; and frequently their temples were entirely empty. Figares of the Phoenician Venus, hut of very rude sculpture, have, however, been found in Cyprus. The Phoenicians brouclit to great perfection the art of carsing and inlaying in ivory, and the manufacture of jewellery and female ornaments, which proved of such irresistible attraction to the Grecian and Jewish women, as nay be seen in the story of Enmaeus in Homer (OL, av. 415), and in the indignant denoncistions if lsaish (iii. 19). They likewise excelled in the art of engraving getns. (2 Chron. ii. 14.) Music is said to have been an invention of the sidonians (Sawhonath. p. 32, ed. Orell.), and a peculiar sort of cithara was called $\lambda$ vpoфoivi $\zeta$. (Athen. iv. 183.)

## VIII. Munfactures, Commerce, and Navigation.

The staple manufacture of Phenicia was the colebrated purpi- dye; but it was not a monopuly. Fizckiel (xxvii. 7) tharacterises the purple dy" as conmint foon (irecer ; and Eyypt and Arabia alst manufartured it, but of vegetable anaterials. The peculiarity of the Phomician article was that it wan whtained from fish of the gencra buecinum and murex, which were almont peculiar to the Phoeniman const, and which even there were found in perfection moly on the rocky part between the Tyrian Climax and the promontwry of Carmel. The liquor is con-
lained in a little vein or canal wlicis folivers the spiral line of these molluses, and yields but a very small drop. The fluid, which is extracted with a pointed instrument, is of a yellowish white, or crearn colour, and smells like garlic. If applied to liuen, cotton, or wool, and expased to a strong light, it successively becomes green, blue, red, and deep purple; aod when washed in soap and wnter a bright and permanent crimson is produced. The buecinum, which is so named from its trumpet slape, is found on rocks near the shore, but the murex must be dredged in deep water. The latter, in its geoeral form, resembles the buecinum, but is rougher and more spinous. The Itelix ianthina, also found on the Phoenician coast, yields a simitar fluid. The superiority of the Tyrian purjle was owing to the abundance and quality of the fish, and probably also to sorne chemical secret. The best accounts of these fish will be fond in Aristotle (H. Anim. lib, v.) and Pliny (ix. 61. s. 62) ; and especially in a paper of Reaumur in the Mémoires de 2.Acadentie des Sciences, 1711; and of the mannfacture of the purple in Amati, De Restitutione I'urpurarum, and Don Michaele Rusa, Dissertazione delle Porpore e delle Materie l'estiarie presso gli Antichi. The trade seems to have been confined to Tyre, though the poets speak of Sidonian purple, (Ovid, Tr. iv. 2. 27.) Trere, under the Rumans, had the exclusive privilege of mannfacturing the imperial purple, and decrees were promulgated prohibiting its use by all except magistrates. (Flav. Vopisc. Aurel. c. 45 ; Suet. Nero, 32.) Tbe manafacture seems to bave flourished till the capture of Constantinople by the Turks.

As Tyre was famed for its purple, so Sidon was renowned for its glass, which was made from the fine sand on the cuast near Mount Carmel. Pliuy (xxavi. 65) describes its discovery as accidental. Some mercluants who bad arrived on this coast with a cargo of natron, employed some lumps of it, instead of stones, to prop up their cmldron, anil the natron being melted by the heat of tbe fire, produced a stream of glass oo the sand. It is probable, however, that the art was derived from Egypt, where it fluurished in very ancient times. The suionians made use of the blowpipe, the lathe or wheel, and the graver. They also cast glass mirrors, and were probably acquainted with the art of imitating precious stones by means of glass. (Plin. l. c.) The Phoenicians were also fanous for the manufacture of cloth, fine linen, and embroidered robes, as we see in the description of thuse brought from Sidon by Paris ( $\pi$ en तot $\pi$ au-
 and in Seriptural allusions. (2 Cliron. ii. 14, \&e.) Ploenicia was likewise celebrated for its perfumes. (Juv. viii. 159 ; 1'lin. xi. 3. s. 2.)

Awyria and Eqypt, as well as Phoenicia, had reached a high pitch of civilisation, yet the geogra. phical position of the forner, and the habits nud policy of the latter, prevented them from commsnicating it. On the Phocnicians, therefore, devolved the beneficent task of civilising mankind by means of conmerce, for which their maritime situation on the burders of Earope and Asia admirably fitted them. Their original occupation was that of mere carriers of the produce and inamufactures of Assyria and Kuypt (11.ctom. i. 1); but their maritime superinrity led them to combine with it the profession of piracy, which in that age was not regarded as disgraceful. (Tlucyd. i. 5 ; Hum. Od. xv. 415. dc.) They were especially noted as slawe-dealers. (Henml.
ii. 54; Hom. Od. xiv. 285.) The importation of cloths, triokets, \&.c., in Phoenician ships, is constantly alloded to in the Homeric poems; but the Phoenicians are as constantly deseribed as a crafty deceitful race, who were ever bent on entrapping the unwary. (Il. vi. 290, xxiii. 743, \&c.) It would be absurd, huwever, to suppose that they were always fraudulent in their dealings. Ezekiel (sxvii.) draws a glowing picture of their commerce and of the splendour of their vessels. From his description we may gather the following particulars. Tbe trade of the Pboenicians with the Erythraean sea, comprised spices, myrrh, frankincense, precious stoncs, and gold-sand. The coast of Africa S. of Bab-elMandeb produced frankincense and spices superior to those of Aralia. The cotton garments mentioned by the prophet were probably Indian fabrics, and the "bright iron" Indian steel. Ezekiel mentions only linen as forming their trade with Egypt, but we know that they also drew their supplies of corn from thence. (Isaiah, xxiii. 3.) In return for these conmodities, the Phoenicians supplied the Egyptians with wine, with asphalt for their embalmments, and probably with incense for tbeir temples. (Herod. iii. 6; Diod. six. 99.) Their traffic with Syria and Mesopotamia, hesides the indigenous products of those countries, probably inclnded Indian articles, which came by that route. Babylon, which is called by Ezekiel (xvii. 4) a city of merchants, must have been a place of great trade, and besides the traffic which it carried on by means of its canal commnnieation with the Tigris, bad manufactures of its own, especially embroideries. With Nineveb also, while it flourished, the Phoenicians must have had an extensive commerce. The neighbouring Judaea furnished them with wheat, grape-honey, oil, and balm; and from the pastoral nations of Arabia tbey procured sheep and goats. Proceeding to more not tbern regions, we find Damascus supplying them with white wool and the precious wine of Helbon. Armenia and the countries bordering on the sonthern and eastern shores of the Eusine - the modern Georgia and Circassia-furnished horses, mules, and slaves; also copper and the tunny fish. Phoenicia bad undoubtedly great commercial intercourse with Greece, as is evident from the fact that the Grecian names fur the principal objects of oriental commerce, especially spices and perfumes, were derived from the l'boenicians. (Herod. iii. 111.) In the time of Socrates a Phoenician vessel seems regularly to have visited the Peirueens. (Xenoph. Oecon, c. 8.) Tarslish, or Tartessus, the modern Andalusia, was the source whence the Phomicians derived their silver, iron, tin, and lead. Silver was so abundant in this country that they substituted it for the inasses of lead which served as anchors. At a later period they procured their tin from Britain. They appear also to have traded on the NW. coast of Atrica as far as Senegal, as well as to the Fortunate Islands, or Canaries. They must also, of course, have carried on a great trade with their many colonies, which there will be occasion to enumerate in the followine section. It is remarkable that Ezekiel ahways describes the nations as bringing their wares to the Pbuenicians, and the latter are not mentioned as going forth to fetch them. The cararan trade munt at that tine bave been in the hands of the nomad Syrian and Arabian tribes by whom the Phoenicians were surrounded, and the business of the latter consisted in distributing by voyages to the various coasts of the Mediterranean the articles
which haa thus been brought to them orerland. (Herod. i. 1.) At a later period, however, they seem to have themselves engaged in the caravain trade, and we have already mentioned their journeys in the track of Alexander. Their pedlars, or retail dealers, probably traversed Syria and Palestine from the earliest tinies. (Proverbs, xxxi. 24 ; Isaiah, xxiii. 8.) In some foreign towns the Phoenicians had facteries, or settlements for the purposes of trade. Thms the Tyrians had a fish-market at Jerusalem (Nehemiah, xiii. 16), chiefly perbaps for the salted tunnies which they brought from the Euxine. They had also a settlement at Memphis (Herod. ii. 112), and, after the close of the wars between the Greeks and Persians, at Atbens, as already related, as well as in other places.

In their original seats on the Persian Gulf the Phoenicians nsed only rafts (Plin. vii. 57 ) ; but on the coasts of the Mediterranean they constructed regular vessels. In their early voyages, which combined piracy with trade, they probabily employed the penteconter, a long and swift vessel of 50 oars. (Comp. Herod. i. 163.) The trireme, or ship of war, and gaulos, or tub-like mercbantman adapted for stowage, which took its name from a milk-pail, were later inventions. (Ibid. iii. 136.) The excelleat arrangements of a Phoenician vessel are described in a passage of Xenophon before cited. (Oecon. 8 ; cf. Heliodor. v. 18 ; Isciah, ii. 16 ) We have already described the Pataeci, or figure-heads of their vessels. The l'hoenicians were the first to steer by observation of the stars (Plin. vii. 56 ; Manil. i. 297, sqq.) ; and could thus venture out to sea whilst the Greeks and Romans were still creeping along the coast. Astronomy indeed had been previously studied by the Egyptians and Babyloniaos, but the Phoenicians were the first who applied arithmetic to it, and thus made it practically usetul. (Strab. xvi. 757.) Herodotus (iv. 42) relates a story tbat, at the instaoce of Neco, king of Egypt, a Phoenician ressel circumnavigated Africa, setting off from the Hed Sca and returning by the Mediterrarean ; and though the father of history doulted the account himself, yet the details which be gives are in themselves so probable, and the assertion of the circumnavigators that they bad the sun on their right band, or to the N . of them, as must really have been the case, is so molikely to have been invented, that there seems to be no good reason for doubting the achierement. (Comp. Remnell, Geogr, of Herodotus, p. 682, sqq. ; Grote, Hist. of Greece, iii. pp. 377, sqq.)

## 1. Colonies.

The foundation of colonies forms so marked a feature in Phoenician history, that it is necessary to give a general sketch of the colonial system of the Phoenicians, although an account of eacb settlement appears nuder its proper head. Their position made them a commercial and maritime people, and the nature of their country, which wonld not admit of a great increase of inhabitants. led them to plant colomies. Before the rise of the maritime power of the Greeks they had the command of the sea for many centuries, and their colonisation thus proceeded without interruption. Their settlements, like those of the Greeks, were of the true nature of colunies, and not, like the Roman system, mere military occupations ; that is, a portion of the population migrated to and settled in these distant possessions. Hence they resembled our own colonies in America or

Anstralia, as dim_tialteil from ant arrap is in at India. Amolem, writer has, wit woh omforn and ingenuity, enterorred to trace bia paseme of Phoenician colomation from the wos fold were of ancient mythe respecting the wandehuss of Bel or Baul - the Cronos of the tireeks, and patritt end of Byblus and Berytus; of Astarte or 10 (V) (Vas(Vemia), who was especially worshipped at sid it; and of Melearth or the Tyrian Mircules. (Movers, Ihwen. vol. ii. pt. ii. ch. i.) With theoc miths are combined the lerends of the rape of Europa, of the wanderings of C'alonas and Harmonia, of Helen, Sido, \&e. That some purtion of historical truth may lie at the buttonn of these mythis can hardly be diyputed; but a eritical uisenssion of them would repuire more space than can be here devoted to the sutiject, and we must therefore content ourselves with giring a short sketch of what seems to be the most probable march of Phoenician colonisation.
Crprus, which lay within sizht of Phoenicia, was probably one of the first places culonised thence. Its name of Chittim. mentioned in Genesis (x.). is preserred in that of Citinm, its chief town. (Cic. Fin. is. 20) Paphin and Prlarpaphes, at the SW: extremity of the island, and tiolgos, near the SE. point, were the chief seats of the worship of Venu-Urania, the propagation of wbich marked the progress of Phenici,in col nisation. The origin of the coleny is hkewise shawn by the lectend of the ronquest of Cyprus by Be us, king of Sidun (-6tum Belus opinum Vastahat Cyprum, et victor ditione tenebat." Virs. Aen i. $621,+1$ ib. Sers.), who was the reputed founder of Citiom, Lapathus, and other Cyprian tomns. (Alex. Yphes, in Stephan. $x$. Aán $\dagger \theta$ os.) A great matuy Pluenician inscriptions lave been found in this iwhal. Hence the Phouni fans seem to have proceedect to the coast of A -ia Minor. the inlands of the Greek Archyelago, and the comet of Creece itself. Phomionn myths and tradations are interwoten with the earluest hist ry of Grrece, and long precede the Trijan War. Such are the legenits of Atrenor in Crlicia, of Europa in Rhondes and Crete, of Calunk in Thasos, Boeotia, Eubas and Thera. Rholfes secmss to have been early risized by the Ph enicians; and, if 't did not actually become their colony, these are at least numernas traces that they were oltec er-doninant in 1 e islan!. It is montioned in Gene-i- ( $x .4$ ) in conHinctinn with Citimn and Tateseus. (Comp. Epifian. ale, Haures. 30. 25, an I 11 vers, val, ii. pt. if. p. 245, nute 127.) Conen, a writer who flomished in the Angantan 1eri i, un-ntions that the Heliades, the rulue dynaisty in Fhatise, were expelied by the Plosetinims (Fich. 47, ap). Tat. p. 187), and nomerons other tradrions testify their occupation of the islanl. Fraces of the Phermicians may also be fomm in Crete, thonsh they are fainter there than at Rhodes. It is the scene of the myth of Enropa, the Sidmian Assate: and the towns of Itanos, which allow hore thensmu if Aralen (Stejh. B. s. $x$. '1 tavós: Hienul. § 11 ; Acts. xx1 12). Whema, and thoemice, were repute 1 ts hase been foundel by them. Wi. leart \& the thrawis (i. \& that the greater
 Th re are tricen of them in Clita, Lseis, and (tiris. We how alreaty al che to their idtimate Crnect an with the last-nat eif esonter, and Thucydifter, in the pasate "ust cotel, mixes the Carians

 heyths: a d at Teneics. Me i ctes, Mosorpped with
the sacrifice of infants, is the Tyrian Meclarth, also called Palamon by the Gireeks, (Lyeophr. Cass. 229.) There are traces of Phoenicisn colonies io Bithynia, but not more eastward in the Euxine, though it cannot be donbted that their voyages extended farther. Mythologienl analogies indicate their presence in Imbros and Lemnos, ard there are distinct listorical evidences of their settlements in tho neiphboaring island of Thasos. Herodotus land hirnself beheld the gigantic traces of their mining operations there, in which they appeared to brre thried a wbole mountain upsideddown (vi. 4i). The fable ran, that they had come thither in search of Europa. (1d. ii. 44.) They had also settlements for the purposes of mining at Nount Pangaeus, on the opposite cnast of Thrace. (Plin. vii. 57 ; Strah. xiv. p. 680.) According to Strabo (x. p. 44i), Cadmms and his Arabs once dwelt at Chalcis in Euboe, haring crossed over from Boeotia. Of the settlement of the Phoenicians in the latter conntry, tbere is historical testimony, to whatever credibility the legend of Cadmus may be entitled. (Herod, F. 57). The name of "Oүкa, or Onea, by which Minerra was worshipped at Thebes, and which was also given to one of the city gates, was pure Phoenician. (Euphor. ap Steph. R. s. v.: ef. Pausan ix. 12.) Frum Thebes the Cadmesns were expelled by the Argives, and retired among the Enchelees, an Illyrian pcople (Herod, v. 6t); and Illyrius, a son of Cadmus and Harmonia. was said to have given oame to their country. (Apollod, iii. 5. § 4) The Paphians, the ancient inhabitants of Cephallenia, were the reputed descendants of Cudmus. (Oulyss. 2v. 426.)

To colonise Sicily required bolder navigation ; but with the instinct of a commercial and maritine p-ople, the Pboenicians seized its promontories and wiljacent isles for the purpose of trading with the natives. (Thucyd. vi. 2.) Subsequently, bowever, they were gradually driven form their pusseosioms hy the growing power of the Greek colonics in that island, and were ultimately confined to its NW: corocr (Ib.). which was the nearest point to Carthage. Daedalus, no epithet of Hephaestos, the father of the Phoenician Cabiri, is represented as flying from Crete to Sicily. (Diod. iv. 7.) The Venus of Mount Eryx was probably of Phoenicinn origin from the veneration paid to ber by the Carthacirians. (Aclian, II. An. iv. 2; Athen, is. p. 934.) An inscription fonod at Segesta mentions a priestess of Venus-Uranian, which was the Phenician Venss (Rhein. Mus, vol, iv. p. 91.) There is some difficulty. however, mith regard to the temples of this deity, from the attempts which lave frequently been made to connect them with the wanderings of the Trojans after the capture of their city. Thus Dionysins of IIalicantassus (Ant. R. i. 20) attributes the temple of Venus at Cythera to Acmeas, wbilst by Herchotus (i. 105) it is assigned to the Phoenicians. The migration of the latter to the western side of Sicily must have taken place after the year $736 \mathrm{~s} . \mathrm{c}$., the dnte of the arrival of the Greck colonists. There are no traces of the Plum miciaus in Italy, Int the islands between Sicily and Africa seem to have been occupied by them. Diodurns (v. 12) mentions Melite, or Malla, as a Phoenician colony. In later times, bowever, it was iccupied by the Carthaginians, so that here, as in the rest of these islands, it is difficult to distincuivh whether the antiguities belong to them, or to the Pheeniciass. Farther westwand we may track the
latler in Sardinin, where Clandian (Bell. Gibl. 520) mentions Caralis as founded by the Tyians, in contralistioction to Sulci, fonnded by the Carthagimians. And the coins of Aebusus (Ivica) seem to denote the occupation of it by the Phoenicians, since they have emblems of the Cabiriac worship.
The very early intercourse between Phoenicia and the south of Spain is attested by the mention of Tarshish, or Tartessus, in the 10th chap. of Genesis. To the same purport is the legend of the expedition of Hercules against Cbrysaor, the father of Geryon, which was of course naval, and which sailed from Crete. (Herod. iv. 8; Diod. iv. 17, sqq. v. 17, \&c.) The account of Diodorus leads us to conclude that this was an earlier colony than some of the intermeliately situated obes. The Pboenicians had no doabt carried on a commercial intercourse with Tartessus long before the foundation of Gadeira or Cadiz. The date of the latter event can be ascertained with very remarkable accuracy. Velleius Pitercolus (i. 2) informs us that it was founded a fow years before Ltica; and from Asistotle (de Mirab. Auscult. c. 146) we learn that Utica was founded 287 years before Carthage. Now as the latter city mist have been founded at least 800 years B. C., it follows that Gadeira must have been built about eleven centuries before our aera. The temple of Hercules, or Melcarth, at this place retained, even down to the time of Silius Italicus, the primitive rites of Phoenician worsbip: the fane bad no image, and the only visible symbol of a god was an ever-hurning fire; the ministering priests were barefioted and clad in linen, and the entrance of women and swine was prohibited. (Punic. iii. 22, seq.) Long before this period, however, it had ceasel to be a Phoenician colony; for the Phocaeans who sailed to Tartessus in the time of Cyrus, abont 556 B. C.. found it an independent state, governed by its own king Arganthonius. (Herod. i. 163.) Miny other towns were doubtless founded in the S. of Spain by the Phoenicians; but the snosequent occupation of the country by the Carthaginiaus renders it difficult to determine which were Punic and which genuine Phoenician. It is probable, however, that those in which the worship of Hercules, or of the Cabiri, can be traced, as Carteia, Malaca, Sexti, \&c., were of Tyrian foundation. To this eariy and long continued connection with Phoenicia we may perhaps ascribe tbat superior cisilisation and immemorable use of writing which Strabo (iii. 139) observed annong the Turduli and Turdetani.

Fartber in the Atlantic, it is possible that the Phoenicians may have had settlements in the Cassiterides, or tin districts on the coast of Cornuvall and the Scilly Islonds; and that northwards they may Lave extended their voyages as far as the Baltic in search of amber. [BritasnicaE Lxs. Vol. 1. p. 433, seq.] (Comp. Heeren, Researches, dc. ii. pp. 53,68.) Bat these points rest principally on conjecture. There are more decided traces of Phoenician oecnpation on the NW. or Atlantic coast of Africa. Abyla, like Calpe, mas one of the lillars of Hercules, and his temple at Lixus in Mlsuretania was said to be older even than that at Gadeira. (Plin. six. 4. x.22.) Tinge was founded by Antaens, with whom Herenles is fabled to have combated (Mela, i. 5; Strab.iii. p. 140) : and the Sinus Emporicus ( $\kappa \dot{\delta} \lambda \pi \pi$ os
 Dlauretania, seems to have been so named from the commerciai settlements of the Phoenicians. Cerne
was the limit of their voyages on this casst: but the situation of Cerne is still a subject of discossion, [Celine.]

With regard to their colonies on the N. or Mediterranean coast of Africa, Strabo (i. p. 48) tells us tbat the Phoenicians occupied the middle [arts of Africa soon after the Trojan War, and they were probably acquainted with it much somer. Their earliest recorded settlement was Itace, or Utica, on the western extremity of what was afterwards called the gulf of Carthage, the date of which has been already mentioned. Pliny ( $x$ vi. 79) relates that the cedar beams of the temple of Apollo at Utica had lasted since its foundation, 1178 years before his time; and as Pliny wrote about 78 years after the birth of Christ, this anecdote corroborates the date before assigned to the foundation of Gades and Utica. The Phoenicians also founded other towns on this coast, as Hippo, Hadrumetum, Leptis, Sce. (Sall. Jug. c, 19), and especially Carthage, on which it is unnecessary to expatiate here. [CARthago.]

The principal modern works on Pboenicia are, Bochart's Geoyraphia Sacra, a performance of unbounded learning, but the conclasions of which, from the defective state of critical and ethnographical science at the time when it was written, cannot always be accepted; Gesenius, Monumenta Phuenicia; Movers, article Phönizien, in Ersch and Gruber's Encyclopädie, and especially his work Die Phönizier, of which two volumes are published, but which is still incomplete; and Mr. Kemrick's Phocnicia, Svo. London, 1855, to which the compiler of this article is much indebted The veader may also consult with advantage Hengstenberg, De Rebus Tyriorum, Berlin, 1832, nad Beiträge zur Einteituing in das Alte Testament : Heeren, Hlistorical Researches, g'c. rol. ii. Oxford, 1833 ; Grote, History of Greece, vol. iii. ch. 18; Forbiger, Handbuch der alten Geographie, vol. ii. p. 659, sqq.; Russegger. Reisen; Burckhardt, Syria; Robinson, Biblical Researches, \&c.

I'HOENI'CE. [PHILA.]
PHOENI'CIS. [JenEON, No. 3.]
PHOENI'CIUS MONS. [Boeotia, p. 412, a.]
PHOENI'CCS (Фoaviאoús). 1. A port of lonis, at the foot of Mount Mimas. (Thucyd viii. 34.) Liry (xxxvi. 45) notices it in his account of the naval operations of the Pomans and their allies against Antiochus (comp. Steph. B. s. v.) ; but its identification is not easy, Leake (Asia Minor, p. 263) regarding it as the same as the modern port of Tshesme, and Hamilton (Researclues, ii. p. 5) as the port of Egri-Limen.
2. A port of Lycia, a little to the east of Patara; it was scarcely 2 miles distant from the latter place, and surrounded on all sides by high clifts. In the war against Antiochus a Roman fleet took its station there with a view of taking Patara. (Liv, xxxvii. 16.) Beaufort (Karamania, p. 7) olserves that Livy's description answers accurately to the bay of Kalamaki. As to Monnt Phoenicos in Lycia, see Olxapes, Vol. 11. p. 480.

PHRULIS．［Frums．］
PHRERI（Фpoîpoi），a Seythian people in Serica， described as eannibals．（I＇lin．vi．17．s．20；Dionys． Per． 752 and Enstath．$u d$ loc．）

PHRI＇GIA（Фpuría：Eth．Фpú of the mast important provisices of Asia Minor．Its inhabitants．the Phrygians，are to us among the most obseure in antijuity，at least so far as their ortigin and nationality are concerned．Still，however， there are many indications which seems culculated to Irad us to dchinite eonelnsions．Sone regard them as a Thracian tribe（Briges or Bryges），wha had immi－ grated into Asia：others consiler them to have been Armenians；and others，again，to have been a mixed race．Their Tliracian origin is mentioned by Strabo （vii．p．295，x．p． 471 ）and Stephanus B．（s．v）； and Herodotus（vii．73）mentions a Macedomian tra－ dition，aerording to which the Phrycians，under the name of Brices，were the neigltbours of the Mace－ donians before they migrated into Asia．This mi－ gration，according to Xanthus（ap．Strab．xiv．p． 680），tonk place after the Trujan War，and aceord－ ing to Conon（ap．Phut．Cod．p．130，ed．Brkk．） 90 years before that war，ander king Midas．These statements，however，can hardly refer to an origmal migration of the l＇hrygians from Europe into Asia， but the migration spoken of by these authors seems to refer rather to the return to Ania of a portion of
the nation settled in Asia; for the Phrygians are not only repeatedly spoken of in the Homeric poems (Il. ii. 862 , iii. 185, x. 431 , xri. 717 , xxiv. 535 ), but are generally admitted to be one of the most ancient nations in Aslia Minor (see the story in Heroa. ii. 2), whence they, or rather a purtion of them, must at one time have migrated into Europe; so that in our traditions the account of their migrations has been reversed, as in many other cases. The geographical position of the Pbrygians points to the highlands of Arneuia as the land of their first ahode, and the relationship between the Phrygians and Armenians is attested by some singular coincidences. In the army of Xerxes these two nations appear under one commander and using the same armour; and Herolotus (vii. 73) adds the remark that the Armenians were the descendants of the Phrygiams. Eadoxus (ap. Steph. B. s.v. 'Apuevía, and Eustath. ad Dion. Per. 694) mentions the same circumstance, and moreover alludes to a similarity in the languases of the tro peoples. Both are said to have lived in subterraneous habitations (Vitruv, ii. 1; Xenoph. Anab. iv. 5. § 25; Diod. xiv. 28); and the names of both, lastly, are used as synonyms. (Anecd. Graec. Oxon. iv. p. 257, ed. Cramer.) Under these circumstances it is impossible not to come to the conclusion that the Phrygians were Armenians; though here, again, the acconnt of their migration has been reversed, the Armenians not being descended from the Phrygians, but the Phrygians from the Armenians. The time when they descended from the Armenian highlands cannot lie determined, and unquestionably belongs to the remotest ages, for the Phrygians are described as the most ancient inhabitants of Asia Minor. (Pans, i. 14. § 2; Claudian, in Eutrop, ii. 251, \&c.; Appulei. Metam. xi. p. 762, ed.Oud.) The Phrygian legends of a great flood, connected with king Annacus or Namnacus, also are rery significant. This king resided at Iconium, the most eastern city of Phrygia; and after his death, at the age of 300 years, a great flood overwhelmed the country, as had been foretold by an ancient oracle. (Zosim, vi. 10; Suid. s. v. Náyvaros; Steph. B. s. v. '1nóviov; comp. Ov. Met. viii. 620, \&c.) Phrygia is said to have first risen out of the flood, and the ark and Munst Ararat are mentioned in connection with the Phrygian town of Celseaae. After this the Phrygians are said to lave been the first to adopt idolatry. (Orac. Sibyll. i. $196,262,266$, vii. $12-15$.) The influence of the Old Testament upon these traditions is umuistakable, but the identity of the Phrygians and Armenians is therehy nevertheless confirmed. Another argument in favour of our supposition may be derived from the architectural remains which have been discavered in modern times, and are scarcely noticed at all by the ancient writers. Vitruvius (ii. 1) remarks, that the Phrygians hollowed out the natural bills of their country, and formed in them pasacges and rooms for habitations, so far as the nature of the bills permitted. This statement is most fully confirmed by modern travellers, who have fund such habitations cut into rocks in almost all parts of the Asiatic peoninsula. (Hamilton, Researchez, ii. P. 250,288 ; Texier, Description de $I$ Asie Mineare, i. p. 210 , who describes an immense tuwn thas formed out of the natural rock.) A few of these architectural monuments are adorned with inscriptions in Phrygian. (Texier and Steuart, A Description of some ancient Momuments with $I n$ scriptions still existing in Lydia and Phryyin,

London, 1842.) These inseriptions must he of Phrygian origin, as is attested by such proper names as Mlidas, Ates, Aregastes, and others, which oceur in them, though some have unsuccessfally attempted to make out that they are Greek. The impression which these stupendons works, and above all the rock-city, make upon the bebolder, is that he has hefore him works executed by human hands at a most remote period, not, as Vitrurius intimates, because there was a want of timber, but becanse the first robust inhabitants thought it safest and most convenieut to construct such habitations for themselves. They do not contain the slightest trace of a resemblance with Greek or Roman structures; but while we assert this, it cannot be denied, on the other hand, that they display a striking resemblance to tbose structures which in Greece we are in the habit of calling Pelasgian or Cyclopian, whence Texier designates the above mentioned rock-city (near Boghugkieni, between the Halys and Iris) by the name of a Pelasgian city. (Comp. Hamitton, Researches, i. pp. 48,490 , ii. pp. 226, \&c., 209.) Even the lion gate of Mycenae reappears in several places. (Ainsworth, Travels and Rescarches, ii. p. 58; Leake, Asiu Minor, p. 28.) These facts throw a surprising light apon the legend abont the migration of the Phrygian Pelops into Argolis, and the tombs of the Pbrygians in Peloponnesus, mentioned by Athenaeus (xiv. p. 625). But yet much remains to be done by more systematic esploration of the countries in Asia Minor, and by the interpret:ltion of their monnments. One conclusion, however, can even now he arrived at, viz. that there must have been a time when the race of the Phrygians furmed, if not the sole population of A sia Minor, at least by far the most important, bordering in the east on their kinsmen, the Armenians, and in the sontheast on tribes of the Semitic race. Tbis conclusion is supported by many facts derived from ancient writers. Indepeodeotly of several Greek and Trojau legeods referring to the sonthern coasts of Asia Minor, the name of the Pbrygian mountain Olympus also oceurs in Cilicia and Lycia; the north of Bithynia was in earlier times called Bebrycia, and the town of Otroia on the Ascanian lake reminds us of the Phrygian chief Otrens. (Hom, 1 L . iii. 186.) In the west of Asia Minor, the comntry about Monnt Sipylus was once occupied by Phrygians (Strab. xii. p. 571 ); the Trujan Thehe also bore the name Mygdonia, which is synonymous with Phrygia (Strab. siii. p. 588) ; Mygdonians are mentioned in the neighbourhood of Miletus (Aelinn, V. H. viii. 5); and Polyaenus (Strateg. viii. 37) relates that the Bebryces, in conjunction with the Phocaeans, carried on war against the neighbouring barbarinns.

From all this we infer that Trojans, Mysians, Maeonians, Mygdonians, and Dolionians were all bianches of the great Pbrygian race. Io the Iliad the Trojans and Phrygians appear in the closest relation, for Hecuba is a Phrygian princess (xvi. 718), Priam is the ally of the Phrygians against the Amazons (iii. 184, \&c.), the rame Hector is said to be Phrygian (Hesych. s. v. Dapeios), and the names Paris and Scamandrius seem likewise to be Phrygian for the Greek Alexander and A-tyanax. It is also well known that both the Greek and Roman poets use the names Trojan and Pbrygian as synonyms. From the Homeric hymn on Aplirodite (113) it might be inferred that Trojans and Phrygians spoke different languages; but that passage is equally clear, if it is taken as alluding
ouly to a dinlectic difference. Now as the Tmjans throughout the Homeric prems appenr as a peaple akin to the Greeks, and are eren called Hellenes by Dionysius of Halicarnassus (Ant. Rom. i. 61), it follows that the Phrygians also must have been related to the Grecks. This, again, is further supported by direct evidence; for, looking apart from the tradtion abont Pclops, which we have already alluded to, king Mulas is said to lave been the first of all foreigners to have dedicated, about the middle of the eighth century b. C., a present to the Delphic oracle (1Lerod. i. 14); and Plato (Crntyl. p. 410) mentimus several words which were common to the Greck and Plurygian languages. (Comp. Jablonski, (opera, vol. iii. p. 64. \&e. ed. Te Water.); and, hatly, the Armenian lancuage itself is now proved to be akin to the Greek. (Schroeder, Thesaur. Ling. Arm. p. 51.) The radical ideatity of the Phrygians, Trujans, and Greeks being thus established, we shall proceed to show that many other Asiatic nations helonged to the same stock. The name of the Mygdunians, as already observed, is often used spnonymously with that of the Phrygians (Paus. s. 27. §1), and in Homer (Il. iii. 186) the leader of the Phrygians is called Mygdon. According to Stephanns B. (s.v. Muy the name of a district in Great lhrygia, as well as ot a part of Macedonia. The Doliunes, who extended westwand as far as the Aesepus, were separated trom the Mygdenians by the river Rhyndacus. (Hitrah, xiv. p. 681 ; Scbol. ad A pollon. Rhod, i. 936 , 943, 1115.) At a later time they disappear from history, their name being absorbed by that of the Phrygians. The Jy yizns are easily recognisable as a Phrygian people, buth from their listory and the conutry they inhabited. They, too, are called Thracians, and their langugre is said to have been a mixture of Phrygian and Lydian (Strab. xii. p. 5i2), and Mysians and I'brycians were so intermingled that their frontiers could searcely be distinguistied. (Strab. xii. p. 564; Eustath. ad Hom. Il. ii. 862,
 to the Mlueonians, see Lydid. The tribes of Asia Minor, which are nsually designated by the name 1'darginus, thns unquestionably mere branches of the great Plorygian stock, and the whole of the western part of the peninsula was thus inhabited by a variety of tribes all belonging to the same family. But the l'hrygians also extended into Europe, where their chicf seats were in the central parts of Emathin. (He;od. viii. 138; comp. Strab. siv. p. 680.) There we meet with Phrygians, or with a modification of their name, Brygians, in all directions. Mardonins, on his expedition aquinst Grecce, met Brygians in Thrate. (Herod. vi. 45; Steph. B. s. e. Bpúкан; 1lin. iv. 18, where we lave probably to read Brycae for Brysac.) The l'hrygian population of 'Thrace is strungly attested by the fact that many names of places were common to Thrace and Trons. (Ntrab) xiii. p. 590: comp. Thucyd. ii. 99: Suid. s. r. Өá$\mu v p s$; Sulin 15; Tzetz. Chill. ini. s12.) Traces of Plirgaians alko recur in Chaleidice. (Lyeoph. 1404: Siteph. 13. s. 2. Kpougis.) Furtier sumth they appear abunt Mount Octa and even in Attica. (Thueyd. ii. 22: ntrah, xiii. p. 6221: Stoph. 13. s. v. \$puyia aad \$pinur: Eustath. ad Dibmys. Ier. 810.) Mount Olympus, also, was perhaps onty ar reputition of the 1'lirygian natue. la the west of Bjessa in Macetoma, abont lake Lychnidus, we in et with Bryges (Strab. vii. p1p. 326, $327^{\text {; Ntepls. B. s. v. Bpik) and }}$ in the satue vicinty we hate the touns ot Brygion,

Brygias, and Mułatio Brucida. (Stepl). B. s. re.; It. Ilieros. p. 607.) The westernnost traces of Brygiaus we find about Dyrrhachium. (Strab. l.c.: Appian, Bell. Cic. ii. 39 ; Scymn. 433, 436.) It is difficult to determine bow for Plurygian tribes extended northward. The conntry beyond the eastern part of Nount Haemus scems to have been occupied at all times by Thracians; bat lhrygians extended very far north on both sides of Mount Scardus, for 1 'asxonia and Moesia seem to be only diffrent formis fur Paeosia and Mysta; and the Breacao on the Savus also betray their origin by their name. lt is possible also that the Dardanis were Phry,ians, and descendants of the Teacrians in Troas; at least they are clearly distinguished from the Illyzians. (Polyb. ii. 6.) Strabo, lastly, connects the lilyrian Henetes with those of Asia Minor who are mentioned by Homer ( 12. ii. 852 ), and even the Dalmatians are in one passage described as Armenians and Phrygians. (Cramer, Anecd. Grafe. Ox, iii. p. 257.) It we sum up the results thus obtained, we find that at one time the Jbrygians constituted the main body of the pppalation of the greater part of Thrate, Macedonia, und llyrienm. Allusions to their migrations into these countries are not wanting, for, independently of the traditions abont the inigrations of the Teucrians and Mysians (Herod. v. 13, vii. 20; Strab. Fragm. 37 ; Lycophr. 741, \&c.), we hnve the accmnt of the migration of Mlidas to tbe plains of Einathia, which evidently refers to the same great event. (Athen. xv. P. 603; Lycoph. 1397 , \&ec.)

The great commotions which took place in Asia and Eurupe after the Trojan War were most uufortunate for the Phrygians. In Europe the lllyrians presed nouthwarls, and from the north-east the ScythoThracian tribes pushel forward and occupied almost all the country east of the river Axius: Hellemic colunies were established on the coasts, while the rising state of the Macedonians drove the Phrygians from Emathia. (Nyncell. pp. 198. 261 ; Justin, viii. 1.) Under such circumstances, it cannot surprise us to find that the great nation of the Pbrygians disap. peared from Earope, where the Paeonians and l'annonians were their only remnants. It is probable that at that time many of them mirrated back to Asia, an event dated by Xanthus ninety years before the Trojan War. It must bave been abont the same time that Lesser Mysia and Lesser Plarygia were Forned in Asin, which is expressed by Strabo (xii. Pp. $565,571,572$, xiii. p. 586) in his statemeut that the Phrygians and Mysians conquered the ruler of the country, nind took pessension of Troas and the neighbourine conntries.

But in Asia Minor, toc, misfortunes came upnt the Phrygians from all quarters. Frem the sontheast the Semitic tribes ndvanced further and further; Diodorus (ii. 2, \&c.) represents Phrygia as suldued even by Nimus; but it is an hisforical fact that the Syrian Cappadocians forced themselves between the Armenians and lhrygians, and thus separated them. (1terod. i. i2. v. 49, vii. 72.) Strabo also (xii. p. 559) syeaks of structures of Semiramis in Pontus. The whole of the south const of Asia Mnoor, as tir as Caria, recesced a Semitic population at at very early period; and the ancient Plarygian or Pelascaan people were in some parts reduced to the condition of lielots. (Athen. iv. p. 271.) The latest of these Syrophuenician immigrants seem to have been the Ifrilians [LyIDIA], whose straggles with the Mysians are expressly menti ned. (S:rab. aiii. p. 612; Scylas, p. 36.) Thas victorious prugress of the

Semitic races exercised the greatest influence upon the Pbrygians; for not only was their political importance weakened, but their national iodependence was lost, and their languaze and religion were so deeply affected that it is scarcely possible to separate the foreign elements from what is original sad indigenous. In the Durth also the Plorygians were hard pressed, for the same Thracians who had driven them mot of Enrope, also invaded Asia: for althongh Homer ioves not distinctly mention Thracims in Asia, yet, in the historical ages, they oecupied the whole coast from the Hellespont to Heracleia, under the names of Thyni, Bithyni, and Mariandyui (Comp. Heroi. vii. 75.) The conflicts between the ancient Plrygians and the Thracians are alluded to io several legends. Thus king Midas killed limself when the Treres ravaged Asia Minor as far as Paphlagonia and Cilicia (Strab, i. p. 61); the Mariandyni are described as engaged io a war against the Mysians and Bebryces, in which Mygdon, the king of the latter, was slain. (Apollod. i. 9. \& 23, ii. 5. § 9 : Apollon. Rhod. ii. 752, 780, 786, with the Schol.; Tzetz. Chil. iii. 808, \&..) The brief period during which the Phrygians are said to have exercised the supremacy at sea, which lasted for twenty-five, and, accordiog to others, only five years, and which is assigned to the beginving of the ninth century e. c., is probably connected with that age in which the Pluygians were evgaged in perpetual wars (Diod. vii. 13; Syncell. p. 181); and it may liave beeo about the same time that Phrygians from the Scamander and from Troy migrated to Sieily. (Paus, v. 25. § 6.)

It was a salutary circumstance that the numerous Greek colonies on the coast of Asia Minor counteractel the spreading influence of the Semitic race; bint still the strength of the Phrygians was broken; they had withdrawn from all quarters to the central parts of the perinsula, and Croesus incorporated them with his own empire. During the conquests of Cyrus, Greater and Lesser Phrygia are already distinguished (Xenoph. Cyrop, i. 5. § 3, vi. 2. § 10 , vii. 4. § 16 , viii. 6. § 7), the furmer being governed by a satrap (ii. 1. § 5), and the latter, also called Phrygia on the Hellespont, hy a king. (vii. $4 . \S 8$ ).

After having thns reached the period of authentic history, tre are enabled to turn onr attention to the condition of the Plurggians, and the country which they ultimately inhabited. As to the name Phryges, of which Bryges, Briges, Breuci, Bebryces, and Berecynthae are only different forms, we are informed by Hesychins (s.v. Bpi'qєs) that in the language of the kindred Lydians (that is, Maeonians) it signified "freemen," The nation bearing this name appears throughont of a very peaceable disposition, and unable to resist forcign impressions and influences. None of their many traditions and legends points to a warlike or beroic period in their history, but all have a somewhat mystic and fantastic character. The whole of their early history is connected with the names Midas and Gordins. After the conqucst of their country by Persia, the Phrygiaus are cenerally mentioned only with contempt, and the Phrygian nanes Midas and Manes were given to slaves. (Cic. p. Fluce. 27; Curt. vi. 11; Strab. vii. p. 304.) But their civilisation increased in consequence of their peaceful disposition. Agriculture was their cbief necujation; aod whoever killed an ox or stole agricultural implements was put to death. (Nicrel. Damasc. p. 148, ed. Orelli.) Gordius, their king, is
said to hare been ealled from the plough to the throne. (Arrian, Anab. ii. 3. § 1 ; Justin, sii. i.) Pliny (vii. 6) calls the ligas andertion of the Phrygians. Great care alao was bestowed upon the cultivation of the vine ; and commerce flourished among them in the very earliest tires, as wf must infer from their well-built towns mentioned by Homer (Il. iii. 400). The foundation of all their great torms, which were at the same time commercial emporia, helongs to the mylhical ages, as, e. g., Pessinus, Gordium, Celaenae, and Apaniea. The religious ideas of the Pbrygians are of great interest and importance, and appear to have exercised a greater influence apon the mythology of the Greeks than is commonly supposed, for many a mysterious tradition or legend current among the Greeks must be traced to Plurggia, and can be explained only by a reference to that country. Truly Pbrygian divinities were Cybele (Phea or Agdistis), and Sabazius, the Plarsgiad name for Dionysus. (Strah. x. p. 470, Sc.) With the workhip of these deities were connected the celebrated orgiastic rites, accompanied by wild music and dances, which were subsequently introdoced annong the Greeks. Other less important divioities of Plarygian origin were Olympus, Hyagnis, Lityerses, and Mlarsyas. It also deserves to be noticed that the Phrygians never took or exacted an oath. (Nicol. Damasc. p. 148.) But all that we bear of the religion of the Phrygians dariog the historical times appears to shom that it was a mixture of their own original form of worship, with the leas pure rites introduced hy the Syro-Phoenician tribes.

The once extensive territory inhabited by the Phrygians, had been limited, as was observed abore, at the time of the Persian dominion, to Lesser Phrygia, on the Hellespont, and Greater PheycLi. It is almost impossible accmrately to define the boundarjes of the former; according to Scylax ( p . 35 ; comp. Pomp. Mela, i. 19) it extended along the coast of the Hellespoot from the river Cius to Sestus; but it certainly embraced Troas likewise, for Ptolemy marks the tro countries as identical. Towards the interior of the peninsula the boundaries are not known at all, but politically as a province it bordered in the east on Bithynia and Great Phrygia, and in the sonth on Lydia, Girfat Phricha formed the central conntry of Asia Minor, extending from east to west about 40 geographical miles, and from south to nurth about 35 . It was bounded in the north by Bithynia and Paphlagonia, and in the east by Cappadocia and Lyezonia, the river Halys forming the boundary. (Herod. v. 52.) The southern frontier towards Pisidia and Cilivia was formed by Mount Taurus; in the west Mounts Tmolus and Messogis extend to the western extremity of Mount Tauras; but it is almost impossible to define the boundary line towards Mysia, Lydia, and Caria, the nstionulities not being distinctly marked, and the Romans having intentionnliy obliterated the ancient landmarks. (Strab, sii, p, 564, xiii. p. 629.) The most important part in the north of Phrygia was the fertile valley of the Sangarins, where Phrygians lived in the time of Homer (Il. iii. 187, xri. 719), and where some of their most important cities were sitnated. Iconiam, the easternmost city of Phrygia, was situated in a fertile district; but the country to the north-west of it, with the salt lake Tatta, was barren and cold, forming a high plateau, which was only fit for pasture, and suffered from frequent dronghts. The southern portion of Plarygia, surrouuded by Mount Taurus, a
branch of it tarnagg to the north-west, and by the mountans containing the sources of the Macander, bore the surnane Paromos, it was a table-land, bat, to judge from the many towns it contained, it cannot have been as barren as the northern platean. In the , west Plirygia comprised the upper valley of the Macander, and it is there that we find the moost heautiful and $m$ st popuhnss parts of Plarygia; but that district was mach exposed to earthouakes in conseluence of the volcanic mature of the district, whith is attested by the hot-sprines of Hierspolis, and the Plutomimn, from which suffeatiog exbafations were sent forth. (Clandian, in Eutrop, ii. 270. \&c.; Sirab, sii. pp. 578, \&c., 629, \&e.; IIerod. vii. 30; Vitrav. viii. 3.)

Phrygia was a comutry rich in every kind of produce. Its muuntains seem to lave furnished gold; for that metal plays an inportant part in the legends of Midas and several of the Plorygian rivers are called " aurileri." (Claudian, L. c. 2.58.) Plurygian marhir, esperially the species found near Symada, was very ceturuted. (Strab. xii. p. 579 : Paus. i. 18. § \& s.se. ; Ov. Fust. v. 529 ; Stat. Sile. i. 5. 36.) The patensive cultivation of the vine is clear from the wrship of Dionysus (Sabazius), and Humer (Il. iii. 184) also gives to the country the attribute $\dot{c} \mu \pi \in \lambda \dot{\varepsilon} \in \sigma \sigma a$. The parts most distinguished for thuir excellent wine, bowever, were subsequently separated from Plirygia and added to neishbouring provinces. But Phrygia was most distinguished for its sheep and the finemess of their twool (Strab, xij) p. 578 ). King Amyntas is said to have kept no less than 300 flocks of sheep on the barren tahle-land, whence we must infer that sbeep-breeding was carried on there on a very large scale. (Comp. Suid. s. r. ф, vyiwv Epich; Aristoph. Ac. 493 ; Strab. l.c. p. 568.)

When Alesander Lad overtbrown the Proian power in Asia Minor, he assigned Great I'hrygis to Antigotus. B. c. 333 (Arrian, Anab. i. 29); and during the first division of Alexander's empire that general retained Plorygia. to which were added L.ycia and Pamplylia, white Leonnatus obtained Lester Pırygia, (Dexipp. ap. Phot. p. 64; Curt. x. 10 ; 1)uxi. xviii. 3; Justin, sini. 4.) In the beginning of ' B. c. 321, J'erdiceas asoigned Greater Phryoia, :and probally alo the Lesser, to Eumenes(Justin, xiii. 6. Com. Xep. Eum. 3); bat in the new division of Tripuradisus Antigonus recovered bis former proviners, and Arrbidaeus obtained Lesser Phrystia, which, hotever, was taken from him by Antiqums as early as ri.c. 319 . (1)ivd. xviii. 39, xix. 51, 52. 75: Arrian, ap. Phot. p. i2.) After the death of Antionatrs, in B. C. 301, Lesser l'irygia fell into the hamls of Levsimathus, and fireat Phryeia into thase it Soleweus (Appian, Syr: 55), who, after conyparing Lysimaclu-, in B. C. 282, united the two I'lurygias with the Syrian emplies (Appian, Syr: 62 : Justin, xvil. 2; Memnon, Hist. Merart. 9.) Suon two wher Kingdums, Bithynis and Pergamum, wore former it the vi intity of Phrygia, and the Gauls or Galatac, the mont dangernus enemy of the A-iatics, tomk permament pasiosion of the northcatern part of P'lirycia, the valley of the Singarius. llums wais firmed Galatia, which in onr maposerarates Greater Phrygia from Paphlaronia and Bithyni.s: and the ancene towns of timilium, Anryra, and I'e sints mus licuate the seats of the Gisuls. To the eate aho Phrygia list a portion of its ternitory, for I,ycaunia was estended so fir westward ats to cubrace the whole of the above mentioned birren
plateau. (Strab. xiv. p. 663.) It is not inpen ile that Attalus 1. of Perganum may bave taken possession of Lesser Phryeia as early as E. C. 240, when he bad gained a decisive victory over the Gauks, seeing that the Trocmi, one of their tribes, liad dwelt on the Hellesprot (Liv, xxxviii. 16); Lut has dominion was som affer reduced by the Syrian kings to its original dimensions, that is, the comutry between the Simus Elaens and the bay of Adramyttium. However, after the defeat of Antivehus in the battle of Magnesia, in B. C. 191, Eumenes II. of Persamum obtained from the Romans the greatee pat of A ias Minor and with it buth the Plarggias. (Strab. xiii. P. 624 : Liv, xxxvii. 54, \&c.) Bumenes on that occasion ahoo acquirea another district, which had been in the possession of Prasias, king of Bithynia. Livy (xxrviii. 39) calls that district Mysia, but it mnst have been the same comitry as the Phrygha Epictetcs of Strabo (xii. pp. 563, 564, 571, 575,5:6). But Strabo is certainly mistaken in reaarding Pbrygia Epictetus as identical with Lesser P'brygin on the Hellespont,the former, according to bis own showing, nowhere touching the sea (p. 564), but being situated south of Mount OJgmpus (p. 575 ), and being bounded in the north und partly in the west also by Bithynia (p. 563). The same conclusion must be drawn from the situations of the towns of Azani, Midacum, and Dorylueum, which be himself assigns to Phrygia Epictetus (p. 576), and which I'toleny also mentions as Phrygian towns. These facts clearly sbow how confused.Strabo's idens about those countries were. The fact of Livy calling the district Mysia is easily accounted for, since the names Phrygia and Mysias are often confoumbed, and the town of Cadi is sometimes called Mysian, thourh, accoruing to Suabo, it belonged to Phrygia Epictetus. It was therefore unyuestionably this part of Phrygia about which Eumenes of Pergamum was at war with Prusias, and which by the decision of the Jomans was handed over to the Pergamenian King, and hence obtained the name of Phrygia Epictetus, that is, "the acquired in addition to." (Pulyb. Excerpt. de Legat. 128, 129, 135, 136: Liv.土xxix. 51 ; Stral. p. 563.) After the death of Attalus 111., н. c. 133, all Plirgcia with the rest of the kingdous of Perganmm fell into the hands of the Romans. A few years later, when the kingdom of Pergamum became a Juman province, Phrygia was eiven to Mithridates V. of Pontus (Just. xxrviii. 1; Appian, Bell. Mitior. 57 ), but after lis death in 13.c. 120 it was taken from his son and sucecssor, Mithridates V1., and declared free. (Appian, l. c.) This freedom, however, was not calchlated to promute the interests of the Plorygians, who gradually lost their importance. The Romans afterwards divided the country into jurisdictiones, bat without any regard to tribes or nitural boundaries. (Strab, xiii. p. 629: Plin. x. 29.) In B. C. 88 the distriets of Landiecia, Apameia, and Symada seem to have been adiled to the province of Cilicia. (Cic. in ferr. i. 17.3..) But this atrangement was nut lasting, for afferwamls we find those three districts as ar part of the pr vince of Asia, and then again ats a part of Cilacia, untif in B. C. 49 they appear to have beconse jurmannat y anited with Asia. The east and sonth of I'hrycia, however, especially the tomens of Apultmia, Antiocheia, and Philomeliun, did not belong to the province of Asia. In the new division of the empire made in the 4th century A. 13., Phrygia Parorios was added to the province of Pisidia, and a district on tho Macander to Caria.

The remaining part of Phrygia was then diviced into l＇hrygia Solutaris，comprising the eastern part with Synoada for its capital，and Phrygia Pacatiana （sometimes also called Capatiana），which comprised the western part down to the frontiers of Caria． （Notit．Imp．c．2；Hierocl．pp．664，676；Constant． Porph．de Them．i． 1 ；Ducas，p． 42 ；see the ex－ cellent article Phrygic in Pauly＇s Reulencyclopnedie， by O．Abel ；Cramer，Asia Minor，ii．p．1，\＆c．； Nichulr，Lect．on Anc．Hist．i．p．83，\＆c．，ii．p． 382．）

## HCENUM．

oppu－ite sule of the Italian peninsula ；and this is explained by Strabo，who tells us that they were in fact a portion of that people who had been trans－ ported by the Kimans from their original abodes to the shores of the Tyrrbenian sea．（Strab．v．p．251．） The period of this transfer is not mentioned，bat it in all probabidity took place on or shortly after the conquest of Picennm by the Romans，B．c． 268. During the Second Ponic War，the Picentini espoused the cause of Hannibal，for which conduct they were screrely punished after the close of the war，being， like the Lucanians and Bruttians，prohibited from military service，and emploved for the inferior duties of public messengers and conriers．They were at the same time compelled to abandon their chief town， which bore the name of Picentia，and to disperse themselses in the villages and hamlets of the sur－ rounding country．（Strab．l．c．）The more effec－ tually to hold them in check，the Romana in e．c． 194 founded in their territory the colony of Salernum， which quickly rose to be a floarisbing town，and the cbief place of the surrounding district（Strab．l．c．； Liv，xixiv． 45 ；Vell．Pat．i．15）．Picentia，however， did not cease to exist：Floras indeed appears to dato ats destruction only from the period of the Sociad War（Flor．iii．18）；but even long after this it is mentioned as a town both by Mela and Pliny，and its name is still found in the Tabula as late as the 4th centory．（Mel．ii．4．§ 9；Plin．iii．5．s．9； Tab．Peut．）The name of $V$ icenza is still borne hy a bamlet on the road from Sulerno to Ebeli，and the stream on which it is situated is still called the $\mathrm{IF}^{\circ}$ centino；but it is proballe that the ancient city was situated ratber more inland．（Romanelli，vol．iii． P．610：Zannoni，Carta del Regno di Napoli．）

The boundaries of the Picentini are clearly marked both by Strabo and Pliny．They occupice the southern slope of the ridge of mountains which sepa－ rates the gulf of Posidnoia from that of Naples，ex－ tendiog from the promutory of Ninerra to the mouth of the Silaras．Ptolemy alone estends their confines across the range in question as far as the mouth of the Sumns，and includes Surrentum among their towns．（Ptol．iii．1．§ 7．）But there is little doubt that this is inaccurate．

The name of Picentini is gencrally confined by gengraphers to the petty people in question，that if Picentes being given to the people of Picenum on the Adriatic．But it is doubtful how far this distinction was observed in ancient times．I＇icentinus is used as an adjective form for＂belonging to P＇icenum＂ huth by Pumpey（ap．Cic．ad Att．viii．12，c．）and Jacitus（11ist．is．63）；while Strabo nses ПukevTüo ot for the people of licenum，and nikevtes for those in Campurial The latter are indeed so seldom men－ tioned that we can liarilly determine what was the general usige in regard to them．
［E．I．B．］
PICEXIINUM，a place in Pannonia，on the lef hank of the Sowns，on the road from Siscia to Sir－ minm．（it．Ant．p．260．）It is possible that some anciont remains now called Kula may mark the site of the ancient Picenti zum．
［L．S．］
PICE＇NLM（ì Пusevtivn，Pol．，Strab．：Fith． Пıкертĩot，Strab．；Пıкдиot，Ptol．；Picentes．Cic， Yarr．，Plin．．\＆e．，but sumetimes also Picentioi and Ificeni），a province or region of Central Italy，ex－ tending along the coavt of the Adriatic from the mouth of the Ac is to that of the Matrinus，and in－ land as far as the central ridge of the Apennines．It Was thas boundeal on the W ．by the Cmbrians and Sabines，on the S．by the Vestini，and on the N．by
the territory occapied by the Galli Senones. which was afterwards incorporated into the province of Umbria. The latter district seems to have been at one time regarded as rather belonging to Picennm. Thus Polybius inclodes the "Gallicas Ager" in Picenum; and Livy even describes the colony of Ariminum as founded " in Ficeno." (Pol. ii. 21; Liv. Epit. xv.) But the boundaries of Piceanm were definitely established, as above stated, in the time of Augustas, according to whose division it constituted the Fifth Region of Italy. (Plin. iii. 13. s. 18; Strab. v. p. 240.) The district thns bounded forms a tract of ahout 80 geographical miles ( 800 stadia, Strab. v. p. 241) in length, with an average breadth of from 30 to 40 miles. The sonthern part of the territory thus himited was inhabited by a tribe called the Praetutii, who appear to bave been to same extent a different people from the Picentes: hence Pliny gives to this district the name of Regio Praetutiana; and Livy more than once notices the Praetutianus Ager, as if it were distinct from the Picenus Ager. (Plin. l. c.; Liv, xxii. 9, xxvii. 43.) The narrow strip between the rivers Vomanns and Matrinus, called the Ager Hadrianns, seerns to have also been regarded as in some degree a separate district (Plio. l. c.; Liv. xxii. 9); but both these tracts were generally comprised by geographers as mere subdivisions of Picenam is the more extensire sense.
Very little is known of the bistory of the Picentes; lnt ancient writers seem to have generally agreed in assigning them a Sahine origin; tradition reported that they were a colony sent out from the parent country in consequence of a vow, or what was called a sacred spring ; and that their name was derived from a Woodpecker (picus), the bird sacred to Mars, which was said to lave guided the emigrants on their march. (Strah, v. p. 240; Plin. iii. 13. s. 18; Fest. v. Picena, p. 212.) Silius Italicns, on the other hand, derives it from the name of Picus, the Italian divinity, whom he represents as the founder of Asculum (Sil. Ital. viii, 439-445); bot this is in substance only another form of the same legend. That writer represents the region as previously possessed by the Pelasgians; no mention of these is found in any other author, but Pkiny speaks of Siculians and Liburnians as having had settlements on this coast, especially in the Praetntian district, where Trueatam was said still to preserve truces of a Lihurnian colony (Plin. l.c.); while the fuundation of Numana and Ancona, further to the N., was ascribed to the Siculi. (Ib.) We have no means of estimating the value of these statements; but it seems not improbabie that in the last instance there was a confusion with the colony of Sicilian Greeks which was established at a much later period at Ancona [Ancona.] This settlement, which was fuanded abont 380 B . C., by a body of Syracusan exiles who had fled from the tyranay of Dionysius (Strab. v. p. 241), was the only Greek colony in this part of Italy; and its foundation is the only fact transmitted to us concerning the history of Picenum previous to the time when it was brouglat into contact with the power of Rome. The 1 licentes appear to have stood aloof from the long protracted contests of the Romans with their Samnite neighoours; but their proximity to the Gauls caused the Romans to court their alliance; and a treaty concluged between the two nations in n. c. 299 seems to have been faithfully observed until after the Senunes had ceased to be formidable. (Liv. x. 10.)

The Picentes reaped the advantages of this lone peace in the prosperity of their country, which became one of the most popalous districts in Italy, 80 that according to Pliny it contained a population of 360,000 citizens at the time of the Roman conquest. (Plin. l. c.) Nevertheless they seem to have offered but bittle resistance to the Roman arms, and were reduced by the consuls Sempronius Sophus and Appins Claudins in a single campaign, B. c. 268. (Flor. i. 19; Liv, Epit. xv; Oros, iv. 4; Eutrop. ii. 16.) The canses which led to the war are onkown; hut the fact that the Picentes and Sallentines were at this time the only two nations of Italy tbat remained nnsubdued is quite sufficient to explain it.

From this time the Picentes lapsed ioto tbe ordinary condition of the subject allies of Rome; and though their territory is repeatedly mentioned as suffering from the ravages of the Second Punic War (Pol. iii. 86; Liv. xxii. 9, xxvii. 43), the name of the people does not again occur in history till the great outbreak of the nations of Itaiy in the Social War, b.c. 90 . In that memorable contest the Picentes bore a prominent part. It was at Asculum, which seems to have been always regarded as their capital, that open hostilities first broke out; the massacte of the proconsul Q. Servilius and his legate Fonteius in that city having, as it were, given the signal of the general insurrection. (Appian, B. C. i. 38 ; Liv, Epit. 1xxii; Vell. Pat. ii. 15 ; Diod. xxxvii. 2.) The first attempt of Cn. Pompeins Strabo to reduce Asculum was repulsed with loss; and it was with difficulty that that general could maintain his footing in Picenum while the other Roman armies were occopied in hostilities with the Marsi, Peligni, and other nations bearer Rome. It was not till the second year of the war that, having obtained a decisive victory over the allies, he was enabled to resame the offensive. Eren then the Picentinc general Judacilius maintained a long struggle against Pompeius, which was at length terminated by the surrender of Asculum, and this seems to have been followed hy the submission of the rest of the Picentes, B. c. 89. (Appiun, B. C. i. 47,48 ; Liv. Fipit. lxxiv., Ixxvi; Oros. v. 18; Flor. iii. 18.) There can he no doubt that they were at this time admitted, like the rest of the Italian allies, to the Roman framchise.

Picenum was occapied almost without opposition hy Caesar at the commencement of the Civil War, в. c. 49 (Caes. B. C. i. 11-15), the inhabitants having universally declared in bis favour, and thus compelled the officers of Pompey to withdraw from Auxinum and Asculum, whieb they had necupied with strong garrisons. In the civil war betseen Vitellius and Vespasian A. D. 69, it was occapied in like manner without resistance by the forces of the latter. (Tac. Hist, iii. 42.) Picenum appears to have contioued to be a flourishing province of Italy throughout the period of the Roman Empire; and though Pliny speaks of it as having mach fallen off in population compared to earlier times ("quondam pberrimae multitadinis, ${ }^{4}$ Plin. iii. 13. s. 18), it still contained a large number of towns, and many of the:o preserved sheir consideration down to a late periol. It is probable that its prosimity to Ravenna contributed to its prosperity daring the latter ages of the Empire, after that city lad become the habitoal residence of the emperors of the West. Under Augustus, Picemum becanne the Fifth Region of 1taly (Plin. l. c.), but at a later period we find it combined for administrative parposes with the district
ealled Flmunin, ard the two together constitufed a province whelh comprised all the strip of Umbria aloug the const of the Adriatic, as well as the territory of the Salines, Vestini, Peligni, and Marsi. Hence we find the Liber colloniarnm including the whole of this extensive district under the name of I'icenum, and enumerating not only Alba and Nussia, lut even Nomentam, Fidenac, and Tibur, among the "civitates 1'iceni." (Liib. Colon. p. 252-259.) But this arrangeonent did not last long. Vlammia and Valeria were again separated from J'icenum, and that province was suldivided into two: the one called "l'icenum suburbicarium," or sumply Picenum, which was the original district of that name, correspouding to the Yifth Region of Aurnstus: while the name of "Picenum Annonarium" was given to the tract from the Aesis to the labicon, which laad been originally known as the " Gallicus Ager," and in the days of Augustus was comprised under the name of Itulrid. (Lib. Colon. pp. 225-227; Mummsen, Die Lib. Col. pp. 208-214: Notit. Nign. ii. pp. 64, 6.5; Bückius, ad Not. pp. 432, 443 ; P. Diac. ii. 19.)

In the wars between the Goths and the generals of Jnstimian, Picenum repeatedly became the immediate theatre of hostilities. Auximum in particular, Whech was at this time the chief city or capital of the province, was regarded as one of the most im1ortant fortresses in Italy, and withstood for a lung time the arms of Belisarius. (Promp. B. G. ii. 10, 23-27.) After the expulsion of the Gioths, I'icenum became one of the provinces of the exarchate of Risenna, and as such continued subject to the Greek eaperors until the final downfal of the exarchs. It was at this perind that arose the geographical designation of the l'entapolis, for a prowince which comprised the creater part of Picenum, together with the maritime district of Uinbria as far as Ariminam. The province of this name was one of those bestuwed on the see of Rome by king P'epin after the defeat of the Lombard kine Astolphus (1.D. 754), and has ever since continned to form part of the States of the Church.

I'icenum is a distriet of great fertility and beanty. Esiending in a broad band of nearly uniform wilth from the central rauges of the Apennines, which form its houndary on the W., and which here attain their ervatest elevation in the Monte Cormo and Monti challa sibilla, it slopes gramailly from thence to the aen; the greater part of this spacc being occapied liy ereat hills, the underfalls of the more lofty Apenthas:, which in their more clevated regions are cluthed with extensive forests, while the lower slopes produce amondance of fruit-trees and olives, as well as good wane and com. (Strah, v. p. 240 ; Liv. xxii. 9.) fi ha Horace ami Juvenal extol the excellence of its affles, and Pliny tells us its olives were among the choicest in Italy. (IIor. Sut. ii. 3. 272, 4. 70; Jur. xi. 72; Mlin. xv. 3. s. 4.) Tlu whole district is firrowed by manerous stacams, which, descending with grat rapiothy from the lofty 1 anges of the Apemines, part:ake much of a torrent-like character, but nevertheless merve to irrigate the whole country, which is thus rembered une of the pleasmentent in Italy. These streaus pursuonearly jarallel courses, the direct distance from their sources to the sea in no case much excereding 40 miles. They are, proceeding from S. to N., as follows: (1) The Maraives, now (atlled Le Piombre, a small stremm which formed the wuthern limit of Jieenum, separating it from the + rritory of the Ve tini ; (2) the Vomanes, still
ealled the lowrmo, which sepratated the district of Adria from that of the Practutit ; (3) the Batines, now called the Tordino, but sometimes also the Trontino, which flows by Teramo (luteramus); (4) the Tinifentes (Tronto), the most considerable of all these streams, which flows under the walls of Ascoli (Asculam); (5) the Tinxs, still called the Tenna; (6) the Fluson, now the Chienti; (7) the l'otentia, still called the Iotenza ; (8) the Misio or Misius, now knuwn as the Musone. These last names are known only from the Tabmia : on the other hand Pliny mentions a stream called Aınula, to which are added in some MSS. the names of Suinus and Helvinus. All these are placed apparently between the river Truentus and the town of Cupra Maritima ; but besides the uncertainty of the reading, the whole description of this region in I'liny is so confused that it is very ansafe to rely upon his order of enumeration. The Albula cannot be identified with any certainty, but may perhaps be the stream now called the Salinello, and the other two names are probably mere corruptions. 9. The Avsis (Esino), a much more considerable stream, flowing into the sea between Ancona and Sena Gallica, formed the boundary which separated Picenum from Umbria.

The towns of Picenum are numerous, and, from the accounts of the populousness of the country in early times, were probably many of them once cansiderable, but few have any historical celebrity. Those on the sea-coast (proceeding as befure from S. to N.) were: (1) Mathinum, at the mouth of the river of the same name, serving as the port of Adria (Strab. v. p. 241); (2) Castreas Novem, at the mouth of the Batinus, near Giulia Nwova; (3) Castrem Truentinum or Theentum, at the mouth of the river of the same name ; (4) Curka MariTima, at Le Grotte a Mare, about 3 miles N. of S. Benerletto: (5) Casthum Firmanuar, now Porto di Fermo, at the mouth of the little river Leta; (6) Pomestis (Sta Maria a Potenza), at the mouth of the river of the sams name; (7) Numana, still called Cmana, at the southern extremity of the momutain headland called Nontc Comero; and (8) Ascosis, at the northem end of the same promentory. This last was by far the most important of the maritime towns of Picenum, and the only one that possessed a purt worthy of the mume: with this exception all the most important cities of the region were situated inland, on hills of considerable clevntima, and thus enjoyed the advantage of strong pro sitions as fortresses. The most important of these were Arximin (Osimo), about 12 miles S. of Ancona; Cinoules (Cingoli), in a very lofty situration, between the vallcys of the Aesis and Potentia ; Finacm (Fermo), on a lill about 6 miles from the sen ; Asculcm (Ascoli), the ancient capital of licemum, in at very strong situation on the river Truenthe about 22 miles from its month; Interasman (Teromo), the chiof eity of the Practntii ; asd ADRLA (Atri), almost elose to the southern frontier of Jicenum. The minor towns in the interior were Berbeira, which may perhaps be placed at Civitella di Tromto, not far from Ascole; Curles Montasa, an called to distinguish it from the mantime city of the same name, supposed to lave occupied the site of Ripatransone; Clutixs at S. Elpidio a More, abunt 4 miles from the sea, and a little to the N. of Firmo; NoviNa, prolably at A/onte di Nowe, near. Ifontulto; Fisberia (Fallerone), in the upper valley of the Tinna; Liuns S.alvia (Crbisaglia) and Tonexth-
nvar (Tolentino), on opposite sides of the valley of the Flusor (Chienti) ; Septempedi (S. Scverino), in the upper valley of the Potenza; Thes.a, on the left bank of the same stream, near the modern town of Treja; and Ricina, on its right hank, not far from Macerata. The site of Pausulae (Pansulani, I'lin.) is fixed by Holstenius at Monte dell' Otmo, and that of Pollestia (Pollentini, Id.) at Monte Melone, all in the same neighbourhood; but these last identifications are merely conjectural.

Picenum was traversed by a line of higbroad, wbich followed the line of the coast from Ancona to Aternum, where it united with the Via Valeria; while its more direct communications with Rome were secured by the Via Salaria, wbich crossed the Apennines direct from Interocrea by Falacrinum to Asculum, and thence to the Adriatic. Further to the north, also, a branch of the Via Flaminia, quitting the main line of that great road at Nuceria, crossed the central ridge of the Apennines by Prolaqueum to Septempeda in the valley of the Potentia, and thence proceeded by Treia and Anximum to Ancona. Besides these more importaut lines of road, the Tabuia notices two cross lines : the one leading from Auximam by Ricina and Urbs Salvia to Asculum ; the other from Asculum to Firmum, and its port Castellum Firmanum. The extremely hilly and broken cbaracter of the country renders the determination of distances along these lines of road very uncertain; aod the whole district is given in the Tubula in so confused a manner that little reliance can be placed on its authority.
[E. H. B.]
plCtaVi. [Pictones.]
PICT1. The names of the Picti and Scoti appear only in late writers, by whom they are spoken of as two allied people. The Picts seem to have been identical with the ancient Caledonians ("Caldonumaliorumque Pictorum, silvae et paludes," Eumen. Pan. vi. 7), and dwelt N. of the Firth of Forth (Beda, H. Ecel. i. 1). Ammianns Marcellinus represents the Picti as divided, in the time of the emperor Constans, into two tribes, the Dicalidonae and Vecturiones, and as committing fearful ravages in conjunction with the Attacotti and Scotti (sxvii. 8. § 4.) Their ethmological relations have been already discussed [Britannicae Insulae, Vol. I. p. 438]. The name of Picti, or painted, is commonly supposed to be derived from their custom of painting their bodies, aod would thus be only a translation of the British word Brith, signifyiog anything painted, and which, according to Camden (Gen.Descr. p. xxxvi.), is the root of the name Briton. Such an etymology favours the notion that the Picts were an inoigenous race; but on this point nothing positive can be affirmed. (Comp. Amm, Marc. ax. 1, xxri. 4 : Beda, H. Eecl. iii. 4, v. 21.) [T.H.D.]
Pl'CTONES (Hírтoves), and, at a later period, Pictavi, were a Gallic nation, sonth of the Leire and on the coast of the Atlantic. Ptolemy (ii. 7. § 6) places them in Celtogalatia Aquitania, and mentions two of their towns, Limonum or Lemonum (Poitiers) and Ratiatum. "They occupy," he says, "the most northern parts of Aquitania, those on the river (Liger), and on the sea." Strabo (iv. pp. 190, 191) makes the Loire the boundary between the Nammetes and the Pictones. South of the Pictavi he places the Santones, who extend to the Garonne.
fhe I'ietones are mentioned by Caesar. He got ships from them for his war against the Veneti (B. G. iii. 11). The Pictones joined Vercingetorix in B. c. 52, when he was raising all Gailia ngainst

Caesar. In n.c. 51 C. Caninias, a legatus of Carsar, marched into the country of the Pictones to relievo Lenronmm, which was besicged by Dunnacus (B. G. viii. 26). [Lemonem.]

Lucan (i. 436) says that the Pictones were "immunes," or paid no taxes to the Romuns:-
"Pictones immunes subigunt sua rura."
His authority is not worth much; and besiiles that, this verse and the four verses which follow are probably spurious. (Nutes in Ondendorp's edition of Lucan.)

The territory of the Pictones was bounded on the east by the Turones and Bituriges Cubi. It corresponded to the diocese of Poitiers. [G. L.]

PICTO'NIUA PROMONTO'RIUM. as it is now generally written, but in Ptolemy (ii. 7. § 1) Jectonium (Пךкт $\dot{\nu}$ à áкроע), is placed by him on the coast of Gallia Aquitania, between the mouth of the river which he names Canentelus [Carantont s] and the port Secor or Sicor. It is impossible to determine what point of land is Pectonium. D Anville: supposes it to be L'Aiguillon near the month of the Secre Niortaise; and Gossellin takes it to be Lat Pointe de Boisvinet.
[G. L.]
PIDA (Miōa), a town in Pontus Galaticus, on the road leading from Amasia to Neocnesareia. (Ptol. r. 6. §9; Tab. Peut., where it is called Pidse.)
[L.S.]
PIENGJ'TAE ( Пieरुitai, Ptol. iii. 5. § 20), a people in European Sarmatia, supposed by Schafarik to be the inhabitnnts of the river Piena, which falls into the Pripjut near Pinsk (Slawische Alterthümer, vol. i. p. 207.)

PI'ERA. [Cumbium.]
PI'ERES (Tícpes), a Thracian people, occapying the narrow strip of plain land, or low hill, between the mouths of the Peneius and the Haliacmon, at the foot of the great woody steeps of Olympns. (Thuc. ii. 99; Strab. vii. p. 331, Fr. 22, is. p. 410 ; Liv. xliv. 9.) This district, which, ander the name of Pieria or Pieris (Mifpía, Miepis), is mentioned in the Honeric poems (Il. xiv. 225), was, according to legead, the birtliphace of the Muses (Hesiod. Theog. 53) and of Orpheus, the father of song. (Apoll. Argon. i. 23.) When this wor-bip was introduced into Bocotia, the names of the mountains, grots, and springs with which this poetin religion was connected, were transferred from the N. to the S. Afterwards the I'ieres were expelled front their original seats, and driven to the N. beycnd the Strymon and Muant Pangaeus, where they formed a new settlement. (Herod, vii. 112; Thuc. l. c.) The boundaries which historians and geographers give to this province vary. In the systematic geography of Ptolemy (iii. 13. § 15) the name is given to tha extent of coast between the months of the ludias and the Haliacmon. Pieria was bounded on the W. from the contiguous district of the Thessalian Perrhaebia by the great chain of Olympus. An offsho t from Olympus advances along the Pierian plain, in a NW. direction, as far as the ravine of the Haliacmon, where the mountains are separated by that chasm in the great eastern ridge of Northern Greece from the portion of it anciently called Bermins. The bighest summit of the Pierian range called Pifrus Mlows (Plin. iv. 15; comp. Pausan. ix. 29. § 3; x. 13. 5 ) rises about 8 miles to the N . of $\mathrm{I} / \mathrm{la}$ kholivadho, and is a conspicuous object in all the country to the E. It would seem that there was a city called Piema (Пiєpía: Eith. Пı $\iota \rho t u ́ t \eta s, ~ П i \epsilon-$

S 53
pítクs, Thepeés, Steph. B.; Suil. s. v. Kpitcw), which may be represented by i "tumulus," uvergrown with trees opon the extrenity of the ridge of A udreotissn, where it ends in a point between Dium and Pydna, the other two chief cities of Pieria. Beyoml Pylna was a considerable frrest, called "Pieria Silva" (Liv. xhy. 43), which may have furnished ther Pierian pitch, which had such a high reputation. (Herod. iv. 195 ; Plin. xiv. 25.) The road from Pella to Larissa in Thessaly passed through 1'ieria [Macelosia, Vol. II. p. 237, a.], and was prolably the route which the consul Q. Marcius Philippus phrsued in the third and fourth years of the Persic War. (Liv. xliv. 1-10; Leake, Northern Greece. vol. iii. pp. 177. 210, 337, 413 , 446.) [E. B. J.]

PIETRIA (Пıерía). 1. A district in Macedonia, [Piemes.]
2. A district in Syria; a name given by the Macedonians to the northern coast of Syria, on the right baak of the Oruntes. The principal mountain in this distriet, and which was a southern branch of the Amanus, was also called Pieria. (Strab. xvi. 1p, 749, 751 ; Ptol. v. 15. § 8.) The chief town was Seleuceia, which is frequently distinguished from oher towns of the same name by the addition of iv $\Pi_{\epsilon \in p l a, ~ e s p e c i a l l y ~ o n ~ c o i n s . ~(E ̌ c k h e l, ~ v o l . ~ i i i . ~ p . ~}^{\text {p }}$ 324: Cíc. ad Att, xi. 20.)

PIERIA. [Cierium.]
PIERIUN. [Cienicm.]
PlGU'NTIA. [Dalmath.]
PILOTL's (חl $\lambda \omega \rho o s$, Herod. vii. 122 ; Steph. B.), a town of Sithonia in Micedonia, upon the Singitic gulf, between Sane and Cape Amıpelus, which probably occapied Vureart, or one of the larhours abljacent to it on the N. (Leake, Northern Greece, vol. iii. p. 153.)
[E. B.J.]
PIMOLISA ( $\Pi\langle\mu \dot{\prime} \lambda \iota \sigma a$ ), a fort in the western part of Pontus, on the river Ilalys. (Steph. B. s.v.) In Strabu's time (xii. p. 562, where it is called P'imolison) the fortress was destruyed, but the district on both sides of the river was still called I'imulisene.
[L.S.]
PIMPLEIA (\#íumieia, Strab. ix. p. 410; ApolInn. i, 23; Lycophr. 273), a place in Pieria, where OTheas was sail to have been born, and from which the . Mrses obtained their efithet of $\Pi \mu \pi \lambda \eta i \delta \epsilon s$ and
 Fragm. 46: "Pimplea dulcis," Horat. Carm. i. 26.9 ; sitat. Sillo. i. 4. 26.) Leake (Northern Cimecr, vol, iii. p. 42.2) identified it with the elerated -utuation of Litikhoro and its commanding pros1wet.
[E. B. J.]
PIMPRANA (пілжраиа, Arrian, Anub. v. 22), : place which appars to have been the capital of the tribe of Adraistae, a nation mentioned by Arrian as existing abont a day's journey from the Hydraotes (Irürati). The name has an Indian form and sumed, but has nut, so far as we know, been identified with :my existing place.
[V.]
1'INAliA (rà Mivapa: Eth. חuvapés). 1. A large city of Lycia, at the fout of Mount Cragus, and not far fron, the western bank of the river Xanthus, where the Lycian hero I'mdarus was worshipped. (Strnb, xiv. 6655; Steph. B.s.v.; Arrian, Anub. i. 24; Plm. v. 24; P'ol. v. 3.§5; Hierocl. p. 684.) This city, thoush it is nut often mentioned ly ancient writers, appears, from its vast and beantutul roins, to have been, as Strabo asserts, one of the largest towns of the country. Aceording to the Lyciun history of Menecrates, quoted by Stephantis Byz. (s. r. 'Aprúps'クбos), the town was a colony of

Xinihus, and originally bore the name of Artymnesus, ufterwards changed into Jinara, which, in the Lycian language, signified a round hill, the town being situated on such an eminence. Its ruins were discovered by Sir Charles Fellows, near the modern village of Minara. "From annidst the ancient city," be says ( Lycia, p. 139), "rises a singular round rocky cliff (the pinara of the Lycians), literally specked all over with tombs." Bencath this cliff lie the rains of the extensive and splendid city. The theatre is in a very perfect state; all the seats are remaining, with the slanting sides towards the proscenium, as well as several of its doorways. The walls and several of the buildings are of the Cyclopian style, with massive gateways, formed of three immense stones. The tombs are innumerable, and the inscriptions are in the Lycian characters, but Greek also occurs often on the same tombs. Same of these rock-tombs are adorned with fine and rich sculptures. (See the plate in Fellows facing p. 141.)
2. A town of Cilicia (Plin. v. 22), perhaps the same as the orie mentioned by Prolemy (v. 15. §ु 12) as situated in Pieria, a district of Syria; though it should be observed that Pliny (v. 19) mentions the L'inaritae as a people in Coelesyria. [L. S.]

PINARUS. [lssts.]
PINDASUS, a mountain in the south of Mysia, a branch of Mount Tembus, stretcbing towards the Sinus Elaens, and containing the sources of the river Cetius. (Plin. v. 33.)
[L. S.]
PINDENISSUS (Eth. Pindenissitae), a town of the Eleuthero-Cilices, situated npon a commanding height of Mt. Amanus, which was taken by Cicern, when be was governor of Cilicin, after a siege of fifty-seven days. (Cic. ad Att. v. 20, ad Fam. ii. 10, xv. 4)

PINLLS (חívóos. Herod. i. 56, vii. 129; Strab. ix. pp. 428,430 , et alii), a long and lofty range of mountains in Northern Greece, rumning from north to sonth about midway between the Ionian and Aegnean seas, and forming the back-bone of the country, like the Apennines of the Italian peninsula. It is in fact a continuation of the same range which issues from the Bnlkan Mountums, and it takes the name of Pindus where it first intersects the northern houndary of Hellas Proper at the 40th degree of latitude. Pindus forns the boandary Letween Thessaly and Epeiras. In its northern part it is called Laemon or Lacmus, nod here the five principal rivers of Northern Greece rise,the Haliacmon, Peneius, Achelons, Arachthus, and Aous. [Lacmos.] To that part of the range S. of Lacmon the name of Cercetium was given.
 úpos, Ptul, iii. 13. § 19 ; Liv, xxxii. 14 ; Plin. iv. 8. s. 15.) Mount Cercetium is prubably the main ridge of Khassiá ; and one of the principal passes from Epeirus into Thessaly lay across this mountaik. (Leake, Northern Greece, vol. iv. pp. 528, 529 ) Still further south, at the 39 th degree of latitude, a point in the rauge of Pindus is called Tymphrestus (Toرфррпотós, Strab. ix. p. 433), now Telolkh; and from it branch off the two chains of Othrys and Oeta, the former rumning nearly due east, sind the latter more towards the south-east. A little S. of Tymphrestus the range of Pindus divides into two branches, and no longer bears the same name. [See Vol. I. p. 1012.]

PINDUES (חivoos), one of the towns of the tetrapolis of Doris, situated upon a river of the same
name, which flows into the Cephissns near Lilaen. [Dosis.] It was also called Acyphas ('Akúфas), as we learn from Strabo and from Theopompus (ap. Steph. B. s.v. 'Aкúqas). In one passage strabosays that Pindus lay above Erineus, and in another he places it in the district of Oetaca ; it is, therefore, probable that the town stood in the upper part of the ralley, near the sources of the river in the mountain. (Strab. ix. pp. 427, 434; Scymn. Ch. 591 ; Schol. ad Pind. Pyth. i. 121 ; Miel. ii. 3 ; Plin. iv. 7. s. 13 ; Leake, Northern Greece, vol. ii. p. 92.)

PlNETUS (Hivntos, Ptol. ii. 6. § 39), a town of Lusitania, on the road from Bracara to Asturica (Itin. Ant. p. 422). Ptolemy places it between the Durins and the Minius, and consequently in the tcritory of the Gallaeei; but, secording to the Itinerary, it must have lain S. of the former river. Viariously identified with Pinhel, Pinheira, and Mirandella.
[T. H. D.]
PINGUS, a river of Upper Moesia, in the territory of the Dardani. (Pliu. iii. 26. s. 29.) It was protably an affinent of the Margus, and is commonly identified with tbe Ypek.
[T. H. D.]
PINNA (Hivva: Eth. Pinneasis: Civita di Penne), a city of the Vestini, situated on the eastern slope of the Apennines, about 15 miles from the sea. It is noticed both by Pliny and Ptolemy, as well as by Silius Italicos, among the cities of the Vestini, and seems to have been a municipal town of importance; but the ooly mention of its name in listory is during the Social War, when its inhabitants distinguished themselves by their fidelity to Rome, and withstood all the efforts of the Italian allies to shake their constancy. (Diod, xxxvii. Exc. Vales. p. 612, Exc. Vat. p. 120.) The circumstances are evidently misrepresented by Valerius Maximus (v, 4. § 7). Numerous inscriptions attest its local consideration; and it appears to have received a eolony, or at least an accession of citizens, under Angustas. (Plin. iii. 12. s. 17; Ptol, iii. 1. §59; Lib. Colon. pp. 227, 257 ; Sil. Ital. viii. 517 ; Inser. ap. Romanelli, vol. iii. pp. 252, 253; Mommsen, Inser. R.N. p. 327.) Vitruvius also notices it as baving some mineral waters in its neighbourhood, which resembled those at Cutiliae (viii. 3. § 5). It early became an episcopal see, a dignity which it still retains; and the modern city undoubtedly occupies the same site with the ancieut one. Sume remains of ancient buildings are extant, but they are of little impurtance. The name of Pinna is fonnd in the Tauula, where it is marked as a place of importance; but the distances annexed are confused and erroneons.
[E. H. B.]
PI'NTIA (Hivria, Ptol. ii. 6. §50). 1. A town of the Vaccaei in Hispania Tarraeonensis, and according to the Itinerary ( $p, 443$ ), on the road from Asturica to Caesaraugosta. It is usually identificed with Valladolid (Mariana, x. 7; Nonius, Hisp. c. 56; Ukert, val. ii. pt. 1. p. 432).
2. A town of the Callaĩei Lucenses in Hispania Tarraconensis, between Libunca and Caronium. (I'tol, ii. 6. § 23.)
[T. H. D.]
Plitulutia ins. [Fomtunatae lxsulae.]
PION (Hi $\omega \nu$ ), a hill in the neighbonhood of Epliesus, at the foot of which that city was sitnated. (Paus, vii. $5 . \S 5$; Plin. v. 31 ; Strab. xiv. p. 633 , where it is called Prion.)
[L.S.]
PIO'NIA (Htovia: Eth. Pionita), a town in the interior of Mysia, on the river Satnioeis, to the northwent of Autindrus, and to the north-east of Gar-
gara. (Strab. xiii. p. 610.) Under the Roman dominion it Lelonged to the jurisdiction of Adranyttium (Plin. v. 32), and in the ecelesiastical nutices it appears as a bishopric of the Hellespontine province. (Hierocl. p. 663; Sestini, p. 75.) [L. S.]
PlRAEEUS or PEIRAEEUS. [ATHExae, p. 306.]

PIRAEUM or PEIRAEUH, in Corinthia [. 685, b.].

PIRAEUS or PEIRAEUS, in Cotinthia [ 1 . $685, \mathrm{a}$.].

PIRATHON (Фаpa月́óv, Joseph., LXX.), a town io the land of Epllataim, and in the monnt of the Amalekites, to which Aldion, one of the judges of Israel, belonged, and where he was lunried. (Jutlyes, xii. 13, 15.) It was repaired and fortified by liac-clides, io his campaign against the Jews (1 Macc. ix. 50; Joseph, Ant, xiii, 1. § 3.)

PIRE'NE or PEIRE'NE FONS. [Comantms, p. 680, b. $]$

PlRESIAE. [Astericis.]
PIRUS or PEIRUS. [Achiala, p. 13, b.]
PIRUSTAE ( Пıpoū $\sigma \tau a i$, Ptol. ii. 17. § s ; Пletpoūrral, Strab. vii. p. 314), a people of Illsria, whom the Romans declared free of taxes, because they assisted the latter in subduing Gentius. (Liv, slv. 26.) Strabo ( $l$. c ) calls them a Pannonian people. Respecting the position of the Pirustae on the northern frontier of Dassaretia, see Vol. I. p. 755, b.

PISA ( $\Pi i \sigma a:$ Eth. Пぃ $\alpha \dot{\tau} \eta s$, Hıбatev́s), a town in Peloponnesus, was in the most ancient times the capital of an indepencient district, called Pisatis ( $\hat{\eta}$ II $\sigma a \bar{r} t s$ ), which subsequently formed part of the territory of Elis. It was celebrated in inythology as the residence of Oenomans and Pelops, and was the bead of a confederacy of eight states, of which, hesides Pisa, the following names are recorded:Salmone, Heracleia, Harpinna, Cycesium, and Dyspontium. (Strab, viii. p. 356, seq.) Pisa had originally the presidency of the Olympic festival, but was deprived of this privilege by the Eleiaos. The Pisatans, however, made many attempts to recover it; and the history of their wars with the Eleians, which were at last terminated by the destruetion of Pisa io b. c. $57^{2}$, is narrated elsewhere. [Elis, Vol. 1. p. 818, b.] Although Pisa censed to exist as a city from this time, the Pisatans, in conjunction with the Arcadians, celebrated the 104th Olympic festival, i. c. 364 . [See Vol. I. p. 819, b.] Pisa was said to have been founded by an eponymons hero. Pisus, the son of Perieres, and graudson of Acolns (Pans. vi. 22. § 2) ; but others derived its nanue from a fountain Pisa. (Strab. viii. p. 356; Eustath. ad Diunys, Per. 409.) Madern writers connect its name with Mioos, a low marshy ground, or with Hioca, the name of the black bir or pinetree. So completely was Pisa destroyed by the Eleians, that the fact of its having existed was a disputed point io the time of Stratro ( $l, c$. .); and Pansanias found its site converted into a vineyard (vi. 22. § 1). Its situation, however, was perfectly well known to Pindar and Herudotus. Pindar frequently identifies it with Olympia (e. g. Ol. ii. 3); and Herodotus refers to Pisa and Olympia as the same point in compating the distance from the altar of the twelve gods at Athens (ii. 7). Pisa appears from Pansanias to bave occopied a position between Harpinna and Olympia, which were only 20 stadia asunder (Luciau, de Mort. Peregr. 35); and the Scholiast on l'indar (Ol. xi. 51) stys that Pisa was only 6 stadia from Olympia. It must therelore be
placei a little east of Olymian, and its actupolis probably occupied a leight on the western side of the rivulet of Movika, near its junction with the Alpheius. Strabo (l.c.) says that it lay between the mountains Olympas and Ossa, which can only have been heiglits on different sides of the river. Sue its position marked in the map in Vol. 11. p. 477. (L.vake, Morea, vol. ii. p. 211. Peloponnesiacn, p. 6. Mnre, Tour in Greece, vol. ii. p. 283; Curtius, Pelononnesos, vol. ii. p. 51.)

P1sAL ( Пi $\sigma \alpha$, Strab. Pol.; Пí $\sigma \sigma a l$, Ptol., Пí $\sigma \sigma a$. I.ycophr.: Etth. Pisanus: Pisa), an important city of Etruria, situated on the N. bank of the river Arnus, ia few miles from its mouth. All authors agree in representing it as a very ancient city, but the accounts of its early history are very confused and uncertain. The identity of its name with that of the city of Elis maturally led to the supposition that the one was derived from the other; and hence the foundation of the Italian Pisae was ascribed by some authors to Pe'ops himself (Plin. iii. 5. s. 8), while others assigned it to a holly of settlers from the Peloponnesian Pisa who had accompaoied Nestor to Troy, and on their return wandered to this part of Italy. (Strab. v. p. 222; Serv. at Aen. x. 179.) Epwius, the reputed founder of Metapontum. was, according to some writers, that of I'isale also. (Serv. l. c.) The Elean, or Alphem, oricin of the city is generally adopted by the Roman poets. (Virg. Aen. x. 179: Claullian, B. (illd. 483 ; Ruti). Itin. i. 565.) Cato, however, followed a different tradition, and represented the city is founded by the Etruscans under Tarchon, though the site was previously possessed by a people called the Teutanes, who spuke a Crrek dialect. (Cato, ap. Serv. l.c.) Virgil also calls it distinctly an Etrasean city, though he derives its more remote oriyin from Elis; and the tradition reported by Cato seems to prove at least that it was one of the cities of which the Etruscans chamed to be the fuanders, and which must tberetore bave been at one period a genuine Etrnscan city. On the other hand, Dionysius mentions it ating the cities founded or occopied by the Pelasgi in conjunction with the Abortgines (Dionys, i. 20); and there seems to be sume reason to regard it as one of the early Pelasgic settlements on the coast of Etruria, which fell at a later period under the power of the Etruscans.

We know almost nothing of Pisae ns an Etruscan vity, nor are there any remains of this period of its lisory. But strabo still found vestiges of its past -reatness, and the tradition of its foundation by Tarchon seems to point to it as one of the principal cities of Elruria. Its inhabitants were trained to aras by frequent contests with their neighbours the Ligurians, while they appear to have been one of The principal maritime powers among the Etruseans, and, like mnst of their countrymen, combined the parsuits of commerce and piracy. (Strab. v. p. 223.) Wr have no arcount of the period at which it became a depundency of Rome; lut the first historical mention of its name is in B. C. $2 \cdot 25$, when the consul C. Atilius landed there with two legions from Sirdimia, with which he shortly after attacked and defeated the Gaulish army near Telamon. (Pol ji. 27.) It is clear therefire that Pisae was at this time already in alliance with Rome, and probably on the same footing as the other dependent allies of the republic. Its port seems to bave been much frequented, nod became a favourite point of departare for the Laman fleets and armies whoee destination
was Gaul, Spain, or Liguria. Thus it was from thence that the consul P. Scipio sailed to Massilia at the outbreak of the Second Punic War (n. c. 218) and thitber also that he returned on finding that Hannibal had already crossed the A!ps. (Pol. iii. 43,$56 ;$ Liv. xxi. 39.) The long-continned wars of the Romans with the Ligurians added greatly to the importance of I'isae, which became the frontier town of the Roman power, and the customary beadquarters of the generals appointed to carry on the war. (Liv. xxxiji. 43. xxxy. 22, x1. 1, \&c.) It was not, bowever, exempt from the evil consequencer incident to such a position. lu r. c. 193 it was suddenly attacked and besieged by an army of 40,000 Ligurians, and with difficulty rescued liy the arrival of the consul Minucius (Liv, xxxv. 3); and on several other occasions the Ligurians laid waste its territory. Hence in B. c. I80 the Pisans themselves invited the Romans to establish a colooy in their territory, which was accordingly carried out, the colonists obtaining Latin rights. (Liv, xl. 43.) From this time we bear but little of Pisae; its colonial condition became merged, like that of the other "colonine Latinae," in that of a municipiun by virtue of the Lex Julia (Fest. v. Mrunicipiam): bit it seems to have received a fresh colony under Augustus, as we find it bearicg the colonial title in a celebrated inscription which records the funeral honours paid by the magistrates and senate of Pisae to the deceased grandchildren of Augustus, C. and L. Caesar. (Orell. Inser. 642, 643.) It is here termed "Colonia Obsequens Julin Pisana:" Pliny also gives it the title of a colony (Plin. iii. 5. s. 8), and there seems no doubt that it was at this period one of the most flourisbing towns of Etruria. Strabo speaks of it as carrying on a considerable trace in timber and marble from the neighbouring mountains, which were sent to Rome to be employed there as bnilding materials. Its territory was also very fertile, and produced the fine kind of wheat callewd siligo, as well as excellent wine. (Strab. v. p. 223; Plin. siv. 3. s. 4, xriii. 9. s. 20.) We have no account of the fortunes of Pisae during the declining period of the Roman empire, but during the Gothic wars of Narses it is still mentioned as a place of importance (Agath. B. G. i. 11), and in the middle ages rose rapidly to be one of the most flourishing commercial cities of Italy.

There is no douht that the nncient city stood on the same site with the modern Pisa, but natural rauses have produced suchs great changes in the locality, that it would be difficult to recognise the site as described by Strabo, were not the identity of the moxiern and ancient cities fully eatallished. That author (as well as Rutilius and other writers) describes the ancient city as situated at the confluence of the rivers Arous and Auser (Serchio), and distant only 20 stadia ( $2 \frac{1}{2}$ miles) from the ses. (Strab. v. p. 222; Plin. iii. 8. s. 14: Rutil. Itin. i. 565-570.) At the present day it is more than 6 miles from the sea, while the Serchio does nut flow into the Arno at all, but has a sepmrate channel to the sca, the two rivers being separated by a tract of 5 or 6 miles in width, formed partly by the accumulation of nlluvial soil from the rivers, partly by the sand heaped up by the sea. There are no reInains of the Etruscan city visible; it is probable that all such, if they still exist, are buried to a censiderable depth by the alluvial soil. The only vestiges of Koman antiquity which remain are "some mean traces of baths, and two marble colutans with
composite capitals, prubably belonging to the vestibule of a temple of the age of the Antonines, now embedded in the wall of the ruined church of S . Felice." (Dennis, Etruric, vul. ii. p. 89.) But uumerous sarcoplagi of Roman date, some of them of very superior workmanship, and some fragments of statues are preserved in the Campo Santo, as well as numerous inseriptions, of which the most interesting are those already altuded to , recording the honours paid by the colony to the deceased grandsons of Augustus. These have been published with in learned and elaborate commentary by Cardinal Nuris (Cenotaphia Pisana, fol. Venet. 1681); as well as by Gori (Inscript. Etruriae, vol. ii. p. 10, \&c.), and more recently by Havbold (Monumenta Legalia, p. 179) and Orelli (L.c.).

The Maritime Itinerary mentions the Portus Pisuvus as distinct from Pisae itself, from which it was no less than 9 miles distant. (Itin. Marit. p. 501.) Rutilins also describes the port of Pisae, which was in his day still much frequented and the seene of an active commerce, as at some distance from the city itself. (Iatil. Itin. i. 531-540, 558 -565, ii. 12.) Bnt the exact site has been a subject of mnch controversy. Cloverins and other writers placed it at the month of the Arno, while Mannert and Mr. Dennis would transfer it to the now celebrated port of Leghorn or Livorno. But this latter port is distant 10 miles from the mouth of the Arno, and 14 from Pisa, which does not agree with the distance given in the Maritime Itinerary; while the mouth of the Arno is too near Pisa, and it is unlikely that the entrance of the river could ever have been available as a harbour. Rotilius also describes the port (without any mention of the river) as formed only by a natural bank of sea-weed, which afforded shelter to the vessels that rode at anchor within it. Much the most probable view is that advocated by a local writer (Targioni Tozzetti), that the ancient Portus Pisanus was situated at a point between the month of the Arno and Leghorn, but considerably nearer the latter city, near an old church of St. Stefano. The distance of this spot agrees with that of the Itinerary, and it is certain from mediaeval docnments that the Porto Pisano, which in the middle ages served as the port of Pisa, when it was a great and powerful republic, was situated somewhere in this neighbonrhood. (Targioni Tozzetti, Fiaggi in Toscana, vol. ii. pp. 225-240, 378-420; Zumpt, ad Rutil. i. 527.) Roman remains have also been found on the spot, and some ruius, which may very well be those of the villa called Triturrita, described by Rutilius as adjoining the port, designated in the Tabala as Turrita. (Rutil. Itin. i. 527; Tab. Peut.) There is every probability that the Porto Pisano of the middle ages occupied the same site with the Roman Portus Pisanus, which is mentioned by P. Diaconus as still in nse under the Lombard kings, and again by a Frankish chronicler in the days of Charlemague (P. Diac. Hist. Lang. vi. 61 ; Ainoin. Rer. Franc. iv. 9) ; and there is no doubt that the mediacral port was quite distinct from Livorno. The latter city, which is now one of the most important trading places in Italy, was in the 13th century an obscure villare, and did not rise to consideration till after the destruction of the Porto Pisano. But it seems probable that it was occasionally used even in ancient tines, and is the Labno noticed by Cicero (ad Q. Fr. ii. 6) as a seaport near Pisae. It las been supposed also to be already mentioned by Zosi-
mus ( $\mathrm{v}, 20$ ) under the name of Liburnum; hut there is really no authority for this, or for the names of Portus Liburni, and Portus Hercalis Liborni employed by modern writers on ancient geography. The Antonine Itinerary, however, gives a station "Ad Herculem," which, as it is placed 12 miles from Pisae, could not have been far from Leghorn. (Itin. Ant. p. 293.)

Pliny alludes to the existence of warm springs in the territory of Pisae (ii. 103. s. 106). These are evidently the same now called the Bagni diS. Giuliano, situated about 4 miles from the city, at the foot of the detached group of Apennines, which diride the territory of Pisa from that of $L u c e a, \quad$ [E.H.B.]

PISA'NUS PORTUS. [PISAF.]
PISA'TIS. [Pisa.]
PIsAVAE, in Gallia Narbonensis, is placed in the Table at the distance of sviii. from Aquae Sextiae (Aix), and on a road leading towards Glannm (St. Remi). The place is supposed to be in the district of Pelissane; and it has accordingly been conjectured that the name in the Table should be Pisanae. Roman remains have been dng up in the district of Pelissane near the chapel of St. Jean de Bernasse. There are traces of the old Roman road near Aix, and it is said that two Ronan milestones are still there. (D'Anville, Notice, $\&$ c.; Statistique du Départ. des Bouches du Rhône, quoted by Ukert, Gallien, p. 436.)
[G. L.]
PISAURUM (Hıбaûpov: Eth. Pisaurensis : Pesaro), a considerable town of Umbria, situated on the coast of the Adriatic, between Fanum Fortonae (Fano) and Ariminum (Rimini). It was on the line of the Via Flaminia, 24 miles from Ariminum (Itin. Ant. p. 126), at the mouth of the small river l'isaorus, from which it in all probability derised its name. (Plin. iii. 14. s. 19.) This is now called the Foglia. The site of Pisaurum, together with all the adjoining country, had been originally included in the territory of the Galli Senones; but we have no account of the existence of a Ganlish town of the name, and the first mention of Pisaurum in listory is that of the foundation of a Roman colony there. This took place in B., c. 184, simultaneously with that of Potentia in Picenum, so that the same triumrirs were charged with the settlement of both colonies. The settlers received 6 jugera each, and erjoyed the full rights of Roman citizens. (Liv. xxxix. 44 ; Vell. Pat. i. 15 ; Madvig, de Colon. pp. 253, 286.) A few years later we hear of the constroction there of some public works, nader the direction of the Roman censors (Liv. xli. 27); but with this exception, wo hear little of the new colony. It seems, however, to have certainly heen a prosperoas place, and one of the most considerable towns in this part of Italy. Hence, it was one of the phaces which Caesar hastened to occupy with his advanced cohorts as soon as he laad passed the Rubicon, B. C. 49. (Caes. B. C. i. 11, 12 ; Cic. ad Fam. xri. 12.) It is also repeatedly alluded to by Cicero as a flourishing town (Cic. pro Sest. 4. Phil. xiii. 12); hence it is impossible that the expression of Catullus, who calls it " moribunda sedes Pisauri" (Carm. 81. 3), can refer to the cundition of the town itself. It would seem that its climate was reputed unhealthy, though this is not the case at the present day. Pisauram received a fresh body of military colonists, which were settled there hy M. Antonius ; but suffered severely from an earthquake, which seems to have destroyed a great part of the town, just before the battle of

## PISTORLA.

Actium, n.e. 31. (llut. Aut. 60.) It appers, hawever, to have been restored, and peopled with fresh colonists by Augustus, for we lind it bearing in inscriptions the titles of "Culonia Julia Felix;" and though Pliny does not give it the title of a colony, its possession of that rank onder the Eimpire is aboundantly proved by inscriptions. (Ilin. ii. 14. 8. 19 ; (Oell. Inser: $81,3143,3698,4069,4084$.) From the same anthority we leam that it was a place of some trade, ani that vessels were built there, so that it lad a "Collegium Fabrorum Na. valium." ( Il .4084 .) The port was unduabtedly formed by the mouth of the river, which still affords a harbour for small vessels. Its position on the great Flaminian Way also donbtless secured to I'isatum a certain share of prosperity as long is the Roman empire continued; but it was always inferior to the neighbouring Fanoun Furtanae. (Mel ii. 4. § 5 ; Ptol. iii. 1. § 22 ; Itin. Ant. pp. 100, 126; Itin. Mlier. p. 615 ; Tub. Peut.)

During the Gothic Wars Pisaurum was desfroyed by Vitiges, but partially restored by Bulisarius (Procop, B. G. iii. 11): and rose again to prosperity under the exarchate of Ravenna, and lecame one of the citics of the Pentapolis. (Geugr. Rav. iv. 31 : P. Diac. Hist. Lang. ii. 19.) The modern city of Pesaro is still a flourishing place; but has no remains of antiqnity, except numerons inseriptions, which have been collected and publinhed with a leurned commentary by the Abate Olivieri. (Marmora Pisaturensiu, fol. l'isaur. 1738.) [E. H. B.]

PISClNAE, enmmerated by 1'liny (iii. 4. s. 5) arung the Oppida Latina of Gallia Narbonensis. It i. generally assumpd to be represented by Pezences in the distriet of Agatha (Agde) near the Arauris (Hérault). I'liny (viii. 48. s. 73) speaks of a wool that was grownabout Piscemae, which was more like hair than wool.
[G. L]
l'ISGAH. [Nemo.]
1'ISIDA, a municipiam and station on the Roman road running along the coust-line of Syrtica, 201 D. P. from Gyparia Taberma (Dohhan), and 20) M1. P. from Villa Magna (Kelelh). (Itin. Anton.; I'cut. Tal.) Ptulemy has a Larbour, Pisindôn
 which is repremonted by the harbun of Barelid or Eirga. (Birth, 11 aulerungin, p, 271.) [E, B. J.]
 pravines in the semth of Asia Minor, which was in the marlier times always regarded as a part of PhryLat or l'amplylia, but was constituted a separate 1worince in the divi-ion of the homan empire made by Constantine the Great. It burdered in the east on Jaturia and Cilicia, in the south on Pamphyla, in the west on Lycia, Caria, and Phrygia, and in the north on P'irygit Paromes; but it is almost innossible to mark the exaet bondary lines, especitlly in the nurth and north-west, as the northern parts of Pisidia are offen treatiod as paits of PhryFind, to which they oriemilly belonged, and from which they are smmetimes ralted Phry, iat l'isidian, or \$puyia mpòs Пia töian; hut Amyntas separated them from Phrypia and unted then with Mosila. (Strab. sii. p. 570, \&e,; I'tol, v. 5. $\$ \$ 4,8:$ Dionys. P'er. aj8, \&u.; 1'lin. v. 21; Hieroll. pp. 662, \&e., 379 , \&.c.) The comtry, whirh was rough and mountanous, thongh it contained severil fertile valleys and plaius, which admitted of the cultivation of olives (Strab. l.c.), was divided into several districts, with separate names. The south-western district bordering on Lexcia was called Milyas, and
unother ailjouning it bore the name of Cabalia. The montains traversing Pisidia consist of ramifications of Dount Taurus, proceeding from Mount Cadmus iis l'luygia, in a south-eastern direction, and assuming in the neighbourhood of Tennissus the name of Sardemisus (Pomp. Mel. i. 14; Plin. v, 26), and on the burders of Milyas that of Climax. (Polyb, v. 72; Strah. xiv. p. 666.) These mountains contain tho sources of the rivers C'atarrlaactes and Cestrus, which flow through Pisidia and Pamphylia into the bay of Dauplyylia. The prineipsl products of $\mathrm{P}_{1}$ sidia were salt, the root iris, from which perfumes were manufactured, and the wine of Amblada, which was much recommended by ancient physicians. (1'lin. xii. 55, xxi. 19, xxxi. 39; Strabo. xii. p. 570.) Pisidia also contained several lakes, some of which are assigned to Plirygia or Lycaonia, e. g. Coralis and Trogitis (Strab. aii. p. 568), the great salt lake Ascania, and Pusguss or P'ungusn, which is mentionei ouly by Byzatine writers. (Nicet. Chiron. x. p. 50; Cinnam. Hist. if. 8.)

The inlabitauts of Pisidia must in a great measure bave belonged to the same stock as the llurggians, but were greatly mixed with Cilicians and 1saurians. They are said to have at first heen called Sulymi (Steph, B. s. v.); they were warlike and free mountaincers who imhabited those parts from very remote times, and were looked upon by the Greeks as barbarians. They were never subdued by nciglibouring nations, but frequently harassed the adjoining countries by predatury inroads. (Xemoph. Inach. i. 1. § 11, ii. 1. § 4, \&c.; Strab. ii. p. 130, xii. p. 569, xiv. pp. 670,678; Liv. xxxv. 13.) Lyea the Romans were scarcely able to subdue these perple, protected as they were by their mountains and rarines. After the defeat of Autiochus, Pisidia was, with the rest of Asia, given to Eumeres, hut had to be conquered by the Rumans thenselves, and then formed the beginning of what subsequently came to be the province of Cilicia, to which, about B. C. 88 , the three l'brygian districts of Laodiceia, Apmucia, mud Symana, were added. (Liv. Epit. 77; Cic. in Ier. i. 17,38.) Still, bowever, the Romans never established a garrison or planted a colony in the interior; and even the submission of the wowns seems to lavee consisted mainly in their paying tribute to their rulers. The principal towns of lisidia were, Antiocheia, Sagalassus, Tyis3) 1 sis's, Selge, Pennelissus, Ctuyra, Oenoaxtha, and Bunon. The mountainons parts of Pisidia are now iuhabited by the Karamanians, a wild and rapacious people, whence the country is little visited by travellers, and consequently little known; but lisidia in general corrcoponds to that portion of Asia Minor comprised within the governmeut of Isbarkh.
[L. S.]
PJSILIS (Hi/ $\sigma_{i} \lambda s$ ), a small town of Caria, bre tween Calinda and Caunus, of uncertivin site. (Staith. xiv. p. 651.)
[L.S.]
!'ISINGARA or PINSIGARA (Hıбvyápa or Mivoryápa), a tewn of uncertain site in Armenia Ninur: (1'tol. v. 7. § 4.)
[L. S.]
I'LSOHACA, accurding to an inscription (Flurex, Esp: Sagr. v. p. 37), a southern afluent of the river Durius in IIispania Tarraconensis, now the Pisuerya. (Ukert, vol. ii. pt. 1. p. 290.) [T.H.b.]

PJSSAELM (HIo大aiov), a town of Pelagonin in Epeirus, the exact site of which is unknown. (Po1y b. s. 108: Steph. B. s. v.)
l'1ssANT1'N1. [1.ascametak]

toja), a town of Etruria, situsted in the northem part of that province at the foot of the Apemmines, and on the direct road from Florentia to Luea, at the distance of 25 niles from each of those cities. (Itin. Ant. p. 284.) We have no acconnt of it as an Etruscan town, nor has it any remains which belung to that people: under the Romans it seems to have been an ordinary monicipal town of no great importance. (1 1 lin. iii. 5. s. 8 ; Ptol. iii. 1. $\S 48$; Itin. Ant. l. c.) Its name is known in histury only in connection with the final defeat of Catiline, B. c. 62. That general had assembled his furces in the neightourhoud of Facsulae: but on learning the discovery and tailure of the conspiracy at Jome, he drew them off into the territory of Pistoris (in agrum Pistoriensem), with the view of making his escape across the Apennines into Cisalpine Gaul. But finding his retreat on that side cut of by Metellus Celer, while he was closely pressed by the consul C. Antonius in his rear, he suddenly turned upon the latter and gave him hattle, but was cut to pieces with the whole of his remaining furces. (Sallust. Cat. 57.) From this narrative it appears that the battle must have been fought in the mountains on the confines of the Pistorian territory, which apparently adjoined that of Faesulae; bat we bave no more precise clue to its locality. Pistoria is mentioned by Ammiamos Marcellinus, at a late period of the Roman Empire, as one of the municipal towns of the district called Tuscia Annonaria (Amm. Mare. xxvii. 3. § 1) ; but it seems to have never been a place of much consideration in aucient times, and first rose to importance in the middle ages. Pistoja is now a considerable town, and tbe see of a bishop.
[E. H. B.]
PISTYRUS (Hiaqupus), a city and lake in Thrace, which the army of Xerxes passed after crossing the Nestus. (Herod, vii. 109.). The lake is described hy Herodotus as 30 studia in circumference, full of fish, and excecdingly salt. The towo is called by Stephanus B. Pistirus or Bistirus (s. vv. Пíarıpos, Biorifos). Others have the form Pisteira. (Mi $\sigma$ тєipa, Harpocrat. p. 124. 11; Sehol. ad Aesch. Pers. 2.)

PISU'RGIA ( $\tau$ d $\Pi$ п $\sigma \hat{v} p \gamma i a$ ), a coast-town of Cilicia, between Celenderis and Seleucia, 45 stadia to the west of Cape Crauni, and to the right of the island of Crambusa. (Stadiasm. Mar. Mag. §s 172, 173.)
[L. S.]
PISYE or PITYE (Пaбbך, Mívŋ : Eth. חiбuhitns, Miтuirns), a town of Caria, of which the site is unknown. (Steph. B. s. v. ; Constant. de Them. i. 14, p. 38, ed. Bonn.)

PITAIUM (Plin. v. 29; Mitáov ródıs : Eth. Mitacús, Stcpb. B. s. v.), a town of Caria, of pucertain site.
PITANE (Пıтávך: Eth. Пıтavazos), an ancient city on the coast of Aeolis in Asin Minor, was situated near the month of the river Evenus on the bay of Elaea. It was one of the eleven ancient Aeolian settlements, and possessed considerable commercial advantages in having two harbours. (Herod. i. 149 ; Scylax, p. 37 ; Strah. xiii. pp. 581, 607, 614.) It was the birthplace of the academic philosopher Arcesilaus, and in the reign of Titus it suffered severely from an earthquake. (Oros. vii. 12; comp. P'tol. v. 2. § 5 ; Steph. B. s. v.; Pliu. v. 32, xxxv. 49; Ov. Met. vii. 357.) The town is still mentimed in Hierocles, and its site is universally identified with the modern Tchandeli or Sanderli. Pliny (l. c.) mentious io its vicinity a river Canaius, which
is not noticed by any other writer; but it may possibly be the river Pitanes, spoken of ly l'tolemy (iii. 2. §3), and which scems to derive its name from the town of Pitane.
[L. S.]
PITANE. [SRanta.]
Pithecusae insulae. [Arnamia.]
PITHOM. [Patumos.]
PITINUM (Torre di Pitino), a town of the Vestini, known ooly from the Tabula Poutiugeriana, which places it on a line of road from Interoerea (Antrodoco) to Aveia. But the stations on each side of it, Prifernum and Eruli, are both anknown, and the distances probably corrupt. Hence, this itinerary affords us no real clue to its position. But Holstenius has pointed out that the name is retained by the Torrc $d \ddot{i}$ Pitino, about 2 miles N. of Aquila, and has also shown that in the middle ages litinum still subsisted as a city, and was an episcopal see. (Tab. Peut.; Holsten. Not. ad Cluver. p. 139 ; Romanelli, vol. iii. p. 280). [E. H. B.]

PiTULUM (Pitulanus: Piolo), a town of Umbria, mentioned only by Pliny (iii. 14. s. 19), who ennmerates among the towns of that region the "Pitulaoi, cognomine Pisuertes et alii Mergentini." Both names are otherwise nnknown, but according to Cluverius there is a village called Piolo in the Apenniues between Camerino and Matilica, which probably retains the name of oue or the other. (Cluver. Ital. p. 614.)
[E. H. B.]
PITYEIA (Hırveca: Eth. Hirvev́s), a town of Mysia, on the coast of the Propontis, between Parium and Priapus. It is mentioned even in the time of Homer. (Il. ii. 829 ; comp. Apollon. Rhod. i. 933; Strab. xiii. 588; Steph. B. s. r.) It is said to have derived its name from the firs which grew there in abundance, and is generally identifica with the modern Shamelik.
[L. S.]
PITYODES (חıтvádクs), a small island in the Propantis off the coast of Bithynia, near Cape Hyris, and 110 stadia to the north of Cape Acritas. (Plin. v. 44 ; Steph. B. s. $v$. Mervouara., who speaks of several islands of this name, which is the same as Miтvé $\delta e t s$.) The island is probably the ono now called Bojuk Ada, where Pococke (vol. iii. p. 147) found remains of an ancient town.
[L.S.]
PITYONE'SOS, a small island in the Saronic gulf, lying between Aegina and the coast of Epidaurus, and distant 6 miles from the latter. (Plin. iv. 12, s. 19.)

PITYUS (חıtvoûs: Pitsunda), a Greek town in Asiatic Sarmatia, on the north-castern coast of the Black Sea, N. of Dioscurias, from which it was distant 360 stadia according to Artemidorus, and 350 according to Arrian. The real distance, however, is underrated by these writers; for from $\boldsymbol{C}$. Iskuria (Dioseurias) to Pitsundos is not less than 400 stadia in a straight line. (Artemidor. ap. Strab. xi. p. 496 ; Arrian, Per. P. Eux. p. 18.) Artemidorus described it as the great Pityus, ard Pliny as an "oppidum opulentissimum ;" but between the time of Artemidorns and Pliny it was destroyed by the Heniochi (Plin. vi. 5), whence Arrian mentions it ouly as a place for anchorage, and the name does not occur at all in Ptolemy. The town was afterwards rebuilt by the Romans, sui is deseribed by Zosimus (i. 32), in the history of Gallieons, as a fortress surrounded with a very great wall, and having a most excellent harbour. (Comp. Procop. B. Goth. iv. p. 473, ed. Bonn ; comp. C. Milller, ad Arrian. l. c. ap. Geoyr. Graec. Min. vol. i. p. 392.)

PITIU'SA (Пıтvoûซa or Пiтvoû́नa, a contr. of

Hıтúéf $\sigma \alpha)$, liturally, "abounding in pine-urees." 1. An island off the promontory Seylhemm, or Bucephala, in Troezenia in Argolis. (Paus, ii. 34. §8.) I'liny meations (ir. 12. s. 19) an island Jityusa in the Argolic gulf, but from the order in which it oecars in Pliny, it would seem to be a different island frum the preceding.
2. Wee of the Demonnesi in the Propontis, according to lforchius (s.v.). [Demonsest.]

PITYU'SAE (Пltvov̂oat or Пıtvoốcoat, Strah. iii. p. 167; Ptul. ii. 6. § 77 ), two islands on the S. coast of Spann, 700 stadia, or nearly 100 miles from Dianium ( 1 lin. iii. 5. s. 11 ; Liv. xxviii. 37). Their position is thus defined by Diodorus (v. 17): they are three nights' and days' sail from the Columns of Hercules, one day's sail from Iberia, and one day and night from Libya; whilst, according to the Itinerary (p. 511), they were 300 stadia from the Baleares, and 400 from Carthago Spartaina, or Carthagena. The larger of tbe two ishands was called Ebusus ('E6urtoos, Ptol. l. c.), the smaller Uphiusa ('O $\phi$ rố $\sigma \sigma, I b_{\text {_ }}$ ): and as they are only separated by a narrow strait, and as Ophiusa, from its small size, was unimportant, they are sometimes coufounded together as one island by the ancients (Diod. v 16; Liv. l.c.: Dinscor. i. 92, \&e.) Their mame of Pitrusac was derived, like that of many other ancient places, from the abundance of pinetrees which grew upon them. They were 46 miles in extent. Diodorus (l.c.) compares Ebusus with Corcyra for size: and according to Strabo (l. c.) it was 400 stadia in cireumference, aud of about equal Iength and breadth. It was billy in some jarts, and not very fruitful, producing but little oil and wine ; but its figs were good, and it afforded excellent pasturace. Snakes and noxious animals were not found mpon it, whilst, on the contrary, the smaller island abounded in serpents to such a degree that it seems to have taken its name from them (Plin. iii. 14, xr. 21, xxxv. 59, \&e.; Mela, ii. 7; Avien. Descr. Orb. 621, \&e.). Tbe chief town, also named Ebusus, which lay on the SE. side of the inland, was a civitas fuelerata, and had a nint. (Ramus, Cat. Vum. vet. Gracc, et Lat, Mus. Reg. Danize, i. p. 13.) It was a well-built city with a good harbour, and was the resort of many barbuians and fereizners, especially Pheenicians. (Strab., Mela, Dind., $l$ l. ce.) The larger island is now Friza, the smaller, Formentara. [T. 1I. D.]
1'LACEN'TLI (Плakevria: Eth. Placentinus: Piucenza), a city of Gallia Cispadana, situated near the S. bank of the Padus, just below the porit where it receives the waters of the Trebia. It was on the Via Acmilia, of which it originally formed the termination, that roal being in the first instance carried frou Ariminum to Placentia; and was 40 miles distant from I'urna. We have no account of the existence of a town on the spot previous to the establishment of the liuman culnyy, which was settled there in 1. C. 219. atter the preat Gaulish war, at the snue time with Crmoma. (Liv, E.pit. xx ; Vell. Pat. i. 14; Jol. iii. 40; Ascon. in Pison. 1. 3.) It consisted of nut less thatn fiono colonists, with Latin ridhts. But the new colony was scarcely founded, aul its walls harilly completed, when the news of the apIrach of liannibal produced a general rising of the nei, thbouring Ganls, the Boians and Insubrians, who attacked Piacentia, ravaged its territory, and drove many of the culonists to take refuge at Mutina; but were umable to effect anything against the city itself, which was still in the lauds of the Romans
in the following year, and became the head-qnarters of the army of scipio both before and after the battlo of the Trebia, (Pol. iii. 40, 66; Liv. xvi. 25, 56, 59, 63; Appian, IIann. 5, 7.) At a later period of the same war, in 13. C. 209, Jlacentia was one of the colonies which proved faithful to Rome at its greatest need, and came forward readily to furnish its quota of supplies for the war, when twelve of the older colonies failed in doing so. (Liv. xavii. 10.) Shortly after this it withstood the arms of Ila-drubal, who was indnced to lay siege to it, after be bad crossed the Alps and descended into Cisalpinc Gaul, and by so doing lost a great deal of valuable time. Atter a protracted siege be was compelled to abandou the enterprise, and continue bis march into Italy, leaving Placentia behind him. (1d. xxvii. 39, 43.) A few years later it was less fortunate, baving been taken by surprise by the sudden insurrection of the Gauls in s. c. 200 , who plundered and burnt the town, and carried off the greater part of the inhabitants into captivity. (1d. xxxi. 10.) After the victory of the consul L. Furius, about 2000 of the prisoners taken on this occasion were restored to the colony; and a few years afterwards L. Valerius Flaccus, who wintered at Cremona and I lacentia, restored and repaired as far as possible all the losses they had suffered during the war. (Id. xxxi. 21, xxsiv, 22.) But they were still exposed to the ravages of the Gauls and Ligurians; and in B. c. 193 their territory was laid waste by the latter up to the very gates of the city. (Id. axxiv. 56.) Hence we cannot wonder to find them, in I. c. 190, complaining of a deficieney of sottlers, to remedy which the senate decreed that a fresb borly of 3000 families should be settled at each of the old colonies of Placentia and Cremona, while new ones should he established in the district of the Buii. (Id. $x x \leq v i i .46,47$.) A few years later the consul M. Aemilius, having completed the subjection of the Ligurians, constructed the celebrated road, which was ever after known by his name, from Ariminum to Placentia (Id. xxxix. 2): and from this time the security and tranquillity enjoyed by this part of Italy caused it to rise rapidly to a state of great prosperity. In tbis there can be no doubt that Placentia fully shared; luat we hear little of it during the Roman Republic, though it appears to have been certainly one of the principal towns of Cispadane Gaul. In the civil war of Alarius and Sulla, a battle was fought near Placeutia, in which the partisans of Carbo were defeated by Lucullus, the general of Sulla, 13. c. 82 (Appian, B. C. i. 92): and in that between Caesar and Porapey, B. C. 49, it was at Placentia that a mutiny broke out among the troops of the former, which at one time nssumed a very formidable aspect, and was only quelled by the personal firmness and authority of the dictator. (Appian, B. C. ii. 47 ; Dion Cass. ali. 26.) Placentia, indeed, seems to have been at this period one of the places cominonly selected as the head-quarters of Roman troops in this part of Italy. (Cic, ad Att, vi. 9.) It was again the seene of a somewhat similar mutiny of the legions of Angustus during the Perusian War, 13, c. 41. (Dion Cuss, alviii. 10.)

Cicero notices Placentia towards the close of the republican jeriot as a manicipium: its colonial aak inust have been merged in the ordinary municipal condition in consequence of the L.e. Julia, v. c. 90 . (Cic. in I'ison. 23; Fest. s. v. 1/unicipium.) But under the Empire it reappears as a
colony, both Pliny and Tacitns giving it that title (Plin. iii. 15. s. 20; Tac. Hist. ii. 19): it had probahly received a fresh colony under Augustus. We leam from Tacitus (l.c.) that it was one of the most flourishing and populons cities of the district of Gallia Cispadana; and though of no natural strength, being situated in an open ylain, it was well fortified. For this reason it was occupied in A. D. 69 by Spurinna, one of the generals of Otho, and successfully defended by him against Caecina, the general of Vitellius, who had crossed the Padus, and laid siege to Placentia, but was compelled to abandon it and witlidraw to Cremona. (Tac. Ilist. ii. 1723.) During the assanlts of Caecina, the amphitheatre, which is said to have been the largest provincial edifice of the kind in Italy, and was situated without the walls, was accidentally burnt. ( 16 . 21.) From this time we meet with no furtber mention of Placentia in history till the reign of Aurelian, when that emperor sustained a great defeat from the Marcomanni, under its walls. (Vopisc. Awrel. 21.) But the city still continned to be one of the most considerable places on the line of the Via Aemilia; and thongh it is noticed by St. Amliruse, twwards the close of the fonrth century, as tharing in the desolation that had then befallen the wbole of this once flourishing province (Ambros. Fip. 39), it survived all the ravages of the barbarians; and even after the fall of the Western Empire was still a comparatively flourishing town. It was there that Orestes, the father of the muhappy Augnstulus, was put to death hy Odoacer, in A. D. 476. (P. Diac. Hist. Miscell. xvi. p. 558.) Procopius also mentions it during the Gothic wars as a strong fortress and the chief city of the provisce of Aernilia It was only taken by Totila, in A. D. 546 , by fanine. (Procop. B. G. iii. 13, 17.) Considerably later it is still noticed ly P. Diaconus among the "opulent cities" of Aemilia (Hist. Long. ii. 18); a position which it preserved throughout the middle azes. At the present day it is still a flourishing and populons place, with about $30,000 \mathrm{in}$ habitants, though partially eclipsed by the snperior importance to which Parma has attained since it became the capital of the reigning dukes. There are no remains of antiquity.
Placentia was undonbtedly indebted for its prosperity and importance in ancient times, as well as in the middle ages, to its advantageous situation for the navigation of the Po. Strabo (v. p. 215) speaks of the navigation from thence to Kavenna, as if the river first began to be navigable from Placentia downwards; but this is not quite correct. The city itself lay at a short distance from the river; but it had an emporium or port on the stream itsdf, probably at its confluence with the Trelia, which was itself a considerable town. This was taken and plondered by Hannibal in E. C. 218. (Liv. xxi. 57 ; Tac. Hist. ii. 19.)

It has been already mentioned that the Via Aemilia, as ofriginally constructed, led from Ariminmm to Placentia, a distance of 178 miles. It was afterwards continued from the latter city to Dertona, from whence a branch proceeded across the Apennines to Genoa (Strab. v. p. 17); while another line was carried from Placentia across the Padus direct to Mediolanum, a distance of 40 miles; and thus communicated with the whole of Gallia Transpadaua. (Itin. Ant. pp. 98, 127, 288; Itin Ilier. p. 616; Tub. Peut.)
[E. 11. B.]
PLA'CIA (Плакíp: Eth. Плaktavós), :u ancient

Pelasgian fown in Mysis Olympene, at the foot of Mount Olympus, and on the east of Cyzions. The place seems to have dccayed or to have been dcstroyed at an early time, as it is not mentioned by later writers. (Herod. i. 57 ; Scylax, p. 35 ; Dionys. Hal. i.p 23: Stepl. B. s. v. Плакп.) [L. S.]
PLACUS (Пла́коs), a woody mountain of Mysia, at the frot of which Thebe is said to have been situated in the Iliad (vi. 397,425 , xxii. 479 ); but Strabo (xiii. p. 614) was unable to learn anything about such a mountain in that neighbourhood. [Fice Pelecas.]
[L.S.]
PLAGIARIA. [Lisitania.]
PlanARIA INs. [Fortunatae Insulake]
PLANA'SIA. [Lerina; leron.]
PLANA'SIA (H^avaria: Pianosa), a small island in the Tyrrlienian sea, about 10 miles SW. of Ilra (Elba), and nearly 40 from the nearest point on the coast of Etruria. It is abont 3 miles long by $2 \frac{1}{2}$ in widtlh, and is low and flat, from whence probably it derived its name. (Plin. iii. 6. s. 12; Ptol. iii. 1. § 79; Itin. Marit. p. 513.) The Maritime Itinerary reckons it 90 stadia from Ilva, while Pliny calls the same distance 38 miles; but this is evidently a mistake for its distance from the mainland. It is remarkable that Pliny mentions Planaria and Planasia as if they were two distinct islands, enumerating the one before and the other after Ilra; but it is certain that the two names are only forms of the same, and both refer to the same island. (Cluver. Itol. p. 504 ; Hardnin. Not. ad Plin. l. c.) In Varro's time it seems to have belonged to M. Piso, who kept larce flocks of peacocks there in a wild state. (Varr. R. R. iii. 6.) It was subsequently used as a place of banishment, and among others it was there that Postumus Agripla, the grandson of Augustus, spent the last years of his life in exile. (Tac. Ann. i. 3, 5; Dion Cass. Iv. 32 ; Suet. Aug. 65.) Sume ruins of Roman buildings still remain in the island : and its quarries of granite seem to have been certainly worked in ancient times. It is now inhabited only by a few fishermen.
[E. H. B.]
PLANE'SLA (п入 $1 / \eta \eta \sigma i a$, Strab. jiii. p. 159), an island in the Sinus lllicitanus, on the SE. coast of Hispania Tarraconensis, now Isola Plana. [T.H.D.]

PlataEa. [Platea.]
PlataEA or PlataEAE (חגátaia, Hom. Herod.; Плaтaıaí, Thuc. Strab. Pans., \&e. : Eth. Пौatautús, Plataeensis), an ancient city of Bueutia, was situated upon the frontiers of Artica at the fiot of MIt. Cithaeron, and between that mountain and the river Asopos, which divided its territory from that of Thebes. (Strab. ix. p.411.) The two citics were about $6 \frac{1}{2}$ miles apart by the road, but the direct distance was little more than 5 geographical miles. According to the Thebans Plataea was founded by them (Thuc. iii. 61); but Pausanias represents the Plataeans as indigenous, and accordiog to their own account they derived their name from Plataca, a daughter of Asiopus. (Paus. ix. 1. § 1.) Plataea is mentioned in Homer among the other Bueotian cities. (Il.ii. 504.) In B. C. 519 Plataea, onwilling to submit to the supremacy of Thebes, and unable to resist her powerful neighbour with her own unuided resources, formed a cluse alliance with Athens, to which she continued faitufnl during the whole of her subsequent bistory. (Herod. vi. 108; Thuc. iii. 68.) She sent 1000 men to the assistance of Athens at Marathon, and shared in the glories of that victory. (Herod. l.c.) The Plataeans also fought at Artenisium, but were
not present at Salamis, is they had to leave the flect in order to remove their families and property fiom the city, in consequence of the approach of the Persian army. (Herod, viii. 44.) Upon the arrival of the I'ersians shortly afterwards their city was burnt to the ground. (Herod, viii. 50.) In the following year (n.c.479) their territory was the scene of the memorable battle, which delivered Greece from the l'ersian invaders. The history of this battle illustrates so completely the topography of the Plataean territory, that it is necessary to give an account of the different positions taken by the contending forces (See accompunying Map). Mardonius proceeded from Attica into Boeotia acruss Mount Parnes by the pass of Decelecia, and took up a position on the bank of the Aspous, where he caused a fortitien carnp to be constructed of 10 stadia square. The situation was well selected, since the had the friendly city of Thebes in his rear, and was thus in no danger of falling short of provisions. (Herod. ix. 15.) The Grecian atny crossed over from Attica by Mt. Cithaeron; but as Pausanias did not choose to expose his troops to the attacks of the Persian cavalry on the plain, he stationed them on the slopes of the mountain, near Erythrae, where the ground was ragged and uneven. (See Map, First Position.) This position did not, however, altogether preserve them ; but, in at attack made ly the I'ersian cavalry, a lody of 300 Athenians repulsed thein, and killed their leader Masistius. This success encouraged Pausanias to

PLATAEA.
descend into the territory of Plataea, more especially as it was better supplied with water than his present position. Marching from Erythrae in as westerly position along the roots of Mt. Cithaeron, and pasing by Ilysiae, he drew up his arny along the right bank of the Asopus, partly upou hills of no great height and partly upon a lofty plain, the right wiog being near the fountain Gargapliat, and the left near the chapel of the Illataean hero Androcrates. (Herod. ix, 25-30.) Mardonins drew up his army opposito to them on the other side of the Asopus. (See 3Fap, Scoond Position.) The two armies remained in this position for some days, neither party being willing to begin the attack. The Persians assailed the Greeks at a distance with their missiles, and prevented them altogetber from watering at the Asopus. Dleanting the Persian cavalry intercepted the convoys of provisions proceeding to the Grecian camp, and on one occasion drove away the Lacedaemonians, who occupied the right wing from the fountain Gargaphia, and succeeded in choking it up. This fountain had been of late the only watering-place of the Greeks; and as their ground was now untenable, Pausaniss resolved to retreat in the night to a place called the lsland ( $\nu \bar{\eta} \sigma o s$ ), abont 10 stadia in the rear of their present position, and halfway between the latter and the tomu of Plataea. The spot selected, impropurly calied an island, was, is fact, a level meadow, comprised between two branches of the river Oerobe, which, rising fr in distinct sources in Mt. Cithaeron,

and running for some space nearly parallel with one another，at length unite and flow in a westerly di－ rection inte the gulf of Corinth．（Herod．ix．5I．） The natnre of the ground would thos afferd to the Greeks ahundance of water，and protection from the enemy＇s cavalry．The retreat，however，though for so short a distance，was effected in disorder and con－ fusion．The Greek centre，chiefly compased of Me－ garians and Corinthians，probably fearing that the island would not afford them snfficient protection against the enemy＇s cavalry，did not halt till they reached the temple of Hera，which was in front of the town of Plataea．The Lacedaemonians on the right wing were delayed till the day began to dawn， by the obstinacy of Amompharetus，and then began to march across the hills which separated them from the islant．The Atbedians on the left wing becan their march at the same time，and got ronnd the hills to the plain on the other side en their way to the island．After marching 10 stadia，Pansanias balted on the bank of the Moloeis，at a place called Agriopius，where stood a temple of the Eleusinian Deneter．Here he was joined by Amompharetus， and here he had to sustain the attack of the Persians， who had rushed across the Asepns and up the hill after the retreating foe．As soon as Pausanias was overtaken by the Persians，he sent to the Athenians to entreat them to lasten to his aid；bnt the coming up of the Bocotians prevented them from doing so． Accordingly the Lacedaemonians and Tegeatans had to encounter the Persians alone withont any assist－ ance from the other Greeks，and to them alone be－ loags the glory of the victory．The Persians were defeated with great slaughter，nor did they stop in their flight till they had again crossed the Asopus and reached their fortiffed camp．The Thehans also were repulsed by the Athenians，bnt they retreated in good order to Thebes，being covered by their cavalry from the pursuit of the Athenians．The Greek centre，which was nearly 10 stadia distant， had no share in the battle；but bearing that the Lseedaemonians were gaining the victory，they las－ teaed to the scene of action，and，coming up in con－ fusion，as many as 600 were ent to pieces by the Theban force．Meantime the Lacedaemonians pur－ sued the Persians to the fortified camp，which，how－ ever，thev were nnable to take until the Athenians， more skilled in that species of warfare，came to their assistance．The barricades were then carried，and a dreadful earnage ensued．With the exception of 40,000 whe retreated with Artabazus，only 3000 of the original 300,000 are said to have escaped． （Herod．is． $50-70$ ．）On the topograplyy of this battle，see Leake，Northern Greece，vol．ii．p．335， seq．；Grote，History of Greece，vol．v．p．212，seq．

As this signal victory had been gained on the soil of Plataea，its citizens received especial honour and remards from the confederate Greeks．Not only was the large sum of 80 talents granted te them，which they employed in erecting a temple to Athena，but they were charged with the duty of rendering every jear religious henours to the tombs of the warrions who had fallen in the battle，and of celebrating cvery five years the festival of the Elentheria in com－ memoration of the deliverance of the Greeks from the Persian yoke．The festival was sacred to Zens Eleutherius，to whom a temple was now erected at Platnea．In return for these services l＇ausanias and the ollher Greeks swore te guarantee the independence and inviolability of the city and its territory．（Thue． ii．71；Plat．Arist．c．19－21；Strab．is．p． 412 ；

Paus，ix．2．§ 4 ；for further details see Dith of Aut． art．Elevtheela．）

Phataea was of course now rebuilt，and its in． habitants contioned unnolested till the commenco－ ment of the Peloponnesian War．In the spring of B．c． 431 ，before any actual declaration of war，a party of 300 Thebans attempted to snrptise Plataea． They were admitted within the walls in the night time by an oligarchical party of the citizens；but the Plataeans soon recovered from their surprise，and pht to death 180 of the assailants．（Thme ii．1，seq．） In the third year of the war（b．c． 429 ）the $\mathrm{V}^{2} \mathrm{elo}$ pounesian army nuder the command of Arelidaunus laid siege to Plataea．This siege is one of the most memorable in the annals of Grecian warfare，and las been narrated at great length by Thucydides．The Plataeans had previonsly deposited at Athens their old men，women．and children；and the ganison of the eity consisted of only 400 citizens and 80 Athen－ ians，together with 110 women to manage their honsehold affairs．Yet this small force set at de－ fiance the whole army of the Peloponnesians，who， after many fruitless attempts to take the city by assanlt，converted the siege into a blockade，and raised a circumvallation round the city，consisting of twe parallel walls， 16 fcet asunder，with a ditch on either side．In the second year of the binckade 212 of the besieged duriug a tempestuons wintry＇s night sneceeded in scaling the walls of circumsal－ lation and reaching Athens in safety．In the course of the ensning summer（B，C．427）the remainder of the garrison were obliged，throngh fature of pro－ visions，to surrender to the Peloponnesians．They were all put to death；and all the private buildinus rased to the ground by the Thebans，who with the materials erected a sort of vast barrack round the temple ef Hera，both for the accemmodation of vi－ sitors，and to serve as an aloode for those to whom they let out the land．A new temple，of 100 feet in length（večs єкんaToureঠos），was alse built by the Thebans in honour of Hera．（Thuc．ii．71，seq．， iii． 20 ，seq．， 52 ，seq．，68．）

The surviving Hataeans were kindly received by the Athenians．They would appear even lefore this time to have enjoyed the right of citizenship at
 63）．The exact nature of this citizenship is un－ certain；but that it was not the full citizenship， possessed by Athenian citizens，appears from a line of Aristophanes，who speaks of certain slaves，who had been engaged in sea－fights，being made Platacans （каi П入атаıâs єü日ùs єivat кàvтí ס̀vú入wy $\delta \in \sigma \pi o ́ т a s, ~$ Ran． 706 ；comp．Sclol．ad Aristople．Ran． 33 ； Böckh，Public Econ．of Athens，P．262，2nd ed．）． Diodorus，in relating their return to Atbens at a subsequent time，says（xv．46）that they received the $l \sigma 0 \pi \Delta \lambda \Delta \tau \in i \alpha$ ；but that some of them at any rate enjoyed nearly the full prixileges of Athenian citi－ zens appears from the decree of the perple quoted by Demosthenes（c．Neaer．p．1380）．On the whele subject，see Hermann，Staatsulterth，\＆ 117.

In 1．C． 420 the Athenians gave the I＇lataeans the town of Scione as a residence．（Thuc．v． 32 ； Isocr．Paneg \＆109；Diodor，xii．76．）At the rluse of the Pelopmonesian War，they were compelled ta evaenate Scione（Plut．Lysand．14），and ngasm foumd a hospitable welcome at Athens．Here they were living at the time of the peace of Antalcidas（s．C． 387 ）．which guaranteed the antomomy of the Gre－ cian cities ；and the Lacedaemonians，who were now ansin to lumble the power of Thebes，teok ad－
vautage of it to restore the I＇lataems to their native city．（Paus ix． $1 . \S 4$ ；1socrat．Plataic．§ 13，seqq．） But the llataeans did not long retain passession of their city，for in E．c． 372 it was surprised by the ＇Thehans and again destroyed．The I＇latawas were compellet onte inore to seek refige at Atbens． （Pans．ix．1．§s $5-8$ ；Diodor．xv．46．）The wrongs done to the l＇ataeams by Thebes are set forth in a speech of Isoerates，entitled Plataicus，which was perhaps actually delivered at this time by a Plataean speaker before the public assembly at Athens． （Grote＇s Girece，vol．x．p．220．）After the battle of Chatronpia（n．c．338）the Plataeans were once more restored to their city by I＇hilip．（Paus，ix． 1. § 8，iv．27．§ 11．）It was shortly after this time that Plataea was visited by Dicaearchus，who calls the Platnenns＇A quvaion Bowtof，and remarks that they have nothing to say for themselves，except that they are colonists of the Athenians，and that the battle between the Greeks and the Persians took place near their town．（Descrijt．Graec．p．14， 1ladson．）

After its restoration by Plilip，the city continued to be inhabited till the latest times．It was visited by J＇ausanias，who mentions three temples，one of Hera，another of Athena Areia，and a third of De－ meter Eleusinia．Paunanias speaks of only one tem－ ple of Hera，which he describes as sitnated within the city，and wortly of admiration on account of its magnitade and of the offerings with which it was adurned（ix．2．§ 7）．This wats apparently the tenple built by the Thebans after the destruction of Platiea． （Thuc．iii．68．）It is probable that the old temple of Ilera mentioned by Ilerodotus，and which he de－ scribes as outside the city（ix．52），was no longer repaired after the erection of the now one，and had clisappeared before the visit of I＇ausanias．The temule of Athena Areia was built accurding to I＇an－ samias（ix．4．§ 1）out of a share of the spoils of Marathon，but according to Plutarch（Arist．20） with the 80 talents out of the sptils of Plataea，as mentinned above．The tenple was adorned with pictures by Pulygnotus and Onatas，and with a statne of the goidess by Pheidias．Of the temple of Io－ unter Elecsinia we have no details，but it was pro－ Watly erected in consequence of the battle baving been fought near a temple of Demeter Eleusinia at Argiopius．（Herod．ix．57．）The temple of Zeus Ehentherius（strah，ix．p．412）seems to have been rerluced in the time ol Pausanias to an altar and a stane．It was situated outside the city．（Pams． ix．2． 8 s 5－7．）

Matata is mentioned in the sisth century by Iliwrecks（ $p, 645$ ，Wesseling）aunong the cities of Ponetia；and its walls were restured by Jnstinian． （Irweop de Aulif．iv．2．）

The ruins of Plataca are situated near the small village of Kikhld．The cireuit of the walls may still be traced in great part．They are about two miles and a half in circumference；but this was the size of the city restores by Philip，for not only is the earlier city，before its destruction by the The－ hans，desernted by Thueydides（ii．77）as stoall，but we find at the sonthern extrenity of the existing remains more ancient masomry than in any other part of the ruins．Hemec Leake suppmes that the ancient city was contined to this prat．He observes that＂the masomry in general，both of the Acropolis and of the town，has the appearame of not being so whas as the time of the battle． 1 her greater part is of the fourth order，but mised with portions of a
less regular kind，aud with some pieces of polygronal masonry．The Acropolis，if an interior inclosuro can be so called，which is not on the liighest part of the site，is constructed in part of stones which lave evidently been taken from eartier buildings．The towers of this citadel are so formed as to present flanks to the inner as well as to the onter face of the intermediate walls，whereas the town walls itave towers，like thase of the Turks，open to the interior． Above the southern wall of the city are fuundations of a third inclosmre；which is evidently more ancient than the rest，and is probably the only part as old as the Persian War，when it may lave been the Acropolis of the Plataca of that age．It surrouods a rocky height，and terminutes to the S ．in an achte angle，which is only separated by a level of a few yards from the foot of the great rocky slope of Cithae－ ron．This inclosure is in a situation higher than any other part of the ancient site，and higher than the village of Koikhle，from which it is 500 yards distant to the E．Its walls are traceable on the eastern side along a torrent，a branch of the Uëroe， nearly as far as the sonth－eastern angle of the main inclosure of the city．Jna charch within this upper inclosure are some fragments of an inseribed marble．＂ （Vertherss Greece，vol．ii．p．325．）（Campare Friederich，Specimen Rerum Plataic，Berol． 1841 ； Mü̈nscher，Diss．de Rebus Plutacens．1841．）

PLERA，a town of Apulia，situated on the branch of the Via Appia which led from Venusia direct to Tarentum．It is supposed to be represented by the modern Grarina．（Itin．Ant．p． 121 ；Holsten．Not． ad Cluv．p．281．）The name is written in many Mis．Blera，
［E．H．B．］
PLERAEI（п入прaîo），a peopie of Illyrieum， who lived upon the banks of the Naro，according to Strabo（vii．p．315，seq．）．Stephanns B．places them in Epeirus（s，v．Пגараiois）．

Pi．Esti＇NIA．［Mars．］
HLECMO＇XI，a Gallic people who were under the dominion of the Nervii（Caes，B．G．v．39）．No－ thing more is known of them．The name is not quite certain，for there are variations io the MSS： It is elear that they were somewhere in Gallia and near the Nervii，as we may infer．
［G．L．］
PLEURON（ Плєup $\omega$ v：Eth．Плєuṕ́vos，also ח $\lambda$ evporvevs，Steph．B．s．v．，Pleuronius），the name of two cities in Aetolia，the tervitory of which was called Pleuronia．（Strab，x．p． 465 ；Auson．Epitaph，10．） vot，II．

## PLEURON．

1．Old Pieleron（ $\grave{\eta}$ ma入aià חौevpón，Strab，x－ p．451），was situated in the plain between the Ache－ Jous and the Evenus，W．of Calydon，at the foot of Mount Curium，from which the Curetes are said to have derived their name．Pleuron and Calydon were the two chief towns of Actolia in the heroic age，and are said by Strabo（x．p．450）to have been the ancient ornament（ $\pi \rho \delta \sigma \sigma \chi \eta \mu \alpha$ ）of Greece．Pleuron was originally a town of the Curetes，and its inhahit－ ants were engaged in frequent wars with the Aeto－ lians of the neighbouring town of Calydon．The Curetes，whose attack upon Calydon is mentioned in an episode of the Iliad（ix．529），appear to have been the inhabitants of Pleuron．At the time of the Trojan War，however，Pleuron was an Aetolian city，and its inhahitants sailed against Troy under the command of the Aetolian chief Thoas，the son （not the grandson）of Oeneus．（Hom．Il．ii．639， comp．xiii．217，xiv．116．）Ephorus related that the Curetes were expelled from Pleuronia，which was formerly called Curetis，by Aeolians（ap．Strab． x．p． 465 ）；and this tradition may also be traced in the statement of Thucydides（iii．102）that the district，called Calydon and Pleuron in the time of the Peloponnesian War，formerly bore the name of Aeolis．Since Plearon appears as an Aetolian city in the later period of the heroie age，it is represented in some traditions as such from the begimning． Hence it is said to have derived its name from Pleuron，a son of Aetolns ；and at the very time that some legends represent it as the capital of the Curetes，and engaged in war with Oeneus，king of Calydon，nthers suppose it to have been governed by the Aetolian Thestins，the hrother of Oenens．Thes－ tius was also represented as a descendant of Pleuron； and hence Pleuron had an heroum or a chapel at Sparta，as being the ancestor of Leda，the daughter of Thestins．But there are all kinds of variations in these traditions．Thus we find in Suphoeles Oeneus，and not Thestius，represented as king of Pleuron．（Apollod．i．7．§ 7；Paus．iii．14．§8； Soph．Trach．7．）One of the tragedies of Phry－ nichus，the sulject of which appears to have been the death of Meleager，the son of Oenens，was entitled חौevpóviat，or the＂Pleuronian Women；＂and hence it is not improbable that Phrynichns，as well as Sophocles，represented Oeneus as king of Pleuron． （Paus．x．31．§ 4．）Plenron is rarely mentioned in the historical period．It was abandoned by its inhabitants，says Strabo，in consequence of the ra－ vages of Demetrins，the Aetolian，a surname proba－ bly given to Demetrius 11．，king of Macedonia（who reigned в．с．239－229），to distinguish him from Demetrius Poliorcetes．（Strab．x．p．451．）The in－ habitaots now built the town of

2．New Plectron（ $\hat{\eta} \nu \in \omega t \dot{\varepsilon} \rho a \Pi \lambda \in u p \dot{c}^{\prime} y$ ），which was situated at the foot of Itt．Aracynthus．Shortiy before the destruction of Curinth（i．c．146），we find Pleuron，which was then a member of the Achaean Leagne，petitioning the Romans to be dis－ severed from it．（Paus．vii．11．§ 3．）Leake sup－ poses，on satisfactory grounds，the site of New I＇letr－ ron to be represented by the ruins called to Káa Tîs Kupias Eiphins，or the Castle of Luely Irone about one hour＇s ride from Mesolonghi．These rnins occuly the broad summit of one of the steep and rugyed heights of MIt．Zygos（the ancient Aracyn－ thus），which bound the plain of Mesolanghi to the north．Leake says that the walls were abut a mile in circumference，but Mure and Dodwell describe the circuit is nearly two miles．The most remark：able

P（）LA（Пó̀a：Eth．Пo入áтŋs：Pola），one of the principal towns of Istria，situnted near the S． extremity of that peninsula，on a landlocked bay， furming an excellent port，which was called the Sinus Polaticus．（Mel，ii．3．§ 13．）According to a tradition mentioned by several mpeient autbors，its foundation was ascribed to a band of Colchians，who Lad come hither in pursuit of Medea，and afterwards settled in the countre．（Strab，i．P．46，v．p．216； Plin．iii．19．s． 23 ；Mcl．l．c．；Tzetz．ad Lycophr． 1022．）It is impossible to explain the origin of this tale，which is already mentioned by Callimachus （ap．Strab，l．c．）；but it may be received as proving
that the city was considered as an ancient one，and certainly existed before the loman conqnest of 1stria in B．c．177，though its name is not mentioned on that occasion．It was mndonbtedly the advantages of its exeellent port that attracted the attention of the Romans，and led Augustus to establish a colony there，to which he gave the name of Pietas duiia． （Nel．l．c．；Plin．iii．19．s．23．）Several of the still existing remains prove that he at the same time adorned it with public edifices；and there is no duubt that under the Roman Empire it lecame a considerable and flomishing town，and，next to Tergeste（Trieste），the most important city of I．tria． （Strab．l．c．；P＇tol．iii．1．§ 27；Grater，Inser． p．263．7，p．360．1，p．432．8．）It is meotioned in history as the place where Crispus，the elidest son of Constantine the Great，was put to death by order of his father；and again，in A．D．354，the Caesar Gallus underwent the same fate there by order of Constantius．（Ammian．Marc．xiv．11．）After the fall of the Poman Empire in the West it continued to be a place of importance，and in A．D． 544 it was there that Belisarius assembled the fleet and army with which he was prepariog to cross over to hal－ venna．（Procop．B．G．iii．10．）It probably partook of the prosperity which was enjoyed by all Istria during the period that Ravenna became the seat of empire，and which was continued throughout the perind of the Exarchate；we learn from the Itineraries that it was connected by a road along the coast with Tergeste，from which it was 77 miles distant，while the direct communication by sea with Iadera（Zava） seems to hare been in frequent use，though the passage was 450 stadia，or 56 Roman miles．（Itin． Ant．pp． $271,496$.
l＇ola is remarkable for the importance and pre－ servation of its ancient remains．Of these by far the most important is the amphitheatre，one of the most interesting structures of the kind still extant， and remarkable especially for the circumstance that the external circumference，usually the part wbich has suffered tbe most，is in this case almost eutirely perfert．It is hailt on the slope of a hill，se that on the E．side it has only one row of areades，while on the opposite side，facing the bay，it las a couble tier， with an additional story above．It is 436 English feet in length by 346 in breadth，so that it exceeds in size the amphitheatre of Nismes，though considerably snaller than that at Jerena．But its position and the preservation of its more architectural portions reoder it far more striking in aspect than either of them．Considerable remaius of a theatre were also prescrved down to the 17 th century，but were destroyed in 1636，in order to make use of the ma－ terials in the construction of the citadel．There still remain two temples；one of which was dedicated to Rome and Augnstus，and though of small size，is of rery elegant design and execution，correspunding to the Augustan age，at which period it was un－ doubtedly erected．It has thence bicome a favourite model for study with ltalian architects from the time of Palladio dewnwards．The other，which was consecrated to Diana，is in less complete preservation， and has been converted into a modern habitation． Besides these，the Porta Aurea，a kind of tiumphat arch，but erected by a private individual of the name of Sergius，now forms the S．gate of the city． Another gate，and seseral portions of the ancient walls are also preserved．The whole of these monu－ ments are built of the hard white limestone of the country，closely approsching to marble，which adds
much to their effect. Daute speaks of the environs of Pola, as in lis time remarkathio for the mumerous sarcophagi and ancint tomis with which they were almost wholly occupied. These have now disappeared. (bante, $/ n f . \mathrm{ir} .13$.)

The antiquities of Pola lave been repeatedly described, and illnstrated with firures: antong others. in the fourth velune of Stuart :and Revett's A Aliens. fol. Land. 1816, and in the lomme Pittoresque de IIstrie et do la Intmatie, fol. Varix, 1802 : also in Allason's Autiouilis nf Poln, fill, Lond. 1819.

The harlour of l'ola is completely landlocked, so as to have the appearance of a snlall basin-shaped lake, communicating by a narrow channel with the sea. Off its entrance lies a groop of small islands called the Isole Erioni, which are probably those called by Pliny Cissa and Pullaria. (Plin. iii. 26. s. 31.) The southernmost promuntory of Istria, abont 10 miles distant from Pola, derived from the name of Polationm Prumontorium. It is now called Capo Promontore.
[E. H. B.]
 coast of Pontus, at the mouth of the small river Sidenus, 10 stadia from Phadisane, and 130 from Cape I.sonium. (Arrian, Peripl. p. 16 ; Annnym. Peripl. p. 11, Sc.. P'tol. v. 6. \& 4 ; Steph. B. s. r.) Pliny (vi. 4) places the town 120 Roman miles from Amisus, which seems to be too great a distance. (Comp. Aum. Mare, sxii. 8: Hierucl. p. 702. where it is errumpouly callel To deminoov; Tab. Perting.) Neither Serabo nor any writer before him mentions this town, and it is therefore generally believed that it was built on the site of the town of side, which is not noticed by any writer after Strabo. Its name intimates that it was foundol, or at all events was named, after one Polemon, perhaps the one who was made king of that part of P'ontus, about B. c. 36 , by 31. Antonius. It had a harbour, and scems to have in the couse of time become a place of considerable importance, as the purt of Pontus in which it was situated receired from it the name of Pontus Polemoniacus. The town was situated on the western bank of the Silenns, where its existence is still attested by the ruins of an octagon church, and the remains of a nassive wall; but the ancient name of the place is proservel by the villace of Pouleman, on the opposite side of the river. (Hamilton, Restarches, vol, i. p. 270.)
[L.S.]
YOLICHSA (Пoגíva). 1. A town of lacouia, mentioned nuly by Polybius (iv 36), is placed by Leake in the interior of the country on the astern slope of Mt. Parnon at Réoula ( $\tau$ à Péavia), where, among the ruins of a fortified town of the lower empire, are some remains of Hellenic wails. (Leake, Peloponmsiaca, p. 364.)
2. A town in the NW. of Messenia on the rowl from Andatia to Dorimm and Cyparissha. (P'aus.

3. A town of Mesaris. mentioned only in a line of Honner, quok doy strabo, for which the Athenians substitutel amother to prose that Salamis at the time of thic Tiajan Whar was a dependency of Athens. (Strab. ix. p. 394.)

narrow space，hordered by precipitons hanks－are those of an ancient Latin city；but whether they mark the site of Politorium，as supposed by Gell， or of Tellenae，as suggested by Nibby and adopted by Abeken，we are wholly without the means of determining．（Gell，Top．of Ronce，p． 280 ；Nibby， Dintorni，vol．ii．p．571，vol．iii．p．146－152； Abeken，Mittel Italien，p．69．）The ruins at La Givstra are more fully noticed under the article Tellenae．
［E．H．B．］
POLLE＇NTIA．1．（По入入ertia：Eth．Pollen－ tinus．Polenza），a city of Liguria，sitnated in the interior of that province，at the northern foot of the Apennines，near the confluence of the Stura and Tanaro．It was about 7 miles W．of Alba Pompeia， It was probably a Ligurian town before the Roman conquest，and inciuded in the territory of the Statielli ；but we do not meet with its name in his－ tory nntil near the close of the Roman republic， when it appears as a town of importance．In n．c． 43，M．Antonius，after his defeat at Mutina，with－ drew to Vada Sabata，intending to proceed into Transalpine Gaul；but this being opposed by his troops，he was compelled to recross the Apennines， with the riew of seizing on Pollentia；in which he was，however，anticipated by Decimus Brutus，who had occupied the city with fire coborts．（Cic．ad Fam．xi．13．）Under the Roman Empire，Pollentia is mentioned by Pliny among the＂nobilia oppida＂ which adorned the tract of Liguria between the Apennines and the Padus．（Plin．iii．5．s．7．）It baid considerable manufactures of pottery，and the wool produced in its territory enjoyed great reputa－ tion，baving a natural dark colour．（Plin．viii． 48. s．73，xxxv．12．s． 46 ；Sil．Ital．viii． 597 ；Martial， xiv．157．）It is incidentally mentioned as a moni－ cipal town under the reigu of Tiberius，having heen severely punished by that emperor for a tumnit that occurred in its forum．（Suet．Tib．37．）But its name is chiefly noted in history as the scene of a great battle fought between Stilicho and the Goths ander Alaric，in A．D．403．The circumstances of this battle are very imperfectly known to us，and even its event is varionsly related；for while Clau－ dian celcbrates it as a glorious triumph，Orosins describes it as a dubions success，and Cassiodorus and Jernandes boldly claim the victory for the Guths．（Claudian，B．Get．580－647 ；Prudent． in Symmach．ii．696－i49：Oros．vii． 37 ；Prosper． Chron．p． 190 ；Cassiod．Chron．p． 450 ；Jormand． Get．30．）But it seems certain that it was attended with great slanghter on both sides，and that it led to a temporary retreat of the Gothic king．No snbsequent mention is found of it，and we have no acconnt of the circumstances of its decay or de－ struction；hut the name does not reappear in the middle ages，and the modern Pollenza is a poor village．Considerable remains of the ancient city may still be traced，thongh in a very decayed con－ dition；they include the traces of a theatre，an smphitheatre，a temple，and other buildings；and variuus inscriptions have also been discovered on the spot，thus confirming the evidence of its ancient prosperity and importance．（Millin，Joynge en f＇iemont．gic．vol．ii．p．55．）The rains are situated two miles from the modera town of Cherasco，but on the left bank of the Tunaro．

2．A town of Picenum mentioned only by Pliny， who among the＂populi＂of that region，exumerates the Pollentini，whom he onites with the Urbs Salvia in a manner that seems to prove the two commu－
nities to have been mited into nne．（U＇rbesalvia Follentini，Plin．iii．14．s．18．）The Unhs S．ation， now Urbisaglia，is well known；and the site ot Pollentia must be sought in its immediate recigh－ bourhood．Holstenius places it at Monte N／Clome， on a bill on the left bank of the Chienti between Macerata and Tolentino，about 3 miles foni L＇rbi－ saglia on the opposite side of the valley．（Holsten． Not．ad Cluv．p．138．）
［E．H．B．］
POLLE＇NTLA．［Baleares．］
POLLUSCA or I＇OLUSCA（חoגov́ra：Eth． Пoגvaкavós，Polluscinus：Casal della Mandria）， a city of Latium，which appears in the eariy history of Rome inseparably connected with Longula and Corioli．Thus，in B．c． 493 ，we find the three places coumerated in succession as reduced by the arms of Postumus Cominias；and again in I．C． 488 all three were recavered by tbe Volscians under the command of Coriolanus．（Liv．ii．33，39；Dionys． vi．91，viii．36．）No subseypuent mention of Pollusca occurs，except that its patme is found in Pliny， among the cities of Latium of which all trace had disappeared．（Plin．iii．5．s．9．）As its name is there given among the places which bad once shared in the sacrifices on the Alban Monnt，it is probable that it was originally a Latin city，and had fallen into the hands of the Volscians；whence it is called，when first noticed in history，a Vulscian city． Livy，indeed，appears to regard Longula and Pollusea as belonging to the Vulsci Antiates，and therefure at that time mere dependencies of Antium．The position of Pollusca，as well as that of Longula，must be in great measure matter of conjecture，but the site suggested by Nibby，on a hill adjoining the Osteria di Civiti，about 22 miles from Rome，on the road to Porto $d$ Anzo，has at least a plausible claim to that distinction．The hill in question which is included in the farm of the Casal della Mandria， stands just at the bifurcation of the two roads that lead to Porto a＇Anzo and to Conca ：it was noticed by Sir W．Gell as the probable site of an ancient town，and suggested as one of those which might be selected for Corioli ：if we place the latter city at Monte Giove，the site more geberally adopted； Pollusca may very well have been at the Osteria di Cicitu；；but the point is one which can never be determined with certainty．（Gell，$T_{o p}$ of Rome， p．183；Nibby，Hintorni，vul．i．p．402；Abeken， Mittel Italien p．72．）
［E．H．B．］
POLTYOBRIA．［AENUS．］
POLIAEGU＇S（חo入úarqos），a desert island in the Aegaean sea，Dear Mlelos．（Ptol，iij．15．\＆ 28 ； Plin．iv．12．s．23；Mela，ii．7．）It is either Pulybus， or perhaps Autimelos with its wild goats．（Ross， Reisen auf den Griech．Inseln，vol．iii．p．26．）

POLYANTHES．［AmLntl．］
I＇OLYANUS（Hodúayos）a mountain in Epeirns mentioned by strabo（vii．p．327）along with Tu－ marus．

POLY＇BOTLS（По入ú\＆otos），a place in the west of Phrygia Major，a little to the sontli－east of Syn－ nada，is mentioned only by Hierocles（p．67\％）and a few Byzantine writers（Procop．Hist．Arc．18； Anna Comben．p．324；Concil．Nicaen．ii．p．358）， who，howerer，do not give the name correctly，but call it Polybatus or Polygotus．Col．Leake（Asinz Min． p．53）identifies the site of Polybotas with the mo－ dern Buluudun，which be regards as only a Turkish corruption of the ancient name．
［ I．．．．］
POLI＇GIUM，a place on the south coast of Gallia mentioncd in the Ora Maritima of Avienus（r．61i）：
" Tenuisque censt civit:s Polyginm est, Tum Nansa vicus oppidumuque Niustalo." There is nothing to say about a place for whose site there is no sufficiont evidence. Menard suppased it to be Bourigues on the Eitang de Tion. The natne sems to be Greek, and the place maty be one of the Massaliot settlements of: this coast. [NaUsтate].
[G. L.]
 6(6), 616: Polymedia, Plin. v. 30. s. 32), it small place in Mysia, between the promontury leetum and Assus, and at the distance of 40 stadiat from the former.

 18, corrected by Gail ; Пo $\lambda \nu \rho \rho \rho \dot{\eta} \nu \mathrm{Lov}$, Zenob. Prov. v. 50 : Pulyrrienium, Plin. iv. 12. s. 20 : Eth.
 a town in the NW. of Crete, whase territory occupied the whole western extremity of the island, exteuding from N. to S. (Scylax, p. 18.) Strabo describes it as lying W. of Cydonia, at the distance of 30 stadia from tbe sea, and 60 from lhalaama, and as containing a temple of Dietynna. He adds that the Polyrrheniaos formerly dwelt in villages, and that they were collected into one place by the Achacans and Lacedamonians, who built a strong city luoking towarls the south. (Strab. x. p. 479.) In the civil wars in Crete in the time of the Achaeau League, 18. C. 219, the l'olyrrhenians, who had been subject allies of Unossus, deserted the latter, and assisted the Lyctians against that city. Thoy abo sent ausiliary troops to the assistance of the Achaeans, because the Gnossians had supported the Aetolians. (Polyb. iv. 53, 55.) The ruins of Polyrrhenia, called Palaedkustro, near Kisumo-Kasteli, exhibit the remains of the ancient walls, from 10 to $\mathbf{J} 8$ feet high. (Pashley, Crete, vol. ii. p. 46, seq.)

POLYTIME'TUS. [OxLA PALES.]
I'OMETAA. [Suessa Iometha.]
 Cass:: Eth. Пopmŋiavos, l'ompeianus: Pompeii), an ancient city of Campania, situated on the coast of the heautiful gulf called the Crater or Bay of . Yaples, at the mouth of the river surnus (Sarno), and inmediately at the foot of Mount Vesuvius. It was internediate betwen Herculanemu and Stabiac. (strab. v. p. 247 ; Pliny, ini. 5.a 9 ; Mela, ii. 4. § 9.) All acconats arree in representing it as a very ancient city: a tralition recorded by Solinus ( 2. § 5) ancribed its tiundation to Hercules; but Diunysius, who expresoly notices him as the founder of Herculaneum, satys nothing of Pompeii (Dionys, i. 44). Strabo says it wats first occupied by the Oscans, subsequently by the Tyrrhomiaus (Etruscans) and Pelasgians, and aftorwarls by the samuites (Strab). l.c.). It contumel in the hamd of these last, that is, of the brancla of the tation who had assumed the name of Campanians [Casurania], till it passel under the eovernment of liome. It is probable that it becane tewo an early prriwl a flourishine town, owing to its alvantageons sitnation at the mouth of the sarmus, which rendered it the poit of Nols, Nuseria, athed all the rich plain watered by that river: (Ntrab. l. c.) lat we meet with no mentron of its natme in history previous to the loman conquent of Compmia. In m.c. 310 it is montioned fire the firat time, when a Joman flent mader P. Cornelius tow tom there, and

sequent notice of it occurs till the ontbreak of the Sucial War (n. c. 91), in which it appears to have taken a prominent part, as the Pompenani are mentioned by Appian apart from the other Campanians, in enumerating the nations that joined in the insurrection. (Appian, B. C. i. 39.) In the secund year of the war (B. C. 89) Pompeii was still in the hands of the insurgents, and it was not till after repeated engagement that L. Sulla, baving defeated the Samnite forces under L. Clucutius, and forced then to take refoge within the watls of Nola, was able to form the siege of Pompeii. (Appian, ib. 50; Oros. v. 18; Vell. Pat. ii. 16.) The rualt of this is nowhere mentioned. It is certain that the town ultimately fell into the liands of Sulla: but whether by force or a capitulition we are not inturmed ; the latter is, however, the most probable, as it escaped the fate of Stabiae, and its inlabitants were admittel to the Roman franchise, thoush they lost a part of their territory, in which a military colony was entablished by the dictator, under the guidance and patronage of bis relation, 1. Sula. (Cic. pro Sull. 21 ; Zumpt, de Colon. pp. 254,468 .) Before the close of the liepublic. Pompeii becane, in common with so many other maritine towns of Campania, a favourite resort of the Roman nobles, many of whom hat villas in its immediate neighbouthood. Among others, Cicero had a villa there, which he frequently mentions under the name of "Pompeianum," and which appears to have been a considerable establishment, and one of his favourite residences. (Cic. Acad. ii. 3, ad Att. i. 20, ad Fum. vii. 3, xii. 20.) Under the Empire it continued to be resorted to for the same purposes. Seneca praises the pleasantness of its situation, and we learn both from him and Tacitus that it was a populous and flourishing town ("celebre oppidum," Tac. Ann. xv. 22; Sen. Nut. (Qu. vi. 1). In addition to the colouy which it received (as already mentioned) under Sulla, and which is alluded to in an inscription as "Colania Veneria Cornelia" (Mommsen, Inscr. R. N. 2201), it seems to have received a colony at some later period, probably under Augustus (though it is not terned a colony by Pliny), as it bears that title iu several inscriptions (Motumsen, l. c. 2230-2234).

In the reign of Nero (A. D. 59) a tumult took place in the amphitheatre of Pompcii, arising out of a dispute betwcen the citizans und the newly-settled colnuists of Nuceria, which ended in a conflict in which many persons were killed and wounded. The Jompeians were pronished for this outbreak by the prohibitton of all gladiatorial and theatrical exhibitions for ten years. (Tac. Ann, xiv, 17.) Only fiur years after, the city suffered severely from an earthquake, which touk place on the 5th of February, A. D. 63. The expressions both of Seneca and Tacitus rould lead us to suppose that it was in great purt utterly destroyed; and we learn from existing cyldence that the damare done was unquestionably very great, the public buildings especially having suffered most severely, (Sm. Nat. (2u. vi. 1; Tac, Ann. xv. 22.) The city had hardly recovered from this calamity, when it met with one far greater; being totally overwhelmed by the famous eruption of fesuvius in A. D. 79, which buried l'ompeii, as well as Herenlameum, muler a dense bed of ashes and cinders. The loss of life in the firmer city was the greater, beeause the-inhalitants were assembled in the theatre at the time whom the eatastrophe took place. (1hion (ass. 1avi. 23.) The yonal or Pliny, in his cel beat d HOYOMOHId(F)hetion of Yompeii or Her-

## POM1'EII.

POMPEI.
culaueum ; hat his attention is directed principally to the circumstances of his uncle's death and the phenomena which he had himself witnessed.
From this time the name of Pompeii disappears from history. It is not noticed by Ptolemy ; and it is certain that the city was never rebuilt. But the name is again found in the Tabula; and it thus appears that a small place mnst have again arisen on the site, or, more probably, in the neighbourhood, of the buried city. But all trace of Pompeii was subsequently lost; and in the middle ages its very site was entirely forgotten, so that even the learned and diligent Claverins was nnable to fix it with certainty, and was led to place it at Scaficti on the Sarno, about z miles E. of its true position. This difficulty arose, in great measure, from the great physical changes produced by the catastrophe of A.D. 79 , which diverted the course of the Sarmo, so that it now flows at some distance from Pompeii, - and at the same time pushed forward the line of the coast, so that the city is now above a mile distant from the sea, which in ancient times undoubtedly bathed its walls.
There is no reason to suppose that Pompeii in ancient times ever rose above the rank of a secondrate provincial town; but the re-discovery of its buried remains in the last century has given a celebrity to its name exceeding that of the greatest cities. The circumstances of its destruction were pecnliarly favurable to the preservation of its remains. It was not overthrowa by a torrent of lava, but simply buried by a vast accumulation of volcanic sand, aslies, and cinders (called by the Italians lapilli), which forms a mass of a very light, dry, and porons character. At the same time, it is almost certain that the present accumulation of this volcanic depusit (which is in most places 15 feet in depth) did not take place at once, but was formed by successive eruptions; and there is little doubt that the rains were searched and the most valuable objects removed
soon after the catastrophe took place. This seems to be proved by the small number of objects of intrinsic value (such as gold and silver plate) that bave been discosered, as well as by the fact that comparatively few skeletons have been found, though it appears certain, from the expressions of bion Cassius, that great numbers of the inhabitunts perished; nor have any of these been found in the theatre, where it is probable that the greatest loss of life occurred.

It was not till 1748 that an accidental discovery drew attention to the remains of Pompeii; and in 1755 regular excavations on the site were first commenced by the Neapolitan government, which have been carried on ever since, though with frequent intervals and interruptions. It is impossible for us here even to attempt to give any account of the results of these excavations and the endless variety of interesting remains that have been brought to light. We shall confine ourselves to those points which bear more immediately on the topography and character of the town of Pompeii, rather than on the general habits, life, and manners of ancient times. More detailed accounts of the remains, and the numerous objects which have been discovered in the course of the excavations, especially the works of art, will be found in the great work of Mazois (Les Raines de Pompeii, continued by Gau, 4 vols. ful., Paris, 1812_-1838), and in the two works of Sir W. Gell (Pompeiana, 1 st series, 2 vols. 8 ro. Lond. 1824 ; 2nd series, 2 vols. 8vo. 1830); also in the little work published by the Society of Useful Knowledge (Pompeii, 2 vols. 12 mo .1831 ). A recent French publication by Breton (Pompeia, 8vo. Paris, 1855), also gives a good account of the whole progress and results of the discoveries (including the most recent excavations) in a muderate compass and inexpensive form. The still more recent work of Overbeck ( 8 vo . L.aipzic, 1856), of which the first part only has yet appeared, contains an excelleat compendium of the whole sub-

ject, with especina attention to the works of art discovered.

The area occupied by the amcient city was an irregular oval, about 2 miles in circumference. It was surroundel by a wall, which is still preserved round the whole of the city, except on the side towards the rea, where no traces of it have been found, and it seems certain that it had been pulled down in ancient times to allow for the extension of houses and other buildings down to the water's edge. The wall itself is in many places macls ruined, as well as the towers that flank it, and though this may be in part owing to the earthquake of 63, as well as the eruptinn of 79 , it is probathle that the defences of the town had before that time
been allowed to fall into decay, and perhaps even intentionally dismantled after the Social War. There were seven gates, the most censiderable and ornamental of which was that which formed the entrance to the city by the high road from Herculaneum: the others have been called respectively the gate of Vesuvius, the gate of Capua, the gate of Nola, the gate of the Saruas, the gate of Stabiae, and the gate of the Theatres. The eutrances to the town from the side of the sea lad ceased to be gates, there being no longer any walls on that side. All these names are of course modern, but are convenient in assisting us to describe the eity. The walls were strencthened with an Agger or rampart, faced with masonry, and having a parapet or outer

wall on its external front : they were further fortified at intervals with aquare towers, which in some parts occur regularly at about 100 yards from each other, in other parts are added much more sparingly. These towers seem to have been subsequent additions to the original walls, being of a different and less solid style of construction. The walls themselves are very solidly bnilt of large blocks of travertine, in horizontal courses, but presentiog coasiderable irregularities of construction: the upper part is more regularly finished, and consists of peperino. But both walls and towers are in many places patched with coarser masonry and reticulated work; thus showing that they had been frequently repaired, and at distant intervals of time.

The general plan of the city is very regular, and the greater part of the streets run in straight lines: but the principal line of street, whicb runs from the gate of Herculanenm to the Forum, is an exception, being irregular and crooked as well as very narrow. Though it must andoubtedly have been one of the chief thoroughtares of the city, and the line followed by the high road from Capua, Neapolis, and Bome itself, it does not exceed 12 or 14 feet in width, including the raised trottoirs or footpatbs on each side, so that the carriageway could only have admitted the passage of one vebicle at a time. Some of the other streets are broader; but few of them exceed 20 feet in width, and the widest yet found is vely about 30 . They are uniformly paved with large polygonal blocks of hard lava or basalt, in the same manner as were the streets of ancient Rome, and the Via Appia, and other great highways in this part of Italy. The principal street, already noticed, was crossed, a little hefore it reached the Foram, by a long straight line of street which, passing by the temple of Fortune, led direct to the gate of Nola. In the angle formed by the two stood the public baths or Thermae, and between these and tbe temple of Fortune a short broad street led direct to the Fornm, of which it seems to have formed the principal entrance. From the Forum two other parallel streets struck off in an easterly direction, which have been followed till they cross anotber main line of street that leads from the gate of Vesuvius directly across the city to the gate adjoining the theatres. This last line crosses the street already noticed, leading from the gate of Nola westward, and the two divide the wbole city into four quarters, though of irregular size. Great part of the city (especially the SE. quarter) has not yet been explored, but recent excavations, by following the line of these main streets, bave clearly shown its general plan, and the regularity with which the misor streets branched off at intervals in parallel lines. There is also little doubt that the part of the city already excavated is the most important, as it includes the Forum, with the public buildings adjoining to it, the theatres, amphitheatre, \&c.

The Forum was situated in the SW. quarter of the city, and was distant about 400 yards from the gate of Herculaneum. As was commonly the case in ancient times, it was surrounded by the principal public buildings, and was evidently the centre of the life and movement of the city. The extent of it was not, however, great; the actual open space (exclusive of the porticoes which surrounded it) did not exceed 160 yards in length by 35 in breadth, and a part of this space was occupied by the temple of Jupiter. It was surrounded un tbree sides by a Grecian-Doric portice or colonnade, which appears
to have been surmounted by a gallery or upper stury, though no part of this is now preserved. It would seem that this portico had replaced an older arcade on the eastern side of the Forum, a portion of which still remains, so that this alteration was not yet completed when the catastrophe tonk place. At the north end of the Forum, and projecting out into the open area, are the remains of an edifice which must have been much the most magnificent of any in the city. It is commonly known, with at least a plausible foundation, as the temple of Jupiter ; others dispute its being a temple at all, and have called it the Senaculum, or place of meeting of the local senate. It was raised on a porlium or base of considerable elevation, and bad a portico of six Corinthian columns in front, which, according to Sir W. Gell, are nearly as large as those in the portico of St. Paul's. From the state in which it was found it seems certain that this edifice (in common with mast of the public buildings at Pompeii) had been overthrown by the earthquake of 63 , or, at least, so moch damaged that it was necessary to restore, and in great part rebnild it, and that this process was still incomplete at the time of its final destruction. At the NE. angle of the Forum, adjoining the temple of Jupiter, stood an arch wbich appears to have been of a triumphal character, though now deprived of all its ornaments: it was the principal entrance to the Formm, and the only one by wbich it was accessible to carriages of any description. On the E. side of the Formm were four edifices, all unquestionably of a public character, tbough we are much in doubt as to their objects and destination. The first (towards the N.) is generally known as the Pantheon, from its baving contained an altar in the centre, with twelve pedestals placed in a circle round it, wbich are supposed to have supported statues of the twelve chief gods. But no traces bave been found of these, and the general plao and arrangement of the building are wholly unlike those of an ordinary temple. A more plausible conjecture is, that it was consecrated to Augustus, and contained a small temple or nedicula in honour of that emperor, wbile the court and surrounding edifices were appropriated to the service of bis priests, the Augustales, who are mentioned in many inscriptions as existing at Pompeil. Next to this building is one which is commonly regarded as the Curia or Senaculum ; it bad a portice of fluted columns of white marble, which ranged with those of the general portico that surrounded the Forum. South of this again is a building which was certainly a temple, though it is impossible now to say to what divinity it was consecrated; it is commonly called the Temple of Mercary, and is of small size and very irregular form. Between this and the street knuwn as the Street of the Silversmiths, wbicb issned from the Forum near its SE. angle, was a large building which, as we learn from an inscription still existing, was erected by a female priestess named Eumacbia. It consists of a large and spacions area (about 130 feet by 65) surrounded by a colonnade, and baving a raised platform at the end with a semicircular recess similar to that usually found in a Basilica. But though in this case the founder of the edifice is known, its purpose is still completely obscure. It is commonly called the Cbalcidicum, but it is probable that that term (which is found in the inscription above noticed) desiguates only a part of the edifice, not the whole huilding.

The S. end of the Forum was occupind by theer "f justien, in which the tribunals held their sittinsbuildings of very similar charaeter, stamling side by The western side of the Forum was principally ecenside, each consisting of a single hall with an apse or pied by a B:sitica, atul a large temple, which is

POMPE11.
l'OMIELI.
building in Pompeii; it is of an oblong form, 220 feet in length by 80 in breadth, and abutted endwise on the Forum, from which it was entered by a vestibule with five doorways. The roof was supported by a peristyle of 28 lonic columns of large size, but built of brick, coated with stucco. There is a raised tribunal at the forther end, but no apse, which is usually found in buildings of this class. Numerous inscriptions were found scratched on the walls of this edifice, one of which is interesting, as it gives the date of the consulship of M1. Lepidus and Q. Catulus (b. C. 7s), and thas proves the builing to have been erected before that time. Between this edifice and the temple is a street of greater width than usual, which extends from the Forum in a westerly direction, and probably communicated with the port. The Temple of Venus, on the N. side of this street, was an extensive building consisting of a peripteral
tempie with a small cella, elevated on a podium or basement, surrounded by a much mors extensive portico, and the whoie again enclosed by a wail, forming the peribolus or sacred enclosure. All parts of the building are profusely decorated with painting. The temple itself is Corinthian, but the columns of the portico seem to have been originally Doric, thongh afterwards clomsily transformed into Corinthian, or rather an awkward imitation of Corinthian. This is only one among many in stances found at Pompeii of very defentive architecture, as well as of the frequent changes which the buildings of the city had undergone, and which were still in progress when the city itself was destroyed. The buildings at the NW. carner of the Forom are devoid of architectural cbaracter, and seem to have served as the public granaries and prisons.

TUMILLE OF VENVS.
(The Forum and Temple of Jupiter is the background.)

The open area of the Forum was paved, like that of Rome, with broad slabs of a kind of marble, thus showing that it was never designed for the traffic of any kind of vehicles. It is moreover probable that the whole space, including the porticoes which surrounded it, could be closed at night, or whenever it was required, by iron gates at the several entrances. It was adomed with numerous statues, the pedestals of which still remain : they are all of white marble, but the statues themselves have unitormly disappeared. It is probahle either that they had not been re-erected during the process of restoration which the Forum was andergoing, or that they had been searched tor and carried off by excavations soon after the destruction of the city.

The remaining public buildings of the city may be more briefly described. Besides the temples which surrounded the Forum, the remains of four others have bren discovered; three of which are situated in the immediate vicinity of the theatres, a quarter which appears to have had more of architectural moment than any other part of the city, except the Forum. Of these the most interesting is one which stood a little to the SW. of the great theatre, near the wall of the city, and which is evidently much more ancient than any of the other temples at Pumpeii: it is of the Doric order and of pure Greek style, but of very ancient character, much resembling that of Neptune at Paestom and the oldest temples at Selinus. Unfortunately only the basement and a few capitals and other architectuad fagrgents remain.

It is commonly called the Temple of Hercules, but it is obvions that such a name is purely conjectural. It stood in an open area of considerable extent, and of a triangular form, surrounded on two sides by porticoes: but this area, which is commonly called a Foram, bas been evidently constructed at a much later period, and with no reference to the temple, which is placed very awkwardly in relation to it. Another temple in the same quarter of the tuwn, immediately adjoining the great theatre, is interesting because we learn with certainty from an inscription that it was consecrated to Isis, and bad been rebuilt by N. Popidius Celsinns "from the foundations ${ }^{r}$ after its overthrow in the great earthquake of A. D. 63. It is of a good style of architecture, but built chiefly of brick covered with stucco (unly the capitals and shafts of the columns being of a soft stone), and is of small size. Like most of the temples at Pompeii, it consists of a cella, raised on an elerated podium, and snrrounded externally by a more extensive portico. Adjoining this temple was another, the smallest yet found at Pompeii, and in no way remarkable. It has been variously called the temple of Aesculapius, and that of Jupiter and Juno.

The only temple which remains to be noticed is one situated about 60 yards N . of the Forum at the angle formed by the long main strect leading to the gate of Nola, with a short broad street which led from it direct to the Forum. This was the Temple of Fortune, as we learg from an inscription,
and was ereeted by a certain N. Tullins, a citizen and magistrate of Pompeeii, who has been supposed to be of the family of Cicero; but the absence of the cognomen renders this highly improbable. The epithet of Fortuna Augnsta shows that the temple and its inscription are not earlier than the time of Augustus. It is much in ruins, having probably suffered severely from the earthquake of 63 ; and lias little architectural effect.

Pompeii possessed two Theatres and an Amphitheatre. The former were situated, as seems to have been usnal in Greek towns, elose together; the laryer one being intended and alapted for theatrical performances properly so called; the smaller one serving as an Odeum, or theatre for music. Both are unquestionably of Roman date: the larger one wais erected (as we learn from an inscription found in it) by two members of the same family, M. Holconins Rufus and M. Holconius Celer, both of whom appear to have held high civil offices in the municipal government of Pompeii. The period of its construction may probably be referred to the reign of Augustus. The smaller theatre seems to be of earlier date, and was erected at the public expense under the direction of the Duumviri or chief magistrates of the city. The large Theatre is to a considerable estent excavated out of the side of a hill, on the slope of which it was situated, thus saving a considerable amount of the expense of construction. But the exterior was still surrounded by a wall, a part of which always rose above the surface of the soil, so that it is singular it should not have long before led to the discovery of the buried city. Its interaal disposition and arrangements, without exactly coinciding with the rules laid down by Vitruvins, approacb sufficiently near to them to show that it was constructed on the Roman, and not the Greek model. Its architect (as we learn from an inscription) was a freedman of the name of M. Artorius Primus. It seems to have been almost wholly eased or lined with marble, but the greater part of this, as well as the other decorations of the building, has been carried away by former escarations, probably made soon after the catastrophe. The interior diameter of the building is 223 feet: it had 29 rows of seats, divided into three stories by galleries or preceinctiones, and was capable of containing about 5000 spectators. The smaller Theatre, which communicated with the larger by a covered portico oo the level of the orchestra, was not above a fourth of the size of the other, being adapted to receive only about 1500 spectators. We learn from an inscription that it was covered or permanently roofed in, a rare thing with ancient theatres, and doubtless owing to its small size. Its chief arehitectural pecoliarity is that the seats are cut off by the walls at the two sides, so that it is only the lower seats of the carea, of which the semicircle is complete.
Adjoining the two theatres, and arranged so as to have a direct comnunication with both, is a large quadrangular court or area (183 feet long by 148 wide), surrounded on ali sides by a Doric portico. Its destination is very uncertain, it lias been called a procision market (Forum Nundinarium); but is more generally regarded as laving served for the barracks or quarters of the soldiers. rerrhaps a nore plausible conjecture is that it was a barrack, not of soldiers but of gladiators. On the W. of this, as well as of the great theatre, was the triangular area or forum already nuticed, in

of this on the N. , where it communicated with the street, was ornamented by a portico or Propylseum composed of eight lonic columns of very elegant style. but consisting of the commou voleanic tufo, cased with stucco.

The Ainphitheatre is situated at the distance of above 500 yards from the Theatres, at the extreme SE. angle of the city. It offers no very renarkable differences from other edifices of the same kind: its dimensions ( 430 feet by 335) are not such as to place it in the first rank even of provincial structures of the class; and from being in great part excavated out of the soil, it has not the imposing architectural character of the amphitheatres of Verona, Nemausus, or Pola. It had 24 rows of seats, and abrot 20.010 feet of sitting-room, so that it was adapted to receive at least 10,000 spectators. From one of the inscriptions found in it, it appears that it was built, or at least commenced, by two lucal magistrates, named C. Quinctius Valgus and M. Porcins, after the estahlishment of the colony under Augustus, and probably in the reign of that emperor.
The only public building which remains to be noticed is that of the Thermae or Batbs, which were situated in the neighbourhood of the Foram, adjoining the short street which led into it from the Temple of Fortune. They bave no pretence to vie with the magnificent suites of buildings whicb bore the name of Thermae at Rome, and in some other great cities ; but are interesting as containing a complete suite of all apartments really required for bathing, and from their good preservation throw much light apon all similar renains. The details of their construction and arrangement are fully given in the Dictionary of Antiquities [arl. Balneak], as well as in the works specially deroted to Pompeii.

It is impossible here to enter iuto any details concerning the results of the excavations in regard to the private dwellings at Pompeii, though these are, in many respects, the most interesting, from the light they have thrown opon the domestie life of the ancient inbabitants, their manners and usages, as well as from the artistic beauty and variety of the objects discorered. A few words on the general character of the honses and other private buildings of Pompeii are all tbat our space will admit of. As these are almost the only remains of a similar kind that have been preserved to us, it must be borne in mind that they can bardly be regarded as representing in their purity the arrangements either of the Greek or Roman mode of building. On the obe hand Pompeii, thongh strongly tinctured with Greek civilisation, was not a Greek city; on the otber hand. though there is no doubt that the houses at Pomperii present much more the Roman plan and arrangement than that of the Greeks, we must not conclude that they represent them in all respects. We know, at least, that Rome itself was built in many respects in a very different manner. Cicero, in a wellknown passage, contrasts the narrow streets, the lofty houses, and irregular construction of the capital with the broad streets and regular arrangement of Capua, resulting from its position in a level phain; and it is clear that, in some respects, Pompcii more resembled the capital of Campania than the imperial city. Its streets iadeed (as already stated) were narrow, but with few exceptinns straight ond regular, and the houses were certainly low, seldom excewliog two stories in height: and -rynof thasc the uppretpry seems to have coosisted
ouly of inferior rooms, a kind of garrets, probably serving for the sleeping-roons of slaves, and in some cases of the females of the family. From the mode of destruction of the city the npper stories have indeed been almost uniformly totally destroyed; bnt this circnmstance itself, as well as the few traces which oceasionally remain, seems to prove that they were built wholly of wood, and conld never have formed an important part of the houses. It is only on the W. side of the city, where the ground slopes steeply towards the sea, that houses are found which cnnsisted of three stories or more. Externally the bonses had little or nothing of an ornamental character; not a single iastance bas been found of a portico before a private honse; and towrards the street they presented either dead walls, with here and there a few small and scanty openings as windows, or ranges of shops, for the most part for and mean in character, even when they occnpied (as was often the case) the front of dwellings of a superior description. The interior of the houses of the more wealtby class was arranged apparently on the same model as those at Rome: its disposition is given in detail in the Dictionary of Antiquities under the article Domes where a plan is giren of the House of Pansa, one of the most extensive and complete of those found at Pompeii. In this case the singie house with its garden and appartenances, including as nstal several shops, occupied the whole of an insula or the space boanded by four streets or alleys: but this was unusual; in most cases each insula comprised sereral houses even where they were of a better description, and most have bren the residence of persons of some wealth. Among the most remarkable of these may be mentioned the dwellings known as the Honse of Sallost, that of the Tragic Poet, of Castor and Pollux, of the Sabyrinth, \&.c. The work of Dr. Orerbeck (above cited) gires a very interesting series of these houses, selected so as to afford examples of every description of house, from the humblest dwelling. consisting of only two rooms, to the richly decorated and spacious mansions of Sallnst and Pansa.

The style of decoration of these houses presents a rery general uniformity of character. The walls are almost incariably ortamented with painting, the
atrium and peristyle being decorated with columns; but these are composed only of a soft and coarse stone (voleanic tnfo) covered with stacco. The prodigal use of marble, both for columns and slahs to encrust the walls, which had become so general at Rome under the first emperors, apparently not having yet found its way to Pompeii. The flows are generally enriched with mosaics, some of which possess a very bigh degree of merit as works of art. The most beantiful yet discovered adorned the house known as the Honse of the Fann, from a bronze statue of a dancing Faun which was also founi in it. The illustrations to Gell's Pompeiana (2ud series, Lond. 1835) will convey to the reader a sufficient idea of the number and variety of the artistic decorations of the private houses at Pompeii; thongh several of the most richly ornamented have been discorered since the date of its publication.

Outside the gate leading to Hercnlanenm, in a kind of subarb, stands a house of a different deseription, being a suburban villa of considerable extent, and adapted to bave been the abode of a person of considerable wealth. From the greater space at command this villa comprises much that is not found in the honses within the town: among others a large court or garden (Xystus), a complete suite of private baths, \&c. The retnaios of this villa are of much ralue and interest for comparison with the numerous ruins which occar elsewhere of similar buildings, often on a much more extensive seale, but in a far less perfect state of preservation; as well as for assisting us to onderstand the descriptions given by Pliny and Vitrorius of similar structures, with their numerous appurtenances. (For the details of their arrangements the reader is referred to the article Villa, in the Dictionary of Antiquities, and to the work on Pompeii, Lond. 1832, vol. ii. ch. 11.) Between this villa and the gate of the city are the remains of another villa, said tu be on a larger scale and more richly decorated than the one just described; but its rains, which were excavated in 1764, were filled op again, and are not now visible. It has been called, though withont the slightest anthority, the Villa of Cicero. The one still extant is commonly known as the Villa of Arrius Diomedes, but for no other reason than that

STREET OF THE TOMLS.

## POUPTINAE PALUDES.

a sepulchre bearing that name was discovered near its entrance; a very slight argument, where almost the whole street is hordered with tombs. In fict, the approach to the gate of Herculaneum is bounded on both sides by rows of tombs or sepulchral monuments, extending with only oerasional intermptions for above 400 yards. Many of them are on a very considerable scale, both of size and architectural character: and though they cannot vie with the enormous mansolea which border in a similar manner the line of the Via Appia near Rome, they derive additional interest from the perfect state of preservation in which they remain: and the sitreet of the Tonbs, as it is commonly called, is perhops one of the most interesting seenes at lompeii. The nonuments are for the most part those of persons who had held macistracies, or other offices, in the city of Pompeii, and in many cases the site was assigned them by public authority. It is therefore probable that this place of sepulture, immediately ontside the gate and on one of the principal approaches to the city, was regarded as peculiarly honourable.

Besides the tombs and the two villas already noticed, there have been found the remains of shops and small houses outside the gate of Herculaneum, and there would appear to have been on this side of the city a considerable suburb. This is supposed to be the one designated in the septrlchral inscription of M. Arrins Hiomedes as the "Pagus Augustus Felix suhurbanus." We have as yet no evidence of the existence of any snburbs ontside the other gates. It is evident that any estimate of the population of Pompeli must he very varue and nncertain ; but still from onr accurate knowledge of the space it occupied, as well as the character of the houses, we may arive at something Jike an approsimation, and it seems certain that the population of the town itself conld not have excecrled about 20,0000 persons. This is in accordance with the statements of ancient writers, nome of whom would lead us to regaril Pompeii as havinse been more than a seconil or third rate provincial town.

The inscriptions fant at lompeii, which are often incorrectly given in the ontinary works on the subjoct, are carefully enlited by Mommsen, in his Inscriptiones Regni Neapolituni ( $\mathrm{PP}, 112-122$ ). These do not, howevor, include a class of much interest, and pecnliar to Pompeii, the inseriptions of a temporary kind which were rudely painted on the walls, or seratched on the plaster of the honsess and public buiklines. It is runarkable that several of these are in the Osman dialect, and semm to prove that the nse of that abolent langnage must have continued down to a much later proion than is commonly supposed. [()sci]. Bat the public or official use of the Oscan scems to have ceased after the social War, and the numerous inseriptions of a public charncter which belong to the age of Angustos and his successors are uniformly in the Latin language.
[E. II. B.]
POMPETI PRAESI' 1 IUBI (Tah. Pent.; Pompeii, Itiz. Ant. p. 134 ; Ipompei, Itin. IFicros. p. 566 ), a place in Mosia Supctior, butween Horrenm Marci and Naissus, Hlentifiod either with Kaschnia (Heiclaard) or Boutoran (L,apiu).
 Paphlaronia, on the southern bank of the river Am nias, a tributery of the Ilalys (Strab. xii. p. 562 ; Steph. B. s. v.). Its name semms to indieate that it was founded by Fompey the fireat. In the Itine-

ing to which its site may be looked for in the valley of the Amnias, about the modern Tash Kupri, where Captnin Kinneir (p. 2s6) found some ancient remains. In the vicinity of the place was a freat mine of the mineral called Sindatach. (Strab. l. c.) Pompeiopolis is often ruferred to by late writers as an episcopal sce of 1'aphlagonia (אocrat. ii, 39, Se.; Jierocl. p. 695 ; Constant. Porph. de 7 'hem. i. 7 ; Justinian, Vovell. xxix. 1; Tub. Peating.).

The name lompehpolis was borne teuporarily by several towns, surh as Solu in Cilicia, Ammes and Eupatones in Cappaducia, as well as by Pompkras in Tarraconensian Smin.
[L. S.]
 iii. p. 161, who makes the name equivalent to Hou$\pi \eta \Delta o f \pi o \lambda i s$ ), the chief town of the Vascones in IILipania Tarramonensis, on the road from Asturiea to Burdigala ( $7 t i n . A n t, ~ p .4 .55$ ), and a civitas stipentiaria in the jursdiction of Caesarancusta. (Plin. iii. 3. s. 4.) Now Pamplone, [1. H. D.]

1'OMI ONA A'NA. Pliny (iii. 5) says that Pomponiana is the same as Mese, the middle island of the Stnechades or Isles d Hières [STopenames], which lie close to the French coast east of Toulon. D'Arville, following the Maritime Itinerary, which place's Pomponiana between Telo (Toulon) and Heracleia Caccabaria [Heraclenil], thinks that Pomponiana is the peninsula of Giens, which is opponite to the western point of Brote (Porqueroles), the mast western of the Stoecbades. Ho remarks that the part of Giens which is on the land side is almost covered by a lagune, from which there are channels to the sea on both sides, so that the peninsula may be considered as an inland.
[G. L.]
POMI'ONIA'NIS PORTUS. [PoRTUS POMPONIANIS.]

PODPTI'NAE PALU'DES ( $\tau \grave{\alpha}$ По $\Pi \pi \tau \bar{\imath} v a$ ë $\lambda \eta$ : Puludi Pontine) was the name given to the extensive traet of marshy gronnd in the $S$, of Latimm at the foot of the Volscian mountains, extending from the neighbourbood of Cisterna to the sea at Terracina. They occupy a space of about 30 miles in lenyth by 7 or 8 in breadth: and are separated from the sea on the W. by a broad tract of sandy plain, covered with forest, which is nlso jerfectly level, and intermixerl with marshy spots, and pools or lagoons of stagnant water, so that it is almost as unhealthy as the regular marsh, and the whole traet is often comprised under the name of the Pontine Morshes. The extremely low level of this whole tract. affording scarcely any natural outfall for the waters whicl descend into it from the Volscian mountains, to getler with the accumulation of sund along the seashore from Astura to the Circeian promontory, readily accounts for the formation of these extensive marshes: and there can be no doubt that the whole of this low alluvial tract is of very recent origin compared with the rest of the adjoining mainland. Still there is the strongest reason from plysical considerations to reject the nution very generally entertained by the Komans, nod adopted by Pliny, that the whole of this accumulation had taken place within the period of historical record. This idea seems indeed to have arisen in the first instance from the nasmuption that the Mons Circeius was the island of Circe mentioned by Homer, and was therefore in the time of that poet really an island in the midst of the open sea. [Cimcrius Moss.] But it is far more strange that Pliny should assert, on the authority of Theophrastus, ihat the acen-

time of that writer; though Theophrastus himself tells us distinctly that the island was io his days united to the mainland by the accumulated deposits of certain rivers. (Theophr. H. P. v. \&. § 3; Plin. iii. 5. s. 9.) Another tradition, preserved to us also by Pliny ( $l$. c.), but wholly at variance with the last, asserted that the tract then covered by marshes, and rendered uninhabitable by them, had formerly been occupied by no less than 24 (or, accorling to some MSS., 33) cities. But no trace of this fact, which he cites from Mucianus, an author contemporary with himself, is to be found in any earlier writer; and not even the name of one of these supposed cities has been preserved; there can therefore be little doubt that the whole story has arisen from some misconception.
The Pomptine Marshes are generally represented as derising their name from the city of Suessa Pometia, which appears to have been situated somewhere on their borders, thongh we have no clue to its precise position. [Suessa Pometha]. The " Pomptinus ager," which is repeatedly mentioned by Livy, and wbich was coltixated with corn, and part of it portioned out in lots to Roman colonists (Liv. ii. 34 , iv. 25 , vi. 5,21 ) was probably rather the district loordering on the marshes than the actual swampy tract, which does not appear to have been ever effectually reclaimed; though a very moderate amount of industry must at any time bave sufficed to bring into cultivation considerable portions of the adjoining plain. As early, however, as the year 312 B. c. the Appian Way appears to have been carried through the midst of the marshes (Liv. ix. 29; Diod. xx. 36), and a canal conducted along with it from Forum Appii to Tarracina, which became also much resorted to as a mode of traffic. [Via Appra.] The iostitution of the Pomptine tribe in B. C. 358, and of the Ufentine tribe in B. c. 318 (Liv. vii. 15 , ix. 20 ), would seem also to point to the existence of a considerable population in the neighbourhood at least of the Pomptine Marshes; but still we have unequivocal testimony of the continued existence of the marshes themselves in all periods of antiquity. (Sil. Ital. viii. 380; Strab. v. p. 233, \&c.)

The very circumstance that the plain is bordered throughout hy a chain of consideratile and populous towns situated on the monntain front, while sot one is recorded as esisting in the plain itself, is a sufficient proof that the latter was in great part uninhalitathe.

The actual marshes are formed principally by the stagnation of the waters of two streams, the Ahasexus and the Ufexs, both rising in the Volscian mountains. (Strab. v.p. 233.) Of these the latter was the most considerable, and appears to have been regarded as the priccipal stream, of which the Amasenus was only a tribatary. The Ufens is described as a slow and sluggish stream; and Silius Italicus, amplifying the hints of Virgil, draws a dreary picture of its waters, black with mud, windiag their slow way through the pestiferous Pomptine plains. (Virg. Aen. vii. 801; Sil. Ital. viii. 379-382; Claudian. Prob. et Ol. Cons. 257.) But, besides these, several minor streams either flow down from the Volscian mountains, or rise immediately at their foot in copions springs of clear water, as is commonly the case with all limestone mountuins. The NismphaEus, which rises at the foot of the hill at Norba, is the most remarkable instance of this. Thus the whole mass of waters, the stag-
pation of which gives rise to these marshes, is very considerable; and it is only by carrying these off in artificial chanoels to the sca that any real progress can be made in the drainage of the district.

Various attempts were made in ancieot times to drain the Pontine Marshes. The first of these was in e. c. 160 , by the consul Cornelius Cethegns, which, according to the brief notice transmitted to us, would seem to have beeo for a time sticcessful (Liv. Epit, xlvi.); but it is probable that the result attained was in reality but a partial one; and we find them relapsing into their former state before the close of the liepablic, so that the drainage of the Poutine Marshes is noticed among the great publie works projected by the dictator Caesar, which he did not live to execnte. (Suet. Caes. 44; Plut. Cues. 58: Dion Cass. aliv. 5.) It wonld appear that on this occasion also some progress was made with the works, so that a considerable extent of land was rechaimed fur cultivation, which M. Antonius proposed to divide amoog the poorer Roman citizens. (Dion Cass. xlv. 9.) Horace alludes to a similar work as having beeo accomplished by Augustus (Hor. Art. Poet. 65; Schol. Crug. ad loc.); but we find no meation of this elsewhere, and may therefore probably conclude that no great success attended his effurts. Juveoal alludes to the Pontine Marshes as in his time a farourite resort of robbers and highwaymen (Juv, iii. 307); a sufficient proof that the district was one thioly inhabited. The enterprise seems to have been resumed by Trajan in connection with his restoration of the Appian Way through the same district (Dion Cass. lsviii. 15); bot we have no particular account of bis works, thongh inscriptions confirm the account given by Dion Cassius of his renovation of the hiphroad. The next serious attempt we hear of to drain this marshy tract was that under Theodoric, which is recorded both by Cassiodorus and by an inscription still extant at Terracina. (Cassiodor. Jar. ii. 32, 33; Gruter, Inscr. p. 152. 8.) But in the period that followed the works naturally fell ioto decay, and the whole tract relapsed into an oninhatitable state, which continued till the close of the middle ares. Nor was it till quite modern times that any important works were undertaken with a view to reclaim it. Pope Pius VI. was the first to reopen the line of the Appian Way, which had been abandoned for centuries, and restore at the same time the canal by its side, extending from Treponti to Terracina. This canal takes the place of that which existed in the time of Horace and Strabo, and furmed the custonary mode of transit for travellers proceediog from Forum Aypii to Tarracina. (Hor. Sat. i. 5. 10-24; Strab. v. p. 233; Lucan, iii. 85.) It is evidently the same which is called by Procopius (B. G. i.11) the Decennovium, a name which could ooly be applied to an artificial cnt or canal, though that author terms it a river. The " niveteen miles" indicated by the name commenced from Tripuntium (Treponti), from whence the canal was carried in a straight line to within 3 miles of Tarracina. It was this portion of the road which, as we learn from an inscription, was restored by Trajan; and the canal was doubtless constructed or restored at the same time. Hence Cassiodoras applies the name of "Decennovii paludes" to the whole tract of the Pontine Marshes. (Cassiod. Tar. ii. 32,33 .)

The Saturae Palus, mentioned both by Virgil and silius Italicus in connection with the river

Ufens (Virg, Acn. vii. 801 ; Sil. Ital. viii. 380), must have been situated in the district of the T'ontine Marshes, and was probably merely the name of some portion of the swouns included under that more general designation.

The line of the Appian Way was carried in a perfectly straight line through the Pontine Narshes from the station Sub Lanuvio, st the foot of the Alban Hills, to within a short distance of Tarracina. The stations along its course and the distances are differeatly given in the Itineraries; but they may all be readily determined with the assistance of inscriptions and Roman milestones still existing. At the beginning of the marshes, or ratber in the level tract immediately adjoining them, was the station of Tiees Tabernae, distaot 17 miles from Aricia, at point where a branch road from Antium fell into the Appian Way. The site of this was fixed by the Abbé Cbaupy and other writers at a place called Le Castelle, 2 miles on the Roman side of Cisterna; but there seems no reasoa to reject the distances given in the Antonine Itinerary, which wonld place it 5 miles further from Rome, or 3 miles beyond Cisterna, where some ruins still remain, referred by Chaupy to the station Ad Sponsas of the Jerusalem Itinerary, bot which would suit equally well for those of Tres Taberoae. [Tres Tabernae.] six miles from this spot, and just 39 miles from Home (as showa by a milestone still remaining there), is a place still called Torre di Treponti, marking the sile of Trepontilim, the spot from whence the canal of the Decennorium commenced, and from which therefore the 19 miles from which it derived its name were measured. Fonr miles further on considersble romains mark the site of Forvan Appif, which in the Augustan age was a busy and thriving town; but in the fourth century had sunk to a mere Mutatio or post station. The Antonine Itinerary gives the distance from Rome to Forum Appii at 43 miles, which is exactly correct ; from thence to Tarracioa it reckons 18 miles; the Jerusalem Itinerary makes the distance 19 miles, and gives an intermediate station called Ad Nedias (1aludes), wbich was 9 miles from Forum Appii and 10 from Tarracina. The site of this is still marked by a spot called Torre di Mesa, where a striking Roman monument still remains; but the real distance from Forom Appii is only 8 miles, which coincides with the Antooine Itinerary. (Itin. Ant. p. $10{ }^{7} ;$ Itin. IIier. p. 611.) The whole of this part of the road has been carefully examined and described by the Abbe Chanpy (Hecourerte de In Maison dFiorace, vol. iii. pp. $3 \times 2$-452); and the distances discussed and corrected by Westphal, (Rom, Kampagne, pp. $67-70$ ). [E. H. B.]

PoNs AlNI, or, as it is called in the Peuting. Table, Ad Aerum, was a frentier fort in Vindelicia on the river Amus, and was garrisoned by a detachment of cavalry. (It. Ant. pp. 236, 257; Not. Imp.) It is commonly believed that its site is now marked by the village of Pfunzen, which in the middle ages bore the name of Pontana; but Muchar (Noricum, i. P. 285) itentifies it with Einnsdroff near $\kappa$ raciburg.

PONA AERATIL'S, in Gallia Narbonensis, is flaced in the Sern*alem ltim, on the read from Ne-man-us (Nimes) to Arolate (Arles), at the distance of sii. from Nemaushs and trii. from Arelate. The Antomene ltin, matks xix. from Nomansus to AreIte tu oine datance. The rat mu: theref re have

fixes the Pons at Bellegarde, where there is a bridge over a canal which comes from the Rhone at Uzernuin (Beaucaire) and extends to A igues Mortes. This canal separates the old dinceses of Nimes aud Arles, and probably divided the territories of Nemausus and Arelate. D'Aurille conjectures that the name Acrarius may be owing to the fact that a toll was paid at the bridge, which was a common practice in the Roman period. (Dig. 19. tit. 2. s. 60 . §'8: " liedemptor ejus pontis portonium ab eo exigebat.")
[G. L.]
PONS ALETT, a tomo in Dacia on the ruad from Egeta to Apula, near Robesti, below Strassburg. (Tab. Peut.)

PONS ARGENTEUS. [Angenteus.]
PONS AUFIDI. [AvFLDEs.]
PONS AUGLSTI (Tab. Peut.), a town in Dacia, on the road from Tiviscom to Narmategte (usually called Zarmizegethusa), identified by Mannert with the Zeugma (Z $\epsilon \bar{i} \gamma \mu a$, I'tol. iii. $\delta . \S 10$ ) of Ptolemy, and placed near Bonizar at the passage over the river Bistra; by others near Margg. (Ukert, vol, iii. pt. ii. p. 616.)

PONS AURE'OLI (Pontirolo), a place on the highroad from Mediolanum to Bergomum, where that road crossed the river Addua (Adda) by a bridge. It is mentioned as a station hy the Jerusalem Itinerary, which places it 20 M. P. from Nediolasum and 13 from Bergomum. (Itin, Hier. p. 558.) It derived its name from the circunstance that it was here that the usurper Aureolus was defeated in a pitched battle by the emperor Gallienas, and compelled to take refuge within the walls of Dilan, A. D. 268 . (Vict. Caes. 33. Epit. 33.) After the death of Aureolus, who was put to death by the soldiers of Clandius, he was buried by order of that emperor close to the bridge, which ever after retained the aame of Aureolus, (Treb. Poll. Trij. Tyr. 10.)
[E. H. B.]
PONS CAMPANUS, a bridge on the Tia Appia, by which that celebrated road crossed tbe little river Savo, a shert distance from its mooth. It was 3 miles distant from Sinuessa (erroneonsly given as 9 in the Jerusalem Itinerary), and evidently derived its name from its beiog the frontier between Campania and Latium, in the more extended sense of the latter name. It is otentioned by Pliny (xiv. 6. s. 8.), as well as the Itineraries (Tab. Ieut.; lin. Hier. p. 611); and Horace fells us that Maecenas and his companions halted for the night in a villa adjoining it, on their journey from Rome to Brundusium. (Hor. Sat. i. 5. 45.)
[E. H. B.]
PONS DUBIS, in Gallia, a bridge over the Dubis (Doubs), is marked in the Table on the road from Cabillonum (Chülon) to Vesontio (Besancon), and xiv. from Cabillonum. D'Anville supposes that the site may be a place called Pontoux, where it is sald that whea tbe water in the Doubs is low, the remains of an old bridge are visible at which several roads met. (Ukert. (iallien, p. 501.)
[G. 1.]
PON SMANSUETINA OR PONS SOCIORIM, a place in Pannonia, on the road leading from Sopianae to Jovia; but no further particulars are kuown. (1t. Ant. pp. 264, 267.)
[L. S.]
P(IXS MILIU'今, or MU'LIJUS (Ponte Mulle), a bridge on the Hia Flaminia, by which that nand crossed the Tiber just about 2 miles from the gate of Iome called the l'orta Jlaminia. It is probatile that a bridge existed on the spot at an early perioud, and there must certainly have been one from the time
mention of the nnme in history occurs in the Second Punic War, when Livy tells us that the Roman people poured out in a continuous stream as far as the Dilvian Bridge to meet the messengers who brought the tidings of the defeat of Hasdrabal, в. c. 207. (Liv. xxvii. 51). Hence, when Aurelins Victor reckons it among the works constructed by Acmilius Saurus in his censorship (B. C. 110), it is evident that this can refer only to its rebuilding or restoration. (Vict. de l'ir. Illustr. 72.) It is very possible that there was no stone bridge befare that time. At the time of the conspiracy of Catiline, the Milvian Bridge was selected as the place where the ambassadors of the Allobroges were arrested by the orders of Cicero. (Sall. Cat. 45 ; Cic. in Cot. iii. 5.) It is probable that ander the Empire, if not earlier, a suhnrb extended along the Via Flaminia as far as the Milvian Bridge. Hence we are told that it was the point from which Caesar (among his other gigantic schemes) proposed to divert the conrse of the Tiber, so as to carry it further from the city (Cic. ad Att. siii. 33): and again, the emperor Gallienns is said to have proposed to extend the Flaminian portico as far as the Milvian Bridge. (Treb, Poll. Gollien. 18.) In the reign of Nero the neighbourhood of the bridge was occnpied by low taverns, which were much resorted to for purposes of debanchery. (Tac. Ann. xiii. 47.) Its prosimity to Rome, to which it was the principal approach from the N., rendered the Milvian Bridge a point of importance during civil wars. Hence it is repeatedly' mentioned by Tacitus during those which tollowed the death of Nero (Tac. Hist. i. 87, ii. 89, iii. 82): and again, in A. D. 193, it was there that Ihidius Julianns was defeated by Severus (Eutrop. viii. 17; Vict. Caes. 19). At a later perind, also, it witnessed the defeat of Maxentius by Constantine (A. D. 312), when the usurper himself perished in the Tiber. (Vict. Caes. 40 ; Eutrop. x. 4 ; Zosim. ii. 16.) Its military importance was recognised also in the Gothic Wars, when it was occupied by Vitiges during the siege of Rome, in A. D. 537 ; and again, in 547, when Tatila destroyed all the other bridges in the neighbonrhood of Rome, he spared the Miltian alone. (Procop. B. G. i. 19, iii. 24.) The present bridge is in great part of modern construction, but the foundations and principal piers are ancient.*
[E. H. B.]
PONS MOSAE, in northern Gallia, is mentioned by Tacitus (Hist. iv. 66), but there is nothing said to show where this bridge was. A Roman road ran from Aduatuca (Tongern) across the Mosa (Moas) past Juliacnm (Juliers) to Colonia (Cologne). It is very probable that the Pons Mosae was on this route, and that it was at Moastricht. The termination tricht is a corruption of the Roman word Trajectum. [Trajeetuar.]
[G. L.]
PONS NA'RTIAE. [Gallaecta, p. 934, b.]
fons ne'ryiae. [G.mlaecth. p. 934, b.]
pons nomenta'Nus. [Nomentum.]
PONS SALA'RIUS (Ponte Salara), a bridge on the Via Salaria where that highroad crossed the Anio (Tererone) about $2 \frac{1}{2}$ miles from Rome. From its position this is certainly the bridge meant by Livy under the name of Pons Anienis, on which the single combat of Manlins Torquatus with the Gaul is described as taking place. (Liv, vii. 9.) The name is not again mentioned in history, but we learn from an inscription still remaining that the present bridge was constrncted by Narses, in the room of the inore ancient one which had been destroyed by Totila
in A. D. 547, when he broke up the siege of Rome and withdrew to Tibur. (Procop. B. G. iii. 24; Nibby, Dintomi, vol. ii. p. 594.) [E.H. B.]

PONS SAlLAVI, a bridge over the Saravus (Sarre) in Gallia on the road from Divedurum (Metz) to Argentoratum (Strasslurg). The Table marks 10 from Decem-paci (Dieuze) to Tabernate (Sazerne). Thongh the distances are not quite correct, it is clear that Saarburg on the Sarre must be the Pons Saravi; and it cannot be Saarbruick on the Suar, for Saarbriick is more than 30 miles north of Saarbarg, and quite out of the way. This is an instance in which a hasty conclusion has been derived solely from the sumeness of name. [G. L.]

PONS SCALDIS, or bridge over the Schelde in North Gallia, is placed both by the Table and the Antonine Itio. on the road from Turnacnm (Tournai) to Bagacum (Bavai). There is a place on the Schelde named Escont-pont between Valenciennes and Conde which may represent the Pons. [GiLL.] PONS SERVI'LII. [Ilixricuat, Vol. Il. p. $36, \mathrm{~b}$.]

PONS TILURI, a station on the rond from Sirmium to Salona, in the interior of Dalmatia. (It in Anton.; Tilurium. Peut. Tab.; Gengr. Rav. iv. 16.) It may be identified with the passage of the river Cettina or Tsettina (Tilurus), at Trigl, with the upposite height of Gardun, where there are restiges of a Roman town, which was probably the colony of Aequem (Aikov̂on кù入. Ptol, ii. 16 (17). § 11 ; Itin. Anton. ; Peut. Tab.; Orelli, Inscr. 502), where an inscription has been found commemorating the restoration of the bridge ander the name of Poss Hifri,-a Graecised form of the Latin name of the town, which was sometimes spelt as Equmm. (Wilkinson, Dalmatia, vol. i. p.238; Neigebaur, Die Sud-Sloven, p. 178.) [E. B. J.]

PONS UCASI, a town of Thrace, near the Dacian border. (Itin. Aut. 1. 567.) [T. H. D.]

PONS ZITHA, a station on the Roman road running along the coast-line of Syrtica, and a manicipinm. (Itin. Anton. ; Geogr. Pav.) In the Pentinger Table it is wrongly ealled Liha. Barth (Handerungen, p. 263) has fixed its site at the promontory opposite to Meninx, where he fonnd remains of a stone bridge or mole connecting the mainland with the island of the Lotophagi. [E.B.J.]

PONTEM, AD, a town of Britain, on the road from Londinium to Lindnm (Itin, Ant. p. 477), identified by Camden (p. 560) with Paunton on the IItham, in Lincolnshive, where a great many Ronaan coins and antiquities have been discovered. Others take it to have been Farndon, near Southwell, in Nottinghemshire.
[T. H. D.]
PONTES, in North Gallia, is placed in the Ant. Itiu. on a road from Sanarobriva (Amiens) to Gesoriacnm (Boulogne): it is 36 M. P. from Samarobriva to Pontes, atd 39 M. P. from Pontes to Giesoriacnm. The Table, which marks a road between Samarobriva and Gesoriacum, does not place Pontes on it, but it has another place, named Duroicoregum, supposed to be Douriers on the Authie. D'Auville concludes that Pontes is Ponches on the Authie, at which place we arrive by following the traces of the old road which still exists under the name of Cheussée de Brunehaut.
[G. L.]
PONTES, a Roman station in the territory of the Atrebates, seated on the Thomes, on the road from Calleva (Silchester) to Londinium (Itin. Ant. p. 478). It was at or near Old 11 indson: [T. H1. D.]

## 1'ONTLS.

Vadelicia, on the roat from Amber to Parllammen (It. Ant. P. 275 ; comp. Muchar, Noricum, i. ]. 284.)
[L. S.]
FO'NTIA or PO'NT1AE (Hovtía: I'טnzt), au iskand in the Tyorhmim sea, situated off the ewast of Italy, nearly oppesite to the Circeam promontury. It is the most cunsiderable of a gronp of three small islands, now collectively known as the Isale di Ponza; the ancient names of which were, l'alasa34.s, now Palmarmole, the most westerly of the three, l'ontia in the centre, and Sisosis (Zannonc) to the NE. (Plin. iii. 6. s. 12; Mel. ii. 7. § 18.) They are all of voltanio origin, like the l'ithecusae (Aenaria and l'roelyta), nearer the coast of CamJania, and the island of Pablataria (noss ealled I (andutena), about midway between the two groups. Strabo places Poutia abont 250 statia from the mainland ( $v, \mu, 233$ ), which is nearly abont the truth, if reekoned (as be docs) from the coast near ( 'aieta; but the distance from the Circeian promontory does nut exceed 16 geog. miles or 160 stadia. We have no account of I'ontia previous to the settlement of a loman eolony there in n. c. 313 , except that it bad been already inhabited by the Volscians. (Liv. ix. 28 : Diodor. xix. 101.) The eolonisation of an island at this distance from the mainland offers a complete anomaly in the Roman system of settlements, of which we have no explanation; and this is the more remarkable, bectuse it was not, like most of the maritime colonies, a "colonia maritima eivium," but was a Colonia Latina. (Liv. xxvii. 10.) Its insular situation preserved it from the ravages of war, and hence it was one of the eighteen which during the most trying period of the Second Punic War displayel its zeal and fidelity to the Roman senate, when twelve of the Latin colonies had set a contrary example. (lbid.) Strabo speaks of it as in his time a well peopled island (v. p. 233). Under the Roman Empire it became, as well as the neighbouring Pandataria, a common place of confinement for state prisobers. Among others, it was here that Nero, the eldest son of (icrmanicus, was put to death by order of Tiberius. (Sinet. Tib. 54, Cut. 15.)

The island of Ponza is about 5 miles long, but rery narrow, and indented by irregular bays, so that in some places it is only a few bundred yards across. The two minor islands of the group, Palmarnolu aml Zonnone, are at the prevent day ouinhabited. Varro motices l'almaria and Pontia, as well as Pandataria, as fiequented by groat flocks of turtle daves and quails, which hadted there on their annual migratious to and from the coint of Jtaly. (Varr. h. R. iii. 5. § خ.)
[E. 11. 1B.]
PO'NT1AE (Пóvtai vīrot, Scyl. p. 46), three islands of the coast of the sireater Syrtis. I'tohny (iv. $3 . \$ 36$; comp. Stadinsm. §s 72-75) calls these Minyous, l'ontia, and Gara. They may be identified with the reets of Ghuira. (Beechey, 1:rpedition to the N. Coctst of Africe, p. 238, App. 1. x.; Sinyth. Mediterrancan, p. 455.) [F. B. J.]

JONTINS [ABters, ], 201, a.]
PONTUS (Hóvtos), a large country in the northeast of Asia Slitor, which derised jis name from its being on the comst of the Pontus Ensinus, extending from the frontiens of Cuhl his in the east, to the river Mitlys in the west. In the cartier times the country dors not appear to have bome any general appethation, but the varions ports nure designated ly names derved from the differment tribes by which they were

ancient author who uses Pontus as the name of the comutry. Pontus formed a long and narrow tract of coast country from the river l'hasis to the llalys, but in the western part it extended somewhat further south or iuland. When its limits were finally fixel, it bordered in the west on Paplalagonia, where the Halys formed the bumbary ; in the Sunth on Gialatia, Cappadocia, med Armenin Minor, the Amtitaurus and Mount l'aryadres being the boundaries; and in the east on Colchis and Armenia. from which it was separated by the river Phaxis. Pontus thos embraced the modern pashaliks of Trebizond and Siurs. Althongh the country was surromuded by lofty mountains, whicly also sent their ramitications into l'ontus itself, the plainis on the coast, and especially the western parts, were extremely fertile (Strab, sii. p. 548), and proluced excellent froit, such as cherries, apples pears, varions kinds of grain, ollives, timber, aconite, \&c. (Strab. aii. p. 545 , \&e.; Theophrast. Mist. Mlent. iv. 5, viii. 4, \&ce., ix. 16, xix. 17 : Plin . xiv 19.) The comntry abounded in game (Strab. xii. p. 548), and among the animals bees are especially mentoned, and honey and wax formed important articks of commerce. (Xinoph, Anab. iv. $8.8 今 16,20$; Diuscor. ii. 103 ; Plin. xxi. 4.) Strab. iii. $\mu$. 163.) The mineral wealth of the countiy consisted chiefly in iron (Xenoph, Anab, v, 4. § 1; Strab. xii. p. 549 ; Steph. B. s. v. Xádubes; Pliny vii. 57) and salt. The ehief meuntains of l'ontus are the Pariapmes, and on the east of it the Scuedises, two ranges of Autitaurus, which they comeet with Mount Caucasus. The Paryadres semels two branches, Litnre's and Ornlime's, to the north, which form the eastern boundary of the plain of Phanarvea. Another monntain which terminates in a promontory 100 stadia to the west of Trapezus was eallel the Oros Hieron (Anonym. Peripl, p. 13; Apollon. Rhod. ii. 1015, with 'Schol.), and Teches is a mountain mentioned in the south-east of Trapezus. The promontories formed by these monntains, if we proceed from west to east, are: the Heracleium, Iasoniunt, and Zephyrium. These projecting headlands form the bays of Amisus and Cutyora. The mountains in the south contain the sources of numerous streams and rivers, such as the Mlalys, Lycastus, Chaulisius, Iris, Scylax, Lyens, Thermodon, Beris, Thoaris, Oenius, Phigamus, Mdemus. Genethes, Melanthins, Pharmathenus, Ifysons, Ophis, Ascurus, Adienus, Zagatis, Prytanis, Pyxites, Archabis, Apsarus, Acampis, Bathys, Acinasis, lais, Mogrus, and the Plasis. The only lake in I'ontus nuticel by the ancients is the stiphane l'alus, in the west, zorth of the niver Scylax.

Pontus was inhabited hy a eonsiderable umber of different tribes, whose etmological relations arv either entirely unknown or extremely obscure. Thie most important among them, if we proceed from west to catt, are: the haucosybi, Tibarkni, Cilaly: mas, Mosviofec, Meptacomptae, Drhag. Br-
 Taocin, and l'maslani. Some of these tribes wead wild and savage to the last degree, especially thone of the interior; but on the ctast Greek culnites conitinned to the establishard wer since the mildle of the 7th century B. c., and rose to great power and prosperity, speating Greck culture and civilisation around them.

As to the history of the comntry, tradition statel that it hat been conqured by Nimus, the fuunder of the Aswrian empie (1)ind. 1i. 2); after the time of Therus big cisfot katuinly was, at least nominally,
under the dontinion of Persia (Herod, iii. 94, vii. 77, \&.c.), and was goveniod by hereditary satraps belonging to the royal fanily of Persia. In the time of Xenaphon, the tribes of Pontus governed by native chiefs seen to have still enjoyed a ligh degree of independence. But in 1. c. 363, in the reign of Artaxerxes II., Arioharzunes subdued several of the J'ootian tribes, and thereby laid the foundation of an indegendent kiugdom in those parts. (Diod. xv. 90.) He was succeeded in в. c. 337 by Mithridates II., who reigned till B.C. 302 , and who, by skilfully availing himself of the circumstances of the times during the struggles annong the successors of Alexander, considerably enlurged his kingdom. After hom the throne was occupied by Mithridates 111., from B. c. 302 to 266 ; Ariobarzanes III., from B. c. 266 prubably till 240 . The chronology of this and the following kings, Mithridates IV., Phatmaces 1 ., and Mithridates $V$., is very uncertain. Under Mithridates VI., from B. c. 120 to 63, the kingdom of Poutas attamed the beight of its extent and power, but his wars with the Romans led to its subjugation and dismenberment. Pompey, the conqueror of Mithridates, in b. c. 65 annexd the western part of Pontus as far as Ischicopolis and the frontiers of Cappadocia to Bithynia (Diun Cass, xlii. 45 ; Strab, xii. pp. 541, 543 ; Vell. Pat. ii. 38: Liv, Epit. 102), and gave away the remaining parts to some of the chiefs or princes in the adjuining countries. A portion of the country betweer the Iris and Halys was given to the Galatian Deiotarus, which was henceforth called Pontus Galaticus (Strab. xii. p. 547 ; Dion Cass. xli. 63, xlii. 45 ; I'tol. v. 6. §§ 3, 9) The Colchians and other tribes in the south-east of the Euxine received a king of their own in the person of Aristarchus. (Appian, Mithrid. 114; Eutrop. vi. 14.) Pharnaces II., the treacherous son of Mithridates, received the Crimea and some adjuioing districts as an independent kingdom under the name of Bosporus (Appian, Mithrid. 110, \&c.); and the central part, from the Iris to Plaaraacia, was suhsequently giveu by M. Antonius to Polemon, the son of Pharnaces, and was henceforth designated by the name of Pontus Polemoniacus (Ptol. v. 6. $\S \$ 4,10$; Eutrop, vii. 9 ; Aurel. Vict. de Caes. 15), which it retained sfterwards, even when it had become incorporated with the Roman empie. The eastern part, which bad likewise been ceded to Polemon, was transterred by his widow Pythodoris to king Archelaus of Cappadocia, who married her, and was thenceforth called Pontus Cappadocius. In Pontus Polemoniacus, Pythodoris was succeeded by her son Polemon 11. ., who resigned his kingdom into the hanis of the emperor Nero (Suet. Ner. 18; Eutrop. vii. 14). Pontus was then made a Roman province, A. D. 63 , under the name of Pontus Polemoniacus, the adniuistration of which was sometimes combined with that of Galatia. In the new arrangements under Constantine, the province was arain divided into two parts ; the south-western one, which had borne the name of Pontus Galaticns, was called Helenopontus, in honour of the emperor's mother Helena ; and the eastern portion, to which Pontus Cappradocius was added, retained the name of Poutus Polemoniacus. (Novell. xaviii. 1; Hierocl. p. 702.) Besides these provincial divisions, there also exist a number of names of smaller separate distriets, such as Gazelonitis, Saramene, Themisciri, Sidene; and in the interior Phazemonitis, l'molisene, Diacolene, Chllocome, Diximonitis, Zeletis, Nibiene, and

Megatorolitis. These, ns well as the most important towns, Amsles, Polvmonitim, Cotyona, Pharnicia, Cerases, Tratezes, Apsames, Ca mba, Gaziura, Zela, Comasa lontica, Nlocaesareha, Aebastia, Themscyra, Pbazemos, \&c., are described in separate articles.
[L. S.]
PONTUS EUXINI is. [Etrines lostes.]
POPLLI or POPOLI, a small place in the west of Pamonia, on the road from Jovia to Apuaviva, south of the river Dravus. (It. Hieros. p. 561; Geogr. Iar. iv. 19; Tab. Peuting.)
[L. S.]
POPULO'NIUM or POPULO'N1A (Попла́rtoע: Eth. Populoniensis: Populonia), an ancient eity of Etruria, situated on the sea-coust, nearly oppusite the island of Ilva (Elba), and about 5 miles N. of the modern city of Piombino. It stood on a lofty hill, rising abruptly from the sea, and forming the northern extremity of the detaehed and almost insulated promontory, the southern end of which is occupled by the modern town of Piombino. This promontory (the חoплúvoov ăкpov of Ptolemy) is separated from the hills in the interior hy a strip of flat marshy ground, about 5 miles in width, which in ancient times was occupied in great measure by lagunes or paduli; so that its position is nearly analogous to that of the still more striking Monte Argentaro. The Maritime Itiderary places it 30 miles S. of the Vada Volaterrana, which is just about the trulh (Itin. Marit. p. 501). Strabo says it was the only one of the ancient Etruscan cities which was situated on the sea-shore (Strab. v. p. 223), and the remark is repeated by Pliny; thus apparently excluding Cosa as well as Pyrgi and other smaller places from that designation. It is probable at least that Pupuloaium was the most considerable of the maritime cities of Etruria; but there are no grounds for regarding it as one of the Twelve Cities of the Lengue, or as ever rivalling in importance the great cities of the interior. Virgil indeed represents it as one of the Etruscan cities which sent forces to the assistance of Aeneas (Aer. x. 172), a statement that seems to prove his belief in its antiquity; but other accounts represented it as a colony of Volaterrae, and therefore of comparatively recent date. Servius tells us that it was first founded by the Corsicans, from whom it was afterwards wrested by the Volaterrans; and distinctly represents it as of later date thau the twelve chief cities of Etruria. (Serv, ad Aen. l.c.) It probably derived its chief prosperity from its connection with the neightouring island of Iva, the iron produced in the latter beng all conveyed to Populonium to be smelted, and thence exported to other regions. (Strab. l. c.; Pscud. Arist. de Mirab. 9.5; Varr. ap Serv. ud den. s. 174) Hence, is n. c. 205, when Scipio was fitting out his fleet for Afica, and the Etruscan cities came forward with their voluntary contributions, the I'opulonians undertook to supply him with iron. (Liv. xxviii. 45.) This is the finst occasion on which the name is mentioned in history, a few years later (B. c. 202) we are told that the consul Claudius Nero, on his vuyage to Sardinia. took refuge with his theet in the purt of l'opulonium trom the violence of a sturm. (Id. xxx. 39). No forther mention of it occurs in bistory; but we learn from Strabo that it sustained a siege from the forces of Sulla at the sume time with Volaterrae, and it appears to have never recovered the blow it then received; for in the time of that geographer the city itself was almost desolate, only the temples and $\pi$ few hotwes remaining. The pert, however, wats still
frequented, and a town had grown up around it at the foot of the lill. (Strab. v. p. 233.) Its name is still mentioned us an existing town by all the other geographers, and I'tolemy especially notices the city as well as promontory of Pupulonium (Mel, ii. 4. § 9 ; Plin. iii. 5. s. \&: Ptol. iii. 1. § 4); but this is the last evidence of its existence; and before the close of the Western Eimpire it had fallen into complete decay. It is described by Ratilius at the beginning of the fifth century as entirely desolate, nothing remaining but fragments of its massive walls and the fallen ruins of other edifices, Gregory the Great also describes it towaris the close of the sixtly century as in a state of complete decay, though retaining an episcopal see; but at a later period of the middle nges a feudal castle was erected on the site, which, with the fow adjacent houses, still bears the name of Populonia, and is a conspicuous object from a distance. (Rutil. Itin. i. 401-414; Gregor. Ep. ap. Cluver, Ital. p. 514.)

The only Ebruscan remains now existing at Populonium (with the exception of a lew tombs of no interest) are those of the ancient walls, which may he tracel in fragments all round the brow of the hill, thronghout the entire circnit of the city. This did not exceed a mile and a balf in circunference; it was of an irregular form, adapted to the requirements of the pronnd. The walls are constructed of rude masses of stone. arranged, like those of I'olterre, in horizontal layers, but with little regularity; they are not, however, nenrly so gienntic in character as those of Volterra, Fiesole, or Corfona. Within the circuit of the walls are to be seen some vaulted chambers, six in a row (which have been erroneously called an amphitheatre) a mosaic pavement, and some reservoirs of water, all unquestionably of Koman date. (1)emnis's Etruric, vol. ii. p. 236-238.)

On the highest point of the hill, in the days of Rutilius, stood a lmely watch-tnwer, serving at the same time as a beacon for ships. (Rutil. Itin. i. 407.) It was from this point that, necording to Strabo, the view comprised not only Corsica (which is visible from many points of the mainland), but Sardinia also. (Strab. l. c.) Hut this last assertion, though it has been reppated by many writers, is certainly erroncous, ns, even if the distance were not too great, the nearer mountains of Filba would effectually conceal those of Sardinia from the view. (1)emis, vol. ii. p. 239.)

We learn from the Tabula that there were hot springs in the territory of l'opulonium, which hat given rise to a bathing-place called the Aquas Porclosiar: (Tab. Peut.). These were evidently the same now known as Le Caldune, at the foot of Campiglia, about 6 miles from Populonium, which have been identified by some witors with the " aquase adilae ad Vetnlonios" mentioned by Pliny (ii, 10. x. 106) ; but these is no authority for placing Vetulonia in this neighbourlhow. (Dennis, vol. ii. p. 2.2.) [Vetulosia.]

Populonion was the ooly city of Etrurin which had a silver coinage of its own, of a very pectiar style, the reverse being generally quite plain, without type or legend, and not incuse or indented, as on the earliest fireck coins. The ordinary type is a Gorgon's head or mask, similar to that on many Etruscan monuments. The copper coins give the Etruscan name of the city " 1'upluna" at fullחrחArNA. It is not improbable (as suggested by

## PORPIIIRIS

eoinage from the Phocaeans of Corsica; but there is eertainly no ground for ndmitting the existence of a Phocaean celony at Populonium itself. (Millingen, Nuanism. de l.Anc. Italie, p. 16:1; Eckhel, Num, Fet. Anecd. pp. 10-18.)
[E. 11. B.]

COHS OF POPTLONTUM.
PORCIFERA (Polecera), a river of I.iguria, flowing 'into the sea about 2 miles W. of Geman. The name is written Porcifers by Pliny (iii. 5. an 7), the only one of the gengraphers who mentions it; but in a curious inscription found near Ginno, it is variously written rorconvita and procompas. [Gexla]
[E. H. B.]
 $\sigma \in \lambda$ चpit $\eta$ s), the chief of the Ilecatonnesi, a gronp of small islands lying between Lesbos and the coast of A in. It contained a town of the same name (Scyhiax, p. 36, Iludson; Strab. xiii. p. 618 ; Steph. B. s. v.). Strabo says (l.c.) that some, in order ts avoil the dirty allusion presentel by this name,
 form employed ly I'tolemy (v. 2. §5), I'liny (v. 31. s. 38), and Aclian (I. An, ii. 6). At a still later time the name was changed into Proselene, under which form the town appears as a bishop's see. (1lierocl. p. 686 ; Concil. Chalced. p. 530.)

COIN OF POEDOSEDENE.
PORINAS. [PuENEES.]
[20ROSELF: NE: [Pormosblene.]
PORDH)TRE0N (Порфире́шv: Fth. Порфире$\dot{\omega} v i o s, ~ \Pi o \mu \phi u \rho \epsilon \omega \nu i \tau \eta s)$, a city of Phoenicia, mentioned by Scylax (p. 42, Hudson) between Berytus and Sidon, and marked in the Jerusalem Itinerary (where it is written l'arphirion, P. 583, Wesseling) as 8 Roman miles N, of Berytus. Procopius calls it a village upon the coast. (Ilist. Arc. e. 30, p. 164, Bomn.) It is mentioned by Polybius (v. 6 K ), from whose narrative we learn that it was in the neighbourhood of Platamus. [Pbatants.] Hence it seems to be correctly placed at the Khuin Neliy Yünas, where Poencke relates (vol. ii. p. 432) that he saw some broken pillars, a Corinthian eapital, and rains on each side of $n$ mountain inrreot. In the side of the mountain, at the back of the Khum, there are extensive excavated tombs, evidently once belonging to an ancient city. The Crusalers regarded Ilaifa as the ancient Porphyreon; but there is no authority that a city of this name ever stood in the bay of 'Akkr. Justinian buile a church of the Virgin at Porphyreon (I'rocop, de Aedif. v. 9, p. 328); and it was a place of sutficient importance to be made a bishopric under the metropolitan of Tyre, (Robinson, Biblical Researches, yot. iii. p. 432.)
ICHBHZHSt (Ninvirs.]
 iv. 5. §27), a long but not very lofty range of monntains which ran nlong the western shore of the Arabian Sea, nearly Irom lat. $26^{\circ}$ to $27^{\circ} \mathrm{N}$. Towards the sea its sides were abrupt, although oceasionally scooped into serviceable barbours, e. g. the Portus Albus and Philoteras. On the land side it sloped more gradually, breaking, however, the eastern derict with numerons bluffs and ridges, and sending forth its spurs as far as Tentyra and Antaeopolis S. and N. respectively.
[W. B. D. 7
PO'RSLLAE, another name for Haximimianopolis [MAximinianopolis.]

PORTA AUGUSTA (Hópta Av̉ $\gamma 0 \cup v^{\sigma} \tau \alpha$, Ptol. ii. 6. $\S 50$ ), a town of the Vaccaci, in Hispania Tarraconensis; perbaps Torquemeda.
[T. H. D.]
PORTHMUS (חópopos), a harbour in Euboea, belonging to Eretria, described by Demosthenes as opposite to Attica, is the modera Porto Bifulo, immediately opposite to Rhamans, in the narrowest part of the Enboean channel, where the breadth is ouly two miles. It was destroyed by Pbilip, after expelling the Eretrians; but its advantageous position close to the coast of Attica gave it importance for many centuries afterwards. (Dem. Phil. iii. pp. 119, 125, iv. p. 133, de Cor. p. 248 , Plin. iv. 12. s. 21 ; Hierocl. p. 645 ; Harpoerat. Phot. Snid. s.v. חó $\rho \theta \mu \mathrm{os}$; Leake, Northern Greece, vol. ii. p. 435 .)
pORTUS ABUCINI, is mentioned in the Notitia of the Gallic provinces as a place in "Prorincia Maxima Sequanorum." It appears to be Port-surSuine. The district abont Port was once called Pagus Portisiorum, whence the modern name Le Portois.
[G. L.]
PORTUS ACHAEORUM, a harbour in European Sarmatia, upon the coast of the Euxine, and upon the strip of land called the Dromos Achilleos. (I'lin. iv. 12. s. 26.) [See Vol. I. p. 20, a.]

PORTUS AEMINES, on tbe south coast of Gallia, is mentioned in the Muritime Itin. It is suyposed to be near the small island Embies. (Ukert, Gallien, p. 428.)
[G. L.]
PORTUS AEPATIACI, is mentioned in the Nutitia Imperii as being in Belgica Secunda: "Tribunus militum Nerviorum portu Aepatiaci." It is uncertain what place is meant. D'Anville (Notice, gic.) has an article on it.
[G. L.]
PORTUS AGASUS. [Garganes.]
PORTUS ALBURNUS. [Alburxu's Moss.] PORTUS ARGOUS. [llva.]
PORTUS ARTABRORUM.
[Artabrobum
Portus.]
I'ORTUS AUGUSTI. [Ostia.]
PORTUS COSANUS. [Cosa.]
PORTUS DELPMIN1 (Plin. iii. 5. s. 7 ; Delphinis, Itin. Ant. p. 293), a small port on the coast of Liguria, still called Porto Fino, situated at the SE. extremity of a great mountain promontory, which projects into the sea between Genoa and Sestri, and forms one of the most striking natural features of this part of the Ligurian coast. [E.H. B.]

PORTUS ERICIS. [LuNa.]
PORTUS GARNAE. [Garganes.]
PORTUS HANNIBALLS, a town on the S, coast of Lusitania, not far from Lacobriga (Mela,iii. 1; Isid. Or. sv. 9), near Albor, where there are traces of l'unic ruins, (Florez, Esp.S. xiv. p. 211.) [T.H. D.]

PORTUS MAURITII. [Liguria, p. 187.]
PORTUS OLIVULA. [NicaE.A.]
PORTUS PISANUS. [PISAE.]
PORTLS POMIPONIANIS, of the Naritime ltin, scems to be one of the bays formed by the Pompeniana Peninsula, and either that on the east side or that on the west side of the peninsula of Giens. The name Pomponianis Portus scems to confirm D'Anville's opinion about Pomponiana [Pomponlin.l].
[G. L.]
PORTI'S SyMBOLON. [Symbolon Portus.]
PORTUS TELAMONIS. [TELhmo.]
PORTUS TRAJANI. [Ostia.]
POLTUS VENERIS (Port Vendre), on the south coast of France near the borders of Spain. The passage ubout Portus Veneris in Mela (ii. 5) is thus (ed. Is. Vossius): "Tum inter P'yrenati promuntoria Portus Veueris insignis fano." The words "insignis fano" are a correction of Vossius without any authority, which he has substituted for the words of the hest MS., " in sinu salse." Port Vendre is in Fratuce, near Collioure, a few miles south of the month of the Tech.
Ptolemy (ii. 10. § 2) fixes the boundary of Narhonensis at the promontory on wbich stood the Aphrodisium or temple of Venus. Pliny (iii. 3) in his description of Hispania Citerior, after mentioning Eimporiae (Ampurias). says: "Flomen Tichis. Ab eo Pyrenaea Venns in latere promontorii altero xl. M." This river Tiehis is the river which is near the site of Emporiae (Ampurios) in Spain. D'Anville concludes that the promontorium of Pliny is the Promontorium Pyrenaeum of the Table, the modern Cap Creux, which projects into the Mediterranean. This would be a fit place for the temple, for it was an ancient practice to build temples on bold headlands. But Pling says "on the otber," that is on the Gallic side of the promontorium ; and the distance of xl. M. P. from the river of Ampurias brings us to the pasition of Port Vendre. Accordingly D'Anville conclodes that the temple of Venus was near the port of Venns; and this would seem likely enough. This temple is apparently mentioned by Stephanus (s, v, 'Aфpoóroias); and certainly by Strabo (iv. p. 178), who makes the coast of the Narbnnensis extend from the Var to the temple of the l'yrenaean Venus, the boundary between Narbonensis and lberia; but others, he adds, make the Tropaea Pompeii the boundary of Iberia and Celtica. The Tropaca Pompeii were in a pass of the Pyrenees not far from the coast. In this passage Strabo simply says that the temple of the Pyrenaean Venus was fixed as the boundary of Gallia and Hispania by some geographers, but this passage does not tell us where the temple is ; aud the distanes which he gives in the same place (iv. p. 178) will not settle the question. But in another pasaage (iv. p. 181) he makes the Galaticus Siums extend from a point 100 stadia from Massilia " to the Aphrodisinm, the promontory of I'yrene." It is plain that his promontory of Pyrene is Cap Creux, for this is a marked natural limit of the Gallic bay on the west; and he also places the temple there. Cap Cretw is a natural bonndary between Gallia and Hispania, and we may conclnde that it was the ancient coast boundary. We know that Cervavia, which is south of l'ortus Veneris and
nortly of Cap Creux, is in Gallia [Cenvarra]. It appears then that there is no authority for placing this temple of Venus at Portus Veneris except the jnssage of Pliny, which leads to this conclusion, if the distance al. is right. The passage of Mela las been corrapted by Vossius. It is even doubtfol if "inter lyrenati promantoria" is the true reading. Some editions have " in I'yrenaei promuntorio," but if that reading is right, the promuntorium of Mcla is not Cap Creux.
[G. 1.]
 'I'bue. iv. 129 ; Posidian, Liv. xliv. 11), the SW. cape uf Pallene, probably so called from a temple to Puseidon, which still retains its name vulgarly pronounced I'osidhi. (Leake, Northorn Greece, vol. iii. p. 156.) Mialler (Geog. Graec. Min, vol. i. p. 52) identifies it with the Themaneis of Scylax (p, 26; comp. $\Theta \varepsilon \rho \alpha ́ \mu 6 \omega$, Herod. vii. 123; Өра́ 6 6as: Eth. ӨранGovarns, Steph. B.; Lycophr. 1405), which Leake and Kiepert place near the Canastraeum Prom, ; but as Scylax interposes Scione between them, Thranbeis corresponds better with Posidhi. [E.B. J.]

POS1DHCM or POSE1'1)]LM (Пo $\sigma \in i \delta t o \nu$ ), the name of several promontories suered to Yoseidon.

1. In Europe. 1. A promontory on the coast of Lucania, opposite to the little island of Leucosia, fion which it is still called Punta della Licosa. [ Leveosia.]

2 The sW. cape of Pallene in Macedouia, also called Poseidonimu. [Posenomium.]
3. A promontory in Chaonia in Epeirus, between Onchesmus and Buthrotum, oppusite the NE. of Corcyra. (Strab. vii. p. 324; Ptol. iii. 14. § 4 ; Leake, Northern Grecce, vol. i. p. 92.)
4. A promontory in Thessaly, in the district I'hthintis, described by Strabo as lying between the Maliac and Payasaean gulis, is the promontory closing the l'agasaean gulf on the S . It is called Kelasium ly Livy, now C. Starros (Strab, vii. p. 330. Fis. 32; Ptol. iii. 13. § 17 ; Lir. xasi. 46; Leake. Northern Greece, vol. iv. p. 351 ).

I'OAL'DIUM or P'OSEI'DIUM ( חaoteloov). If. In Asua. 1. The easternmost promontury of the island of Samos. (Strab, xiv, p. 637.)
2. A promontory on the eastere coast of the island of Chios (Strab. xiv. p. 644 ; Ptol. v. 2. § 30), now salled Cape Helene.
3. A promontory of Bithynia, at the northern extrenity of the bay of Cios or Myrleia, foroning the termination of Monnt Arganthouius, is now called Cape Bozbarun, in the Sia of Marmora. (I'tol, v. 1. §4: Marcian, p. 70; Scylas, p. 35, where it is

4. A promomery on the const of Cilicia, 7 stadia to the wrst of the town of Maodane, is now called C. Killunan. (Studiasm. Mar. Magn. § 175.)
5. A promontury on the sonth-west cuast of Caria, sunth of Miletus, to the territory of which it belonecol. It fornus the northern extremity of the Insian bay, aue? aloo contained a swall town of the same name. (Polyb. xri. 1; Snub, siv, Jp, 632, 651, 658; Plin. v. 31 ; Pomp. Mria, i. 17; Stadiusm. Mar. Mayn. §§273.275, 276.) lts moderu name is C. Babir or del Arberv. [L. S.]

6 A promontory in Arabia, on the eastern side of $t^{\prime}$ 'ce cutrace of the gulf of Hetompolis, where wats a grove of pal n-trees, and an altar to Posedon, which was erected by Ariston, whom one of the P'tolemies Laid sent to explore the Arabian gulf. This promontory is mov called lius Mohamoned. (Artenid.

his copyist, erroneously says that it lies within the Aelanitic recess. (ine the notes of Groskurd and Kramer.)
7. A promontory in Arabia, E. of the Straits of the Red Sea (Bab-el-Manuleb, 1'tol. vi. 7. § 8), which must not be confounded with No. 6, as some modern writers lave done.
8. A town on the const of Syria, in the district Cassiotis, lying S. of Mt. Casios. There are still remaias of this town at I'esseda. (Strab. svi. pp. 751, 753 ; Ptol. จ. 15. § 3; 1'lin. v. 20. s. 18.)

POSIDONIA, POSIDONIATES SINUS. [PAEstum.]

POSTUNIA or POSTUMIA'NA CASTRA, a fortress in Hispania Baetica, seated on a bill near the river Salsum (Hirt. B. $1 /$ isp. 8); probably the modern Salado, between Osuña and Antequera. (Mariana, iii. 2; Florez, Esp. S. x. p. 150, xii. p. 14.)
[T. H. D.]
F'OTAMI ( $о \tau \alpha \mu 0$ ), a fort on the north-eastern part of the coast of Paphlagonia, with a harbour for small craft. According to Arrian (Peripl. P. E. p. 15) it was 150 stadia to the NE. of Stephane, but according to others only 120. (Marcian, p. 72; Anonym. Peripl. P. E. p. 7, who places it 100 stadia to the SW, of Cape Syrias.) [L.S.].

POTA'MILA (Потацia). a district in the SW: of Paphlagonia inentioned by Strabo (xii. p. 562), but without defining its extent or limits. [L.S.] PO'TANUS, or PO'TAMI. [Attica, p. 331, b.] PO'TANA ( Пठ́ava, Agatharch. de Mar. Erythr. S 104, ed Paris, 1855), a place mentioned by $\Delta y$ tharchides, which Alexunder the Gireat founded at the mouth of the Indus. Diodorus calls it חótavat (iii. 46). It has been suspeeted, with some reason, that the name io both of these authors is an error for l'attala (the present Tattu), which is spoken of in sinilar terms by Arrian (Anab. v. 4, vi. 17, Indic. c. 2) and by Pliny (ii. 75). On the other hand, the name may readily be conceived as a Graecism fur Patan, a common Indian word for a town or city.
[V.]
1'OTE'NT1A. 1. (Пotevtía: Eth. Potentinus: Sta Maria a Potenza), a town of Picenum, situated on the coast of the Adriatic, at the mouth of the river of the same name, still called the Potenza, and 18 m les S . of Ancona. We have no means of determining whether or not there was an ancient town on the spot previous to the Roman conquest uf Picenum ; but in B. c. 184 a Roman colony was settled there, at the same time with that at l'iana rum in Umbria. (Liv. xxxix. 44; Vell. Pat. i. 15. The older editions of Livy have Pollentia, but there seems no doubt that the true reading is l'otentia.) It was, as well as the latter, a "calonin civiun," but does not seem to have ever risen to a position of importance; ond with the exception of an incidental notice in Cicero of an earthquake that occurred in its territory (Cie. de Harasp. R'esp. 28), no mention of its name is fonnd in history. It is, however, wentioned by all the geographers as one of the towns of licennm, and at a later period its name is still found in the Itineraries. (Strab. v. p 241 ; Mel. ii. 4. §6; Plin. iii. 13. s. 18 : Ptol. iii. 1. §21 ; Itin. Ant. pp. 101, 313 ; Tat. Peut.) From the Liber Coloniarum we learn that it had received a fresli body of colonists, though it is uncertain at what period (lib. Colon. PP 226,257 ); but there is 100 evideace of its having retaineid the rank of a colony under the Roman Eim-

episcopal see in the early nges of Christianity；and the time of its decay or destruction secms to be un－ known ；but the site is now whelly deserted．Con－ siderable remains of the ancient city were still visi－ ble in the time of Holstenius in the plain on the right bank of the Potenza，near its mouth；and the name is still retained by an ancient church and abibey called Sta Maria a Potenza，about a mile from the Porto di Recanati．（Holsten．Not．ad Cluser．p．134．）
2．（Motevzia，Ptol．：Eth．Potentinus：Potensa）， a city of the interior of Lucania，situated in the valley of the Casuentus or Basiento，not far from its source，and above 60 miles from the gulf of Tarenturn．No mention of it occurs in history，and 1hough it is noticed by Pliny，Ptolemy，and the Liber Coloniarum，among the municipal towns of Lucania，we have no indication of its superior im－ portance．But from the numerons inscriptions dis－ covered there，it is evident that it was，under the Koman empire，a flourishing municipal town，and must at that period have been one of the most con－ siderable in Lucania，the towns of that province having for the most part fallen into great decay． The Itineraries give us two lines of road passing through Putentia，the one from Venusia smuthwards towards Grumentnm aid Nerulum，the other from Salermun and the valley of the Silarus，which appears to have been continued in the direction of Tarentum． （Plin．iii．11．s． 15 ；Ptol．iii．1．§ $76 ;$ Lib．Cul． p．209；Itin．Ant．p．104；Tab．Peut．；Mommsens 1．R．N．pp．23，24．）The modern city of Patenza is the capital of the Busilicata，a province which comprises the greater part of the aticient Lucania： it dues not occupy precisely the site of the ancient town，the remains of which are visible at a place called La Murata，in the valley below the modern city．（Romanelli，vol．i．p． 435 ．）［E．H．B．］
POTHEREUS，a river of Crete mentioned by Vitruvius（i．4），is identified by some with the Ca－ tarllactes of Ptolemy．［Catarnhactes．］
POTIDAEA．［CAssindreia．］
POTIDA＇NIA（Потıбаvia：Eth Потıठаviáтทs）．a town in Aetolia Epictetus，on the borders of Lecris， and one day＇s march from Oeneōn．（Thuc．iii．96； Liv．xaxiii．1；Steph．B．s．v．）

POTNIAE（Пótvial：Eth．Пotvitús，fem．Пot－ $\nu$ ids），a village of Boeotia，on the road fron Thebes to Plataea，distant 10 stadia from the former city． It was in ruins in the time of Pausanias，and con－ tained a grove sacred to Demeter and Cora（Proser－ pine）．Potniae is celebrated in mythology as the res dence of Glaucus，who was torn to pieces by his infuriated mares．（Xen．Hell．v．4．§51；Paus．ix． 8．§§ 1，3；Steph．B．s．c．；Plin．xxv．8．s．53； lirg．Georg．iii． 268 ；Ov．Ibis， 557 ；Dict．of Biagr，art．Glatces．）According to Strabo（p． 412）some authorities regarded Potnine as the Hy － puthelae of Homer（Il．ii．505）．Gell places Potnise in the neighbourhood of the modern village of Taki． （Gell，Itinerary，p．110；comp．Leake，Northern Greece，vol．ii．p．323．）
PRAASIPA．［PhRAATA．］
l＇RA＇CTIUS（Прákтios），a small river in the nurth of Troas，flowing from Mount Ida，and dis－ charging itself into the Hellespont a little below Percote．（Hom．Il．ii． 835 ；Strab．xiii．p．590； Arrian，Anab．i．12．§6．）Some identify it with the nodem Borgas，and others with the Muskakoi－ Sis．

PRAENESTE（ $\quad$ paivea $o s$, ，Strab．，Appian

Пра⿱⺊口灬єのтє，Dion Cass．：Eth．Прaweotivos，or Праıгєбт $\quad$ Dós，Pruenestinus：Polestrina），one of the most ancient，as well as in carly times one of the most powerful and important，of the ci－ ties of Latium．It was situated on a projecting point or spur of the Apennines，directly oppo－ site to the Alban Hills，and nearly due E．of Rume，from which it was distnut 23 miles． （Strab．v．p．238；Itim．Aut．p． 302 ；West phal， Rimische Kimpragne，p．106．）Varions mythical tales were current in ancient tomes as to its founder and origin．Of theee，that adopted by Virgil as－ eribed its foundation to Caeculns，a reputed son of Vulcau（Virg．Aen．vii．67\％）；and this，we learn from Solinus，was the tradition preserved by the Praenestines themselves（Sulin．2．§ 9）．Another tradition，obviously of Greek origin，derived its name and foundation from Praenestus，a sun of Latinus，the offspring of Ulysses and Circe（Steph． B．s．v．；Solin．l．c．）Strabo also calls it a Greek city，and tells us that it was previously called Пodvaté $\phi \operatorname{los}_{0}$（Strab，v．p．238）．Another form of the same name name is given by Pliny（iii．5．s．9）， who tells us its original name was Stephane．And finally，as if to complete the series of contradictions， its name is found in the lists of the reputed colonies of Alba，the foundation of which is ascribed to Latinus Silvius（Vict．Orig．Gent．Rom．1\％；Diod．vii．ap． Euseb．Arm．p．185）．But there seems no doubt that the earlier traditions were those which assigned it a more ancient and independent origin．The first mention of its name in history is in the list of the cities of the Latin League，as given by Diony－ sins，and there can be no doubt of its having formed an important member of that confederacy．（Dionys． v．61．）But as carly as B．C．499，according to Livy，it quitted the cause of the confederates and joined the Romans，an event which that bistorian places just before the battle of Regillus．（Liv．ii． 19．）Whether its separation from the rest of the Latins was permanent or not，we have no inform－ ation；but on the next occasion when the name of Praenente occurs，it was still in alliance with Rome， and suffered in consequence from the ravages of the Aequians and Volseians，в．c． 462 （Liv．iii．8）． The capture of Rome by the Gauls seems，however， to have introduced a change in the relations of the two eities．Shortly after that event（B．C．383）the Praenestines are mentioned as making hostile in－ cursions into the territories of the Gabians nud Labicans：the Romans at first treated this breach of faith with neglect，apparently from unwillingness to provoke so powerful an enemy；but the next year， the Praenestines having sent an army to the support of the revolted colonists of Velitrae，war was for－ mally declared against them．The P＇raenestines now joined their former enemies the Volscians，and，in conjunction with them，took by storm the Roman colony of Satricum．（Liv．vi．21，22．）The next year the Volscians were defeated in a great battle by Camillus，but no mention is made of the Prae－ nestines as taking part in it．The following season， however（в．C．380），they levied a large amy，and taking advantage of the domestic dissensions at Rome，which impeded the levying of troops，they advanced to the very gates of the city．From thence they withdrew to the banks of the Allia，where they were attacked and defeated by T．Quintius Cincin－ natus，who had been named in all liaste dictator． So complete was their rout that they not only fled in confusion to the very gates of Iraeneste，but

Cincinnatus, following up his advantage, relnced eight towns which were subject to Praeneste by force of arms, and compelled the city itself to submission (Liv. vi. 26-29). There can be little donbt that the statement of Livy which represents this as an unqualified surrender (delitio) is one of the exaggerations so common in the early Roman history, but the inscription noticed by him, which was placed by Cincimatus under the statue of Jopiter Imperator, eertainly seems to have claimed the captore of Pracneste itself as well as its deprendent towns. (Fest, s.v. Triontem. p. 363.)

Yet the very next year the Prachestines were again in arms, and stimulated the other Latiu cities against Rume. (Liv, vi. 30.) With tbis exception we hear no more of them for some time; but a notice which occurs in Diodorus that they concluded a truce with liume in E.c. 351 , shows that they were still acting an independent part, and kept aloof from the other Latins. (Diod. xvi. 45.) It is, however, certain that they took a prominent part in the great Latin War of R, c. 340. In the second year of that war they sent forces to the assistance of the Pedanm, and, though defeated by the consul Aemilius, they continued the contest the next year together with the Tiburtines; and it was the final defcat of their combined forees by Camillus at Pedum (s. c. 338) that eventually terminated the struggle. (Liv. viii. 12-14.) In the peace which ensued, the Iraenestines, as well as their neighbours of Tilner, were punished by the loss of a jart of their tersitery, but in other respects their position remained unchanged: they did not, like the other cities of Latium, receive the Roman franchise, but contioued to subsist as a nominally independent state, in allance with the powerful nepublic. They fornished like the other "socii" their quotu of troops on their own separate acconnt, and the Praenestine muxiliaries are meationed in several instances as forming a scparate budy. Even in the time of Polybius it was one of the places which retained the los Exilii, and could afford shwiter to persons banished from Fome. (1'ol, vi. 14.)

On the arrival of I'yrrhus in Italy the fidelity of the Praenestines seems to have been suspected, and the Lomans compelled then to deliver hostages. (\%onar, viii. 3.) Shwrly afterwards Praeneste was the print from whence that monareh tarned back on lis adrance to Rome. There is no probability that he took the town. Entropions says merely that he advanced to Prameste; and the expression of Florus that be looked down unan Rome from the catadel of Pramente is probably only a rhetorical Hharish of that uaccurate writer. (Flor. ii. 18; Eutrop. 1. 12.) In the Second Ponic War a body of l'raenestine troops distingnished themselves by their gallant defence of Casilinum against Mannibal, and though ultimately compelled to surrender, they were rewarden for their valour and fidelity by the Roman setitice, while the highest honours were paid them in their uative city. (Liv, xxiii. 19, 20.) It is remarkable that they refused to aceept the ofter of the Roman franchise; and the Pracmestanes in goweral retained their indernondent position till the period of the social War, when they received the Liman franchise together with the other allies. (Appian, B. C. i. 65.)

In the civil warr of Marius and Sulla, Praeneste lure an important part. It was occupied by Cinna when he was driven from lome in B. C. 87 (Appian,
hands of the Marian party till s. c. 82, when it afforded a shelter to the younger Marius with the remains of his army, after his defeat by Sulla at Sacriportus. The natural strength of the city had been greatly increased by new fortifications, so that Sulla abandoned all idea of redacing it by force of arms, and was content to draw lines of circumvallation round it, and trust to the slower process of a Whockade, the command of which he entrusted to Lucretius Ocella, white he himself carried on operntions in the field against the other leaders of the Ilatian party. lepeated attempts were made by these gererals to relieve I'racneste, but without effect; and at length, after the great battle at the Culline Gate and the defeat of the Sammite general Pontius Telesinus, the inbabitants opened their gates to Ofella. Marius, despairing of safety, after a vain attempt to escape by a subterranean pasage, put an end to his own life. (Appian, B. C. i. $87-$ 94 ; Plut. Mar. 46, Sull. 28, 29, 32; Vell. Pat. ii. 26,27 ; Liv. Epit. Inxxvii., 1xxaviii.) The city itself was severely ponished; all the citizens without distinction were put to the swerd, and the town given $u p$ to plunder; its fortifications were disnautled, and a military colony settled by Sulla in pnsoession of its tervitory. (Appian, l.c. ; Lucan, ii. 194; Strab. v. p. 239 ; Flor. iii. 21.) The town seens to have been at this time transferred from the hill to the plain beneath, and the temple of Fortune with its apportenances so extended and enlarged as to occupy a great part of the site of the ancient city. (Nibby, Mintorni, vol. ii. p. 481; but see Bormann, All. Lat. Chorogr. p. 307, note 429.)

But the citadel still remained, and the natural strength of the pasition rendered Iracneste always a place of inportance as a struaghold. Hence, we find it mentioned as one of the points which Catiline was desireus to occupy, but which had been studionsly guarded by Cicero (Cie. in Cat. i. 3); and at a later period L. Antonius retired thither in n. C . 41 , on the first outbreak of his dispute with Octavian, and from thence endeavoured to dietate terms to lais rival at Rome. Fulvia, the wife of M. Autonius took refuge there at the same time. (Appian, B. C. . . 21, 23, 29.) From this time we hear but little of l'racueste in history; it is probabie from the terms in which it is spoken of both by Strabo and Appian, that it never recovered the hidew inflicted on its prosperity by Sulla (Strah, l.c.; Appian, B. C. j.94); but the new colnny cstablished at that time rose again into a flourishing and considerable town. Its proximity to lome and its elevated and healthy situation made it a favourite resort of the Romans during the summer, and the poets of the first century of the Empire abound in ailusions to it as a cool and pleasant place of suburban retirement. (Juv. iii. 190, xiv. 88 ; Martial, x. 30. 7; Stat. Silv, iv. 2. 15 ; Plin. Fp. v. 6. § 45 ; Flor: i. 11.) Among others it was much frequented by Augustus himself, and was a favourite place of retirement of Horace. (Suct. Auy. 72; Hor. Carm. iii. 4. 23, Ep. i. 2. 1.) Tiberius also recovered there from a dangerous attack of illness (Gell. N. A. xvi. 13) ; and lladrian luilt a villa there, which, though dot compauable to his celebrated villa at 'Tibur, was apjarently' on an extensive scale. It was there that the emperor $\$ 1$. Aurelius was residing when he lost his sun Annius Verus, a child of seven yeurs old. (Iul. Capit. 1\%. Ant. 21.)
1racmeste appers la have always retained its
colonial rank and condition. Cicero mentions it by the title of a Colonia (Cic. in Cat. i. 3); and though neither lliny nor the Liter Coloniarum give it that appellation, its colonial dignity under the Empire is abnndantly attested by numerous inscriptions. (Zumpt, de Culon. p. 254 ; Lib. Colon. p. 236 ; Orell. Inser. 1831, 3051, \&c.) A. Gellius indeed has a story that the Praenestines applied to Tiberins as a favonr to be changed from a colony into a Municipian ; bnt if their request was really granted, as he asserts, the change could have lasted for bnt a short time. (Gell. N. A. xvi. 13; Znmpt, l. c.)

We find sarcely any mention of Iraeneste towards the decline of the Western Empire, nor does its name figure in the Gothic wars which followed: but it appears again under the Lombard kings, and bears a conspicuons part in the middle ages. At this period it was commonly known as the Civitas Praenestina, and it is this form of the name-which is already found in an inscription of A. D. 408 (Orell. Inscr. 105)-that has been gradually corrupted into its nodern appellation of Palestrina.

The modern city is bnilt almost entirely upan the site aud gigantic substructions of the temple of Fortune, which, after its restoration and enlargement by Sulla, uccnpied the whole of the lower slope of the hill. the snmmit of which was crowned by the ancient citade. This hill, which is of very cunsiderable elevation (being not less than 2400 feet above the sea, and more than 1200 above its immediate base), projects like a great buttress or bastion from the angle of the Apennines towards the Alban Hills, so that it looks duwn upon and seems to comuand the whole of the Campagna around Rome. It is this position, combined with the great strengti of the citadel arising from the elevation and steepness of the hill on which it stands, that rendered Praeneste a position of such impertance. The site of the ancient citadel, on the summit of the bill, is now occupied by a castle of the middle ages called Castel S. Pietro: but a considerable part of the ancient walls still remains, constructed in a very massive style of polygonal blocks of limestone; and two irregular lines of wall of similar constraction descend from thence to the lower town, which they evidently served to connect with the citadel above. The lower, or modern town, rises in a somewhat pyramidal manner on successive terraces, supported by walls or facings of polygonal masonry, pearly resembling that of the walls of the city. There can be no doubt that these successive stases or terraces at one time belonged to the temple of Fortune; but it is probable that they are of mnch older date than the time of Sulla, and previonsly formed part of the ancient city, the streets of whicb may have occupied these lines of terraces in the same manner as those of the modern town do at the present day. There are in all tive successive terraces, the bighest of which was crowned by the temple of Fortune properly so called,-a circalar building with a vanlted roof, the ruins of which remained till the end of the 13 th century, when they were destroyed by Pope Boniface VIII. Below this was a hemicycle, or semicircular building, with a portico, the plan of which may be still traced ; and on one of the inferier terrices there still remains a mosaic, celebrated as one of the most perfect and interesting in existence. Varions attempts have been made to restore the plan and elevation of the temple, an edifice wholly unlike any vther of its kind; but they are all to a great extcnt
conjectural. A detailed accomnt of the existing remains, and of all that can be traced of the phan and arrangement, will be fond in Nibly. (Dintorni, vol. ii. p. 494-510.)
The celebrity of the shrine or sanctuary of Fortune at lraeneste is attested hy mary ancient writers (Ovid, Fast. vi. 61 ; Sil. Ital. viii. 366 ; Lucan, ii. 194 ; Strab. v. p. 238), and there is no doubt that it derived its origin from an early period. Ciccro, who speaks of the temple in his time as one of great antiqnity as well as splendour, gives us a legend derived from the records of the I'raenestines concerning its foundation, and the institution of the oracle known as the Surtes Prae. nestinae, which was closely associated with the worship of Fortune. (Cic. de Div. ii. 41.) So celebrated was this mode of divination that not only Romans of distinction, but even foreign potentates, are mentioned as consulting them (Val. Max. i. 3. § 1 ; Liv. xlv. 44 ; Propert. iii. 24. 3); and though Cicero treats them with contempt, a> in his day obtaining credit only with the valgar, we are told by Suetonius that Tiberius was deterred by religious scruples from interfering with them, and Dounitian consulted them every year. Alexander Severns also appears, on one occasion at least, to have done the same. (Suet, Tib. 63, Domit. 15; Lamprid. Alex. Sev. 4.) Numerons inscriptions also prove that they continned to be frequently consulted till a late period of the Empire, and it was not till after the establishment of Christianity that the cnstom fell altogether into disuse. (Inscr. ap. Bormann, pp. 212, 213; Orelli, Inser. 1756-1759.) The Praenestine goddess seems to bave been specially known by the name of Fortuna Primigenia, and her worship was closely associated with that of the infant Jupiter. (Cic. de Div. l. c.; Inser, ut sup.) Another title under which Jupiter was specially worshipped at Prueneste was that of Jupiter Imperator, and the statne of the deity ut Rome which bore that appellation was considered to bave been bronght from Praeneste (Liv. vi. 29).

The other ancient remains which bave heen discovered at Palestrina belong to the later city or the colony of Sulla, and are situated in the plain at some distance from the font of the hill. Among these are the extensive roins of the villa or palace of the emperors, which appears to have been bnilt by Hadrian about A.D. 134. They resemble much in their general style those of his villa at Tivoli, bnt are much inferior in preservation as well as in extent. Near thern is an old clmreb still called Sta Maria della Jilla.

It was not far from this spot that were discovered in 1773 the fragments of a Roman calendar, sup. posed to be the same which was arrauged by the grammarian Venius Flaccus, and set up by lim in the fornm of Praeneste. (Suet. Gramm. 17.) They are commonly called the Fasti Praenestini, and have been repeatedly published, first by Foggini (fol. Romae, 1779), with an elaborate commentary; and again as an appendix to the edition of Suetonins by Wolf ( 4 vols. 8 ro. Lips. 1802); also in Orelli (Inser. vol. ii. p. 379, \&.c.). Notwithstanding this cvidence, it is improbable that the formon of Praeneste was so far from the foot of the hill, and its site is more probably indicated by the discovery of a mmber of pedestals with honorary inscriptions, at a spot near the SW. angle of the modern city. These inscriptions range over a period from the reign of Tiberius to the fifth century, thus
tending to prove the continued importance of Prac－ neste thronghout the period of the Roman Einpire． （Nibly．，vol．ii．pp．513－515，Fog gini，l．e．pp．v．－ viii．）Other inscriptions mention the existence of ： theatre and an amphitheatre，a portico and euria， and a spoliarium；but no remains of any of these ellifiers can be traced．（Giruter，Inscr．1．132； Onelli，Inser． 2532 ；Lormam，note 434．）

The celebrated grammarian Verrius Flaceus，al－ ready mentioned，was probably a native of l＇sae－ rente，as was also the well－known author Aelianus， who，though he wrote in Greek，was a Rowan eiti－ zen by birth．（Suid．s．c．Aidiavós）．The family of the Anicii also，so illustriuns under the Empine， seems to hate derived its origin from Praeneste，as a Q．Aricius is mentioned ly Pliny as a magistrate of that city as early as B，C．304．（Plin．xxxiii． 1. s．6．）It is probable aiso that in lisy（xxiii．19） we should read M．Anicius for Manicius．It is re－ makkable that the Praenestines appear to have had certain dialectic peculiarities which distinguished them from the other Latins；these are more than once alluded to by Plautus，as well as by later wrammarians．（Plaut．Trinum．iii．1．8，Truc，iii． 2．23：Quintil．Inst．i． $5 . \S 56$ ；Fcst．s．v．Nephren－ this，Id．s．v．Tongere．）

The territory of I＇raeneste was noted for the ex－ cellence of its nuts，which are noticed by Cato． （R．R．8， 143 ；Plin．xvii．13．s． 21 ；Naevius，ap． Mfacrob．Sat．iii．18）．Hence the Praenestimes themselves seem to bave been nicknamed Nuculac； though another explanation of the term is given by Festus，who derives it from the wahuts（nuces） with which the Pruenestine garrison of Caslinum is said to have been fed．（Cic．de Or．ii．62；Fest． s． 3 ．Nuculae．）Pliny alse mentions the ruses of Prae－ Heste as among the inost celebrated in Italy；and its wine is noticed by Athenaeus．though it was ap－ parently not one of the choicest kinds．（Plin．axi． 4．s． 10 ；Athen．i．p．26，f．）

It is evident from the narrative of Livy（vi． 29）that Praeneste in the days of its independence， like Tibur，had a considerable territory，with at least eight smaller towns as its dependencies． lout the names of none of these are preserved to us， and we are wholly unable to fix the limits of its ter－ ritury．

The name of Via Praenestina was kiven to the road which，proceeding from Rome through（i：ahii direct to Praeneste，from thence rejomed the Via Latina at the station near Anaynia．It will be comsidered in detail in the article Via lomenes－ тมั่．

## PRAESII．［Prastaca］

PlBAET11（Curt．is．8．§ 11），a people of the Panjib，who were conquered by Alexander tho Gireat．Their king is stated by Curtius to have been named Oxycanus．He would seem to have been the same ruler who is called by Strabo Por． ticamus（sv．p．701）．His name，however，nceurs in Arrian．（Anab．vi．16．）As Curtius calls the 1＇raesti a purely Indian nation，it is not unlikely； from the resemblance of the names，that they formed the western portion of the great empire of the J＇rasii．．［Prasiaca．］
［V．］
PRAESUS，or PlRASUS（Hpaíoos；in the MSS． of Strabo ח1pẫos，but in inscriptions Прaíros，Böckh， Inscr．vol．ji．p．1102：Eth．חpaiotos，more rarely Mpaiaitús，Steph．B．s．v．），a town in Crete，be－ longing th the Eteocretes，and containing the temple of the Dictaean Zeus，for Mt．Dicte was in the ter－ ritory of Praesus．（Strab，x．Pp．475，478．）There is a difficulty in the pussage of Strabo，describing the position if this town．Ile first says（ $\mathrm{p}, 47 \mathrm{~B}$ ） that Praesus bordered upon the territory of Leben， and was distant 70 stalla from the sea，and 180） from Gortyn；and be next speaks of I＇raesus as lying between the promontories Samonium and Cherso－ mesus，at the distance of 60 stadia from the sca． It is evident that these are two different places，as a town，whose territory was contiguous to that of Lehen，must hare been situated in the southern part of the island；while the other lown，hetween the promontories of Samonium and Chersonesus，munt have been at the eastern end．The latter is the thwn of the Eteocretes，possessing the temple of the Dictacan Zeus，and the Praesus usually knuwn in history：the former is supposed by Mr．Pashley （Crete，vol．i．p． 289 seq．）to be a falise reading for Primsus，a town mentioned in coins and inseriptions， wlicla he accordingly places on the southern coast between Bienna and Leben．In this he is followed by Kiepert．But Bückh thinks（Iuscr．vol．ii．P． 4105）that חpavous，or חpiavoos was the primitive form of the name，from which Пpaīos，or חpianous （a form in Steph．B．s．z．），and subsequently חlpãoor， were derived．just as in the Acolic dialeet $\pi$ diva a brcame maĭoa，and in the Attic dialect $\pi a \sigma \sigma$ ． Kramer（ad Strab．l．c．）adapts the ovinion of Bückh． Upun the whole we must leave uncertain what town was intended by straho in the former of the abuve－ mentioned passages．

The territory of l＇resus extended across the island to cither sea．（Sylax，p．18，Huds．）It is said to have been the onily phace in Crete，with the Mrictrof＇scyft＇（⿴囗十）：did not tuke part in the
expedition against Camicus in Sicily, in order to avenge the death of Minos (Herod. vii. 170). It was destroyed by the inlabitants of Hierspytua. (Strab. x. p. 479.) Agathocles, the Babylonian, related that the l'raesii were accustomed to sacrifice swine before marringe. (Athen, ix. p. 376.) The ruins of Praesus are still called Praesus. (Pashley, Crete, vol. i. p. 290, seq.; Höck, Kreta, vol. i. p. 413, seq.)

COIN OF PRAESUS OR PRLANSUS.
praetória augusta. [Augusta PraeTORLA.]

PRAETO'RIUM. There were places of this name in Gallia, Hispania, and in other countries wbich the Romans occupied. A Praetorium is the residence of a praeter and the seat of the supreme court. The word was also used to signify a magnificent pulatial building. The Table marks a Praeterium in Gallia, on a road from Augustoritum (Limoges). At the Praetorium the road divides, one branch going to Augustonemetum (Clermont Ferrand in the f uvergne) and the other to Avaricum (Bourges). It is not possille to fix the site of this Praetotiun.
[G. L.]
PRAETORIUS. 1. A town in the territory of the Lacetani, in the NE. of Hispania Tarraconensis, and on the road from Tarrace, in Gaul, to Barcino. (Itin. Ant. p. 398.) Usually identified with La Roca, where there are still considerable Roman remains. (Marca, Hisp. ii. 20.)
2. (Пєтovapia, Ptol. ii. 3. §17), a place in the most N. part of Britanaia Romana, in the territory of the Parisi, whence there was a separate road from the Ikoman Wall to Eboracum (Itin. Aut. pp. 464, 466.) It is supposed by Cauden (p.871) to be Beverley in Yorkshire ; hy others it has been variously identified with Patrington, Hebberstove, Hornsea, Kingston, and Flamborough. Some writers distinguish the Petuaria of Ptoleny from the Praetorimus of the Itinerary; and Gale (Itin. p. 24) identifies the former phate with Aublby on the Derwent.
[T.H.D.]
 Upper Pannonia, south of the Savus, on the road Iroun Siscia to Sirmium. (Tab. Pcuting. ; Ptol. ii. 15. §6.) It was probably a place where a court of justice was held for the inhabitants of the surrominding district, or it contained an imperial palace where the emperors put up when travelling in that country.
[L. S.]
PRAETOTIUM AGRIPPl'NAE. This Pruetorium appears in the Table, and is distinguished hy the representation of a large building. D'Anville conjectures that it may have taken its name from Agrippina, the daughter of Germanicus and the mother of Nero, who gave her name to the Colonia Agrippinensis (Cologne). The Practorium is placed above Lugdunum Bataverum (Leiden) at the distance of 11. DAnville concludes that it is RoomLurg uear Leiden, where it is said that many Roman
antiquities lave heen found. (Ukert, Gallien, p. 533.)
[G. L.]
PRAETO'RIUM LATOVICO'RUM, a place in Upper Pamnovia, on the site now occupied by Jeustaidte, on the river Gurk: (It. Ant. p. 259: Tab. Peuting., called simply Pruetorium.) [L. S.]

PRAETU'TII (Hipaitav́rtiol, I'tol.: Eth. Прaiтєтtıavós, Pol.; Practutianus), a tribe of Ceotral Italy, who occupied a district of Picenum, bounded by the river Vomanus on the S . and apparently by the stream called by Pliny the Albula on the N. This last cannot be identified with certainty, and the text of Pliny is prolably currupt as well as confused. He appears to piace the Albula N. of the Trucutus; but it is certain that the Praetutii did not extend as far to the N. as the latter river, and it is probable that the stream now called the Salinello was their northern linit. We have no account of the ongin of the Practutii, or their relation to the Picentes, from whom they seem to have been regarded as to some extent a distinct people, though more frequently iucluded under the one general appellation. The "Ager Pısetutianus" is mentioned by Livy and Polytrius, as well as by Pliny, as a well-known district, and Ptolemy even distioguishes it altogether from Picenum, in which, hotrever, it was certainly generally comprised. (Yol. iii, 88 ; Liv. xxii. 9, xxvii. 43 ; Plin. iii. I3. s. 18 ; Ptol, iii. 1. § 58.) But the name seems to have continued in general use, and became corrupted in the middle ages inte Prutium and Aprutium, from whence the modern name of Abruzzo (now applied to all the northernmast proviuces of the kingdom of Naples) is generally thought to be derived. (Blondi Flavii, Italia Illustrata, p. 394.) The chief city of the Praetutii was Interamna, called for distinction's sake Praetutiana, which under the name of Teramo is still the chief town of one of the provinces of the Abruzzi. Ptolenay also assigns to them the town of Beregra. (PtoL l. c.) Pliny mentions the "Ager Palmensis" in close connection with the Practutii ("Ager Practutianus Palmensisque," Plin. l.c.); but this appears to have been only a small district, which was celebrated, as was the Praetutian region generally, for the excellence of its wines. ( Pl lin. xiv, 6. s, 8 ; Diescor. v. 19 ; Sil. Ital. xv. 568.) [E. H. B.]

PRAS (Пpãs: Eth. Пpáv in Thessaly, a little S. of Phar*alus. For its position see Narthaciem. (Xen. Hell. iv. 3. §9, Ages. 2. § 5 ; Steph. B. s. v.)

PRASIACA (Прaбıaкท่, Ptol. vii. 1. § 53), a very extensive and rich district in the centre of IFindostan, along the banks of the Ganges and the Sona, whose chiel' town was the celebrated l'alibothra. The name of its inhabitants, which is written with slight differences in differeat authors, is most correctly given as Prasii ly strabe (xy. p. 702, 703), and by Pliny (vi. 19. s. 22), who states that their kiog supported daily no less than 150,000 foot, 30,000 horse, and 9000 elephants. Diudorus calls them Praesii (xvii. 93), as does also Plutarch. (Alex. 62.) In Curtius aceain they occur under the form of Pharrasii (ix. 2. §3). It was to the king of the Prasii, Sandroenttus (Chandragupta), that the famous mission of Megasthenes by Scleucus took place. (Plin. l. c.; Curt. ix. 2; Appian, Syr. 55 ; l'lut. Alex. 62 ; Justin, xv. 4.) All authors concur in stating that this was one of the largest of the Indian empires, and extended through the richest part of Indin, from the Ganges to the l'onjuib. There cim be no doubt that Prasii is a Graecised form for
the Sanscrit I'rachinus (meaning the dwellers in the east). (Bohlen, Alte Indien, i. p. 33; Kitter, Eirdliunde, vol. v. p. 460 .)
l'RA'SAAE or BliA'SLAE (Пporaci, Thuc. Strab. Aristoph.; Пpaбia, scyl. p. 17; 1’tol. iii. 17. § 10; Bpactal, I'aus.: Eth. Bpactátクs, I'aus.; Пpaбtєús, Steph. B.), a town on the castern coast of Laconia, described by Pausinias as the farthest of the Eleu-thero-Laconian places on this part of the coast, and as distant 200 stalia by sea from Cyphanta, (P'ans. iii. 24. §3.) Soylax (l.c.) speaks of it as a city and a harbour. The name of the town was derived by the inhabitants from the noise of the waves (Bpá $\epsilon 1 \nu$ ). It was lurnt by the Athenians in the second year of the l'elupomesian War, 1. c. 430. (Thuc. ii. 56; Aristoph. Pac. 242.) Also in B. C. 414 the Athenians, in conjunction with the Argives, ravaged the coast near P'rasize. (Thuc, vi. 105.) In the Macedonian jeriod Prasiae, with other Laconian towns on this coast, passed into the hands of the Argives (Polyb, iv. 36); whence Strabo calls it one of the Argive towns (viii. p. 368), though in another passige he says that it belonged at an earler period to the Lacedaemonians (vini. p. 374). It was restored to Lacoula by Augustus, who made it one of the Eleuthero-Laconian towns. (Paus. iii. 21. §7, iii. 24. §3.) Among the curiosities of Prasiae Pausanias mentions a cave where Ino nursed Himysus : a temple of Asclepius and another of Achilles, and a small promontory apon which stood four brazen figures not more than a foot in height. (Paus. iii. 24. §\$ 4.5.) Leake places Prasiae at St, Andrew in the Thyreatis; but it more probably stood at Tyro, which is the site assigned to it by Loblaye, Ross, and Curtius. (Leake, Morea, vol. ii. p. 484 : Boblave, Kickerches, \&r. P. 102 ; Ross, Keisen im Peloponnes, p. 165: Curtius, Peloponuesos, vol. ii. p. 306. [Sec Vol. I. Pp. 727, b., 729, a.]
lRASIAE, a demus in Attica. [Yol. I. p. 331, b.]

PliASIAS LACUS. [Cercintis.]
l'liAsil. [Praslica.]
PRASO'DES SINU's (Прапб́rins кó $\lambda \pi$ os, Ptol. vii. 4. $\$ 4$ ), a gulf which Itolemy places on the AII. side of the island of Taprobane or Ceglon. No such gulf can now be traced upon the outline of this ivland; and there woold seem to be some confusion butween the gulf and a sea to which the geugrapher gires the same name of חparwâns, and which he makes exteni along the paralle! between the island of Menuthias (Kanzibar?) and the Gutf of Siam (vii. 2. § 1).
[! ! $]$
IRASUM D'ROMONTORIUM (Пра́бov áкршripmon, 1'tol. i. $7 . \$ 2$, sey., vii. 3. § 6), or the $C$. of Leeks, was a headland in the region S. of Mcroie, to which the ancient geographers gave the appellation of Barbarica. The position of Prasum is unknown; for it is impussible to identify I'rasam, the (irech Promontory, with Cape Delgado, i. e. Cape stemier, which, as tha name implies, is a mere line upan the wat-r. Neither is it vertain that Prasum, allhough a loty rork, was a portion of the mainland at all, inasmuch as the cuast of Zingebar, where I'rasum is probably to be found, is distinguished allke for the verdure of its projections and the bright green islands that stretch alone and beyond then. Mhoreover, Agathomerns ( $\mu, 57$ ) and Blarci.mus Ileacleota (ap. II wlsum, (irog. Min. i. 1. 12) montion a sea in this region callied, from its colour,

Zingebar derive their rich verdant appearance from the prevalence of the bombyx or cotton-tree. All that is known of I'rasum is that it was 100 or 150 miles S. of the headland of Rhapta, lat. $4^{\circ} \mathrm{S}$, and a station for that obscure but active aml remunerating trade which Acgypt under the Ptolemies and the Caesars carried on with the eastern emporia of Africa. (Cowley, Cluudius Ptolemy and the Vile, pp. 88-90.)
[W. B. D.]
PRASUS. [PRAEsUs.]
I'liECLA'NI, a preople of Aquitania, who surrendered to l'. Crassus, Caesar's legatus in B. C. 56. We know nothing about them, and even the name is uncertain, for the MSS. write it in several ditterent ways. (Caes, B. G. iii. 27.) [G. L.]

PRE'LIUS LACUS, a lake mentioned only by Cicero (pro Mil. 27), and in a manner that affurds no indication of its position. But it is probable that it is the same which is called Lacus Aprilis in the Itincraries, and apparently l'rilis by Pliny [Arkmus L.uevs], the modern Lago di Castiglione, on the coast of Etruria. (Cluver. ItaL. p. 474.) [E.H.B.]

## PREMNIS. [Pumis.]

PREPESLNTHUS (חpeтє $\sigma \nu \theta 0 s$ ), an island in the Aegaean sea, one of the smaller Cyclades, lying between Oliaros and Siphnos. (Strab. x, p. 485; Plin. iv. 12. s. 22.)

PRIA. [Gallaecha, p. 934, b.]
PRIANSUS. [l'maESUs.]
IlliANTAE, a people of Tbrace, on the Helrus, (Plin. iv. 11. s. 18.) Forbiger (vol. iii. p. 1076) cun. jectures that they may have inhabited the Bptaprusin mentioned by Herodotus (vii. 108). [T. H. D.]

PR1A'Pl PORTUS (Пptámiôos $\lambda<\mu \dot{\eta} \nu$, I'tol. vii. 4. S 3), a port which Ptulemy places on the NW. side of the island of 'Taprobanc (Ceylon). Mannert imagines that it is represented by the present Ne. gombo. The name may not unnaturally have arisen from the Grecks having noticed at this place the prevalence of the Lingom or Phallic worship. [V.]

I'RIA'PUS (Прíamos: Eth. Прıãqעós), a town of Mysia on the Propontis, situated on a headland on the spur of Mount Pityus. Some said that it was a colony of Miletus, and others regarded it as a settlement of Cyzicus: it derived its name from its worship of the god Priapus. It had a good harbour, and ruled over a territory which produced good wine. (Strab. xiii. p. 587 ; Thucyd viii. 107 ; Pomp. Melu, i. 19; Plin. iv. 24, v. 40; Steph. B. s. r.; Geugr. Rav. ii. 18. v. 19 ; Arrian, Anab. i. 12. § 7.) Ruins of l'riapus still cxist nest Karaboa. (lichter, Wallfitheten, p. 425; Rasche, Lex. Num. iv. 1. p. 51.)
[L.S.]
 an lorian city, near the cuast of Caria, on the southeastern slope of Mount Mycale, and un a little river called Gaeson, or Gaesus. It had originally been sitnated on the sea-coast, and had two ports, one of which could be closed (Scylax. p. 37), and a small fleet (Hurod. vi. 6); but at the time when Strako wrote (xii. p. 579 ) it was at a distance of 40 stadia from the sea, in consequence of the great alluvial deposits of the Macander at its mouth. It was believed to lave been originally fuunded by Aepytes, a son of Neleus, but receired afterwards additional colonists under a Bucotian Philotas, whence it was by some called Cahne. (Strab. xiv. pp. 633, 636; Paus. vii. 2. §今 7 ; Enstath. ad Jionys. 825; Diog. Laërt. i. 5. 2.) But notwithstanding this admixture of Bucotians, Priene was one of the twelve lumian yitien Hyged is It Atlian, 1: II. viii. 5 ; Vitruv.
iv. 1), and took a prominent part in the religious solemnities at the Panionia. (Strab. xiv. p. 639.) It was the native place of the philosopher Bias, one of the seren sages. The following are the clicf circumstances known of its history. It was conquered by the Lydian king Ardys (Herod. i. 15), and when Croesss was overpowered by Cyrus, Priene also was forced with the other Greek towns to submit to the Persians. (Herod. i. 142.) It seems to have been doring this period that Priene was very ill-nsed by a Persian Tabules and Hiero, one of its own citizens. (Paus. l. c.) After this the town, which seems to have mere and more lost its importance, was a subject of contention between the Milesians and Samians, when the former, on being defeated, applied for assistance to Athens. (Thucyd, i. 115.) The town contained a temple of Atbena, with a very ancient statue of the goddess. (Paus. vii. 5. § 3; comp. Polyb. xxxiii. 12; Plin. v. 31.) There still exist very beautiful remains of Priene near the Turkish village of Samsoon; its site is described by Chandler (Travels, p. 200, \&c.) as follows: " It was seated on the side of the mountain, flat beneath flat, in gradation to the edge of tbe plain. The areas are levelled, and the communication is preserved by steps cut in the slopes. The whole circuit of the wall of the city is standing, besides several portions within it worthy of admiration for their solidity and beauty." Among these remains of the interior are the ruins of the temple of Athena, which are figured in the Iomian Antiputities, p. 13, \&e. (Comp. Leake, Asia Minor, pp. 239, 352; Fellows, Asia M/in. p. 268, \&c.; Rasche, Lex. Num. ir. 1. p. 55 ; Eckhel, Doctr. Rei Sum. vol. ii.. p. 536.) [L. S.]

conn of phiene.
Prifernull, a town of the Yestini, mentioned Goly in the Tabnla, which places it 12 miles from Pitinum, the same distance from Amiternum, and 7 miles from Aveia. (Tab. Teut.) But the roads in this district are given in so confused a manner, that notwithstanding these data it is impossille to fix its site with any certainty. It is placed by Romanelli (vol. iii. p. 283) in the neighbourhood of Assergio, but this is little more than conjecture.
[E. H. B.]
PRIMIS MAGNA and PARVA ( $\Pi$ рi i us $\mu \dot{\jmath} \gamma a \lambda \eta$,
 towns in Aethiopia, situated upon the extreme or right bank of the Nile. Primis Magna, called simply Primis by Pliny (iv. 29. s. 35), and Pren-
 by the Roman commander Petronius in the reign of Augustus. After taking Premnis, which is described as a strong place, the Roman cormmander adranced sgainst Napata. (Strab. L.c.) Ptolemy places it beyond Napata and just above Meroé. Hence it is identilied with Jrim. (Comp. Kearick, Ancient Egypt, vol. ii. p. 464.)
PRIMU'POLIS (прінои́тодts, Concil. Chalced. pp. 127, 240; falsely Tрциои́тодьs, Hierocl. p. 682, and Пріацои́тодіs, Concil. Ephes. p. 528), a town in Pamphylia, the later name of Asresicts. (Sce Wesseling, ad Hieroch. p. 682.)
 a town in Caria, of uncertain site, taken by Plilip V., king of Macedonia, and known also hy its cuirr(Polyb. xxi. 11; Sleph. B. s. v.; Sestini, p. 89; Cramer, Asia Minor, vol. ii. p. 217.)

PRINOESSA, an island off the croast of Lerreas, in Acarnania, mentioned only by Pliny (iv. 12. \& 19).
prinus, [Maxtineis, p. 264.]
PRION (חi i $\omega \nu$ ), a mountain in the island of Cas, which is about 2760 feet ligh. (Plin. v. 36.) From a scholion (ad Theocrit. vii. 45) it might be inferred that Oromedon was another name fir Mount Prion; but according to another ancient commentator Oromedon was either a surname of some divinity, or the name of some wealthy and pawerful man.
[L. S.]
PRION (Прíwv), a river in Arabia. [PRIoxotus.]
PRIO'NOTUS MONS (חрívoqov ©́pos), a mountain in the southern part of Arahia, in the territory of the Adramitae, identified by Forster with Riss Broom, a leeidland forming the termination of a mountain chain and jutting out prominently into the ocean in long. $49^{\circ}$, about 35 miles NE. of Mughdu. Prion was a river flowing into the spal near this promontory. (Ptol. vi. 7. §§ 10, 13 ; Forster, A trabin, vol. ii. p. 204, seq.)

PRISTA (Прабтो, Ptol. iii. 10. § 10. Where, however, sone read Tupt $\sigma \tau$; called in the Itin. Ant. p. 222, Sexantaprista; in the Not. Imp. Sexaginta Prista; and in Procopius, de Aed. iv. 11, p. 307, ${ }^{\mathrm{E}} \mathrm{E} \xi v \tau \dot{\pi} \pi \rho(\sigma \tau a)$, a place in Moesia Inferior, on the Damnbe, the station of the 5th colort of the 1 st Legio Ital. Identified with Rutschuck. [T. H. D.]
PRIVERNUM (Прเoúeppov: Eth. Privernas -ätis: Piperno l'ecchio), an ancient and important city of the Volscians, afterwards inclnded, with the rest of the territory of that people, in Latium, in the more estended sense of the name. It was situated in the Volscian mountains, or Monti Lepini; but not, like Sietia and Norba, on the front towards the plain of the Pontine Marshes, hat at some distance further back, in the valley of the Amasenus. Virgil reprosents it as an ancient city of the Volscians, and the residence of Metabus, the father of Camilla (-4en, xi. 540); and there is ne reason to doubt that it was originally a city of that people. Its name is not indeed mentioned during any of the earlier wars of the Volscians against Rome ; but on these occasions the name of the people is generally given collectively, and the brunt of the war naturally fell upon thase cities which more inmediately adjoined the fronticrs of Latium. When the name of l'rivernum first appears in history it is as a city of considerable power and importance, holding an independent po-ition, and able not only to engage in, but to sustain, a war against Rume single-handed. In в. c. 358 the l'rivernates drew upon themselves the bostility of Rome by plondering the lands of the Roman colonists who had been recently settled in the Pontine Plains. The next year they were attacked by the consul C. Marcins, their forces defeated in the field, and they themselves cempelled to submit (Liv. vii. 15, 16). But though their submission is represented as an unconditional surrender (deditio), they certainly continued to form an independent and even powerful state, and only a ferv years afterwards again ventured to attack the Reman colonies of Norba and Estia, for which they were speedily punished by the consul C. Plantius : their city is said to have been taken, and two-thirds of their territory forfeited. (Id. vii.

42, viii. 1.) This was soon after divided amony the lieman plebeians. (Id. viii. 11.) They do not appear to have taken any part in the general war of the L.atins and Campanians against Rome ; but in n. C. 327 the Privernates ayain took up arms singlelianded, with only the assistance of a few of the Fundani. Notwithstanding this, the war was deemed of sufficient importance to employ two consular armies; and it was nut till after a long siege that Privernum was reduced by C. Pluntius, the consul of the fillowing year. The walls of the city were destroyed. and the leaders of the defection severely panished; but the rest of the people were adinitted to the Roman citizenship, - probably, howerer, in the first instance without the rizht of Nuffiage, though this aloo must have been granted them in the year B. c. 316 , when the Ufentine tribe was constituted, of which Privernum was the chief town. (Liv, viii. 19-21, ix. 20: Fast. Capit.; Val. Max. vi. 2. § 1: Festus, 8. v. (fentiar ; Niebuhr, vol. iii. p. 176.) According to Festus (p. 233) it became a Praefectura; but notwithstanding this subordinate condition (which was perkaps confined to the short period before it attained the full franchise), it seems to have been a flourishing municipal town under the Roman govemment. Its territory was one of those which the agrarian law of Servilins Rullos proposel to assign to) the Roman populace (Cic. de Lely, Agr. ii. 25); but thougb it escaped upon this occasion, it subsequently received a military colony (Lib. Colon. p. 236). The period of this is uncertain: according to Zumpt (de Colon. p. 401) it probably did not take place till the reign of Trajan. In inscriptions it bears the title of a colons; though others terin it a municipinm ; and neither Pliny nor Ptolemy assign it the rank of a colony. (Plin. iii. 5. s. 9 ; Ptol, iii. 1. § 63 ; Zumpt, l. c.) It was noted, as well as the neighbouring Setia, for the excellence of its wine (Plin. zir. 6.s.8); but we hear little of Privernum under the Roman Empire, and have no subsequent account of its fate. From its secluded position, no mention occurs of it in the ltineraries. The ruins of the ancient city, which according to Cluverius are considerable, are situated abont 2 miles N. of the modern Piperno, un the site still called Piperno Verchio. The period or oecasion of the abandonment of the ancient site is unknown ; but it is certainly erroneous to connect it with a great eathquake which is alluded to by Cicero as taking place at Privernuin (Cic, de Jic. i. 43). On that vecasion, we are told, the earth sank downtua great depth,-a phenomenm which may have given rise to a remarkable chasm nu cavity still visible in the neighborrhod of Piperno. The ancient city was more probably deserted in consequence of the ravages of the Saracens in the tenth century, from which all this part of Latimn sulfered neverely (Rampoldi. Conografut d Italia, vol. iii. p. 2.58 ), and the inlabitants souglit refuge in more elevated and secure positions, such av that of the modern town of Piperno.
E. H. B.]

1'ROBALANTHES [Marathox.]
PleOBA'TlA. BoEOTIA, p. 412. b.]
P'ROCERASTIS, the nore ancient name of Cinatcelmos, according in Pliny (v. 32. s. 43).

Plio'ClIIA (חpoxút thlathd off the roast of Campania, situated between Cape Misenmm (trom which it is distant leas than 3 miles) and the larger inland of Aenaria or Ischia, In comnon with the latter it is of volcanic formation, and appears to have been sulferet in ancient
even tell ns that it was a mere fragment broken off from the neighbouring island of Aenaria by one of the violent convulsions of nature to which it was subject. But this statement certainly has no bistorical foundation, any more than another, also recorded by Pliny, that both islands had been thrown up by voleanic action from beneath the sea. Such an event, however true as a geological inference, must have long preceded the historival era. (Strah. i. P. 60, ii. P. 123, v. pp. 248,258 ; Plın. ii. 88.) The same phenomena led the poets to associste I'rochyta with Aenaria or Inarine, in comnectinn with the fable of the giant Typhoeus [AENAmid]; and Silins Italicus even assigned it a giant of its own, Dimas. (Virg. Aen. ix. i15; SiL. Ital. vin. 542, xii. 147 ; Ovid. Met. siv. 89.)

Virgil's epithet of "Prochyta alta" is less appropriate than usual, - the island, though girt with perpendicular cliffs, being flat and low, as compared either with Ischia or the neighbouring headland of Misenum. There does not appear to have been any town on the island in ancient times. Statius (Sile. ii. 276) terms it a rugged island, and Juvenal (Sut. iii. 5) speaks of it as a wretched and lonely place of residence. At the present day, on the contrary, it is one of the most fertile and flourshing spots in the Neapolitan dominions, its whole area being cultivated like a garden and supporting a population of 4000 inhabitants. It is distant hetween 2 and 3 miles from Cape Miseriun, but only about a mile and a lialf from the nearest point of the mainland, which is now known as the Monte di Procida,
[E. H. B.]
 $\sigma$ os in Zusim. ii. 30, and Hierocl. p. 662), an island in the western part of the Propontis, between Priapos and Cyzicns, and not, as Strabo (xini. p. 589) has it, between Parium and Priapus. The island was particularly celebrated for its rich marble quarries, which supplied most of the neighlouring towns, atid especially Cyzicus, with the materials for their public buildings; the palace of Mausolus, also, was built of this marble, which was white intermixed with black streaks. (Vitruv. ii. 8.) The island contained in its south-western part a town of the same name, of which Aisteas, the poet of the Arima peia, was a native. (Herod. ir. 14 ; comp. Scylax, F. 35: Strab, l.c.) This town, which was a colony of the Milesians (Strah, xii. p. 587), was burnt by a 1'homiciun theet, acting under the orders of king Darius. (Herod. vi. 33.) Strabo distinguishes between old and new Procomesus; and Scylax. besides 1'roconnesus, notices another island called Elaphonesus, with a good harbour. Pliny (v. 44) and the S-lmolisat on Apollonius IRhodius (ii. 2;8) consitier Elaphonesus ouly as another name for Procomuesus; but Elaphonesus was unquestionably a distinct island, situated a little to the south of l'rocomnesus. The inlrabitants of Cyzicus, at a tine which we cannot ascertain, forced the Proconnesians to dwell together with them, and transferred the statue of the goddess Dindymene to their own city. (1'aus, viii. 46. § 2.) The island of I'roconncsus is mentiuned as a bishopric in the ecclesiantical Listorians and the acts of the Council of Clabledum. The celebrity of its marlle quarries has changed its ancient name into Mermere or Jarmora; whence the whole of the Propnotis is now called the Sica of Marmora. Respecting snme autonomous coins of 1 'roconnesus, see Seatini, M/on. 1et. 1 . 75.
[L.S.]

Thessaly（Strab．ix．p．434），which Stephanus B． writes Proarna（ $\Pi \rho o \alpha \rho \nu a$ ），and calls by mistake a town of the Malians．In e．c． 191 Proerna，which had been taken by Antiochns，was recovered by the cunsul Acilins．（Liv．xxxvi．14．）We learn frons this passage of Livy that Proerna stood between Pharsalus and Thaunaci，and it is accordinzly placed by Leake at Ghynekikustro．（Northern Greece，rol．i．p．459．）

PKOLA＇QUEL3（Pioraco），a village or station on the branch of the Via Flaminia which crossed the Apennines from Nuceria（Nocera）to Suptenipeda （S．Severino）．It was situated at the foot of the pass on the E．side of the mountains，and evidently derived its name from its being at the outflow of a small lake which discbarges its waters inta the Po－ tenza．Cloverius speaks of the lake as still existing in his time：it is not marked on modern maps，but the village of Pioraco still preserves the traces of the ancient name．The linerary reckons $16 \mathrm{3l}$ ．P． from Nuceria to Prolaqueum，and 15 from thence to Septempeda．（Itin．Ant．p．312；Claver．Itol．p． 614．）
［E．H．B．］
PlRO’1ONA（Пра́ноуа，Appian，Illyr．12，2－5 －28；Peut．Tab．；Geogr．Rav．iv，16），a town of the Liburni，situated on a hill，and，in addition to its natural defences strongly fortified．Octavianus，in the campaign of e．c． 34 ，surrounded it and the ad－ jacent rocky beights with a wall for the space of 40 stadia，and defeating Tentimus，who had come to its relief，forced an entrance into the town，and obliged the enemy to evacuate the citadel．There is every reason to believe that Promona stood on the skirts of the craggy hills，which，with the neighbouring district，now bear the name of Prominc．As the Peutinger Table places it in the road from Buronm to Salona，it must be looked for on the SW．side of the mountain of Promina，in the direction of Dernis． （Wilkinson，Dalmatia，vol．i．p．206．）［E B．J．］

PRONAEA．［Nemesa．］
PRON1，PRONN1，or PRONE＇SUS（ $\quad$ póryot， Pol．；Проvaios，Thace；Пршע $\eta$ चos，Strab．），one of tbe four towns of Cephallenia，sitnated upon the south－eastern coast．Together with the other towns of Cephallenia it joined the Athenian alliance in n．c． 431 ．（Thuc．ii．30．）It is described by Polybius as a small fortress；but it was so difficult to besiege that Philip did not venture to attack it，but sailed against Pale．（Pol．v．3．）［Pile．］ Livy，in his account of the surrender of Cephatlenis to the Ronians in B．c． 189 ，speaks of the Neniotae， Cranii，Palenses，and Sumaei．Now av we know that Proni was one of the four towns of Ceplallenia， it is probable that Nesiotae is a false reading fur Pronesiotae，which would be the ethnic form of Pronesus，the name of the town in Strabo（x．p． 455）．Proni or Pronesus was one of the three towns which continued to exist in the island after the destruction of Same．（Comp．Plin．iv．12．s．19．） The remsins of Proni are found not far above the shore of Liménia，a harbour about 3 miles to the northward of C．Kapri．（Leake，Northern Gireece， vil．iii．p．66．）

## PROIHTHA＇SIA．［Drangilina．］

PROH＇ONTIS（Hिоторtis：Sea of Marmora）， the sea between Thrace and Asia Minor，forming an intermediate sea between the Aegean and the Euxine，with the latter of which it communicates throngh the narrow strait of the Thracian Bosporus， and with the former through the Hellespont．Its aacient name Propontis describes it as＂the sea be－
fore the entrance of the l＇ontus＂or Euxine ；white its modern name is derived from the island of Marmora， the ancient Proconnesus，near the western entrance of the sea．（ $A_{j p u l, ~ d e ~ M u n d . ~ p . ~ 6 ; ~ S t e p h, ~ B . ~ s . ~ r . ~}^{\text {．}}$ Hоолont（s．）The first authors who mention the lro－ pontis onder this name are Aeschylus（Pers． 87 fif）， Herodotus（iv．85），and Scylax（1pp．28，35）；and Herodotus seems even to have made an accurate measurement of this sea，of which he states the length， to be 1400 stadia，and the breadth 500 ．Later writers such as Strabo（ii．p．125）and Agathemerus（ii． 14），abandoning the correct view of their prede－ cessor，state that the breadth of the Propontis is ahnost equal to its length，although，assuming the Propontis to extend as far as Byzantium，they include in its length a portion of the Thracian Bosporus．Jlodem geographers reckon abont 120 miles from one strait to the other，while the greatest breadth of the Propontis from the European to the Asiatic coast does not exceed 40 miles．The form of the Propontis wonld be nearly oval，were it nut that io its south－eastern part Mt．Arganthonius with the promontory of Poseidion forms two deep bays，that of Astacus［Sines Astacenve］and that of Cins［Cunes Sines］．The most important cities on the coasts of the Propontis are ：Peris－ thes，Selymmba，Byzantium，Chalcedon， Astacus，Cies，and Cxzicus．In the south－west there are several islands，as Proconnesus，Opmics．i， aud Alone：at the eastern extremity，sonth of Chalcedon，there is a group of small islands called Demonnest，while one small island，Besbicus，is situ－ ated in front of the bay of Cius．（Comp．Polyh．iv．39， 42；Stral．xii．p． 5 7．4，xiii．pp． 563,583 ；Ptol，『． 2．§ 1，vii．5．§ 3，viii．11．§ 2，17．§ 2；Agath．i． 13；Dionys．Per，137；Pomp．Mela，i．1，3，I9，ii． 2.7 ；Plin．iv．24，v． 40 ；Kruse，Leber Herodots Ausmessung des Pontus Eucinus，©c．，Breslau， 1820．）
［L．S．］
PRO＇SCHIUM（Mрб́ $\chi i o \nu$ ：Eth．Проб $\chi \iota \in \dot{\prime}$ ），a town of Aetolia，between the Achelous and the Eveous， is said to have been founded by the Aeolians when they removed from the Homeric Pylene higher up into the country．［Prlene．］Proschium also laid claim to high antiquity，since it possessed a slirine said to have been dedicated by Hercules to his cup－ bearer Cyathus，whom he had unintentionally slain． It is clear，from a narrative of Thucydides，that Proschium lay west of Calydon and Ileuron，and nt no great distance from the Achelous．Leake places it on the western part of $3 / t$ ．Zygns（the ancient Aracyothus），near the monastery of St．Gecrge be－ tween．A natoliko and A nghelokastro．（Strab，x．p．4．51； Athen．x．p． $411 . a$. ；Thuc．iii．102，106；Steph．15． s．v．；Leake，Northern Greece，vol．i．p．119．）

PROSPALTA．［ATTTCA，p．332，a．］
PROSYMINA（Про́бvuva：Eth．Прободvaîs， Steph．B．s．v．），an ancient town in the Argeia，in whose territory the celebrated Heraenm，or temulo of Hera，stood．（Strab，viii．p．373）．Statius gives it the epithet＂celsa＂（Theb．iv．44）．J＇ausantas （ii．17．§ 2）mentions only a district of this name． （Leake，Peloponnesiaca，pp．264，269．）［Sce Vol． 1．pp．206，207．］

PROTA（Пр $\omega$ Ta），one of a group of small islands in the east of the Propontis，not tir from Chalecion． （Steph．B．s．v．Xa入kitcs．）Its distance from Chal． citis was 40 stadia，and it is said still to hear the name of I＇rote．
［L．s．］

PHOTE (חра́r $\eta$ ). 1. An island off the western coast of Messenia. [Sce Vou], 11. F. 342, b.J
2. One ot the Stoechades off the sonthern coast of (iaml. [KToECHADEs.]

PBOTUNICA, a place in Bithynia, on the road from Nicaea to Aucyra. (Itin. Ilieros. p. 573.) It is possibly the same place as l'rotomame (חprotonáкрас) mentinned by Ptolemy (v, 1.§ 13), [1., S.]

IROVI'NC1A. The part ot Gallia which bordered on Italy and was bounded on the south ly the Mediterranean was (aallia Provincia (Cites. B. G. i. 19), a term by which Cacsar sometimes distinguishes this part of Giallia from the rest, which he ealls "omnis Gallin" (B. G. i. 1) or "tota Gallia" (B. fr. vii. 66). The I'rovincia in ('aestr's time was bounded on the north by the lhone from the westorn extremity of the Lacus lemanons (Lake of Genera) to the junction of the Rhone and the Scône. Gieneva, which belonged to the Allohruges, was the furthest town in that direction [Gexevid]. Along the southern side of the Lake of (ifneva the linit was the boundary hetween the Allobroges who were in the Irovincia and the Nantuates who were not. (13. G. iii. 6.) The Alps were the eastern houndary. Ocelum [Oowlem] was in the Citerior Provincia or Gallia C'salpina, and the country of the V'soontii was in the Ulterior I'rovincia or in the I'rovincia Gallia (B. (ir. i. 10). On the west the Mons Cevenna (C'írenus) sonthward from the latimule of Luedunum (Lyou) was the boumlary. The Voleae Arecomici were within the Provincia, and also the towns of Narlon (Narbonne), Carcaso (Corcassone), and Tolosal (Toulonse), as we see from a pasage in Caensr (B. G. iii. 20). Part of the Ruteni, called I'rovinciales (B. G. vii. 7), were in the Irovincia; and also the Helvii, who were separated from the Arremi by the Cevenna (B. (i. vii. 8). The linteni who were not in the Provincia, the Gabali, Nitiobriges, and Cadurci bordered on it on the weat.

The Ronan tronps were in this country during the Sceond 1'unic War whon Hamibal was on his raad to Italy; but the limuans first got a footing there throngh the people of Massilia, who called for their help r. c. 154. In N.c. 122 the Rumans made a anttement, Aquae Sextiae (Air), which we may comsider to be the commencement of their ocenpation of the conntry cast of the Rhome. [(iambid, Vol. I. p. 953.] The conquest of the Salyes and Vocontii, and of the Allobroges, gave the Romans all the country on the east side of the Rhone. The settlement of Narbo (Narbonne) in 1s. ᄃ. 11s, near the border of Spana and in a position which gave easy access to the hasin of the Garonne, secured the Roman dominion on the west side of the Rhone as far an the I'yrenees, But the lomans hal many a bloody I ittle to fizht hefire they were safe on Gatlice gromed. The eapture of Tolosa (Toulouse) in the conntry of the Volsae Tectosages by the consut Q Servilins Canpio (3. C. 1U6) extended the limits of the Provimia as far as this rich town. (1)ion Cass. F'r. 97 , (iv.) But the Roman dominion was not safe even in H. C. 58 , when the proconsul Caesar received Gallia as one of his provinces. Wis suthugation of all G. Hin finally secured the Romams on that side. [Vol. I. p. $9.54, \mathrm{sc}$.

In the division of all Gatlin by Augustus the Provincia retained its limits pretty marly: and it was from this time cemerally called Narbonensis I'roviucia, and sometimes fiallia Braceata. The names which oceur in the Greek writers are: Kєлтоуалатia NapGuvjara (I'tul, 11. 10 § 1), in Napeativis, 「aratia
 There is no doubt that the name Braceata or Bracata is derived from the dress of the Galli ("ens lice sagatos bracatosque versari." ('ic. pro Funteio, c. 15), and the word "braca" is Celtic.
Strabo (iv. p. 17R) says that the form of the Narbonensis rescmbles that of a parallelogram ; bnt lis comparison is of no use, and it is foumled on an erroneons notion of the pasition of the l 'yreners. [Vol.1. p. 949.] P'olemy determines the eastern loundary of the Provineia by the west side of the Alps, from Mons Alulas (perliaps $3 / \mathrm{mt}$ St. Gothard) to the mouth of the Varus (lar), which separated Narbonensis from Italia. Part of the southem boundary was formed by that part of the l'yrenees which extended from the boundary of Aquitania to the promontory on the Mediterramean where the temple of Venus stond, hy which l'tulemy means Cap Creax [Pontes Vexeris]. The rest of the *outhern bonndary was the sea, frum the Aphrodisinn to the month of the l'ar. Tbe western bonndary remained as it was in the time of Caesar, as it seems ; for Carcano and Tolosa are placed in Narbonensis by: Ptolemy nonl Pliny (iii, c, 4). Ptolemy places Luglunum or Convenale, which is on the Garonae and near the P'yrenees, within the limits of Aquitania, and he mentions no flace in Aquitania east of Lugdunum [Convenae]. East of the Convenac and at the foot of the Pyrenees weco the Consorani, part of whom were probably in Aquitunia nud part in Narhonensis [Cossolcini]. The western boundary of Narbonensis therefore ran from the Pyrenees northwards, and patsed west of Toulouse, Perhaps it was continued northwards to the Tarnis (Tarn), We camat determine the puint where the Cevenms became the houndary ; but if part of the Ruteni were at ill in the Narbonensis, the bomblary may have ron along the Tarn to the Cerennes and the Mons Lesura, une of the highest points of the range (La Losère). From the locire northwards the mountain country borders the lithone as far as Inglunum, which was not in Narbonensis. The northern boundary of Narbonensis ran along the Khone from Lugduman to dieneva at the west end of the Leman lake. Pliny mentions the (iehenna (Cebenna) and the Iura as northern bonndaries of the Provincis; but his notion of the direction of the Jum was nut exact, thangh it is true that the range touches a part of the morthern lumulary. P'toleny makes the Adulas the sonthern limit of the enstern boundary of Belgica (ii. $9 . \S 5$ ); and Alubus is also the northern limit of the eastern bomalary of Narbomensis. The southern Twundary of Belyica from the Adulas westward was the northern boundary of Narbonensis. It is difficult to say whether the gengrapher is making a boumbury of his own or fullowing an administrative division; Int we may certainly conclude that the Narhonensis coutained the upper valley of the Rhone (the l'alaie), for the Bernese $A$ lps which form the northern side of this great valley are a natural bonndary, and the Helvetii were not in the L'alais [11m,vetir]. We may conclude then that the Seduni, Veragri, and Naituater, who were not within the Provincia as defined by Cussar, were within the limits of the Narbonensis. (bre of the common rands to Italy was from Octoclarus (Martigny in the Valais) over the A! pis Pomina (Givat St. Bemord). The Narbonensis is thus a matural division comprehending the upper valley of the Rhone, the Lenan lake and the countries sonth of it to the Alps , the country on the south sity of the Fhone from the lake to

Lyon, add the country south of Lyon. The part of the Provincia south of Lyon is a valley between the Alps on the east and the Cévennes on the west, which becomes wider as we advance south. On the east side the lower Alps and the Alpine valleys cover a large part of the country. On the west, the Ce vennes and the lower ranges connected with them leave a very narrow tract between the Rhone and the mountains till we come to the latitude of A vignon and Nimes. The southern part of the Fhone valley between Massilia and the Pyrenees contains a large estent of level country. The sonthern part of this great valley is more ltalian than Gallic in position, climate, and products. The Rhone, which cuts it into two parts, has numerous branches which join it from the Alps ; but the mountain streams which flow into it trom the Cévennes are few [Rhodanus].

The rivers of the Provincia west of the Rhone flow from the Cevernes and from the Pyrenees into the Mediterranean. They are all comparatively sinall. The Classius of Avienus is probably the Caulazon, so far as we can conclude from the name ; the Ledus is the Lez, which flows by Montpellier ; the Arauris (Herault) flows past Agathe (Agde); the Libria or Liria may be the Livron [Liaria] ; the Obris or Orbis (Orbe); the Narbo or Atax (Aude), which passes Narbonne ; the Ruscino or Tetis (Tet), and the Tichis ( $T e c h$ ), which enters the Mediterranean a few miles north of Portus Veneris (Port lendre). Between the Var and the Rhone there are very few streams, for the form of the surface is sucb that nearly all the drainage runs into the Rhone. There is the Argenteus (Argens), and a few insignificant streams between the Argenteus and the delta of the Rhone.

The extreme western part of the Provincia comprehends a portion of the basin of the Garonne, for Toulouse is on this river. The valley of the Aude between the Cévennes and the Pyrenees forms an easy approach from the Mediterranean to the waters of the Garonne and to the Atlantic,-a circumstance which facilitated the commerce between the Mediterranean and the Atlantic, and made this a commercial route at a very early period. [Narbo.]

The coast from the Pyrenaeum Promontorium to a point a few miles south of Massilia forms a great bay called the Gallicus Sinus: it is generally flat, and in many places it is lined by marshes and lakes. This part of the coast contains the Delta of the Rbone. East of Massilia the country is billy and dry. The port of Massilia is naturilly a poor place. East of it is the port of Telo Martius (Toulon). and a ferr other ports of little value. Mela's remark (ii. 5 ) is true: "On the shore of the Provincia there are some places with some ammes; but there are few cities, because there are few ports and all the coast is exjinsed to the Auster and the Africus." There are a few small islands along the eastern coast, the Stoe chades, Planasia, Leron, and other rocky islets. The dimensions of the Provincia, according to Acrippa's measurement, are said to be $270 \mathrm{M} . \mathrm{P}$. ia length and 248 M. P. in breadth. But we neither know how the measures were taken, nor whether the numbers in Pliny's text (iii. 4) are correct. Huwever we learn that this, like many other parts of the empire, was surreyed and measured under Agrippa's orders.

The length of the coast of Narbonensis is above 260 miles. The direct distance from Toulouse to the mouth of the Vor is near 300 miles; and from the junction of the Rhone aud the Saone, the direct VOL. in.
distance to the sea measured along a meridian is about 180 miles. But these measures give only an imperfect idea of the area of the country, becanse the outline is irregular. Straho (iv. pp. 178, 179) has preserved a measurement which has followed a Roman road from the Pyrenees to the Var. The distance from the temple of Aphrodite at the Pyrenees to Narbo is 63 Roman miles ; thence to Nemausus 88; from Nemausus throngh Urernun and Tarasco to the warm springs called Sextiae (Aquae Sextiae), which are near Massilia, 53; and thence to Antipolis and to the Varus, 73 ; the whole making 277 miles. Sume reckon, he says, from the Aphrodisium to the Varus 2600 stadia, and some add 200 more, for they do not agree abont the distance. Two thonsand six bundred stadia are 325 Roman miles. When Strabo wrote, the distance along the road from Narbo to the Var was not measured, or he did not know it. The other great road which be describes is a road through the Vocoutii and the territory of Cottins : "As far as Ugernum and Tarasco the road from Nemausus is the same as the route just described; but from Tarasco to the borders of the Vocontii over the Druentia and through Caballio (Cavaillon on the Durance) is 63 miles; and agaio, from Caballio to the other limit of the Vocontii toward the land of Cottius to the village Epebrodunum (Embrodanum, Embrun) is 99 miles; thea 99 more through the village Brigantium (Briancon) and Sciacomagus and the passage of the Alpes (the pass of Mont Generve) to Ocelum [Ocelum], the limit of the land of Cottius; the country from Sciacomagns is reckoned a part of Italy, and from there to (celum is 27 miles." He says in another place (iv. p. 187) that this road through the Vocontii is the shorter, but though the other road along the Massiliotic coast and the Ligurian territory is longer, the passes over the hills into Italy are easier, for the mountains in those parts sink lower.

These were the two great roads in the Provincia. There was a road in the west from Narbo through Carcaso to Tolosa. There was also a road from Arelate (Arles) at the bifurcation of the Rhone northward on the east side of the Rbone, through Avenio, Arausio, Valentia, and Vienna (Viemne), to Lugdunum: this was one of Agrippa's roads (Strab, iv. p. 208). There was no road on the oppasite side of the river, or no great road, the land on that side not being well arlapted for the construction of a road. There were other roads over the Alps. There was a ruad from Lugdunum and Vienna up the valley of the Isara (Isère) to the Alpis Graia (Little St. Bernare'), which in the time of Angustus was much used (Strab. iv. p. 208); and there was the roald from Augusta Praetoria (Aosta) in Italy over the Great St. Bernard to Octodurus (Martigny) and Pennilucns, at the east end of the Lake of Geneve; and thence into the country of the Helvetii.
Within the limits of Narbonensis there is every variety of surface and climate, Alpine mountains and Alpine valleys, sterile rocky tracts and fertile plains, winter for nime months in the year and summer for as many months. Pliny says of it: "Asrorum cultu, virorum moramque dignatione, amplitudine opum, aulli provinciarum postferenda breviterque Italia verins quam proviocia." (Pliny, iii. 4.) The climate is only mild in the sonth part and in the lowlands. As we descend the Rhoge a difference is felt. About Arausio (Orange) the olive appears, a tree that marks a warm climate. "All
by Microsoff (®) $\begin{gathered}\text { x. }\end{gathered}$
the Narbonitis," says Strabo, "has the same natural products as Italia; but as we advance towards the north and the Cemmenon (Cevemnes), the land planted with the olivo and the fig terminates, but all the other things are grown. The grape alse does not ripen well as we alvance further north" (iv. p. 178). Straho's rwmark about the elive is true. As we advanee fron Nimes ley the great road to Clermont Ferrand in the A arrergne, we ascend pradually in a north-west direction to a rocky country well planted with vines, malbery trees, and olives. After proceeding a few miles further the olives suditenly disappear, a sign that we have passed the limits of the temperature which they require. The country is now an irrogular plateau, recky and sterile, but in parts well plantel with mulberries and vines; and there is a little whent. Before descendiog to Andusia ( 1 nduse), which is deep sunk in a gorge of the Varilo (fictelon), a few more olives are seen, but these are the last. We are approaching the rugged Ficemnes.

The native population of the Ireorincia were Aquitami, Celtae, and Ligures. The Aquitani were in the parts along the base of the P'yrences. The ligures in the listorical period eccupied the sonth-east part of the Proviucia, north and east of Marseille, and it is probable that they were once on the west side of the Rhone also. The Greeks were on the coast, east and west of the city of Massilia [Masshli.1]. After the country was reduced to the form of a Provincia, the Itatians flucked to the Provincia to make moncy. They were petty dealers (Hercatures), bankers, and muney-lenders (negetiatores), sheep-feeders, agriculturists, and traders. (Cic. pro P. Quintio, c. 3, pro M. Fonteio, c. 5.) The wine of Italy was imported into the Provincia io Cicero's time, and a duty was levied on it, if $\pi$ ! at the port, at least in its tramsit through the country (pro Fontcio, c. 9). Cicero sneeringly says, "We liomans are the most just of men, for we do not allow the Traosalpine nations to plant the olive and the vine, in order that our olive phantations and vineyands may be worth more" (de Re Publica, iii. 9). It dues not appear from Cieere when this seltislt order was made. But the vine is a native of Narbonensis, and the fireeks made wine, as we might xafidy tas-une, athl they sold it to the Galli, I'osidonins, whon Cicero knew, and who bad travelled in the country, says, that the rich Galli bunght Italian wine and wise fron the Massaliots. (losidonins, (op. Athen. is. p. 152.) If any of the Galli got th ts wine, the (ialli of the Provincia would have it.

This favourite provioce of the Romans was full of larie cities, whiels under the Eimpire were ornamurnted with works both splendid and useful, anphitheaties, temples, theatres, and aqueluets. Dlany of these buillimes have profished, but the magnificent monuments at Ar res and Nines, and the less striking 1. nuain in other citios, sliow what this country was Bitier hamon dominion,

Tlir tribers or proples within the limits of the I'rovineia are very numerous. Pliny has a long list. On the west sile of the Rhone at the toot of the I'yrences were the Consorani and Surlones or Sordi. Nurth of them were the Volcae Tectusures, whose capital was Tolesa; and the Ruteni Provinciales. The Volcar Arecomici ocetpiped the country east of the Tectosage- and extunded to the Rhone. The paition of the Taconi, a simall people mentioned by Plany, is only a matter of conjectore [TAsconi]. North of the Arecomici only one peaple is men-
tioned between the Cevennes and the Rhone, the llelvii [11elvin]. The Ardeche (a mountain stream from the Cévennes) flows through their country intu tho Rhone. It was by the valley of the Ardiche that Caesar got over the Cévennes into the country of the Arverni through the snow in the depth of winter (B. fr. vii. 8). He could go no other way; for he tells us that he went through the territory of the Helvii.

East of the Rhone the tribes were very numerous for the surface is larger and fall of valleys, It has been already observed that the Seduni, Veragri, and Nantuates must have beco included in the Narbonensis of Augustus. The Allabroges accupied the country south-west of Geneva, to the Isere and the Ehone. Pliny's list of names in the Provincia connprises all P'tulemy's, with some slight variations, except the Commoni, Elicoci, and Sentii. Some of the names in Pliny are probably corropt, and nothing is known about some of the peoples. The following are the principal peoples south of the Nantuates aod Allobroges: the Centrones, Graioceli, Mledulli, Catwriges, Tricorii, Segovellauni, Tricastini, Cavares, Vocontii, Vulgientes, Bodiontici, and Albici, all of them aorth of the Druentia or its braches, South of them were the Salyes or Salluvii, the neighbours of Massilia; the Suetri, Oxybii, Deciates, and the Nerusi, who were separated from Italy by the Iar.
[G. L.]
1'RUSA (Проиิ $\sigma a$ : Eth. Пpovaacús), generally with the addition of $\dot{e} \pi \hat{l}$ or $\pi \rho \dot{s} s \tau \hat{\varphi}{ }^{\prime} \mathrm{O} \lambda \dot{v} \mu \pi \psi$, to distinguish it from another place of the same name, was situated at the oorthern foot of Muunt (Olympus, in Mysia. Pliny ( $\mathrm{v}, 43$ ) states that the town was built by Hannibal during his stay with Prusias, which can only mean that it was built by lrusias, whese name it bears, on the advice of Hannihal. According to the common test of Strabo (xii. p. 564), it was founded by one Prusias, who waged war against Croesus, for whom Stephanus B. (s.v.) substitutes Cyrns. As no such Prusias is known in the age of Croesus or Cyrus, various conjectares have been made upon the passage of Straho, but withunt success. At all events, it is ackaowledged by Dion Chrysostomus (Orat. sliii. p. 585), who was a native of the town, that it was neither very ancient nor very large. It was, however, as Strabo remarks, well governed, continned to floarish under the Loman emperors (Ilin. Epist. x. 85), and was celebrated for its marm baths, which still exist, and bere the name of the "royal waters." (Athen, ii. p. 43 ; Steph. B. s. v. ©épua.) Under the Greek emperors it suffered much during the wars against the Turks (Nicet. Chon. Pp. 186, 389); when st last it fell into their hands, it was for a time the capital of their empire under the name of Brusa or Brousse, which it still bears, for it still is one of the must flourishing towns in Asia Minor. (Browne's Travels in Walpple's Turkey, vol. ii. p. 108 ; Sestini, Jon. Vict. p. 70; 113milton, Researches, i. p. 71, \&c.)
I'toleny (v. 1.§ 13) and Plioy (v. 43) mention a town of the same name oa the river Hyppius or Hypius, in Bithynia, which, according to Memnon (cc. 29, 42, 49), had formerly been called Cierus (Kiepos), and had belonged to the territory of ITeracleia, but bad been taken by Prusias, wbo changed its name. But there seems to be some confusion bere between Cierus aod Cius, the latter of which is known to bave received the name of Prusias from the king of that name. (Strab. xii. PR. $563,566$.
[L.S.]

 central Phrygia. (Ptol, v. 2. § 24 ; Hierocl. p. 677 ; Conc. Chalced. p. 673.) Pococke (Travels, iii. c. 15) foand aa inscription contaiaing the name of this town near Afrom Cara-hissar. Leake (Asia Minor, p. 55) shows that the inscription does nut refer to Prymnesia, but to some person whose name ended io menneas. No infereace, therefore, can be drawn from it as to the site of that town. Franz (Fuinf Inschriften, p.5) has proved, by iucontrovertible arguments from other inscriptions, that Prymnesia must have beea situated at Seid-el-Ghazi, between Eski-Shehr and Coniah, where a few renains of an ancient Greek town still exist. (Leake, Asia Minor, p. 21.)
[L.S.]
PRI'TANIS (חри́tavis), a small river in the east of Poutus, which has its soorces in the Mosehici Muntes, and flows by the town of Abgales. (Arrian, Peripl. P. E. p. 7; Anooym. Peripl. P. E. p. 15 , where it is called Prytanes.) It is perhaps the same river as that called by Scylas (p. 32) Pordanis.
[L. S.]
I'SACUM ( $\Psi$ áкov), a promontory on the NW. conast of Crete, forming the termination of Mt. Tityrus, now called C.Spada. (Ptol. iii. 15. §8.)

## I'SANATHLS. [TAENABEM.]

PSAPHIS, [ATTICA, p. 330, a.]
PSEBO'A or PSEBO ( $\Psi \in S$ Śo, Strab. zvii. p. 822: $\Psi \in \mathcal{L} \dot{\alpha}$, steph. B. s. v.), the modera Tsana, one of the enurmous lakes $\mathbf{S}$. of Meroë, which feed the principal tributaries of the Nile. The 10th parallel of N. latitude nearly bisects the lake Psebua. According to Stephanus, it was five days' journey from Acthiupia, i.e. from Axume. In the centre of the lake was a populous islaod - a depôt of the ivory trade, and frequeoted also by the hunters of the Hippopotamus, the hides of which animal were exported to Aegypt, and employed as coverings for shields. On the E. and S. the lake was eacompassed by lofty monntains, which abounded in mineral wealth (Theophrast. de Lapid. p. 695, ed. Schneider), and whose periodical torrents, according to Agatharchides (c. 5. ap. Hudson, Geogr. Min.) poured their waters over the plains of the Troglodytes.
[W. B. D.]
PSELCIS ( $\Psi \in \lambda k i s$, Strab. svii. p. $820 ;$ Itin. Antor. p. 162; $\Psi$ é $\lambda \chi^{t s}$, Aristid. Aegin. p. 512), was a town of the region Dodecaschoenus aituated on the left baok of the Nile. Originally Pselcis was little more than a suburb of the older Aethiopian town Tachompso; but it speedily outgrew its parent, so that in process of time Tachompso was degominated Contra-Pselcis. In e.c. 23 the Aethiopian nation, alarmed by the approach of the Romans to their frontier, barassed the neighhourhood of Philae and Syene, and it became necessary to repel their iacursions. C. Petroains, accordingly, who had succeeded Aelius Gallus in the government of Aegypt, undertook to drive them back, and Pselcis was one of the towns which submitted to him. (Strab. l. c. ; Dion Cass. liv. 5.) So long as the Romans maintained their hold on Northera Aethiopia, Pselcis was the permanent beadquarters of a troop of Germao horse. The modera hamlet of Dakkeh occupies a portion of the site of the ancient Pselcis.
[W. B. D.]
PSE'SS11, or PSESSI ( $\Psi$ भ́ббıot, Ptol. т. 9. § 17 ; $\Psi_{\eta, \sigma o o l, ~ A p o l l o d . ~ a p . ~ S t e p h . ~ B . ~ s . ~}^{e}$; in Plin. vi. , the old editions have Psesii, but sillig reads Psessi; it appears from an inscription that Psessi, is the
correct form, Inser. in Jahn's Jahrbiicker, vol. axxi. p. 225), a people in Sarmatia Asiatica placed by Ptolemy between the lake Maeot is and the Hippici Minates after the Siraceai.

PSEUDUCE'LIS ( $\Psi \in \nu \delta \delta \dot{\kappa} \pi \eta \lambda s$ ), a town of the Elisari in Arabia Felix, identified by some mudern writers with Mochha. (1'tol. vi. 7. § 7.)

## PSEUDOLENIAS. [Hesperides.]

 vii. 1. $\S \S 8,33,83,85,86)$, a stream of western Iodia, which Ptolemy describes as flowing from Mtt. Bettigo near Coimbature to the sea oear Muziris (Mangalor). It cannot with certainty be ideatified with any existing river, especially as along that coast, between lat. $10^{\circ}$ and $15^{\circ}$, there are a great number of streams which, flowing but a short distance from mountains which approach the sea, are little better than torrents.
[V.]
PSILE, a small island, forming one of a cluster, off the coast of Ionia, upposite to Clazomenae. (Pliu. v. 31. s. 38.)

PSILLIS ( $\Psi$ id $\lambda i s$ ), a small river on the coast of Phrygia, flowing into the Euxine hetweea Artane and Calpe, and affording at its mouth a good road for small vessels (Strab, xii. p. 543; Ptol. v. 1. § 5: Anonym. Peripl. P. E. p. 2; Pliu. vi. 1 ; Arrian, Peripl. P. E. p. 13, where it is called Psilis; Mariciao, p. 69, where it is writted Psillius; comp. Steph. B. s. v. 'A $\sigma \kappa \alpha v_{1}^{\prime}$.)
[L. S.]
PSOPH1S ( $\Psi \omega \phi i s: ~ E t h . ~ \Psi \omega \phi i \delta i o s)$, a city in the NTV. extremity of Arcadia, bouoded on the N. by Arcadia, and on the IV: by Elis. It was a very ancient place. It is said to have been originally called Erymanthus, and its territory to have been ravaged by the Erymanthian boar. (Paus, viii. 24. § 2 ; Hecat. ap. Steph. B. s. v. 母 w申's ; Apollod. ii. 5. § 4.) It afterwards received the name of Phegia or Phegeia (\$च>ia, Фर्भүєca), apparently from the oaks ( $\phi \eta \gamma \circ$ i), which are still found upon the site of the town; thongh the aucients, as :asual, derived the name from an eponymons founder, Phegeus. (Steph. B. s.vv. $\Phi \neq \hat{\gamma} \in\llcorner, \Psi \omega \phi$ is ; Paus. l.c.) It was called Psophis by Ecbephron and Promachus, sons of Hercules, who are said to have come from Sicily and given to the town this name after their mother Psophis. (Paus, l. c.) Psophis, while still called Phegia, was celebrated as the residence of Alcmacon, who fled thither from Argos, after slaying his mother, and married Alphesiboea, the danghter of Pbegeus, (Paus. viii. 24. §8: Dict. of Biogr. s.v. Alcmaeon.) In consequence of their cornection with Alcmaeon, the Psophidii took part in the second expedition against Thebes, and refused to join the other Greeks in the Trojan War. (Paus. viii. 24. § 10.)

Psophis is rarely mentioned in history. In B. c. 219 it was in possessiun of the Eleians, and was taken by Philip, kiog of Macedunia, who was then in alliance with the Achaeans, In narrating this event Polybius gives an accurate description of the town. "Psophis," he says, "is confessedly an ancient fouadation of the Arcadians in the district Azanis. It is sitnated in the central parts of Peloponnesns, but in the westero corner of Arcadia, and adjoining the Achaeaos dwelling furthest towards the west. It also overhangs cooveriently the conntry of the Eleians, with whom the city was then in close alliance. Philip marched thither in three days from Caphyae, and eocamped apon the hills opposite to the city, where he could safely lave a vicw of the whole city and the surrounding places. When the ling obserfed the stren e chof frepplace, he was at a
loss what to de. On the westorn side of the town there is a rapil terrent, impassable during the greater part of the winter, and which, rashing duwa from the mountains, makes the city exceedingly strong and inaccessible, in comsprpence of the size of the ravine which it has grablually formed. On the eastern side flows the Erymanthus, a large and impetuous river, concerning which there are so many steries. As the western torrent juins the Erymanthus on the southern side of the city, its three sides are surrounded by rivers, and rendered secure in the manner describel. On the remaining sido townods the north a strong hill hangs over, surrounded by a wall, and serving the purpose of a woll placel citadel. The town itsell rlan is provided with walls, remarkable for their size and construction." (P'elyb. iv. 70.) From this description it is evident that the Erymanthus on the eastern side of the city is the river of Soputo ; and that the western torrent, which we learn from I'ansanias (viii. 24. § 3) bare the name of Aroanius, is the river of cihcrmotzinut. About 300 feet helow the junction of these rivers the united stream is joined by a thind, smaller tham the other two, callied the river of Lipusi or Skupi, which rises on the frontiers of Cleitor, near semrae. From these threo rivers the place is now called Triputamo. The banks of the Erymanthus and the Armanius are precipitons, but not very high ; and between them and the steep sunmit of the hill upen which the town stood there is a small space of level or gentlyrising ground. The summit is a sharp ridge, sendiug forth two routs, ono of which descenils nearly to the angle of junction of the two streams, the other almest to the bank of the Erymanthus at the castera extremity of the city. (Leake, Morea, vol. ii. p. 242.)

Philip, in his attack upon Psophis, erossed the bridge ever the Erymanthus, which was probably in the same position as the modern bridge, and then drow up his men in the narrow space between the river and the walls. While the Macedenians were attempting to scale the walls in three separate parties, the Eiematis made a sally from a gate in the upper part of the town. They were, however, Itriven buck by the Cretans in Philip's army, who followed the fugitives into the tuwn. Enriphlas and the garrison then retreatel into the citadil, ami shartly afterwards surrendered to I'hilip. (Polyb. iv. 71, 72.)
l'ausanias sawat J'sophis a ruined temple of A phrodite Erycina, leroa of Promachus and Echephron, the tomb of Alemaen, ami near the Erymanthus at temple sacred to that streain. (Paus, viii. 24. \$ 7.) Lakake also noticed a part of a theatre, not mentioned by l'ansanias, on the side of the bill towamds the Armanius. Nine huntred feet above the junction of the two rivers, and near the walls on the bank of the Frymanthus, Laske also found some remains of a publie huildune, 95 feet in length, below which thene is a source of water in the bank. Ife conjectures that , huy may be the remains of the temple of Erymaththus.
P. phis was ahont 2 miles in cirommference. The town-walls fillowed the crest of the ridge to the northward and the hank dhume the two rivers on the opposite sile ; and they are trawemble nearly throughont the entire circuit of the place. On the northcastern side of the town, whinth is the ouly part not protected by the two rivers or by the precipices at the back of the hill, thore was a touble inclosure. lesake couth not trate the inclenture of the eitadd.

At the distante of 30 stialia from, P'sophis was

Seirae ( $\Sigma_{\text {tupai }}$ ), which Pausanias deseribes as the bembary of the Psophidii and Cleiterii (viii. 23. §9, 24. § 3). On the real frem U'suphis to Thelpusa lay Tropaea, upon the left bank of the Ladun, near which was tho greve Aphrodisium. nfter which eame a colnmn with an ancient inseription upon it, marking the boundaries of Psophis and Thelpusa. (Leake, Morea, vol, ii. p. 240 , seq. ; Boblaye, Recherches, 9.c. p. 158 ; Curtius, Peloponnesos, vol. i. p. 384, sey.)

## PLAN OF PSOPEIS.

$a$ a. Ancient walls.
b. Theatre,
c. F undations of a large building.
d d. Churches.
c. Bridge over the Aroanius.
f. Bridge over the Firymunthus.
g g . Position of the army of Phlip.
i. Khan of Tripótamo

PSYCHIUN ( $\Psi$ Úztov, Steph. B. s. v.; Ptol, iii. 17. § t; $\Psi \dot{v} \chi \in a$, Studiusm, Mar. Magn. P. 298, Hoflinann: Fith. Woxuevs), a town on the south coast of Crete, placed by J'tulemy between the mouths of the rivers Massalia and Electra, and by the Stadiasmus 12 stadia to the west of Sulia, $\pi$ distance which agrees very well with the situation of Kustri. (Pabley, Crute, val, i. p. 304.)

ISICllRUS ( $\Psi$ uxpuis), a small river in the east of P'ontus, forming the boundary between the tribes of the Cohthi and Kanni. (Arrian, Peripl. P.E. p. 6; Anonym. Peripl. P. E. p. 14.)
[L. S.]
PSYLLI ( $\Psi$ úd Aot, Hecat. F'r. 303, ed. Klausen; 1lernd. iv. 173 ; Strab, ii. p. 131, xiii. p. 588, xvii. pp. 814, 838 : Plin. 8.4 , vii. 2, viii. 38 , xi. 30 , xxv. 76, ג土viii. 6 ; Acliam, Vat. An. vi. 33), a people on the sbores of the Greater Syrtis, who bordered on tho Nasamones, oceupying that part of the shores of Sort which lies between Aulad Slimun and Aulad Naim. Accorling to llerodutus (l.c.) they sallied forth against Notos, or the S. wind, and were huried in the sands which were rnised by the oflemded wind. Thoir country was afterwands occupied by the Nasamones.

The story gives a vivid picture of those seas of sand, unlathed by dew or rain, when the fine dustliko particles, rising through the rarefied air, roll up in dark opprossive clonds. Thay were suppused by the ancients to bave a secret art enabling them th secure thomselves from the poison of serpents, hike the " llisece," or suake jugglers of Cairu (Wilkinson, Anciont Eyyptians, vul. v. P. 241 ; Lane, Modevn Esoyptians, vol. ii. p. 214; Quatremive, Mcm. sur $l$ Figwte. ©ol. i. pp. 203-211.) Cato
brought some of these people in his train when he led the way into the depths of the desert which skirts the Lesser Syrtis（Plut．Cat．Min． 56 ；Lucan， is．891）；and Octarius made use of the services of these poison－suckers，it was said，in order to restore his victim，Cleopatra，to life．（1）ion Cass，li．I4； comp．Lucan，ix．925．）
［E．B．J．］
PSI＇LLIUM（ $\Psi \cup \lambda \lambda t o \nu, \Psi \dot{i} \lambda \lambda e t o v$ ，or $\Psi i \lambda \lambda \lambda a$ ），a fortified emporium on the coast of Bithynia，between Crenides and Tium．（Ptol．v．1．§ 7；Arrian， Peripl．P．E．14：Anonym．Peripl．P．E．p． 5 ； Marcian，p．70；Steph．B．s．v．Yv́え入a；Tab．Peut－ ing．erroneunsly calls it Scyllenm．）
［L．S．］
PSYRA（ $\Psi v p a ́)$ ，a small island in the Aegean sea，to the north－west of Cbios，at a distance of 50 stadia from Cape Melaenae ia Chios，and baving only 40 stadia in circunference．It was a lofty， rocky island，and contained on its sontb－east coast a small town of the same name．（Strab．xiv．p． 645 ； Plin．v．36；Steph．B．s．v．；Hom．Od．iii．171．） Its modern name is Ipsora．
［L．S．］
PSITTALE1A（ $\Psi \cup \tau \tau \dot{\lambda} \lambda \epsilon a$ ），a small islad off the Attic coast between Peiraeens and Salamis．For details see Salamis．
PTANDARIS or PTANDARA，a place in Cap－ padocia on the south－west of Arabissus（It．Ant． pp． $178,180,210,212, \& c$ ．，where we sometimes read the ablative Ptandari，and sometimes Ptan－ daris．）
［L．S．］
PTA＇RENUS（חrápevos，Arrian，Ind．c．4），a small tributary of the Upper Indus，which flows into that river a little above Pesháwar．Lassen con－ jectures that it is the present Burrindu．（Lassed， Mop of Anc．India．）
PTE＇LEA，an ancient name of Ephesus．（Plin． v．29．s．31．）

PTE＇LEOS（ $\Pi \tau \epsilon \lambda \epsilon ́ \omega s$ ），a small lake in Mlysia， near Ophrynim on the coast of the Hellespont （Herod，rii．42；Strab，xiii p． 595 ；Schol．ad Ptol． v．2．§ 3．）
［L．S．］
P＇E＇LEUM．1．（ $\Pi \tau \in \lambda \in \dot{\delta} \nu$ ：Eth．$\Pi \tau \in \lambda \in d \tau \eta s$ ， Птeגeaveros，Пт $\boldsymbol{\Pi} \boldsymbol{\lambda} \in \epsilon \dot{u} s$ ），a tomo of Thessaly，on the south－western side of Plathiotis，and near the en－ trance of the Sinus Pagasaens．It stood between Antron and Halos，and was distant from the latter 110 stadia，according to Artemidorus．（Strab，is． p．433．）It is mentioned by Homer as governed by Protesilaas，to whom the neighbouring towa of Antron also belonged．（IL．ii．697．）In B．c．192， Antiochns landed at Pteleum in order to carry on the war against the Romans in Greece（Liv，xxxv． 43）．In B．c．171，the town，having been deserted by its iohabitants，was destroyed by the consul Licinius．（Liv，xlii．67．）It seems never to lave recovered from tbis destruction，as Pliny speaks of Pteleum only as a forest（＂uemus Pteleon，＂Plin． iv．8．s．15）．The form Pteleos is used by Lucan （ri．352）and Mela（ii．3）．Ptelenm stood near the modern village of Pteleo，or Ftelio，upon a peaked bill crowned by the remains of a town and castle of the middle ages，called Old Ftelio．On its side is a large marsh，which，as Leake observes， was probably in the more flourishing ages of Greece a rich and productive meadow，and hence the epithet of $\lambda \in \chi \in \pi o i n \nu$ ，which Homer（l．c．）bas applied to l＇teleuin．（Leake，Northern Greece，vol．i．p．341， seq．）

2．A town of Triphylia，in Elis，belonging to Nestor（Hom．Il．ii．594），is said by Strabo to lave been a colony from the Thessalian Ptelenm．This town had disappeared in Strabo＇s time ；but its un－
inhabited woody site was still called Peleasimum （Strab，viii．pp，349，350．）

3．A fortress in the territory of Eiythrae，in Ionia．（Thnc，viii．24，31．）Pliny（v．29．s．31） meations Pteleon，Helos，and Dorinna as near Eiyth－ rae，but those places are confused by Pliny with the Triphylian towns io Honier（l．c．）．

PTE＇RIA（Птєpia），the name of a town and dis－ trict in Cappradocia，mentioned only by Herodotus（i． 76），who relates that a great battle was fought in this district hetween Cyrus and Croesus．Stephauns B．mentions Pterium，a town of the Dedes，and Pteria，a tows of Sinope（s．v．Птépıov）．

PTEROS，one of four islands－the other three being Labatanis，Coboris，and Sambracate－lying off the coast of the Sabaei in Arabia，and corre－ spooding in mmmber，and the last of the four in name，with the Sohar islands．（Plin，vi．28．s． 32 ； Forster，Arabio，vol．ii．p．230．）

PTOLEDERMA（Пто入єঠє $\rho \mu a$ ），a town of the Eutresii，in Arcadia，which was deserted in conse－ quence of the removal of its inhabitants to Megalo－ polis．（Paus．viii．27．§ 3．）

PTOLEMA＇1S．I．（Hro入є 1 its Ptol．iv．5．§ 57），a small towa of the Arsinoite nome in Middle Aegypt．It was situated between Heracloopolis Minga and Arsidoë，near the point of junction be－ tween the Bahr Jusef and the Nile．The modern village of El－Lahum vecupies a portion of the site of the Arsinoite Ptolemais．

2．Ptolembis Theron（ $\Pi$ rode $\mu$ ats Otpôn，Ptol． i． $8 . \S 1$, iv． $7 . \S 7$ ，viii． 16 ．§ 10 ；$\Pi$ to $\lambda \in \mu a t s$, Strab．xvii．pp．768－76 ；Agatharch．ap．Phot． Pp．457－459，ed．Bekker ：Ptolemais Epitheras，Plin． vi．29．s．34），was origibally an Aethiopiau village situated on the sonthern skirts of the forest which extended from the S．side of the Troglodytic Bere－ nice to lat． $17^{\circ} \mathrm{N}$ ．Its convenient situation on the coast of the Red Sea and in the beart of the region where eluphants abounded induced Ptolemy Phila－ delphus（B．．．282－246）to ocenpy，enlarge，and furtify the village，which thenceforward was named Ptolemais after its second founder．Pliladelplins， indeed，before be colonised this outpost of his king－ dom，used every effurt to persuade the Aetbiopian bunters［Elephantofiagi］to abstain from the flesh of these animals，or to reserve a portion at least of them for the royal stables．But they re－ jected bis offers，replying that for the kingdom of Aegypt they would not forego the pleasure of huat－ ing and eating elephants．Hitherto the Acgyptians had imported these animals from Asia，the Asiatic breed being stronger and larger than the African． But the supply was precarions：the cost of import－ ation was great；and the Aethiopian forests afforded mo ample supply buth for war and the royal house－ hold．As the depot of the elepbant trade，including that also in hides and ivory，Ptolemais attained a ligh degree of prosperity，and ranked among the principal cities of Aethiopia．From its market it is probable that Carthage also derived its supply of elephants，since about the period of Pliladelphus＇ reigo the Carthaginians employed these animals more frequently io war．（Liv． $\mathbf{x}$ vii．Epit．；Florus，ii． 2．§ 98．）Ptolemais had，properly speaking，no harbour， and the Aegyptian vessels were comjelled to run up to Berenice whenever the N．or E．winds prevailed： in the present day the Red Sea coast at this point is approachable only by boats．The roadstead of Pto－ lemais，however，was partially sheltered from the E ． winds by an island covered with olive－trecs．In its

PLRA. [Gedrusha.]
PURPURARLAE INS., islands off the coast of Mauretania, which are said to bave been discovered by Juba (Plin. vi. 3i), who establisted there a manufactory of purple. If his description of them as being 62:5 M. P. from the Fortunate lalands be received, they cannot be, as D'Anville suppoed, Lanzerate or Fuente ientura, the two nearest of the Canaries to the African contineot. Still greater dufficulties exist in surposing them to be Madeira and f'orto Sunto, wiich are too remote from Juls's kiogtum to be the seat of a manufucture of purple carried on by him. Lelewel (Fimdeckungen der Carthager und (iriechen, p. 141) considers then t) be the islands of Lanzarote Na Clara, with the sualler ones of Graciusa and Aligranza. (Kenrick, Phoenicia, p. 229 ; Humbolat, Cosmus, vol. ii. p129, trans.)
[E. B. J.]
PLTE'OLI (Hovtéरoz, Ptol. Dion Cass.; Horiodou Strab, Act. Aposth: Eth. Puteolanus: Mive zwoli), a maritine city of Campania situated no the northern store of the Sinus Cumanus or Crater and on fle east side of the smaller bay known as the Sinus Batanus. It was originally a Greek city of the riane of Dicaenichia (Dikatapxia, Strab.; Ai-
 apxefins, Steph.), and was acolony of the neighbouring Cumae, to wlich it served as a port. (Strab. r. p. 24.5.) There can be lietle doubt of the accuracy of this statement, lut Steplanus of Byzantium and Euselius ayrribe its foundation to a colony frota Sunns; and it is nut improbable that in th is as in trany similar instances, the colnon from Cumae was reinforced by a fresh band of emigrants from Samos (Steph, B. s. v. חuriunot; Euseb. ii. p. 129, ed.

Scal.). The date assigned to this Samian colony by Eusehins is as late as b, c. 521 . No mention occurs of Dicaearchia in history previous to the couquest of Cumae by the Campanians: from its serving as the port of Cumae it conld probably never have taken any active or independent part; but there seems no donbt that it must have become a populous and flourishing town. The name of Dicaearchia contioued to be applied to it by Greek writers long after it had assumed the new appellation of Puteoli. (Diod. iv. 22. v. 13, \&ce.)

The perion of this change is uncertain. It is generally said that the Romans bestowed on it the new name when they established their colony there; but tbere seems good reason to believe that it was considerably more ancient. The name of Puteoli is applied to the city by Livy during the Second Punic War (Liv, sxiv. 7), and there is much probability that the coins with the Oscan inscription "Phistlus." sometimes Graecised into Plisteha, belong to Puteoti during the period previous to the Roman colony. (Millingen, Numism. de l'Anc. Italie, p. 201; Friedländer, Oskische Mïnzen, p. 29.) According to the Roman writers the name of Puteoli was derived either from the stench arising from the numerous sulphureous springs in the neighbourhood, or (with more probability) from the wells (patei) or sources of a volcanic nature with which it aboonded. (Varro, L. L. v. 25 ; Fest. s. v. Puteoli; Plin. axsi. 2; Strab. v. p. 245 ; Steph. B. s. v. Пurio入ot)

The first mention of Puteoli in bistory is during the Second Punic War, when it was fortified by Q. Fabius by order of the senate, and protected by a strong garrison to secure it from the attempts of Hannibal, в. c. 215. That general, indeed, in the following season made an attempt, though without success, to make himself master of the city, the possession of its port being an otject of the greatest importance to him. (Liv. sxiv. 7, 12, 13.) Livy speaks of Puteoli as having first become freqnented as a port in consequence of the war: and though this is not strictly correct, as we know that it was frequeoted long before under the name of Dicaearchia, it is probable that it then first rose to the bigh degree of commercial importance which it subsequently retained under the Romans. Thus in 8. c. 212 it becarne the principal port where the supplies of eorn from Etruria and Sardinia were landed for the use of the Roman army that was besieging Capua (Liv. xxy. 22); and the nest year it was from thence that Claudius Nero embarked with two legions for Spain. (IU. xxvi. 37.) Towards the close of the war also (B. c. 203) it was at Puteoli that the Carthaginian ambassadors landed, on their way to Rime. (Id. xxx. 22.) It was dubbtless the growing inaportance of Pateoli as a commercial emporium that led the Romans to estahlish a colony there in n. c. 194 (Liv, xxxir. 45 ; Veil. Pat. i. 15): the date is confirmed by a remarkable inscription of B. c. 105 (Mommsen, Inser. R. N. 2458), and it svens to have become before the close of the Repuiblic, as it continued under the Empire, one of the most considerable places of trade in ltaly. From its being the first really good port on the south of Rome (for Antinm could never deserve that epithet) it became in a manner the port of the imperial city, although distant from it not less than 150 miles. Not only did travellers coming from the East to Rome frequently land at Puteoli and proceed from thence by land to the city, as in the weli-known instances of St. 1'aul (Act. Apost. xxviii. 13) and

Cicero on bis return to Rome from bis quaestorship is Sicily (Cic. pro Planc. 26), but the same course was pursued with the greater part of the merchandise brought from the East, expecially with the costly wares sent from Alexandria, and even the supplies of corn from the same quarter. (Strah. Nrii. p. 793; Suet. Aug. 98; Senec. Ep. 77.) Strabo speaks of Puteuli as one of the mast important trading eities of his time ( v . p. 245 ), and it is erident from the expressions of Seneca (l. c.) that this had not fallen off in the days of Nero. The trade with Alexandria indeed, important as it was, was only one branch of its extensive commerce. Among other things the iron of Ilra, after being speited at Populonium, was brought to Puteoli (1)iod. r. 13): and the eity carried on also a great trade with the Turdetanians in the south of Spain, as well as with Africa. (Strab. iii. p. 145.) We learn also from an inscription still extaut, that its trade with Tyre was of such importance that the Tyrians bad a regular factory there (Boeckh, C. I. no. 5853): and another inscription mentions a number of merchants from Berytus as resident there. (Mormmsen, I.R.N. 2488.) Indeed there seems no doubt that it was under the Roman Empire one of the greatest-if not the greatest-emporiums of foreign trade in all Italy For this advantage it was in a great measure indebted to the excellence of its port, which, besides being uaturally well sheltered, was further protected by an extensive mole or pier thrown out iuto the bay and supported on stone piles with arches between them. Heace Seneca speaks of the population of Puteoli assembling on this mole (in pilis) to watch for the arrival of the ships from Alexandria. (Sen. Fp. 7\%.) Putecli bad peculiar facilities for the construction of this and similar works, from the excellent quality of its roleanic sand, which formed a mortar or cement of the greatest hardness and durability, and wholly proof against the intluence of the sea-water. (Strab. v. p. 245; Plin. xxxv, 13. s. 47.) This kind of cement is still known by the name of Pozzolana.

It was from the estremity of the mole of Puteoli that Caligula carried his celebrated bridee across the bay to the opposite shores at Baiae. (Suet. (cal. 19, 32; Diod Cass. lis. 17; Joseph, Ant. xis. 1. § 1.) It is scarcely necessary to observe that this bridge was merely a temporary structure [BALIE], and the remains still visible at Pozzuoli which are popularly kuown as the Bridge of Caligula are in fact the piles or piers of the mole of Putenli. The construction of this mole is generally ascribed to Augustus, without sufficient antbority; but it is prohable that it dates from at least as early a period: and we learn that there were in his time extensive docks (navalia) at Puteoli, in which the huge ships that had been employed in bringing the obelisks from Erypt were preserved,- a suflicient proof of the magnitude of these establisbments. (1Plin. xxxvi. 9. s. 14.) Auother proof of the importance of Puteoli is the fact that Claudius established there, as well as at Ostia, a cohort of troops to guard the cit against fire, in the same manner as was done at Rome (Suet. Claud, 25). In A. D. 95 Domitian constructed a new line of road leading direct to Puteoli from Sinuessa, where it quitted the Appian Way. (Diun Cass. Ixvii. 14: Stat. Silv, iv: 3.) Previons to that time its commumication with Rome must have been by way of Capua, to which a branch roud (at given in the Itiperaries) led direct from Puteoli.

Pateoli certainly contiaued to enjoy under the Empire the rank of $n$ colony. (Plin. iii. 5. s. 9 ; Orell. Inser. 1694, 3697, \&e.) Is addition to the original "colonia civimon" settled there, as already mentioned, in n. c. 194, it appears to have received a fresh colony under silla (Val. Max. ix. 3. § 8; Plut. Sull. 37 ; Zumpt, de Colon. p. 260), and certaialy was acain colnaised by Angustus. (Lib. Col. p. 236.) The inhahitants had, as we leara from Cicero (Phit, ii. 41), warmly esponsed the cause of Brutus and Cassins after the death of Caesar, which may bare been one reason why Augustus songht to secure so important a point with a colony of veterans. But, us was often the case, the old inhabitants seem to hare contioued apart fron the colonists, with separate manicipal rights, and it was not till the reign of Nero that these also obtsined admission into the colony. (Tac. Ann. siv, 27.) lo A. D. 69 the l'uteolani zealously espoused the cause of Vespasian (Tuc. Hist. iii. 67), and it was probalily in consequence of this that the city afterwards assumed the honorary title of "Colonia Flaria Augusta Puteoli," by which we find it designated in inscriptions. (Orell. Inser. 3698 ; Zumpt, l. c. p. 395 ; Mommsen, 2492.2493.) It is not improbalile, however, that it may at the same time have received a fresh accession of colunists.

In addition to its commercial importance, Puteoli, or rather its immediate neighbourhood, became, before the close of the Republic, a farourite resort of the Roman nobility, in conmon with Baiae and the whele of this beautifal district. Thus Cicero, as we learn from bimself, had a villa there, to which be gave the name of Academia, but which he more often mentions merely as his Pateolanum. (Cic. de Fat. 1, ad Att. j. 4, sir. 7, xv. 1, \&c.) It passed after his death into the hands of Antistios Tetus, and the outbreak of a thernal spring there became the occasion of a well-known epigram, which has been preserved to ns by Pliny. (Plin. xxxi. 2. s. 3.) This villa was situated between Puteoli and the lake Averous; it was subsequently chosen as the place of barial of the emperor Hadrian. (Spart. Hodr. 25.)

We bear little of Puteoli in history during the later periods of the Fornan Empire, but there is every reason to suppose that it continned to be a flourishing and populous towa. Its mole and port were repaired by Antonimus Pins (Mommsen, Inscr. 2490 ). aud numerous inscriptions have been found there, some of which belong to a late period, and attest the continued importance of the city down to the reign of Hunnrins. (Munmsen, 2494-2500.) But it shared to the full extent in the calamities of the declining empire: it was taken and plundered loy Alaric in A. D. 410, and again by Genseric in 455 , and by Totila in 545 . Nor did it ever recover these repested disasters. After having for some time been almost deserted, it partially revived in the middle ages; but again suffered severely, both from the ravases of war and from the volcanic cruptions of the Solfatara in 1198, and of the Monte Nuovo in 1538. At the preseat day Poz-woli, though etaining its episcopal see, and about 8000 inhabitants, is a puor place, and suffers severely from malaria in summer.

It, however, retains many remains of its ancient grestness. Ainong these one of the most conspicoous is the amphithestre, on the hill behiod the town, which is of considerable size, being larger than that at Pompejiz and callylated to the capable
of containing 25.000 spectators. It is in good preservation, and, having been recently excavated and cleared out, affords in many respects a good specimen of such structures. It derives additional interest from being more than once alladed to by ancient writers. Thus Suctonins mentions that Angnstus presided at games there, and it was in consequence of an insult offered to a senator on that occasion that the emperor passed a law assigning distinct seats to the senatorial order. (Suet. Aug. 44.) It was there also that Nero entertained Tiridates, king of Armesia, with magnificent shows both of gladiators and combats of wild beasts. (Dion Cass. 1xiii. 3.) Near the amphitheatre are some ruins, commonly known as the temple of Diana, but which more probably belonged to a range of thermae or baths; as well as several piscinas or reservoirs for water on a great scale, some of wbich are supposed to bave been connected with the service of the anphitheatre. Near them are the remaios of an aqpeduct, iotended for the smpply of the city, which seems to bare been a branch of that whicb led to Misenum. In the city itself the modern cathedral is in great part constructed out of the remains of a Roman temple, which, as we learn from an inscription on the architrave, was dedicated to Augnstus hy L. Calpunius. From snother inscription we learn that the architect was L. Cocceius Auctus, evidently the same who is meationed by Strabo as having been employed by Agrippa to construct the tunuel at Posilipo. (Mommsen, I.R.N. 2484. 2485; Strab. v. p. 245.) The masonry is of white marble, and there still remain six beautiful Corinthian columns of the same material.

Mach more celebrated than these are the remains of a building commonly known as the temple of Serapis or Serapeum. The interest which attaches to these is, bowever, more of a scientific than antiquarian character, from the evidence they afford of repeated changes in the level of the soil on which they stand. (Lrell, Principles of Geology, 8th ed. p. 489, \&c. ; Daubedy On Yolcanoes, p. 206.) The edifice is one of a peculiar character, and the received attribution is very doubtful. Recent researches have rendered it more probable that it was a building connected with the mineral spring which rises within it, and was adapted both for purposes of worship and for the medical nse of the source in question. The general plan is that of a large quadrangular atrinm or court, surrounded internally by a portico of 48 columns, with chambers at the sides, and a circular temple in the centre. Not far from the temple of Serapis are the ruins of tro other buildings, both of them now under water: the one of which is commonly known as the temple of Neptune, the other as the temple of the Nymphs; but there is no real foandation for either name. We know, however, from Cicero that there was a terpule of Neptune at Puteoli, as might naturally be cxpected at so frequented a seaport. and that its portico fronted the bay. (Cic. Acad. ii. 25.) The remains of the ancient mole have been already mentioned; there are now portions of 16 piers remaining, 13 of which aro still visible above water.

On the const procceding from Pozzuoli towards the Lucrine lake (or rather on the ancient cliff which rises above the low line of coast) are some ruins called (with at least more prubability than in most similar eases) those of the villa of Cicern, which was certainly, as we learn from Pliny, situated between Pufeoli and the Lucjive Jabe. (Plin $x x x i .2 .2 .3$.)

About a mile from Pozzuoli to the NE., on a hill between the town and the Logo d Angano, is the remarkable spot now called the Solfutara, and in ancient times known as the Forcsi Vucani ('Hфaiotou à yupá, Strab.). It is evideotly the crater of an extinct roleano, retaining ooly so much of its former activity as to emit constantly sulphureous gases io considerable quantity, the deposit of which forms large accumulations of sulphur. It is well described by Strabo, in whose time it would seem to have been rather more active than at present, as well as in a more poetical style hy Petronius (Carm. B. Civ. 67-75); and is noticed also by Lucilius, who justly points to the quantity of sulphur produced, as an evidence of igneous action, though long extinct. (Strab. v. p. 246; Lucil. Aeth. 431.) It does not seem to have ever broken ont into more violeot action, in aocient, any more than in modern, times; bot in the middle ages on one occasion (in 1198) it hroke into a violent eruption; and a stream of trachytic lava, which has flowed from the crater in a SE. direction, is probably the result of this outburst. The effect of the sulphureous exhalations on the soil of the surrounding hills is visible for some distance, and imparts to them a peculiar whiteness of aspect, whence they were ealled the Levcogaei Colles. (Plin. sviii. 11. s. 29, xxxv. 15. s. 50.) Pliny also mentions in connection with them some mineral springs, to which he gives the name of Leccogaei Fontes. (Id. xxxi. 2. s. 8.) They are probably those now known as the Pisciarelli.
There were two ancient roads leading from Puteoli, the one to Capaa, the other to Neapolis. Both of them may still be distioctly traced, and were bordered, for some distance after they quitted the city, with ranges of tombs similar to those found ontside the gate of Pompeii, though of course in less perfect preservation. They are nevertheless in many respects of much interest. Pliny mertions the road (which he calls a Via Consularis) that led from Puteoli to Capna; it was the tract on the left of this turards Cumae that was the distriet properly called the Campi Laborint, or Laboriae, distinguished even above the rest of Campania for its sarpassing fertility. (Plin. xviii. 11. s. 29.) Concerning the topography of Puteoli and ruins still remaining at Pozzuoli, see Nazzella, Situs et Antiquitas Putecolorum in Graevius and Burmann's Thesaurus, vol. ix. part iv.; Romanelli, Tiaggio a Pozzuoli, 8vo. Naples, 1817; and Jorio, Guida di Pozzuoli, 8vo. Naples, 1830.

puteola'ncs sinus. [Crater.]
PUTPUT, a station in Africa Proper, 12 M. P. from Neapolis (Nabel) (Itin. Anton,; Peut. Tab.), कhich has been identified hy Barth (iVanderungen, pp. 142, 143) with Hámâmàt. Sir G. Temple (Excursions, vol. ii. p. 10) considers it to be Siagel ( iagoún, Ptol. iv. 3. § 9), because of the two inscriptions with "Civitas Siagitana," which Shaw found at Hȧmámát. (Trav. p. 169.) [E. B. J.]

PYCNUS (Пuкvós, Ptol. iii. 17. § 8), a riser on the N. caast of Crete. a little W. of Cydonia.
fYDARAS [Athyras.]
PYDNA (пúžva, Scyl. p. 26; Scymn. Ch. 626; Ptol. iii. 13. §§ 15; Steph. B.; Plin. iv. 17), a tomu which originally stood on the coast of Pieria, in the Thermaic gulf. Themistocles was conducted by two Macedonian guides across the mountains, and found a merchant ship about to sail for Asia. (Thuc. ii. 137.) Pydna was blocknded by the Athenians,
who, after prosecuting the siege in vain, concluded a convention with Perdiccas. (Thuc. i. 61.) It was taken B. C. 411 by Archelaus, who removed ita site 20 stadia from the sea. (Diodor, siii. 49.) Afterwards it was gained for Atheos by Timotheus; but in the two first years of the disastrous Social War (358-356). Pydna, about the exchange of which for Anphipolis there had been a secret negotiation, was betrayed to Philip by a party of traitors in the town. (Demosth. adv. Leptinem, p. 476. § i1, Olynth. i. p. 10. § 5, Olynth. ii. p. 19. § 6; Lipian, ad loc.; Theopompus, $F r$. 1s9, ed Didot.) Several Atbenian citizens were taken in Pydna, and sold into slavery, whom Demoothenes ransomed from his own funds. (Plut. 1zit. X. Orator. p. 851, vol. ix. p. 381, ed. Reike.) Towards the close of the year в.c. 316, Olympias retired to Pydna, where she was besieged by Cassander, and taken prisoner hy him. (Diodor, xix. 49; Polyaen. iv. 11. \$ 3.) In the spring of e.c. 169 , Perseus abandoniog Dium, retreated hefore the consul Q. Marcins Ptilippus to Pydna. (Liv. sliv. 6.) After again occupying the strong line of the Enipeus, Persens, in consequence of the dexterous flank movement of P. Scipio Nasica, was compelled to fall back upon Pydna. On the 22nd of June, B. c. 168 (an eclipse fixes the date, Clinton, $F$. H. vol. iii. p. 82), the fate of the Macedonian monarchy was decided in a plain near the town, which was traversed by a small river, and hordered by heights affordiog a couvenient retreat and shelter to the light infantry, while the plain alone contaioed the level ground necessary for the phalans. (Liv. xJiv, 32-46; Plut. Aemil. 13-23.) The Epitomiser of Strabo and a Scholiast upon Demostlieres (Olynth. i. p. 10) assert that the Kitpos of their time was the same place as Pydna; but their anthority is of no great weight, and Colonel Leake (Northern Greece, rol. iii. pp. 429-435) bas shown tbat the ancient site is better represented by $A y \dot{0}$, where there are Hellenic remains, and, on the slope towards the sea, two "tumuli," probahly monnments of the battle. Kitro. it may be supposed, rose upon the decay of Pydna and Methooe, hetween which it lies. For antonomons coins of Pydos, see Eckhel, vol. ii. p. 76.
[E. B. J.]
PIDNAE or PYDNA (Hízvai), a small town on the coast of Lycia, between the river Naotbus aod Cape Hieroo. (Stadiasm. M. Magni, p. 221.) It is probably the same place as the one called by Ptolemy (v. 3. 5) Cydna, and which be places at the foot of Mount Cragus, where ruins of an ancient town were observed by Beaufort. (Leake, Asia Minor, p. 182.)
[L. S.]
PY'GELA or PHX'GELA (Пíjèa, Фúyeגa: Eth. Пuredeús), a small town on the coast of the Caystrian bay, a little to the south of Ephesus, was said to have been founded by Agamernon, and to have been peopled with the remnants of his army; it contained a temple of Artemis Munychia. (Xeooph. Hellen. i. 2. § 2: Strab. xiv. p. 639; Steph. B. s. v.; Harpocrat. s.v.; Plin. v. 31 : Scylax. p. 37; Pomp. Mela, i. 17; Liv. xxxvii. 1.) Dioscorides (v. 12) commends the wine of this town, which is still celebrated. Chandler (Travels, p. 176) observed its remains on a hill between Ephesus and Scala Nora. (Comp. Leake, Asia Minor, p. 261.) [L. S.]
PYLAE. [Thermopylie.]
pylae ciliciae. [chlicia.]
PYLAE SYRIAE, [AManides; Isscs.]
PYLAEA (Hudaia), a suburb of Delphi, and
the place of meetin：of the Amplictyonic Conncif ［Delui，p．767，b．］
 town of Actolia，between the Achelous and the Evenus， mentioned in the Homeric eatalogue of the Grecian ships，is placed by Pliny on the Corintbian gulf．It would therefore scem to have existed in later times； although Strabo says that the Aeolians，laving re－ moved Pylene higher up，changed its name into Proschiom．The site of Pylene is uncertain．（Hom． Il．ii． 639 ；Plin．iv． 3 ；scupulosa Pylene，Stat． Theb．iv．102：Steph．B．s．v．）

PYLON（ $\Pi \lambda \lambda \omega \nu$ ），a town on the Via Egnatia， being the frontier town of Illyria and Macedonia． （Strab．vii．p．323．）It is not mentioned in the ltineraries．

PYLo＇mUS，a town in Crete，S．of Gortyn，now Plöra．（Pliu．iv．12．s．20；Pashley，Crete，vol．i． p．295．）
 towns on the western coast of l＇eloponnesus．

I．A town in hollow Elis，described by Pausanias as situated upon the mountain road leading from Elis to Olympia．and at the place where the Ladon flows into the Peneius（vi．22．§5）．Strabo，in a corrupt passage，assigns to it the same sitnation， and places it in the veighboorhood of Scollium or

 6o入ท̂s］Пủえos wikeiro，Strab．viii．p．338）．Pausa－ nias（l．c．）says that it was 80 staria from Elis． Diodorus（xiv．17）gives 70 stadia as the distance， and Pliny（ir．5．s．6） 12 Roman miles．According to the prerious descriptinn．Pylus should probably be identified with the rnins at Agrápidho－khori，situated on a commanding position in the angle formed by the junction of the Pencius and Ladon．This site is distant 7 gengraphical miles from Elis，which snffi－ ciently agreps with the 80 stadia of Pausanias． Leake，however，places Fylus further S．，at the ruins． at Kuluglt，mainly on the ground that they are not so lar removed from the road between Elis and Olympia． But the fact of the roins at Ayrripidho－khori being at the juuction of the Peneios and Ladon seems de－ civive in fawour of that position ；and we may sup－ Inse that a road ran up the valley of the Peneias to the junction of the two rivers，and then took a leed to the right into the valley of the Ladon．（Leake， Northern Greece，vol．ii．p．228，Peloponnesiaca， p．219：Boblaye，Richerches，de．p． 122 ：Curtius， Pelopomenesos，vol．ii．p．39．）The Eleian Pylus is said to have been built by the Pylon，son of Clesn of Megara，who founded the Messenian Pylas，and who，upon being expelled from the latter place by Pelpus，settled at the Eleisn Pylos．（Paus，iv． 36. § 1, vi．22．§ 5．）I＇ylasmas said to have been destroyed by Ilereules，and to have been aftermards restored be the Eleians ；but the story of its destruction by llercules mor－propurly belongs to the Mlessenian P＇ylus，Its inhabitants aseerted that it was the town which Homer had in view when he asserted that the Alpheius flowed through their territory（＇A入фetoũ，
 the poxition of the 13oneric I＇ylus we slatl speak presently：and we maly obsenve here，that this claim was admitted hy Patumias（vi．22．S．6），though its alinurdity had been prowoully pointed ont by Strabo （iiii．p． 350 ，seq．）．Like the other lleian towns， Plas is rarely mentioned in histary．In n．C． 402 it iw，taken by the spartane，in theer invasion of the twritary of Lilis（1）u4 ax．1－）and ity Ryc． 366

It is mentioned as the place where the democratical exiles from Elis planted themselves in order to carry on war against the latter city．（Nen．Hell．vii． 4. § 16．）Pausumias snw only the roins of Pylus（vi． $22 . \$ 5$ ），and it woold appear to have heen deserted long previonsly．

2．A town in Triphylia，mentioned only hy Strabo， and surnamed by him Tрıфидıaкós，＇Аркаб̄ко́s，and Aempeatikós．He describes it as sitoated 30 stajlia from the sea，on the rivers Mamathons and Arcadieus， west of the monntain Minthe and north of Leprenmi （viii．p．344）．Upon the conquest of the Triphylian towns by the Eleians，Pylus was annexed to Lepream （viii．p． 355 ；comp．Pp．339．343，344）．Leake ohserves that the village Tjorbadji，on the western extremity of Mount Minthe，at the fork of two branches of the river of Ai Sidhero，seems to agree in every respect with Strabo＇s description of this town．（I Peloponnesiaca，p．109．）

3．A town in Messenia，situated apon the pro－ moutory Coryphasium，which furms the northern termination of the bay of Nararino．According to Thncedides it was distant 400 stadia from Sparta （Thuc，iv．3），and according to Pausanias（v． 36. § 1） 100 stadia from Methone．It was one of the last places which held ont agsinst the Spartans in the Second Messenian War，upon the conclusion of which the inhabitants emigrated to Cyllene，and from thence，with the other Messenians，to Sicily．（Paus． iv．18．§ 1，iv．23．§ 1．）From that time its name never occurs in history till the seventh year of the Peloponnesian War，B．c．424，when Demosthenes， the Athedian commander，erected a fort upon the promontory，which was then unishabited and called by the Spartans Coryphasium（Kopuфártov），thongh it was known by the Athenians to be the site of the ancient Pylus．（Thuc．iv．3．）The erection of this fort led to one of the most memorable events in the Peloponnesian War．Thucydides bas given a minute account of the topography of the district，which， though clear and consistent with itself，does not co－ incide，in all points，with the existing locality． Thucydides describes the harbour，of which the pro－ montory Corgphasiom formed the northern termina－ tion，as fronted and protected by the island Sphac－ teria，which stretched along the coast，leaving only two narrow entrances to the harboor，－the one at the northera end，opposite to Coryphasium，being only wide enough to admit two triremes abreast，and the other at the southern end wide enough for cight or nine triremes．The island was about 15 stadia in width，covered with wood，uninhabited and untrodden． （Thuc．ir．\＆．）Pansunias also says that the island Sphacteria lies before the harbour of Pylus like Rheneia before the anchorage of Delos（v．36．§ 6）． It is almost certain that the fortress erected by the Atherians stood on the site of the ruins of a fortress of the middle ages，called Palevi－A rarino， which has been changed into Nararino by the habit of using the accusative case，fis $\tau \partial \nu{ }^{\prime}$＇AGapivov，and by attaching the fimal $\nu$ of the article to the sub－ stantive．The distancess of 400 stadia from Sparta and too stadia from Methone，given respectively by Thueydides and Pausanias，are the correct distances of Old Sivarino from thuse two ancient sites． （1．cake，Pelloponnesiaca．p．191．）Ephacteria（ $\Sigma$ фak－ тmpra）is now called Sphayia，a name which it also bore in antiquity．（さфayia，Strab．viii．p． 359 ； Plat．Miner，p．242；ai 玉фayian，Xen．Hell．vi． 2. § 31；tres Sphaziac，Plin．iv．12．s．25．）The frol－ Wising decuiption will be rendered clearer by the
two accompanying maps, of which the former contains the whole locality, and the latter the fortress of Old Nacarino and its immediate neighbourhood on a larger scale.

MAP OF THE BAY OF PYLUS.
A. Suhacteria (Sphagia).
B. Pylus on the pruunontory Corsphasium (Old Nanarino).
C. The modern Novarino.

D D. Bay of Pylus (Buy of Niavalino).
The chief discrepancy between the account of Tbucydides and the existing state of the coast is fonnd in the width of the two entrances into the bay of Navarino, the northern entrance being about 150 yards wide, and the sonthern not less than between 1300 and 1400 yards; whereas Tbucydides states the former admitted only two triremes abreast, and the latter only eight or nine. Therefore not only is the actual wioth of the two entrances very much greater than is stated by Thncgdides, but this width is not in the proportion of the number of triremes; they are not as 8 or 9 to 2 , but as 17 to 2 . To explain this difficulty Col. Leake supposes that Thucydides was misinformed respecting the breadth of the entrances to the harbour. But to this a satisfactory reply is given by Dr. Arnold, that not only conld no common false estimate of distances hare mistaken a passage of nearly 1400 yards in width for one so narrow as to admit only eight or nine slips abreast, but still less could it have been supposed possible to chake up such a pasage by a cuntinuoos line of ships, lying lroadside to bruadside, which Thucydides tells us the Lacedaemonian commanders intended to do. Moreover the northern entrance has now a shoal or bar of sand lying across it, on which there are not more than 18 inclues of water; whereas the narrative of Thucydides implies that there was sufficient depth of water for triremes to sail in unohstructed. The length of

17 stadia, which Thueydides ascribes to Sphacteria, does not agree with the actual length of Sphayia, which is 25 stadia. lantly Thucydides, speakmg of the bay of Pylus, calls it "a barbour of con-

MAP OF PYLUS AND ITS MMEDIATE NEIGHBUURHOOD.

E. Bay of Pylus ( Bay of Nararino).
a. Cave of Hermes.
$b$. Stmall channel connecting the lagoon of OsmynAga with the Bay of Navarino.
 expression which seems strange to be applied to the spacions Bay of Nararino, which was not only the largest harbonr in Greece, but perfectly unlike the ordinary harbonrs of the Greeks, which were always closed artificially at the month by projecting moles when they were not sufficiently land-locked by nature.
la consequence of these dificulties Dr. Arnold raised the donbt whether the island now called Sphagia he really the same as the ancient Sphacteria, and whether the Bay of Javarino be the real barbour of Pylos. He started the bypothesis that the peniusnla, on which the ruins of Uld Nararino stand, is the ancient island of Sphacteria converted into a peuinsula by an accumulation of saud at either side; and that the lagoon of Osmyn-Aga on its eastern side was the real harbour of Pylus, into which there was an opening on the nortb, at the port of Voilho-Kiliin, capable of adnitting two triremes abreast, and another at the south, where there is still a narmow opening, by which eight or nime triremes may bave entered the lagoon from the
great barbour of Navarino. Upon this hypothesis Col. Leako observes, that in itself it is perfectly admissible, inasmuch as there is scarculy a situation in Greece on the low coasts, nat the mouths of rivers, where, by the operation of waters salt or fresh, or buth united, some change has not taken place since the times of ancient history; and that in the present instance, therefore, there is no great ditliculty in imagining that the lagoon may be an ancient harbour converted into a lagoon by an accumulation of sand which has separated it from the sca. But, among the many difficulties which beset this hy pothesis, there are fwo which seem quite fatal to it; one of which has been stated by Mr. Grote and the other by Col. Leake. The former writer remarks that, if the peninsula of Otd Narerino was the real ancient Sphacteria, it most have been a second island situated to the northward of Sphagia; and that, conseqnestly, there must bave been tro islands close together and near the scene. This, as Mr. Grote observes, is quite inconsistent with the narrative of Tbucydides, which presuppises that there was only one island-Sphacteria, withunt any other near or adjoining to it. Thus the Athenian fleet under Eurymedon, on first arriving, was obliged to go back some distance to the island of Prote, because the island of Sphacteria was full of Lacelaemonian hoplites (Thuc. iv. 13); whereas, if the hypothesis of Dr. Arnold were admitted, there wonld have been nothing to prevent them from landing on Sphagia itself. It is true that Xenophon (IIell. vi. 2. § 3) speaks of ミqa riat in the plural, and that I'liny (iv. 12.s. 25) mentions "tres Sphagiae;" but two of them appear to have been mere rocks. The objection of Cul. Leake is still more fatal to Dr. Arnoll's bypothesis. He calls attention to the fact that the French Commission observed that the walls of the castle of Old Navarino stand in many parts on Nellenic foundations, and that in some places three conrses of the ancient work remain, consisting of a kind of masonry which seems greatly to resemble that of Messene. Besides these remains of middle Hellenic antiquity, some foundations are traced of a more aneieut inclasare at the northern end of the peninsula, with a descent to the little harbour of ToulhoKilia by means of steps cut in the mok. Itemains of walls of early date are to be seen likewise towards the snuthern extrenity of the bill, among which is a tumnlus;-all tewding to prove that the entire peninsula of Nararino was occupied at a remote period of history by ao ancient city. This peninsula could not, therofore, have been the ancient Splacteria, which never contained any aneient town. The only way of reconciline the acconnt of Thucydides with the present state of the coast is to sup. puse, with Mr. Grote and Curtins, that a great change has taken place in the two passage, which separate Sphagia from the mainturif since the time of Thucydiles. The mairland to the sonth of Na rarino must have been much nearer than it is now to the southern portion of Sphagia, while the northern passape also must have been both narrower and clearer. (Leake, Moria, val. i. p. 401, seq., I'tozumnesiaca, p. 190, sem. : Amold, Appendix to Thutcydiules, vol ii. P. 400, seq.; (rote, Girerce, vol, vi. p 427 . seq.; Curtina, Pelopmumsus, vol. ï. p. 173, seq.; Bublaye, Recherchers, p. 113; Erpedition Scientifique de lu Morie, vol. i. pl, vii.)

It is unnecessary to relate here the events which followed the erection of the Athenian fort at Pylus
and which terminated with the capture of the Spartans in the island of Sphacteria, as they are given in every Grecian history. The following extract trom Col. Leake illustrates the deseription of Theydides in the most satisfactory manner: "The level and source of water in the middle where the Lacedaemonians elicamped,- the summit at the northern end to which they retired,-the landingplaces on the western side, to which the 1tclots brought provisions, - are all perfectly recognisable. Of the fort, of loase and rude construction on the summit, it is not to be expected that any remsins should now exist; but there are some ruins of a signal-tower of a later age on the same site. The summit is a pile of rongh rocks ending in a peak; it slopes gradually to the shore on every side, except to the harbonr, where the cliffs are perpendicular, though here just above the water there is a small slope capable of admitting the passage of a bidy of men active in climbing among rocks und difficult places. By this pass it is probable the Messenians came upon the rear of the Lacedaemoniams on the summit; for just at the southern teruination of the pass there is a passage through the cliffs which border the greater part of the eastern shore of the island, so that by this opening, and along the pass under the rocks to the northward of it, the Measenians had the means of passing unseen from the centre of the island to the rear of the lacedaemoniads on the summit. Though this hill slopes gradually from its rocky peak to the shore on every side except towards the harbour, it does not admit of a landing at its foot, except in the calmest weather; nor is it easily assailed on any side by land, on account of the ruggedness of the summit, except by the means to which the Messenians resorted; so that the words of Thucydides respecting

 extremity of the inland is rocky, steep, and diffirult of access, and forms a separate hill; in every other part the ground slopes from the cliffs on the side of the harbour to the western shore, which, thongh rocky, is low; so that when the weather is calm it is more easy in face of an opponent to land, and to make way into the island on that side than on the eastern shore, where the cliffs admit of an casy access only in two places, one towards the morthern end, the other in the middle of the island, where an opening in the cliffs leads immediately into the most level fart of it; exactly in the opening stands a small church of the Panaghia. There are also two sunall crecks adjacent to each other, near the southern end of the enstern side of the island, opproite to Neikastro: near these crecks there is a well. The prineipal source of water is towards the middle of the island, at an excavation in the rock 20 feet deep, which seems to be more natural than artificial; for below a shallow surface of soil, in which there is a circular peristomium of motern masonry, the excaration in the rock is irregular and slauting. In one or two places there are groves of high bushes, and there are low shruhs in every part of it. It often happens, as it did in the sereath summer of the l'eloponnevian war, that a fire, occurring accidentally or of intention, clears the face of the island during the droughts of that senson: the northern bill exhibits at this moment recent marks of a similar conflagration." (Morea, vol. i. 408, siq.)

The peninsula of Corypbasium is a precipice on
the eastern side or towards the lagoon; while on the westeru side or towards the open sea it slopes gradually, particnlarly on the SW., where Demostbenes succeeded in preventing the landing of Brasidas and the Lacedaemonians. The promontory is bigher at the northern end. Below the ruined fortress at the northern end there is a fine cavern, called ToidhoKilid (Boiסó-кointá), "the ox's belly," which gives nane to the small circnlar port immediately below it, which has been already spoken of. This caveru is 60 feet long, 40 wide, and 40 ligh, having a roof like a Gothic arch. The entrance is triangular, 30 feet leng and 12 high; at the top of the cavern there is an opening in the surface of the bill above. This cave was, according to the Peloponnesian tradition, the one into which the infant Hermes drove the cattle he had stolen from Apollo. It is mentioned io the Homeric bymn to Hermes as situated upon the sea-side (v. 341); but in Antoninus Liberalis (c. 23) it is expressly said to bave been at Coryphasium. In Ovid (Met. ii. 684) Mercury is represented as beholding from Mt. Cyllene the unguarded cattle proceeding into the fields of Pylus.

The bay of Voidho-Kilia is separated by a low semicircular ridge of sand from the large shallow lagoon of Osmyn-Aga. As neither Thucydides nor Pausanias says a word abont this lagoon, which now forms so striking a feature in the topograpby of this district, we may confidently conclude, with Leake, that it is of recent formation. The peninsula must, in that case, have been surrounded with a sandy plain, as Pausanias describes it; and accordingly, if we sappose this to have been the site of the Homeric Pylas, the epithet ${ }^{3} \mu a 0$ obes, which the poet constantly gives to it, wonld be perfectly applicable.

The Athenians did not surrender their fortress at Pylus to the Lacedaemonians in accordance with the treaty made in B. C. 421 (Thuc. v. 35), but retained possession of it for fifteen years, and only lost it towards the close of the Peloponnesian War. (Diud. xiii. 64.) On the restoration of the Messenians to their country by Epaminondas, Pylus again appears in history. The remains of the walls already described belong to this period. On more than one occasion there was a dispute between the Messenians and Achaeans respecting the possession of this place. (Liv. xxvii. 30; Polyb. xviii. 25.) It was visited by Pausanias, who saw there a temple of Athena Coryphasia, the so-named house of Nestor, containing a picture of bim, his tomb, and a cavern said to have been the stable of the oxen of Neleas and Nestor. He describes the latter as within the city; which must therefore lave extended nearly to the northern end of the promontory, as this cave is evidently the one described above. (Paus, v. 36.) There are imperial coins of this city bearing the epigraph $\Pi \nu \lambda i \omega \nu$, belonging to the time of Severus. (Eckhel, vol. n. p. 277.) it would appear from Leake that the restered city was also called Coryphasinm, since he says that " at the time of the Achaess League there was a tewn of Coryphasium, as we learn from a coin, which shows that Coryphasium was a member of that contederacy." (Peloponnesiaca, p. 171.)

The modern name Avarino, corrupted, as already said, into Nararino, is probably due to the Avars, who settled there in the sixth century of the Christian era. The mediaeval castle was built by tbe widow of the Frankisb chieftain William de la Roche. Her descendants songht a more convenient
place for their residence, and erected on the southern side of the harbour the Neikastru or modern Navarino. It commanded the sonthern end of the harbour, which became more and more important as the northern eutrance became choked up. Containing, as it does, tbe hest harbour in the Peloponnesns, Navarino constantly appears in modern history. It was taken by the Turks in 1500. In 1685 it was wrested from them by the Venetian commander Morosini, and remained in the hands of the Venetians till 1715 . Io more recent times it is memorable by the great battle fought in its Lay, on the 20th of October, 1827, between the Turkish fleet and the combined fleets of Eoglaod, France, and Russia. (Curtins, Peloponnesos, vol. ii. p. 181.)

It remains to speak of the site of the Homeric Pylos. According to a generally received tradition, Nelens, the son of Poseidon, migrated from lolcos in Thessaly, and founded on the west coast of Peloponnesus a kingdom extending westward as far as that of the Atrilae, and northward as far as the Alpheins, or even beyond this river. Nelens incurred the indignation of Hercules for refusing to parify him after the murder of his son lphitus. The hero tuok Pylus and killed Nelens, together with eleven of his twelve sons. But his surviving son Nestor opheld the fame of his house, and, after distinguishing himself by his exploits in youth and manhood, accompanied in his old age the Grecian chiefs in their expedition against Troy. Upon the invasion of Peloponnesus by the Dorians, three generations after Nestor, the Neleids quitted Pylus and removed to Athens, where they obtained the kingly power. The situation of this Pylus - the Mùas
 dispate among the Grecian geographers and grammarians. Strabo (viii. p. 339) quotes a proverbial verse, in which three towns of this name were mestioned -
 ă $\lambda \lambda \frac{s}{}$, 一
of which the former balf-"E $\sigma \tau 1$ Пú入os $\pi \rho d$ חúdoro - was at least as old as the time of Aristophanes, when Pylus became famons by the capture of the Spartans at Sphacteria. (Aristoph. Equit. 1059.) The claims of the Eleian Pylus to be the city of Nestor may be safely set on one side; and the choice lies between the towns in Triphylia and Messenia. The ancients asnally decided in favour of the Messenian Pylos. This is the opinion of Pausanias (iv. 36), who unbesitatingly places the city of Nestor on the promontory of Coryphasium, although, as we have already seen, he agrees with the people of Elis that Homer, io describing the Alpheins as flowing tbrough the land of the Pylians (Il. v. 545), had a view to the Eleian city. (Pans. vi. 22. §6.) It is however, much more probable that the "land of the Pylians" was used by the poet to signify the whole kingdom of the Nelcian Pylus, siace he describes both Thryoessa on the Alpheins and the cities on the Messeuian gulf as the extreme or frontier places of Pylus. (Opu-

 In this sense these expressions were uaderstood by Strabo (viii. pp. 337, 350). It is curions that Pausanias, who paid so much attention to Homeric antiquities, does not even allude to the existence of the Triphylian Pylus. Pindar calls Nestor" "the Messenian old man." (I'yth. vi. 35.) 1soctates
mentions Messenia as his birthplace (Tanath. § 72); and Pherecydes (ap. Schul. ad IJom. Od. xi. 289) and Eustathins (ad Od. iii. p. 1454) describs the Messenian Pylus as the city founded by Peleus. This was also the opinion of Diodorus (xv. 66), and of many others. In opponition to their views, Strabo, following the opinion of the 'Ouпpıк心́тepor, argues at great length that the Triphylian Elis was the city of Nestor. (Strab. viii. pp. 3339, seq., 348. seq.) He maiotains that the description of the Atpheine flowing threagh the land of the Pslians (il. v. 545), which, as we have already seen, was the only arsument which the Eleians could adduce for their claim, is applicable to the Triphylian Pylas; whereas the pnet's mention of Nestor's exploits acainst the Epcians (71. xi. 670, seq.) is fatal to the supponition of the Messeaiaa city being his residence. Nestor is described as making an incursion inte the country of the Epeians, and returning thence with a larse quantity of cattle, which be safely lodges by niglit in the Neleian city. The third day the Epeians, having cullected their forces on the Alpheins, Nestor marched furth frem Pylus, and at the end of the first day halted at the Minyeins (subsequently called the Anigrus), where he passed the night; starting from thence on the following morming. he arrived at the Alpheius at noon. Strabo argues that neither of theese erents conlif have taken place if Nestor bad narched from su distant a city as the one at Coryphasium, while they might easily have happened if the Nelefian city had been situated at the Trijbylian P'ylus. Acain he argues from the Odyssey that the Neleid Pylus could uot have been on the seq-coast, since Telemachus, after be had disenbarked at the temple of Poscidon and had proceeded to Pylus, sent a courier to his ship to fetch his cumpanions (Od. iii. 423); and on his return from Sparta to P'ylos, he desired Pisistratus to tura off to the sea-side, that be might immediately embark, as he wished not to be detained in the city by Nestor. (O\%. xv . 199, seq.) These arguments, as well as others. addured by Straho, have convinced K. O. Mïller (Orchomenos, p. 357, self.), Thirlwall (llist. of (irecce, vol, i. p. 96), and several modem schulars; but Leake. ('urtius, and others bave adhered, with much greater probalility, to the anore common view of antiquity, that the Neleian Pylos was situated at Cirythasium. It hav been shown that Pylus was frojurntly used by Homer to signify the Neleid kiumem, and not simply the city, as indeed strabo himsclif hadd admitted when arcuing against the elains of the Elpian Pylus. Mureover, even if it should be admitted that the account of Nestor's explhits agnainst the Fpuians agrees better with the claim of the Triphylian 1 'yluw, yet the narrative of the jourreeys of Teleniachus is entirely opposed to this claim. Tclemachos in going from l'ylus to Sparta drove his horses thithor, withont changine them, in two dars, stopping the first night at Pluerae (Od. iii. 485); and he returned from sparta to l'ylus in the same manuer. ( $\mathrm{Od} . \mathrm{xy} .182$, seq.) Now the Messenian Pylas, Plorsae, and Sparta, lie in a direet line, the distares from I'ylus to Plerac being abut 35 iniles by the roud, and from l'herae to Sparta about 28 miles. On the other hand, the road from the Triphylina l'ylus to Sparta would have been br the valley of the Alphens into that of the Eurotas; whereas Pherne wonld have been ont of the way, and the distance to it would have been much mere tham a day's journey. Besides whick
the position of the Messenian Pylus, the most striking apon the whole western coast of Pelopmonnesus, was far more likely to have attractel the Thessalian wanderers from Iolcos, the worshippers of the god Proscidon, than a site which was neither strony by nature nor near the eoast.

Bat although we may conclude that the Messenian Pylus was the city of Nestor, it may admit of doubt whether the city itself existed on the promontory Coryphasimm from the earliest times. The Greeks rarely built a city in the earliest jeriod immediately upon the coast, and still more rarely chose a site so bailly supplied with water as Coryphasium, of which the Atheoians experienced the inconvenience when they defended it ia the Peloponnenian War. There seens much probability in the accouat of Strabe (viii. p. 359) that the ancient Mcssedian Pylus was situated at the foot of Mt. Aegalens, and that upon its destruction some of its inhabitants settled at Ciryphasinm. If then we suppose the city of Nestor to have stood a little way inland, and Coryphasium to have heen its port-towa, the narrative of Telemachus' return becomes perfectly clear. Not wishing to luse time at the royal residence, he drives straight to the port and goes quietly on buard. Hence, one of Strabo's most serious objeetions to the Messenian Pylus disappears. Strabo was justificd in seeking for a separate site for the city and the port, bat he seems to have forgotten the cxistence of the Old Pylus inland, which he had himself mentioned. (Leake, Morea, vol. i. p. 416, seq.; Curtins, Peloponnesss, vol. ii. p. 174, seq.)
PYRAEI, a people in Illyria (Plin, iii. 23. s. 26 ; Nela, ii. 3. § 12), perhaps the same as the l'leraei of Strabo. [Pleriet.]

PYKA'M1A. [Argos, p. 202, a.]
PYTAMIUS (Húpauos), one of the great rivers of Asia Minor, which has its sources in Cataonia near the town of Arabissus, (Strab. i. p. 53, xiv. p. 675.) For a time it passes under ground, but then comes forward again as a navigable river, and furces its way through a glen of Moant Taurus, Which in seme parts is so marrow that a dog can leap acruss it. (Strah. xii. p. 536.) 1ts course, which until then had been south, oow turns to the snoth-west, and reachees the sea at Mallus in Cilicia. This river is deep and rapid (Tzetz, ad Zycophh. 440): its average brealth was 1 stadium (Xenoph. Anrb. i. 4. § 1), but it carried with it such a quantity of numb, that, according to an ancient oracle, its deposits were one day to reach the island of Cypras, and thus unite it with the mainland. (Strab. l. c:; Enstath, ad Diomys. 867.) Stephanus B. (s.r.) states that formerly this river had been called Lencoisyrus. (Comp. Seylax, p. to; I'tol. v. 8. §4; 1lin. v. 22; Pomp. Mela. i. 13; Curtius, iii. 7; Arrian, Amab. ii. 5. § 8.) Its modern name is Stikun or Jechum.
[L. S.]
PYRANTIIUS (Húpaveos: Eth. חupávelos), a small town in Crete, rear Gortyn, probabiy the modern Pyruthi. (Steph. B. s. v.; Pashley, Crete, vol. i. p. 291.)
PYRASLS (Húparos, Strab. Steph. B. s.r.; Mipparos, Hom: Fith. Huparaĩos), a tewnof Phthintis in Thessaly, mentioned by Ilomer aloug with Phylace and Iton, and described by him as $\Pi$ úppoacov aves-
 was situated on the Paqasaean gulf, at the distance of 20 stadin from Thiches, and possessed a good harbour (eviniuevos. Strab, ix. p. 43.5). It had disappeared in the time of Strabo. Its name was
superseded by that of Demethium, derived from the temple of Demeter, spoken of by Homer, and which Strabo describes as distant two stadia from Prrasus. Demetrium is mentioned as a town of Phthiotis by Seylax (p. 24, Hudson), Livy (xxviii. 6), Stephanos B. (s. v. $\Delta \eta \mu$ írpiov), and Dela (ii. 3). Leake places Pyrasus at Kokkina, where there are vestiges of an ancient town, consisting of wronght quadrangular blocks, together with many smaller fragments, and an oblong beight with a flat summit, partly if not wholly artificial. He also states that at Kokkind there is a circular basin full of water near the shore, which was once probably a small harbour, since there are traces of a nuole unt far from it. The exact site of the temple was probably at a spot, 5 minutes short of Kolkina, where exist many stones and some hewn blocks. (Leake, Northern Greece, vol. iv. p. 366.)
 i. $15 . \S 2$, viii. $4 . \S 2$; Strab. ü. p. 71, iii. p. 161 \&c: Polyb. iii. 34), called also Pyrenaens Mons (Mcla, ii. 5 ; Plin. ii. 3. s. 4, \&c.), Pyreuaeas Sultus (Liv. xxi. 23, \&c.; Plin. iv. 19. s. 33), PyrenaeumJngum (Mela, iii. 1), and M. Pyreдe (Пupท́vn, Strab. ii. p. $160, \& c$; Sil. Ital. iii. 417 ; Aus. Ep. xxv. 51), the lofty chain of monntains which divides Spain from Gaul. It was fabled to derive its name from the Greek word $\pi \hat{v} \rho$, fire, from a great conflagration which, throngh the neglect of some shepherds, destroyed its woods, and melted the ore of its mides, so that the hrooks ran with molten silver. (Strab. iii. p. 147; Diod. v. 25 ; Arist. Mir. Ausc. 88 ; Sen. Q. N. 1.) Silius Italicus (l. c.) derives its name from Pyrese, a daughter of the king of the Bebryces; bat its true etymology is probably from the Celtic word byrin or bryn, signifying a monntain. (Cf. Astruc. Mém. de l Hist. Nat. de Languedoc, iii. 2.) Herodotus seems to have bad some obscure intelligence respectiog the Pyrenees, as he mentions (ii. 33), a place called Pyrene, near which the Ister had its source. Strabo (iii. pp. 137,161 ) erroneously describes the chain as running from S. to N.; but its true direction, namely, from SE. to NW., is given by Pliny (iv. 20, s. 34), and Marcian (Herael. p. 38). According to Diodorus (r. 35) it is 3000 stadia in length; according to Justio (xliv. 1) 600 Roman miles. After the Alps, and the mountains of Sarmatia, the Pyrenees were esteemed the highest mountains in Europe (Agathem. ii. 9, p. 47 ; Eustath. ad Diongs. 338 Diod. l. c.), whence they are sometimes described by the poets as covered with eternal snow. (Lncan. iv. 84, seq.) On the side of Gaul they are steep ragged, and bare; whilst on the Spanish side they descend gradually to the plain, are thickly wroded and intersected with delicions valleys. (Strab. iii. p. 161.) Their western prolongation along the Nare Cantabricum, was called "Saltus Vasconum," which derived its name from the Vascones, who dwelt there. (Plin. iv. 20. s. 34.) This portion now bears the names of Sierra de Orcamo, S. de Augana and $S$. Sejos. still farther W. was Dlons Vinnins or Vindius (Ov́ivotov öpos, Ptol. vì. 1. §21; Flor. iv. 12), which formed the boundary between the Cantabri and Astores. The Pyrenees form several promontories, both in the Mediterranean sea and the Atlantic ocean. (Strab. ii. p. 120, iii. p. 160, iv. p. 176 , \&c.; Mela, ï. 5 ; sil. It. iii. 417. seq.) They were rich in mines of gold, silver, iron and lead (Strab. iii. p. 146; Plin. l. c.), and contained extensive forests, as well as the sources of the

Garumna, the lberus, and a numher of smaller rivers. (Strab. l.c., and iv. p 182.) Only three roads over them were known to the Romans: the most westerly, by Carasae (now Garis), not far from the coast of the Cantabrian sea, and which doubtless was the still practicable route over the Bidasoa by Fuenterabia: the most easterly which was also the most frequented, and is still used, near the coast of the Mediterratrean by Juncaria (now Jurquera) ; and one which lay between these two, leading from Caesaraugusta to Benearamm (now Barege). (Itin. Ant. pp. 390, 452. 455 ; Strab. iii. p. 160 ; Liv, xxi. 23, \&ce) Respecting the present condition of the l'yreners, the reader may consult Mī̃ano, Diccionario, vii. p. 38 , seq.: Huber, Skizzen aus Spanien, Gött. 1833; and Ford, Handbook of Spain, p. 579, seq. From the last autbority, it will be perceived, that the character of the Gallic and Spanish sides bas been somewhat reversed since the days of Strabo; and that, while "the French slope is full of summer watering-places and sensual, the Spanish side is rade, savage, and Iberian, the Lair of the sanggler and wild bird and beast."
[T. H. D.]
PYRENAEI PORTUS. [INDIGETFR]
PIRE'NES PROMONTO'RIUM, [HISPANLA, Vol. I. p. 1084.7

PYRETES (Muperós), called by the Scythians חópata, described by Herodotus (iv. 48) as a large river of Scythia. flowing in an easterly direction and falling into the Danube. The modern Pruth.

PYRGI (חúp $\gamma o t:$ Eth. Pyrgensis: Santa Severa), a city on the coast of Etruria, situated between Alsium and Castrum Novum, and distant 34 miles from Home .(Itin. Ant. p. 290.) It was rather more than 6 miles ( 50 stadia) from Caere, of which it served as the port (Strab. v. p. 226), but it is probable that it was not originally designed for that purpose, but grew op in the first instance around the temple of Eileitbyia, for which it continned to be celebrated at a much later period. (Strab. l. c.; Diod. xv, 14.) The foundation of this temple is expressly ascrited to the Pelasgians, and the pure Greek form of the name cettainly tends to corroborate this statement. It is probable that both Pyrgi and the neighbonring Caere were originally Pelasgian settlements, and that this was the canse of the close connection between the two, which led to Pyrgi ultimately passing into the condition of a dependency on the more powerful city of the interior. Wirgil calls it an ancient city (Pyrgi veteres, Aen. x. 184), and represents it as one of the Tuscan cities that sent assistance to Aeneas. But the only mention of Pyrgi in history during the period of Etruscan iodependence is in b. C. 384 . when the treasures of its temple attracted the copidity of Dionysius of Syracuse, who made a piratical descent npon the coast of Etruria, and, landing his troops at Pyrgi in the night, surprised and plundered the temple, from which he is said to have carried off spoils to the value of 1000 taleuts. (Diod. xv. 14; Strab. v. p. 226, Arist. Oecon. ii. 21: Polyaen. v. 2. 21.) The amoant of the booty seems incredible, but the temple was certainly very wealthy: and it would seem that the peuple of Pyrgi had given some excuse for the aggression, by themselves taking an active part in the piracies carried on at this period by the Etruscans in general. Servins, indeed, represents it as bearing the chief part in those depredations; but this may prubably be an exaggeration. (Serv. ad Aen. x. 184.) It
coold never have been a large town, and appears under the Romans to have sunk into comparative insigoificance. It is indeed noticed by Livy, together with Fregenae and Castrum Novum, as one of the maritime colonies which in n.c: 191 conteaded in vain for exemption from military levies (Liv, xxxri. 3 ); but we have no account of the time at which the colony was established there, nor does any subsequent mention of it occur in that capacity. Its name is mentioned by all the geographers among the towns on the coast of Etruria; but Strabo terms it only a small town ( $\pi 0 \lambda i x v o p$ ), and Servins calls it in lis time merely a fort (castellum), which would agree well with the character of the remains. (Strab. v. p. 225; Mel. ii. 4: Plin. iii. 5. s. 1; Ptol. iii. 1. § 4 ; Martial, xii. 2; Serv. ad Aen. l. c.) But in the time of Rutilius it had altogether sonk into decay, and its site was occupied only by a large villa. (Rutil. Itin. i. 223.) No subsequeat aotice of it is foand until it reappears in the middle ages under the title of Santa Severa.

The Itineraries vary much in the distanaces they assigo between Pyrgi and the other stations on the coast; but they agree in placing it between Alsium and Castrum Xovua: and this circumstance, coupled with the distance of 50 stadia from Caere, given by Strabo, leaves oo donbt that it is correctly jdentified with Sta Severa. (Strab, v. p. 226; Itin. Ant. pp. 290, 301 ; Itin. Morit. p. 498 ; Tab. Peut.) The site of the fortress of that name is noqnestionably that of an ancient city. The walls of the present castle, which is of mediaeval date, are based on foundations of very ancient cbaracter, being coostructed of polygonal blocks of stone of large size, neatly fitted together without cement, in the same manner as the walls of Cosa and Saturnia. The line of these foundations, which are undoubtedly those of the walls of the ancient city, may be traced throughont their whole extent, eaclosing a gnadrangular space of about half a mile in circuit. abatting on the sea, Some remaias of Roman walls of later date occur at the extremities on the sea-coast; but no remaios have been found of the celebrated temple which was probably sitnated within the enclosure; nor are there any traces of the aacient port, which must have been wholly artificial, there being no natural inlet or harbour. (Canina, io the Ann. dell Inst. Arch. 1840, pp. 35-44; Denois, Etruria, vol. ii. pp. 11-16.) The goddess to whom the temple was dedicated is called by Strabo Eileithyia, but several other writers call her Leucothea (Arist. l. c.; Polynen. l. c.), who was identified with the Mater Matuta of the Romans. There is no doubt that the same deity is meant by both appellations. (Gerhard, Gottheiten der Etrusker, pp, 9, 25.)
[E. H. B.]
PYRGES or PYRGi. 1. (Hípyos, Her. Polyb,; Пúpyon, Strab., Steph. B. s.v.: Eth. Пupyitns), the most soutberly town of Triphylia in Elis, at the mouth of the river Neda, upon the Messenian frontier (Nitrab. viii. p. 348), and hence described by Stephanus B. (s. v.) as a Messeniaa town. It was one of the settlements of the Minyae. (Herod. iv. 14*.) It opened its gates to Philip in the Social War. (1'olyb. iv. 7. 80.) Leake places Pragi at some ancient remains upon the richt bank of the Neda, not far from its mouth. (Nurea, vol. i. p. 57, vol. ii. p. 207.)
2. A town in hollow Elis in a district named Perippia, which Polybius mentions in conjunction with Lasion. (Polyb. v. 102; comp Liv. xxvin. 32.)

PYRNUS (Húpvos: Eth. Múpvios), a town of Caria, of uncertain site. (Steph. B. s.v.; Plic. v. 28. s. 29.)
l'YROGERI, a people dwelling on the Hebras in Thrace, mentioned by Pliny, iv. 11, s. 18. [T.H.D.]

I'YRRHA (Пúp p̀a: Eth. Пuppaîos). 1. A town on the coast of the deep bay on the west of the island of Lesbos, which had so narrow an entrance that it was called the Euripas of Pyrrha. It was sitnated at a distance of 80 stadia from Mytilene and 100 from Cape Malea. (Athen. iii. p. 88 ; 'Strsb. xiii. p. 617.) In the Lesbian revolt the towa sided with Mytilene, but was reconquered by Paches. (Thac, iii. 18, 25, 35 ; comp. Scylas, p. 36: Steph. B. s. v.) In Strabo's time the town no longer raisted, but the suburbs aad port were still inhabited. Pliay (v. 39) reports that l'yrrha had been swallowed up by the sea. The bay of Pyrrlas is now calied Caloni.
2. A small town on the Mreander, opposite to Miletus; it was 50 stadin distant from the bouth of the river. (Strab. xiv. p. 636; Plin. v. 29; Schol. ad Ptol. v. 2. § 5.)
[L. S.]
PYRRHA ( $\Pi \dot{v} \dot{p} \rho a$ ), a promontory of Thessaly, now C. Ankistri, in the Pagasaean gulf, forming the northern boundary of the district l'hthiotis, and near which were the two islets of l'yrrha and Deucalion. (Strab. ix. p. 435 ; Leake, Northern Greece, rol. iv. pp. 359, 360, 371.)

PIRRHE'UM1. [Ambracta, p. 120, a.]
PYRRHI CASTRA (חúp̧ov $\chi \dot{\alpha} p a \xi$ ). 1. A fortress iv the N. of Laconia, was probably at or near the junction of the Ocnus and Eurotas, and is sapposed to have been so named from having been the place of encampment of Pyrrhus, wheo he invaded Laconia in B. c. 272. (Polyb. v. 19 ; Liv, xuxv. 27 ; Leake, Peloponnesiaca, p. 345.)
2. In Greek Illyria. [Vol. 1. p. 563, a.]

PY'RRHICHL'S (Húppıðos), a town of Laconia, situated about the centre of the promontory ending in Cape Taenarum, and distant 40 stadia from the river Scyras. According to some it derived its namo from Pyrrhns, the son of Achilles, according :o others from Pyrrlicus, one of the Curetes. Silenus was also said to have been brought op here. It contained temples of Artemis Astrateia and of Apollo Anazooins, - the two surnames referring to the tradition that the Amazons did not proceed further than this place. There was also a well in the agora The ruios of this town have been discovered by the French Commission near the village of Kiralo, where they found the well of which Pausaoias speaks, the torso of a female statuc, the remains of baths, and several Roman ruins. Leake observes that the distance of 40 stadia from the Scyras to Pyrrhichus must be measored, not from the mouth of that river, as Boblaye proposes, but from cear its sources Augustus made lyrrhichus one of the EleutheroLaconian towns (1’aus. iii. 21. \& 7, iii. 25. §§ I-3; Boblaye, Richerches, 9'0. p. 88: Leake, Peloponnesiaca. p. 174; Curtius, Peloponnesos, vol. ï. p. 276.)

PIRLUM. [l'emtre]
PYRUSTAE (Пupoûqтai), according to Stmbo (rii. p. 314), a tribe of l'annonia, but undoubtedly the same people as the Illyrian Pisustae. [1. S.]

PYTHILA (חúetov), n town of l'errhaebia in Thessaly, sitnated at the foot of Mount Olympns, and forming a Tripolis with the two neigbbouring towns of Azorus and Dolichc. Pythium derived its name from a terople of Apollo Pythius situated on one of the summits of Olympus, as we learo from an

## PYTHO.

QUADRATAE.
epigram of Xeinagoras, a Greek mathematician, who measnred the height of Olympus from these parts (ap. Plut. Aemil. Paul. 15). Games were also celebrated liere in honour of Apollo, (Steph. B. s.v. Пúdov.) Pythium commanded an important pass across Mount Olympus. This pass and that of Tempe are the only two leading from Macedonia into the north-east of Thessaly. Leake therefore places Pythimu on the angle of the plain between Kokkinopló and Livédhi, thengh no remains of the ancient town have been discavered there. (Liv, xlii. 53: Plut., Steph. B., ll. ce.; Ptol. iii. 13. § 42 ; Leake, Northern Greece, vol. iii. p. 34 I , seq.)
PYTHO. [DeLphi.]
PYTHO'POLIS. [MyThepolis.]
PYXIRATES. [EUphmates.]
IYXITES (חఎ Pontus, emptring itself into the Enxine 60 stadia on the north-east of Prytanis. (Plin, vi. 4 ; Arrian, Peripl. P. E. p. 6; Anonym. Peripl. P. E. p. 15.) It is possibly the same as the Cissa mentioned by Ptolemy (5. 6. §6), and is commonly identified witb the modern litzeh.
[L.S.]
PYXUS. [Buxentum.]

## Q.

QUACERNI. [QUERQCERNI.]
QUADI (Kuvá $\delta o c)$, a great German tribe in the south-east of Bohemia, in Moravia and Hungary, between Mons Gabreta, the Hercynian and Sarmatian mountains, and the Dannbe. (Tac. Germ. 42, Anu. sii. 29, Hist. iii. 5, 21; Ptol. ii. 11. § 26; Plin. iv. 25.) They were surronnded on the north-west by the Marcomanni, with whom they mere always closely connected, on the north by the Gothini and Osi, on the east by the Jazyges Metanastae, and on the south by the Pannonians. It is not known when they came to occupy that country, but it seems probable that they arrived there about the same time when the Marcomanni established themselves in Bohemia. At the time when the Marcomannian king Maroboduus and his successor Catualda, on being driven from their kingdom, inplored the protection of the Romans, the latter in A. D. 19 assigned to them and their companions in exile the districts between the rivers Marus and Casus, and appointed Vannins, a Quadian, king of the territory ('ac. Ann. ii. 63; Plid. iv. 25). This new kingdom of the Quadi, after the expulsion of Vannins, was divided between his nephews Vangio and Sido, who, however, continned to keep up a good understanding with the Romans. (Tac. Ann. sii. 29,30 .) Tacitus (Germ. l. c.) says that down to his own time the Marcomanni and Quadi bad been governed by kings of the honse of Maroboduns, but tbat then foreigners rnled over them, though the power of these rulers was dependent on that of the Roman emperors. At a later time the Quadi took an active part in the war of the Marcomanni against the Romans, and once nearly annibilated the whole army of M. Aurelins, which was saved only by a sndden tempest. (Dion Cass. Ixxi. 8). Notwithstanding the peace then concluded with them, they still continned to harass the Romans by renewed acts of hostility, and the emperor was obliged, for the protection of his own dominions, to erect several forts both in and aronnd their kingdom, in consequence of which the people were nearly driven to ahandon their country. (Dion Cass. Ixxi. 11, 13, 20.) In
vol. II.
A. D. 180 the emperor Commodus renewed the peace with them (Dion Cass. Ixxii. 2; Lamprid. Com. 3 ; Ilerodian, i. 6), but they still continued their inroads into the Roman empire (Fintrop is. 9; Vinpise. Aurel, 18; Amm. Marc. xvii. 12, xxix. 6). Towands the end of the fourtb century the Quadi entirely disappear from history; they lad prubably migrated westward with the Suevi, for Quadi are mentioned ameng the Suevi in Spain. (Hieron. Ep. 9.) According to Ammianus Marcellinns (svii. 12) the Quadi resembled in many respects the Earmatians, for they used long spears and a coat of mail consisting of linen covered with thin plates of horn; they lad in war kenerally three swift horses for every man, to enable him to change them, and were on the whole better as shirmisbers than in an open battle in the field. Ptolemy ( $l, c$. ) mentions a considerable number of towns in their country, such as Eburodunum, Meliodunum, Caridorgis, Medoslaniam, $\&$ c.; the Celtic names of which suggest that those districts previons to the arrival of the Quadi had been ishabited by Celts, who were either subdued by tbem or had become amalgamated with them. The name Quadi itself seems to be connected with the Celtic word col, cold, or coad, that is, a wood or forest, an etymology which receives support from the fact that Strabo (vii. p. 290), the first ancient author that notices them, mentions them under the name of Kó $\bar{\delta} \delta o v o$. Tacitus evidently regards them as Gernans, bot Latham ( ad Tac. Germ. p. 154) is inclined to treat them as Sarmatians. (Comp. Wilhelm, Germanien, p. 223, fol.)
[L.S.]
QUADIA'TES. In the inscription on the arch of Susa, published by Maffei, there is a list of the Alpine peoples who were under the dominion of Cottins. The first narne is the Seguvii, and the last is the Quadiates. There is nothing tbat enables ns to fis the position of the Quadiates.

Pliny (iii. 4) mentions a people in Gallia Narbonensis nuder the nanue of Quariates. After naming the Oxybii and Linganni [LLvgauni], he adds : "Super quos Suetri, Quariates, Adunicates." The valley of Queirus on the left bank of the Durance, below Briançon, and a little above Embrun, is supposed to represent the position of the Quariates. D'Anville conjectures that the Quadiates of the inscription may be the same as the Quariates, for the n of the inscription, if it is not very clear, may bave been taken for a D ; or the complete name may have been Quadriates, the nanve of Queiras in old records being Quadriatium.
[G. L.]
QUADRA'TA (sc. Castra). 1. A Roman fort in Ulper Pannonia, on the river Sarus, between the towns of Novioduumm and Siscia. (It, Aut. pp. 260, 274; Geogr. Rav. iv. 19 ; Tab. Peut.) No remains appear to be extant, and the site accorlingly is unknown.
2. A fort in Upper Pannonia, on the road between Arrabona and Carnuntnm, not far from the banks of the Danube. (It. Ant. p. 247.) Mluchar (Noricum, p. 264) identifies it with a place between Ovar and Oroszvar, now occupied by a large farm of Connt Zitsi.
[L. S.]
QUADRA'TAE, a village or station in Gallia Cisalpina, on the road from Augusta Taurinorum to Ticinum. The Itineraries place it 22 or 23 miles from the former city and 16 or 19 from Rigomagus (Itin. Aut. pp. 340, 356; Itin. Hier. p. 557); but the latter station is itself of uncertain site. Quadratae must have been sitnated between Chivasso
and Crescentino, near the confluence of the $l$ Im Baltea with the I'o; but the exact sito has not been deternined. Though the name is not mentioned by any of the geographers, it wouh seem to have been in the later ages of the Empire a place or station of importance, as we learn from the Notitia that a body of troops (Sarmatac Gentiles) was permanently stationed there. (Notit. Digm. vol. ii. p. 121)
[B. II, B.]
(QUADIHBDRG1UM. Amminus Mareellinus (xrmi. 2) mentions (Gundriburgium among the fortresses on the Rbine which Julian repaired: "Civitates orrnpatae sunt soptem, Castra Herculis, Qualriburgium, Tricesimae, Novesium, Bomna, Antumsteum et Bingio." There is hwwever some corruption in the pasage (note of Lindenbrog). The places seem to be mentioned in order from nurth to south. D'Auville conjectures that Quadriburgium is the same place as Burginatimn [BumonaTwM], following Cluver and Alting. (Ukert, Ginllien, p. 528.) Other geographers conjectare suldy from the resemblance of name that it may be Qualburg, not far from Clice, which appears to have been a Llman place, for Roman coins and inceriptions have been found there.
[G. L.]
(2THABATES [Q(ADIATES.]
QUARQUERNS, a prople in Istria, of uncertain site. (Plin, iii. 19. s. 23.)

QUARQUERN1. [QCERQCETMY.]
QUARTENSIS LOC'US, a place mentioned in the Nut. Iup, as under the command of the governor of BeJrica Secunda: "Pıaefectus classis Sumbricae in loci) (2autensi sive Mormensi." The place seems to be Quart on the Sombre, which keeps the ancient name. The word Quarte indieates a distance of iv. from sume principal place, it being usual for chivf tuwns to reekon distanees along the roads which lel from them to the limits of their territory. This princijal place to whichs Quartensis belonced was Bayacum (Rarai), and the distance from Quarte to Bavoi is four Giallic leagues. The great Roman wad from Durocuturm (Reims) to B'ucai passed by enturte. "Quartensis" is the adjective of a Firm "Quartus" or "Quarta," and Quarta oceurs III an whe record of the yoar 1125, "Altare de 12nata supra Sunbram," which is the chureh of (2iwarte.
[(i.1.]
Qt'EROTERN1 (Plin. iii. 3. s. 4: Quarquerni, Irsect: up. (iruter, p. 245. 2; Quaemi, Kovakepvoí, 1'tal. ii. 6. § 47), a pemple in the NW. of llispobia Tartaconctsio, at subtivision of the Gallaeci Bra, .urii.

QUERQUETULA (Eth, Querquetulams; Kop. אotnuגavos, bionys.), an ancient city of Latium, montioned only by l'hny among the populi Albenses, or estiuet coumunnities of Lattim, and by Dionysins amones the the Latin cities which constituted the league arminst lome. (1llin iii. 5. s. 9 ; Dionys. e. 61.) Nither passage affords the slightest clue to it position, and the name is not elsewhere mentioned; indeed, it srems certain that the place was not in ..veteneer at as later periont. It is undunbtedly erronewas to connect (as (icll has dome) the name of the lorta ( foweynetulana at hone with this city (Bucker, Ifuallewh, vol. i. p. 170); and we are absolutily in the dark as in its positun. It has been placed by fiell and Nollhy at a phate ralled Coreolo, abont 3 wile NE of (thatu sul the sante dotance from Halrian's villa near Tireli: lat this is a mere conjowture ( i ill, Top, if Rome p. 369; Nibby, Dinturni, vul. ii. 1. 665.) [E. 11. B.]

QUINDA. [ANAZ.AEBYR.]
QUINTANAE or AD QUINTA'NAS, a station on the Vin Labieana or Latina, 15 miles from Rome, and at the foot of the hill occupied by the ancient city of Labienm, now La Colonna, from which it was about a mile distant. (Itin. Ant. p. 304; Gell, Top. of Rome, p. 5.) Under the Roman Empire it beeame the site of a village or suburb of Labicum, the inhabitatts of which assumed the name of Lavicani Quintanenses. [Laहाстm.]
[E. 1I. B.]
QUINTIANA CASTRA, a fort in the east of Viudelicin, not far from the bauks of the Danube, between Batava Castra and Augustana Castra. Its garrion consisted of a tronp of Rhaetian honse. men. (lt. Aut. p. 249; Notit. Imp., where it is called Uuartana Castra; comp. Eugipp. 1'it $S$. Severini, 15, 27.) Aluchar (Noricum, p. 285) identifies its site with tbat of the modern rillage of Kimzen.
[L. S.]
QU1\%A (Kovísa, also Boúí̧a, 1'tol. iv. 2. § 3), a ilace on the coast of Mauretania Caesariensis, called by I'tulemy a colunia, and in the Antonine Itinerary a municipinm, but in Pliny designated as "Quiza Xenitunat preregrimorum oppidum." It was situated between I'ortus Magnus and Arsenaria, at the distance of 40 stadia from either. It is the modern Gizn nestr Oran. (1'tol. l.c.; It. Ant. p. 13; Plin v. 2 ; DIcla, i. 6.)

## R. *

## RAAMAHL [Rhegma.]

RAAMLis' ('Papeocท̂, LXX., Exod. i. 11, xii. 37; Numb. xxxiii. 3, 5), was, according to 1) Ansille (.1em sur. l'Eigypte, p. 72), identical with lleroopolis in the Delta; but accorting to other writers (Jablonsky, Opusc. ii. p. 136; Winer, Bibl. Recaleworterbach, vol. ji. p. 351) the same as Heliopolis in the sane division of Aegypt. [IW.B.D.]

## RABBATH-AMMON. [PHRADELPMA.]

RABBATIl-MOAB, a town in the country of Moab, stated by sitephanus, who is followed by Reland, Raumer, Winer, and other moderns, to be identical with Ar of Maab, the classical Areopolis. This identification is ahnost certainly erroneous; and indeed it is very donbtful whether a Rabuath ditl exist at all in the country of Mab All the notiess of such a name in the Bible are identified with Rabbath-Ammon, exeept in Joshua (xiii. 25), where Areer is said to be " before Rabbah," which may possibly be Rabbath-Ammon, and certainly cannot, in the absence of other ancient evidence, be admitted to prove the existerice of a Rabbath in Moab. There is, however, some evidence that such a town may have existed in that country, in the modern site of Rabba, marked in Zimuerman's map shout halfway between Kerak: (Kir of Maab) and the Mojeb (Arnon), and by bim identiffed with Areopulis, wbich last, however, was rertainly identical with Ar of Mloab, and lay further north, on the south bank of the Arnon, and in the extrene bunder of Moab (Numb. xxi. 15, xxii. 36). [Ameororss.] Rabbu is placed hy Burckhardt 3 homs north of Ki rak (Syria, 11. 377), and is dombtlens the site monticed in Abulfeda's Tabula Syrite as /ialbath and Mab (90). Irby and Mangles

* Fir those articles not found under Ra-, NL-, Kt-, Sic, see Rilu-, Kile-, RHi-, \&c.
passed it two hours north of Kerak: "The ruins," they say, "are situated on an eminence, and present nothing of interest, except two old ruined Roman temples and some tombs. The whole circuit of the town does not seem to have exceeded a mile, which is a small extent for a city that was the capital of Moab, and which bore such a high-sounding Greek name." (Journat, June 5, p. 457.) They most not be held responsible for the double crior involved in the last cited words, regarding the etymology of the name Areopolis, and its identity with Rabbath, which are almost universal.
[G. W.]
R.AGAE. [Rhagae.]

IAGANDO or liAGINDO, a town in the southeast of Noricum, on the great road leading from Celeia to Poctovium, between the rivers Savns and Dravus. (lt. Ant. p. 129; 1t. Hieros. p. 561 ; Tab. Peut.) Mluchar (Noricum, p. 240) looks for its site near Mount Studenitz; but other geugraphers entertain different opinious, and nothing certain can be said.
[L. S.]
 a town mentioned by lsidorus in the district of Parthia called Apavarctene. It is probatly the same place as the Ragaea of Itolemy ('Paraia, vi. 5. § 4). It is not clear whether there exist at present any remains of this town, but it must bave been situated to the E. of Nishäpur, between that town and Herát.
[V.]
Ragirava. [Rarava.]
RAMAH ('Pa $\alpha \dot{\alpha}$ ). 1. A city of the tribe of Benjamin, mentioned with Gibeon and Beeroth (Josh. xviii. 25), and clsewhere with Bethei, as in or near Mount Ephraim. (Judges, iv. 5.) From xix. 13 of Judges it would appear to have been not far north of Jerusalem, and lying near to Gibeah of Benjamin. Being a border city between the kingdoms of Israel and Judah, it was fortified by Baasha king of Isruel, "that he might not suffer any to go out or come in to A×a, king of Judah." (1 Kings, xv. 17, comp. xii. 27.) It is placed by Eusebins 6 miles north of Jerusalem, over against Bethel (Onomast. s. r.), and by S. Jerome 7 miles from Jerusalem near Gabaa, and was a small village in his day. (Comanent. in Hos. cap, v., in Sophon. eap. i.) Josephus places it 40 stadia from Jerusalem. (Ant. viii. 12. § 3.) Its site is still marked by the miserable village of Er-Räm, situated on a hill on the east of the Nablis road, 2 hours north of Jerusalem, and half an hour west of Jeba', the ancient Gibeah. Its situation is very commatnding, and it retains a few scattered relics of its ancient importance. (Bubinson, Bibl, Res. vol. it. pp. 315, 316.)
2. See also Ramatha and Ramoth. [G. W.]

RAMATH-LEHI, or simply LEHI (translated in LXX. 'Avalpeoıs ouayóvos), where Samson slew the Piulistines with the jaw-bone of an ass. (Judges, xv, 14-19.) The name Ramleh appears so like an abbroviation or contraction - perbaps a corruption -of this name, that it may well be identified as the scene of this slanghter. And bere probably was the Ramah in the Thamnitic toparchy in which Busebius and S. Jerome found the Ramathaim Sophim of Samuel, and the Arimathaea of the Evangelists, which they place ncar to Lydda in the plain. (S. Math. xxvii. 57 ; S. Mark, xv. 42; S. Luke, xxiii. 50 ; S. John, xix. 38 , 'Apquataia; Eusebius, Onomast. s.v. Arnatha Sophinn ; S. Jerome, Epitaph. Paulae, p. 673.) Dr. Rolinson, indeed, controverts all these positions; but his arguments cannot
prevail against the admitted facts, "that a place called Fanathem or Ramatha did anciently exist in this region, somewhere not far distant from Lyddia" (Bibl. Res. vol. iii. p. 40), and that no other place can be found answering to this description but Ramleh, which has been regarded from very early times as the place in question. The facts of Rumlch having twen built by Suliman, sou of the khalif Abd-cl-Melik, after the destruction of Lydda in the early part of the 8th century, and that the Aralic name signifies "the sand," will not seriously militate against the hypotheses with those who consider the great probability that the khalif would fix on an ancient, but perhaps neglected, site for his new town, and the common practice of the Arabs to modify the ancient names, to which they would attach no meaning, to similar sounds intelligible to them, and in this instance certainly not less approIriate than the ancient name; althongh the situation of the town " on a broad low swell in the samdy thongh fertile plain," would satisfy the condition required by its presumed ancient designation. (Bibl. Res. vol, iii. p. 25-43.) It may te questioned whether the nomus of Ramathem, mentioned with those of Apheirema and Lydda, as taken from Samaritis and added to Juduea (1 Maccab. si. 34; Josephns, Ant. 2. § $3,4 . \S 9$ ), derived its name from this or from one of the other Rarnahs, in Benjamin. [G. W.]

RAMATHA ('Papalá), the form in which Josephus represents the name of Samuel's native city, Ramathaim Sophim (LXX. 'Apرatai $\boldsymbol{\Sigma}$ 玉 $申 \alpha$ ) of Mount Ephraim (1 Sam. i. 1), perhaps identical with Ramah, where was his ordinary residence (vii. 17, viii. 4, xix. 18-24, xxv. 1), but distinet from the Ramah above named. Ancient tradition has fixed this city at Neby Samwil, i. e. "The Prophet Sampel," a village situated on a very high and commanding hill, two hours to the NNW. of Jerusalem, wbere the place of his sepulture is shown. Eusebius and S. Jerome, however, found it in the western plain, near Lydds (Ononast. s. v. Armatha Sophim; see Ramath Lehi). Dr. Robinson has stated his objections to the identification of Mamathain Sophim with Neby Samwill, and has endeavoured to fix the former much further to the south, on the bill called Suiba, a little to the south of the Jaffa road, about 3 hours from Jeru-alem; while Mr. Wolcott has carried it as far south as the vicinity of Hebron. (Robinson. Bibl. Res, vol. ii. pp. 139144, 330-334, Bibl. Sucra, vol. i. pp. 44-52.) These objections are based on the hypothesis that the incidents attending Sull's unction to the kingdom, narrated in 1 Sam ix. x., took place in Ramah of Samuel, of which, bowever, there is ne evidence; and his difficulty wonld press almost with equal weight on Sóbu, as the direct route from Süba to Gibeah (Jeba') would certainly not have conducted Saul by Racbel's sepulchre. Neither can the district of Mount Ephraim be extended so far sonth. Indeed, this last seems to be the strongest objection to Acby Sanwail, and suggests a site further north, perhapis Ram-Cllah, in the same parallel of latitude as the other Ramals and Bethel, which were certainly in Mlount Ephraim. (Judges, iv. 5.) On the other hand, the rame Ramah, signifying "a height," is su remarkably applicable to Neby Samwil, which is evidently the site of an ancient town, which could not, as 1r. Robinson suggests, have Leen Mizpth, that it would be difficult to find a position better suited to Ramathain Sophim than that which tradition bas assigned it. [Mizpail] [G. W.]

## RAMATHAIM-ZOPHIM

RAMATILALM-ZOPHIM. [Ramatha.]
LiAM1BA'CIA ('Pap6akia, Arrian, Anab. vi. 21), a village of the Oritae, the first which was taken by Alexander the Great in his march westwards from the Indus. There can he no certainty as to its exact position, but the conjecture of Vimeent seems well crounded that it is cither the Ram-nagar or the Ram-gnv of the Ayin Akbari. (Vincent, loyage of Neorchus, vol. i. p. 185.)
[V.]
RAME, a place in Gallia Narbonensis, which the Itins. fix on the road between Embrodunum (Embrun) and Brigantium (Briançon). D'Anville says that there is a place called Rame on this road near the Durance, on the same side as Embrun and Briancon, and at a point where a torrent named Biesse joins the Durance.
[G. L.]
RAMISTA or REMISTA, a place in Upper fannonia, on the road running aiong the river Savus to Siscia (It. Ilieros. p. 561; Geogr. Rav. iv. 19: Tab. Peut.) Its site has not yet been ascertained with certainty.
[L. S.]
RAMOTH, identical in signification with Ram and Ramah, equivalent in Hebrew to "an eminence," and hence a generic name for towns situated on remarkable heigbts, as so many in Palestine were. Besides those abore named [R.amah; Ramatili] was a Ramab in the tribe of Asher, not far from Tyre; and another in Naplthali (Josh. xix. 29, 36) in the north. and a Ramath in the tribe of Simeon, appropriately called "Ramath of the Sontb " (ver. 8.), to which David sent a share of the spoils of Ziklag ( 1 Sam, sxx. 27), and yet a Ramoth in Issachar, assigned to the Levites of the family of Gershom. (1 Chron. vi. 74.) More important than the foregoing was-
 city of the tribe of Gad, assigned as a city of refuge, first by Minses and sulbsequently by Joshina. (Deut. iv. 43; Josh. xx. 8. 'Ap $\eta \mu \omega^{\prime} \theta$.) It was also a Leritical city of the farnily of Merari. (Josh. xxi.38.) The Syrians took it from Ahab, who lost his life in seeking to recover it. ( 1 Kings, xxii.) Eurebins places it 15 miles west of Philadelphis (Onomast. s. $v$., where S . Jerome erroneousiy reads edst: Reland, p. 966), in the Peraea, near the river Jubok: Its site is uncertain, and has not been recovered in inodern times.
[G. W.]
RANILUM, a town in the interior of Thrace. (Tab, Peul.)
[T. H. D.]
LAFLHANAEA ('Paфquaia), a maritime town of Syria, ouly once named by Jo-ephus, who states that the Sabbatic river flowed between Arcaca and Raphanaca. (B.J. vii. 5. § 1.) [Sammathet's.]

RAl'HIA ('Paфía, 'Páфєia), a maritime eity in the extreme south of l'alestine, between Gaza and Whinocorma, a day's march from both, reckoned by Jonephus, l'olybius, nuk others, as the first city of Syria. (Joseph. B.J. iv. 11. § 5 ; Polyb. v. 80.) It was taken from the Egyptians by Alexander Jannams, and held by the Jews for some time. It was one of the ruined and depopulated cities restored ly Gabinius. (Ant. xini. 13, § 3, 15. § 4, siv. 5. § 3.) It is mertioned also by Sirabo (svi, p, 759) and in the Itincrary of Antoninus, between the nhorenamed towns. Cuins of Liaphia still exist, and it was represented by its bishop in the conncil of Ephesus, and in those of Constautinople. A. D. 536 and 553 . (Reland, s.v.1pp. 967, 968: Le Quien, Oriens Cheristianus, vol. iii. Pp. 629, 630.) It was in the neighbourhood of this city that a great battle was fought

## RATIATUM.

between Ptolemy Plailopator and Antiochus the Great, in which the latter was routed with immense loss. ( 3 Maccab. i. 2; Polyb. v. 80, \&c.; Hieron. ad Dan, cap. xi.) Its site is still marked by the name Refuh, and two ancient granite columns in situ, with several prostrate fragments, the remains apparently of a temple of considerable magnitude. (Irby and Mancles' Journal, October 8.) [G. W.]

RAPPIA'NA, a town on the river Margus in Noesia Superior, now Alexinitza. (Itin. Micrus. p. 566.)
[T. II. D.]
RAPRAUA ('Pámpava, Marcian, Peripl. ii. § 32, ed. Müller), a small place on the coast of Gedrosia, between the river Arabis and the Portus Mulierum. It is probably the same as that called by Ptolemy Ragirava ('Payipava, vi. 21. § 2). It may be doubted whether it can now be recognised, unless indeed the name has been preserved in that of Arabat, a bay in the immediate neighhourhod. (Siee Mitler, ad Arrian. Indic. § 26.) [V.]

RARA'PIA (Itin. Ant. p. 426, where the reading varies between Scalacia, Serapia, Sarapia, and Rarapia), a town of Lusitania, on the road from Ossonoba to Ebora, and 95 miles N. of the former place; now Ferreira. (Comp. Florez. Esp. Sagr. xiv. p. 202.)
[T. H. D.]
RARASSA ('Papá $\sigma \pi \alpha$ or 'Hpápara, Ptol. vii. 1. § 50), a place which Ptolemy calls the metropolis of the Caspeiraei in India intra Gangem. Its exact situation cannut be determined; but there can be no doubt that it was in Western India, not far from the Jindyas Ms. Lassen places it a little S. of Ajmir.
[V.]
RA'SENA. [Etruria, pp, 855, 859.)
RATAE ( Jtin. Ant. pp. 477, 479: 'Pd́ce, Ptol, ii. 3. § 20, where some read 'P $\alpha$ ' $\epsilon$ ), a town of the Coritani in the interior of Britannia Romana, and on the road from London to Lincoln. It is called Ratecorion in the Gengr. Rav. (r. 31). Camden (p. 537) identifips it with Leicester. [T. H. D.]

RATA'NEDM (Plin. iii. 22. s, 26 ; 'Paítoov, Dion Cass. 1vi. 11), a town of Dalmatia, which was burnt by its inhabitants, when it was taken by Germanicus in the reign of Augustus. (Dion Cass. l.c.)
hatia'Ria ('Putıapia, Procop. de Aed. iv. 6, p. 290 ; 'Patiapia Mvâ̂v, Ptol. iii. 9. § 4, viii. 11. § 5: 'Pa (apia, Ilierocl. p. 655; 'Patnpia, Theopbylact. i. 8: Ratiaris, Geogr. Liav. iv. 7), a considerablo town in Moesia Superior on the Danube, and the head-quarters of a Roman legion; according to tho Itinerary (p. 219), the Leg. xiv. Gemina, according to the Not. Imp. (c. 30), the Leg. xith. Gemina. It was also the station of a fleet on the Danube (ibid.). Usually identified with Arzar-Palanca. [T. 11. D.]

RAT1A'TVM ('Parlazov), a town of the Pictones (Ptol, ii. 7.§ 6). P'olemy mentions it before Limonum, and places it north of Limonum, and further west. Some editions of Ptolemy place Ratiatum in the territory of the Lemovices, hat this is a mistake. In the records of a council beld at Orlicans in A.D. 511, the bishop of the Pictavi signs himself "de civitate Ratiatica." The nume was preserved in that of the l'agus latiatensis, from which comes the modern name of Pays de Relz. Gregory of Tours speaks of Ratiatum as "infra terminum Pictavorum qui adjacet civitati Namneticac." The district of Retz was taken from the diocese of Poitiers and attached to the diocese of Santes in the time of Charles the Bald. Belley (Mem, do l'Acad. des Inscript. tom. xix. p. 729) fixes Ratiatum at the site of the two churches of St. Fierre and St. Op.

## RATOMAGUS.

portune de Retz, which are near Machecoul and on the Tenu, a small river in the department of $L a$ Vendée. The Tenu enters the sea sear Bourgneuf, opposite to the Isle Noirmoutier (D'Anville, Votice, Gै.; Ukert, Gallien, p. 393).
[G. L.]
RATODIAGUS, [Rotomiges.]
RAUDA ('Puí $\delta a$, Ptol. ii. 6. §50), a town of the Vaccaei in Hispania Tarraconensis, on the road from Asturica to Caesar Angnsta (Itin. Ant. p. 440), now Roa, on the Douro. (Comp. Florez. Esp. Sagr. vii. p. 274.)
[T. H. D.]
RAU'Dif CAMPI. [Campi Ravdir.]
RAVENNA ('Paov́evya, Strab.; 'Pábevra, Ptol. et al.: Eth. Ravennas -ätis: Ravenna), one of the most important cities of Gallia Cispadana, situated a short distance from the sea-coast, at the southem extremity of the extensive range of marshes and lagunes, which occupied the whole coast of Venetia from thence to Altimm. (Strab. r. p. 213; Itin. Ant. p. 126.) It was 33 miles N. of Ariminum. Though inclnded within the limits of Cisalpine Gaul, according to the divisions established in the days of Strabo and Pliny, it does not appear to have ever been a Gaulish eity. Strubo tells us that it was a Thessalian colony, which probably meant that it was a Pelasgic settlenient, and was connected with the traditions that ascribed to the Pelasgi the foundation of the neighbouring city of Spina. [Sinsa.] But they subseqnently, according to the same writer, received a body of Umbrian colonists, in order to maintain themselves against the growing power of the Etrnscans, and thus became an Umbrian city, to which people they continued to belong till they passed under the Roman government. (Strab. v. pp. 214, 217.) Pliny, on the other hand, calls it a Sabine city, - a strange statement, which we are wholly unable to explain. (Plini.iii. 15. s. 20.) It seems probable that it was really an Umbrian settlement, and retained its national character, though surrounded by the Linsonian Gauls, until it received a Roman colony. No mention of the name is funnd in history till a late period of the liuman Republic, bnt it appears to have been then already a place of some conseqnence. In B. c. 82, during the civil was of Marius and Snlla, it was occupied by Metellns, the lieutenant of the latter, who made it the point of departure from whence he carried on lis operations. (Appian, B. C. i. 89.) Again it was one of the places which was frequently risited by Caesar during lis command in Ganl, tor the purpose of raising levies, and communicating with his friends at Rome (Cic. ad Att. vii. 1, ad Fam. i. 9, viii. J); and just before the ontbreak of the Civil War it was there that he established lis head-quarters; from whence he carried on negotiations with the senate, and from whence he ultimately set ont on his march to Ariminum. (id, ib. ii. 32; Caes. B. C. i. 5; Suet. Caes. 30; Appian, B. C. ii. 32.) Its name again figures repeatedly id the civil wars between Antony and Octavian, especially during the war of Perusia (Appian, B. C. iii. 42,97, v. $33,50,8 . \mathrm{c}$.) ; add it is evident that it was already become one of the most important towns in this part of Cisalpine Gaul.

It is uncertain at what period Ravenna received a Roman colony. Strabo speaks of it as having in his time, as well as Ariminum, received a body of Roman colonists (v. p. 217); lunt the date is not mentioned, and it certainly did not, like Ariminum, pres intu the condition of a regular Colonia, numerous inscriptions being extant which give it the title
of a Municipium. It is probable that the settlement alluded to by Strabo took place under Aucustus, and it is certain that it was to that emperor that Raveona was indebted for the importance which it subsequently enjoyed during the whole period of the Roman Empire. The situation of the city was very pecnliar. It was surrounded on all sides by marshes, or rather lagnnes, analogous to those which now surround the city of l'enice, and was bnilt, like that city, actually in the water, so that its houses and edifices were wholly constrocted od piles, and it was intersected in all directions by canals, which were crossed either by bridges or ferries. The lagunes had a direct communication with the sea, so that the canals were scoured every day by the finx and reflinx of the tides, - a circumstance to which Strabo attribntes, no doubt with justice, the healthiness of the city, which must otherwise have been nninhabitable from malaria. (Strab. v. p. 213; Jornand. Get. 29 ; Sidon. Apoll. Epist. i. 5 : Procop. B. G. i. 1 ; Clandian, de VI. Cons. Hon. 495.) 'The old city lad a small port at the month of the river Bedesis, mentioned by Pliny as fluwing under its walls (Plin. iii. 15. s. 20) ; but Augnstus, having determined to make it the permanent station of his fleet in the Adriatic, constructed a new and spacious port, which is ssid to have been capable of containing 250 ships of war (Jornand. $l$ c.), and was furnished with a celebrated Pharos or lighthonse to mark its entrance. (Plin, xxxyi, 12. s. 18.) This port was near 3 miles distant from the old city, with which it was comnected by a long canseway: a cmsiderable town rapidly grew up aronnd it, which came to be knomn by the name of Portus Classis or simply Classis; while between the two, but nearer to the city, there arose another suburb, scarcely less extensive, which bore the name of Caesarea. (Jornand. l.c.; Sidon. Apoll. l. c.; Procop. B. G. ii. 29; Geogr. Rav. iv. 31.) In addition to these works Augustus constructed a canal, calleu from him the Fossa Angusta, by which a part of the waters of the Padus were carried in a deep artificial channel under the very walls of Ravemna and had their outlet at the port of Classis. (Plin, iii., 16. s. 20 ; Jormand. l. c.)

From this time Ravenna continued to be the permanent station of the Roman fleet which was destined to goard the Adriatic or Upper Sca, as Misenum was of that on the Lower (Tac. Ann. iv, 5, Hist. ii. 100, iii. 6, 40 ; Snet. Aug. 49 ; Veget. de R. Mil. v. 1; Not. Dign. ii. p. 110); and it rose rapidly into one of the most considerable cities of Italy. For the same reason it hecame an important military post, and was often selected by the emperors as their head-quarters, from which to watch or oppose the advance of their enemies into Italy. In A. D. 193 it was occupied by Severus in lis march opon Rome agaiost Didius Julian (Spartian, Did. Jul. 6 ; Dion Cass. Ixxiii. 17): and in 238 it was there that Pupienus was engaced in assembling an army to oppose the advance of Maximin when he received the news of the death of that emperor before Aquileia. (Herodian, viii. 6, 7; Capit. Maximin. 24, 25, Max, et Balb.11, 12.) Its strong and secluded position also cansed it to be selected as a frequent place of confinement for prisoners of distinction, such as the son of the German chieftain Arminius, and Maroboduus, chief of the Suevi. (Tac. Ann. i. 58, ii. 63; Suet. Tib. 20.) The same circumstances at a later period led to its selection by the feeble and timid Honorius as the place of his

Y Y 3
residence: his example was followed by his successors; and from the year 404, when llonorius first established himself there, to the close of the Western Eimpire, Ravenna continued to be the permaneut imperial residetce and the place from whence all the laws and rescripts of the emperors mere dated. (Jornand. Get. 29 ; Gibbon, c. 30.) Even before this period we are told that it was a very rich and populous city, as well as of great strength (Zosim. ii. 10): it was the capital of Picenum (as that name was tben nsed) and the residence of the Consularis or governor of that province. (Orell. Inscr. 3649 ; Bücking, od Not. Dign. ii. pp. 359, 443.) But the establishment of the imperial court there naturally added greatly to its prosperity and splendour, while its inaccessible situation preserved it from the calanities which at this period laid waste so many cities of Itally. Yet liavenna as a place of residence must always have had great disadvantages. Sidonius Apollinaris, who visited it late in the fifth centary, complains especially of the want of fresh water, as well is the muddiness of the canals, the swarms of grats, and the croaking of frogs. (Sidon. Apoll. Ep. i. 5, 8.) Martial, at a much earlier period, also alludes to the scarcity of fresh water, which he jestingly asserts was so dear that a cistern was a more valuable property than a vineyard. (Martial, iii. 56,57 .)

After the fall of the Western Empire Ravenna continued to be the capital of the Gotbic kings. Odoacer, who had taken sefuge there after repeated defeats by Theodoric, beld out for near three years, but was at lengtb ,compelled to surrender. (Jormand. Get.57: Cassind. Chron. p. 649.) Theodoric himself established his residence there, and his example was followed by his successors, until, in 539 , Vitiges was after a long siege compelled by famine to surrender the city to Belisarius. (Procop. B. G. ii. 28 29.) It now bpeame the residence of the governors who ruled a part of Italy in the name of the Byzantine emperon, with the title of exarchs, whence the whole of this province came to be known as the Exarchate of Ravemna. The Byzantine governors were in a state of frequent hostility with the Lombard kings, and were gradually stripped of a large portion of their dominions; but Ravenna itself defied their arms for more than two centuries. It was besieged by Lintprand ahout 750 , and its important suburb of Classis totally destroyed (P. Diac. vi. 49) ; but it was not till the reign of his succersor Astolphus that Ravenna itself fell into the hauds of the Lombards. But the exact date, as well as the circurnstances of its final conquest, are uncertain. (Gibbon, c. 49.)

The situation of Ravenna at the present day presents no iesemblance to that described by ancient writers. lift there is no doubt that the modern city occupies the same site with the ancient one, antl that the change is wholly due to natural causes. The accumulation of slluvisl deposits, hrought riown by the rivers and driven back by the waves and tidec, has gradually filled up the lagunes that surrounded and canals that intersected the city ; and the modorn Ravema stands in a flat and fertile plain, at a distance of 4 miles from the sea, from which it is separated by a broad sandy tract, covered in great part witb a beantiful forest of stone pines, Though Ravenna is one of the most interesting places in Italy for its medianval and early Christian antiquities, it presents few remains of the Rotnan periool, and those for the most part belong to the
declining years of the Einpire. A triumphal arch, known by the name of Yorta Aurea, was destroyed in 1585: it stood near the modern gate called Porta Adriant. Several of the ancient basilicns date from the Roman period; us does also the sepulcliral chapel contaiving the tomb of Galla Placidia, the sister of Honorios, and mother of Valentinian III. A portion of the palace of Theodoric still remains in its original state, and the mausolenm of that monarch, just without the walls, is a monument of remarkable character, though stripped of its external ornaments. Ao ancieot basilica, still called $S$. A pollinare in Classe, about 3 miles from the southern gate of the city, preserves the memory and marks the site of the ancient port and suburb of Classis; Whisle anotber basilica, which subsisted down to the year 1553 , bore the name of $S$. Lorenzo in Cesarea: and thus indicated the site of that important suburb. It stood about a quarter of a mile from the south gate of the city, betreen the walls and the bridge now called Ponte Nioro. This bridge crosses the united streams of the Ronco and Montone, two small rivers wbich previously beld separate coarses to the sea, but were onited into one and confined within an artificial clasoel by Clement XII. in 1736. The Ronco, whicb is the southernmost of the two, is probably the same with the Bedesis of Pliny; indeed Cluverius says that it was in bis time still called Bedeso. Hence the Montone must be identified with the Vimis of the same author. The Aveme, which he places next in order, is clearly the same now called the A mone or Lamone, which flows under the walls of Faenza, (Plin. iii. 15. s. 20; Cluver, Ital. p. 300.)

The natural calises which bave produced thee changes in the situation and environs of Ravenna were undoubtedly in operation from an early period. Already in the fifth century the original port constructed by Augustus was completely filled up, and occupied by orcbards. (Jornand. Get. 29.) But Ravema at that period had still a much frequented port, where the fleets of Belisarius and Narses could ride at anchor. The port of Classis itself is now separated from the sea by a strip of sandy and marshy plain about 2 miles broad, the greater part of which is occupied by a forest of stone pires, which extends for many miles along the seacoast both to the S. and N. of Ravenna. The existence of this remarkable strip of forest is attested as early as the fifth century, the name of Pineta being already found in Jornandes, who tells us that Theodoric encamped there when he besieged Odoacer in Ravennic (Jornand. 57.) But it is probable that it has extended its boundaries and shifted its position as the land has grauually gained upoa the sea.

Tbe territory of Ravenna was always fertile, except the sandy strip adjoining the sea, and produced abundance of wine of good quality, but it was remarked that the rines quickly decayed. (Strab. v, p. 214: Jlin. xiv. 2. s. 4.) Its gardens alsu are noticed by Pliny as growing the finest asparagus, while the adjoining sea was noted for the excellence of its turbot. (Plin, ix. 54. s. 79 , xix. 4. \& 19.)
[E. H. B.]
RAVIt's ('Paoútos, J'tol. ii. 2. § 4), a river on the W : const of Hibernia, according to Camden ( p . 1385) the Trobis. Others ideatify it with the Guebara.
[T. H. D.]
RAURACI, or RAURICT ('Paupioof). The furm Raurici appears in l'tolemy (ii. $9 . \S 18$ ), in Pliny (iv.

1i), and in some inscriptions. Ptolemy mentions two towns of the Rauraci, Rauricorum Augnsta and Argentovaria [Acgusta Rauracorum; Argentaibll. Augusta is Augst near Büle, in the Siviss Cantoo of Bäle, and Argentovaria may be Artienheim. The position of these places helps us to form a measore of the extent of the teritory of the Rauraci, which may have nearly coincided with the bishopric of Bäle.
The Rauraci joined the Helvetii in their emigration, b. c. 58. [Helveti.]
[G. L.]
ravranum, in Gallia, is placed by the Table and the Antonine litin. on a direct road from Mediulanum Santonum (Saintes) to Limonum (Poitiers). It is Raurana in the Tablie, but the name Rauranum occurs in a letter of Paulinus to Ausonins (E.p. II. ad Auson. v. 249), who places it "Pictonicis in arvis." The place is Rom or Raum, near Chenay, nearly due sonth of Poitiers. (D'Anville, Nutice, fo.; Ukert, Gallien, p. 392.)
[G. L.]
Rauraris. [Akauris.]
REA'TE ('Peáte, Strab.; 'Peárus, Dionys. : Eth. 'Peativos, Reatinas: Rieti), an ancient city of the Salines, and one of the most corsiderable that belonged to that people. It was situated on the Via Sularia, 48 miles from Rome (Jtin. Ant. p. 306), and on the baoks of the river Velinus. All writers agree in representing it as a very ancient city: according to one account, quoted by Dionysius from Zenodotns of Troezen, it was one of the origioal aboles of the Umbrians, from which they were ex. pelled by the Pelasgi; but Cnto represented it as one of the first places occupied by the Sabines when they descended from the neighbourhood of Amiternum, their original abode. (Dionys. ii. 49.) Whatever anthority Cato may have had for this statemeot, there seems no reason to doubt that it was substantin!!y true. The fertile valley in which Reate was situated lay in the natural ronte of migration for a people descending from the highlands of the central Apemines : and there is no doolit that both Reate and its neighbourbood were in listorical times occupied by the Sabines. It was this migration of the Sabines that led to the expulsion of the Aborigines, who, according to Dionysius, preriously occupied this part of 1taly, and whose ancient metropolis, Lista, was only 24 stadia from Reate. (Dionys. i. 14, ii. 49.) Silius laticus appears to derive its name from Rhea, and calls it consecrated to the Nother of the Gods; but this is probably a mere pretical fancy. (Sil. 1tal. riii. 415.) No mention of Reate occurs in history before the period when the Sibines bad been subjected to the Roman rule, and admitted to the Roman Franchise (B. c. 290) ; but its name is more than once incidentally noticed during the Second Ponic War. In n.c. 211 Hannibal passed onder its walls daring his retreat from Rome, or, according to Coelius, during his advance upon that city (Liv. xxvi. 11); and in e. c. 205 the lieatini are specially mentioned as coming forward, in common with the other Sabines, to furnish volunteers to the armament of Scipio. (Id. xxviii. 45.) We are wholly ignorant of the reasons why it was reduced to the subordinate condition of a Praefectura, under whicl title it is repeatedly mentioned by Cicero, but we learn from the great orator hinself, under whose especial patronage the inhabitants were placed, that it was a Alourisluing and important town. (Cic. in Cat. iii. 2, pro Scaur. 2. § $\mathrm{I}^{7}$, de Nat. Deur. ii. 2.) Under the Empire it certainly obtained the ondinary municipal privileges, and had
its own magistrates (Zumpt, de Col. pi. 99, 188 ; Grater, Inscr. P. 354.3, \& ce.): under Te-pasian it received a considerable number of veteran solidiers as colonists, but did net obtain the rank or title of a Colonia. (Lib. Col. p. 257; Orell. Ihscr. 3685 ; Gruter, Inscr. p. 538.2 ; \&c.)

The territory of Reate included the whole of the lower valley of the Velinus, as far as the fall, of that river; one of the most fertile, as well as leatutiful, distriets of Italy, whence it is called by Cixero the Reatiue Tempo (ad Att. iv, 15.) Bat the peculiar natural character of this district was the means of involving the citizens io frequent disputes with their neighbours of Interamna. (Varr. R. R. iii. 2. § 3.) The valley of the Velinus below Reate, where the river emerges from the darrow mountain valley throngh which it bas bitherto flowed, and receives at the same time the waters of the Salto and Tiurano, both of them considerable streams. expands into a broad plain, not less than 5 or 6 miles in breadtb, and almost perfectly level; so that the waters of the Velinusitself, and those of the smaller streams that flow into it, hare a tendency to stagtuate and form marshes, while in other places they give rise to a series of small lakes, remarkable for their picturesque beauty. The largest of these, now known as the Lago di Pië di Lugo, seems to have beea the one designated in ancient times as the Lacus Velnecs; while the fertile plains which extended from Reate to its banks were kuown as the Rosei or more properly Roseae Cisipi, termed by Virgil the "Rosea rara Velini." (Virg. Aen, vii. 712; Cic. ad Att. iv. 15 ; Varro, R. R. i. 7. § 10, ii. 1. § 16, iii. 2. § 10 ; Plin. srii. 4. s. 3.) But this broad and level ralley is at an elevation of near 1000 feet above that of the Nar, into which it pours its waters by an abrapt descent, a few miles above Interamna (Terni); and the stream of the Velinns must always have constituted in this part a natural cascade. Those waters, howeser, are so strongly impregnated witb carbonate of lime, that they are continually forming an extensive deposit of travertine, and thas tending to block up their own channel. The consequence mas, that unless their course was artificially regulated, and their channel kept clear, the valley of the Velinus was inundated, while on the other hand, if these waters were carried off too rapidy into the Nar, the valley of that river and the territory of linteramna soffered the same fate. The first attempt to regulate the course of the Velinus artificially, of which we have any account, was made by 31 . Corius Dentatus, after his conquest of the Sabines, when he carried of its waters by a deep cut through the hrow of the bill overlowking the Nar, and thas gave rise to the celebrated cascade now known as the Falls of Terni. (Cic, ad Att. iv. 15; Serv. ad Aen. vii. 712.) From the expressions of Cicero it would appear that the Lacus Yelions, previous to this time, occapied a much larger extent, and that a considerable part of the valley was then first reclaimed for cultivation.

But the expedient thus resorted to did not fully accomplishi its object. In the time of Cicero (B.e. 54) fresh disputes arose between the citizens of Reate and those of lnteramna ; and the former appealed to the great orator himself as their patron, who pleaded their cause before the arbiters appointed by the Roman senate. On this occasion he visited Reate in person, and inspected the lakes and the channels of the Velinus. (Cic, pro Scaur, 2. § 27 , ad Att. iv. 15.) The result of the arbitration is

## rechics.

unknown: but in the reign of Tiberius the Reatines had to contend against a more formidable danger, arising from the project which had been suggested of blocking up the ontlet of the Lacns Velinus altogether; a measure which, as they justly complained, would undoubtedly bave ioundated the whole valley. (Tac. Ann. i. 79.) Sumilar disputes and difficulties again arose in the mildle ages ; and in A. D. 1400 a new channel was opened for the waters of the Velinus, which bas continued in use ever since.

No other mention occars of Reate under the Roman Empire; but inscriptions attest its contimued municipal importance: its name is found in the Itineraries (Itin. Ant. p. 306), and it early became the see of a bishop, which it bas continned ever since. Throughont the middle ages it was, as it still contiones to be, the capital of the surrounding country. No accient remains are now visible at Rieti.

The territory of Reate was famons io ancient times for its breed of mules and asses : the latter were particularly celebrated, and are said to have been sometimes sold for a price as bigh as 300.000 or evenl 400,000 sesterces (Varr. R.R. ii. 8. § 3 ; Plid. siii. 43. s. 68 ), thougb it is difficult not to suppose some error in these numbers, Heace, Q. Axius, a friend of Varro, who had a villa on the Lacus Velinus, and extensive prosessions in the Reatine territory, is introdoced by Varro in his dialogues De Re Rustica, as discoursing on the subject of breeding horses, mules, and asses. (Yarr. R. R. ii. 1. §8: Strab. v, p. 228.) It was at the villa of this Q. Axius that Cicero ludged when be visited Reate. (Cic. ad Alt. iv. 15.) The Septem Aquae, mentioned by him in the same passage, and alluded to al-o by Dioaysins (i. 14), were evideatly some spritug or sonrce., which supplied one of the small lakes in the valley of the Velious.
[E. H. B.]
RECHIUS. [BoLse]
REDJSTLINLiY ('PeõovToúlvov), a torn in the northern part of the country occupied by the Marcomami (Bohemin), is mentioned only by Ptoleny (ii. 11. § 29). Sume pengraphers regard it as having occupied the site of the modern Pragre, and others identify it with Horziez; but nothing certain can be said about the matter.
[L. S.]
PE'DONES ('Prifoves, 'Pritoves), in the Celtoy:latia Lugdunensis of Ptulemy (ii. 8. § 12), are placed by hion west of the Senones and along the Li_er. Tbeir capital is Condate (Rennes). But the Redones were not on the Loire. Pliny (iv. 18) en murates the Phedones among the juoples of Gallia Lugdunensis: " Diablindi, Rhedunes. Turones." Afier the blowdy fight on the Sambre (B. C. 57 ) Caesar sunt P. Crassus with a single legion into the conntry of the Vemeti, Bedones, and other Celtic tribes letween the Seine and the Loire, all of whom snbmitte 1. (B. G. ii. 34.) Caesar liere enumerates the Redones an ung the inaritime states whose territory exturds to the ocean. In B. . . 52 the leedones wi ha their neiglabours sent a cuntiogent to attack Cuesar during the siege of Alesia. In this passage also (B. G. vii. 75), the Redones are ennmerated among the states burdering on the occan, which in the Cellic language were called the Armoric States, D'Anvi le supposes that their territory exteniled beyond the limits of the diocese of Renmes into the diuceses of St. Mato and Iol. Their chief town, Rennes, is the capital of the department of Ille-el-l'ilrine.
[G, L..]
I:FGANCDM, a northern tributary of the Dambe,

REGILLUS LACUS.
the modern Regen in Bavaria, is noticed only once. (Geogr. liav. iv. 25.)
[L. S.]
RE'G1A ('Pryia, Ptol, ii. 2. § 10). 1. A place in the interior of Hibernia, no donbt so named by the lomans from its being a royal residence, the proper name of which was unknown to them. It was perbaps seated on the river Culmore, in the neighboarbood of Omagh.
2. ('Et $\hat{\rho}$ a ${ }^{\text {'P}} \boldsymbol{\eta} \gamma / \mathrm{la}, \mathrm{Ptol}$. l.c.), another place of the same description, conjectured to have been on the river Dur.

## 3. Regia Carissa. [Carisa.] [T. H. D.] <br> REGIA'NA (called by Ptol. ii. 4. § 13, 'Píriva

 comp. Geogr. Rav. iv. 44, and Regina, Plin. iii. 3), a town of Baetica, on the road from Hipsalis to Emerita. (Itin. Ant. p. 415.) Usually identified with Puebla de la Reyna, where there are Roman remains.[T. H. D.]
REGLANLM (P Priayov, Ptol. iii. 10. § 10), s place oo the Danabe in Moesia Inferior. It is probably the same place as the Augusta of the Itinerary' (p. 220; comp. Tab. Peut.) and the Aivovē $\sigma$ тov of Procopius (de Aed, iv. 6) ; in which case it may be ideatified with Cotoszlin at the confluence of the Ogristul and Danube.
[T. H. I).]
REGILLLUM ('PíyiA $\lambda_{0 \nu}$ ), a town of the Sabines mentioned by several ancient writers as the place of residence of Atta or Attius Clansus, who migrated to Rome about E. C. 505 , with a large body of clients and followers, where be adopted the name of Appius Clandius and became the founder of the Claudian tribe and family. (Liv. ii, 16; Dionys. v. 40 ; Suet. Tï. 1; Serr. ad Aen. vii. 706.) About 60 years afterwards C. Claudius, the uncle of the decemvir Appius Claudius, withdrew into retirement to Regillom, as the native place of his forefathers ("antiquan in patriam," Liv, iii. 58; Dionys, xi, 15). The name is not noticed on any ether occasion, our is it found io any of the geograpbers, and we are wholly without a clie to its position. [E. H. B.]

REGILLUS LACU'S ( $\eta^{\prime} \mathbf{P} \not \gamma_{\gamma}(\lambda \lambda \eta \lambda i \mu \eta \eta$, Dionys.: Lago di Corrayfelle), a small lake in Latium, at the foot of the Tusculan hills, celebratel for the great battle between the Romans and the Latins nuder C. Manilius, in n. C. 496. (Liv. ii. 19: Dionys 1i. 3 ; Cic, de Nat. 1), ii. 2, iii. 5 ; Plio, xxxiii. 2. 8. 11 ; Val. Max. i. $8 . \S 1$; Vict. Jir. Ill. 16 ; Flor. i. 11.) Hardly any event in the early Ruman history has been more disguised by pretical embellishment and fiction than the battle of Regillus, and it is impossible to decide what amount of historical character may be attached to it: bnt there is no reason to doubt the existence of the lake, which was a signed as the scese of the combat. It is expressly described by Livy as situated io the territory of Tusculum (" ad lacum Regillum in agro Tuseulano," Liv. ii. 19) ; and this seems decisive against the identification of it with the small lake called Il Laghetto di Sta I'rassede, about a mile to the N. of I.a Colonna: for this lake must have beea in the territory of Labicum, if that city be correctly placed at La colonna [Labictsr], and at all events could hardly lave been in that of Tusculum. Moreover, the site of this lake being close to the Via Labicaoa would more probably have been indicated by some reference to that bigh-road than by the vague phrase " in ayro Tusculano." A much more plansible suggestion is that of Gell, that it occupied the site of a volcanic crater, nots drained of its waters, but which was certainly once occupied by a lake, at a place called Cornufelle, at the foot of the hill on which
slaulds the modern town of Frascati. This crater, which resembles that of Gabii on a much smaller scale, being not more than half a mile in diameter, was drained by an artificial emissary as late as the 17 th century: but its esistence seems to have been nnknown to Claverius and other early writers, who adopted the lake or pool near La Colomna for the Lake Regillus, on tlee express ground that tbere was no other in that neighhourhood. (Cluver. Ital. p. 946; Nibby, Dintorni, vol. iii. pp. 8-10; Gell, Top, of Rome, pp. 186, 321.) Extensive remains of a Roman villa and batbs may be traced on the ridge which boonds the crater, aud an ancient road from Tusculum to Labicam or Gabii passed close by it, so that the site most certainly have been one weil known in ancient times.
[E. H. B.]
REGINA. [Erginte ; Regiana.]
REGINEA, in Gallia Lagduneasis, is placed in the Table on a road from Condate (Rennes). The first station is Fanum Mlartis, and the next is Reginea, 39 Gallic leagues from Condate. D'Aaville fixes Reginea at Erquies on the coast, between $S$. Brienc and S. Malo. [Fanem Martis.] [G. L.]
REGLNUM, a torn in the northern part of Vindelicia, on the southern bank of the Dannbe, on the nad leading to Vindobona. This town, the modern Ratisbon, or Regensburg, is not mentioned by the Roman bistorians, but it was nevertbeless an important frontier fortress, and, as we learn from inscriptions, was successively the station of the 1 st, 3rd, and 4th Italian legions, and of a detachment of cavalry, the Ala Il. Valeria. The town appears to have also beea of great commercial importance, and to have contained among its inhabitants many Roman families of distinction. (It. Ant. p. 250; Tab. Peut, where it is called Castra Regina; comp. Rayser, Der Oberdonankreis Boyerns, iii. P. 38, \&c.)
[L. S.]
REGIO, a town of Thrace on the river Bathynias, and not far from Constantinople (Itin. Hieros. p. $5 \% 0$ ), with a roadstead, and handsome coontry houses. (Agath. v. p. 146; comp. Procop. de Aed. iv. 8; Theophan. p. 196.) Now Koutechuk$T$ sschekmetsche.
[T. H. D.]
REGIS IILLA ('P $\eta \gamma$ rooúlıra, Strab.), a place on the coast of Etruria, which, according to Strabo, derived its name from its baving beea the residence of the Pelasgic king or chief Maleas, who ruled over the neigbbouring Pelasgi in this part of Etroria, (Strab, v. p. 225.) None of the other geographers mentions the locality; hut Strabo places it between Cuss and Graviscae ; and it is therefore in all proba. bility the same place which is called in the Maritime Itinerary Regaze, and is placed 3 miles S. of the river Armenta (Fiora) and 12 miles from Grariscae. (Itin. Marit. p. 499.) The site is now marked only by some projecting rocks called Le Murelle. (Dennis's Etruria, vol. i. p. 398; Westplial, Ann. d. Inst. 1830, p. 30.)
[E. H. B.]
REGISTUS or RESISTUS. [BISANTHE.]
RE'GIUS LE'P1DI or RE'G1UM LE'PIDUM ('Pírion $\Lambda e ́ \pi i \delta o \nu$, Strab.; 'Priyton $\Lambda \in \pi i \delta t o v$, Ptol.: Fth. Regiensis: Reggio), sometimes also called simply Regriar, a town of Gallia Cispadana, situated on the Tia Aemilia, between Mntina and Parma, at the distance of 17 miles froms the former and 18 from the latter city. (Itin. Ant. pp. 99, 127; Strab. v. p. 216.) We have no account of its foundation or origio ; but the name would raise a presumption that it was founded, or at least settled ano enlarged, by Aemilius Lepidus when he constructed the Aemi-
lian Way ; and this is confirmed by a passage of Festus, from which it appears that it was originally called Forom Lepidi. (Fest. s.r. Rhegium. p. 270.) The origin of the appellation of Regivm, which completely superseded the former name, is nuknown. It did not become a colony like the neighbouring cities of Mutina aod Parna, and evidently never rose to the same degree of opulence and prosperity as those cities, but became, nevertheless, a flourishing municipsl town. It is repeatedly mentioned during the civil war with M. Antonius, both before and after the battle of Mntina (Cic. ad Fam. 土i. 9. xii. 5); and at a somewhat earlier period it was there that M. Brutus, the father of the murlerer of Caesar, was put to death by Pompey in n. c. 79. (Oros. . 22; Plut. Pomp. 16.) Its name scarcely occors in history during the Roman Empire ; but its municipal consideration is attested by inscriptions, and it is mentioned by all the geographers among the towis on the Via Aemilia, though ranked by Strabo with those of the second class. (Strab. v. p. 216; Plin. iii. 15. s. 20; Ptol. iii. 1. § 46; Orell. Inscr. 3983, 4133 ; Tac. Hist. ii. 50 : Phlegon. Mucrob. 1.) Ptolemy alone gives it the title of a Colonia, which is probably a mistake : it was certainly not such io the time of Pliny, nor is it so designated in any extant inscription. Zumpt, however, supposes that it may have received a colony under Trajan or Hadrian. (Zumpt, de Colon. p. 403.) St. Ambrase notices Regium as well as I'lacentia and Mutina among the cities which bad fallen into great decay before the close of the fourth century. (Ambros. Ep. 39.) It was not lung before this tbat an attempt had been made by the emperor Gratian to repair t ve desolation of this part of ltaly by settling a body of Gothic captives in the territory of Regium, Parma, and the neigbbonring cities. (Ammian. xxxi. 9. § 4.) The continued esistence of Regium at a late period is proved by the ltineraries and Tabnla (Itin. Ant. pp. 283, 287; Htin. Hier. p. 616; Tab. Peut.), and it is mentioned long after tbe fall of the Western Empire by Panlns Diaconus among the "locupletes arbes " of Aemilia. (P. Disc. Hist. Lang. ii. 18.) In the middle ages it rose to a great degree of prosperity, and Reggio is still a considerable town with about 16000 inhabitants. Its episcopal see dates from the fifth century.

The tract called the Canpi Mlacri, celebrated for the excellence of its wool, was appareatly included in the territory of Regium Lepidum. [E. H. B.]

REGNI ('Pôpvok, Ptol. ii. 3. §28), a people on the S. cosst of Britannia Romana, seited between the Cantii on the E. aod the Belgae on the W., in the modern counties of Surrey and Susser. Their chief tomn was Noviomagus. (Conp. Camden, p. 179.)
[T. I. D.]
REGNLM, a town of the Belgae in the S. of Britannia Rumana, and seemingly a place of some importance, since there was a particular mad to it. (Itin. Ant. p. 47\%.) Camden (p. 133) identibes it with Ringurood in Hampshire. Horsles, on the contrary ( $\mathrm{p},+41$ ), conjectures it to have been Chichester ; but, though Roman antiqnities bave beeo funnd at Chichester, its sitnation does not suit the distances given in the Itinerary.
[T. H. D.]
REGU'LBIUNI, a town of the Cantii on the E. cosst of Britannia Romana, now Reculeer. (Not Imp.; comp. Camden, p. 236.)
[T. H. D.]
REHOB ('Poáb, al. 'Padé, ol. 'E $\rho \in \omega$ ). 3 town in the tribe of Asher, occupied by the Canaanies. (Josh. sis. 28 ; Judg. i. 3I.) A second city of the
same name is reckoned among the 22 cities of the same tribe (Josh. xix. 30); but neither of these can be identified with the Rhoob ('Powe) nuticed by Eusebins, 4 miles distant from Sythopolis. [G. W.]

3F1FOBOTH (translated єupuxwpía in L\N.). one of the wells dug by lsaac in the conntry of Gerar, - after Fisek (contention) and Sitnah (hatred), - for which the herdsmen did not strive: so he called it lehoboth: "And lie sand, For now the Lord hath made room for us, and we shall be fruitful in the land." (Gen. xxvi. 18, 20-22.) There was a town in the vicioity of the well, the traces of which were recovered, with the well itself, by Mr. Rowlands, in 1843. "Alout a quarter of an bour beyoud Sebita, we came to the remains of wbat must have beell a very wall-built city, called now Rolucbeh. This is undoubtedly the ancient Rehoboth, where Abraham, and afterwards lsaac, digged a well. This lies, as Reluboth did, in the land of Gerar. Outside the walls of the city is an ancient well of living and good water called Bir-Rohébeh. This most probably is the site, if not the well itself, digged by Isaac." (Williarss's Holy City, vol. i. Appendix, i. p. 465 .)
[G. W.]
hell Apollina'res (Riez), in Gallis Narhonensis. Among the Oppida Latua of Gallia Narbonensis, or those which had the Latinitas, Pliny (iii. c. 4) enmmerates "Alebece Reiorum Apollinarimu." The old resding, "Alebeceriorum Apollmarium," is a blunder made by joining two words torether, which has been corrected from the better MSS.. from the inseription col hejor. apollinar., and from the Table, which has Reis Apollinaris. The place may have taken its name from a temple of Apollo built after the town became Roman. The name Alebece may be corropit, or it may be a rariation of the form Albici or Albioeci. [Albicr.] As Pliny calls the place an Oppidum Latinam, we might suppuse that it was made a Colunia after his time, but the oame Col. Jul. Aug. Apollinar. Reior., which appears in an inscription, shows it to have been a culony of Augustus.

Kics is in the arrondissement of Digne in the department of Fiasses Alpes. There are four columns st.nhling near the tuwn, which may be the remains of a temple. The bases and the caypitals are marble: the shafts are a very hard granite, and about 18 feet lush. There is also a small circular huilding conwturg of eight colums resting on a basement, but it has been spuiled by modern hands. There now stands in it a reetangular altar of ene block of white marble, which bears an inceription to the Muther of the Gods and the Great Godless. At Riez there have been discovered an enurmous quantity of fragmonts of granite columns; and it is said that there have been a circus and a theatre in the town. (Gicile de loyageur, Richard et Hocquart, p. -92.)
[(G.1.]
R1WMLSIA'NA ('Peperiava, 1herocl. p. 654 ; called Rennc-iana in Tab. Peut, and in Geugr. Lav. iv. 7: 'Povusolava in Prowopius, de Aed. iv. 1, p. 268, ed. Buma), a town of Muenia Superior, between Naisms and Serdica. (Itin. Ant. p. 135.) Now Mustapha Patancas.
[T. II. W.]
REMETUD1A (alled Remetodion in Geugr. Rav. iv. 7), a place in Moesia Superior on the Damube. (Tab. Peut.)
[1. 11. D.]
12L3II ('Pquot), a people of Gallia Belpica (1'tol. ii. 9. § 12) alone the sequana (Scine). Their capital was Durncertorum (Keims). This is PtoIemy's description (ii. 9. § 12).

## REPHAIM VALLIS.

Caesar (B. G. ii. 3) says that the Remi were the nearest to the Celtae of all the Belgae, and he makes the Serpuana and Matrona (Marne) the bouodary between the Belgae and the Celtac. The Suessiones were the neighbours of the Remi. (B. G. ii. 12.) When Caesar had enterel the country of the Jemi from the south (B. c. 57 ), be came to the Axona (Aisne), which he says is on the borders of the Remi. Eight miles from the Aisne and north of it was Bibrax, a town of the kemi, The Remi then extwnded as far north as the Aisne, and beyond it. Their capital, Durocortorum, is between the Aisne and the Narne.

When the Belgae in the beginning of r. c. 57 were collecting their forces to attack Caesar, the Remi were traitors to their country. They submitted to the Roman procunsul and offered to supply him with corn, to give hostages, to receive him in their towns and to help him against the rest of the Belgae and the Germans with all their power. ( $B$. G. ii. 3.) The Sucssiones who were io political union with the Remi joined the Belgae. When the great meeting of the Gallic states was held at Bibracte in n. C. 52 in raise troups to attack Caesar at Alesia, the Remi did not come, and they contioued faithfal to Caesar. When Caesar entered Gallia in b. c. 58, the Aedui and the Sequani were the leading nations; but when the Serquani were humbled, the Femi took their place, and those nations that did not like to attach themselves to the political party of the Aedui, joined the Remi. Thus the Aedvi were the first of the Gallic political communities and the Reni were the second. (Caes. B. G. vi. 12.) Even the Carnutes, a Celtic people, bad nttached themselves to the Remi. (B. G. vi. 4.) Caesar rewarded the fidelity of the Remi by placing the Suessiones in dependence on them (viii. 6).

Pliny (iv. 15) mentions the Remi as one of the Focderati Popnii of Belgica. When Strabo wrote (p. 194) the kemi were a people in preat favoor with the Rumans, and their city Durocortorum was the occasional residence of the Ronaan governors. [Durocortorem.]

Lucan (Pharsal. i. 424) has a line on the Remi:-

## "Optimus excusso Leucus Phemusque lacerto."

But the military skill of the Remi is otherwise muknown. They were a chmring people, who looked after themselves and betrayed their meighbours.
[G. L.]
REPANDUNUM, a town of the Coritani in Britamia Komaea, probably Repton in Derbyshive. (Not. Imp.: Camten, p. 586.) [T. II. 1)]
hEPllAIM VALLIS (rì'Paфaty, 'E $\mu \in \kappa$ 'Papatv,
 valley mentioned in the rorth berder of the tribe of Judah, the south of Benjatnins (Josh. xv. 8, xviii. 18), in the vicinity of Jerusalem. It is translated "the valley of the ciamts" in the authorised version, except in 2 Sum. v. 18, 22, where we fod that the valley of Jephaim was a favourite caoping ground for the Ilmlistines, soon after lavid bad got possession of the stronghold of Sion ; and in Isaialh, xvii. 5, where it is represented as a fruitful corn-bearing tract of land, well answering to the wide valley, or rather plain, inmediately south of the valley of Ilinnem, travened by the Bethleliem road, which is enmmonly identifiel by travellers as the "valley of the giants," althouch Euscbius places it in Benjumin (Onomast, s.e.).

It evidently derived ita name from the Rephaim, a family of the Amalekites (Gen. xiv. 5) settled in Asliteroth Karnaim, supposed by Reland to be of the race of the Gephyraci, who came with Cadmus from Phoenicia to Grecce. (Herod. v. 57; Kelaod, Falaest. p. 141, comp. pp. 79,355.) The Philistioes who are said to have encamped there may have bequeathed their name to the valley. [G.W.]
REPHIDIM ('Pa申iסєiv), the eleventh encampment of the Israelites after leaving Egypt, the next before Sinai, "where was no water for the people to drink." (Numb. xxxiii. 14.) Moses was accordingly instructed to smite the rock in Horeb, which yielded a sapply for the needs of the people, from whose murnurings the place was named Massalt and Meribah. Here also it was that the Israelites first eucountered the Amalekites, whom they disconnfited ; and here Moses received his father-in-law Jethro, (Exod. xvii.) lts pasition, Dr. Robinson surmises, must have been at some point in Wady-eshSheich, not far from the skirts of Horeb (which be takes to be the name of the mountain district), and about a day's march from the particular mountain of Sinai. Such a spot exists where H'ady-eshSheikh issues from the high central granite cliff ; which locality is more fully described by Burckhardt, and Dr. Wilson, who agrees in the identification, and names the range of rocky mountains Hateigah. He says that "water from the rock in Horeb could easily flow to this place." (Robinson, Bib. Res. vol. i. pp. 178, 179; Burckhardt, Travels in Syria, foc. p. 488 ; Wilson, Lands of the Bible, vol. i. p. 254.) Dr. Lepsius controverts this position and proposes El-Hessue, only a mile distant from the convent-mountain of Pharán, as the Rephidim (= "the resting-place") of the Ezodus. Thas is at the foot of Gebel Serbal, which he regards as the mountain of the law, and finds the stream opened by Moses " io the clear-runoing and wellflavoured spring of Iİàdi Fïrán, which irrigates the fertile soil of El-Hessue, and canses it to exhihit all the riches of the gardens of Faran for the space of half a mile." (Lepsius, A Tour from Thebes to the Peninsula of Sinai, pp. 74-82.) [G. W.]

RERIGO'NIUN ('Pepryóviov, P'tol. ii. 3. § 7), a town of the Novantae in the province of Vialentia in the SW. part of Britannia Barbara, which seems to have been seated at the $S$. extremity of the Sinus Rerigonius (Loch Ryan) near Stanraer. Camden juentifies it with Bargeny (p. 1203). [T. H. D.]

RERIGONIUS SINUS ('Pepiqúvtas кú入лos, Ptol. ii. $3 . \S 1$ ), a bay in the country of the Novantae, so named from the town of Rerigooium (q.v.). Now Loch Ryan, formed by the Mull of Galloway. (Horsley, p. 375. )
[T. H. D.]
RESAINA. [Rhesaena.]
RESAPHA al. REZEPH ( ${ }^{\text {P }} \boldsymbol{1} \eta \sigma \alpha \dot{\alpha} \alpha a$ ), a city of Syria, reckoned by Ptolemy to the district of Palmyrene (v. $15 . \S 24$ ), the Risapa of the Peutinger Tables, 21 miles from Sure ; probably identical with the Rossafat of Abulfeda (Tab. Syr. p. 119), which be places oear Rakka, not quite a day's journey from the Euphrates. It is supposed to be identical with the Rezeph of Scripture ('Papos, LXX.), taken by Seunacherib, king of Assyria, as he boasts in his insulting letter to Hezekiah. (2 Kings, six. 12.) It has been identified with Sergiopolis, apparently withont sufficient reason. (Mannert, Geographie von Syrien, p. 413.)
[G. W.]
REUDIGNI, a German tribe on the right hank of the river Albis, and north of the Longobardi,
which may have derived its name fromin bund trine a marshy district, or from reed or T.d (lim. Germ. 40.) Various conjectures have been hazarded about their exact abodes and their name, which some have wished to change into Reudingi or Deuringi, no as to identify them with the later Thuringi; but all is uncertain.
[L. S.]
REVESSIO ('Pveđtov), in Gallia, is the city of the Vellavi, or Velauni, as the pame is written io Ptolemy (ii. 7. §20). Revessio is the name of the place in the Table. In the Not. Provinc. it is written Civitas Vellavorum. Mabillon has shown that the place called Civitas Vetula in the middle ages is S. Paulien or Paulhan, and the Civitas Vetula is supposed to be the ancient capital of the Vellavi. S. Paulien is in the department of Ilaute Loire, north of Le Puy.
[ $\mathrm{f}, \mathrm{L}$.
RHA ('Pâ тотоцós, Ptol. x. 9. §§ 12, 17, 19. 21, vi. 14. §§ 1, 4; Amm. Marc, xxii. 8. § 28 : Pās, Agathem. ii. 10: Iolgu) a river of Asiatic Sarmatia, which according to Ptolemy ( $l$ c.), the earliest geographer who had any accurate knowledge of this longest of European streams, hat its twin sources in the E. and W. extremities of the Hyperhorean mountains, and discharged itielf into the Hyrcanian sea. The affluents which I'tulemy (vi. 14.§4) deveribes as falling into it from the Rhymmici Montes, and which must not be confounded with the river Rhymmus [Ruymmus], are the great accession made to the waters of the Volga by the Kama in the goternment of Kasan. Ammianus Marcellinus ( $l$.c.) says that its banks were covered with the plant which bore the same name as the river - the "rha" or "rheon" of Dioscorides ( $\rho \hat{a}, \phi \hat{j} o \nu, ~ i i i .11)$ and "rhacona" of Pliny (xxvii. 105), or officinal rhubarb. (Comp. Pereira, Mat. Iled. vol. ii. pt. 1. p. 1343.) The old readiog liha in the text of Fomponius Mela (iii. 5. § 4) has been shown by Tzschacke (ad loc.) to be a mistake of the carlier editors, for which he sabstitutes Casius, a river of Albanis. The Oarus ("Oapos, Herod. iv. 123, 124), where, according to the story of the Scythian expedition, the erection of eight furtresses was supposed to mark the extreme point of the march of Darcins, has been identified by Klaproth, and Schafarik (Slav. Alt. vol. i. p. 499)-who mentions that in the language of some tribes the Volga is still called "Rhau"-with that river. [E. B. J.]

RHAABE'NI ('Paabnvol), a people of Arabin Dcserta, next to the Agabeni, who were on the confines of Aralia Felix. (Ptol. v. 19. § 2.) Above them were the Masani; the Orcheni lay between them and the NW. extremity of the Persian Gulf: Mr. Forster justly remarks that "the description of Ptoleny rather indicates the dircction, than defines the positions, of these several tribes." (Gieog. of Arabia, vol. ii. p. 238.) [G. W.]

RHA'BDIUN ('Pá6סtov, Procop. B. I. ii. 19, de Aedif: ii. 4), a strongly fortified beight, in an inaccessible part of Mlesopotamia, two days' jonrney from Dara in the direction of Persia. The works were placed on the brow of very steep rocks which overiook the surrounding country. Justinian added additional works to it. It has not been identified with any modern place.

RHACALA'N1. [loxorani.]
HHACATAE ('Рака́таı), a (ierman tribe mentioned by Ptolemy (ii. 11. § 26) as occupying, together with the Teracatriae, the country on thie south of the Quadi, on the fronticrs of Pannonia;
but nothing further is known about either of them.

RHACOTIS [Amexindmes, p. 95.]
HIlAEBA ('Pai6a, 1'tol. ii. 2. § 10), a town in the interior of Hibernia, according to Camden (p. 1357) Rheban in (Uueen's County. [T. I1. D.] PIHAEDESTUS. [Bisintie.]
PIHAETEAE ('Paiteai), a plice in the Arculian district of Cymuria, at the confluence of the Gortynius and Alpheius. (1'uns. vini. 28. §3.)

RHAETIA ('PauTía). The name of this country, as well as of its inhabitants, appears in ancient inscriptions invariably withont the $h$, as Factia and Raeti, while the MSS. of latia autbors commouly bave the forms Rlawtio :and Iliaeti,-a circumstance whidh gues far to show that the more correct spelling is without the h. Rlautia was essentially an Alpine country, bordening in the north on Vindelicia, in the west on the territory inhalited by the Helvetii, in the sonth on the chain of the Alps from Mons Adula to Mons Ocra, which separated Rhaetia from faly, and in the cast on Noricum and Venetia : heure it comprisel the molern Grisons, the Tyrot, and some of the worthem parts of Lombardy. This country and its inhabitants did not attract moch atteution in ancient times until the reign of Augustus, who determined to reduce the Alpine tribes whel hal until then maintained their independence in the monatains. After a struggle of many years Rhactia and several ndjoining districts were conquered by brusus and Thberus, s. c. 15. Mhaetia, within the houmdaries above described, seems then to have been constituted as a distinct prosince (Suet. Aug. 21 ; Vell. Pat. ii. 39; Liv. Epit. 136 ; Aurel. Vict. Epil. 1). Vindmicia, in the north of Rhaetia, must at that time likewise have been a sepurate province; but towards the end of the first century A. D. the two provines appear united as one, under the name of Rhuetia, which aceordingly, in this latter sonse, extended in the worth as far as the Bambe and the lines. At a still later period, in or shortly before the reien of Constantine, the two proymes werc again divitut, and ancient Mhactia somped the name lihactia Prima, its capital being c.Aled Curia Rhactornan (Chur) ; while Vindelicia was called Thatia Sicrunda. The exact boundry hee betwen the two is mit :cecmately defined by thie ancients, but it is highly probable that the Alpine chain extending from the Lake of Constance to the river Inn was the natural lue of demareation; it should, howewer, be observel that Ptulemy (ii. 12) includes under the mame of Rlactia all the country west of the river Lacus as far as the sources of the Danubins and lihems, while he applies the name of Vindelicia to the territary between the Licus and Oenus.

Ansinnt lihaetia or Rhaetia 1'roper was throughout :th Alpune country, being traversed by the Alpes Rhantiou and Mons Aimia. It contained the sources of urarly all the . Ipine rivers watering the north of It.dy, suth as the Adelut, Surius, Olbius, Clemsis, Ninems, and othore; but the chof rivers of Bhatia itself wree the Athesis with its tributary the laargus (iof llarenis), and the Amms or Oems. The magwifienout walleys formed by these rivers were ferti.e and well adapted to agricniltural pursuits: but the Inl.abitants de pouled m:infy apon their flocks (Strab. vii. $\mu .316$ ). The cha f promene of the vallyys wats wine, whel was hot at all interior to that grown in I. . 1 ; so that Aupustus w.s particularly partial to It (Strah, 1v, T, 206, I'm. xw, 3, 3, s; Virg. Geory, ii. 96 ; Coluns.iii. 2 ; Martial, xiv. 16世; Nuet. Ang. 7i).

Besides this Thactia produced abundance of wax, honey, pitch, and cheese, in wheb considerable commerce was carrjed on.

The ancient inhabitants of Thactia have in modern times attracted more than ordinary attention from their supposed comection with the ancient Etruseana, They are first mentioned by Polybius (xxxiv. 10; comn. Strab. iv. p. 204. vii. Pp. 292, 313). According to tradition the Rhaetians were Etruscans who had originally inbabited the plains of Lombardy, but were compelled by the invading Gaiuls to quit their country and take refnge in the Alps, whereby they were cut off from their kinsmen, who remained in Italy and finally established themselves in Etruria, (Jastin, xx. 5; Plin. iii. 24; Steph. B. s.v. 'Paitol.) This tradition derives some support from the fact recorded by Dionysius of IIalicamassus (i. 24) that the Etruscans in Etruria called themselves Itasena, which is beliesed to be only another form of the name Rhaeti. A decision of this question is the more difficult because at the time when the Romans conquered Rhaetia the bulk of its inhabitants were Celts, which in the course of a few centuries becamo entirely Rumanised. But, assuming that the Ehaeti were a lranch of the Etruscan nation, it is not very tikely that on the inrasion of Italy by the Gauls they should have gone back to the Alps across which they hat come into ltaly ; it seems much more probable to suppose that the Etruscans in the Alpis were a remnant of the nation left behind there at the time when the Etruscans originally migrated into Italy. But, however this may be, the anxiety to oltain a key to the mysterions language of the Etroscans has led modern inquirers to search for it in the monntains and valleys of ancient Rhaetia; for they remonably assumed that, although the great buly of the population in the time of Augustus consisted of Celes, who soun after their subjugation adopted the language of the conqnerors, there may still exist some traces of its original inhabitants in the names of places, and even in the language of ordinary life. In the distriets where the nation lias reuained purest, as in the valley of Engadino and in the Grutnerthal, the language spoken at present is a corruption of Latin, the Romaunsh as it ia called, intermixed with some Celtic and German dements, and a few words which are believed to be neither Cellic, nor Gernan, nor Latin, and are therefore comsidered to be Etrascan. Several names of places also bear a strong resemblance to those of places in Eitruria; mat, lastly, a few ancient monaments have been disowered which are in some respects like those of Etruria. The first who, after many broal and unfounded assertions had been make, nndertork a thorough investiration of these points, was L. Steub, who publisbed the results of liss inquiries in a work Uber die Urbetcohner Ractions und ihren Zusammenhang mit den Etruskern, Munieh, 1843, 8vo. A few yearsago another scholar, Dr. W. Freund, daring a residence in Rhaetia collected a vast number of facts, well calculated to throw light upon this obscure subject, but the results of his investigations have not yet been published.

As to the history of the ancient Rlunctians, it has already been intimated that they became known to the Rumans in the sccond century B. c. Tbey wero a wild, cuming, and rapacious mountain people, who indulged their propensity to rob and plander even at the lime when they were subject to Rome, and when their rulers had made a great road through their country into Noricum (Dion Cass. liv. 22;

Hor. Carm. iv. 14. 15). Like all mountaineers, they cherished great love of freedorn, and fought against the Romans with rage and despair, as we learn from Florus (iv. 12), whe states that the Rlaetian women, wio also took part in the war, atter having spent their arrows, threw their own children in the faces of the Remans. Still, hometer, they were obliged to gield, and in B. c. 15 they were finally subdued, and their country was made a Roman province. During the later period of the Einpire their territory was almost entirely depopulated; hut it somewhat recovered at the time when the Ostrogoths, under Theoderic, took possession of the country, and placed its administration into the hands of a Dux (Euipp. 1 ït. S. Severini, 29; Cassiod. Var. iv. 4). After the death of Tbeodoric, the Boioarii spread over Rhaetia and Noricum, and the river Licus became the houndary between the Alemanni in पindelicia, and the Boioarii in Phaetia. (Egin. Tit. Carol. M. 11.) The more important among the varions trites mentioned in Rhaetia, such as the Lepontil, Viberi, Calucones, Vexnones, s.mexetes, Isabce, Bhixestes, Gexauni, Thidestine, and Etganel, are discossed in separate articles. Tridentum was the most important among the few towns of the country; the others are known almost exclusively through the Itineraries, two roads having been made tirough Rhaetia by the Romans, the one leading from Augusta Vindelicoram to Comnm, and the otker from the same town to Verona; Paulus Diaconus, howerer, mentions a few towns of the interior which were not situated on these high-roads, sucb as the town of Maia. which was destroged in the eighth centary by the fall of a mountain, and the site of which is now occapied by the town of Meran.

RHAGAE ('Payai, Arrian, Anab. iii. 30; Strab. xi. pp. 514, 524; 'Páy Steph. B. s. v.: 'Páraia, Ptol. vi. 5. § ti Rhages, Tobit, i. 14: Eth. 'Pa ${ }^{\prime}$ mvós), a great town of Media Magna, the capital of the provioce of Rhagiana, which is first known to us in history as the place to which the Jewish exiles were sent. (Tobit, i. 14, iv. 20, ix. 2.) It was situated in the eastero part of the country towards Parthia, one day's jonrney from the Pylae Caspiae (Arrian, Anab. iii. 20) and 10 days' march from Echatana (Hamadín). The name of the place is stated by Strabo to have been derived from the frequent earthquakes to which it had been subject, but this is contrary to all prohability (Strab. xi. p. 514); le adds, also, that, like many other places in the neighbourbood, it had been built (or ratber rehuilt) by the Greeks (p. 524 ). In later times it appears to bave been rebuilt hy Selencus Xicator, who called it Europus. (Strah. l. c.) Still later it appears to have been again rebuilt hy one of the house of Arsaces, who named it in consequence Arsacia. (Strab. l. c.; Steph. B. s.v.) In modern times the ancient name bas retorned; and the ruins of Rhey. which bave leen visited and described by many travellers, no doubt represent the site of the ancient Rhagae. (Ker Porter, Travels, vol. i. p. 358.) Pliny mentions a town of Parthia, which be calls Apamein Rhagiane (vi. 14. § 17). Some geographers have contended that this is the same as Rhagae ; but the inference is rather that it is not.
[V.]
RHagla'Na. [Rhagae.]
RHAMAE, a tomn in the interior of Thrace. (Itin. Hieras. p. 568.)

RHAMANI'TAE. 1. ('Pquanitu Strab yri.
782), supposed by Mr. Forster to be identical with the Rhabanitae of Ptolemy ('Pa6avitai, vi. 7. §24), whom that geographer places under Mount Climax. He says "their common position, north of Mount Climas, concurs with the resemblance of the two names to argue the identity" (Geog. of Arabia, vol. i. p. 68, note) ; hut it is by no means clear that the Plamanitae lay near Mount Climas. All that Strabo says of them is, that Nariaba, the limit of the expedition of Aelins Gallus, the siece of which he was furced to raise for want of mater, lay in the country of the Rbamanitae; but nothing in geography is more difficult to determine than the situation of that torn. [Mansyabs.]
2. A people of the same name is mentioned by Pliny, as existing on the Persian Gulf, identical with the Anariti of Ptolemy and the Eprmaranitae [G. W.]
RHAMIDAIA. [DACTA, p. 244, b.]
RHAMNUS. 1. ('Pauroûs, oouvtos: Eth. 'Pa $\mu$ vov́rios, fem. 'Pauvovaía, 'Pauvouris), a demus of Attica, belonging to the tribe Aeantis (Steph. B., Ilarpocr., Suid., s. v.), which derived its namp from a thick prickly shrab, which still grows upon the
 The town stood upon the eastern coast of Attica, at the distance of 60 stadia from Marathon, and upon the road leading from the latter town to Oropus. (Pans. i. 33. § 2.) It is described by Scylax (p. 21) as a fortified place; and it appears from a decrce in Dernosthenes (pra Cor. p. 238, Reiske) to have been regarded as one of the chief fortresses in Attica. It was still in existence in the time of Pliny ("Rhamous pagus,locus. Marathon," iv. 7.s. 11). Rbamnns was the tirthplace of the orator Antipho [Dict. of Biogr. s. v.]; hut it was chiefly celelrated in antiquity on acconnt of its worship of Nemesis. who was hence called by the Latin poets Rhamnusia virgo and Rhamnusia dea. (Catull. 1svi. 71: Claud. B. Get. 631 : Ov. Met. iii. 406, Trist. v. 8.9 ; Stat. Silv, iii. 5. § 5.) The temple of the goddess was at a short distance from the tomn. (Pans. l.c. c; comp. Strah. ix. p. 399.) It contained a celehrated statuc of Nemesis, which, according to Pausanias, was the work of Pheidias, and was made by him out of a block of Parian marble, which the Persians bad brought with them for the construction of a trophy. The statoe was of colossal size, 10 cnbits in height (Hesych. s.v.; Zenob. Prov. v. 82), and on jts basis were several figures in relicf. Oither writers say that the statue was the work of Agoracritns of Paros, a disciple of Pheidias. (Strab. is. p. 396; Plin. xxxvi. 5. s. 4. § 17, Sillig.) It was however a common opinion that Pheidias was the real author of the statue, but that he gave up the honour of the work to his faxourite disciple. (Suid. s.v.; Zenob. l.c.: Tzetz. Chil. vii. 960.) Rhamnus stood io a small plaio, 3 miles in length, which, like that of Marathon, was shut out from the rest of Attica by surrounding mountains. The town itself was situated upon a rocky peninsula, sarronnded by the sea for two-tbirds of its circamfereace, and cornected by a narrow ridge with the mountains, which closely approach it on the land side. It is now called Ovrio-Kastro. ('O8pió-Kacтpo, a corruption of 'Ebpauto-Kactpov, Jetrs'-Castle, a name frequently applied in Greece to the ruins of Hellenic fortresses.) It was about half a mile in circuit, and its remains are considerable. The principal gate mas situated upon the narrow ridge already mentioned, and is still preserved; and adjoining it is the soutbern wall,
nbont 20 feet in height. At the head of a narrow gien, which leads to the princijal gate, stand the ruins of the temple of Nemesis upon a large artificial platform, supported by a wall of pure white marble, but we find upon this platform, which formed the téuevos or sacred enclosure, the remains of tiro temples, which are almost enntiguons, and nearly though not quite parallel to cach other: The larger building was a peripteral hexastyle, 71 feet long and 33 broad, with 12 culumns on the side, and with a pronaus, cella, and prsticum in the usual manner. The smaller temple was 31 feet long by $2 t$ feet broad, and consisted only of a cella, with a portico containing two Doric columns in antis. Anong the ruins of the lareer temple are some fiagments of a colossal statue, corresponding in size with that of the Rhamnnsian Nemeois; bot these fragments were made of Attic marble, and not of Parian stone as stated by Pausanias. It is, however, not improbable, as Leake has remarked, that the story of the block of stone brought by the Persians was a valear fable, or an iovention of the priests of Nemesis by which Pausanias was deceived. Amung the ruins of the smaller temple nots found a fragment, wanting the bead and shoulders, of a statue of the human size io the archaic style of the Aecinetan school. This statue is now in the British Nuseum. Jodging from this statue, as well as from the diminutive size and ruder architecture of the smaller temple, the latter appears to have been the more ancient of the two. Heace it has been inferred that the smaller temple was anterior to the Persian War, and was destroyed by the Persians just before the battle of Marathon; and that the larger temple was erected in hononr of the goddess, wha had taken vengeance upon the insolence of the bubburians for outraging her worship. In front of the smaller temple are two chairs ( $\begin{aligned} & \text { pobvor) of white }\end{aligned}$ martile, upon one of which is the inscription $N \in \mu \dot{\epsilon} \sigma \in d$
 ミ́watpatos àviӨnкev, which has led some to suppose that the smaller temple was dedieated to Themis. But it is more probable that both temples were dedicated to Nemenis, and that the smaller temple was in ruins before the larger was erected. A difficulty, however, arises about the time of the destruction of the smaller temple, from the fact that the forms of the letters and the long vowels io the inscriptious upon the chairs clearly show that those inscriptions belong to an era long subsequent to the battle of Marathon. Wordsworth considers it ridiculous to supprese that these chairs were dedicated in this temple after its destraction, and hence conjectures that the temple was destruyed towards the close of the I'elopuntesian War lyy the Persian allies of Sparta. (Leake. It mi of Attica, p. 105, seq.. 2nd ed., Northe the (irvere, vol. ii. p. 434, seq.; Wordswerth, Athrms nat Altica, p. 34, seq.; Unedited Antiquitius of Alticice, c. vi. p. 41, seq.)
2. A harbour on the W . const of Crete near the promontory Cisersmesus. (Ptol. iii. 17. § 2.) Iliny, on the contrary, places it in the interior of the inland (15. 12, s. 20).

RHADSH Al:THODES. [BHAPTA.]
R11A1'TA ( $\tau \dot{\alpha}$ 'Partá, l'tol i.9.§ $1,14 . \S 4 ;$ Peripl. Mot: Eryther. p. I0), was, according to the author of the Periplus, the most distant station of the Arahian trale with Aegypt, Aethiopia, and the Furth of the Red Sen. lis corrert lat. is $15^{\prime} 5^{\prime \prime}$. The name is derived from the peetuliar buats in use there. These are termed by the natives dows
(dáui), and, like the modern boats of Pata on the Mozambique coast, were frequently of 100 or 150 tons burden. Bot whether vessels of this size or merely canoes, all the craft at this part of the $\mathbf{E}$. const of Africa were formed of the hollowed trunks of trees and joined togetber by cords made of the filses of the cocoa instead of iron or wooden pins, and bence the Greeks gave them, and the harbour which they principally frequented, the name of "the sewed" ( $\tau \dot{\alpha} \dot{\alpha} \alpha \pi \tau \alpha$ ). Ptolemy speaks ( $i_{1}$ 17. § 7, jv. $7 . \S 28$, vii. $3 . \S 6,1,17 . \S 12$, \&c.) of a promontory linaitus, a river linaptes, and a tribe of Acthiopians named Rharsir. All these may probably be referred to the immediate neighbourhood of the town Rhapta, since the emporium was doubtless the most striking ubject to the caravans trading there and to the Greek merchants accompanying the caravans. The promontory was one of the numerous bluffs or headlands that give to this portion of the E. coast of Africa the appearance of a saw, the shore-line being everywhere indented with sharp and short projections. The river was one of the many streams which are broad inland, but whose mouths, being barred with sand or coral reefn, are narrow and difficult to be discovered. This portion of the coast, indeed, from lat. $2^{\circ} \mathrm{S}$, to the month of the Govind, the modern appellation of the libaptus of Ptolemy and the Periplus, is bordered hy coral reefs and islands, e. g. the Dundus and Jubah islands, - generally s league or even less from the maioland. Some of these islands are of considerable beight ; and tbrough seversl of them are arched apertures large enough to admit the passage of a boat. As the shore itself also is formed of a coral cooglomerate, containing shells, madrepore, and sand, it is evident that there has been a gradual rising of the land and correspooding subsidence of the sea. The recfs also which have been formed on the main shore have affected materially the course of the rivers, - barring the months of many, among them the Rhaptus, and compelling others, e. g. the $11^{\circ}$ ebbee, to run obliquely in a direction parallel to the coast. Another result of the recfs has been that mady rivers having no or insufficient ontlets into the sea, have become marshes or shallow lakes; and, consequently, streams that in Ptolemy's age were correctly described as runuing into the ocean, are now meres severed from it by sand and ridges of coral.
Khapta seems, from the account in the Periplus, to have been, not so mneh the name of a single torn, as a generic term for numerous villages inhalited by the builders of the "seamed boats." These were probably situated nearly opposite the modern island of Pata; and whether it implies one or many places, Ihapta certainly was on the coast of Azania. The Rhapsii Acthiopes are described in the Perijfins as men of lofty stature; and in fact the natives of E. Africa, at the present day, are gencrally taller than the Arabs. Each village had its chief, but there was a principal shiekh or chicf to whom all were subject. This division into petty communities under a reneral head also still subbists. In the first century is c. the Rhapsif wore held in subjection by the shiekh and people of Mluza, whence came ships with Arab masters, and pilots who understnod the language of the Rhapsii and were connected with them by intermarriage. The Arabs brought to thapta spear-heads, ases, knives, buttons, and beads; sonctimes also wine and wheaten bread, not so much indeed for barter, as for presents to the

Rhapsian chiefs. From Rhapta they exported ivory (inferior to that of Adulis), tortoise-shell (the next best in quality to that of India), rhinoceros-horn, and natuplius (a shell probably osed in dyeing). These commercial features are nearly repeated at the present day in this region. The African still builds and mans the ship; the Arab is the navigator and supercargo. The ivory is still of inferior quality, being for the most part found in the woods, damaged by rain, or collected from animals drowned by the overflow of the rivers at the equinoxes. The liawksbill turtle is still captured in the neighbourhood of the river Govind, and on the shore opposite the island of Pata. (See Vincent, Toyage of Nearchus, vol. ii. pp. 169-183; Cooley, Claudius Ptolemy and the Nile, pp. 68-72.)

RHAPTUM PROMONTORIUN. [RBARTA.]
RHAPTUS FLUVIUS. [Rhafta.]
RHASTIA ('Pacria), a town in the country of the Troemi in Galatia, in Asia Minor, which is noticed only by Ptolemy (v. 4. § 9).
[L. S.]
RIIATOSTATHYBIUS ('Pa oortâv́sios, Ptol. ii. 3. §3), a river on the W. coast of Britamia Romana, according to Camden (p. 733) the Taf. [T.H.D.]

RHALCUS ('Paûkos, Scyl. p. 19 ; Polyb. axxi. 1. § 1, xxxiii. 15. § 1: Eth. 'Paúktos, fem. 'Pauria, Steph. B. s. v.). From the story told about the Cretan bees by Antenor in his "Cretica" (ap.Aclian. N. A. xvii. 35, comp. Diodor. v. 70), it seems that there were two cities of this name in Crete. The existence of two places so called in the island might give rise to some such legend as that which he mentions. Pashley (Crete, vol. i. p. 235) fixes the site of one Rhaucns at Haghio Mýro, between Cnossus and Gortyna, and from its prosimity to Mit. Ida iofers that it is the more ancient.
[E. B. J.]

COIN OF EHAUCUS.
RHEBAS ('Pígas), a very small river on the coast of Bithynia, the length of which amounts only to a few miles; it flows into the Euxine, near the entrance of the Bosporus, north-east of Chalcedon, and still bears the name of Riva. (Scylax. p. $34 ;$ Dionys. Per. 794 ; Ptol, v. I. §5; Arrian, Peripl. P.E. p. 13; Marcian, p. 69 ; Plid. vi. 1; Steph. B. s. v.) This little river, which is otherwise of no importance, owes its celebrity to the stury of the Argonauts. (Orph. Ary. 711 ; Apollun. Rhod. ii. 650,789 .) It also bore the games of Rhesaeus and Rhesns (Plin. bc.; Solin. 43), the last of which seens to have arisen from a confasion with the Rhesus meationed by Homer.
[L. S.]
RHEDONES. [REDONES.]
RHE'GIUM ('P'jrtov: Eth. 'P $\eta \gamma$ ivos, Rheginus: Reggio), an important city of Magna Graecia, sitnated near the sonthern end of the Bruttian peninsula, on the E. side of the Sicilian straits, and almost directly opposite to Messuna in Sicily. The distance between the two cities, in a direct line, is obly abont 6 geog. miles, and the distance from Thegium to the
nearest point of the island is somewhat less. There is no doubt that it was a Greek colory, and we have no acconnt of any settlement, previously existing on the site; but the spot is said to bare been marked by the tomb of Jocastas, one of the sons of Acolus. (Heraclid. Polit. 25.) The fonndation of Ihegium is universally aseribed to the Chalcidians, who bad, in a year of famine, consecrated a tenth part of their citizens to Apollo; and these, nnder the direction of the oracle at Deljhi, procecded to Rhegium, whither they were also invited by their Chalcidic brethren, who were already established at Zancle on the opposite side of the strait. (Strab. vi. p. 257; Ileraclid. l. c.; Diod, xiv. 40; Thuc, vi. 4; Scymm. Ch, 311.) With these Chalcidians were also united a body of Messenian exiles, who had been driven from their country at the beginning of the First Messenian War, and had established themselves ofor a time at Macistus. Tbey were apparently not numerons, as Pbegium always continued to be considered a Chalcidic city; but they comprised many of the chief families in the new colony; so that, according to Strabo, the presiding magistrates of the city were always taken from amony these Messenian citizens, down to the time of Anaxilas, who himself belonged to this dominant caste. (Strab. vi. p. 257 ; Paus, iv. 23. §6; Thuc. vi. 4; Heraclid. l.c. 1.) The date of the foundation of Rheginom is nncertain; the statements jast mentioned, which connect it with the First Mlessenian War would carry it back as far as the 8th century B.c.; but they leave the precise period nncertain. Pausanias considers it as fonnded after the end of the war, while Antiochus, who is cited by Strabo, seems to refer it to the beginning; but his expressions are not decisive, as we do not know how long the exiles may have remained at Macistus; and it is probable, on the whole, that we may consider it as taking place shortly after the close of the war, and therefore before $720 \mathrm{~B} . \mathrm{c}$. (Pans. l.c.; Antioch. ap. Strab. l.c.). In this case it was probably the most ancient of all the Greck colonies in this part of Italy. Various etymologies of the name of Ehegium are given by ancient authors; the ove generally received, and adopted by Aeschylus (ap.Strab. l.c.), was that which derived it from the bursting asunder of the coasts of Sicily and Italy, which was generally ascribed to an eartioquake. (Diod. iv. 85; Justin. iv. 1, \&c.) Others abanrdly connected it with the Latin regium (Strab. l, c.), while Heraclides gives a totally different story, which derived the name from that of an indigenuns hero. (Heraclid. Pulit. 25.)

There seems no doubt that Rbegium rose rapidly to be a flourishing and prosperous city; but we know almost nothing of its history previons to the time of Anaxilas. The constitution, as we learn from Heraclides, was aristocratic, the management of affairs resting whally with a conncil ur body of Joph of the principal and wealthiest citizens. After the legislation of Chawadas at Catana, his laws were adopted by the Rhegians as well as by the other Clatcidie cities of Nicily. (Heraclid. l.c.; Arist. Iol. ii. 12, v. 12.) The Rhegians are mentioned as affording shelter to the fugitive Phocaeans, who bad been driven from Corsica, previous to the foundation of Velia. (Herod, i. 166, 167.) According to Strabo they extended their dominion over many of the adjoining towas, but these conld odly have been swail places, as we do not bear of any colonies of importance fonnded by the Rhegians; and their territory exteoded only as far as the Hales ou the E.,
where they adjoined the Locrian territory, while the Locrian colonies of Medma and Ilipponimm prevented their extension on the N. Indeed, from the position of Rhegiun it seems to have always maintained closer relations with Sicily, and taken more part in the politios of that island than in these of the other Greck cities in Italy. Between the Rhegians and Locrians, however, there appears to have been a constant spirit of enmity, which might be readily expected between two rival cities, such near neighbons, and belonging to different races. (Thuc. iv. 1. 24.)

Rheginm appears to bave participated largely in the political changes introtuced by the Pythagoreans, and even became, for a short time after the death of Pythagoras, the bead-quarters of his sect (lambl. Fit. Pyth 33, 130, 251): but the changes then introduced ho not seem to have been permanent.

It was ander the reign of Aaaxilas that Rhegiam first rose to a degree of power far greater than it had previously attained. We have no account of the circumstances attending the eleration of that duspont to power, an erent which tonk place, according to Diodorns, in B. C. 494 (Diod. xi. 48); hut we know that be belonged to one of the ancient Messenian families, and to the oligarchy which had previously ruled the state. (Strab, ri. p. $25 \vec{i}$; Pans. iv. 23. §6; Arist. Pol. v. 12: Thuc. vi. 4.) Hence, when he made himself master of Zancle on the Hposite side of the straits, he gave to that city the name of Messana, by which it was ever afterwards knowa. [Messana.] Anaxilas contimued for some years ruler of both these cities, and thus was undisputed master of the Sicilian straits: still further to strengthen himself in this sovereignty, le fortified the rocky promontory of Scyllacum, and established a naval station there to guard the straits against the Tyrriebian pirates, (Strab, vi. p. 257.) He meditated also the destraction of the neigbbonring city of Locri, the perpetual rival and enemy of Ihescium, bat was prevented from carrying ont bis purpose by the intervention of Hirm of Syracuse, who esputsed the cause of the Locrians, and whose emmity Anarilas did not choose to provoke. (Schol. wel I'ind. Pyth. ii. 34.) One of his daughters was, imleed, married to the Ssracusan despont, whose frienulship be seems to have sought assiduousty to cultivate.

Anasilas epioyed the reputation of one of the millest and most equitable of the Sicilian rulers (Justin. iv. 2), and it is probable that Rbegium
 Ins death, in s. r. 476 , it passed without opposition wuder the rule of his two sons; but the govermment was administered during their minority by their guir lian Nicythas, who reignel over hoth Rhegium and Messans for nige years with exemplary justice and molemation, and at the end of that time gare up the sowervignty into the hands of the two sons of Anaxilas. (Dyod. si. 48, 66; IIerod, vii. 170; Justin. iv. 2. Macrub, Sat. i. 11.) These, however, did not hold it long: they were expelled in r. C. 461 , the revolutions which at that time agitated the cities of Sicily laving apparently extended to Rhegium also. (1)ind. xi. 76.)

The eovernment of Micythus was marked hy one ereat diaster: in n.c. 473 , the Rhegians, having sent an auxiliary force of 3000 men to assist the Tarentines ag.iost the lapygians, shared in the treat defeat which they sursained on that neeasion [TAmenrcar]; but the statement of Diodorus that
the barbarians not only pursued the fugitives to the grates of Rhegium, bit actually made themselves masters of the city, may be safely rejected as ineredible. (Diod. xi. 52; Hurod. vii. 170; Grote's Ii.t. of Greece. vol. v. p. 319.) A story told by Justin, that the Rhegians being agitated by domestic dissensions, a body of mercenaries, who were called in hy one of the parties, drove out their opposents, and then made themselres masters of the city by a general massacre of the remaining citizens (Justio, iv. 3), must be placed (if at all) shortly after the expulsion of the sons of Anaxilas; but the whole story has a very apocryphal air; it is not noticed by any other writer, and it is certain that the old Chalcidic citizens continned in possession of Rheginm down to a much later period.

We hare very little information as to the history of Rhegium during the period which followed the expulsion of the despots; bnt it seems to have retained its liberty, in common with the neighbouring cities of Sicily, till it fell under the yoke of Dionysius. In B. c. 427, when the Athenians sent a fleet under Laches and Charoeades to support the Leontines against Syracnse, the Rhegians esponsed the cause of the Clalcilic cities of Sicily, and not only allowed their city to be made the head-quarters of the Athenian fleet, but themselves furnished a cousiderahle auxiliary force. They were is consequence engaged in continual hostilities with the Locrians. (Diod. xii. 54: Thuc. iii. 86, ir. 1. 24. 25.) But they pursued a different course on aceasion of the great Atbenian expedition to Sicily in B. C. 415 , when they refused to take any part in the contest; and they nppear to have persevered in this neatrality to the end. (Diod. xiii. 3: Thuc. vi. 44, vii. 1, 58.)

It was not long after this that the inereaving pawer of Dionysias of Syracuse, who had destroyed in succession the chief Chalcidic cities of Sicily, became a subject of alarm to the Khegians ; and in B. C. 399 they fitted out a fleet of 50 triremes, and an army of 6000 foot aod 600 horse, to makc war upon the despot. But the Messenians, who at fint made common cause with them, having quickly abandoned the alliance, they were compelled to desist from the enterprise, and made peace with Dionysins. (Diod. xiv. 40.) The latter, who was meditating a great war with Carthage, was desirons to secnre the friend bip of the Rhegians; hut his proposals of a matrimonial alliance were rejected with scorn ; he in consequence concluded such an alliance with the Locrians, and became from this time the implacable enemy of the Rhegians. ( $16.44,107$.) It was from hostility to the latter that he a few years later (n.c. 394), after the destruction of Messana by the Carthaginims, restored and fortified that city, as a post to conmand the straits, and from which to earry on his enterprises in Southern Italy. The Rhegians in vain sought to forestal him; they made an mnsnccessful sttack upon Messana, and were foiled in their attempt to establish a colony of Naxians at Mylae, as a post of offence agninst the Messenians. ( $/ b .87$. ) The next year Dionysins, in his turn, made a sudden attack on Ihegium itsclf, but did not succeed in surprising the city; and after ravaging its territory, was compelled to draw off his forces. ( $16,90$. ) But in n. c . 390 he resumed the design on a lorger scale, and laid regular siege to the city with a force of 20.000 foot, 1000 horee, and a fleet of 120 triremes. The Rhegians, however, opposed a vigorous resistance: the fleet of Dionysins suffered severely from a storm, and the approach of winter at length compelled bim
to abandon the siege. (Ib.100.) The next year (b.c. 389 ) his great victory over the confederate forces of the ltaliot Greeks at the river Helorus left bim at liberty to prosecute his designs against Rhegiom without opposition: the Rhegians in vain eodeavoured to avert the danger by submitting to a tribute of 300 talents, and by surrendering all their ships, 70 in ourmber. By these concessions they obtained only a precarious truce, which Dionysius found a pretext for bresking the very nest year, and laid siege to the city with all his forces. The Rhegians, nuder the command of a general named Phyton, made a desperate resistaoce, and were enableil to prolong their defeace for eleven months, but were at length compelled to surreader, after having suffered the ntmost extremities of famine (B. C. 387). The surviving inhabitants were sold as slaves, their general Phyton pat to an ignominious death, and the city itself totally destroyed. (Diod. xiv. 106-108, 111, 112; Strab. vi. p. 258 ; Pseud.-Arist. Oecon. ii. 21.)

There is no doubt that Rhegium never fully recovered this great calamity; but so important a site conld not long remain nooccupied. The younger Dionysius partially restored the city, to which be gave the name of Phoebias, but the old name soon again prevailed. (Strab. l.c.) It was ocenpied with a garrison by the despot, but in B.c. 35 t it was besieged and taken by the Syracusan commanders Leptines and Callippus, the garrison drisen out, and the citizens restored to independence. (Diod. xvi. 45.) Hence they were, a few years later (b, c. 345), among the foremost to promise their assistance to Timoleon, who halted at Rhegiom on bis way to Sicily, and from theace, eluding the vigilance of the Carthaginians by a stratagem, crossed over to Tauromenium. (Diod. xvi. 66, 68; Plut. Timol. 9, 10.) From this time we hear no more of Rhegium, till the arrival of Pyrrhus in Italy (B. C. 280), when it again became the scene of a memorable catastrophe. The Rhegians on that occasion, viewing with apprehension the progress of the kiog of Epirus, and distrusting the Carthaginians, had reconrse to the Roman alliapce, and received into their city as a garrison, a body of Campanian troops, 4000 in namber, ander the command of so officer named Decius. But these troops had not been long in possession of the city when they were tempted to follow the example of their countrymen, the Mamertines, on the other side of the strait; and they took advantage of an alleged attempt at defection on the part of the Rhegians, to make a promiscuous massacre of the male citizens, while they reduced the women and children to slavery, and established themselves in the sole occupation of the town. (Pol. i. 7; Oros. iv. 3 ; Appian, Sumnit. iii. 9 ; Diod. sxii. Exc. II. p. 494. Exc. Vales, p. 562 ; Dion Cass. Fr. 40. 7; Strab. v. p. 258.) The Remans were unable to punish them for this act of treachery so long as they were occupied with the war agaiost Pyrrhus; and the Campanians for some years continned to reap the benefit of their crime. But as soon as Pyrrhus had fioally withdrawn from Italy, the Romaos turned their arms against their rebellious soldiers; and in B. c. 270 , being actively supported by Hieron of Syracuse, the consul Genucius succeeded in reducing Rhegiom by force, though not till after a long siege. Great part of the Campanians perished in the defence; the rest were executed by order of the Roman people. (Pol. i. 6, 7 ; Oros. iv. 3 ; Dionys. Fr. Mai. six. 1, xx. 7.)
vol. 11.

Rhegium was now restored to the survivors of its former inhabitants (Pol, i. 7; Liv, xxxi. 31 ; Appian, l. c.); but it must have suffered sevetely, and dues not seem to have again recovered its former prosperity. Its name is bardly mentioned daring the First Punic War, but in the second the citizens distinguished themselves by their fidelity to the Romaa canse, and repeated attempts of Hannibal to make himself master of the city were uniformly repulsed. (Liv. xxiii. 30, xxiv. 1. xxvi. 12, xxis. 6.) From this time the name of Rhegiom is rarely mentioned in history under the Roman Repablic ; bat we learn from several incidental notices that it contioued to enjoy its own laws and nominal liberty as a "foederata civitas," thongh bound, io common with other cities in the same condition, to furnish an auxiliary naval contingent as often as required. (Liv. xxxi. 31, xxxv. 16, xxxvi. 42.) It was not till after the Social War that the Rliegians, like the other Greek cities of Italy, passed into the condition of Roman citizens, and Rhegium itself becane a Roman Mlunicipium. (Cic. Verr. iv. 60, Phil. i. 3, pro Arch. 3.) Shortly before this (B. c. 91) the city had suffered severely from an eartluquake, which had destroyed a large part of it (Strab. yi. p. 258 ; Jul. Obseq. 114): but it seems to have, in great measure, recovered from this calamity, and is mentioned by Appian towards the close of the Republic as one of the eighteen flourishing cities of Italy, which were promised by the Triumvirs to their veterans as a reward for their services. (Appian, B. C. iv. 3.) Rheginm, however, had the goud fortune to escape on this occasion by the personal favour of Octavian (Ib. 86); and during the war which followed between bim and Sextus Pompeins, B. c. 38-36, it became one of the most important posts, which was ofien made by Octavian the beadquarters both of his fleet and army. (Strab. vi. p. 258; Appian, B. C. v. 81,84; Dion Cass. xlviii. 18, 47.) To reward the Rhegians for their services on this occasion. Augustus increased the population, which was in a declining state, by the addition of a body of new colonists ; but the old inlabitants were not expelled, nor did the city assume the title of a Colonia, though it adopted, in gratitnde to Augustus, the name of Rheginm Julium. (Strab. l.c. ; P'tol. iii. 1. §9; Orell. Inscr. 3838.) In the time of Strabo it was a populons and flourishing place, and was one of the few cities which, like Neapolis and Tarentum, still preserved some remains of its Greek civilisation. (Strab. vi. Pp. 253, 259.) Traces of this may be observed also io inscriptions, some of which, of the period of the Roman Empire, present a curious mixture of Greek and Latin, while others bave the names of Roman magistrates, though the inscriptions themselves are in Greek. (Morisnni, Inscr. Reginae, 4to. Neap. $17 \% 0$, pp. 83,126, \&c. ; Boeckh, C. $I$. 5760-5768.)

Its favourable situation and its importance, as commanding the passage of the Sicilian straits, preserved Rhegium from falling into the same state of decay as many other cities in the sonth of Italy. It contitured to exist as a considerable city thronghout the period of the Roman Empire (Plio. iii. 5. s. 10; Ptol. l. c. ; Itin. Ant. pp. 112. 115, 490), and was the termination of the great bighway which led through the sonthern peninsula of Italy, and formed the customary mode of communication with Sicily. In A. D. 410 Rhegium became the limit of the progress of Alaric, who after the capture of Rome adranced through Campania, Lucaoia,

## RIIENUS.

and Bruttium, laying waste those provinces on his march, and made himself master of Rhegium, from whence he tried to eross over into Sicily, but, heing frustrated in this attempt, retraced his steps as far as Consentia, where he died. (IJist. Miscell. xiii. p. 535.) Somewhat later it is described by Cassiodorns as still a flourishing place ( I'ar. xii. 14), and was still one of the chief cities of Bruttium in the days of Paulus Diaconus. (Hist. Lang. ii. 17.) Durieg the Gothic wars after the fall of the Westcrn Empire, Rbegimn bears it considerable part, and was a strong fortress, but it was taken by Totila in A. D. 549, previons to his expeclition to Sicily. (Procop. B. G. i. 8, iin. $18,37,38$.) It subsequently fell aqain into the hands of the Greek emperors, and continued subject to them, with the exception of a slort periol when it was occupied by the Saracens, until it parsed under the dominion of Robert fiuistard in A. D. 1060. The modern city of Regyio is still a comsiderable place, with a population of about 10.000 souls, and is the capital of the province of Calubria C'ttra; but it bas suffered severely in modern times from earthquakes, laving been alimost entirely destroyed in 1783, and again in great part overthrown in 1841. It has no remains of antiquity, except a fow inscriptions, but numerous coins, urbs, mosaics, and other ancient relics have been brought to light by excavations.
Rhegium was celebrated in adtiquity as the birthplace of the lyric poet Ibycus, as well as that of Lycus the historian, the father of Lycophron. (Suid.s. v. "1Guкos; Id. s. r. мíkos.) It gave birth also to the celebrated sculptor Pythagoras (IDiog. Laïrt. viii. 1.§47; Paus. vi. 4. § 4); and to seteral of the minor Pythagorean philosophers, whose names are enumerated by lamblichus ( I'it. Pyth. 267), but none of these are of much note. Its territory was fertile, and noted for the excellence of its wincs, which were especially esteemed for their salubrity. (Athen. i. p. 26.) Cassiodorus describes it as well adapted for vines and olives, but not suited to corn. (J'ar: xii. 14.) Another production in which it excelled was its breed of mules, so that Anaxilas the despot was repratedly victor at the olympic ganes with the chariot drawn by mules ( $\alpha \pi \dot{\eta} \nu \eta$ ), and his son Leophron obtained the same distinction. One of these sictories was celebrated by simonides. (Heraclid. Polit. 25 ; Athen. i. p. 3 ; Pollux, Onomast. v. 75.)

Rhegium itself was, as already mentioned, the termination of the line of high road which traversed the whole length of Southern Italy from Capua to the Sicilian strait, and was first constructed by the practor l'opilins in B. C. 134. (Orelf. Inscr. 3308 ; Alommsen, Iner. R. N. 6276 ; Ritschel, Mon. Epigr. pp. 11, 12.) But the most frequented piace of passage for crossing the strait to Nessana was, in ancient as well as in modern times, but at Rhegium itself, but at a spot ahout 9 miles further N., which was marked by a colums, and thence known by the name of Contrmsa limbgins. (/tin. Ant. pp. 98, 106,
 v. p. 25\%.) The distance of this from Rhegium is given both by I'liny and Strabo at 12.3 miles or 160 stadia, and the latter places it only 6 stadia from the promontary of Cacnys or Punta del l'eazo. It mnst therefore have heen sitnated in the neighbourhood of the modern village of Villa San Giovanni, which is still the most usual place of passage. But the distance from Rhegium is overstated by both geographers, the P'unta del Pcwo itself beiag less
than 10 miles from Regyio. On the other hand the inscription of La Polla (Fortun Popilii) gives the distance from the place of passage, which it desienates as "Ad Statuam," at only 6 miles. (Mumunseb, Inscr. R. N. 6276.) Yet it is probable thit the spot meant is really the same in both cases, as from the strong current in the straits the place of embarkation must always have been nearly the same.
[E. II. B.]

COIN OF RHEGUUM.
RHEGMA ('Pì $\gamma \mu a$ ), the name of a lake or lagune formed by the river Cydnus in Cilicia, at its mouth, about 5 stadia below Tarsus; the inhabitants of this city used it as their port. (Strab. xiv. p. 672; Stadiusm. Mar. Mag. §s 155, 156, where it is called 'Pry ${ }^{\prime}{ }^{\prime}$; It. Hiervs. p. 579.) The tro last authorities place the lihegma 70 stadia from Tarsus, which may possibly refer to a particular point of it, as the Rhegma was very extensive.
[I. S.]

## RHEGMA. [Epimhirinitae.]

RHEI'MEA ('Petuéa, Böckh, Inscr. no, 4590), a town of Auranitis, as appears from an inscription found by Burckbardt (Travels, p. 69) at Deir-ch $\boldsymbol{L}$ cben, situated three-quarters of an honr from the medera village of Rima-el-Luhff, where there stands a building with a flat roof and three receptacles for the dead, with an inscription over the door. (Bückh, Inscr. 4587-4589; comp. Buckingham, Arab Tribes, p. 256.)

RHEITI. [ATHICA, p. 328, n.]
RHENI. [Rent.]
RHENEIA. Delos, p. 760.]
RHENUS ('Pîvos), one of the largest rivers in Europe, is not so long as the Danube, bat as a commercial channel it is the first of European rivers, and ns a political boundary it has bcen both in ancient and modern times the most important frontier in Europe. The Rhine rises in the mountains which belong to the group of the Se . Gothard in Switzerland, about $46^{\circ} 30^{\circ} \mathrm{N}$. lat. There are threo branches. The lorder-Rhein and the Mittel-Rhein meet at Dissentis, which is only a few miles from their respective sources. Tho united stream has an east by north course to Reichenaw, where it is joined by the Hiater-Rhein. At Chur (Curin), which is below the junction of the Hinler-Rheia, the river becomes navigable and has a general northern course to the Bodensec or Lake of Constanz, the Lacus Brig:utimus or Venetus. This lake corsists of two parts, of which the mestem part or Cintersce, is about 30 feet lower than the chief part, called the Lake of Constanz. The course of the Nhine from the Lutersce is westward, and it is navigable as far as the falls of Schaffhausen, which are not mentioned by any of the ancient geographers. It is interrupted by a smaller fall at Layfinburg and there is a rapid near Rheinfclden, 10 miles below Laufenburg. The course is still wast to

Basle (Basiliz), where the Rhine is ahout 800 feet above the sea, and here we may fix the termination of the Upper Rhine. The drainage of all that part of Switzerland which lies north of the Lake of Geneva and the Bernese Alps is carried to the Rbine by the Aar, which joins it on the left Lank at Coblenz, one of the Roman Confluentes.

From Basle the Rhine has a general north course to Bonn, where it enters the low country which forms a part of the great plain of Northern Europe. This may be called the Niddle Rhine. In this part of its course the river receives few streams on the left bank. The chief river is the Mosel (Mosella), which joins it at Coblenz (Confluentes). On the right bank it is joined by the Neckar (Nicer), the Dfain (Moenus), wbich joins it at Mairz (Moguntiacuin), and the Lahn (Laugana), which joins it at Tiederlohnstein.

Below Bonn the river has still a general north course past Cologne (Colonia Agrippineasis) as far as Wesel, where it is joined on the right bank by the Lippe (Luppia), and higher up by the Roer or Ruhr (Rura). Between Cologne and Wesel it is joined on the west side by the Erft. From Wesel its course is NW, and then west to Ponnerden in the kingdom of the Netherlands. At Pannerden it divides into two branches, of which the southern is called the Waol (Vabalis), and the northern retains the name of Rbine. The Waal has the greater volume of water. It runs westward, and is joined at Goreum on the left bank by the Maus (Mosa). The Mas itself divides several times after its junction with the Waal. The main branch is joined on the right side by the Leck, a branch which comes from the Rhine Proper at Wyck by Duurstede, and flows past Rotterdam into the North Sea.

The Rhine, which was divided at Pannerden, runs north to Arnheim (Arenacum), above which town it commonicates with the $\bar{Y}$ ssel at Doesburg by a channel which is supposed to be the Fossa Drusiana, the cana] of Drusus. [Flevo Laces.] The Issel runs north from Doesburg to the Zuider Zee, which it enters on the east side below the town of Kampen. The Rhine rass westward from Arnheim, and at Wyck by Duurstede, as already said, seads off the branch called the Leck, which joins the Maas. The Fhine divides again at Utrecht (Trajectum): one branch called the Vecht runs nortbward into the Zuider Zee; the other, the Rhine, or Old Rhine, continues its course with diminished volume, and passing by Leiden enters the North Sea at Kotuyck. The whole course of the Rhine is estimated at about 950 miles.

The delta of the Rhine lies between the Tssel, which flows into the Zuider Zee, and the Maas, if we look at it simply as determined by mere boundaries. But all this surface is not alluvial ground, for the eastern part of the proviace of C'trecht and that part of Gnelderland which is between the Rhine, the Zuider Zee, and the Yssel contains smail elevations which are not alluvial.

This description of the lhine is necessary in order to understand what the ancient writers have said of it.

The first description of the Rhine that we possess from any good authority is Caesar's, though he bad not seen much of it. He says (B.G. iv. 15) that it rises in the Alpine regions of the Lepoatii, and passes in a long course along the boundaries of the Nantuates, Helvetii, Sequani, Mediomatrici, Triboci, and Treviri, in a rapid course. The name Nantuates
is corrupt [Nantuates]. If we make the linits of the Treviri extend mearly to the Netherlands or the commencenent of the low country, Caesar has shown pretty clearly the place where the khine enters the great plain. On approaching the occan, he says, it forms many islands, and enters the seat by several mouths (capita). He knew that the Rhine divided into two minin branches near the sea; and he says that one of the branches named the Vabalis (1taal) joined the Mosa (Mcas), and formed the Insula Batavorum [Batavomes 1ssula]. He speaks of the rapidity of the river, and its breadth and depth in that part where he built his wooden bridge over it. (B. G. iv. 17.) He made the bridge between Coblenz and Audernach. higher up than the place where the river enters the low country. He crossed the Rhine a seond time by a bridge which be constructed a little higher np than the first bridge. (B. G. vi. 9.)

Tbose persons, and Caesar of course, who said that the Rhine had more than two outlets were criticised by Asinius Pollio (Strab, iv. p. 192) ; and Virgil (A em. viii. 724 , Rhenique bicoruis) follows Pollio's authority. But if the Mosa divided as it does now, Caesar was right and Pollio was wrong.

Strabo, who had some other authorities for bis description of the Rhine besides Caesar, and perhaps besides Caesar and Pollio, does not admit Pollio's statement of the Rhine having a course of 6000 stadia; and yet Pollio's estimate is much below the truth. Strabo says that the length of the river in a rigbt line is not much above one-half of Pollio's estimate, and that if we add 1000 stadia for the windings, that will be enough. Tbis assertion and his argument founded on the rapidity of the strean, show that he knew nothing of the great circuit that the Rhine makes between its source and Basle. He knew, however, that it flowed north, but uoluckily be supposed the Seine also to flow porth. He also made the great mistake of affirming that the county of Kent may be scen from the months of the Phine. He says that the Rhine had several sources, and he places them in the Adulas, a part of the Alps, In the same mountain mass be places the source of the Aduas, or Addua (Adda), which flows south into the lake Larius (Lago di Como). [Addi'A.]

The most difficult question about the Rhine is the outlets. When Pliny and Tacitus wrote, Drusus the brother of Tiberius had been on the lower Rhine, and also Germanicus, the son of Drusus, ano other Roman comunanders. Pliny (iv. 14) speaks of the Rbenus and the Moss as two distinct rivers. In another passage (iv. 15) he says that the Rhine has three outlets: the western, named llelium, flows into the Mosa; the most northerly, named Flevum, flows into the lakes (Zuider Zee); and the middie branch, which is of moderate size, retains the name Rhenus. He supposed that there were islands in the Rhine between the Helium and the Flevum; and the Batavorum Insula, in which were the Canninefates also, is one of them. He also places between these two branches the islands of the Frisii, Cbauci, Frisiabones, Sturii, and Marsacii. The Flevum of Pliny corresponds to the Flevo of Mela [Flevo Lacus], who mentions this branch and only another, which he calls the Phenus, which corresponds to Pliny's Rhenus. Maia mentions no other outlets. He considered the third to be the Mosa, we may suppose, if he knew anything about it

Tacitus (Ann. ii. 6) observes that the Ehine
divides into two branches at the head of the Batavorum Insula. The branch which flows along the German bank keeps its name and its rapid course to the Ocean. The branch which floms on the Gallic bank is broader and less rapid: tbis is the Vahalis (Hiual), which flows into the Mosa. (Hist. v. 23.) [Bitavonim Inscla.] He knows only two outlets of the Fhine, and one of thern is tbrough the Mosa. The Rhine, as be calls the eastern braneh, is the bonodary between Gallia and Germania. East of this eastern branch he places the Frisii (Ann. iv. 72) ; and herein he agrees with Pliny, who places them between the Middle Rbive and the Flevam. Accordingly the Rhenas of Tacitus is the Rhenus of Mela and Pliny.

This third branch of the Rhine seems to be that whicb Tacitus calls the work of Drasus (Ann. ii. 6), and which Sentonius (Claudius, c. 1) mentions withont saying where it was: "Drusus trans Rhenum Gossas nori et immensi operis effecit, quae nune adhnc Drusinae rocantur." Germanicus in his expedition a atainst the northern Germans (Tac. Aun. ii. 6), ordered his fleet to assemble at the Batavorum lusula, whence it sailed through the Fossa Drusiana, and the lakes into the Ocean and to the river Amisia (Ems). This course was probably taken to aroid the navigation along the sea-coast of Holland. On a former occasion Germanicus had taken the same conrse (Ann, i. 60), and his father Drusus had done the same.

Ptoleny (ii. 9. § 4), who wrote after Tacitus and Pliny, is acquainted with three ootlets of the Ehine. He places first the outlet of the Mosin in $24^{\circ} 40^{\prime}$ long., $53^{\circ} 20^{\prime}$ lat. He then eomes to the Batavi and to Lugdanum, which town he places in $26^{\circ} 30^{\circ}$ long., $53^{\circ} 20^{\prime}$ lat. The western mouth of the Rhine is in $26^{\circ} 45^{\prime}$ long., $53^{\circ} 20^{\prime}$ lat. The middle montb is in $27^{\circ}$ long., $53^{\circ} 30^{\prime}$ lat. ; and the eastern in $28^{\circ}$ long. $54^{\circ}$ lat. His absolate numbers are iocorrect, and tbey may he relatively incorrect also. His western ontlet is a little ea-t of Lugdunum, a日d this should be the Old Rline or Rhine l'roper. The middle month is further east, and the eastern month further east still. The eastern mouth may be the Fssel but it is difficult to say what Ptolemy's middle month is. Gosselin supposes that Ptolemy's western month may bave been about Zandwoord. He forther supposes that the Middle Month according to his measures was abont the latitude of Bokknm, about 4 leagnes above Zandwoorl, and Jin adds that this month was not known to those writers who preceded Ptolemy, and we may conjecture that it was little used, and was the first of the outlets that ceased to be navigable. The third month he supposes to carrespond to the passage of the Whie. But nothing can be more vague and unsatisfactory than this explanation, founded on Itolemy's measurements and pure conjecture. So much as this is plain. Ptolemy does not reckon the Musa as one of the outlets of the Rhine, as the Roman writers do; and he makes three outlets besides the ontlet of the Mosa.

This conntry of swamps, rivers, and forests through which the 1 unter Rhine flowed has certainly undergone great changes since the Roman period, owing to the Howis of the Rhine and the ianndations of the sea, and it is very difficuit, perhaps impossible, to make the ancient descriptions agree with the modern localities. Still it was a fixed opinion that the Eline divided into two great branches, as Caesar oyys, and this was the division of the lihine from
the Waal at Ponnerden, or wherever it may hare bcen in former times. One of the great outlets was that which we call the Mans that flows by Rotterdam: the other was the lihine Proper that entered the sea near Leiden, and it was the stream from Pannerdea to Leiden that formed the boudary between Gallia and Germania. (Servius, ad Aeneid viii. 727.) Ptuleny places all his three outlets in Gallia, and it is the eastern month which he makes tbe bounỏary between Roman Gallia and Great Germania (ii. 11. § 1). If his eastern mouth is the Yssel, he makes this river from Arnheim to the ontlet of the Yissel the eastern limit of Roman Gallia ia his tirre. This may be so, but it was not so that Pliny and Tacitus understood the boundary. Whatever chances may have taken place in the Delta of the Rhine, D'Anville's conclusion is just, when he says that we can explain the ancient condition of the places sufficieatly to make it agree with the statements of the ancient authors.

The floods of the Phine have bees kept in their limits by embankments of earth which begin at Hesel, in the Prassian province of Düsseldorf, and extend along the Rhine and its branches to the sea. The Romans began these works. In the time of Nero, Pompeins Paallinus, to keep his soldiers emploged, finished an embankment ("agger") on the Ehine which Drusas had begun sisty-three years before. (Tac. Ann, xiii. 53.) It has sometimes beea surposed that this "agger" is the "moles " which Civilis broke dowa io the war which be carried on against the Romans on the Lower Rhine. (Tac. Hish. v. 19.) The consequence of throwing down this " moles" was to leave nearly dry the chaunel betweea the Batavorum Insula anil Germania, which channel is the Proper Phine. The effect of throwing dowa the "moles" was the same as if the river bad been driven back ("velat abacto amne"). This could not have been effected by destroying an embankment ; bat if the " moles" of Drusus was a dike which projected into the river for the purpose of preventing most of the water from going down the Wual, and for maintaining the channel of the Whine on the north side of the Batavoram Insula, we can anderstand why Civilis destroged and why Drusus had cunstracted it. Drasus constructed it to keep tho channel fall on the north side of the Batavorum Insula, and to maiatain this as a frontier against the Gernans : and so we have another proof that the Rbine Proper or the Middle Rhiae was the bonndary between Gallia and Germania in this part, as every passage of Tacitus shows in which he speaks of it. Civilis destroyed the " moles "to stop the Romans in their pursuit of him ; for they were on the sonth side of the island, and had no boats there to make a bridge with. Ukert anderstands it so, and he is probably right.

Another great Roman work in the Delta of the Rhine was the canal of Corbulo. The Roman conquerors left durable monuments of their dominion in all the countries which they invaded, even in the watery regions of the Rhine, where they had to fight with floods, with the tempests of the ocean, and a warlike people whose home was io the marshes and forests.

The Khine was the great frontier of the Romans against the German tribes. All the cities on the west or Gallic side, from Leiden to Basle, were either of their foundation or were strengthened and fortified by them. In the time of Tiberius eight legions guarded the fronticr of the Rhine.

This article may be read with the articles Batavorta Insela, Flevo Lacts, Fossa Cornclonis, Nosa, Mosella, and Gallia Trassalpixa.
(D'Anville, Notice, qc., "Rhenus"; Penny Cyclopaedia, art. "Rhine"; and Ukert, Gallien,-who has collected all the ancient and many modern authorities.)
[G. L.]
RHEXU'S (Reno), a river of Gallia Cispadana, and one of the sontiern tributaries of the Padus. (Plin. iii. 16. s. 20.) It flowed within about a mile of the walls of Bononia (Bologna), on the W. side of the city, and is celebrated in history on account of the interview betreen Antony, Octavian, and Lepidus, which is generally believed to have taken place in a small island formed by its waters. [Boxosia.] It has its sources in the Apennines nearly 50 miles abore Bologna, and is a considerable stream, though called by Silius Italicus "parrus," to distinguish it from its far greater damesake, the Rhine. (Sil. Ital. viii. 599.) In the time of Pliny it is proballe that it discharged its waters into the principal channel of the Padus, but at the present day they are turned aside into an artificial channel before reaching that river, and are thus carried into the arm now known as the $P$ o di Primaro. Hence the month of that branch of the $P 0$ is now called the Foce del Reno. Pliny tells us that the reeds which grew on the banks of the Rhenus were superior to all others for making artows. (Plin. xvi. 36. s, 65.) [E. H. B.]
RHESAENA ('Pé $\sigma a w a$, Ptol. r. 18. § 13 ; 'Pé $\sigma i v a$, Steph. B. s. v.; Amm. Marc. exxii. 5 ; Ressaina, Tab. Peut.; Rasin, Notit. Imp.: Eth. 'Perovànŋs, Steph. B. s. v.), a torn of considerable importance at the northern extremity of Mlesopotamia ; it was situated near the sources of the Chaboras (Khabir), on the great road which led from Carrbae to Nicephorium, about 88 miles from Nisibis and 40 from Dara. (Procop. B. P. ii. 19, de Aedif. ii. 2.) It was near this town that Gordian the Yoonger fell in a battie with the Persians. (Amm. Marc. L c.) A coin exists of the emperor Decius, bearing the legend CEח. KOA. PHCAINHCIRN., which may in all probability be referred to this town. In the Notit. Imp. the place is subject to the govermment of the Dos Osrloenae (.Notit. Dign. ed. Buikking, i. p. 400), and a bishop of Resaina is mentioned among those who subscribed their names at the Conncil of Nicaea. Under Theodosius, the town appears to have been partially rebuilt, and to hare received the title of Theodostorolas. (Hierocl. p. 793.) There can be no ioubt that it is at present represented by Ras-al-Ain, a considerable entrepôt of conmerce in the province of Diarbehr. It was nearly destroved by the troops of Timirr, in A. D. 1393. (D'Herbelot, Dict. Orient. i. p. 140, iii. p. 112 ; Niebuhr, ii. p. 390.)
[V.]

## COIN OF RHFSAENA.

RIIETICO, a mountain of Germany, mentioned only by Yomp. Mela (iii. 3), alung with Mount Taunns. As no particulars arc stated it is impos-
sible to identify it, and German writers are so divided in their opinions that some take Rhetico to be the name of the Siebengebirge, near Bonn, while others identify it with a mountain in the Tirol. [L. S.]

RHidagu's (Curt. vi. 4. § 7), a river of Hyrcania, which flurs from the mountains NIW. to ihe Caspian. Alexander crossed it on his march in pursuit of Dareins. It apperrs to be the samee as the Choatres of Ammizuus (xxiii. 24), and may perhaps be represented by the present $A d j$ iva. [V.]
RHINOCORU'RA or RHINOCOLU'RA ('Pavoкб́povpa, Polyb. Ptol. Jusepl.; 'Puokidoup', Strab.: Eth. 'Pivoкoupaípos, 'Pivokovpoupírns), a maritime city on the confines of Egypt and Palestine, and consequently reckoned somelimes to one country, sometimes to the other. Strabo, going south, reckons Gaza, Raphia, Rluinocolura (xvi. p. 759); Polybins, going north, reckons it to Egypt, calling Raphis the first city of Coelessria (v. 80). Ptoleny also reckons it to Egypt, and places it in the district of Cassiotis (iv. 5. § 12), between Ostracine and Anthedon. The Itinerarium Antonini (p. 151) places it axii. M.P. south of Rafia, and the same distance north of Ostracena. The following corious account of its origin and name is given by Diodorus Siculus. Actisanes, king of Aethiopia, having conquered Egypt, with a riew to the suppression of crime in lis newiy-acquired dominion, collected together all the suspectei thieves in the country, and, after judicial conviction, cut off their noses arid sent them to colonise a city which he had built for them on the extremity of the d-sert, called, from their mishap, Rhinocolnra (quasi pī̀os кódoupou=curti, al. p. кeipaotai), sitnated on the confines of Egypt and Syria, near the shore; and from its situation destitute of nearly all the necessaries of life. The soil areund it was salt, and the sinall supply of well water within the walls was hitter. Necessity, the mother of iovention, led the iolabitants to adopt the following nuvel expedient for their sastenauce. They collected a quantity of reeds, and, splitting them very fine, they wove them into bets, which they stretched for many stadia along the sea-sbure, and so snared large quautities of quails as they cane in vast flights from the sea (i. 60). Strabo copies this acccunt of its origio (l. c.); Seneca ascribes the act to a Persian king, and assigns the city to Syria (de Ira, iii. 20). Strabo (sri. p. 781 ) mentions it as having beeu the great emporium of Indian and Arabian merclandise, whicb was discharged at Leuce Come, on the eastern coast of the Red Sea, whence it was convesed, viâ Petra, to Rhinocolura, and thence dispersed to all quarters. In his day, however, the tide of commerce flowed chiefly down the Nile to Alesandria. The name occors in Josephins, but onconnected with any important event. It is known to the ancient ecclesiastical writers as the division between the possessions of the sons of Nash. S. Jerome states that the "River of Egypt" flowed between this city and Pelasinm (Fieland, Palaest. pp. 285, 286, 969-972); and in one passage the LXX. translate "the liver of Egypt" by Rhinocorura. (lsoiah, xxvii. 12.) It is remarkable that this penal colony, fuunded for mutilated convicts, should have become fruitful in saiols; and its worthy and exemplary bishop Melas, in the time of the Arian persecution, who was succeeded by his hrother Solon, became the fonder of a snccession of religious men, which, according to the testimony of Sozonen, contiuned to liis time. (Hist. Ecdes vii. 31.) Rlinocurara is now El-Arish, as the $z z 3$

liver of Egypt is Wady－el－Arish．The village is situated on an eminence about half a mile from the sea，and is for the most part enclosed within a wall of considerable thickness．There are some Ronsan ruins，such as marble columns，\＆c．，and a very fine well of goed water．（Irby and Mangles，Travels， p．174，October 7．）
［G．W．］
RH1PE．［Exisire．］
RII11＇AE1 MoN＇TLS（ $\tau$ à＇Pıtaia ö $\rho \eta$ ），a name applied by tirecian fancy to a mountain chain whose jeaks rose to the N ．of the known world．It is probably comnected with the word forai，or the chill rushing blasts of Bopeas，the mountain wind or ＂tramontana＂of the Greek Archipelago，which was conceived to issue from the caverns of this mountain range．Hence arose the notion of the lappiness of those living beyond these mountains－ the unly place exempt from the northern blasts．In fact they appear in this furm of＇ P itai＇，in Alcman （Fragm．p．80，ed．Welcker），a lyric poet of the 7th century в．с．，who is the first to mention them． The contemporary writers Damnstes of Sigeum（ap． Steph．B．s．v．＇ $\mathrm{T} \pi \in p 6 \delta_{p \in o z}$ ）and Hellanicus of Lesbos （ap．Clem．Alex．Stron，i．p． 305 ）agree in their statements in placing beyond the fabled tribes of the N．the Rhipaean mountains from which the north wind Llows，and on the other side of these，on the sea－coast，the Hyperboreans．The legends comnected with this imagined range of mountains lingered for a long period in Grecion literature，as may be seen from the statements of Hecataeus of Abdera（ap． Aelian．H．A．xi．1）and Aristotle（．1．c．i．13； comp．Suph．Oed．Col．1248；Sihol．ad loc；；Strah， vii．pp．295，299．）Herodotus knows nothing of the Rhiprean mountains or the Alps，though the positive Fengraphy of the N．begins with him．It would be an idle inquiry to identify the Phipaean range with any actual chuin．As the knowledge of the Greeks advanced，the geographical＂mytius＂was moved further and further to the N ．till it reached the 48 th degree of latitude N ．of the Maeotic lake and the Caspian，between the Don，the Volga，and the Jaik，where Europe and Asia melt as it were into each wther in wide ן lains or steppes．These＂monn－ tains of the winds＂followed in the train of the metcorological＂mythus＂of the Hyperboreans which wandered with 11 eracles far to the W．Geogra－ phical discovery embudied the picture which the imagination had formed．Pesedonius（ap，Athus． 1i．p． 223, d．）seems to have considered this range to be the Alps．The Roman pocts，borrowing from the Greeks，male the lihipaean chain the extreme lomit to the N．（Virg．Georg．i．24t）；Propert．i．6．3； Sil．18．xi．459）；and Lucan（iii．273）places the sources of the Tamais in this chain．（Comp．Mela， i．19．§ 18；Illu，iv．24；Atmm．Marc，xxii．8．§38； Procop．R．（i．iv．6；Sid．Apkll．ii．343；Jwnand． Git．16；Orus．i．2．）In the earlier whters the form is Kipaci，but with Ithiny and those who followed him the $p$ becomes aspirated．In the grographly of I＇thlemy（iii．5．§§ 15，19）and Mar－ cian（＇leripl．§＇ 39 ，cd．Dilot）the Rhiprean chain appears to be that enontly rising ground which divides the rivers which flow into the Daltic from those which min to the kuxine．
［E．B．J．］
RIllsPla（＇Pt $\sigma \pi i a$ ），a place in l＇pper l＇amonia， of unectain site（Ptul，ii．15．§ 4 ；Orelli， $1 n-$ script．n．4991），thouch it is commonly iknatified with Cour．（Shlünwisner，Antiquitates Sabrriac， p．41．）
［1．S．］
H11THYMNA（＇Piovpua），a town of C＇rete，which
is mentioned by Ptolemy（iii．17．§ 7）and Pliny （iv．20）as the first town on the N ．coast to the E ．of Amphimalla，and is spoken of as a Cretan city by Steph．B．，in whose text its name is written Rhi－
 It is also alluded to by lycophron（76）．The modern Rhithymnos or Retime retains the name of the ancient city upon the site of which it stands， Eckhel（Numi 1et．Anecdoti，p．155；comp．Rasche， vol．iv．jit．i．p．1024）first assigned to Rhithymna its ancient coins；maritime emblems are found on them．（Pasbler，Crete，vol．i．p．101．）［E．B．J．］

COLN OF RHITHYMNA．
RHIUM（＇Piov）．1．A promontory in Achaia． ［Vol．1．p．13，a．］

2．A town in Aessenia，in the Thuriate gulf，and also the name of one of the five dirisions into which Cresphontes is said to have dividel Messenia， （strab．viii．Pp．360，361．）Strabo describes Rhium as over aguinst Taenarum（ãevavtion Tawápov）， which is not a very accurate expression，as hardly． any place on the western coast，except the vicinity of Cape Acritas，is in sight from Taenarum．（Leake， Morea，vol．i．p． 459 ．）
heHillslava．［Riestava．］
IHHLZANA（＇PiGava，1＇tal．vi．21．§ 2；＇Pígava， Marcian，Peripl．i．§ 33 ，ed．Maller），a town on the coast of Gedrosia，in the immediate neighbourhood of the most western mouth of the Indus．The diffe－ rences hetween Ptolemy and Marcian with regurd to distances do not seern here reconcileable．［V．］
RHIZE＇N1A（＇Pi〔qvia，Steph．B．s．v．），a town of Crete of which nothing is known；there is an ＂eparkhia＂now called Rhiso－kastron，lut it is a mere guess to identify it with this．［E．B．J．］

RHIZIUS（＇Pigios），a small coast river of Pontus， between the lris and Acampsis，still bearing the name of Rizch．（Arrian，Peripl．P．E．p． 7 ； Anonym．Peripl．I．E．p．12．）
［L．S．］
1iHIZON（＇PiG $\omega$ v，I＇olyb．ii．11；Strab．vii．p．316； Liv．xlv．26；Steph．B．s．v．：＇Pi乌áva，P＇tol．ii． 17. § 12；Rhizinium，Plin．iii．26；Rucimum，Geogr． lav．v．14；al Zizio［ad Rhisio？］，I＇eut．Tab．），a town of Dalmatia，situated upon a gulf which bore the name of Rinizosicus Sinus（＇Pigovuc̀s кб才тоs， Strab．vii．pp．314．316；Ptul．ii．17．§ 5）．Teuta， the Illyriau queen，took refige in this her last stronghold，and obtained peace upon the conqueror＇s terms．Scylax（ p .9 ）has a viver Nhizus（＇Pícous， comp．Poly ${ }^{3} . l$. c．；Plilo，ap．Steph．R．s．v．Boubon）， but this can be no other than the Bocche di Cattaro， celebrated for its grand scenery，which gives this gulf with its six mouths the appearance of an inland lake，and hence the mistake of Scylax，and Polylius， who salys that Rhizen was at a distance from the sea．In Risano，standing on rising ground at the extremity of a beautiful bay that runs to the N． from P＇erasto，are remains of the Roman colony．A Monaic pavement and coins have been found there． Near Risano is a cavern from which a torient runs in winter，and falls into the bay，but it is not known whether this be the balmatian cavern mentioned by lliny（ii．44）．It is liere that Cadmus is said to
have retired among the Enchelees. (Scylax, l. c.) Whether the Phoenicians lad reached the E. shore of the Adriatic does not appear, but it could only be from traces of Phoenician settlements that this term wals assigned to his wanderings. (Wilkinson, Datmatia, vol. i. p. 381; Neigehaur, Die Suid-Slaven, p. 30 .)
[E. B. J.]
RHIZONICUS SINUS. [Ruizon.]
liHizo'PhAGI AETHIOl'ES ('Pisuøá子ot, Diodor. iii. 23 ; Strab. xvii. p. 770, seq. ; Ptol. iv. 8. § 29). one of the nomerous tribes of Aethiopia, whom the Greeks named after the diet pecnliar to them. The root-eating Aethiopians dwelt abore Meroë, on either bank of the Astaboras ( Tacazzé), and derived their principal sustenance from a kind of cake or polenta, made from the reeds and bulrushes that covered that alluvial region. The roots were first scrupulously cleansed, then powdered between stones, and the pulp thus obtained was dried in the sun. The Rhizophagi are described as a mild and harmless race, living in amity with their neightours, and, probably because they had nothing to lose, unmolested by them. Their only foes were lions, who sometimes committed the greatest havoc among this unarmed race; and their best friends, according to Diodorus (comp. Agatharch. ap. Hudson, Geog. Graec. Min. p. 37), were a species of gnat, or more probably gadfly, which at the summer solstice ( $\dot{\varepsilon} \pi \delta \quad \tau \grave{\eta} \nu \dot{a} \nu a \tau 0 \lambda \eta \nu \nu$ rov̂ кuvos) assailed the lions in such numbers, that they fled from the marshes, and permitted the Rhizophagi to recruit their losses. The site of this otscure tribe probably corresponds with that of the Shihos (Bruce, Travels, vol. iii. pp. 69-72), who now occopy the southern part of the teritory of Taka or Atbara, on the upper Tacazze. [W. B. D.]

RHIZUS (Pisous), a port-town of Pontns, at the mouth of the river Rinizius, about 120 stadia to the east of the river Calns, and 30 stadia west of the mouth of the Ascuras. In the time of Procopius (Bell. Goth. iv. 2) the place had risen to considerable importance, so that Justinian surrounded it with strong fortifications. The Table mentions on its site a place under the name of Reila, which is probahly only a corruption of the right name, which still exists in the form of Rizeh, though the place is also called Irrish. - (Comp. Procop, de Aed. iii. 4: Ptol. v. 6. §ु 6.)
[L. S.]
RHIZUS ('Pi(Güs: Eth. Pi Sov́vtios), a town of Magnesia in Thessaly, whose inlabitants were transpurted to Demetrias upon the foundation of the latter city. (Strab. is. Pp. 436, 443; Steph. B. s. v.; Plin. iv. 9. s. 16.) We learn from Scylax (p. 24) that Khizus was outside the Pagasaean gulf upon the exterior shore; but its esact position is uncertain. Leake places it at the ruins castward of Nekhori (Northern Greece, vol. iv. p. 383).
RHOCCA ('Póкка), a town of Crete, wherethere was a temple to Artemis Kioccaea (Aelian, N. A. xii. 22). Pocucke (vol. ii. p. 247) fonnd remains at the village which still bears the name of Rhokka, to the S. of the ancient Methymna; and there can be little doubt but that this is the site of Rhocea, which, as is shown by Aslian (N. A. xiv. 20), was near Methymna (Höck, Kreto, vol. i. p. 391; Pashley, Crete, vol. ii. p. 41.)
[E. B. J.]
RHODA or RHODUS ('Pód $\eta$, Steph. B. s. $v$; Rhoda, Mela, ii. 6; Liv. xxxiv. 8; 'Púbos, Strab. xiv. p. 654 ; Enstath. ad Dion. Per. 504; called by Plol. ii. 6. § $20,{ }^{\prime} \mathrm{P} u$ ölmodıs, where we should prolably read 'P $\sigma \bar{\delta} \eta \pi{ }^{\prime} \dot{\delta} \lambda(s)$, a Greek emporinm on the coast of the Indigetae in Hispania Tarraconeusis,
founded according to Strabo (l. c.) by the Rhodians, and subsequently taken pussession of by the Massiliots. It is the inodern Rosas; but tradition kiys that the old town lay towards the headland at Sant Pedro de Roda. (Ford, Handbook of Spain, p. 249 ; comp. Meurs. Rhod. i. 28; Marca, Hisp. ii. 18; Martin, IIist. des Gaules, p. 218; Florez, Med. iii. p. 114; Miomnet, i. p. 148.) [T. H. D]

RHO'DANU'S' ('Poठ́avós: Rhóne). The lihone rises in Switzerland, in a glacier west of the pass of St. Gothard and south of the Gallenstuck, is monntain above 12,000 feet high. It has a peneral course, first SW., then W. by S. as far as Martigny, the Octodurus of Caesar (B. G. iii. 1). The course from Martigny to the Lake of Genera forms nearly a right angle with the course of the river above Mortigny. The length of the valley through which the Rhone flows to the Lake of Geneva is above 90 miles. This long valley called Wallis, or the Vallais, is bounded by the highest Alpine ranges: on the north by the Bernese Alps, which contain the largest continnous mass of snow and ice in the Swiss mountains, and on the south by the Lepontian and Peunine Alps. The Lake of Genera, the Lacus Lemannus of the Romans [Lemanus], which receives the Rhone at its eastern extremity, is more than 1200 feet above the surface of the Mediterranean.

The Lake of Gencra lies in the form of a crescent between Switzerland and Savoy. The convex part of the erescent which forms the north side is above 50 miles in length; the concave or southern side is less than 50 miles in length. The widest part, which is about the middle, is 8 or 9 miles. The greatest depth, which is near some high cliffs on the south coast, is stated variousiy by different authorities, some making it as much as 1000 feet. The Rhone enters the lake at the east end a muddy stream, and the water flows out clear at the western extremity prast Geneva, an ancient city of the A!iobroges. [Geneva.]

Below Geneva the Rhone runs in a rapid course and in a SIV. direction past Fort $I$ Eclase. Fort $l$ Ecluse is at the point describel by Caesar (B. G. i. 9) where the Jura overhangs ilie course of the Rhone. [Helvetin.] The river then rmis south past Seyssel, and making a bend turns north ayain, and flowing in an irregalar western conrse to Lyon (Lugdunum) is joined there by the Suone, the ancient Arar [Arak; Lugdexus]. The length of the course of the Rhone from the Lake of Genera to Lyon is about 130 miles. The Sainte, as Caesar says, is a slow river, bnt the current is seen very plainly under the bridges in Lyon. The lhone is a rapid stream, and violent when it is swelled by the rains and the waters from the Alpine regions.

From Lyon the lhone flows in a general southern course. The direct distance is abont 150 miles from Lyon to Arles (Arelate) where the river divides into two large branches which include the isle of Carmague. The whole course of the latone from the ice-fields of Switzerland to the low shores of the Mediterrane:m is above 500 miles.

The valley of the Rhone below Lyon is narrow on the west bauk as far as the junction of the $A r$ décke, and it is bounded by high, hare, and rocky heights. Some of the hill slopes are planted with vines. All the rivers which flow into the lihome from the bighlands on the west are smail: they are the Ardeche, Céze, Gerdon (Vardu), and some smaller streams. The left bauk of the Nhone from

Lyon downwards is generally flat, but there are sula. [Insuta Aılobrogum.] Nuch has been several parts where the rocks rise right abore the water, and in these places the railway from Lyon to Marseille is cut in the rocks close to the river. At $S t$. Andeol, a small town on the west bank above the Ardeche, the plain country begins on the west side of the Ehone. On the east side the hills are seen in the distance. From one of the middle-age towers built on the amphitheatre of Artes, there is a view of the great plain which hes all round that city to the north, west, and east, and stretches son thward to the coast of the Mediterrancan. The two large affluents of the lhome on the east side are the Isire (1sara) and the Phurance (Druentia).

The Rhone was earlier known to the Greeks and Fomans than any other of the large rivers of Western Emope. The oldest notices of this river must have cone from the lhocaens and the Greeks of Massilia. What Avienus has collected from some source (Or. Marit. 623-690) is unintelligible. Pliny (iii. 4) very absurdly derives the name Rhodanus from a town which he names Rhoda; but the name Rhodanus is older than ary city, and, like the names of other European rivers, it is one of the oldest memorials that we liave of the languages of the West. Polybins (iii. 47) supposed that the Phone rose farther east than it does, but he knew that it fluwed down a long valley ( $\alpha \dot{v} \lambda \omega \omega^{\prime}$ ) to the west, though he does not mention the Lake of Genera. Ptolemy (ii, 10), the latest of the classical geographers, had no exact notion of the sources of the Fhone, thungh the Romans long hefore bis time must have known where to look for them. He makes the sources of the Arar come from the Alps, by which the Jura is meant, and in this statement and what he says of the course of the Arar and Dubis he may have followed Strabo (iv. p. IS6), as it has been supposed. The blunders about the sources of this river are singular. Mela (iii. 3) mentions the Danubins and Rhodanus amorg the rivers of Germany; and in anuther passage he says that it rises not far from the sources of the Ister and the Rhenus (ii. 5).

There is much difference in the statements about the nomber of the mouths of the Rhone. Timacus, quoted by Strabo (p. 183), says that there were five outlets, for which lolybius reproves Timacus, and says there were only twn. Polybius (iii. 41) names the eastern branch the Massaliotic. Artemidorus, as eited by Strabo, made five months. Strabo dops not state how maay he supposed that there were. He says that abore the months of the Rhone, not far from the sea, is a lake called Stomalimne, which some nake one of the outlets of the Rhone, and those particularly do who enmmerate seven outlets of the river, But he shows that this was a mistaken optuion. Catesar built ships at Arelate when he was poing to besiege Massilia, and he lrought then down the river to that city, and by the eastern hranch, as we may assume.

The lhone was mavigated by the people on its banks at the !ime when Hantibal with his army came to crums it, and much earlier. l'olybius is the carliest extant writer who has given us any precise information about this river. Hamibal (b. c, 2:8) crossed it at a pmint nbove the division of the stream, and of course higher than Arles, for we assume that the bifurcation was not higher than that city in his time, if it ever was. (Polyb. iii. 43.) He juwhably crossed the river at Beancuire and below the junction of the Giurdun. He then marched northwands on the east side of the river to the In-
written on this passage of Polybius and on livy ( x xi.), who also describes the same passage. (The March of Hannibal from the Rhone to the Alps, by H. L. Long, Esq., 1831 ; Ukert, Gallien, p. 561, \&c.; and the modern writers quoted hy each.)

Pliny (iii. 4) enumerates three months of the Phone. He calls the two smaller "Libyca" (if the reading is right): one of tbese is the Hispaniense os, which we may assume to be the nearest to Spain ; the other is Metapinm, and the third and largest is the Massaliot. Some modern maps represent three mouths of the river. I'tolemy (ii. 10) mentions only a western and an eastern mouth, and he makes a mistake in placing the Fossae Marianae [Fuss.ar Martanie] west of the western mouth. The channels of the Rhone below Arles may have been chaaged in some parts, even in historical periods, and the bed of the river above Arles bas not always been where it is now. But there is no evidence for any great changes in the river's course since the time when Polybius wrote, though it is certain that the alluvium brought down the river must lave enlarged the Delta of the Phone.

The canal of Marius, which was on the east side of the eastern outlet of tha Rhone, is described under Fossa Mariana; and the stony plain ia described under Lapinei Campa.
[G. L.]
RHODANU'SIA. Pliny (iii. 4) mentions Rhoda in Gallia Narbonetisis as a colony of the Rhodii He places it on the coast east of Agathe ( $A g d e$ ), and says that it gave the name to the Rhodanas. [Rhonivis.] Ilieronymus, in his Prologne to the Second Epistle to the Galatians, copies Pliny. This may be the place which Stephanus ( $s, r$. 'Podavovala) names lhondanusia, and calls "a city in Massalia;" by which the Massiliotic territory must be meant. The passage in Strabo (iv. p. I80) Tivv $\delta \dot{E}{ }^{\prime} \mathrm{P}$ Ónp 'A rabip tois, in which he intends to speak of one of the Massiliotic settlements, is corrupt. Casaubon (Comment. in Strab. p. 83) sometimes thought that
 Groskurd (Strab. Transl. i. p. 310) thinks that Pliny has called this place Rhoda because he con founded it with Phode or Phoius in Iberia, whieh he dors not mention. He observes that Scymnus (v. 208), Stephanus, and Sidonius Apollinaris (i 5) rightly name it Rbodanusia; and he has no doubt that Strabo wrote it so. But it is by no means certain that Strabo did write it so. Groskurd's argument is this: there never was a town Rhoda in Gallia, and Strabo mentions the Iberian Rhude or Rhoolus. Since then Strabo is aequainted with buth places, he has not made a mistake like Pliny: rather mnst we with Vossius ( Vote on Mela, ii. 6) alter the corrupt 'Póqu into 'Poסavouciav; snd Koray is mistaken in rejecting "Pónv altogether as not genuine. We know nothing of this Gallic Khode or Rlodanusia. The place is gone and has left no trace.
[G. L.]
R11ODE. [RHODANUSIA.]
RHODE FLTVTUS. [Sagams.]
Rllo'DIA ('Pooia: Eth. 'Pooiteús), a town of Lecia, situated in the mountains on the north of Corydallus. (Steph. 13. s.v.; I'tol. v. 3. § 6; Phot, (iod. 176.) At the time when Col. Leake wrute his work on Asia Minor (p. 186) the site of this town was not yet ascertained, and Sir C. Fellows dill not examine the district; but the inscriptinns which have since been fonnd fix its site at the place now called Eski Missar. (Spratt and Forbes, Tru-
vels in Lycia, i. pp. 166, 181.) The town had a temple of Asclepius, and its citizens are not called, as Stephanus Byz. asserts, 'Puסıtís, but 'Poסıamoגîtaı or 'Poóoтоגîta, whence it appears that Pliny (v. 28) correctly calls the town Rhodiopolis. A plan of the numerous remains of this town is given by Spratt, according to whom it was not surrounded by walls: the theatre stands nearly in the centre, and is small, having a diameter of only 136 feet; but many of the seats remain, and the lasement of the proscenium is perfect. In the front of it is a terrace, with seats along the parapet. lemains of churches show that the place was inhabited in Christian times. There are also traces of an aqueduct. The town being situated on a lofty eminence, commands an extensive southern prospect.
[L. S.]

## RHODIO'RUM REGIO. [Peraea.]

RHODIUS ('Póóos), a river of Troas, having its smurces in Mount lda, a little above the town of Astyra; it flows in a north-western direction, and after passing by Astyra and Cremaste, discharges itself into the Hellespont between Dardanns and Abydus. (Hom. Il. xii. 20, xx. 215; Hesiod, Theog. 341 ; Strab. xii. p. 554, xiii. pp. 595, 603; Plin. r. 33.) Strabo (siii, p. 595) states that some regarded the Rbodius as a tributary of the Aesepus; bnt they must have been mistaken, as the river is mentioned on the coins of Dardanus. (Sestini, Geog. Numis. p. 39.) Pliny ( $l$. c.) states that this ancient river no longer existed; and some modern writers identify it with the Pydius mentioned by Thncydides (viii. 106; comp. Hesych. and Phavorin. s. v. חúsiov). Richter (Wallfahrten, p. 457) describes its present condition as that of a brook flowing into the Dardanelles by many months and marslus. [L. S.]

RHO'DOPE ('Poठón $\eta$, Herod. vi. 49; Thuc. ii. 96 ; Pulyb. xxxiv. 19 ; Strab. iv. p. 208, vii. pp. 313 , 329, 331 ; Mela, ii. 2. § 2: Plin. iii. 29, iv. 5. s. 17 ; Amm. Marc. xxi. 10. §3; Malchus, ap. Exc. de Leg. Rom. p. 90), a monntain chain forming the W. continuation of Haemus, and the frontier between Thrace and Macedonia, of which little more is known than the name. On its desolate heights, the lurking places of the fierce Satrae, was the great sanctuary and orucle of the Thracian Dionysus. As the Strymon took its sources in Rhodope (Strab. viii. p. 331 ) the high ridges round Dupniza and Ghiustendil must te assigned to Rhodope, which may roughly be said to belong to the central of the three continuons chains, which noder the name of the Despoto Dagh branches out to the S of the Balkon (Haemus) at about $23^{\circ} \mathrm{F}$. long.
[E. B. J.]
RHODU'NT1A ('Pooovvтía: Eth. 'Poסoúvtios), a fortress on MIt. Callidromus, defending one of the passes to Thermopylae. (Strab. ix. p. 428; Liv, xxxvi. 16, 19; Steph. B. s.v.; Leake, Northern Greece, vol, ii. pp. 10, 62, 64.)

RHODUS ('Pódos: Eth. 'Póbos: Rhodes), one of the chief islands of the Aegean, or more properly of that part of the Aegean which is called the Carpathian sea, about 9 or 10 miles from the coast of Caria. In the earliest times it is said to have borne the names of Ophiussa (Steph. B. s.v. 'Pódos), Stadia, Telchinis (Strab. xvi. p. 653), Asteris, Aethraea, Trinacria, Corymbia, Poieessa, Atabyria, Macaria, and Oloeissa. (Plin. v. 36.) It extends from sonth to north, ald is 920 stadia in circumference (Strab. xiv. p. 605), or, according to l'liny, 125 Roonan miles, though others reduced it to 103. The island is traversed from north to south by a
chain of mountains, the highest point of which was called Atabyris or Atabyrion, and the towns were all situated on the coast. Mount Atabyris is 4560 feet above the level of the sea, and on the top of it stood a temple of Zens Atabyrius. Rhodes was believed to have at one time risen out of the spa, and the Telchines, its most ancient inhabitants, are said to bave immigrated from Crete. (Pind. Olymp. vii. 23, \&c.; Plin. ii. 87 ; Aristid. Orat. xliii. p. 653, ed. Dind.; Strab. l. c.; Diod. v. 55.) The Telchines, about whom many fabulous stories are related, are said to have been nine in number, and their sister Halia or Amphitrite became by Poseidon the mother of six sons and one daughter, Rhodos, from which in the end the island received the name it still bears. Others, however, with better reason, derive the name Rhodus from poiovo a rose, for the rose appears as a symbol on coins of the island, so that Rhodus wonld be "the island of Roses." (Eckliel, vol. ii. p. 602; Sestini, Num. J'et. p. 382.) These most ancient and fabulons Telchines are said to have perished or been driven from the island during an inundation, and Helios then created a new race of inbabitants, who were called after him Heliadae; they were seven in number, and became ancestors of seven tribes, which partly peopled Rhodus itself and partly emigrated to Lesbos, Cas, Caria, and Egypt. The Heliadae are said to have greatly distinguished themselves by the progress they made in the sciences of astronomy and navigation. (Pind. l. c. 160, \&c.; Diod. v. 56; Conon, Narrat. 47 ; Strab. xiv. p. 654.) After this various immigrations from foreign conntries are mentioned: Egyptiaus under Danaus, Ploenicians under Cadmns, Thessalians and Carians, are each said to have furnished their contingent to the population of Rhodes. Whatever we may think of these alleged immigrations, they can have but little affected the national character of the Phodians, which in fact did not become fixed untıl a branch of the Doric race took possession of the island, after which event the Doric character of its inhabitants became thoronglily established. Some Dorians or Heracleidae appear to have been settled there as early as the Trojan War, for the Heracleid Tlepolemus is described as having sailed to Troy with nine ships. (Il. ii. 653; Diod. iv. 58, v. 59 ; Apollud. ii. 8. § 2.) After the Trojan War Aethaemenes, a Heracleid from Argos, led other sett)ers to Rhodus. (Strab. siv. P 653; 1)iod. xv. 59; Apollod. iii. 2. § 1; comp. Thuc. vii. 57 ; Aristid. Orat. Iliv, p. 839.) After this time the Rhodians quietly developed tho resonrces of their islind, and rose to great prosperity and affluence.

The three most ancient towns of the island were Lindt's, lalysts, and Camibes, which were believed to have been founded by three grandsons of the Heliad Ochimus bearing the same names, or, according to others, by the Heracleid Tlepolemns. (Diod. iv. 58, v. 57 .) These three towtis, together with Cos, Cnidus, and Halicarnassus, formed what was called the Doric hexapolis, which had its common sanctuary on the Triopian headland on the coast of Caria, Apollo being the tutelary deity of the confederation. (Herod. i. 144.) The rapid progress made by the Hhodian towns at a comparatively early period is sufficiently attested by their colonies in the distant countries of the west. Thus they founded settlements in the Batlearic islands, Rhode on the coast of Spain, l'urthenofe, Salapia, Siris, and Sybaris in ltaly, and Gcia in

Sicily: while thie countries nearer home were not neglected, for Sult in Cilicia, and Gagac and Corydalla in Lycia, were likewise Rhodian colonies. But notwithstanding this early appliration to navigation and commerce, for which Rhodes is so admirably situated between the three ancient continents, the thodians were not ranked with the great maritime powers of Greece. Herodotus speaks of them only as forming a part of the lhuric contederacy, nor dops Thurydides mention their island more frequently. The Rhodians, in fact, did not attuin to any pulitical cminence among the states of Greece until abont B. c. 408 , when the three ancient towns conjointly built the city of Rhowles at the northern extremity of the island, and raised it to the rank of a capital. During the first period of the Pe loponnesian Winr the towns of Rhicdes paid tribute to Athens, and were reluctantly compelled to serve against Syracuse and Gela in Sicily (Thuc. vii. 57 ) ; but in B. C. 412 they joined the Peloponnesians. The popular party being favourable to Athens, soon afterwards attempted a reaction, but it was crushed (Diod. xiii. 38, 45). In B. C. 396 , however, when Conon appeared with his fleet in the waters of Phodes, the Rhodians again embraced the cause of Athens (1)iod, xiv. 79; Faus. vi. 7.§6); but the democracy which was now established was ill managed, and did not last Jong; and as early as r. c. 390 , the exiled aristocrats, with the assistance of Sparta, recovered their former aveendancy. (Aristot. Pulit. v. 4. 2; Xenoph. Hellen. ir. 8. § 20.\&. ; Hiod. siv. 97.) The fear of Sparta's growing jower once more threw Elowles into the hands of the Athenians, but soon after the battle of Leuetra a change again took place; at least the Thebans, in R. C. 364 , were zealously engaged in sowing discord for the purpose of drawing Rhodes, Chios, and Byzantium over to their own side. Dering the Aucial Wir, from B. C. 357 to 355 , the Rhodians were arrayed against Athens, being instigated by the dymast of Caria and lis suecessor Artemisia. But as they became alarmed by the growing power of the Carian dyuasty, they solicited the protection of Athens throngh the eloquence of Jemosthenes. (Demos, de Libert. Rhodior:) The firm of goverument thenurhout this period was oligarchical, which aceounts for the insolent conduct of Hegesilochus, as deseribind in Athemeus (x. p. 444). Rhades furwished Davius, the last king of I'ersia, with one of hib bravest and ablest generals in the person of Mennon, who, if he hat lad the sole dinection of affairs, might have checkel the rictormous career of Al-xander, and saved the Persian empire. But as it was. Phodes, like the rest of Gireece, lost its indepeulence, and received a Macedonian zarrison (Curt. iv. 5). The expulsion of this garrison after the death of Alexander was the begiuning of a glonious epoch in the history of thodes; for during the wars against the successors of Alexander, and expecially during the menorathe siege of the city of Rhodes by Demetrius I'ohorectes, the RLodians gained the liyhest cateem and regard from atl the surrounding prinesa and mations. During the period which then followed. down to the overthiow of the Macedon an monarelhy, Ehodus, which kept up friendly relations with lome, actel a very prominent part, and extended its domimion over a portion of the opposite coasts of Caria and Lyeia-a termtory which is hence often called the Пepaia $\tau \overline{\omega \nu}$ 'Pobicy [Pruaki] and over seseral of the nelghbounisg islands, such as Casus, Carpathus, Telus, and Cbalce. After the
defeat of Persens the Romans deprived the Rhodiar: of a great amount of territory and power, ander the pretext that they bad supported Nacedonia: but the auger of Rome was propitiated, and in the war against Nithrilates the Fhorlians defended themselves manfully agailst the Pontian king. During the civil war between Cassar and Jompey they sided with the furmer, and their adherence to him led them, after bis death, to resist Cassius; but the republican, after defeating them is a naval engagement, entered the city of Rloodes by force, and having put to death the leaders of the liostile party, carried off all the public property, even the ofleringe and ornaments of the temples (Appian, Bell. Cio. iv. 72; Plut. Brut. 30; 1hion Cass. xlvii. 32). This calamity in B. C. 42 broke the power of the Rhodians, but it still remained one of the great seats of learoing. Tiberius, before his accession to the imperial throne, resided at Rbodes for several sears. The emperor Claudius deprived it of all pulitical independence (Dion Cass. 1x. 24); but although he afterwards restored its liberty, it was at all times a very precarious possession, being taken away and given back as circumatances or the caprices of the emperors suggested (Tae. Ann. xii. 58 ; comp. Suet. J'esp. 8; Eutrop. vii. 13). In the arrangements of Constantine, lthodus, like other islands, belonged to the Provincia Insularum, of which it was the metropulis (Hierocles, p. 685, \& ..). During the middle agres it continued to enjoy a considerable degree of prosperity, and was the last place in Western Asia that yielded to the Mohammedans.

The great prosperity which the Rhodians enjoyed during the hest period of their history was owing in the first place to their extensive navigation and commerce, and in the second to their political institutions. In respect to the former they were particularly faroured by the situation of their islaad, and during the Nacedonian and Roman periods no Greek state could rival them in the extent and organisation of their commerce; their sailors were regarded as the best, and their laws relating to navieation were thought models worthy of being aldupted by the Ronians. The form of government of the Rhodians was indeed founded apon a popular basis, but their democracy was tempered by an admixture of oligarehy. Such at least we find it during the Macedonian poriol, at a time when the ancient Doric institutions bad given way to a furm of goveroment more suited to the actual circumstances. (Strab. xii. p. 575 , xiv. p. 652 : Cie, de Re Publ. i. 31: Dion Chrys. Orat. xxxi.; Aristid. Orat. sliv. p. S31.) The suvereign power betangel to the assembly of the people, which had the final decision of everything; but nothing was brought before it which had not previously been discussed by the senate or Bou入ウ́, (Polyb. xvi. 35, xxiii. 3, xxvii. 6, xxviii. 15. xxix. 5; Cic. de Re Publ. iii. 35.) The executive was in the hands of two magistrates called $\pi \rho u \tau a \dot{v}$ eis, each of whom governed for six months in the year as eponymus. Next to these, the admirals (vaviap $\chi$ ot) possessed the most extensive power. Other officers are mentioned in inscriptions, but their character and functions are often very uncertain. The Ihndian constitutima had its safest foundation in the character and habits of the people, who, although the vicinity of Asia had a considerable influence and created a love of splendour and luxury, yet preservel many of their ancient Doric peculiarities, such as eamestness, perseverance, valour, and patriotism, eombined with an

RIIODUS.
RHOGONIS.
hetive zeal for literature, philosophy, and art. The intellectual activity maintained itself in Rhodes long after it had died away in most other parts of Grece.

The istand of Rlodes, which appears even in the earlicst traditions as extremoly wealthy (Hom. Il. ii. 670; Pind. Olymp. vii. 49; Pbilostr. Imag. ii. 27 ), is in many parts indeed rough and rocky, especially the coast near the city of Rhodes, and the district about Lindns, but on the whole it was extremely fertile: its wine, dried raisins and figs, were much esteemed, and its saffron, oil, marble, achate, sponges, and firb, are often spoken of. The most important productions of Fhodian indnstry were ships, arms, and military engines. Besides the places already mentioned, the ancients notice 1xia and Muasyrium, two forts in the sonth, and a place called Achaia.
By lar the most important place was the city of Rhodns at the north-eastern extremity of the island. It was built in B. C 408 npon a regular plan formed by the architect Hippodamus, the same who built the walls of Peiraecus. (Strab. xiv. p. 654 ; Diod. xiz. 45, xx. 83 ; Harpocrat. s. v.; '1 $1 \pi \pi 0 \delta \alpha \dot{\mu} \mu \iota \alpha$.) It was constructed in the form of an amphitheatre rising from the coast, and was protected by strong walls and towers, while nature provided it with two excellent harbonrs. The acropolis rose at the southwestern extremity, and nn the slope of it was the theatre. According to Strabo, Rhodus surpassed all other eitics for the beauty and consenience of its ports, streets, walls, and public edifices, all of which were adorned with a profusion of works of art both in painting and sculpture. The principal statnes were in the temple of Dionysns and the gymnasium; but the most extraordinary statne, which is described as one of the seven wonders of the ancient world, was the brazen statue of Helios, commonly called the Culossus of Phodes. It was the work of Chares of Lindus, who cmployed apon its execntion twelve years. It cost 300 talents, and was 70 cubits in height: its gigantic size may be inferred from the fact that fer men were able to encompass one of its thumbs with their arms. (Plin. exxir. 18 ; Strab. l.c.) The Colossus stood at the entrance of one of the ports, but the statement that it stood astride over the entrance, and that the largest ships conld sail between its legs, is in all probabisity a mere fable. It was overthrown by an earthquake, 56 years after its erection, that is, in n. c. 224, or according to others a few years later. Ptolemy promised the Phodians, among other things, 3000 talents tor its restoration (Polyl. v. 89), but it is said not to have been attempted in consequence nf an nracle (Strab. l.c.). Later authorities, however, speak of it as standing erect; the emperor Commodus is said to have ordered his own bnst to be put npout it; and Cedrenus relates that a king of the Saracens sold the fragments to a merchant who employed upwards of 900 eamels to carry them away. Notwithstanding the great splendour of the eity, the number of its imhahitants does not appear to have been very great, for during the siege of Demetrins Poliorcetes no more than 6000 eitizens eapable of bearing arms are mentioned. (Diod. xx. 84.) But Rhodns has nevertheless prodnced many men of eminence in philosophy and literature, such as Panaetius, Stratocles, Andronicns, Eudemus, Hieronymus, Peisander, Simmias, and Aristides ; while Poseidonins, Dionysins Thrax, and Apollonins, surnamed the Rhodian, resided in the island for a
considerable time. The present town of Mhodes contains very few remains of the ancient (ireck city. (Comp. P. D. Paulsen, Descriptio Fhodi Maced. Aetate, Güttingen, 1818 : H. Rost, Khodus, ein Hist. Arch. Fragment, Altons, 1823; Th. Menge, Jorgeschichte von Whodus, CBln, 1827 ; Rottier, Descript. des Monuments de Rhodes, Bruselles, 1828; Ross, Reisen auf den Gricch. Inseln, iii. pp. $70-113$, which contains a good account of the middle-age history and the present condition of the island aud city with maps and plans; Sestini, Mon. Fet. p. 91.)
[L. S.]

COLS OF RHODUS.
RHODUSSA, an island off the southern coast of Caria, near the entrance of the port of Padormus. (Plin. v. 35 ; Stadiasm. Mar. Mag. p. 248, where the name is written 'Porovoa.) It is marked in modern ebarts by the name of Limosa or Karagash.
[L. S.]
RHODUSSAE, a group of small islands in the Propontis, south of Eitynssa, is mentioned only by Pliny (v. 44).
[L. S.]
IHOE ('P $\delta \eta$ ), a place on the coast of Bithynia, 20 stadia to the cast of Calpe, on a steep promontory, contained a road fit only for small vessels. (Arrian, Pcripl. P. E. p. 13 ; Anonym. Peripl. P. E. p. 3.)
[L. S.]
RHOETACES [Albania, p. 89, b.]
RHOETEUM ( $\tau \grave{\text { ' }}$ 'Poiteiol or 'Poizion ákpoy), a promontory, or rather a rocky beadland, runuing out in several points in Mlysia or Troas, at the entrance of the Hellespont, north of Ilion; it contained a small town of the same name situated on an eminence. The place is very often mentioned by the ancients. (Herod. vii. 43 ; Scylax, p. 35 ; Strab. xiii. p. 595 ; Steph. B. s. v. ; Pomp. Mela, i. 18 ; Plin. v. 33 ; Thneyd. iv. 52, viii. 101 ; Apollon. Rhod. i. 929; Tryphiod. 216 ; Virg. Aen. vi. 595 ; Liv. xxxvii. 37.) The promontory is now called Intepeh, and the site of the ancient town is beliered to be oconpied by Paleo Castro, near the villaze of It-ghedmes. (Richter, Hallfahten, p. 475 ; Leake, Asia Minor, p. 275.)
[L. S.]
RHOGANA ('Pójava, P'tol. vi. 8. § 7 ; Marcian, Peripl. i. § 28 , ed. Mililler), a small place on the coast of Carmania, between the promontories of Carpella and Alambater. It is perbaps the same place as the Gogana of Arrian. [Gogasis:] [ V.$]$

RHOGANDA'NI ('Poyavסavoi, P'tul, vii. 4. § 9), a tribe of ancient Ceylmo. at the southern end of the island. Ptelemy mentions that in this part of the island were the best pastures for the elephants, which is the case, too, at the present time. [V.]

RHOGE ( $\mathbf{P} \dot{\prime} \neq \eta$ ), an island off the coast of Lycia, not far from the entrance of the Phoenicus Portus. (Plin. v. 35; Steph. 1B. s. r.; Stadiusm. Mur. Mag. $\$ \S 217,218$, where it is calted Rhope,

[L. s.]
RHO'GONIS ('Pújovis, Arriarl, Ind. c. 39), a river of ancient Persis, which flows into the Persian

Gulf in lat. $29^{\circ} 20^{\prime}$, long. $48^{\circ} 25^{\prime}$ E. It was little better than a torrent, and is nor doubtless marked by the present Bender-rik. Ptoleny (vi. 4. § 2) and Ammianus (xxiii. 6) call it Rhogomanis (Poyoud́vs), and Marcianus (Peripl. i. § 24, ed Müller) Thogomanius ('Poyouderos). (Viccent, vol. i. p. 401: Thevenot. v. p. 535.)
[ 1.$]$
RHIOSCOPLS ('Poorótous). a place on the coast of Pamphylia, near the mouth of the Ce stris, is mentioned only in the Stadiasmus ( $\$ \S 199$, 2(10).
[L.S.]
RHOSOLOGIACUM or RHOSOLOGIA ('Pogodoyia), a small place in the country of the Tectosages in Galatia, on the road from Ancyra to Caesareia Mazaca, not far from the river Halys. (It. Ant. pp. 143, 206 ; 1'tol. ४. 4. §8, where some
 p. 575 , where it is called Rosolodiacum.) [L.S.]
mhosus. [1ssus.]
RHOXOLA'NI. [Roxotani]
RHLANA ('Pouáva :ll. 'PáGava ßaб'ìetov), an inland town of Arabia, placed by Ptolemy (ri. 7. § 33) in long. $87^{\circ}$, lat. $22^{\circ}$. Apparently not far distant from the SW. bay of the Persian Gulf. and on the river Lar.
[G. W.]
RllUBON, RILLDON ('Poibwhos ext., Ptol. iii. 5. § 2; 'Pouঠāvos énc., Marcian. Meracl. Peripl. § 39, ed. Mïller), a river of Eoropean Sarmatia which tonk its source in the Alsni Montes and discharged itself into the Venedicus Simus. Schafarik (Star. Alt. vol. i. p. 497) has identified it with the Dina, which, taking a direction generally W., falls into the Gulf of Riga below Fort Dünamunde, after a course of 655 miles. This samie rethnologist connects the mythic Eridanns, and the trees that rept amber, with the Vhadon of Marcian (Rhuhon appears to be a corrupted form), which Sabinus, a commentator apon Tirgil, A. D. 1544 , calls Rhodanas. The amber could be brought by land, or by water from the coasts where it was collected to the Dima, and thence by boats conveycd to the Borysthenes and the coasts of the Euxine. The name "Eri-danus," closely connected with Phodanus, is composed of the words "Rha" and "Don," roots which, in several of the In-do-Furopean lauguages, siguify "water," " river." as for instance in "Rha." the old nome for the lolga, and Dannlius, Tacais, Damapris, Danastris, and the like.
[E. B. J.]
RHUBBRICATUS ('PovEpiкatas, Ptol.iv. 3. § 5), a river of Numidia, the same as the Ubus of the Peot. Tab., which flowed 5 M. P. to the E. of Hippo Revius, now called the Scibouse (Barth, Wanderungrn. p. (0).
[E. B. J.]
IRHU'DIAE or RU'DIAE ('Pouסia, P'tol.; 'Posiai, Strab.: Fith. Rudinus: Rugge), an ancient city of the salentines, in the interion of the Soman province of Calabria, and in the immediate vicinity of Lupiae (Lecre) (Strah. vi. p. 281 . Ptul. iii. 1.§ i6.) Sirabo calls it a (ircek' city ( $\pi$ ódss 'EגA $\eta \nu i s$ ); but we have no other indination of this fact, and all the other notices we fith of it would lead us to infer that it was a native Salentine or Messapiad tuwn. Under the Rumatns it appears to have enjoved municipal rank (an imserptum has "Mudicipes Rudimi," Orell. $3 \times 58$ ); hat in other respects it was a place of httle importance, ast derived its sole celebrity from the circumstane of its being the birthrlace of the poet Emuius. (Sth.th. l.c. Mel. ni. 4. § 7 ; sll Ital. xii. 393 ; Cic. de (1r. iii. 42.) That anthor is repeatedly termed a Calabrian (II)r. C'arm. iv, \&; Urid. A.A.
iii. 409; Sil. Ital. l. c.; Acron, ad IIor. l. c.), and these passages confirm the accuracy of Ptoletoy, who assigns Rindiae to the Saleatines, and therefore to the Calabrians according to the Roman ose of the name. Pliny and Mela, on the contrary, enomerate Rudiae among the towns of the Pediculi togetlier with Barium and Egnatia, and the latter author expressly excludes it from Calalria (Plin. iii. 11. s. I6; Del. l.c.). But it seems inpossible to reconcile this statement with that of Strabo, who places it near Lupiae, in the interior of the peninsnla, or with the actual situation of Rudiue, which is clearly ascertained at a place still called Rugge,though now noinhabited, about a mile from Lecce, where the inscription above cited was discovered, ds well as several others in the Messapian dialect, and many vases and other objects of antiquity. The identity of this place with the monicipal town of Rudiae can therefore admit of no doubt ; nor is there any reason to question the fact that this was also the birthplace of Enoius: but considerable confusion has arisen from the mention in the Tabula of a place called "Rudae," which it places 12 miles W. of Rubi, on the road to Canosium. As this place would lase been within the limits of the Pediculi or Peucetii, it has been supposed by some writers to be the same with the Rudiae of Pliny and Mela, aod therefore the birthplace of Ennius; but the claims of Rugge to this distinction appear unqnestionable. (Galateo, de Sit. Iapyg. p. 77; Rom manelli, vol. ii. pp. 93-102; Monmsen, Lnter Ital. Dialekte, p. 58.)

The Radae or Rudiae of the Tabula, which is otherwise quite unknown, must bave been situated somerhere in the neighbowhood of the modern. Andria.
[E. H. B.]
RHLS. [Megara, p. 313, b.]
RHU'silds ('Poúauov, Anna Comn. vii. pp. 210, 215), a town in Thrace on the road from Siracellae to Aenos. Now Ruskoi.
[T. H. D.]

## RHUTUPIAE [Rutupine.]

I:HY'MMICl MONTES ('Pu 14. §s 4. 10, 11), a mountain chain of Asiatic Sarmatia, of which no nearer indication can be given than that it belongs to the great meridian cliain, or rather assemblage of vearly parallel mountain chaios, of the liral.
 14. $\$ \$ 2,4$ ), which has been a sore puzzle to geographers, twok its source in these mountains and discharged itself into the Caspian between the Rha (Volga) and the Daix ( $C$ ral $)$. In the present day there is, W. of the embouchure of the Ural to the great delta of the lulga, only one small stream which reaches the Caspian, noder the name of the Naryn Chara (Goelvel, Neise in die Steppen, vol. ii. p. 342). This river is probably the Whymmus of l'tolemy. (Humboldt, Asie Centrale, vol. ii. p. 187.)
[E. B. J.]
12 HY 'N1)ACUS ('Punōakós), an important river in the province of Hellespontus, which has its sonrees at the foot of Mount Olympus in Plarygia Epictetus, near the town of Atami. (Scylas, p. 35 ; Plin. r. 40 ; Pomp. Mela, i. 19 ; Strubl. xii. p. 576 .) According to Pliny, it was at one time called Lyeus, and had its origin in the lake of Miletopolis ; lut this notion is incorrect. The riser flows at first in a north-western direction, forming the boundary between Mysia nud Bithynia, through the lake of Apollunia, and in the neighbourbood of Diletopolis receives the river Megistus, and discharges itself into the Propontis opposite the island of Besticus,

The Scholiast on Apollonins Rhodius（i．1165）states that in later times the Rhyndacus，after receiving the waters of the Megistus；was itself called Me－ gistus；but Enstathius（ad Hom．Il．xiii．7\％1）as－ sures us that in his time it still bere the name of Rhyndacus．Acecrding to Valerius Flaceus（iii． 35）its yellow waters were discennible in the sea at a great distance from its mouth．In n．c． 73 Lucullus gained a victory over Mithridates on the banks of this river．（Plut．Luc．11；comp．Polyb．v． 17 ； Ptol．v．1．§§ 4， 8 ；Steph．B．s．v．）The Rhyn－ dacus is now called Lupad，and after its anion with the Megistus（Susughivili）it bears the name of $\mathrm{Mo-}$ ha＇ulsh or Micalitan．（See Hamilton＇s Researches， i．p． $83 . \&$ ．）
［L．S．］
RHYPES（＇P仑́tes，＇Púral，Steph．B．s．v．：Eth． ＇Píq．＇Púmos），a city of Achaia， 30 stadia W．of Aeginm，was originally one of the twelve Achatean cities．It had ceased to be a member of the League in the time of Polybius，who mentinns Leontium in its place．Rhypes，however，continued to exist down to the time of Augustus；but this emperor trans－ ferred its inbabitants to Patrae，and its territory （＇Puris，or $\dot{\eta}$＇Purikí）was divided between Aegium and Pharae．Its ruins were seen by Pausanias at a short distance from the main road from Aeginm to Patrae．We learn from Strabo that this tomn was mentioned by Aeschylus as кєpauvias＇Púmas， or＂Rhypes stricken by the thunderbolt．＂It was the birthplace of Myscellus，the founder of Croton． （Herod．i． 145 ；Paus．vii． $6 . \S 1$ 1．vii． $18 . \S 7$ ，vii． 23．§ 4 ；Strab．viii．pp． 386,387 ．）In the terri－ tory of Rhypes there was a demus called Levc－ trem（＾è̈ктpon，Strab．p．387），and also a sea－ port named Emineum（＇Epive $\delta \nu$ ，or＇Epueds $\lambda 1 \mu$ h́v）， which is mentioned by Thucydides，and which is described by Pausanias as 60 stadia from Aegium． （Thuc．vii． 34 ；Pans．vii．22．§ु 10 ；Plin．iv．6．）

The geographers of the French Commission place Rhypes at some ruins on the right bank of the river Tholo，where it issmes into the plain；and the dis－ tance of the position on the Tholo from Vostitza （Aegiam）is that which Pausanias assigns as the interval between Aegiim and Rhypes．But Leake， thinking it highly improbable that two of the chief cities of Achaia should have been only 30 stadia from each other，suspects the accoracy of Pausanias or his text，as to the di－tance between Rhypes and Aegium．He accordingly places Rhypes further W．on the banks of the river of Salmeniko，and smpposes Erineum to have been its port and to have been situated immediately above it at the harbour of Lambiri．The position of Lambiri answers very well to that of Erimenm；but the reason given by Leake does not appear sufficient for rejecting the express statement of Pansanias as to the distance between Aegium and Rhypes．（Leake，Peloponne－ sioca，p．408，seq．；comp．Curtius，Peloponnesos， rol．i．p． 458 ，seq．）

RHY＇TIUM（＇Pútiov，Steph．B．；Plin．iv．20：Eth． ＇Putieós），a town of Crete which Homer（ 11. ii．648） conples with Phaestus as＂well－peopled cities．＂The city belonged to the Gortynians（Strab．x．p．479； Nonnus，Dionys，xiii．233．）The corrupt reading ＇Puもiup in Steph．B．（s．v．इrर̂̀ai）should be emended into＇Pútiov．（Höck，Kreta，vol．i．p． 414．）The city mnst have existed somewhere on or close to the ronte which leads from Kasteliani to Haghius Dhéka；but Pashley（Crete，vol．i．p．293） conld find no restiges of antiquity in the neighbour－ hood．
［E．B．J．］

RIBLAH（＇PaE入áá ），a city＂in the land of Hamath，＂where Jehoahaz or Shallum was cast into chains by Pharaob Necho，und where Nebuchad－ nezzar subsequently gave juulgment on Zelekiah． （2 Kings，xxiii．33，xxv．6．）We find Nebuchad－ nezzar there again，after an interval of ten years， when the last remnant was carried captive and slain there．（Jerem．lii．27．）
［（i．W．］
RICCIACUM，in North Gallia．The Table has a road from Divodurum（Mets）to Angusta Tre－ virorum（Trier）．From Divodurum to Caranusca is sliit，from Caranusea to Ricciacum x．，and from Ricciacum to Augusta x．D＇Anville guessed Ric－ ciacum to be Remich on the Mosel；but it is only a guess．There is evidently an error in the Table in the distance between Divodnrum and Ricciacum， which is a great deal too much．The geographers have handled this matter in varions ways．［CA－ ravusca．］（Sce also Ukert，Gallien，p． 512 ．and the note．）
［G．L．］
RICINA．1．（Eth．Ricinensis：Ru，near Mia－ cerata），a municipal town of Picenum，situated on a hill above the rigit bank of the river Potentia （Potenza），about 15 miles from the sea．Pliny is the only geographer that mentions it（iii．13．s．18）； hut the＂ager Ricinensis＂is noticed also in the Liber Coloniarum（p．226），and we learn from an inscription that it received a colony under the cm－ peror Severus，and assumed in consequence the title of＂Colonia Helvia Ricina＂（Orell．Inscr．915； Cluver．Ital．p．739．）Its ruins are still visible， and include the remains of a theatre and other huildings．They are sitnated about 3 miles from Macerata，and 6 from Recanati，which bas preserved the traces of the ancient name，though it does not occupy the ancient site．（Holsten．Not．ad Cluver． p．137．）The Tabula correctly places it at a distance of 12 iniles from Septempeda（S．Severino．）（Tab． Peut．）

2．A small town on the coast of Liguria，men－ tioned only in the Tabula，which places it on the coast to the E．of Genoa．It is commonly identified with Recco，a town about 12 miles from Genoa，but the Tabula gives the distance as only 7 ，so that the identification is very doubtful．（Tab．Peut．；Geogr． Rav，jv．32．）
［E．H．B．］
RHCINA（＇Pikiva．Ptol．ii．2．§ 11），one of the Ebudae insulae or Hebrides．
［T．II．D．］
RIDUNA，one of the islands off that part of the Galiic coast which was occupied by the Armoric states．As the Marit．Itin．mentions Cacsarea （Jersey），Sartia（Guernsey），and Riduna，it is con－ cluded that Riduna is Aurigny or Alderney off Cap de la Hague．
［G．L．］
RIGODULUM，a place on the Mosella（Mosel）， ＂protected either by mountains or the river．＂ （Tacitus，Hist．iv．71．）In the war with Civilis this place was eccupied by Valentinus with a large force of Treviri．Civilis，who was at Mainz， marched to Rigodulum in three days（tertiis castris） and stormed the place．On the following day he reached Colonia Trevirorum（Trier）．It is supposed that Rigodulum may be Reol on the Mosel．Lip－ sius assnmes Rigodulum to be Rigol near Con－ fluentes（Coblenz），but that is impossible．Am－ mianus Marceilinus（xvi．6）places Rigodulum near Confluentes，but his authority is small；and there may be some corruption in the text．［G．L．］

RIGODU＇NUM（＇Pizóoouvy，Ptel．ii．3．§ 16）， a town of the Brigantes in the N．of Britanma Ro－ mana．Canden（ $\mathrm{r}, 974$ ）conjectures it might have

## RODUMNA.

been Ribble-chester or Rixton; ethers identify it with Richmond.
[T. II. I.]
RIGOMAGUS, a village of Cisalpine Gand, forming a station on the roal from Ticinum (Paria) to Augusta Taurinorum (Turin.) It is placed by the Itineraries 36 M. P. from Laumellum (Lomello), and 36 M. I'. from Augusta or Taurini: these distances coincide with the site of Trino Decchio, a village a little to the S. of the modern town of Trino, on the left bank of the Po (Itin. Ant. p. 339; Cluver. Ital. p. 234; Walckenaer, Gcogr. des Goules, vol. iii. p. 23).
[E. H. B.]
RIGOMAGUS (Remugen), on the Rhine. The Table places it between Bonna (Bonn) and Antomacum (Audernach), viii. from Bonna and ix. from Antumacum. The Antonine Itin., which omits Rigomagus, makes the distance xxii. from Bonna to Autumacum. Remagen is on the Rhine and on the north side of the $A / k$ near its junction with the Thine. Ukert (Gallien, p. 518, note) speaks of a milestone found at Remayen with the inscription "a Col. Agripp. m. p. xxx." [G. L.]

RIMDION (E $\rho \in \mu \mu \dot{\omega} \nu)$, a city of the tribe of Simeen (Jos/t. xix. 7), mentioned by Zechariah as the extremity of the land of Judah (xiv, 10). Placed by Eusebius S. of Daroma, 16 miles from Eleutheropelis. (Onomast. s.vv. 'E $\rho \notin \mu \delta \grave{\alpha v},{ }^{\prime} \mathbf{P} \in \mu \mu \dot{\text { a }}$.) He places another town of the same name 15 miles north of Jerusalem. (Ib, s.v. 'P $\in \mu \mu$ ous.) [G. W.]

EIOBE, in North Gallia, a name which appears in the Table on a road which passes from Augustomagus (Sentis) through Calagmon (Chailli). Tiebe comes atter Calagum, but the distance is net given. A road. which appears to be in the direction of a Reman roud, runs from Chailli to Orbi, a few miles north of the Seine ; and D'Auville thinks that the name Orbi and the distance from Riobe to Condate (Montereau-sur-1 $\mathbf{I}$ onne) enable us to fix Riebe at Orbi. [Comdate, No. 2; Caligum.] [G. L.]

RIPA (Plin. iii. 1. s. 3, according to the Codex Keg., though the commen reading is Ripepora), a place in Hispania Baetica, which according to Rezzonico (Disquisit. Plin. ii. p. 11) occupied the site of the modern Castro del Rio. (Comp. Ukert, vol. ii. part i. p. 380.)
[T. H. D.]
RIF.i, a river on the E. const of Thrace. (Plin. iv. 11. s. 18.) Reichards conjectures it to be the Kumesil.
[T. H. D.]
1:1sARD1R (Polyb. op. Plin. v. 1), a harbour on the W. censt of Mauretania, which may be identified with the Acns of tbe Ship-journal of Hanno ('Aкра, Peripl. § 5, ed. Müller). It now bears the name of Agader, signifying in the Berber language (Paradis, Jictionatire Berbere, p. 110) "a fortress,' and is described as being the best roadstead aleng $t$ e coast of Marocco. Agader or Santa Cruz, which was called Guertguessem in the time of Leo Africanus, was walled round and strengthened by batteries in 1503 by Emanuel, king of Pertugal; but was taken from the lortuguese by the Moors in 1536. (Jackson, Maro reo, 1. 113; Journ. of Geogr. Soc. vel, vi. p. 292.)
[E. B. J.]
RITHYMNA. [RнTHyMNA.]
RITTHUM ('Pirctop), a place in the south-cest of Lower Prannonia, situsted close to the Danube, and on the road leading to Taurunum. (It. Ant. p. 242; P'ol. ii. 16. §5; Tab. Peut.) It contrined a garrison of Dalmatian cavalry. (Not. Imp., where the name is mis-spelt Rictimn.) Accerding to Muchar (Noricun, i. p. 265), its site is now occupied by the town of Titcl.
[L. S.]

RITUMAGUS, in Gallia, a Mansio which Is placed in the Anton. Jtin. and in the Table on a road on the north side of the Seine frem Rotemagus (Roven) to Lutetia (Paris) ; and between Rotomagus and Petromantalum. The distance of Pitumagus frem Rotemagus is viii. in the Table and ix. in the Ttin., which distance fixes Ritumagus near Radepont, at the passage of the Andelle, a small stream which flows into the Seine. [G. L.]

RIUSIAFA ('Pıovorav́a), a town in the Agri Decunates, in Germany (Ptol. ii. 11. § 30), is commenly beliered to have heen situated it the Riesgou, or Ries, which may possibly derive its name from it.
[L. S.]
ROBOGD11 ('PoEb $\gamma \delta i a t$, Ptel. ii. $2 . \S 3$ ), a people in the northernmost part of Hibernia, whose name, according to Camden (p. 1411), is still perpetuated in that of a small episcepal town called Rubogh in Ulster:
[I.H. D.]
ROBOGDIUM PROM. ('PoEó $\delta$ б̀an akpoy, Ptol. ii. 2. § 2), a promontory on the N. ceast of Hibernia in the territery of the Robogdii, conjectured by Catndeo (p. 1411) to be Fair Head. [T. H. D.]

ROBOLARIA, a station on the Via Latina, 16 miles from Rome, the site of which is probably marked by the Osteria della Molara, at the lack of tho hill of Tusculvin (Itin. Ant. p. 305 ; Westphal, Rom. Kampagne, pp. $76,97$. ) [Vin L.imins.] [E.H.B.]

ROBORETUM. [Gallafcla, Vel. ]. p. 934, a.]
ROBRICA, in Gallia, is placed by the Table on the north side of the Loire, on a road from Juliomagus (Angers) to Caesarodunum (Tours). The distance of Rubrica from Juliomagus is xvii. and xxviii. from Caesarodunum. D'Aoville fixed Robrica at the disiance of 16 Gallic leagues from Angers at the bridges of Longué, over the Latan, which flows into the Loire. He conjectures that Robrica contains the Celtic element Briga, a bridge or river ford, which is probable. Though D'Anville catnot make the two actual distances severally correspend to those of the Table, he finds that the whole distance between Angers and Tours agrees with the whole distance in the Table between Juliomagus and Caesarodunum. Walckenaer has shown in a Mémeire cited by Ukert (Gallien, p. 481), that the ancient road deviated in may places from the modern read.
[G. L.]
ROBUR. Ammiamus Marcellinns (xxx, 3) mentions a fertress named Robur, which Valentinian I., A.D. 374, built near Basilia (Busle) on the Rhine in Switzerland. Schoepfiin guessed that Robur was on the site of the cathedral of Basle, but the werds of Anmianus do not give much support to this cenjecture: " Prope Basiliam, quod appellant accolas Robur." Others have made other guesses. [G. L.]

EODIUMI, in Nerth Gallia, is placed in the Table on a road between Sumarebriva (Amiens) and Augusta Suessienum (Suissons). It is xx. from Samarobriva to Rodium, a distance which followed along the ancient road brings us to Roie, whieh represents Rodium ; but D'Anville says that to make the ancient and medern distances agree we must go further, and as far as the belfry named Roieéglise.
[G. L.]
HODUMNA ('Poסov̂ $\mu \mathrm{pa}$ ), in Gallia, is one of the towns of the Segusiani. (I'tol, ii. 8. § 14.) Row dumna appears in the Table on a road which leads to Lugdunum (Lyon) through Forum Segusianorum. Rodurna is Roanne on the west bank of the Loire, which gave name to the former district of Roamais.

## Situation.

Rome was seated on the Tiber, and principally on its left bank, at a distance of about 15 miles from its month. The ebservatory of the Collegio Romano, which ia sitnated in the ancient Campus Martius, lies in $41^{\circ} 53^{\prime} 52^{\prime \prime} \mathrm{N}$. lat., and $12^{\circ} 28^{\prime} 40^{\prime \prime}$ long. E. ef Greenwich.

Rome lies in the vast plain now called the Campagna, which extenda in a south-easterly direction about 90 miles from Cope Linaro, a little S. of Civita Jecchia, to the Circaean promentery; whilst its breadth is determined by the mountaina on the NE. and by the Mediterranean on the SW., in which direction it does nnt exceed about 27 miles in its greatest extent. Looking from any of the heights of Rome towards the E., the horizon is bounded frem the N. almost to the S. by
a nearly continuens chain of mountains, at a distance varying from about 10 to 20 miles. This side offers a prospect of great natural beauty, which, to the lover of antiquity, is still further enhanced by the many objects of classical interest which it presents. In the extreme north, at a di-tance of about 20 miles, lies the round and isolated mass of Soracte. Then follows the picturesine chain of the Sithine Apennines, in which the peaked and lofty summit of Lucretilis, now Monte Gennarn, forms a striking feature. A few miles farther S., at the spot where the Anio precipitates its waters threugh the chain, lies Tibur, embosomed in its grey and sombre groves of elives. More sonthward still, and seated on the last declivities of the Sabine mountains, is the "frigidum Praeneste," celebrated for its Kortes and its temple of Fortune (Cic. Div. ii. 41), and, like the neighbouring Tibur, one of the faronrite resorts of Horace. (Od...iii. 4.) A plain of 4 or 5 miles in breadth now intervenes, after which the horizon is again intercepted by the noble form of Mens Albanus (Monte Cavo), which closes the line of mountains towards the S . This mass is clearly ef volcanic origin, and totally unconnected with the Apennines. The mountain awakens many historical recollections. Ita summit was crowned by the temple of Jupiter Latiaris, the common sanctuary and meeting place of the Latin cities, conspicuous from the surrounding phain, and even visible to the mariner. Beneath lay Alba Longa with its lake; at its southern foot Lanuriom, and on its northern declivity Tusculum, consecrated by the genina and philosophy of Cicero. To the S. and SW. of Mons Albans there is nothing to obstruct the view over the undulating plain till it ainks into the sea; but on the W. and NW. the prospect is bounded to a very narrow compass by the superior elevation of Mons Janiculus and Mons Vaticanus.

The plain marked out by these natural boundaries is intersected by two considerable rivers, the Tiber and the Anio. The former, at first called Albula, and afterwards Tiberia or Tibris (Liv. i. 3; Plin. iii. 5. s. 9; Virg. Aen. viii. 330, d.c.), entering the plain between Soracte and the Sabine chain before described, bends its yellow course to the S . At a distance of about 3 miles from Rome, it receives the Anio flowing from the eastward, and then with increased volume passes through the city and discharges itself into the sea at Ostia. The course of the Tiber marked the limits of Etruria : the angular territory between it and the Anio is attribnted to the Sabines; whilst on the southern side the line of the Anio and of the Tiber formed the boundary of Latium.

The Campagna of Rome consists of nodulating ridges, from which scanty harvests are gathered; but the chief use to which it is applied is the pasturing of vast berds of cattle. These, with the picturesque herdsmen, mounted en small and lalf wild horses and armed with long poles er lances, are almest the ouly objects that break the monotuny of a scene where scarce a tree is visible, and where even the solitary houses are scattered at wide intervals. Yet anciently the Campagna must have presented a very different aspect. Even within sight of Rome it was thickly studded with cities at first as flonrishing as berself; and in those times, when "every rood of ground maintained its man," it must bave presented an appearance of rich cultication.

Such is the mature of the country in the immediate neighbourhood of kome. The celebrated group of
seven hills- the site on whieh the eternal city itself wats destined to rise - stands on the left bank of the Tiber. To the N . of them is atother hill, the Nlons lincins or Cullis Hortorum, which was excluded from the ancient city, but part of it was enclosed in the walls of Aurelian. The Tiber, at its entrance into Rome, very nearly approw hes the foot of this hill, and then describes three hold curves or reaches; first to the SW., then to the SE., and again to the SW. The distance from the spot where the Tiber enters the city to the SW. point of the Aventine is, in a direct line, about 2 miles. At the extremity of the second, or must eastern reach, it divides itself for a slort space into two channels and forms an island, ealled the Insula Tiberina. At this spot, at about 300 paces fron its eastern bank, lies the smallest but most renowned of the seven hills, the Mons Capitolinus. It is of a suddle-hack shape, depressed in the ceutre, and rising into two etninences at its S. and N. extremities. On its N. or rather NE.
side, it must in ancient times hare almost tonclued the Collis Quininalis, the most northerly of the seven, from which a large portion was cut away by Trajan, in order to construct his forum. The Quirinalis is somewhat in the shape of a hook, ranning first to the SW, and then curving its extreme print to the S. Properly speaking, it is not a distinet hill, but merely a tongue, projecting from the same cornmon ridge which also throws out the adjoining Viminal and the two still more southern projections of the Esquiline. It will be seen from the annexed plan, without the help of which this description cannot to nuderstood, that the Quirinal, and the sonthernmest and most projecting tongue of the Esquiline, alınost meet at their extremities, and enelase a considerable hollow which, however, is nearly filled up by the Viminal, and by the northern and smaller tongue of the Esquilive. These two tongues of the Esquiline were originally regarded as distinct hills, under the names of Cispins, the northern projection, and Op-

pius the sonthern one; but they were afterwards considered as one hill, in order aot to exceed the prescriptive number of seven. S. of the Esquiline lies Muns Caelius, the largest of the seven; and to the W. of it Mons Aventinus, the next largest, the NW. side of which closely borders on the Tiber. In the centre of this garland of hills lies the lozenge-shaped Mons Palatinos, facing on the NW. towards the Capitoline, on the NE. towards the Esquiline, on the SE. towards the Caelian, and on the SW. towards the Aventine.

It may he olserved that, of the seven hills above described, the Quirinal and Viminal are styled colles, whilst the others, though withont any apparent reason for the distinction, are called montes. It camot depend upos their height, since those called colles are as lofty as those dignified with the more improsing name of montes ; whence it seems probable that the difference originated in the ancient traditions respecting the Septimontiom. A less important eminence, called Velia, which was not reckoned as a distinct hill, projected from the NE. side of the Palatine towards the Esquiline, and separated the two valieys which in atter times became the sites of the Forom Romanum and of the Colosseum. The Germalus was another but still smaller offshoot, or spur, of the Palatine, on its western side.

On the opposite bank of the Tiher, Mons Vaticanus and Mons Janicnlus rise, as before remarked, to a considerably greater height than the hills just described. The former of these lies oppasite to the Pincian, but at a considerable distance from the river, thus leaving a level space, part of which was called the Ager Vaticanus, whilst the portion nearest the river obtained the name of Prata Quinctia. To the S. of Muns Vaticunus, and close to the river, at the extreme western point of its first reach, the Mons Janiculus begins to rise, and runs almost straight to the S . till it sinks into the plain opposite to Mons Aventinus. The opea space between this hill and the southernmost curve of the Tiber formed the Regio Transtiberina. The sinvous course of the river from the Pincian to the Capitoline left a still more extensive plain between its left bank and the hills of Rome, the northern and more extensive portion of which formed the Campus Martius, whilst its southern part, towards the Capitoline, was called the Prata Flamiaia.

From the preceding description it will be perceived that the Capitoline, Aventine, Caelian, and Palatine were completely isolated bills, separated from one another by narrow valleys. Those valleys which lay nearest the Tiber seem, in their original state, to have formed a marsh, or even a lake. Such was the Vallis Murcia, between the Palatine and Aventine, in later times the seat of the Circus Maximus ; as well as the low ground between the Palatine and river, afterwards known as the Velahrum and Forum Buarium ; and perhaps even part of the Formm Romannm itself. Thus, in the combat between the Rotnans and Salines, on the spot afterwards occupied by the forum, the affrighted horse of Jettios Cortius, the Sahine leader, is descrihed as carrying him into a marsh. (Liv. i. 12.) Nay, there are grounds for believing that the Tiber, in the neighbourhood of Rome, formed at a very remote period an arno of the sea, as pure marine sand is often found there. (Niebubr, Lect. on Ethnogr. vol. ii. p. 39.)

In order to assist the reader in forming a clear idea of the nature of the Roman hills, we shall here vol. II.
insert a few measurements. They are taken from a paper by Sir George Schukbarg in the "Philoso. phical Transactions," Au. 1777 (vol. 1xvii. pt. 2. p. 594), and have been esteemed the most accurate. (Becker, Hundbuch, vol. i. p. 83, nate.) Other measurements by Calandrelli are also amexed. The latter are according to the Paris foot, which equals 12.785 inches English.

In ancient times, however, the hiills must have appeared considerably higher than they do at present, as the valleys are now raised in many places from 15 to 20 feet above their former level, and in some parts mneh more. (L.amisden, Aut. of Rome, p. 137.) This remark is more particularly applicable to the forum, which is covered with rubbish to a great depth; a circumstance which detracts mach from the apparent height of the Capitoline; whose sides, too, must formerly have been much mure abropt and precipitons than they now are. The moch superior height of the Janiculam to that of any of the hills on the W: bank of the Tiber, will have been remarked. Hence it enjoyed a noble pro-pect over the whoie extent of the city and the Caupagna beyond, to the mountains which bound the pastern horizon. The view bas been celebrated by Martial (ir. 64), and may be still enjoyed either from the terrace in front of S. Pietro in Montorio, or from the bpot where the Funtana Paolina now pours its abundant waters :-
"Hibc septem dominos videre montes Et totam licet aestimare Romam, Alhanos quoque Tusculosque colles Ett quedcunque jacet sub urbe frigus."

## Climite.

The climate of Rome appears to have becn much colder in aacient times than it is at pro-s 3 A
sent. Dienysius (xii. 8) reeords a winfer in which the snow lay more than 7 feet deep at Rome, when loases were destroyed and men and cattle perished. Another severe winter, if it be not the same, is mentioned by Livy (v. 13) as oceurring r.c. 398 , when the Tilier was frozen over and the roals rendered impassable. (Ct. x!. 4., \&e.) A very severe winter is also alloded to by St. Augustin (de Civ. $m_{\text {ci. iii. 17). That such instances were rare, how- }}$ ever, appeas from the minuteness with which they are recoriled. Yet there are many passages in the classics which prove that a moderate degree of winter cold was not at all umsmai, or rather that it was of ordinary occarrence. Thus Pliny (xvii. 2) speaks of long snows as being beneficial to the corn; and allusions to wiater will be fornd in Cicero (ad Qu. Fr. ii. 12), Hnrace (Od. i. 9, iii. 10), Martial (iv. 18), and in numernus other passages of ancient writers. At the present time the occurrence of even such a degree of cold as may be inferred from these passages is estremely rare. One or two molern iostances of severe winters are indeed recorded; but, generally speaking, snow seldom falls, and never lies long upon the ground. This change of climate is accounted for by Dr. Arnold as fullows: "Allowing that the peoinsular form of Italy must at all times lave bad its effect in softening the climate, still the woods and manslues of Cisalpine Gaul, and the perpetual snows of the Alps, tar more extensive than at present, owing to the uncultivated and uncleared state of Switzerland and Germany, could not but have been felt even in the neighbourhood of Rome. Besides, even in the Apennines, and in Erruria and in Latium, the forests occupied a far greater space than in molern times : this would inerease the quatity of rain, and consequently the volume of water in the rivers; the flowds would be greater and more numerous, and before man's domioion had completely subdned the whole country, there would be a large accumulation of water in the low grounds, which would still further increase the coldness of the atmosphere." (Ilist. of Rome, vol. i. p. 449.)

But if the Ronan climate is aneliorated with regard to the rigour of its winters, there is no reason to believe that the same is the case with respect to that unhealtly state of the atmospliere ealled malaria. In ancient times, Rome itself appears to hare been twlershly fiee from this pestilence, which was confined to certain traets of the surrounding country. This way have been partly owing to its denser population: for it is ohserved that in the more theckly inhabited districts of Rome there is even at present but little malaria, Strabo, speaking of Lattium, observes that only a few spots near the cuast were marshy and onwholesome (v. p. 231), and a little further on gives positive testimony to the healthiness of the immediate neighbeurhoul of hone ( $\epsilon \phi \in \xi \bar{\eta} s \delta^{\prime} \dot{\epsilon} \sigma \tau \boldsymbol{\lambda} \pi \in \delta \dot{i} a$, ráa $\mu \dot{\epsilon} v$

 Tn the samm parpuse is the testimony of Livy, who represents Camiltus describing the hills of Rome as "saluberrimos colles:" anil of Cicerv (de Ficp. ii. 6): " locumque delogit et fontibus abundantem et in retiome pestilenti sulubrem: colles enim sunt, 'qui cum pertlantur ipsi, tum afferunt umbram vallibus." It i, surprising how Becker (Handlowh, p. s2) can itterpret Cicero's meaning in this passage to be that the lower jarts of Rome were unhealtlyy, when it is
obvious that be meant just the revense, - that the shade of the hills secured their bealthiness. Littlo ean be inferred with regard to any permanent maLuria from the altara which we are told were erected to the goddesses Orbona and Febris on the Esquiline and in other places, (Cic. N. D, ii. 25 ; Plin. ii. 5 ; Valer. Mas. ii. 5. § 6.) Even the most healthy spots are not always exempt from fevers, much less a populons city during the heats of autumn. The climate of Rome is at present reckoned unhealthy from June till October; bat Horace dreaded only the autumnal heats. (Od. ii. 14. 15 ; Sat. ii. 6. 19) The season is more acearately defined ia his Epistle to Matecenas, where be places it at the ripeuing of the fig:-

# "dum ficus prima calorque <br> Designatorem decorat lietoribus atris." 

( $E_{l}$, i. 7. 5.)
In the same epistle ( $v, 10$ ) he seems to expect as a usual occurrence that the Alban fields would bo covered with snow in the winter.

## PART I. HISTORY OF THE CITY.

## I. Traditions respecting the Foundations

 of Rome.The bistory of the foundation of Rome is lost in the darkness of remote antiquity. When the greatness of the city, and its progress in arts and letters, awakened curiosity respecting its origin, anthentic records on the subject, if indeed they bad ever existed, were no longer to be found. Hence a licenso of conjecture which has produced at the least no fewer than twenty-five distiact legends respecting the foundation of Rome. To record all these, many of which are merely rariations of the same story, would be beside the purpose of the present artiele. The student who desires a complete account of them will fiod them very clearly stated in Sir G. Cornewall Lewis's Inquiry into the Credibility of the early Roman IIistory (vol. i. p. 394, seq.), and also, though rout so fully, in Niebalir's Mistory of Rome (Eng. Transl. vol. i. p. 214 , seq.), chiefly derived from the following ancient sources: Dionys, Halic. i. c. 72 -7t: Plut. Rom. 1, 2; Servius, ad Jïrg. Acn. i. 273 ; and Festus, s. v. Roma. The importance of the subject, however, and the frequcut allusions to it in the classical writers, will not permit as to pass it over in perfect silence; and we shall therefore mention, as compendiously as possible, seme of the principal traditions.

All the theories on the subject may be reduced to three general heads, as follows:-1. That Rome was founded in the age preceding the Trojan War. II. That it was founded by Aeneas, or other persons, a little after the fall of Troy. HI. That Romulus, grandson of Numitor, king of Alba Longa, was its fourder, several centuries after the Trojau War.

Many who heid the first of these opinions averiocd the building of Rome to the Pelasgi, and thought that its name was derived from the force ( $\beta \dot{\omega} \mu \eta)$ of their arms. (1lut. Rom. 1.) Others regarded it as having been founded by an indigenous Italiau tribe, and called Valentia, a name of the same import, which, after the arrival of Evander and other Greeks, was translated into Rome. (Niebuhr, IFist. vol, i. p. 214.) A more prevalent tradition than either of the preceding was, that the city was first founded by the Areadian Erander, sbout sisty years lefore the Trojan War. The fact that Evandir
noma.
settied on the Palatine hill seems also to have been sometines accepted by those who referred the real foundatien of Rome to a much later peried. The tradition respectiog this settlement is interesting to the topographer, as the names of certaio places at Rone were said to bo derived from circumstances connected with it. The Palatium, or Palatine bill, itself was thought to have been named after the Arcadian town of Pallantium, the $n$ and one $l$ having heen dropped in the course of time ; though others derived the appellation in different ways, and especially from Pallas, the grandson of Evander by his daughter Dyna and Hercules (Paus. viii. 43 ; Dionys. i. 32.) So, too, the Porta Carmentalis of the Servian city derived its name from a neighbouring altar of Carmentis, or Carmenta, the mother of Evaukler. (Dionys. l. c.; Virg. Aen. viii. 338.) Nothing indeed can be a more striking proof of the antiquity of this tradition, as well as of the deep root which it must have taken among the Roman people, than the circumstance that to a late period divine hobours continued to be paid to Carmenta, as well as to Evander himself. Another indication of a similar tendency was the belief which prevailed a:iong the Remaus, and was entertained even by such writers as Livy and Tacitus, that letters and the arts of civilisation were first introduced among them by Evander. (Liv. i. 7; Tac. Ann. si. 14; Plat. Q. R. 56.)

The greater part of those who held the secend opinion regarded Aeneas, or one of his immediate descendants, as the founder of Roore. This theory was particularly current among Greek writers. Sometimes the Trojans alone were regarded as the firunders : semetimes they are represented as uniting in the task with the Aborigines. Occasienally, however, Greeks are substituted for Trojans, and the origin of Rome is ascribed to a sen of Ulysses and Circe: nay, in one case Aeneas is represented as coning into Italy in company with Ulysses. But though this view was more particularly Grecian, it was adopted by some Latin writers of high repute. Sillust (Cat. 6) ascribes a Trojan origin to Rome; and Propertius (iv. 1), without expressly naming Aeneas as the founder, eridently refers its origio to bin:-
"Hec quadcunque vides, hospes, qua maxioai Rema

## est, <br> Ante l'hrygem Aenean collis ct berba fuit;"

though in the same passage he also refers to the occupation of the Palatine hill by Evander. One very prexalent form of this tradition, which appears to have been known to Aristotle (Dionys. i. i2), represents either a matron or a female slave, named lionce, as burning the ships after the Trojans had laded. They were thus compelled to remain ; and when the settlement became a flowisling city, they named it after the woman who had been the cause of its foundidtion.

The third form of tradition, which ascribed the origin of Rome to Romalus, was by far the most naiverally received among the Romans. It must be regarded as ultimately forming the national tradition ; and there is every probability tbat it was of native growth, as many of its incidents serve to explain Roman rites and institutions, such as the worship of Vesta, the Lupercalia, Larentalia, Lemuria, Arval Brothers, \&c. (Lewis, vol. i. p. 409.) The legend was of high antiquity among the Romans, although inferior io this respect to some of the Greek
homa.
accounts. It was recorded in its present form by Fabius l'ictor, one of the earliest Roman amnalists, and was adopted by other ancient antiguarians and bistotians (Dionys. i. 79). Nay, from the testimony of Livy we may infer that it prevailed at a nuch earlier date, since he tells us ( x .23 ) that an image of the she-wolf suckling the two royal infants was erected near the Ficus Ruminalis by the curule aediles, B. c. 296.* The story is too well known to he re-

THE CAPITOLINE WOLF.
peated here. We shall merely remark that although according to this tradition Aeneas still remains the mythical ancestor of the Romans, yet that the building of two cities and the lapse of many generations intervene between his arrival in Italy and the foundation of Rome by his descendant Rumulus, Aeneas himself founds Lavinium, and his son Accanius Alba Longa, after a lapse of thirty years. We are little concerned about the sovereigns who are suppased to have reigned in the latter city down to the time of Numitor, the grandfather of Romulus, ex-

* It has been conjectured that this was probahly the same statue mentioned by Cicero (de Div. i. 12, Cat. iii. 8), and described as having been struck by lightning ; but this can hardly be the case, as the inage described by Cicero stood in the Capitol. A bronze statue answering Cicero's deseription is still preserved in the Capitolioe Museum at Reme, which is regarded by Niebuhr as a genuine relic (IIst. vol. i. p. 210), and has been immortalised in the rerse of Byron, A modern critic finds it a proluction too clemsy for the state of Roman art at the time assigned by Livy, and thinks that the holes in the hind-leg of the wolf were not produced by lightoing, but arise from a defect in the casting. (Braun, Ruins and Muserms of Rome, p. 81.) Fabius Pictor, however, who mentions this statue in the passage cited from his werk by Dionysius (l.c.), expressly remarks the primitive
 ma入aias Epyarias,-thoogh considerably less than a century must have elapeed between bis time and the date of its erection. It was rude, therefore, even when compared with the state of Roman art towards the end of the third century B. C., though it had been erected only at the beginning of that ceutury. Mommsen is inclined to believe that the Capitoline wolf is the genuine one erected by the Ogulnii and described by Livy, from the circumstance of its having been found near the arch of Severus, (I) Comitio Rom., in the Annali dell' Instituto, 1844, vol. xvi. p. 300.) Whoever has seen the group will perhaps at all events agree with Winckelman! that the twins are evidently of a different period from the wolf.
3.2
cept in so far as they may serve to ascertain the era of Rome. The account which has the most pretensions to accuracy is that given by Dionysias (i. 65 , 70,71 ) and by Diodorus ( $F r$. lih, viii. vol. iv. p. 21, lipont). The sum of the reigns here given, allowing five years for that of Acneas, who died in the seventh year after the taking of Troy, is 432 years that is, down to the second year of Numitor, when Rome was foumded by Romulus, in the first year of the 7 th Olympiad. Now this agrees very closely with Varro's era for the foundation of Rome, viz., $753 \mathrm{~B} . \mathrm{C}$. For Troy laving been taken, according to the era of Eratosthenes, in 1184 n. C., the difference between 1184 and 753 leaves 431 years for the duration of the Alban kingdom.

Viuro's date for the foundation of Rome is that generally adopted. Other authorities place it rather later: Cato, in 751 2. C.; Polybius, in 750 ; Fabius Pictor, in 747.

This is not the place to enter into the question whether these dates of the Alban kings were the invention of a later age, in order to satisfy the requirements of clironology. It will suffice to remark that the next most prexalent opinion aunong those Runans who adopted the main points of this tradition assigned only three centuries to the Alban kings before the foundation of Rome. This was the opinion of Virgil (Aen. i. 272), 一
"Hic jam tercentum totos regnabitur annos," - of Justio, of Trogus Pompeius (xliii. 1), and of Livy (i. 29), who assigns a period of 400 years for the existence of Alba, and places its destruction a century after the foundation of Rome. At all events the preponderance of testimony tends very strongly to show that liome was not founded till several centuries after the Trijan War. Timaeus seems to have been the first Greck writer who alopted the account of the toumdation of Rome by Romulus. (Niebuhr, Itist, vol. i. p. 218.)

## II. Tife City of Roatlus.

The Ioman historians almost unamously relate that Rome originally consisted of the city fuunded by Itomulus on the Palatine. (Liv, i, 7; Vell. i. \&; Tac. Ann. xii. 24 ; Dionys, i. 88 ; Gell. xiii. 14; Or. $T r$, iii. 1. 29, \&c.) The ancient settlement of Evander on the same hill, as well as a city on the Capitoline called Saturnia (Varr, L. I. ©. § 42, Miill.; Festus, p. 322, Mill.), and another on Muns Janiculus called Aenea or Antipolis (Dingss, i. 73; Plin. iii. 9). must he supposed to have disappeared at the tim of its fomndation, if indeed they had ever cxisted. It semms probable enough, as Gronysins says, that villages were previonsly scattered about on the sryen hills: but the exi-t-nce of a place called Vaticat or Vaticum, on the right lank of the Thber, and of a Quirium on the Quirinal, rests solely on the comjecture of Niebuhr (Ilist. vol. i. p. 223, scq., 2*9, seq., Eng. Trans.)

Iomacrium.-Tacitus has given in the following passage the fulkest and most autheutic account of the circnit of the Romulean city: "Sed initium condendi, et quad pomnerinm Romulus posnerit, noscere haud absurdum rear. Igitur a foro Buario, whi acreum tauri simulacnmm :adspicimus, quia id genus auimalium aratro subditur, sulcus designandi oppidi cneptus, ut magnam Iferculis aram amplecteretur. Inde certis spatiis interjecti lapdes, per una montis Palatini ad aram Consi, mox ad Carins Veteres, tum ad acellum Larum; forumgue Ronanum et

Capitolium non a Romulo sed a Tito Talio additum urbi credidere." (Ann. xii. 24.)

According to this description, the point where the furrow of the pomorrium commenced was marked by the statuc of a bull, whence the name of the Formm Boarium was by some writers afterwards derived. The Forum Boarium lay under the westernmost angle of the Palatinc ; and the furrow probably becan a little beyond the spot where the Arens Argentarius now stands, clase to the church of $S$. Giorgio in Velabro, embracing the altar of Hercules, or Ara Maxima, which stood in the same forum :-
"Constituitque sibi, quae Maxima dicitur, arau, Hic ubi pars urbis de bove nomen liahet."
(Or. Fast. i. 581.)
Hence it proceeded along the north side of the Vallis Murcia (Circus Maximus), as far as the Ara Consi. According to Becker (Handluch, p. 98 , de Muris, sce. p. I1), this altar must be sought towards the lower end of the Circus, near the sontheramost angle of the Palatine; but he gives no anthority for this opinion, which is a mere assumption, or ratber a petitio principii from the passage of Tacitus before quoted, whence he thinks that it must necessarily be referred to the spot indicated, (Handh. p. 468, and p. 665, note 1438.) But there is nothing at all in the words of Tacitus to warrant this inference : and there seems to be no good reason why we should dispute the authonity of Tertullian, from whom we learn that the Ara Consi stood near the first meta of the circus, and therefore somewhere near the middle of the SW: side of the Palatine ("ct nunc araConso illi in Circo defossa est ad primas metas," de Spect. 5). Hence, after turning, of course, the sonthermmost point of the Palatine, where the Septizonium of Severus afterwarls stood, the pomoerium proceeded through the valley between the Palation and Caelius (I'ia de S. Gregorio) to the Curiae Veteres. The situation of this last place has been the subject of much dispute. Niebuhr (Hist. vol. i. p. 288), though with some hesitation (ib. nute 735), and Bunsen (Beschreibung, vol. i. p. 138), place the Curiae Veteres near the baths of Titus on the Esquiline, and they are followed by Miiller (Etrusker, vol. ii. p. 143). This view appears, however, to be foundel on no authority, except that of the modern writers Blondus Flavius and Lucius Faunns, who state that the part of the Enquiline called Carimae, and even the baths of Titns themselves, were desirnated in ancient notarial documents as "Curia Vetus." But, first, it is lighly improbable that Tacitus, in his description, should have taken so long a stride as from the Ara Consi, in the middie of the SW: side of the l'alatine, to the lisquiline, without mentioning any intervening place. Agnin: if the line of the pomocrium had proceeded so far to the N ., it must have embraced the Velaa as well as the l'alatine, as Bumsen assunes (l.c.); and this must hare destruyed that squareness of form which, as we slall see further on, procurel for the city of Romulus the appellation of "Roma Quadrata." That the forrow was drawn at right angles following the natural lue of the hill we are assured by more than one an-
 Dionys. i. 88: antiquissimom pomoerium, quod a Romulo institntum est, I'alatini montis radicibus terminabatur, Gell. xiii. 14). But, further, it may be shown from satisfactory testimony that the Curiae Teteres were not seated on the Esquiline, but between the Palatinc and Caclian. Thus the Notitia, in de-

ROMA.
ROMA.
725
scribing the 10th Regio, or Palatium, marks the boundaries as follows, taking the reverse direction of that followed by Tacitus: "Continet casam Romuli, aedem Matris Deum et Apollinis Rhannusii, l'entapylum, domum Augustinianam et Tiberianam, AuEuratorium, aream Palatinam, aedem Jovis Victoris, domum Dionis, Curiam Veterem, Fortunam Respicientem, Septizonium Divi Severi, Victoriam Germanicianam, Lupercal." The Curiae Veteres are here mentioned in the singular number; but there is some authority for this deviation. Thus Ovid (Fast, iii. 139) says:-
"Janua tunc regis posita viret arbore Phoebi; Ante tuas fit idem, Curia prisca, fores,"
where the Curia Prisca is identified with the Curiae Veteres by the following passage in Macrobius:" Endem quoque ingrediente mense tain in Regia Curizsque atque flaminum domibus, laureae veteres novis laureis mutabantur." (Sat.i.12.) Now, in order to determine the precise situation of the Curia Vetus of the Notitic, it must be borne in mind that the "Donus Angustiniana," or palace of Augustus, occupied a cousiderable portion of the NE. side of the Palatine, commencing at the N. corner, as will be shown in treating the topography of the later city, and ending probably opposite to the arch of Titus, where the entrance was situated. Proceeding eastward, along the same side of the hill, we find enumerated the Auguratorium and Area Palatina. Then fullows the tenple of Jupiter Vietor, which we must not confound, as Becker does (Handb. p. 100, cf. p. 422, nate 847 ; see Preller, Regionen, p. 186), with that of Jupiter' Stator, since the latter, according to the Notitia, lay rather more northwards in the 4th Regio, and probably on or near the Summa Sacra Via. That of Jupiter Victor, then, must have l,tin to the E. of the palace, and, as there is but a short space left on this side of the hill, it is probable that the Domus Dionis must be placed at least at its extreme NE. angle, if not on the side facing the Caelian. The Curia Vetus, of course, lay more to the S., and perhaps towards the middle of the E. side of the l'alatine. Its site near the temple (or statue) of Fortuna Respiciens is confirmed by the Basis Capitolina, which mentions in the 10th Regio a "Vicus Curiarum" near to another of Yortuna Respiciens. (Gruter, Inser. ccl.) The fourth point mentioned by Tacitus - the Aedes Larum - lay on the Sumuna Sacra Via, and therefore at about the middle of the NE. side of the Palatine hill. ("Aedem Larum in Summa Sacra Via," Mon. Ancyr.; "Ancus Martius (habitavit) in Summa Saera Via, ubi aedes Larum est," Solin. i. 24.) At this point the historian finishes his description of the pomoerium of Romulus, and proceeds to say that the forum and Capitol were believed to bave been added to the city not by that manarch but by Titus Tatius. Hence he is charged with leaving about a third of the pomoerimen undefined ; and, in order to remedy this defect, Becker (de Muris, gc. p. 14, Handb. p. 102), not without the sanction of other critics and editors, proposes to alter the punctuation of the passage, and to read "tum ad sacellum Larum forumque Romanum; et Capitolium non a Komulo," \&c. But in truth little is gained by this proceeding - only the short space from the arch of Titus to the N. point of the Palatine, whilst the remaining part of the line from thence to the Forum Boarium still remains undescribed. But what is worse, even this little is gained at the expense of truth; since, strictly speak-
ing, a line drawn from the Acdes Larum to lhe formn would include the temple of Testa ( $S$, Maria Liberatrice), which, as we learn from Dionysius (ii. 65), lay outside the walls of Romulus. Moreover, according to the emended punctuation, it night be doubtful whether Tacitus meant that the forum was included in the Romvlean city, or not; and it was apparently to obviate this objection that Berker proposed to insert hoc before et (hac et Capitolium). But these are liberties which sober criticism can hardly allow with the text of such a writer. Tacitus was not speaking like a common topographer or regionary, who is obliged to identify with painful accuracy every step as he proceeds. It is more consistent with his sententious style that, having carried the line thus far, he left his readers to complete it from the rough indication - which at the same time conveyed an important historical fact - that the forom and Capitol, which skirted at some distance the northern angle of the hill, were atded by Tatius, and lay therefore outside the walls of Romulus. His readers could not err. It was well known that the original Rome was square; and, having indicated the middle point in each of the sides, he might have been cbarged with dulness had he written," tum ad sacellun Larum, inde ad formu

## ROMA.

Boarium." Bussen, however, has assumed from the omission that the line of wall never proceeded beyond the Sacellam Larum, and that, indeed, it was not needed; the remaining space being sufficiently defended by a marsh or lake which surounded it. (Beschr. vol. i. p. 138.) But, as the Sacellum hatrum lay on high ground, on the top of the Velian rilge, this could not have been a reason for not carrying the wall farther; and even if there was a marsh lower down, we cannot hut suppose, as Beekur observes (de Mur. p. 14), that the pomoerimm must have been carried on to its termioation. Indeed the Porta homanola, one of the gates of the Romulean city. Lay, as we shall presently see, on the NW. side, a little to the N . of the spot whence Tacitns commences his description; and if there was a gate there, it fortiori there was a wall.

The line described by Tacitus is that of the furrow, not of the actual wall; but, in the case at least of a newly founded city, the wall must have very closely fullowed this line. The space between them - the wall being inside - was the pornoerium, literally, "behind the wall" (post moernm = murum); and this space conld not be ploughed or cultivated. The line of the furrom, or boundary of the pomoerium, was marked by stones or cippi. The name pomoeriom was also estended to another open space within the walls which was kept free from buildings. The matter is very clearly explained by Livy in the following passace: - "Pomoerinm, verbi vim solum intuentes, postmoerium interpretantor eise. Est autem magis circa murun locus, guem in condendis urbibus olim Etrusci, qua muruan ducturi essent, certis circa terminis inangurato consecrabant: ut neque inteciore parte uedificia moenibus onstinnarentur, quae nunc vulgo etiam conjungunt; et extrinsecus puri aliquid ab humano cultn pateret soli. Hloc spatium, quod neque habitari neque arari fas erat, non magis quod post muram esset, quam quod murus post id, panoetium Romani appellarunt: et in urbis incremento semper, quantam moenia processura erant, tantum termini hi consccrati profercbuntor" (, 44 ). Every city funmled, like Kome, after the Etruscun manner, had a pomoerium. The rites olserved in drawing the boundary lue, called " primigenius suleus" (Panl. Diac. 1. 236, Mitl.). were as fulluws: the founder, dressed in (i, binian fashiun (cinetu Gabino), yoked to a plough, on an aukpiciuns thay, a boll and a cow, the former on the off side, the litter on the near side, and, proevelug always to the left, drew the furrow marking the boundary of the pomoerium. There was a mystical meaning in the reremony. The ball on the ontide dented that the malris were to be dreadful to external enemics, winilst the cow inside typified the women who were to replenish the city with inhabitants. (Jumn. I.ydus, de Mens. iv, 50.) The furrow nopresented the ditch; the chads thrown up, the wall; and persons followed the plough to throw inwards those chuls which had fallen outwards. At the places lef. for the gates, the plough was lifted up and earried over the pufane space. (Varr, L. L. v. § 143, Miill.; Plut. (2. R. 27, Rom. 11.) The whole prowess has bera summed up in the following vigorms womls of Cato:- " (Qui urbem novam com. det, tauro et vacca alet; whi araverit, murum faciat; ubi fortam vult easc, arutrum sustollat et portet, et portan yocet." (ap. Isidur. xv. 2, 3.)

The religions use of the phmerinat was to define the boundary of the mopiris urkana, or city anspiecs. (Varr. l. c.) So Gillias, fron the books of
the Roman augurs: "Pomoerium est locus intra agrum effatum per totins urbis circuitum pone maros regionibns certis determinatus, qui facit finem urbani auspicii" (xiii. 14). From this passage it appears that the pomoerium itself stood within another district called the "ager effatoa" This was also merely a religious, or augural, division of territory, and was of five kinds, viz, the ager Romanus, Gabinus, peregrinus, hosticus, and incertus, or the Roman, Gabinian, foreign, hootile, and doubtful territories. (Varr. v. § 33, Müll.) These agri or tervitories were called "effati," because the augurs declared (effati sunt) after this manser the bounds of the celestial auguries taken beyond the pomoerium. (Id.vi. § 53, Niill.) llence in this sense the Ager Romanus is merely a religions or augural division, and must not be confonnded with the Ager Lomanus in a political sense. or the territory actuaily belonging to the Rowan people. It was the territory declared by the augors as that in which alune auguries might be taken respectiug foreign and military affairs; and hence the reason why we find so many acconnts of generals returning to Rome to take the augnries afiesh. (Liv. viii. 30, x. 3, xxiii. 19, \&c.)

It is impossible to determine exactly how much space was left for the pomoerium between the forrow and the wall. In the case of the Romulean city, however, it was probably not very extensive, as the natare of the ground, expecially on the side of Mons Caelins, would not allow of any great divergence from the base of the hill. Besides, the boundaries already laid down on the N. side, as the Sacellum Larum and Aedes Vestae, show that the lino ran very close under the Palatine. This question depends upon another, which there is no evidence to determine satisfactorily, namely, whether the wall crowned the sumnit of the hill or ran along its base. The furmer arrangement seems the more probable, beth becanse it was the most natural and usaal mode of fortification, and because we should otherwise in some parts hardly find room enongh for the pornoerium. Besides, one at least of the gates of the Romulean city, as we shall see further on, was approached by steps, and inust therefore have stond upon a height, There seems to be no good authority for Niebulur's assumption (Hist. vol. i. p. 287 , seq.) that the ariginal city of Romulus was defended merely by the sides of the hill being escarped, and that the line of the pomoerimu was a later culargement to enclose a suburb which had sprung up round abont its foot. It is surprising how Niebular, who had seen the grond, conld imagine that there was room for such a suburb with a pomerium. Besides, we are expressly told by Tacitus ( $l$. c.) that the line of the pmoerium which he deacribes was the beginning of building the city (imitium condendi). Indeed Niebulre seems to liave had some extrsordinary ideas respecting the nature of the groand about the I. .latine, when he deseribes the space between that hill and the Caclius, now accupied by the road called Toir di $S$. Gorgorio, as "a wide and convenient 1lain!" (Ilist. i. 390, ef. p. 391.) An obscure tralition is mentioned indeed by Greek writers, nccording to which there was a Romb Quadrata distinet fiom and older than the city of

 'Púpou yे 'Pápovs ma入anotépou toútul, Dion Cuss, Fr. Fales. 3, 5, p. 10, St, ; ef. Tzetzes, ad L.ycophr.v.123:2). But, as Becker observes (Hundb.

ROMA.
p. 106), we should infer from these words that the Rome alluded to was not on the Palatine, but on some otber hill Plutarch, indeed, also alludes to the same tradition (Rom. 9), and describes Romulus as building this Roma Quadrata and afterwards enlarging it. We also find some obscure hints to the same purpose in Latin anthors. Thus Solinus: "Nam ut affirnat Varro, anctor diligentissimus, Romam condidit Romolus, Marte genitus et Rhea Silvia, vel ut nonnulli, Marte et llia, dietaque est primnm Rona quadrata, quod ad aequilibrium foret posita. Ea incipit a silva, quae est in area Apollinis, et ad supercilium soalarum Caci habet terminum, ubi tugurium fuit Faustuli " (i. 2). Now we must not take the whole of this account to be Yarro's, as Becker does. (De Muris, gc. p. 18, seq., Handb. 1. 106.) All that belongs to Varro seems to be taken from a passage still cxtant respecting the jarentage of Romuius (L. L. v. § 144, Dlüll.), and the words after "rel ut nonnulli," \&e. belong to Sulinus himself. Varro, tberefore, is not, as Becker asserts, a witness to Rome having been called quadrata. The following pussage in Festus, however, manifestly alludes to another sense of Roma Qualrata, namely, as a certain hallowed phoce wiuch every city built with Etruscan rites possessed, and in which were deposited such things as were considered of good omen in founding a city, and which are described by Orid (Fasti, iv. 821 ; of. Plut. Rom. 11): "Quadrata Roma in Palatio ante templurn Apollinis dicitur, ubi reposita sunt quae solent boui ominis gratia in urbe cundenda adhiberi, qnia saxo munitus est initio in speciem quadıatam. Ejus loci Enuius meminit, cum ait: 'et quis est erat Romae regnare quadratne"" (p. 258, Müll.). The place here described was, in fact, the mundus of the Romulean city. The words of Solinus, though we are ignorant of the exact position of the places which be mentions, seem to denote too large an area to be reconciled with the description of Festus. In confirmation of the latter, however, Becker (Handb. p. 107) adduces a fragment of the Capituline plan (Belluri, Tab. xvi.), with the imperfect inscription niea apo (area Apollinis), and, on the space beside it, a plan of a square elevation with stops at two of its sides. Tbis, he observes, exactly answers to the description of Festus, being a "locus saxo manitus in speciem quadratam;" and the area Apollinis was naturally hefore his temple. That the whole of the Ronulean city, huwever, was also called quadrata, is evident, not only from a passage of Dionysius before cited, where he speaks of the temple of Vesta being outside of the Rome called Quadrata ( $07 \boldsymbol{\sigma}$

 mutilated fragment of Ennius, quoted by Festus in the passage just cited. It is without sense as it stands, and Miiller's emendation appears certain:
"Et qui se sperat Romae regnare quadratae,"
where the menning is inapplicable to a mere mundus, and must be referred to the entire city.

Gates of the Palatine city.- It was required that in a town built, like Rome, with Etruscan rites, there should be at least three gates and three teruples, namely, to Jupiter, Juno, and Minerva (Sers. ad Aen. i. 422); and we learn from Illiny (iii. 9) that the city of Romulus had, in fact, three if not four gates. In the time of Varro, three gates cxisted at lome besidex those of the Servian walls, and two of these can be referred with certainty to

IOMA.
the Pahatine city. "Practerea intra muros video portas dici. In palatio Muciunis, a mugitu, qued ea peous in bucita circum nutiquom oppidum exigebaut. Alteram Romanulam ab Rona dictan, quae habet gradus in Nova Via ad Volupiae sacellum. Tortia est Janualia dicta ab Jano; et ideo ibi jositnom Jani signum ; et jus institutum a Pompilio, ut seribit in Annalilus Miso, ut sit aperta semper, nisi quom bellum sit nusquam." (L. L. v. §§ 164, 165, Ditill.) The gate here called Mucio by Varro is the same as that called Mugio by other writers, by an ordinary interehange of c and $g$, as in Caius for Gaius, Cernalus for Germalus, \&c. Thus Varro hitnself, as cited by Nonius (xii. 51. p. 531, s.) is made to call it Mugio. In Paulus Diaconus (p. 144, Miill.) we find the adjoctive form Mugionia, erroneonsly fornsed, however, from Mugins, the nane of a man; and lastly, the form Mugonia in Solitus (i. 24).

The most important passage for determining the situation of this gate is Livy's description (i. 12) of the battle between the Satines and Romans. The former occupy the Capitoline hill, the latter are arrayed in the valley beneath. The Romans mount to the attack, but are repulsed and driven back towards the " old gate" ("ad veterem portam") of the Palatium. Romulus, who is stationed on the high ground near it (the summit of the Velia), yows to erect on this spot a temple to Jupiter, under the name of "Stator," if he arrest the flight of the Romans. At this time the Sabines bad driven back the Romans to the extremity of what was afterwards the forum, and their lcader Metins Curtins had even penetrated nearly to the gate of the l'alatium. The Romans, however, rally; the Sabines are repulsed, and the conbat is renewed in the valley between the two hills. Dionysius confirms the site of the gate by describing it as leading to the Palatium from the Summa Sacra Via; which street, as will be seen when we conse to describe the topography of the later city, crossed the ridge of

 $\delta \delta \overline{0} \hat{v}$, ii. 50 ). The spot is further identified by a graphic passage in Ovid, where the citizen who serves as Cicerone to his book conducts it from the fora of the Caesars along the Sacra Vin, and, having crossed the eastern estremity of the Forum Romanum, arrives at the temple of Vesta; then proceeding onwards up the Sacra Via, first points out the former residence of Numa, ard then, turning to the right, indicates the gate of the palace:-
${ }^{4}$ Paruit et ducens, 'Haec sunt fora Caesaris, inquit; Haec est a sacris quae via nomen habet.
Hic locus est Vestae, qui Pallada servat et ignem; Hio fuit antiqui regia parva Numae.'
Inde petens dextram, 'Porta est, ait, ista Palat!; Hic stator; boc primum condita Rona loco est. " "
(Trist. ini. 1. 27.)
The site of the temple of Jupiter Stator here given is confirmed by other writers. Thas it is described by Livy (i. 41) as near the palace of Tarquinius Prisons, from the windows of which, overhanging the Nora Via, Tanaquil addressed the people. Nuw. as will be shown in its proper place, the Nova Via ran for some distance parallel witb the Nacra Via, and between it and the P'alatine, and, at its lighest. point near this gate, was called "Sumna," like the Sicra Via. Thus Sulinus (i. 24): "Tarquinius Priscus ad Mugoniam l'ortam supra Summan

Novan Viam (habitavit)." The site of the 1 emple of Jupiter Stator near the Summa Suera Via is sufficiently certaio without alopting the proof adduced by Beeker from the equestrian stathe of Cloelia, the history of which he completely misuoderstands. The passace from Plony (xxxiv. 13) which lie quotes (note 156) relates to another and apparently a rival statue of Valeria, the daughter of Publicola, who disputed with Cloelia the hooour of having swum the Tiber, and encuyed from the custody of Porsena. Indeed, the two rival legends seem to have created sone coufusion among the ancients themselves ; and it was a disputed point in the time of Plutarch whether the existing statue was that of Clowlia or Valeria. (Popl. 19.) Becker confounds these two statnes, and asserts (note 155) that Pliny, as well as Dionysilts, speaks of the statue of Cloclia as no looger existing in his time. But Pliny, on the contrary, in the very chapter quoted, mentions it as still ill beiog: "Cloeliae etian statua est equestris." It was the statue of Valeria that had disappeared, if indeed it had ever existed except in the account of Andius Fetialis. Pliny, therefore, must share the castigation bestowed by Becker on Plutarch and Servius for their careless topography: whose assertion as to the existence of the statue in their time he will not beliere, though the latter says he had seen it nith his own eyes (ad Aers. viil. 646). The only ground which Beeker has for so peremptorily contradicting these three respectable authorities is a passage in Dionysius (v. 35); who, however, only says that when he was at Rome the statue no louger stirnt in its place (raírnv $\eta \mu \mathrm{f}$ is
 he was told that it had beeu destroyed ( $\eta \neq \alpha v i \sigma \theta \eta$ ) in a fire that had raged among the surrounding houses. But Dionysius may have heen misinformed;
 sense, and the statue was only remosed for a while out of sight. We may assume, therefore, that it had been restored to its original position in the period which elapsed between Dionysius and Pliny, and that it contimued to adorn the summa Saera Via for some centuries after the titue of the former writer.

The preceding passages abundantly establish the site of the Porta Mluqionis at that spot of the Palatine which faces the Summa Sacri Via, or present arch of Titus: wur does it seem necessary, by way of further proof, to resort to the far-fetehed argument adduced by Becker from the uature of the ground (Haudb. p. 113), namely, that this is the only spot on the NE. face of the hill which offers a natural ascent, by the road (Fiat Polveriera) leading up to the Convent of $S$. Bonaventura. That road, indeed, has all the appearance of being an artificial rather than a matural asrent, and may bave been made centuries affer the time of Romulus. L'nfortumately, too, for Becker's round ussertion on this subject (Ilavell. H. 109), that we must ab initio embrace as an incontroverrible principle that gates are to be sunught ouly where the hill offers natural ascents, we find that the ouly other known gate, the Porta Roroanula, was, on his own showing, accessible only by means of steps. For the situation of this gate Varro is again our principal authority. We have seen in the passage before gnoted from that author that it ofemed into the Nova Via, parar the Sacellum VoInpiae, by meaus of steps. Varro acain alludes to it in the following gasage: "Hoe sacrificiun (to Acca lareutia) fit in Velabro, qua in Novam Viam
exitur, ut aiunt quidam, ad sepulcrum Accae, ut quod ibi prope faciunt lhis Manibns Servilibus sacerdotes; qui nterque loeus extra urbem antiquam fuit non longe a Porta Romanula, de qua in priore libro dixi." (L. L. vi. § 24, Müll.) The site of the Sacellum Volupiae canot be deterunined; but the Velabrum is one of the most certain spots in Roman topography, and is still indicated by the chureh which bears its name, S. Giorgio in Velabro. We learn from both these passages of Varro-for Sca. liger's emendation of Nova Via for Novalia in the former is incontestable - the exact site of the Porta Romanala: for as the sacritice alluded to was perforoned in the Velabrum near the spot where the Nuva Via entered it, nod as the P. Romanula was not far from this place, it follows that it must lave been at the lower cud of the street or in the infima Nora Via. Varro's account is confirmed by Festus ( 14 262, Mitl.), who, however, calls the gate Romang instead of Romanula: " Sed porta Romaua instituta est a Rumnlo infino clivo Victoriae, qui locus gradibus in quadran furmatns est : appellata autero Romana a Sabinis prapeipue, quod ea proximus aditus erat Romam." Here the same steps are alluded to that are mentioned by Varro. The Clivus Victoriac was that part of the NW. declivity of the Palatioe which overhung the Nova Via. It was so mamed either from a temple of lictory seated on the top of the hill (" in acdem Victoriac, quae est in Palatio, pertulere deam," Liv, xxix. 14), or more probably - as this temple was not dedicated by L. Yostumius till B. c. 295-from an ancient grove, sacred to Victory, on this side of the Palatine, near the Lanjercal (Dionys. i. 32), the tradition of which, though the grove itself had long disappeared, probably led to the temple being fourded there.

The lomulean city must undonbtedly have had at least a third gate, both from the testimony of Pliny and because it cannot be supposed that its remainiog two sides were without an exit; but there is 10 authority to decide where it lay. Becker thinks that it was seated at the sout heromost point of the hill; but this, though prubable enough, is nothiog more than a conjecture. The l'orta Juoualis, the third gate mentioned by Varro, was most probably as old as the tine of Romulus, though it certainly never belooged to the Palatine city. Its situation and true nature will bo discussed presently. We find, however, a gate called Ferentina meotioned by Plutareh (Rom. 20), who relates that Romulus, after the murder of Tatius, which was tollowed by visible signs of the divinu anger, parified Rome and Laurentum by rites which still continued to be observed at that gate. We also find ao arcount in Festus (p. 213) of a ' 'orta l'iacularis, which was so called "propter aliqua piacula quae ibiidem fiebant;" and some have assumed ( $v$. Miiller, ad Fest. l c.) that these two gates were identical. It is well known that the Roman gates Indd sometimes two mimes; and this seems especially probable in the case of thase which had sonse religious ceremony connected with them. Beeker (IIandb. P. 17\%) tejects, however, with something tike indignation the idea that such a gate could bave belonged to the liommlean city, and would therefore either place it in the Lucus Ferentinac, or alter the text of Plutarch, his usual expedient. Alto. gether, however, it does not scem quite so improbable that it may hare been the third and missing gate of Romulus, since its name indicates its site near the S. extromity of the Dalatine, just where we are in want of one.

IIl. Progness of the City till tie Time of Servies Tullius.
We can only pretead to give a probahle account of the progress of the city under the first five kings. The statements on thie subject in ancient authors are divergent, though the contradiction is often rather apparent than real. In the course of his reign Romulus added to his original city on the Palatme, the Capitoline hill, then called Saturaius, the Caelian, then called Querquetulanus, and the Arentine. But we must distinguish the nature of these additions Dionysius (ii, 37) represents the Capitoline and Aventine as enclosed by Romnlus with a strong fortifieation consisting of a ditch and palisades, chiefly as a protection for herdsmen and their flocks, and not as surrounded with a wall, like the Palatine. Yet it is evident from the account of the attack by the Sabines on the Capitoline (Liv. i. II) that it mnst have heen regularly fortified, and have lad a gate. Romulus had already marked it out as the arx or citadel of his future city ; and when he had defeated the Cacninenses and slain their king, he carricd thither and dedicated the first spolia opina at an oak-tree held sacred by the slieplierds, but whieh now became the site of the temple of Jupiter Feretrius ( Ib, c. 10). When Livy tells ns that this was the first temple consecrated at Rome, he probably means with the exception of those which were nsually erected at the foundation of every city. That the Capitoline was a much more important hill in the time of Romulus than the Arentine and Caelian is also shown by the fact of lis opening upon it the asylum for slaves and fugitives, in order to increase the population of his city. This asylum was situated somewhere in the hollow between the two eminences of the Capitoline, and the site retained till a late period the name of "Inter duos lucos" (11. c. 10; Dionys. ii. 15; Strab. v. 230 : Plut. Rom. 9; Ov. Fast, iii, 431, \&e.).

The Capitoline hill, or Mons Saturnius, appears then to have been a real addition to the Fomulean city ; but the Aventine seems to have remained dowo to the time of Ancus Martius a mere rudely fortified enclosure for the protection of the shepherds. Various etymologies, all perhaps equally unsatisfactory, have been iavented for the name of Aventimus. One legend derived it from an Alban king so called, who was buried on the lill (Liv. i. 3; Varr, L. L. v. § 43, Müll.; Paul. Diac. p. 19, Miill.), another from a descendant of Hercules, mentioned by Virgil (Aen. vii. 656). Servius in his commentary on this passage makes Arentinus a king of the Aborigines, but adds from Varro that the Aventine Was assigned by Rumulus to the Sabines. who named it nfter the Avens, one of their rivers. This account is not found in the remains which we possess of Varro, who, however (l. c.), adds a few more etymologies to that already given. One of them, taken from Naevius, derives the name of the hill from the birds (aves) that resorted thither from the Tiber, to which Virgil also seems to allude (Aen. viii. 233). Varro himself thinks that it was so called "ab adventu," because, being formerly separated from the other hills by a marsh or lake, it was necessary to go to it in boats: whilst others derived the name "ab atrentn hominum," because, having upon it a temple of Diana common to all the Latin people, it was a place of great resort. But these various etymologics only prove that nothing certain was known.

The preponderance of authority tends to show that
the Caelian hill was also colonised in the time of Romulus. Caelins Vibennus, or Caeles Vibenna, an Etruscan general who came to the rassistance of liomolus against Tatius and the Sabiaes, had this hill assigned to him and settled upon it with his army; whence it derived its name of "Caelius," it having been preriously called Querquetulanns from its woods of oak. (Varr, L. L. v. § 46, Mitll.; Dionys. ii. 36; Paul. Diac. p. 44, Mïll.) The traditions respecting the incorporation of this hill are, however, very rarious. Some anthors relate that it was added by Tullus IJostilius (Liv. i. 30 ; Entrop. i. 4 ; Aur. Vict. I ir. Ill. 4). others by Ancus Martius (Cic. Rep. ii. 18 ; Strab. v. p. 234) ; whilst some, ngain, place the arrival of Caeles as low down as the reign of Tarquinius Priscus. (Tac. Ann. iv. 65; Festas, p. 355, Müll.) The last account probably arose from some collfusion between the arrival of the Tuscans mader Romulus, and a subsequent one under the Tuscan king Tarquinius. But the sacred books relating to the Argive chapels established by Numa mention the hiil under the name of Caelius (Varr. ib. $\S 4 i$ ), and it therefore seems probable that the arrival of Vibema must be placed ander Romulus. This Tuscan set:lement appears, however, not to have been permanent. After the death of their leader a portion of his followers incurred the suspicion of the Romans, and were removed from the bill to a less defeusible position on the plain, apparently between the Palatine and Capitoline, where they founded the Vicus Tusens; whilst the remainder were transferred to the adjoining hill called Caeliolus (Varr, ib. § 46). Whence also Propertius:-
"Et tu, Roma, meis tribuisti prnemia Tuscis Uude hodie viens nomina Tuscus habet; Tempore quo sociis venit lycomedius armis, Atque Subina feri contudit arma Tati."-
(iv. 2. 49.)

Here the Tuscan general is named Lycomedius, which seems to be derived from Lucumo, the name given to him by Dionysins (ii. 42, 43), and which was probably only an appellative for an Etruscan priuce. The hill having been vacated by this removal of the Tuscans, was agnin colonised under a subsequent king, which in some degree reconciles the conflicting accounts: but all we shall say further about it at present is, that in the reign of Tiberius an attempt was made to change its name again, and to call it Mons Augustus, either because Tiberins had laid out a great deal of money there in repairing the damage occasioned by a fire, or from a decree of the senate, which appointed that name to be used because a statue of Tiberius had been saved from the flames. (Tac. Ann, iv. 64; Suet. Tib. 48.) But this name never came into common use.

Legend of Tarpeia.-Porta Janualis and Temple of Janus. - The story of Tarpeia iavolves two or three points of tnpographical interest. It shows that the Capitoline hiill was regularly fortified, and had a gate. The deed of Tarpeia, whether treacherous or patriotic, fur there are two versions of her history, occasioned a change in the name of the hiil. It had previously been ealled Mons Suturnits, from Siturn, to whom it was sacred (Fest. p. 322); and there was a tradition that some Eleans, who had obtained their dismissal from the army of Hercules on his return from his western expedition, had been attracted to settle upon it by the resemblance of its name to that of Kporios, a mountain of their own country. (Dionys. i. 34.) After the foundation of the Capitol
its appellation, ns wo shall have occasion to relate forther on, was again altered to that which it ever afterwards contimued to bear ; yet one part of the southern portion of the hill still retained the name of Rupes Tarpeia, from the vestal having been buried on it. (Varr, L.L. v. \& 41, Mïll.) Dhonysius (ii. 40) adopted the account of $\mathrm{l}^{\prime} \mathrm{iso}$, who nttributed the death of Tarpeia to a patriotic attempt to deceive the Sabines, in preference to that of Fabius, which bramds her with disloyalty. The latter. however, scems to have obtained most currency among the Rumans ; and Propertius even derives the name of the hill from her tather, Tarpeius, who commamled the Diman garison,-"A duce Tarpeio mons "st cognomen aluptus" (v.4.93),-whilst he brands the tomb of the vestal with infamy. ("Tarpeiae turpe sepulcrum," ${ }^{\prime}$ v. 4. 1). The obscure legend of the Ponta landan:, which existed somewhere on the Capitol in the time of Varro (L.L.v. § 42), is also connected with the story of Tarpein; and Tatius is said to lave stipulated, in the treaty which he made with Romulus, that this gate shoold always be left open. (Fest. p. 363, and Pral. Diac. p. 220, Miill.) Accarding to an incredible account in Solinus (i. 13), it was a gate of the old Saturnian city, and was originally called Porta Suturnia; mor is the version of Polyaenus more satisfactory (Stratag. viii. 35), who refers the story of the Porta Pandana to the treaty with the Gatuls, by which the Romans engaged always to leave one gate open, but, in order to evade the consequences, built it in an inaccessible place.

After peace bad been concluded between Romulus and Tatius, they possessed two distinct but united cities,-the former reigning on the Palatine, the latter on the Capitoline, and dwelling on the spot where the temple of Juno Moneta afterwards stond (Plut. Rom. 2; Sol. i. 21.) When Tacitus sayw, in the passage before cited, that Tatios added the Catpitaline to the city, we are perhaps therefore to understand that he built upon it and made it habitable, whilst previonsly it had been only a sort of military outpost. The valley between the two hills formell a kind of mentral ground, and served as a emmon market-place. The gate called Janualis, mentioned ly Varro in the passage cited from him when treating of the Romulean cates, seems undoubtedly to lave belonged to tbe Nibine town. Niebuhr, who is followed by Bunsen (Beschr. vol. i. p. 145), is of opinion (Mist. i. 292) that it was built by the two cities as a barrice of their common lihertics ; that it was open in time of war in order that succour might pass from one to the other, and shut during peace, either to prevent the quarrels which might arise from unrestricted intercourse, or as a token that the cities, though united, were distinct. Beeker, on the other hand, denies that it ever was a gate at all, maintaining that it only got that name catacheresticatly, from the temple which it subsequently formod bring called "Porta Belli" (pp. 118, 119, sud note 167). But there seems to be momple evilence that it was orginally a gate. Varro, in the passage cited, evidently considered it as such; and it is alon :ncmtioned by Macrobius as a real gate, though the situation which he assigns to it will lardly be allowed even hy those who give the greatest extention to the wails of the Romulean city ("Cum bello Sahino-Rumani purtam, quae sub radicihus collis Viminalis erat, quar postea ex eventu Januerlis vocata est, elaudere fistinarent," Sul. i. 9). We may learn from Ovid, not only its real situ-
ation, hat also that it was the very gate which Tarpeia betrayed to the Sabines. The passage fixes its site so uccurately, and consequently also that of the temple of Janus, - an important point in Roman topography, - that it is necessary to quote it at length : -
"Presserat ora deus. Tonc sic ego nostra resolvo, Vuce mea voces cliciente dei:
Quum tot sint Jani cur stas sacratus in uno,
IIic abi templa foris juncta duobus laabes?
Ille manu mulcens propexam at pectora barbam Jrotinus Oebalii retulit arma Tati,
Utque levis custos, armillis capta Subinis,
Ad summae Tatium duxent arcis iter.
Inde, velut nunc est, per quem descenditis, inguit, Arduus in rulles et fora clivus erat.
Et jam contigerat portam, Saturnia cujus Denipserat oppresitas insidiona seras.
Cum tanto veritus committere numine pugnam
1 sse meae movi callidus artis opus,
Oratue, qua pollens ope sum, fontana reclusi Sumque repentinas ejpculatus aquas.
Ante tamen calidis subjeci sulphum veris, Clauderet ut Yatio fervidus humer iter.
Cujus ut vtilitas julsis percepta Sisbinis, Quae fuerat, tuto reddita furma loco est. A) me mîhi pasitu est, parvo conjuncta sacello. 11.tec adolet flammis cum strue farta suis."
(Fast. i. 255. seq.)
We see from these lines, that the gate attncked by the Sabines lay at the bottom of a path leading down from the Cayntoline, which path still existed in the tinte of Ovid, and was situated between the formm of Caesar and the Forum Romanum. The gate was con-cquently at the bottom of the NE. slope of the Capituline liill, a little to the N. of the present arch of Septimius Severus. We also lean that a small temple or sacellam was dedicated to Janus at this spot. Whether the ancient gate was incorporated in this temple, or whetber it was pulled down, or whether the temple was erected by the side of the gate, cannot be determined; but at all events its former existence was commemorated by the title of Porta Janualis. It is no objection to Ovid's account, as far as the topographical question is concerned, that it differs from the one usually received, which represents the Sabines as successful through the treachery of Tarpeia, and not as repulsed through the intervention of Janus. He seems to have combined two different legends ; but all that we are here concerned for is his accurate description of the site of the temple, and consequently of the gate.

Its site is further confirmed by Procopius (B. G. i. 25. p. 122, 1hind.), who mentions it as situated a little beyond the statues of the three Fates, as will appear in the second part of this article. The temple was dedicated by the peace-loving Numa, who made the opening and shutting of it the sign of war and peace. (Liv. i. 19.) Niebuhr, therefore, besides assigning an inadmissible and even absurd meaning to this custom, has forestalled its date, when lie mentions it as coming into use at the union of the two independent cities.

After writing what precedes, the compiler of this article met with na exsay by Dr. Th. Mommsen, published in the Amuali dell Instituto for the year 1844 (vol. xvi.), and entitled Ile Comitio Romano, in which that writer ( $\mathrm{p}, 306$, seq.) considers that he lais irreftagably established that the temple of
$J$ anus was not sitnated in the place here assigred to it, but in the Forum Olitorinm outside the Porta Carorentalis. As the opinion of so distinguished a scholar as Mommsen is entitled to great attention, we shall here briefly review his argaments. They may be stated as follows. That the temple of Janns was in the Fornm Olitorium may be shown from Tacitus: "Et Jano templum, quod apud Forum Olitorium C. Duilius struserat (dedicarit Tiberius)," (Ann. ii. 49); and also from Festus: "Religioni est quibusdann porta Carmentali egredi et in aede Jani, quae est extra eam, senatum haberi, quod ea egressi sex et trecenti Fabii apud Cremeram omnes interfecti sant, cum in aede Jani S.C. factum esset, ut proficiscerentur" (p. 285, Mitl.). But this temple was undoubtedly the same as the famous one founded by Numa, and Duilius could only have restored, not buill it ; since it can be shown that there was only nue Temple of Janus at Rome before the time of Dumitian. Thus Ovid (as may be seen in the passage before quoted) asks Janus, -
"Cum tot sint Jani cur stas sacratus, in uno,
Hic ubi juncta foris templa duobus habes?"
The same thing appears from the following passage of Martidl (x. 28.2), which shows that, before Dumitian erected the Janus Quadrifrons in the Forum Transitorium, the god had only one little temple: -

## "Pervius exiguos habitabas ante Penates Plurima qua medium Foma terebat iter."

The same sitnation of this only temple is also testified by Servins (ad Aen. vii. 607): "Sacrarium (Jani) Numa Pompilius fecerat - Quod Numa instituerat, translatum est ad Forum Transitorium." And again "Sacrarium hoc Numa Pompilias fecerat circa imum Argiletum josta theatrum Marcelli." Thus the situation of the sole temple of Janus is proved by the preponderance of the best authority, and does not rest on mere conjecture.

In these remarks of Mommsen's we miss that accuracy of interpretation which is so necessary in treating questions of this description. The word "struserat," used by Tacitus, denotes the erection of a new building, and cannot be applied to the mere restoration of an ancient one. Nor, had there been no other temple of Janus, would it have been necessary to designate the precise situation of this by the words "apud Formn Olitorium." Again, the words of O-id refer, not to one temple, but to one Janus, which, however, as we have seen, was converted into a sort of small temple. "When there are so many Jani, why is your image consecrated only in one?" This, then, was not a temple in the larger sense of the word ; that is, a building of such a size as to be fit for assemblies of the senate, but merely the little sacellum described by Ovid. Let us hear Mommsen's own description of it, drawn from this passage, and from that of Martial just quoted: "Fuit enim Jani aedes (quod luculentissime apparet ex Ovidii verbis supra laudatis) mon nisi Janus aliquis, sive bifrons sive quadrifrons, Dei statua ornatus, Ea, quam Numa fecit, fornix erat pervius ad portam Carmentalem applicatus, quo transibant omnes qui a Campo Martio Furoque Olitorio venientes Boarium Ruranumve petebant " (p. 307). But -overlooking the puint how the building of Numa could have been attached to a gate erected in the tione of Servius how is it pnosible to conceive that, as Monmmen infers from the words of Festus, the senate could hate been assembled in a little place of this description,
the common thoroughfare of the Romans? Besilke, we have the express testinony of Livy, that the Senatus Consultum, sanctioning the departure of the Fabii, was made in the usual place for the meetings of the serate,-the Curia Hostilia. "Consul e Curia egressus, comitante Fabiorum agmine, qui in vestibulo curiae, senatus consultum exspec. tantes, steterant, domum rediit" (ii. 48). Lisy is certainly a better witness on such a point than Festus; whose account, therefore, is overthrown, not only by its inherent improbability, but also by the weight of superior authority. All that we can infer fiom his words is, that the temple of Janus, outside the P'orta Carmentalis, was sufficiently large to hold an assembly of the senate; but this circumstance itself is sufficient proof that it could not have been the original little tomple, or sacellnm, of Numa. There ture other oljeetions to the account of Festus. It was not ominons, as he says, to go out at the Cammental gate, but to go out through the right arch of the gate (" infelici via dextro Jano portae Carmeotalis profecti, ad Cremeram flumen perveniaut," lb. c. 49). If the whole gate had been accursed, how conld a sacred procession like that of the virgins from the temple of Apollo to that of Juno Regina, described by Livy (xxvii. 37), have passed through it? Nor can it be told whether the relative ea refers to the Porta Carmentalis, as sense, or to aedes Jani, as grammar, requires. Further, it would be contrary to the usnal custom, as Becker correctly remarks (Ifandbuch, p. 139, note), for the senate to assemble outside of the gates to deliberate on a doblestic matter of this nature. Then, with reference to Ovid's description, he could not have meationed the sacellum of Janus as adjoining two fora, had it stood where Monmsen places it, where it would have been separated from the Forum Romanum by the whole length of the Viens Jugarius. Besides, it is plain from the passage of the Fasti before quoted that the original temple stood at the foot of a clivus, or descent from the Capitoline. Yet Mommsen puts it at the rery top of the bill over the Carmental gate (" in ipso monte." p. 310, vide his plan at the end of the volume), where the hill is most abrapt, and where there could not possibly have been any clivus, and the Porta Janualis at the bottom. We should remark, too, that the reading, "arduns in valles et fora clivas erat," is not a mere conjecture of Becker, as Mominsen seemis to think ( $\mathrm{p}, 310$ ), bnt the common realing; and that to substitute "per forn " instead would make evident nonsense. Nor in that case do we see how the temple could lave been "apud Forum Olitorium," as Tacitus says, even if apud only means vear, not at : and still less how it could have adjoined the theatre of Marcellus ("juxta theatrum Marcelli "), as indicated by Servius. What has been said will also be sufficient to retute the last named commentator in stating this to be the original temple. He has evident!y confounded the two.

We can therefore ouly ngree in part with the somewhat severe censure which Mommsen has pronounced on Becker on this occasion. "At quod somniavit de aede Jani sine simulacro (p. 259), quod Festum, quod Servium gravissimi erroris incusavit (p. 139, n. 254. seq.), id vix condono homini philologo" (p.307). It appears, we tuust, pretty plainly, that Festus and Servius must have been in error; but we cannot admit a temple without an image. The explanation we have already given, that Oxid is alluding to a Janus, not to a proper temple, may obviate the difficulty. But we
see no reason why Janus, a very ancient Latin divinity, and to whom the Mons Janiculus appears to have been sacred before the building of Rome, shonld not have heen honoured with a regwar tenple bexides the little affair which was the index of pace and war. As the question. however, is conrected with the situation of the Argiletum and Forum Caesaris, we shall have occasion to revert to it, and have mentioned it here only because the legend of Tarpeia, and consequent building of the temple, are closely connected with the history of the city.

Lomulus, after his mysterinus disappearance, was deifed under the name of Quiriums, and his successor, Numa, erveted a temple to the new God on the Quirinal. (Dienys, ii, 63; Ov. Fast. ii. 509). This hill, which was previously named Agonus (Fent. p. 254: Dionys. ii. 37 ), appears in the time of Numa to have been divided into four distinct eminences, each mamed after some deity, navely, Quirinalis, Salutaris, Mucialis, and Latiaris (Varr. L. L. v. § 51. Müll.); but from what deity the name of Miucialis was derived remains inexplicalle. The name of Quirinalis, which, however, some derive from the Quirites, who had come with Tatius from Cures, and settled on the hill (Varr. and Fest. ll. cc.), ultimately swallowed up the other three. The temple of Quirinus probably stood near the presont church of $S$. Andrea del Nuriziato. This question, hosever, as well as that concerning the sites of the other three temples, will recur when treating of the topography of the city. Numa, who was himself a Sabine, also founded a capitol (Hieron. i. p. 298), subsequently cailed, by way of distinction, "vetus Capitolium," on the Quirinal, which lill had been chiefly colonised by his countrymen. Of course the nane of "Capitolium" could not have breen applied to it till after the foundation of the Roman Cupitol, and originally it was the arx of the city, containing the three usual temples of Jupiter, Juno, and Mmerva. (Varr. L.L. v. § 158, Mitil.) This anciment temple of Jupiter is alluded to by Martial (v. 22.4), and probably stood on the southern part of the Quirinal on the present lieight of Magnanapoli.

Tniths Hostlius is said to lave added the Caelian hill to the city after the destruction of Alba Lousa, when the population of Rome was doubled by the inhabitants of Alba being transferred thither; and in order to render the Caclian still mure thickly inhalited Tullas chose it for his own residence. (liv, i. 30 : Eutrop. i. 4; Victor, Vir. Ill. 4.) The two :ccounts of the incorparation of this hill by Romulus and Tullus contain, as we have before renarked, molling contradictory ; otherwise, Dionysus Halicat tu-somis would hardly have curnmitted himself by :wiopting then lwoth (ii. 36, 30 , iii. 1). The first Tusion settlement lad been transferred to athother place. But when Cicero (de Rep, ii. 18) and strabo (v. p. 234) state that the Caclian was added to the city by Ancus Martius, this is a real diversence tor which we cannot accomit ; as the hill could hardly bave been incorporated by Tullus and again by Anens.
Ancus is alkn said, by the two authorities jast punted, to have all ted thie Aventine; and there is no improbatility in this, for Romulus never made it a proper part of his city, and we larn from Platareh (Niom. 1.5) that it was minhathited in the time of Numa. We mast romember that the earlier enclasures were made rather to assert a future chaim to the ground when the number of eitizens was in-
creased, than that they were absolutely wanted at the time of making them (" Crescebat jinterim urbs, munitionibus alia atque alia appetendo loca ; quam in spern magis futurae multitudinis, quarn ad id quod tum hominum erat, munirent," Liv. i. 8). The account of Aucus having added the Arentine is contirmed by Dionysius (iii. 43) and by Livy (i. 33), who state that it was assigned to the citizens of the conquered Politorium. I et the history of the Aventine is more mysterious than that of any other of the Roman hills. At the end of the third century of the city we find it, as an ager publicus, taken possession of by the patricians, and then, after a hard contest, parcelled out among the plebeians by a Lex Icilia (Dionys. x. 31, 32; cf. Liv. iii. 31, 32), by whom it was afterwards principally inhabited. It remained excluded from the pomoerium down to the time of Cluadius, though the most learned Romans were ignorant of the reason. After some further victories over the Latins, Ancus brought many thousands more of them to loone ; yet we can hardly understand Lirg's account (l. c.) that be located them in the Vallis Murcia; not only because that spot seems too limited to hold so large a number, but alsn because the Circus Maximus seems already to have been designed, and even perhaps begun, at that spot. (Dionys. iii. 68.) At all events they could not have remained there for any length of time, since Livy limself mentions that the circus was laid out by Taryuinins Priscus (i. 35). The fortifying of the Janiculum on the right bunk of the Tiber, the building of the Sublician bridge to cumnert it with Rome, and the foundation of the port of Ostia at the mouth of the river, are also ascribed to Ancus Martins, as well as the fortification called the Fussa Quiritium. (Liv. i. 33; Dimys. 44, 45 ; Victor, Vir. Ill. 5; Flor. i. 4.)

The circuit of Rome, then, at the time of the accession of Tarquinius P'riscus, appears to have embraced the (Quirinal, Capitoline, Palatine, Aventiuc, and Caelian hills, and the Janiculum beyond the Tiber. The Viminal and Esquiline are not mentioned as having been included, but there can be ne doubt that they were partially imhabited. Whether the first named lills were surronnded with a common wall it is impossible to say ; but the fortifications, whatever their extent, seem to have been of a very

 Tarquinius does not appear to have made any additions to the city, hut he phaned, and perhaps partly executed, what was of much more utility, a regular and connected wall to encluse the whole city. (Liv. i. 36,38 ; Dionys. iii. 67.) Nay, according to Victer ( 1 ii. III. 6), be actually completed this wall, and Sprvius only added the agger (Ib, e. 7.) The reign of Taryuin was indeed a remarkable epoch in the architectural progress of the city. We must remember that he was of Tuscan birth, and even of Greek descent ; and therefore it is natural to suppose that his knowledge of architecture and of the other arts of civilised life was far superior to that of the limans and Latins ; and heure the improvements which he introduced at lome. It is satisfactory to discover and point out undesigned coincidences of this description, which greatly add to the credibility of the maratives of aucient writers, since there is too much di-position at the present day to resard them as the inventors or propagators of ioere baseless fables. Tarquin also constructed those wonderful sewers for draining the Velabrum and
forum which esist even to the present day ; he improved the Circns Maximns, planned the temple of the Capitoline Jupiter, and erected the first porticoes and tabernae aronnd the formm (Liv. i. 35, s8; Dionys. iii. 67-69 ; Tac. Hist. iii. 72) ; in short, be must be regarded as the founder of the subsequent architectural splendour of Rome.

The additional space included by Servins Tullius in the line of wall which be completed is varionsly stated in different authors. Dionysius (iv. 13) and Strabo (v. p. 234) relate that be added the Viminal and Esquiline bills: Liry states that the hills which he added were the Quirinal and Viminal, and that he eularged or improsed the Esquiline (" anget Esquilias," i. 44); while Victor (Iir. Ill. 7) mentions that he added all three. It is possible that Livy means all that back or eastern portion of the Quirinal and Esquiline which run together into one common ridce, and which was fortified by the agger of Servius Tullius; and in this way we may account for his expression of "anget Esquilias," which alludes to this extension of the hill, and the consequent amalgamation of its previously separate tongues, the Oppius and Cispius. Hence there is but little real contradiction in these apparently divergent statements. Though the elder Tarquin may dispute with Servius the honour of having built the walls of Rome, yet the construction of the agger is unanimonsly ascribed to Servius, with the single exception of Pliny (iii. 9), who attributes it to Tarquin the Prond. The custom, however, has prevailed of ascribing not only this, but the walls also, to Servius. A description of these walls and of their gates, and an inquiry into the circumference of the Servian city, will be found in the second part of this article; but there are two other points, in some degree connected with one another, which require investigation here, namely, the Regiones of Servius and the Septimontium.

Regions of Servius. - Servins divided the city into fonr political districts or regions, which, however, were not commensurate with its extent. Their number seems to have been connected with that of the city tribes; but there are many particulars concerning them whicb cannot be explained. Our knowledge of them is chiefly derived from Varro (L. L. $\S \$ 4$, seq., Nüll.), from whom we learn that they were : 1. the Sulurana, the limits of which cannot be precisely determined, but which embraced the Caelian hill, the valley of the Celosseum, and part of the Sacra Via, that western portion of the southern tongue of the Esquiline (Mons Oppius) known as the Carinae, the Ceroliensis,-which seems to have been the valley or part of the valley between the Esquiline and Cac-lian,-and the Subura, or ralley north of the Oppins. 11. The Esquilina or Esquiliae, which comprehended the smaller or N. tongue of the Esquilioc (Mlons Cispius) and its eastern back or ridge, as far as the rampart or agger of Servius, and perhaps also the eastern back of the Oppins. I11. The Collina, so called from its embracing the Quirinal and Viminal hills, which, as te bate before said, were called colles, in contradistinction to the otber bills called montes. The intervening valleys were, of course, iocluded. IV. The Palatina or Palatium, embraced that hill with its two spurs or offshoots, Velia and Germalus.

When we compare these regions with the map of Rome we are immediately struck with some remarkable omissions. Thus, the Capitoline bill, with the valley to the E. (forum), and ralley to the S. (Velabrum and Forum Boarium), together with the

Aventine, are entircly excluded. Various conjectures bave been proposed to account for these omissions. Some have imagined that the Capitol was excluded because the division of Servins regarded only the plebeian tribes, and that the Capitul was inlabited solely by patricians. Becker (Ilandb. p. 386) rightly rejects this hypothesis; but another, which be prefers to it, seems hardly better founded, namely, that the hill, as being the citalel, was occopied with public buildings to the exclusion of all private ones, or, at all events, as being common to all, could not be incorporated with any one region. But this would lave been a better reason for the exclusion of the Quirinal, which was at that time the proper capitol of the city; nor does it seem to le a fact that private buildings were excluded from the Capitol. Yarious reasons have also been assigned for the exclusion of the Aventine : the principal of which are, the unfawourable augnries which had appeared upon it to Remus, and the circumstance of its containing a temple of Diana, which was common to all the Latim nation, and therefurc prevented the liill from being made a portion of the city.

But if we attentively read the account given by Varro of the Servian Regions (L. L. v. §§ 41-54, Miill.), we sball perceive that the division was entirely guided by the distribution of the Argive chapels, instituted probably by Numa; though Varro does not explain why they should bave had this influence. Thus, after giving an account of the Capitoline and Arentine, he proceeds to say (\$ 45): "Reliqua urbis loca olim discreta, quom Argeornm sacraria in reptem et. xx. partis urbis sunt disposita. Argeos dictos putant a principibus qui cum Hercule Argivo venere Romam et in Saturnia snbsederunt. E quîs prima est scripta Regio Suburana, sccunda Exquilina, tertia Collina, quarta Palatina." He then proceeds to enumerate the sacraria or chapels in each regio, mentioning six in each, or twenty-four in all, though he had called them twenty-seven in the passage just quoted.

The obrions meaning of this passage is, that "the other parts of the city were formerly separated (i.e. from the Capitoline and Aventine) at the time when the Argive clapels were distributed into twentyseven parts of the city." It would hardly, perhajis, be necessary to state this, had not some eminent scholars put a different interpretation on the passage. Thns Bunsen (Beschreibung der Stadt Rom, vol, i. p. 147), whose general view of the mutter seems to be approved of hy Becker (Handb. p. 127, note 183), takes Varro's meaning to lue, that the renaining parts of the city did not originally form each a separate district, like the Capitol and Avertine, but were divided into smaller parts, with different names. This riew bas heen already condemned by Mitler (ad loc.), and indeed its improbability is strikiog; but it requires a somewhat minute examination of the passage to show that it is altogether nutenable. Livy also mentions these chapels ns follows : "Multa alia sacrificia locaque sachis faciendis, quae Arecos pontifices rocant, dedicavit (Numa)." (i. 21.) Now Bunsen is of opinion that the statements of Livy and Varro are inconsistent, and that whilst the former under the name of Argei means places, tho latter alludes to men. In contormity with this view he proceeds to construe the passage in Varro as follows : "The name of Argices is derived from the chiefs who came with the Argive Hercules to Rome and settied in Saturnia. Of these purts nf the city we find first described (viz, in the Sacris Argcorum)
the Suhuran Region, as second, \&ce" ("Den Namen Argeer leitet man ab von den Anführern dio uit dem Argiver IIereules nach hom kaner, und sich in Saturnia miedierliessen. Von diesen Stadttheilen findet sich zuerst verzeichnet (nündich in den Steris Arcenrum) die Suburanische Region, als zweite, \&c." (Beschr. i. 690, cf. p. 148.) But to say that the name of Argives was derived from other Argives can hardly be what the nuthor intended. Besides, the sense is disjuinted; for the relative quis (wrongly translated " if these parts of the city ") catmot be made to refer to an antecedent that is separated from it by a long sentence. As the text stands, quis must necessarily refer to Argeos in the sentence immediately preceding. It might be thought that this sentence has been interpolated, since Varro called an Argive Argus, not Argivus. "Itaque dicimus 'hic Argus' cum hominem dicimus; cum oppidam, Graec:anice 'hoc Argos,' cum Latine, 'Argei.' (L. L. is. $\$ 89$, Mitll.) Weseefrom thia passage that the more ancient Latin name for the town of Argos was Argei (masc, plur.), and hence it might be inferred to be Livy's meaning that the chapels were called Argos or Argoses, not Argices. But Argei, in still more aucient Latin than that of Varro, was also the name for Argives as we find trom a verse which he quotes from Ennius (vii. § 44): 一

## "Libaque, fictores, Argeos et tutulatos;"

whence we are disposed to think that the name of Argives, however anomalous the nsage may appear. was really applied to these chapels, just as a modern Itahan calls a church S. Pietro or S. Paolo, and that the meaning of Varmo in the second sentence of the passage quoted, is: "It is thought that these Argel (i. e. the sacraria so called) were named after the chiefts who cane to lome with the Argive Hercules ; " in which manner Varro would colucide with Livy in making these Argei places. How else, too, shall we explain Orid (Fast. iii. 791) : -
"Itur ad Argeos, qui sint sua pagina dicet?"
Aml in like manner Masurius Sabinus, quoted by Gellius (N. A. x. 15): "Atque etiam cum (Flaminica) it ad Argens." A passage in Paulus Daacomus throws a gleam of light upon the matter ; though, with more grammatical nicety than knowledse of antiquity, he has adopted, apparently from the Greek, a peuter form unknown to any other writer: "Argea loca appellantor Romae, quod in his sepnlti essent quidam Argivorum illustres viri," (p. 19. Nïll.) Heoce it appears that these chapels were the (reputed) burial places of these Argive hemoss, and their masculine appellation thus gains stlll further probability. "E quis," \&c. would mean, therefore, that the different Siervian Regions were marked off and maned according to these chapels.

He lave already remarked that though Varro mentions 27 of these chapels, he enumerates only 24. Hence Becker (IIandh. p. 386), as well as Bunsen, are of opinion that the three old ones were upon the Capitol. The onily reason assigned for this coujecture is that the hill had three natural divisions two heights with a depression between thom. Int if we have rightly explaned Varro's meaning, it is impossible that the Capitol should have liad any of these chapels. Bunsen, however, gons still further, and, comecting the chapels with the Argive men of straw which were ammally precipitated into the Tiker, thinks that their number might have been 30 , allotting the
remaining three to the ancient Capitol on the Quirinnl, although Varro had already nccounted for his uwnal number of six in that district. (Beschr, i. 149.) llowever, it is not at all improbable that the tradition of the Argive mannikins wna connected with that of the chapels, since it may be inferred from the context of the passage in Varro, explaining the line of Emius before quoted, that they were instituted by Numa. Thus the preceding line ( $\S+3)$, "mensas constituit idemque ancilia," refers to Numa's institutions, who is ngain alluded to in § 45 , "eundem Pompilium ait fecisse flamines." In § 44 Varro describes the custom regarding the meo of straw as follows: "Argei ab Argis ; Argei fiuto o scirpeis, simulacra hominum xxiui.: $\epsilon$ a quotannis de ponte sublicio a sucerdutibus publice deici solent in Tiberim." 'The origin of the custom is varionsly explained; but the most probable account is tiat it was intended to commemorate the abolition by the Argives of human sucrifices unce offered to Suturn, for which these men of straw were substituted. Noue of the MSS. of Varro, however, gives the number of 27 or 30 ; though the latter was introduced into the text by Aldus from the account of Dionysius (i. 38). Hence it would perbaps be more in accordance with the principles of sound criticism to reduce the namber of chapels given by Varro (v. § 45) from 27 to 24 , instead of increasiog them to 30 ; as they won!d then not only correspond with the number of these Argire mancikins, bnt also with that of the chapels which Varro separately enumerates.

Septimontium. - The Septimontium seems also to be in some degree connected with these Argive chapels and the Servian divisions of the city. The word Septimontium bad two meanings ; it signified both the complex of seven bills on which Rome stood, and a festival (Soptimontiale sacrum, Suet. Dom. 4) celebrated in commemoration of the traditions connected with them. Now it is remarkable that Antistius Labeo, quoted by Festus (p. 348, Mäll.) in his acconat of the places where this festival was celebrated, omits all mention of the Capitoline and Aventine, just as they seem to have been left out of Numa's town and the regions of Servins subsequently formed according to it: "Sep. timontium, ut ait Antistius Labeo, bisce montibus feriae: Palatio, cui sacrificium quod fit, Palatuar dicitur. Veline, cni item sacrificium Fagutali, suburae, Cermalo, Oppio Caelio monti, Cispio monti." There were Argive chapels at all these places, and houce a strong presumption that the festival of the Septimontium was fuunded by Numa, the author of most of the ancient Roman solemnities. That Laben considered the places be enumerates to be hills is evident, not only ns a direct inference from the term Scptimontium jtself, but also from his express words, "- lisce montibus feriae,"- "there are bolidays on the lills lieve recited." Moreover, we know as a certainty that live of the places mentioned were hills, namely, the Palatiun, Velia, Oppius, Cispius, and Calous,a strong presumption that the others ulso were heigbts. Yet Niebuhr (IIist. i. 389), Bunsen, (Beschr. i. 685), and Becker (Handh. p. 124), assnme that one or two of them were no hills at sill. The places ahout which there car be any duult are Fagutal:and Germalus. Respecting Subura there can be no donbt at all; it was certainly a valley. Naw the Fagntal was a ridge of the Finquiline exntaining the Lacus Fagntalis. It was the residenco of Tarquinius Superbus: "Esquiliis (hahitavit) supra clivam I'ullium, ad Fagutalem lacum" (Sulin. i. 2.5). But if the grove was above the clivus it must
have been on a height. Servius had occupied a reidence not far from it, over the Clivas Urbius (ll.; Liv. i. 48), and it was probably situated at or near the spot now occupied by the church of $S$. Martina. There is not the slightest ground for Niebulr's assnmption (IIist. i. 390) that the Fagutal was what he cails "the phain" between the Caelian aod Palatine. The Cermalus or Gerinalus - for originally $c$ and $g$ were the same letter-wis, like the Velia, only a distinet portion of the Palatine hill. ("Huic (Ialatio) Cermalum et Velias conjunxerunt," Varr, v. § 64, Müll.) Preller (Regionen, p. 180) considers the Gernalus to be that side of the Palistine which overhangs the Velabrum between the modern churches of $S$. Giorgio in Velabro and S. Anastasia ; and it is not inpprobable, as Becker conjectures (p. 418), that the hill formerly projected further to the W. than it now does, and descended in shelves or ledges. It does not appear on what grounds Niebuhr ( $l$, e.) assumed the Germalus to be a "spot at the foot of the Palatine." It contained the Lupercal, which, being a cave or grotto, mast have been excarated in a hill or cliff, as indeed Dionysius states in bis description of it : 勈 $\delta \dot{\epsilon}$ रोे
 $\mu \mathrm{c} \alpha$ (i. 32).

All the places, then, enumerated by Labeo appear to hare been heights, with the exception of the Subura. But on counting the names, we find that he mentions eight places instead of seven, or one more than is required to make a Septimontium. Hence Niebahr (Ib. p. 389) omitted the Subura,-not, however, because it was situated in the plain,- and wis followed by Bunsen (Beschr. i. 141), who aftermards altered bis mind, and strack out the Caclius (Ib. p. 685) ; and this last opinion is also followed by Becker (Handb. p. 124) and Mïller (ad Fest. p. 341). The chief reason assigned for this view is that a principal part of the first regio (Suburana) was called Caelinontium, - a name afferwards preserved as that of one of the regions of Augustus; and on comparing this name with that of Septimontium it is inferred that, like the later, it must have indicated a distinct and independent city union, and could not therefore bave been included in any anteSerrian union. But if there had been any distinet and independent township of this kind, we must surely have heard of it in some of the arcient authors. We do not know when the term Caelimontium first canve into use; but it is not inprolalile that it arose from another small hill, the Caelius Minor or Caeliolum, having beeo amnexed to the larger one. Martial mentions them both in the following lines:-
> "Dum per limina te potentiorum Sudatrix toga ventilht, vagumque Major Caelius et minor fatigat." - (xii. 18.)
We learn from Varro that the junction of these two hills liad taken place in or before his time: "Caeliolus cum Caelio nunc conjunctum " (L. L. v. § 46 , Biull.), though popular vie, as we see from the lines of Martial, sometimes still continued to regard them as distinct ; nor can we tell fur what purpose they had been nrited. Little can be inferred from the order in which the hills are mentioned in the text of Festus, as local sequence is entirely disregarded ; or from the circumstance that Cispins is called "mons" and Oppius not, unless we leave out "Cselio;" or fron the omission of Caelins in some of the MSS. of Paulus Diaconus, On the whole it seems most
proluble that Suburae may be the redundant word; uniess indeed wo might suppose that there were two Fagutals or groves of Jupiter, and that Suburae was inserted here to define the place of tho ono which overhung it.

Becker regards the Septimontium nut as a proper city festival, but as commemorating traditions connected with the site of Rome long previous to the building of the city. In confirmation of this he refers (Handb. p. 125) to a passage in Varro (L.L.v. § 41, Müll.) and to another in Festus (p. 321), where it is said that a yeople of Reate, called Sacrani, drove the Licuriaus and Sicilians out of Septimontium; and a third passare is adduced from Servius (ad Aen. xi. 317) to pruve that the Sicilians once occupied the site of Rome; that they were expelled thence by the Ligurians, and the Ligarians in their tum by the Sacrani. Now, without entering into the historical questions connected with these obscure traditions, it may be alJowed in general to be probable enough that such traditions were afloat ; and when, as we have ventured to assume, Numa instituted the festival, he made them the basis of it; just as he instituted the Argive chapels and the twenty-four manoikins to commemorate the tradition of the Argive chiefs and their abolishment of buman sacritices. But the festival, nevertheless, was a proper city festival. Becker urges (Handb. 1. 124) that the Septimontium described by Labeo could not have been in commemoration of a city union immediately preceding that of Servius, because it included the Oppius and Cispius, which were first added to the city by Servius. A great deal depends upon what we understand by the words "added to the city" (" zur Stadt gezogen"); To say that they were not included in the wall and agger afterwards completed by Servius would be a mere puerility; but they must have been inhabited and formed part of the city before his time, since there were Argive clapels upon them (Varr. v. § 50 ); ard these chapels, as we have seen, formed the basis of the city union formed by him. The festival must certainly have been post-Ronulean, since some of the names of places where it was celehrated were not known before the time of Romulus. Caelius occupied the Caelian hill in bis reign ; the name of Germalus is sail to be derived from the twins (germani) Romulus and Remus, who were landed there (Varr. v. § 54); whilst Oppius and Cispius are said by Festus (p. 348, Mïll.), on the authority of Varro, not to have been so named till the reign of Tullus Hostilus. But as they are mentioned by thase names in the sacred looks of the Argives (Yarr. r. $\S 50$ ) it is probable that they were so called at least as early as the time of Numa.
Such, then, was the ancient Septimontium. The walls of Servius included a different group of seven hills which came to be regarded by the later Romans as the real Septimontium. They are those already described at the beginning of this artiele, namely, the Quirinal, Viminal, Exquiline, Caclian, Aventine, Capitoline, and Palatine.

## 1V. Progress of tae City till the Time of Acgustus.

Having thus brought down the history of the city to the fuundation of the Servian walls, we shall proceed to sketch its progress to the time of Augustas, and then till the walls of Aurelian. The former walls marked the rise and consolidation of a city, which,
though soon to become formidable to its neightours, was not yet sechire from their attacks. The latter, enclosing an area more than twice as large as that defended by the Servian walls, betokened the capital of a large state, which, after becoming the mastress of the world, was heginning to totter under the weight of its own greatness, and found itself compelled to resort to the same means of defence which had protected ifs infancy - no longer, however. to ward off the attacks of its inmediate deighbours, but those of the remotest tribes of Asia and Europe. Thus the history of the city, during thas period of eight centuries, reflects in some degree the bistory of the Reman people, and exlibits the varying fortunes of the greatest of all human empires. Enfortunately, however, the materials even for a slight sketch of so vast a subject and so long a period are scanty and inalequate; nor, even were they mere abundant, would war present limits allow more than an attempt to draw such an ontline as may serve to illostrate the topography of the city.

Tarquin the Prond, the last of the Reman kings, seems to have effected little for the city, except by completing or improving the works of his predecessors. Of these the most important was the temple of the Capitaline Jove, the description of which will be fonod in the second part of this article. The expulsion of the Tarquins (s.c. 510) restored to the Raman people the use of the Campas Martins. This ground, which from the earliest times had probably been sacred to Mars (Dionys. v. 13), had been appropriated by the Tarquins, and at the time of their expulsion was cavered with the crops which ther had suwn. The anboly nature of this property prevented its distribution among the people, like that of the other royal goods. The corn was ordered to be cut down and thrown into the Tiber; and according to the legend its quantity was so great that it caused the island afterwards known as the Insula Tiberina, or that of Aesculapius. (Liv. ii. 5; Dionys. l.c. Plat. Publ. 8.)

The defeat of the Etruscans under Aruns, who had esponsed the royal canse, was, according to the ossaal principle of the Romans of incorporating the vanquished nations, the means of adding a tresh supply of citizens, as there will be occasion to relate in another place.
We have little or nothing to record respecting the history of the city from this period till its capture by the Gauls n. c. 390 . After the fatal battle at the Allia, the lhmans returned dispirited. The city, tugether with the older inhabitants, was abandoned to its fate; many families escaped to Veii and other neighbouring towns ; whilst the men of an age to bear arms occupied the Capitel, which they prepared to dufend. The flight of the Vestal virgins, who succeeded in escaping to Catere, is comected with a topographical leremb. Being auable to carry away all thrir sacred utenals, they buried some of them in cashs (ctoliolis), in a clapel near the house of the Flamen (2, irmalis: ; whence the place, which seents to have been near the Cloaca Maxima, in the Forum Boarium, btamed the name of Dolobla, and wass leld so sacred that it was forbiden to spit upor it. (Liv. v. 40, Vat. Max. i. 1.§ 10.) Varro, however (LIL. v. § 157, Mill.), did not recognise this story, but attributed the natue cither to some bones having been dephoited theres or to the barial at an earlier period of some sa real oljects belarging to Numa Pompilius.

The diauls entered the city unopposed, and throngl
the open Peirta Collina. (Liv, v. 41.). The tince luring which they held it is variausly given at from six to eight months. (Polyb. ii. 22; Flor. i. 13; Plot. Cam. 30 ; Serv. Aen. viii. 652.) Their attempt on the Capitol is alloded to elsewhere. They set fire to and otherwise devastated the city; but perhaps we are not to take litesally the words of Livy aod other writers, to the effect that they completely destroyed it (v. 42, 43; Flor. i. 13; Plat. Cam. 21). It is at least apparent, from Livy's own narrative (c. 55), that the Caria Hostilia was spared; and it scems probable that the Gauls would lave preserved some of the bonses for their own sakes. We may, however, conclude, that the destruction was very great and terrible, as otherwise the Romans would not have discussed the project of ennigrating to Veii. The tirmness and jadicions aivice of Canillns persuaded them to remain. But the pressing necessity of the case, which required the new buiddings to be raised with the greatest haste, was fatal to the beanty and regularity of the city. People began to build in a promiscuous manner, and the materials, afforded at the public expense, were granted only ont condition that the houses should be ready withio a year. No general plan was laid down ; each man built as it suited him; the ancient lines of streets were disregarded, and houses were erected even over the cloacae. Hence down to the time of Angnstus, and perhaps later, the city, according to the forcible expression of Livy (v. 55), resembled in arrallgement rather one $\pi$ here the gromnd bad been seized upon than where it had been distributed. It may be inferred from a statement of Cornelins Nepos, as quoted by Pliny, tbat the greater part of the city was roofed with shingles. ("Scandula contectam tuisse Romam, al Pyrrhi usque bellam, annis cecclex., Cornelius Nepos auctor est," xvi. 15.) Livy indeed mentions the public distribation of tiles, but these perhaps may have been applied to other purInses besides roofing, such as for making the floors, d.e; and the frequent and destructive fires which occurred at Rome lead to the belief that wood was much more extensirely used in bnilding than is customary in modern times. Withia a year the new city was in readiness ; and it most bave been on a larger seale than before the Gallic iovasioo, since it bad acguired a great accession of inhabitants from the conipuered towns of Veii, Capena, and Falisci. Tbuse Romans who, to avoid the trouble of building, bad occupied the deserted houses of Veii, were recalled by a decree by which those who did not return within a fised time were declared guilty of a capital offence. (Liv. vi. 4.) The walls of liome seell to have been left ouinjored by the Gauls, notwithstanding Plutarelis assertion to the contrary. (Cam. 32.) We nuwhere read of their being repaired on this occasion, though accounts of subsequent restorations are frequent, as in the year B. C. 351 (Liv. vii. 20), and again in 217 , after the defat at Trasinens: (ld. xxii. 8.) Nothing can conrey a higher notion of Ronan energy than the fact that in the very y ar in which the city was thens rising from its a alhes, the Capitol was suyported by a snostructure of square and solid masonry, of sucb massiveness as to excito wonder cven in the Augastan age. (Liv. L c.; L'lo. xxxvi. 24. s. 2.)

The cellsarship of Appins Claudius Caecus, n. C. 312 , forms a marked epoch in the progress of the city. By his care liome obtained its first aqueluet, and its first regularly constracted high-road, the A pua and Via $\Lambda_{\text {plin.t. (Liv, ix. 29.) But the }}$
war with Pymhus which soon ensued, and afterwards the still larger and more destructive ones waged with the Carthaginians, prevented the progress which might have been anticipated from these beginnings. The construction of a second aqneảuct. the Anio Vetus, in the censordhip of Man. Curins Dentatus and L. Papirius Cursor, B. C. 272, testifies, however, that the population of the city must have contioned to increase. In the year B. c. 220 we find the censor C. Flaminins constructing the Flaminian Way, as well as the circus which bore his name. (Liv. Epit. xx.; Panl Diac. p. 89.) But it was the conquests of the Romans in Lower Italy, in Sicily, and Greece, which first gave them a taste for architectural magnificence. The irst basilica was erected at Rome in the year B. c. 184, and was soon followed by others, as there will be occasion to relate when we come to speak of the forum. But it was not till ten years later that the city was first paved by the care of the censors Q. Fulvius Flaccus and A. Postnmins Albinus. They also paved the public highways, constructed numerons bridges, and made many other important improvements, both in the city and its neighbourbood. (Liv, xli. 27.) Yet, notwithstanding these additions to the public convenience and splendour, the private honses of the Romans continued, with few exceptions, to be poor and inconvenient down to the time of Sulla. The bouse of Cn. Octavius, on the Palatine, seems to have exhibited one of the earliest examples of elegant domestic architecture. (Cic. de Off. i. 39.) This was pulled down by Scaurus in order to enlarge his own honse. The latter seems subseqnently to bave come into the possession of Clodins (Ascon. ad Cic. Mil. Arg.), and its magnificence may be inferred from the circumstance that he gave $14,800,000$ sesterces for it, or about $130,000 \mathrm{l}$. (Plin. xxxvi . 24. s. 2.) Indeed, as we approach the imperial times, the dwellings of the leading Romans assnme a scale of extraordinary grandeur, as we see by Pliny's description of that of Crassus the orator, who was censor in B. c. 92 . It was also on the Palatine, and was remarkable for six magnificent lotus-trees, which Pliny had seen in his youth, and which continued to flourish till they were destroyed in the fire of Nero. It was also distinguished by four columns of Hymettian marble, the first of that material erected in Home. Yet even this was surpassed by the house of Q. Catulns, the colleagne of Mlarius in the Cimbrian war, which was also on the Palatine ; and still more so by that of C. Aquilius on the Viminal, a Roman koight, distinguished for his knowledge of civil law. (Plin. xvii. 1.) M. Livins Drusus, tribune of the people in n. c. 93 , also possessed an elegaot residence, close to that of Catulus. After his death it came into the prossession of the wealthy M. Crassus, of whom it was bought by Cicero for abont 30,0001 . (ad Fam. r. 6). It seems to have stood on the N. side of the Palatine, on the declivity of the bill, not far from the Nora Via, so that it commaoded a view of the forum and Capitol. It was burnt down in the Clodian riots, and a temple of Freedom erected on the spot ; but after the return of Cicero was restored to him, rebuilt at the public expense. (Cic, ad Att. ii. 24. Fam. v. 6.; Vell. Pat. ii. 45 ; Dion Cass. sxxviii. 17, xxxix. 11, 20 ; App. B. C. ii. 15, \&c.) The house of Lepidus, consnl in B. c. 77, was also remarkable for its magnificence, having not only columns, hat cven its thresholds, of solid Numidian marble. (Plin. xxxvi. 8.) The luxury of private residences at Fome seems to have att:ined
its acme in those of Sallust and Lucullus. The distingnishing feature of the former, which lay on the Quirinal, was its gardeos (Horti Sallustiani), which probably occupied the valley between the Quirinal and Pincian, as well as part of the latter hill. (Becker, Handb. p. 583.) The house of Lucullus, the coaqueror of Mitlridates and Tigranes, was situated on the Pincian, and was also surrounded with gardens of snch remarkable beanty, that the desire of possessing them, which they awakened in the breast of Messalina, caused the death of their subseqnent owner, P. Valerius Asiaticus. (Tac. Ann. xi. I; Dion Cass. 1x. 31.) From this period they formed one of the most splendid possessions of the imperial family. (Plut. Lucull. 39.)

The ambitions designs entertaioed by the great leaders of the expiring Republic led them to court public favour by the foundation of public boildings rather than to lay out their immense wealth in adorning their own residences. The honse inbabited by Pompey in the Carinae was an hereditary one; and though, after his triumph orer Mithridates and the pirates, he rebuilt it on a more splendid scale and sdorned it with the beaks of ships, yet it seems even then to have been far from one of the most splendid in Rone. (Plnt. Pomp. 40, seq.) On the other hand, he consulted the taste and convenience of the Romans by bnilding a theatre, a curia, and several temples. In like manner Caesar, at the height of his power, was content to reside in the ancient Regia; though this indeed was a sort of official resideoce which his office of Pontifex Maximns compelled him to adopt. (Snet. Caes. 46.) But he formed, and partly executed, many magnificent designs for the embellishment of the city, which bis short tennre of power prevented him from accumplishing. Among these were a theatre of unexampled magnitude, to be hollowed out of the Tarpeian rock; a temple of Mars, greater than ady then existing; the foundation of two large public libraries; the construction of a new formin; hesides many other important works, both at Rome and in the provinces. (Suet. Caes. 26. 44; App, B. C. ii. 102, Sc.)

The firm and lengthened hold of power enjoyed ly Augustus, and the immense resources at hio disposal, enabled him not ooly to carry out several of bis uncle's plans, but also some new ones of his own; so that his reigo must be regarded as one of the most important epochs in the history of the city. The foundation of new temples and other public buileling, did not prevent him from reparing and embellishing the ancient ones ; and all his designs were excenterd with so much magnificence that he conld boast in his old age of having found Rome of brick and left it of matble. (Suet. Aug. 28.) In these undertakings be was assisted by the taste and munificence of his son-in-law Agrippa, who first founded public and gratnitous baths at Rome (1)ion Cass. lis. 29) : but as we shall have occasion to give an teconnt of these works, as well as of those execnted by Pompey aod Caesar, in the topographical portion of this article, it will not be necessary to enumerate them here; and we shall proceed to describe the important municipal reforms introduced by Augustus, especially his new division of the city into tivi and Regions.

Regions of Augustus.-Althongh Rome had long outgrown its limits under Servins Tullins, yet the muoicipal divisions of that monarch subsisted till the time of Augustus, who made them his model, so far as the altered circumstances of the city would

## ROMA.

permit. Servius had formed the different Vici into religious corporations somewhat analogous with our parishes, with an appointed worship of the Lares, and proper feasts or Compitalia. During the Republic these corporations became a kind of political clubs, and were often made the engines of designing ciemagogues. (Preller, Regionen, p. 81.) Augustus, in his new distribution, also adopted the scheme of embolying the Vici as religious corporations, and for this purposo crected chnpels in the crossways, and set up images of the gods ricatim, as the Apollo Sandaliarius and the Jupiter Tragoedus, (Suet. Aug. 57.) Many bases of these statues have been discovered. By the term I'icus we are to understand a certain collection of houses insulated by streets ruming round all its sides; whence the term came also to be applied to the streets thernselves (" altere vici appellantur, cum id genus aedificiorum definitur, quae continentia sunt in oppidis, quaeve itiveribus regionibusque distributa inter se distant, nomiuibusque dissimilibus discriminis causa sunt dispartita," Fest. p. 371, et ibi Mitill). Compitum, wbich means properly a cross-road, was also, especially in ancient times, only another name for Vicus; and thus we find Pliny describing Kome as divided into Compita Larum instead of Vici (iii. 9). Tbe Vici and Compita. regarded as streets, were narrower than the Viae and Plateac. (Suet. Aug. 45 ; Amm, Marc. sxviii. 4. § 29.) They were named after temples and other objects. Tbe Vici were composed of two classes of houses called respectively insulae and domus. The former were so called because, by a law of the XII. Tables, it was ordained that they should be separated from one another by an interval of $2 \frac{1}{2}$ feet, ealled ambitus, and by later authors circuitus (Varr. L. L. v. § 22, Müll.; Paul. Diac. p. 16,111 Mtill.) This law, which seems to have been designed for purposes of healt hand for security against fire, was disregarded during the Republic, hut again enforced by Nero when he rebuilt the city (Tac. Ann. xv, 43) : and there is an ordinauce on the subject by Antoninus and Verus (Dig. viii. 2.14). By insulae, therefore, we are to understand single houses divided by a small space from the neighbouring ones, not a complex of houses divided by streets. The latter division formed a licus. Yet some insulae were so large and disposed in such a manuer that they almost resembled Vici (vide Fest. p. 371 , et ibi Miill). The insulae were inhabited by the middling and lower classes, and were generally let out in floors ("coenacula meritoria," Dig. six. 2.30). It appears from the same authority that they were farmed by persons who underlet them; but sometines the proprictors kept stewards to collect their rents. Insulae were manoed after their owners, who were ealled "domini insularum" (Suet. Coes. 41, Tïb. 48). Thus we bear of the insula Eucarpiana, Critonia, Arriana, \&c. (vide Cirnter, 611. 13; Mnrat. 948.9.) Pent was bigh (Juv, iii. 166), and investments in honses consequently protitable, though hazardous, sinee the prineiple of insurance was altogether unknown. (Gell. xv. 1, 2.) Crassus was a great speculator it houses, and was said to possess nearly half lome. (1'lut. c. 2.) The domus, on the contriny, were the habitations or palaces of the rich and great, and consequently much fewer in number than the insulae, the proportion in each liegion being as I to 25 or 30 . The domms were also cmmonly insulated, but not by any special law, hike the jasulac. They were also composed of floors or stages, but were oceupied by a single family (1'etron. 77); though larts of them,
especially the postica, were sometimes let out (Plaut. Trin. i. 2. 157; Suet. Nero, 44, 1utell. 7).

The number of insulae and domua in each Vicus would of cuurse vary. Augustus appointed that each slould be under the government of magistrates elected from its plebeian inhahitants (" magistri e plebe cujusque viciniae lecti,"-where vicinia bas its origioal meaning of the honseholders composing a Vicus, Suet. Aug. 30). Hence Livy calls them "infimum genus magistratuum" (xxxiv, 7). They were called Magistri, Magistri Vicorum, Curatores Vicorum, and Mazistri Larum, and their number varied from two to four in each Yicus. In the Basis Capitolina each \ieus has 4 Magistri : bnt the Notitia and Curiosum mentiou 48 Vico-magistri in each Region, without reference to the number of Vici. On certain days, probably the Compitalia (Ascon. in Cic. Pis. p. 7), these magistrates were allowed to assume the toga praetexta, and to be attended by two lictors; anil the public slaves of each Region were at their command, who were commonly at the disposal of the aediles in case of fire. (Dion Casslv. 8 ; Liv. l. c.) The principsl duties of their office were to attend to the worship of the Lares, recensions of the people, \&c. For Augustus restored the Ludi Compitalicii and the regular worship of the Lares in spring and summer (Suet. Aug. 3I), and caused bis own Genius to be added to the two Lares which stood in the aedicula or chapel of each compitum. (Ov. Fast. v. 145.) The Vicomagistri likewise superintended the worship of the popular deities Stata Mater and Vulcanus Qujetus, to whom, as protectors against fire, chapels were erected, first in the forum, and afterwards in the different streets. (Fest. p. 317, Müll_ ; of. Preller, Regionen, p. 84.)

A certain number of Vici, varying according to the Notitia and Curiosum from 7 to 78 constituted a Regio ; and Augustus divided Rome into 14 of theso Regions. The 4 Servian Regions were followed in the first 6 of Augustus. In determining the boundaries of the Regions Augustus seerns to bave canbed them to be measured by feet, as we see them enumerated in the Notitia and Curiosum. The limits appear to have been marked by certain public buildings, not by cippi. We may safely assume that Augustus included the suburbs in his city, but not within a pomucrium, sincethe Porticus Octaviae is mentioned, as being outside of the ponnerium, although it lay far within the 9th Region. (Dion Cass. liv. 8.) The Regions appear at first to have been distinguished only by numbers; and officially they were perhaps neter distinguished otherwizc. Some of the names of Regions found in the Notitice and Curiosum are prostAugustan, as those of Isis and serapis and Foruth lacis. The period when names were first applied to thein cannot be determined. They are designated only by numbers in Tacitus and Frontinus, and even in tho Basis Capitolina which belongs to the time of Hadrian. We find, indeed, in Suetonius "Regin 1'alatii " (Aug. 5, Ill. Giramen. 2): but so also ho says "Regio Mantii Campi," which never was a Region (Caes. 39, Nero, 12) ; and in these instances Regio seems to be used in its general sense.

The boundaries of the Regions cannot be traced with complete accuracy; but, as it is nut our intention to follow those divisions when treating of the topograplyy of the city, we shall here insert such a general description of them as may enable the reader to form some notion of their situation and relative size. liegio 1., or P'orta Capena, cmbraced the
soburb lying outside uf that gate, to the E. of the baths of Antoninus, It contained 10 Vici, and among its priocipal objects were, the temple of Mars, the arch of Drusus, and the sepulchre of the Scipios. Regio 1I., or Caelimontana, lay to the N . of this, and comprehended the whole extent of the Caelian bill. It had 7 Vici, and among its menuments may be mentioned the Arcus Dolabellae and the aqueduct of Nero. Regio III., called Isis and Seropis, lay to the N. of the Caelimontana, and embraced the valley of the Colosseum, and that southern portion of the Esquiline anciently known as Mons Oppius. It comprehended 12 Vici, and its principal objects were the baths of Titus and the Flavian amphitheatre or Colasseum. Regio $/ V$., called Templum Pacis and Sacra Via, was situated to the W. of that of Isis and Serapis, and comprehended the Velian ridge and the greater part of the valley betreeu the Palatine, Esquiline, Viminal, and Quirinal, to the exclusion, however, of thas western portion which lay immediately onder the Capitoline. Yet it embraced the buildings on the N . side of the forum, including the temple of Faustina, the Basilica Paulli, and the Area Vulcani. Its eastern boundary ran close to the Colosreum, sioce it included the Colossus and the Deta Sulans, both wbich objects stood very near that building. Its principal monuments, besides those already mentioned, were the temple of Venus and Rome, and the basilica of Constantine. It embraced the Subura, the greater portion of the Sacra Via, and the Forum Transitorium, and contained 8 Vici. Regio V., or Esquilina, included the northem portien of the Fsquiline (Mons Cispius) and the Viininal, besides a vast tract of suburbs lying to the E. of the Servian walls and agger. Thus it extended so far as to embrace the Amplitheatrum Castrense, which adjeins the modern eburch of $S$. Croce in Gerusalemme, and the so-called temple of Minerva Medica, near the Porta Maggiore. It had 15 Vici, and among its remaining principal objects were the gardens of Maecenas, the arch of Gallienus, and the Nymphaeum of Alexander Severus, Regio V7., called Alta Senita, embraced the Quirinal, and extended to the E. so as to include the Praetorian camp. It had 17 Vici, and its chief objects were the baths of Diocletian, the house and gardeus of Sallust, and the ancient Capitol. Regio V11., or Pia Lata, was bounded on the E. by the Quirinal, on the N. by the Pincian, on the S. by the Servian wall between the Quirinal aod Capitoline, and on the W. by the road called Via Lata till it joined the Via Flaminia-a point which cannot be accurately ascertained. The Yia Lata was the southern portion of the modern Corso, and prebably extended to the N. nearly as far as the Antonine column. The Region comprehended 15 Vici. Being without the Servian walls, part of this district was anciently a burying place, and the tomb of Bibulus is still extant. Regio VIII., or Forum Romanum Magnum, was one of the most important and popalous in Rome. The ancient furum obtained the name of "Nagoun" after the building of that of Caesar. (Dion Cass. xiiii. 22.) This Regien, which furmed the central point of all the rest, embraced not only the ancient forum, except the buildings on its N. side, but also the imperial fora, the Capitoline bill, and the valley letween it and the Palatine as far as the Velabrum. It cuntained 34 Vici, among which were the densely populated ones Jugarius and Tuscus. The monuzzents in this district are so numerous and well
known that it is unnecessary to spuify them. Regio IX, called Circus Flaminias, cotpprenended the distriet lying between the Via Lata on the F. ., the Tiber on the W., the Capitoline lill and Servian wall on the S.; whilst on the N. it seems to bave extended as far as the present Piazza Narona and Piaza Colonna. It contained 35 Vici , and amons its objects of interest may be named the circus from which it derived its name, the three theatres of Balbus, Pompey, and Marcellus, the I'antheno, and many other celebrated monuments. The Caupus Martius, or northern part of the area between the hiils and the Tiber, was not comprehended in any of the 14 Regions. Reyio X., or Palatiann, consisted of the l'alatine hill and its declivities. It bad 20 Vici. Its boundaries are so well markel that we need not mention its numcrous and wellknewn monuments till we come to describe its topography. Regio XI., or Cirens Maximus, derived its hame from the circus, which occupied the greater part of it. It compreliended the valley between the Palatine and Arentine, and also apparently the northern declivities of the latter hill, as far as the Porta Trigemina. On the N., where it met the Region of the Formm Romanum, it seems to bave incloded the Velabrum. It contained 19 Vici according to the Notitia, 21 according to the Curiosum. Regio NII., called Piscina Publica, was bounded on the W. by the Aventinc, on the N. ly the Caelian, on the E. by Regio I. or Porta Capena, and on the $\mathbf{S}$. it probably extended to the line of the Aurelian walls. It had 17 Vici, and its most remarkable monument was the baths of Caracalla. Regio XIII., or Aventinus, included that hill and the aljoining banks of the Tiber. It had 17 Vici according to the Notitia, 18 according to the Curiosum. Regio XIF., Transtiberina, or Transtiberim, comprebended all the suburb on the W., or right bank of the Tiber, including the Vatican, the Janiculum, with the district between them and the river, and the Insula Tiberina. This, therefore, was by far the largest of all the Regions, and costained is Vici.

Municipal Regulations of Augustus.-All these Regions were under the control of magistrates chosen annually by lot. (Suet. Aug. 30.) The government of the Regions was not cerporative, like that of the Vici, but administrative ; and one or more Regions seem to have been intrusted to a single magistrate chosen umong the aediles, tribuncs, or pritetors. (l'reller, Regionen, p. 77.) The supreme admunistration, however, was vented in the Praefectus Uili. At a later periol other officers were interposed between the pracfect and these govemurs. Thus the Basis Copitolina mentions a Curator and Denunciator in each Region. Subsequently, however, the latter office seems to have been abolished, and tbe Votitio and Cwrisum mention two curators in each Region. There were aloo subordinate officers, suchs as preecones or criers, and a number of imperial slaves, or lithertini, were : 1 pointed to transact any necessary business conecrning the Regions. (Preller, p. 79.)

Onc of the chief oljects of Angustus in establishing these llegions seems to have been cunnected with a reform of the city police. For this purpose he established 7 Cohortes Vigilum, whose stations were so disposed that each colurt night be available for two Regions. Each was under the command of a tribune, and the whole was superintended by a Praefectus Vigilum. (Suri, Aug. 30;

Dion Cass. Jv. 26; Paulus, de Offic. Pracf. Tigil., Jig. i. 15.) As these stations were necessarily near the borders of Regions, we fixd them frequently meutioned in the Notitia and Curiosum. They seen to have theen a sort of barracks. But besides the 7 principal stations, the Breviarium mentions 14 excubitoria. or outposts, which seem to bave been placed in the middle of each region. The corps of which they were composed were probably supplied from the main stations. The duties of the vigiles were those of a night-pulice, namely, to guard against fires, burglaries, highway robberies, \&c. The first of these duties had anciently been performed by certain triumviri, called from their functions Nocturni, who were assisted by public slaves stationed at the gates and round the walls. The same office was, however, sometimes assumed by the aediles and tribunes of the people. (Panlus, l.c.) The vigiles were provided with all the arms and tools necessary for their duties; and from a passage in Petronins (c. 79) seem to lave possessed the power of breaking into houses when they suspected any danger. The numbers of the vigiles amounted at last to 7000 men, or 1000 in each coliort. Augustus also established the Cohortes Praetoriae, or imperial guard, of which 9 cohorts were disposed in the neighbourhood of Rome, and 3 only, the Cohortes Irbanae, were permitted within the city. (1ac. Ann. ir. 5 ; Suet. Aug. 49.) These cohorts of Augustus were uoder the command of the l'raefectus Urbi. (Tac. Mist, iii. 64.) It was his successor, Tiberius, who, by the advice of Sejanus, first established a regular Praetorian camp at Pome, a little to the eastward of the agger of Servius, and placed the bands under the command of a Priefectus Praetorio. (Tac. Ann. iv. 2; Suet. Tïb. 37.)

Angustus nlso paid considerable attention to the method of building, and revived tbe regulations laid down by I'. Rutilius Rufus with regard to this subject in the time of the Gracchi (Suet. Aug. 89); but all we know of these regulations is, that Augustus forbade bouses to be built higher than 70 feet, if situated in a street. (Strab. v. p. 235.) The height was subsequently regulated by Nero and Trajan, the last of whom fixed it at 60 feet. (Aur. Vict. Epit. c. 13.) Yet horses still continued to hep inconveniently high, as we see from the complaints of Juvenal, in the time, probably, of Domitian, and dangerous alike in care of fire or falling, especially to a poor poet who lived immediately under the 1ties: -
> "Nos urbem colimus temi tibicine fultam
> Magna 1arte sui; nam sic labentibus obstat Dillicus, et veteris rimae quum texit hatum Securas pendente jubet dormire ruina. Viscudum est illic ubi nulla incendia, nulli Noete metus. Jan poscit ayuam, jam frivola transfert
> Wralegon: tabulata tibi jam tertin fumant:
> Tu nescis: nam si gradibus trepidatur ab imis Iltimus ardebit, quem tegala sola thetur A pluvia, molles nbi veddunt ova columbae."
> (iii. 1!3.)

Augustan Rome. - Strabo, who visited Rome in the reign of Augustus, and must have remaioed there during part of that of T:iberius, has left us the following lively picture of its appearance at that jeetiod: "The city, having thus attained such a size, is alle to maintain its greatness by the anundance of provisiuns and the plentifal supply
of work and stone for building, which the constant fires and continnal falling and pulling down of houses render necessary; for even pulling down and rebuilding in order to gratify the taste is but a sort of voluntary ruin. Noreover the abundant mines and forests, and the rivers which serve to convey materials, afford wonderful means for these purposes. Such is the Anio, flowing down from Alba (Fucensis), a Latin city lying towards the territery of the Marsians, and so through the plain till it fallis into the Tiber: also the Nar and the Teriea, which likewise join the Tiber after flowing through Umbria; and the Clanis, which waters Etruria and the territory of Clusinm. Augustus Caesar tonk great care to obviate such damages to the city. To guard against fires he appointed a special corps composed of frecdmen; and to prevent tbe falling down of houses he ordained that no new ones shonld be built, if they adjoined the public streets, of a greater height than 70 feet. Nerertheless the renovation of the city would have been impossible but for the before-mentioned mines and forests, and the facility of transport.
"Such, then, were the advantages of the city from the nature of the country; but to these the Emmans added those which spring from industry and art. Although the Greeks are supposed to excel in building cities, not only by the attention they pay to the beauty of their architecture and tbe strength of their situation, but also to the selection of a fertile country and convenient harbours, yet the Romans have surpassed them by attending to what they neglected, such as the making of high-roads and aquednets, and the constructing of sewers capable of conveying the whole drainage of the city jato the Tiber. The high-roads have been constrncted through the country in such a manner, by levelling hills and filling-up hollows, that the waggons are enabled to carry freight sufficient for a vessel ; whilst the sewers, vaulted with hewn blocks of masonry, are sometimes large enough to admit the passage of a hny-cart. Such is the volume of water conveyed by the aqueducts that whole rivers may be said to flow through the eity, which are carried off by the sewers. Thus almost every house is provided with water-pipes, and possesses a never-failiog fountain. Marcus Agrippa pad partieular attention to this department, besides adorning the eity with many beautiful monments. It may be said that the ancient Romans neglected the beanty of their eity, being intent upon greater and more important objects; but later generations, and paticularly the Romans of our own day, have attended to this point as well, and filled the city with many beatutinl monnments. l'ompey, Julins Cacvar, and Augustus, as well as the children, friends, wife and sister of the last, have bestowed an almost excessive care and expense in providing these objects. The Campus Martins las been their special care, the natural beauties of which have been enhauced by their designs. This plain is of surprising extent, sffording unlimited room not only for the chariot races and other equestrian games, hut also for the multitudes who exercise themselves with the ball or hoop, or in wrestling. The neighbuming buildings, the perpetual veriure of the grass, the hills which crnwn the opposite banks of the river and produce a kind of sceric eflect, all combine to form a spectacle from whieh it is difficult to tear oneself. Adjoioing thus plain is another, and many porticoes and swered groves, three theaties, an amphitheatre, and ten $1^{\text {les }}$
so rich and so close to one another that they might appear to exlibit the rest of the city as a mere suppleraeat. Hence this place is considered the most hrowourable and sacred of all, and has been appropriated to the mosuments of the most distinguished men and women. The most remarkable of these is that called the Mansoleam, a vast monnd near the river raised upon a lofty base of white stone, and covered to its summit with evergreen trees. On the top is a bronze statue of Angastas: whilst ander the mouad are the tombs of hinself, his relatives, and frieads, and at the back of it a large grove, affording delightful promenades. In the middle of the Campus is an eaclosed space where the body of Augustus was burnt, also constructed of white stone, surrouaded with an iron rail, and planted in the interior with poplar trees. Then if we proceed to the aacient forum, and sarvey the numerous basilieae, porticoes, and temples which surround it, and view the Capitol and its works, as well as those on the Palatine and in the portico of Livia, we might easily be led to forget all other cities. Such is Rome " (v. pp. 235, 236).

In spite, however, of this glowing picture, or rather perhaps from the emphasis which it lays on the description of the Campus Martius, whilst the remaiader of the city is struck off with a few light toaches, it may be suspected that in the time of Augastus the ancient part of Rome, with the exception of the immediate vieinity of the forum and Capitol, did not present a spectacle of aay great magaificeace. The narrowness and irregularity of the strects, the consequeace of the hasty manner in whieh the city was rebuilt after its destruction by the Gauls, still continued to disfigure it in the time of Augustus, as is shown by a passage in Livy ( v . 55), already cited (cf. Tacitus, $A n n$. xv. 38: "Obnoxia urbe artis itineribus, hacque et illuc flexis, atque eaormibus vicis, qualis vetus Roma fuit"-tbat is, before the fire). This defect was not remedied till the great fire in the reign of Nero, which forms the next remarkable epoch in the bistory of the city.

## V. The City till the Time of Aurelian.

Fire under Nero.-There had been a destructive fire in the reign of Tiberius, which burnt down all the buildings on the Caelian hill (Tac. Ann. iv. 64); but this was a mere trifle compared with the extensive contlagration under Nero. The latter, the most destructive calamity of the kiad that had ever happened at Rome, is unequivocally said by Suetoaius (Nero, 38) to have been caused by the wilfal act of the emperur, from disgust at the narrow and winding streets. Nero is represented by that historian as cootemplating the flames with delight from the tower of Mapcenas on the Esquiline, aad as converting the awful reality inte a sort of dramatic spectacle, by siaging as the fire raged, in proper scenic attire, the Suck of Troy; nor does the more judicious Tacitus altogether reject the imputation (Ana, xr. 38, seq.) The fire commenced at the lower part of the Circns Maximus, where it adjoins the Caelian and Palatine, in some shops contaiaing combastible anaterials. Thence it spread through the whole length of the circus to the Forum Boarium, and northwards over the whole Palatine till it was arrested at the foot of the Eisquilize. It lasted six days and seven nights, and its extent may be judged from the fact that out of the fourteen Regioas three were completely destroyed, and seven very nearly so, whilst only three escaped altogether untouched.

The three Recions ntterly destroyed mast have been the xith, xth, and ivth, or those called Cirus Mlaximus, Palatiam, and Templom Pacis. The forarn must have saffered considerably, but the Capitol seems to have escaped, as the Capitoline temple, after its first destruction in the time of Sulla, remained entire till burnt by the Vitellians. The narrow and crooked streets, and the irregular Vici of which ancient Rome was composed, readered it impossible to arrest the conflagration. Nero was at Antium whea it broke out, and did not return to Rome till the flames were threatening his own palace, which he had not the power to sarc. This was the Domus Transitorin, the domain of which he had extended from the Palatine to the gardens of Maecenas on the Esquiline. What chiefly directed suspicion against Nero, as having wilfully caased the fire, was the circamstance of its breaking out afresh in the Aemilian property of his minion Tigellinus.

Mucb irreparable loss was occasioned by this fire, such as the destruction of several time-hononred fanes, of many master-pieces of Greek art, besides a vast amount of private property. Among the venerable temples which perisbed on this occasion, were that of Luna, erected by Servius Tullius, the altar and fane of Hercules in the Forum Boarium, the temple of Jupiter Stator, founded by Romulas, those of Vesta and of the Peuates I'opuli Romani, and the Regia of Numa. Yet, on the other band, the fire made room for great improvements. Nero caased the town to be rebuilt on a regular plan, with broad streets, open spaces, and less lofty houses. All the buildings were isolated, and a certain portion of each was constructed with Alban or Gabinian stone, so as to be proof agaiast fire; to guard against which a plentiful supply of water was laid on. As a meaus of escape and assistance in the same calamity, as well as for the sake of ornament, Nero also caused porticoes to be built at his own expense along the fronts of the insulae. He supplied the proprietors with money for huilding, and specified a certain time by wbich the houses were to be completed (Tac. Ann. xv. 38-43; Suet. Nero, 38). Thus Rome sprung a scood time from lier ashes, in a style of far greater splendour than before. The new palace, or domus aurea, of the emperor bimself kept pace with the increased magnificence of the city. Its bounds comprebended large parks and gardens, filled with wild amimals, where solitude might be found in the very heart of the city; a vast lake, surroanded with large buildiags, filled the valley in which the Flavian amphitheatre was afterwards erected ; the palace was of such extent as to have triple porticoes of a thousand feet ; in the restibule stood a colossal figure of Nero himself, 120 feet in lieight ; the ceiliags were panelled, the chambers gilt, and ialaid with getns and mother-of-pearl; and the baths flowed both with fresh and sea water. When this magaificent abode was completed, Nero vouchsated to honour it with his qualified approbation, and was heard to observe, "that he was at last begianing to lodge like a maa." (Suet. Nero, 31 ; Mart. de Spect. 2.)

Changes under subsequent Emperors. - The two predecessors of Nero, Caliguia and Claudias, did not effect Imach for the city : and the short and turbulent reigns of his three successors, Galba, Otho, and Vitellius, were characterised rather by destruction than improvement. Caligala iadeed perfected some of the designs of Tiberius (Suet. Cal

3 n 3
21); and the reign of Claudius was distingh las by the corpletion of two aqueducts and the coustruction of several beautiful fountains (Id. Claud. 20). The factions strugeles between Otho and Vitellius were masked by the ominous hurniug of the Capitol. At leagth the lappier era of the public-spirited Vespasian was distinguished alike by his regard for the eivil liberties of the Romans, and for their material comforts, by the attention which he paid to the improvement of the city, and by his restoring to the public use and enjoyment the vast space appropriated by Noro for his own selfish gratification. The bounds of the impurial palace were again restricted to the limits of the Palatine, and on the site of Nero's lake rose a vast atmphitheatre destined for The amusement of so many thousaods of the Roman perple, whose ruins we still gaze at with wonder and admiration. Vespasian was likewise the founder of the temple of l'eace, near the Forum, and of a tomple to Claulius on the Caelian hill. Titus pursued the ppular designs of his father, and devoted a large portion of the former imperial gardens on the Esquiline to the foumlation of public baths. (Suet. Tit. 7; Mart. iii. 20. 15.) Under this emperor another destructive fire raged for three days and mghts at Rome, and again land a great part of the city in ashes. (Suet. Tit. 8.) The cliet works of Dunitian were the rebuilding of the temple of Jupiter Capitolinas, which had again been burnt, on the mere external gilding of which he is said to have expended 12,000 talents, or nearly three millions sterling; and the fundation of a new formm, which, howeser, was not finished till the time of Nerva, whowe name it bore. (1d. Dom.5.) Trajan constructed the last of the imperial fora, with which was connected the Basilica Elpin. (Dion Cass, 1xis. 4.) Rome probably attained its highest pitch of architectural splemdour under the reigo of his suecessor Il:adrian. That emperur had a passion for tuilding, and frequently furnished lis own designs, which, bowevr, were not always in the best taste. His innet renarkable works were the Mausoleum on the ruht bauk of the Tiber, now the Custello di $S$. An(2) for, the Temple of Venus and Ronne near the Colusseum, and the enormous villa whose ruins may sill be seen at the foot of the ascent which leads to Tiroli. (spart. Hadr. 19; Frocop. B. G. i. 22.)

It would be tedions and muprofitable to recount the works of succeeding emperors down to the time of Aurelian; and it may suffice to mention that those who most contributed to renosate or addarn the city wore Septimius Severus, Carncalla, and Alexander Severus. During this period Iome betrayed unequiwhal symptoms of her approaching decline and fall. Lurew binion of the barbarians hatl already penetrated +A:n Italy, athe in the reign of the accomplished but twhe ( :illiemos, a larde of the Alemami had me-- .... and monlted Kone itself. After a lapse of
 asy of tharr families and homes; and the active athl inturpriala; Aurdian, whilat waging successful wars in li:gpt and the kast, fornd himself com1 welled to stente has capital by fortifying it with a wall.

This great umbortaking, commenced A. D. 271, was completed in the reyth of $\mathrm{l}^{\prime}$ 'robar, the successor of Aurelian. (Vop inc.Aur: 21, 39; Aur. Vict. Cines. 35; Eatrop ix. 15 ; Zovim. i. 49). The aceounts of the eircumforence of this wal are discrejant and iugrointle. Vopisems ( 1 turel, e, 39) mentrons the absurd thi extrathinat t measure of nealy 50 niles; which,
howerer, has been adopted by Lipsius and Isaac lossius, as well as by Nibby (Mura, fc. p. 120, seq.). The walls of Aurelinn were repaired by Honorins. and with the exception of that part beyond the Tiber, and some modern additions ly the Popes, are substantially the same as those which now exist, as appears from the inscriptions on the gates. Without the additions referred to, tbeir circumference would be between 11 and 12 iniles, thus reducing the city to abont the same dimensions as those given by Pliny in the time of Vespasian; nor is there any reason to believe that, in the sinking state of the Enpire, the city would lave received any increase of iohabitants. Another measurement by Ammon, the geometrician, just before the siege of the city by Alaric, gave a circumference of 21 miles (Phot. Bibl. 80, 1. 63, ed. Bekk.) ; but this number, though adopted by Gibbon, and nearer to the truth, cannot be accepted any more than that of Vopiscus. (tiibbon, Decl. and Fall, vol. ii. p. 17, ed. Smith, and notes.) Piale suggested that Vopiscns meant peles instead of passus, and other emeadations of both the passages have been proposed; but without discussing the merit of these, it is sufficient to know that the texts are undoubtedly either corropt or erroneous. This may be briefly but decisisely shown from the following considerations, which will, for the most part, apply to both the statements:1st, the incredible extent of the work; 20d, the absence of any traces of such walls: 3rd, or of any buildings within their supposed limits, such is would naturally belong to a city; 4 th, the fact that the extant inseriptions neveribe to llonorius the restoration if an old line of walls and towers, not the construction of a new one. (Burbury, in Class. J/us. iii. p. 368.)

## VI. Decline and Fall of thi City.

The history of the city from the time of Aurelian presents little more than a prospect of its rapid decline. The walls of that emperor were ominens of its sinking fortunes; but the reign of Diocletian forms the first marked aera of its decay. The triumph of that emperor and of his colleague Maxinian. A. D. 303 , was the last ever celebrated at Rome, but was distinguished by the trophies of an important Persian victory. (Eutrop. ix. 27.) The Roman emperors lad long ceased to be of Roman extraction ; Diocletian, the descendant of slaves, was born in Dasmatia; Maximian, the son of a peasant, was his fellow countryman; and thus neither was wedded by any ties of birth or patriotism to the ancient glorics of the eternal city. These were the first emperors who deserted the capital to fix their residence in the provinces. Maximizan established his court at Milan, whilst Diocletian resided at Nicomedia, on the embellislument of which le lavished all the treasures of the East, in endeaveuring to render it is rival worthy of thome. His only visit to the ancient capital seems to have been on the ocea. sion of his triumph ; it was not prolonged beyond two months, and was closed with mexpuected precipitation and abruptness. (Lact. Mor't Pers c. 17.) Yet his reign is distinguished as having conferred upon the city one of the latest, but moos magnificent of its momments, - The buths on the Quirinal which lear his name, by far the largest at Kume, whose enornous ruins may still be truced, and affurd room enough for varieus clrurclies, convents, anl gardens. (Vopisc. Prob. 2; Orell. Insci: I056.) Subsequently, indeed, Dasentius,
the partaer and rival of Constantine, resided at Rome during the six years of his reiga, and affected to prize the elegance of the ancient metropolis; whilst his lust and tyranay, supported by squandering its treasnres, created more disgust among the Homans than the absence of their former sovereigns. Masentius, however, adorned the city which he polluted by his vices, and some of his works are among the last monuments worthy to be recorded. He restered the temple of Venns and Rome, which had been damaged by a fire, and erected that magnificent basilica, afterwards dedicated in the name of Constantine, whose three enormous arches may still be viewed with admiration. (Aur. Vict. Caes. c. 40. § 26.) The final transfer of the seat of empire to Byzantium by Constantine gave the last fatal blow to the civic greatness of Rome. Yet even that emperor presented the city - we can bardly say adorned it - with a few monuments. One of them, the arch which records his trimph over Masentins, still subsists, and strikingly illustrates the depth of degradation to which architectural taste had already snok. Its beauties are derived from the barbarous pillage of former monuments. The superb sculptures which illustrated the acts and victories of Trajan, were ruthlessly and absurdly constrained to typify those of Constantine ; whilst the original senlptures that were added, by being placed in juxtaposition with those beautiful works, only serve to show more forcibly the bopeless decline of the plastic arts, which seem to have fallen with paganism.

Rome in the Time of Constantius II. - From this period the care of the Roraans was directed rather towards the preservation than the adornment of their city. When visited by the Second Constantius, A. D. 357 , an honour which it had not received for two and thirty years, Rome could still display her aacient glories. The lively description of this visit by Ammianus Marcellinus, though written in a somewhat inflated style, forms a sort of pendant to Strabo's picture of Rome in the age of Augustns, and is striking and valuable, both as exbibiting the condition of the eternal city at that period, and as illustrating the fact that the men of that age regarded its monuments as a kind of Titanic relics, which it would be hopeless any longer to think of imitating. "Haring entered Rome," says the historian, "the seat of empire and of every virtne, Constantius was overwbelmed with astonisbment when he viewed the formm, that most conspicuous monument ot ancient power. On whatever side he cast his eyes, he was struck with the thronging wonders. He addressed the senate in the Curia, the people from the tribunal; and was delighted with the applause which accompanied his progress to the palace. At the Circensian games which he gave, he was pleased with the familiar talk of the people, who, without betraying pride, asserted their bereditary liberty. He bimself observed a proper mean, and did not, as in other cities, arbitrarily terminate the contests, but, as is custonary at Lonee, permitted them to end as chance directed. When he viewed the diferent parts of the city, situated on the sidies of the seven bills and in the ralleys between them, be expected that whatever he first sam must be superior to everything else: such as the ternple of the Tarpeian Jove, whose excellence is like divine to human; the baths which ocenpy whole districts; the enormous mass of the amphitheatre, built of solid Tiburtine stone, the height of which almost baffles
the eye; the Pantheon, which may be called a circular Region, vaulted with lofty beauty; the high, hut accessible mounds, bearing the statues of preceling princes; the temple of Rome, the forum of I'eace; the theatre of Pompey, the odeum, the stadium, and other similar ornaments of the cternal city. Bat when he came to the forum of Trajan, which we take to be a structure unparalleled in the whole world, he was confounded with astunishment as he snrveyed those gigantic proportions, which can neither be described nor again imitated by man. Wherefore, laying aside all hope of attempting anything of the lind, he merely expressed the power and the wish to imitate the lorse of Trajan, on which that prince is seated, and which stands in the middle of the Atrium. Hereupon prince Hormisda, who stood near him, exclaimed with national gestienlation: 'First of all, emperor, order snch a stable to be made for it, if you can, that the horse you propose making may lolge as magnificently as the one we behold. The same prince being asked his opinion of Rome said that the only thing which displeased him was to perceive that men died there as well as in other places. So great was the emperor's surprise at all these sights that he complained that ramour, which commonly magnifies everything, had here shown itself weak and malignant, and had given but a feeble description of the wonders of Rome. Then, after much deliberation, he resolved that the only way in which he could add to the ornaments of the city would be by erecting an obelisk in the Circns Dlaximus" (xvi, 10).

The same historian from whom the preceding topographical picture has been transcribed has also left some lively and interesting notices of the manners of the Romans at this period. These have been paraphrased in the elnquent laaguage of Gibbon, to whose work the reader is referred for many interesting particnlars concerning the state of Rome at this time (vol, iv. pp. $70-89$, ed. Smith). We may here obserse with surprise that whilst Alaric, like anotlier Hannibal, was threatening her gates, her nobles were revelling in immoderate wealth, and squandering the revenues of provinces on objects of pomp and lusury, though, as we have seen, the arts had fallen to so low an ebb that there was no longer any hope of rivalling the works of their ancestors. The poorer citizens, few of whom could any longer boast a pure Roman descent, resembled the iamates of a poorhouse, except that their pleasures were provided for as well ats their wants. A liberal distribution of corn and bacon, and sometimes even of wine, reliesed their necessities, whilst liealth and recreation were promoted by gratuitous admittance to the haths and public spectacles. Yet Rome was now struggling for her existence. We have already mentioned the restoration of the walls by Honerius. It was nnder the salae emperor that the first example occurs of that desecration by which the Romans stripped and destroyed their own monnments. If we unay credit Zosimns (v. 38), Stilicho was the first to lay violent lands on the temple of the Capitoline Juve, by stripping off the plates of gold which lined its doors, when the following inscription was found beneath them: " llisero regi servantur." In after times this esample was bnt too frequently followed; and it may be said with truth that the Romans themselves were the principal destroyers of their own city.

The Barbarians at Rome. - After two sieges, or rather blockades, in 408 and 409 , by the Goths
under Alaric, Rome was captured and sacked ont a thirl occasion in 410 (1. a, c. 1163) - the first time since the Gallic invasion that the city Ind actually been in the hauds of an enemy but though it was plundered by the Goths, it dues not appear to have sustainel much damage at their lands. They evacuated it on the sisth day, and all the mischief they seem to have done mas the setting fire to some hoases near the Salarian rate, by which they had entered, which unfortunately spread to and destroyed the neighbouring palace of Sallust (Procop. B. 1.. i. 2.) Nearly balf a century later, in the reign of Mlaximus, Rome was again taken, and sacked by the Vandals, under Genseric, A. D. 4.55. This time the pillare lasted a fornight; yet the principal damage infficted on the monuments of the city was the carrying oll by Genseric of the curious tiles of gitt turonze which covered the temple of the Capituline Jupiter (Ib. 5). That edifice, with the exception, perhaps, of the spoliation by Silicho, appeats to have remained in much the satne state as after its l.ast rebuilding by Domitian; and though patanism liad been abolished in the interval, the venerable fane seems to have been respected by the Roman Christians. Yet, as may be perceived from an edict of the emperor Majorian, A. D. $45{ }^{\circ}$, the inhabitants of Roure had already commenced the disgraceful practice of destroying the monuments of their ancestors. The zeal of the Cbristians led them to deface some of the temples; uthers, which had not been converted into Christian churches, were suffered to go to ruin, or were converted into quarries, from which building materials were extracted. l'etitions for that purpose were readily granted by the magistrates; till Diajorian checked the practice by a severe edict, which reserved to the emperor and senate the cognisance of thase cases in which the destruction of an ancient building might be allowed, imposed a fine of 50 lbs . of guld ( 2000 l . sterling) on any magistate who granted a license for such dilapidations, and conilenined all subordinate officers engaged in such transactions to be whipped, and to have their hands amputatel (Nor, Major, tit. vi. p. 35: "Aotiquaram aedinan dissipatur speciosa constructio; et ut earum aliquid reparetur magna diruuntur," \&c.)

In the year 472, in the reign of Olybrius, Rome was for the third time taken and sacked by Ricimer; hat this calamity, like the two former ones, does not appear to have been productive of much damage to the public monuments. These relics of ber former 4lary were the especial care of Theodoric, the $O_{s-}$ trougoth, when le becanse king of Italy, who, when 7." visited the capital in the year 500 . had surveged them with admiration. "The Gothic kings, so inJurivisly accused of the rain of antiquity. were anxious to preserve the monaments of the nation whom they had sthamid. The royal edicts were framed to prewent the abuses, the neglect, or the depredations of the citisms themelves; and a professed architect, the munal sum of 200 lbs of gold, 25,000 tiles, and the seceipt of "u foms' from the Lucrine port, were assignea for the ordinary repairs of the walls and pultic edifiers. A similar care was extended to the theture of motal ot marble, of men or animals. The sant of the limon, whidh have given a moxern forme to the Quirmal. Was applanded by the barI wans; the brazen el phant of the Via Sucra were Whacently restored; the famons heifer of Myron deceived the cattle as they wem driven through the formo of Seace; and an offlieer was cerated to protect those works of art, which Theonoric enisidered as
the noblest ormament of his kingdom." (Gibbon, Hecline and Fall, vol. v. p. 21, ed. Suith ; cf. E.rcupt. de Orloac. Thearl. 67.) The letters of Cassiodurus, the secretary of Theodoric, show that Rome hal received little or no injury from its three cap. tures. The Circus Maximus was uninjured, and the Ladi Circenses were still exhibited there ( J ariar, iii. 51 ); the thermae and aqueducts were intact (Ib. vii. 6); the Clundian aqueduct was still in play, and disebarged itself on the top of the Areatine as if it were a valley ( $I b$.). That the aqueducts were perfect also appears from l'rocupius (B. G. i. 19), who says that in the subsequent siege under Vitiges, the tioths broke them down, to deprive the inhabitants of their supply of water. The theatres had suffered only from the effects of time, a ad were repaired by Theodoric (Cassiod. ib. iv. 51.)
In the year 536 the Guthic garrison, with the exception of their commander Leuderis, who preferred captivity to flight, evacuated Rome on the approach of Belisarius, the lieutenant of Justinian. Belisarius entered by the Asinarian gate, and, after an alienation of sixty years, Rome was restored to the imperial dominion. But in a few months the city was beleaguered by the numerous host of Vitiges, the newly elected king of the Goths; and its defence demanded all the valour and ability of Belisarius. Fur this parpose he repaired the nalls, which had again fallen into decay. Regular bastions were constructed; a chain was drawn acrees the Tiber; the arches of the aqueducts were fortified; and the mole of Hadrian was converted into a citadel. That part of the wall between the Flaminian and Pincian gates, called muro torto, was alone neglected (Procop. B. G. i. 14. sqq.), which is said to lave been regarded both by Goths and Romans as under the peculiar protection of St. Peter. As we bave before ssid, the Guths invested the city in six divisions, from the Purta Flaminia to the Portat Praenestina; whilst a seventh encampment was formed near the Vatican, for the purpose of comnasiding the Tiber and the Milvian bridge. In the general assanlt which followed, a feint was made at the Salarian gate, but the principal attacks were directed against the mole of IIadrian and the Porta Iraenestina. It was on this occasion tbat at the former point the finest statues, the works of Praxiteles and Lysippus, were converted into warlike missiles, and harled down upon the besiegers. When the ditch of St. Angelo was cleansed in the pontifieate of Urban Vill., the Sleeping Famn of the Barberini Palace was discovered, but in a sadly nnutilated state. (Winckelmann, Hist. de l'Art,vol.ii. p. 32, seq.) But the assault was not successful, and after a fraitless siege, which lasted a year, the Gotbs were forced to retire.

After the recall of Belisarius the Goths recorered strength and courage, and, under Totila, once more threatened the walls of Rome. In 544 Belisarius was again despatched into Italy, to retrieve the faults of the generals who hal sacceeded him; but or1 this occasion he was deserted by his usual fortune, and, after a fruitless attempt to reliere the city, was compelled to retreat to Ostia. (Procop, B. (G. iii. 19.) In IDecenber, 546 , the Goths were adruittell into the city by the treachery of sume I-aurian sentinels posted at the Asinarian gate. lime was again subjectel to pillage, and apprars to liave suffered more than on any former necasion. A third part of the walls was destroged in differcht places, and a great many houses were bnroth
(Frocop. ib. c. 22 ; Mareell. Chron. p. 54.) Totila threatened to destroy the finest works of antiquity, and even issued a decree that Rome should be turned into a pasture. Yet he was not deficient in magnanimity and clemency, and was diverted from these designs by the remonstrances of Belisarius, who warned him not to sully his fame by such wanton barbarity. Upon 'Totila's marehing into Lueania, Belisarius, at the head of 1000 horse, ent his way through the Guths who bad been left to guard the city. He repaired with rude and heterogeneous materials the walls which had been demolished; whilst the gates, which could not be so suddenly restored, were guarded by his bravest soldiers. Tutila returned to Rome by forced marches, but was thrice repulsed in tbree general assaults. Belisarius, however, being commanded by Justinian to proceed into Lucania, left a garrison of 3000 ol his best troops at Rome under the command of Dingenes. The city was again betrayed by some Isiurians in 549 , who opened the gate of St . Paul to Totila and his Guths, Totila, who seems now to lave considered himself as in confirmed possession of Italy, no langer exhibited any desire to destroy the edifices of Rome, which be regarded as the eapital of his kingdonn, and be even exbibited the equestrian games in the Circus. (Procop. B. G. iv. 22.) But in 552 he was defeated and slain by the eunuch Narses in the battle of Tagina. Narses then marched to Rome, and once more sent its keys to Justinian, during whose reign the city had been no fewer than five times taken and recovered. ( $I 6$. $26-35$; Theoph. Chron. vol. i. p. 354, ed. Bonn.)

Rome under the Popes. - Towards the close of the sixtb century Rome had touched the lowest point of degradation. The Roman eitizens lived in continual fear of the attacks of the Lombards ; the inhabitants of the surrounding conntry, who no longer dared to devote themselves to the pursuits of agriculture, took refuge within the walls; and the Campagna of Rome became a desert, exhaling infectious rapours. The indigence and the celibacy of a great part of the inbabitants produced a rapid decrease of population, thongh their seanty uumbers did not protect them from famine. The edifices of Rome fell into decay; and it is commonly believed that Pope Gregory the Great, who filled the papal chair from 590 to 604 , purposely defaced the temples and mutilated the statues,-a charge, however, which rests on doubtful evidence, and which las been strennously repelled by Gregory's biographer Platina (ap. Bayle, Grégoive Ier.). Bargaeus, in his epistle on the subject (in Graevius, Thesaur. Ant. vol. iv.), says tbat the Cireus Maximus, the baths and theatres, were certainly overthrown designedly, and that this is partieularly evident in the baths of Caracalla and Diocletian (p. 1885). He attributes this, as a merit, to Gregory and one or two subsequent popes, and assigns as a reason that the baths were nothing but schools of licentivusness (p. 1889, seq.). It seems more probable, however, that the destruction of the batbs arose from the failure of the aqueducts - a circumstanee which would have rendered them useless - and from the expense of keeping them np. Bargaens himself attributes the ruin of the aqueducts to the latter cause (p. 1891); but they must also have suffered very severely in the Gothic wars. Hence perhaps the hoge foundations of the thermae, having become altogether uieless, began to be nsed as stone quarries, a circumstance which would account for
the appearance of wilful damage. That ruin had made great progress at liome before the time of Gregory, is manifest from some passages in his own works in which lie deplores it. Thus in one of his homilies be says: "Qualis remanserit Roma, conspicimns. Immensis doloribus multipliciter attrita, desolatione civium, impressione hostium, firequentics ruinarum." And again: "Quid autem ista de hominibus dicimns, cum ruinis crebrescentibus ipsa quoque destrui aedificia videmus?" (Hom. 18 is Eaech. ap. Donatum, de L'rbe Roma, i. 28, sub fin.) He would hardly have written thus had he himself heen the cause of these ruins. The charge probably acquired stiength from Gregory's arowed sutipathy to classical literature.

Whilst the dominion of Italy was divided leetween the Lombards and the exarchs of Ravenna. lione was the head of a duclyy of almost the same size as her ancient territory, extending from Viterbo to Terracina, and from Nami to the mouth of the Tiber. The fratricide Constans II. is said to luave entertained the idea of restoring the seat of empire to Rume ( $1 . \mathrm{D} .662$ ). (Hist. Misc. ap. Muratori, Scrip. R. . i. iii. pt. i, p. 137.) But the Lombard power was tou strong; and, after a visit of a few days to the ancient capital, lre abandoned it for ever, after pillaging the eburches and cariying off the bronze rouf of the Pantheon. (Schlusser, Gesch. d. bilder-stürmenden Kaiser, p. 80.) In the eighth century the Romans revived the style of the liepublic, but the Popes had become their chief magistrates. During this period Rome was eonstantly harassed and suffered many sieges by the Lombards nnder Lnitprand, Astolphus, aud other kings. In 846 the various measure of its calamities was filled up by an attack of the Saracens-as if the former mistress of the warld was destined to be the butt of wandeting barbarians from all quarters of the glube. The disciples of Mahomet pillaged the church of St. Peter, as well as that of St. Paul outside the Porta Ostiensis, but did not succeed in entering the city itself. They were repulsed by the vigilance and energy of pope Leo IV., who repaired the ancient walls, restored fifteen towers which had been overthrown, and enclosed the quarter of the Vatican; on which in 852 he bestowed his blessing and the title of Citta Leonina, or Leonine city (nuw the Borgo di S. Pietro). (Anastasius, V. Leom. IJ.) In the period between 1081 and 108 4 Rome was thrice fruitlessly besieged by the emperur Henry IV., who, bowever, by means of corruption at last succeeded in gaining possession of it; but the ruins of the Septizonium, defended by the nephew of Pope Gregory VII., resisted all the attacks of Menry's forces. Gregory shat himself up in the castle of S. Angelo, and invoked the assistance of his rassal, Robert Guiscard. Henry fled at the arproach of the warlike Norman; but Rome suffered more at the hands of its friends than it had ever before done from the assaults of its enemies. A tumult was excited by the imperial adherents, and the Swacens in Fobert's army, who despised both parties, seized the opportunity for violence and plunder. The city was Ered; a great part of the buildings on the Campus Martius, as well as the spacious district from the Lateran to the Colosseum, was consumed, and the latter portion has never since beeu restored. (Mabaterra, iii. c. 37 ; Donatus, iv. 8.)

But Rome las suffered more injury from her own citizens than from the hands of foreigners; and its ruin must be chiefly imputed to the civil dissensiuns
of the Romans, and to the use which they made of the ancient monuments to serve their own sulfish and mercenary purposes. The factions of the Givelphs and Glitibelines, of the Colonna and Ursini, which began in the tenth century and lasted several hundred years, must have been very destructive to the city. In these sanguinary quarrels the ancient -ifices were converted into castles; and the multitude of the latter may be estimated from the fact that the senator Bramealeone during bis government ( $1252-1258$ ) cansed 140 towers, or fortresses, the strongholds of the nobility, to be demolished in Rome and its neighbourhood; yet subsequently, under Martin V ., we still hear of forty-four existing in one quarter of the city alone. (Matthew Paris, Mist. Maj. p. 741, seq.) Some of these were erected on the most celebrated buildings, as the triumplal monnments of Caesar, Titus, and the Antonines. (Montfaucon, Diar. Ital. p. 186; Anonymus, ib. p. 285.) Bat still more destructive were the ravages committed on the ancient buildings during times of peace. The beautiful sculptures and architectural members, which could no langer be imitated, were seized upon and appropriated to the adornment of new structures. We have seen that this barbarous kind of spolistion was exercised as early as the reign of Constantine, whe applied the senlptures of some monument ef 'rajan's to adorn his own triumphal arch. Io after ages Charlemagne carried off the columns of Rome to decorate his palace at Ais-laChapelle (Sigebert. Chron. in Bonquet, Historiens de Firance, r. p. 378 ); and several centories later Petrarch laments that his friend and patron, Robert, king of sicily, was following the satne pernicious example. ("Itaque nunc, ben dolor! beu scelus indignum ! de testris marmoreis celumnis, de liminibus templorum (ad quae nuper ex orbe toto concursus devotissimus fiebat), de imaginibos sepulcrorum sub quibus patrum vestrorum venerabilis cinis erat, ut reliquas sileam, desidiosa Napolis adomatur," Petrar. $O_{p p}$. p. 536, sep.) It wonld be endless to recount the depredations committed by the popes and nobles in order to build their charches and palaces. The ablé Barthélemi (Mém. de l.Acad. des Inser. xxviii. 1. 58.5) mentions that he hail seed at Rome a manuscript letter relating to a treaty between the chiefs of the factions which desolated Rome in the 14th century, in which, among other articles, it is agreed that the Colosseum shall he common to all parties, who shall be at liberty to take stomes from it. (De Sale; Tie de Petrarque, i. 328, note.) Sixtus V. employed the stomes of the Septizoniam in building St. Peter's. (lireg. Leti, Jitn di Sisto J. iii. p. 50.) The nephews of l'aul III. were the principal destroyers of the Colossemm, in order to build the Famese palace (Maratori, Ann, d Italia, siv. p. 371): and a similar reproaeh was proverbially applied to those of Lrban V111. ("Quod nen fecerunt Rarbari, fecere Parberini," Gibbon, viii. p. 2s4, note.) But wen a worse species of devecration than this was the deat:action of the most beautiful marble columas, by corterting then into lime. I'ograio conntains (A.17.1430) that the temple of Cuncord, whech was almost pertert when he first came to Rome, had almost disatucured in this manner. ("Cspitolio contigoa furum virsus superest porticus aedis Concordiae, quan cum 1rmum al urbem accessi, vidi fere intigram, ofere anarmureo admodum specioso; Fomani prstmoduan, ad calcom, aedern totam et printicûs partem, di,jectis culumnis, sunt demoliti," de I wi: Fort. p. 12.) And the same practice
is reprobated in the verses of Aeneas Sylvius, afterwards lope l'ius 11.:-
"Sed tuns hic populus, muris defossa vetostix, Calcis in obseyuium marmora dura corpuit. Impia tercentum si sic gens eyerit annos Nullom hic indienm nobilitatis erit." (In Mabillon, Vus. Ital. i. 97.)
The melancholy progress of the desolation of Rome might be roughly traced from some inperfect memorals. The account of the writer called the Anonymus Einsiedlensis, who visited Rotue early iu the 9th century, which has been published by Mabillon (Anal. iv. p. 502), and by Hinel (Archic. f: Philol. u. Padag. i. p. 115), exhibits a much more copions list of monuments than that of another anonymous writer, whe compiled a book De Mirabilibus Romae, in the 12 th or 13 th century. (Noutfaueon, Diar. Ital. p. 283, seq.; Nibby, Effemt, Lett. di Roma, 1820 , Fasc. i.-iv.) Several passages in the works of Petrarch exlibit the negleeted and desolate state of Rome in the 14th ceatury, -the consequence of the removal of the holy sec to Avignon. Thus, in a letter to Urban V., be says: " Jacent domus, labant maenia, templa ruunt, sacra pereunt, calcantur leges." And a little after: "Lateranum humi jacet et Ecclesiarum mater omniun tecto carens ventis patet ac pluviis," \&c. (Cf lib. ix. ep. 1.) Yet the remains of ancient Roman splendour were still considerable enough to excite the wonder and admiration of Manuel Chrysoloras at the commencement of the 15th century, as may be seen in bis epistle to the emperor John P'alaeologus, (subjoined to Codinus, de Antiq. C. P. p. 107, seq.) Much destruction must have been perpetrated frotn this period to the time, and even during the life, of Poggio. But the progress of desolation seems to bave been arrested subsequently to that writer, whose catalogue of the ruins docs net exhibit a great many more lemains than may yet be seen. Care is now taken to arrest as far as possible even the inevitable influence of time; and the antiquarian has at present nothing to regret except that more active means are not applied to the disinterment of the ancient city. The funds desoted to the reerection of a magnificent basilica far withont the walls, and on so mawholesome a site that the very monks are forced to desert it daring the heats of summer, might, in the eye at least of tramsmontane taste, have been more worthily deroted to such an object.

## Vil. Popclation of Rome.

Before we elose this part of the subject it will be expected that we should say something respecting the probable amonnt of the population of Rome. The inquiry is unfortunately involved in much obscurity, and the vaqueness of the data upon which any calculation can be founded is such that it is impossible to arrive ut any wholly natisfactory conclusion. The latitude hence allowed may loe judged from the fact that the estimates of some of the beat modern scholars are obout four times as great as those of others; and whilst Dureau de la Malle, in nis Economie politique des Romains (i. p. 340 , sel.), sets down the population at 562,000 souls, 11 cick, in his Remische Geschichte (vol. i. pt. ii. p. 383, seq.), estimates it at $2,265,000$; Day Lipsius, in his work De Mugnitudine Romana (iii. 3), evin carried it up to the sstounding number of $8,000,000$. But this is an absurd exaggeration; whilst, on the
ather hand, the estimate of Dareau de la Malle is undonbtedly mech too low.
The only secure duta which we passess on the sabject are the records of the number of citizens who reccived the congiaria or innperial largesses, for it is only daring the imperial times that we can profess to make any calculation. We learn from the Monumentum Ancyrantme that Augustus, in bis 12th coosulate, distributed a pecuniary gift to 320,000 of the plebs urbana. ("Consul XII. trecentis et viginti millibus plebei urbanae sexagenos denarios viritim dedi," tab. iii.) The recipients of this bounty were all males, and probably formed the whole free male papulation of Rome, with the exception of the senators, knights, and aliens. Women and boys of a tender age did not participate in these distribations. It had been custonary for the latter to be admitted to participation after the age of ten ; but Angustus appears to have extended his liberality to still yonnger children. (" Ne minores quidem pueros praeteriit, quanvis nonnisi ab undecimo aetatis anno acceipere consuessent," Suet. Aug. 41.) The distributious of corn seem to have been regulated on stricter principles, as these were regnlar, not extraonlinary like the largesses. From these the cbildren were probably excluded, and there was, perbaps, a stricter inquiry made into the titles of the recipients. Thus we leurn from the Mon. Ancyranum that those who received corn in the 13th consulate of Augustus amounted to rather more than 200,000. (Cf. Dion Cass. Iv. 10.) From the same document it appears that three largesses made by Auguxtus, of 400 sesterces per man, were nerer distributed to fewer than 250,000 persons. ("Quae mea congiaria pervenerunt ad hominmm millia nunquam minus quinquaginte et ducenta," $I b$, where Hück, Röm. Gesch. i. pt. ii. p. 388, by erroneously reading sestertium instead of hominum, has increased the number of recipients to 625,000 .) From a passage in Spartian's life of Septinnins Severus (c. 23) it would seem that the number entitled to receive the distributions of corn had increased. That nuthor says that Severus left at liis death wheat enongh to last for seren years, if distributed according to the regular canon or measnre of 75,000 modii daily. Naw, if we calculate this distribution accarding to the system of Angustus, of five modii per man monthly, and reckon thirty days to the month, then this would leave the number of recipients at $450,000 \quad(75,000 \times 30=2,250,000 \div 5=$ $\$ 50.000)$. According to these statements we can lardly place the average of the inale plebeian population of Rome daring the first centaries of the Empire at less than 350,000 ; and at least twice as much again must be added for the females and boys, thus giving a total of $1,050,000$. There are no very accurate data for arriving at the numbers of the senaturs and knights. Bnasen (Beschr.i. p. 184), withoat stating the groonds of his calculation, sets them dorn, including their families, at 10,000 . Bnt this is evidently much too low an estimate. We learn from Dionysius Halicarnassensis (vi. 13) that in the annual procession of the knights to the temple of Castor they sornetimes mustered to the number of 5000. But this mast have been very far from their whole number. A great many must liave been absent from sickness, old age, and other canses; and a far greater number must have been in the provinces and in fureign countries, serving with the armies, or emPloyed as publicani, and in other public capscities. Yel their families would probably, for the most part,
reside at Rome. We see from the complaints of Horace bow the equestrian digrity was prostituted in the imperial times to liberti and aliens, provided they were rich enough for it. (Eipod. iv. in Menam; cf. Jnv. i. 28.) We shonld, perhaps, therefore be below the mark in fixing the number of knights and senators at 15,000 . If we allows a wife and one child only to each, this wonld give the number of individuals composing the senatorial and eqnestrian families at 45,000 , which is a small proportion to $1,050,000$ freemen of the lower class. It may be objected that marriage was very much ont of fashion with the higher classes at Rome during the time of Augustus; but the omission was supplied in another manner, and the number of kejut women and illegitimate ehildren, who would count as popnlation just as well as the legitimate ones, must have been considerable. In this calculation it is important nat to underrate the numhers of the higher classes, since they are very important factors in estimating the slave population, of which they were the chief maintainers. The preceding sums, then, would give a total of $1,095,000$ tree inbabitants of Rome, of all classes. To these are to be added the aliens residing at Rume, the soldiers, and the slaves. The first of these classes must have been very numerous. There must have been a great many provincial persons settled at Rome, for purposes of business or pleasure, who did not possess the franchise, a great many Greeks, as tutors, physicians, artists, \&cc., besides vast numbers of other foreigners from all parts of the worid. The Jews alone must bave formed a considerable popalation. So large, indeed, was the number of aliens at Rome, that in times of scarcity we sometimes read of their being banished. Thus Angnstus on one occasion expelled all foreigners except tutors and pliysicians. (Snet. Aug. 42.) According to Seneca, the greater part of the inhabitants were aliens. "Nullnm non hominum genus concurrit in urbem et virtutibus et vitiis magna praemia panentem. Inde domo quisque sit, quaere; videbis majnrem partem esse, quue relictis sedibus suis venerit in maximan quidem et pulcherrimam orbem, non tamen suam." (Cons. ad Helv. c. 6.) In this there is no doubt some exaggeration; yet we find the same complaints reiterated by Juvenal:-

## " Jam pridem Syrns in Tiberim defluxit Orontes."

" Hic alta Sicyone, ast bic Amydone relicta,
Hic Andro, ille Samo, hic Trallibus ant Alabandis,
Esquilias dictnmque petunt a Vimine collem,
Viscera magnarum domuum, dominique fitturi ${ }^{\text {, }}$
(iii. 62 , sey.).

It would perhaps, then, be but a modest estimate to reckun the aliens and foreigners resident at lome, together with their wives and families, at 100,000 . The soidiers and the rigiles, or police, we cant hardly estimate at less than 25.000 ; ind as many of these men must have been married, we may reckon them, with their families, at 50,000 . Hence 100,000 aliens and 50,000 military, \&c., added to the foregoing sum of $1,095,000$, makes $1.24,5,000$ tor the total miscellaneons free population of kome.

There are great difficulties in the way of estimating the slave population, from the total absence of any accurate data. We can only infer generally that it must bave been exceedingly numerous-a fact that is evident from many passiges of the aucient anthors.

The number of slaves kept as domestic servants must have been execedingly large. Horace mentions (Sat. i. 3. 12) that the singer Tigellius had sometimes as many as 200 slaves; but when he was taken with a sudden fit of cconomy, he reduced them to the very modest number of 10 . No doubt, however, he was a first-rate vocalist, and, like lis brethren in modern times, a man of fortune. Tillius the pratotor, who was a stingy churl, when be went to Tibur, had 5 slaves at his heels to carry his cooking utensils and wime. (Ib, i. 6. 107.) Horace himself, who of course was not so rich a man as Tigellius, when he sat down to his frugal supper of cakes and vegetables, was waited upon by 3 slaves; and we may presume that these did not compose bis entire bousebold. (Ib, v. 115.) In the reign of Nern, 400 slaves were maintained in the palace of Pedanius Secundus, who were all put to death, women and children included, because one of them had murdered his master. (Tac. Ann. xiv. 42 , seq.) The slaves no longer consisted of those born and bred on the estates of their masters, but were imported in multitudes from all the various nations under the wide-spread dominion of the Romans. (* Postquam vero nationes in familiis habemus, quibus diversi ritus, externa sacra, aut mulla sunt, colluviem istarn non nisi meto coercueris." (Ib. c. 44.) The case of Pedanius, however, was no doubt an extraordinary one. It cannot be imagined that the plebs urbana, who received the public rations, were capable of maintaining slaves; nor probably are many to be assigned to the aliens. But if we place the patrician and equestrian farnilies at 15,010 , and allow the moderate average number of 30 slaves to each family, this would give a total number of 450,000 . Some also must be allowed to the richer part of the plebs-to persons who, like Horace, were not patrician nor equestrian, yet could afford to keep a few slaves; as well as to the aliens resident at Rome, so that we can hardly compute the number of donestic slaves at less than 500,000 . To these must be added the public slaves at the disposal of the various municipal officers, also those employed in handicraft trades and manufactures, as journeymen carpenters, builders, masons, bakers, and the like. It would not jerhaps be too much to estinnate these at 300,000 , thus making the total slave population of Rome 800,000 . This sum, added to that of the free inlabitants, would give a total of $2,045,000$.

The Votitia and Curiosum state the number of insulae at Rome at 46,602 , and the number of domus at 1790 , besides balnea, lupunaria, military and police stations, \&.c. If we had any means of ascertaining the average number of inhabitants in cach insula, it would afford a valuable methed of checking the preceding eomputation. But bere ngain we are unfirtumately reduced to uncertainty and conjecture. We may, however, pretty surely infer that each insula contained at large number of inuates. In the time of Augustus the yeurly rent of the roenamula of nu insula ordinarily produced 40,000 secterces, or between 3006 . and $400 l$. sterling. (Dig. 19. tit. 2. s. 30, ap. (iblion, ch. 31, nute 70.) l'etronius (c. $4.5,97$ ), and Juvenal (Sat. uii. passim) describe the crowded state of these lodgings. If we take them at an average of four stories, each accommodating 12 or $1: 3$ persuns, this would give say 50 persons in each insula; andeven then the imates, men, wonen and boys, would be paying an averate yearly rent of about il. wer head. The inmates of eath donnus can harilly be set down at less, since the
family, with tutors and other hangers on, may perhaps be fairly estimated at 10 , and the slaves in each domus at 40 . We learn from Valerins Maximus (iv. 4. § 8), that sixteen men of the celcbrated Gens Aelia lived in one small house with their faunilies; but this seems to have been an exceptional case even in the early times, and camot be adopted as a guide under the Eimpire, Nuw, taking the insulae actually inhabited at $40,000-$ since some must have been to let, or under repair and tbe inlabited domus at $1500=41,500$, and the number of innates in each at 50 , we should have a total population of $2,075,000$, a sum not greatly at variance with the nmonnt obtained by the previous method. But the reader will have seen on what data the calculation proceeds, and must draw his own conclusions accordingly. (Cf. Bunsen, Beschreibung der Stadt Rom, i. p. 183, seq.; Durean de la Malle, Economie politique des Romains i. p. 340. seq. ; Dlommsen, Die Romischen Tribus, p. 187, seq.; Höck, Römische Geschichte, i. pt. ii. p. 383, seq.; Zumpt, Ueber den Stand der Berölkerung im Alterthum, Berlin, 1841; Gibbon, Decline and Fall, wol, iv. p. 87 , seq., with the note of Smith.)

## PART II. TOPOGRAPHY.

Having thus given an account of the rise and progress, the decline and fall of the Roman city, we shall now proceed to describe its topography. In treating this part of the subject we shall follow those divisions which are marked out either by their political importance or by their natural features rather than be guided by the arbitrary bounds laid down in the Regions of Augustus. The latter, lowever convenient for the manicipal purposes which they were intended to serve, would be but ill calculated to gronp the various objects in tbat order in which they are most calculated to arrest the attention of the modern reader, and to fis them in his memory. We shall therefore, after describing the walls of Servius Tullius and those of Aurelian, proceed to the Capitol, one of the most striking objects of ancient Rome, and then to the Forum and its environs, the remaining hills and their calleys, with the various objects of interest which they present.

## I. Walls and Gates of Servies Tullius.

At the commencement of the Roman Empire the walls of Servius Tulitius could no longer be traced. Instead of dreading the assaults of the surrounding petty nations of Italy, lome had now extended her frontiers to the Euphrates and the Atlantic; her ancient bulwarks were become entirely uscless, and the increase of lier population had occasioned the building of houses close to and even over their remains; so that in the time of Dionysius of Halicamasuls, who came to Bone in the reign of Augnstus, it was difficult to discover their course (iv. 13). To attempt now to trace their exact outline would therefore be a hopeless task. The remains of the agger of Servius are still, however, partly visible, and the situation of a few of the ancient gates is known with certainty, whilst that of others may be fixed with at least some approach to aecuracy from notices of them contained in ancient authors. It is from these materials that we must endeavour to reconstruct the line of the Servian walls, by first determining the probable sites of the gates, and by then drawing the
wall between them, according to indications offered by the nature of the ground.

We learn from Cicero that Servius, like Romnlus, was guided in the construction of his wall by the autline of the hills: "Cujus (urbis) is est tractatus ductusque muri quom Romuli tum etiam reliquorum regum sapientia definitus ex omni parte arduis praeruptisque montibus, nt unus aditus, qui esset ioter Esquilnum Quirinalernque mentem, maximo aggere ebjecto fossa cingeretur vastissima; atque at ita munita arx circminjectu arduo et quasi circumciso saxo niteretur, ut etiam in illa tempestate herribili Gallici adventus incolumis atqne iotacta permanserit." (De Rep. ii. 6.) Becker (de Muris, p. 64, Handb. p. 129) asserts that Cicero here plainly says that Servius erected walls ooly where there were no bills, or across the valleys, and concludes that the greater part of the defences of the city consisted of the natural ones offered by the hills alone. Becker, however, appears to have formed no very clear ideas upon the subject; for notwitbstaoding what is here said, we fiad him a few pages further on, conducting the line of wall not only along the height of the Quirinal, but even over the summit of the Capitoline hill itself ! (Handb. pp. 131, 136, de Muris, pp. 65, 70.) Neither his first, or theoretical, nor his second, or practical, view, is correct. The former is in direct coztradiction to his anthority; for Cicero says that the other kings did lika Romulns; and he, as we have seen, and as Becker himself has shown, walled iu his city all round. Cicero says, as plainly as he can speak, that there voas a wall, and that it was defined along its whole extent (" definitus ex omui parte") by the line of the hills. If it did not run along their summit, we cannot explain Pliny's assertion (iii.9) that the agger equalled the height of the walls ("Namque eum (aggerem) muris aequarit qua maxime patebat (urbs) aditu plano : caetero munita erat praecelsis muris, aut abruptis montibus," \&..), since it would be a no great extolling of its height to say that it was raised to the level of a wall in the valley. Cicero, however, notices two exceptions to the continuens line, and the fact of his printing these out proves the continuity of the wall in the remainder of the circuit. The first exception is the agger just mentioned, upon the tap of which, however, according to Dionysius (ix. 68), there seens also to have been a sort of wall, though probably not of so great a beight as the rest, at least he uses the comparative when speaking of it :
 exception was the Arx, or Capitolne hill, which, being on its western side much more abrupt and precipitons than the other hills, was considered as sufficiently defended by natnre, with a little assistance from art in escarping its sides. That there was no wall at this spot is also proved, as Niebuhr remarks (Hist. vol. i. p. 396) by the account of the Gauls scaling the beight. (Liv. v. 47; comp. Bumbury, Class. Mus. vol. iii, p. 347.) The Capitoline, thierefore, must bave been the spot to which Dinnysius alluded, when he ssid that Rume was partly defended by its hills, and partly by the Tiber (ix. 68); as well as Pliny in the passage just cited, where we must not infer from the plural (montibas) that be meant more than one hill. This is merely, as in Dionysius alse, a general mode of expression; and we have before observed that Pliny's own account shews that the wall crowned the bills. Lastly, had there been no wall npon thein, it is difficult to
see how there could have beea gates; yet we find Becker himself placing gates at spots where, accordiag to his theoretical view, there could have been no wall. Niebuhr (l.c.), who, like Becker, does not confine the escarpment to the Capitul, but thinks that the greater part of the city was fortified solely by the steepuess of its hills, places towers, walls, and gates just at the diffirent ascents; but this view, improbable in itself, and unsupported by any authority, cannot be maintained against the express testimony of Cicero. There seems, bowever, to have been an interior fortification on the E. side of the Capitoline, protecting the ascent hy the clivus, as we shall see in the sequel. It was probably intended to secure the citadel, in case an eneny succeeded in forcing the external walls. We have seen before that the hill was fortified by Romulus; but whether these ancient fortifications, as well as thooe on the Palatine, were retained by Servius, it is impossible to say.

We may assume then that the wall of Servius, or his predecessor,-which seems to lave been built of stone (" muro lapideo," Liv, i. 15),-surrounded the whole city, with the exception of the Capituline hill and a small part defended by the Tiber,-thns justifying the noble lines of Virgil (Georg. ii. 533.) : -

## "rerum facta est pulcerrima Roma

Septemque una sibi muro circumdedit arces."
Our next task will be to determine the ontline of this wall by means of the site of the different gates : though, of course, where the outline of the hills is well defined this alone will be a guide. The situation of two of the gates may be considered certain,that of the Ponta Collina, at the N.extremity of the agger, and that of the Esquiline at its southern end. Taking, therefore, the former as a starting-point, anil proceeding continually to the left, we shall make the circuit of the whole city, till we again arrive at the Porta Collina.
This, the most northerly of all the gates, lay near the point where the Via Salaria branches eff from the Via Nomentana. From this spot the first gate to the W. was prohably the Porta Salutaris, so named, apparently, from its being on that division of the Quirinal which in the time of Numa and in the sacred books of the Argives was called Collis Salutaris, from an ancient sacellum of Salus which stood upon it (Varr, L. L. v. § 51). When Paulus Diacoms tells us (p. 327, Mill.) that it was named after the temple of Salus, he seems to be alluding to the later and more famous temple dedicated by C. Junius Bubulens in a. c. 303 , which we shall have occasion to describe in the sequel : but it is probable that it obtained its name, as we liave snid, at a much earlier period. As the new temple probably stood at or near the site of the ancient one, and as the Notitia in destribing the 6th Regio, or Alta Semita, takes this temple for a starting point, and, proceeding always in a circnit to the left, arrives at last at the bathis of Diocletian, it may be assumed that this gate was the frst important object westward of the laatbs. It seems to bave spanned a Clivas Salntis, which Canina (Roma Antica, p. 187) places, with much probability in the Via delle Quattro Funtane, where it ascends from the Piaza Barberina. (Cf, 1'reller, Regionen, p. 134.)

The next cate to the left secms to lave been the Porta Saxqcalas.so namedfrom the temple of Sancus. (l'aul. Diac. 1. 345, Müll.) This wats the same
divinity as Deus Fidius (Fest. p. 241, Müll.), whose ancellum is mentioned by Livy (viii. 20) as situated near the temple of Quirinus. It is also recorded in the fragments of the Argive books is seated on the Collis Mucialis (Varr, L.L.v. § 62, Mïll.), which hill comes hest in order after the Collis Salutaris. We have already mentioned the temple of (Quirinus as having been situated near the present chureh of S. Andrea and it may therefore be issumed that the Porta Sanqualis spanned the ascent to it at or near the modern I'ia della Ihataria.

Between the I'orta Sanqualis and the Capitoline hill there were prebably two gates ; at all events there must undoubtedly have been one in the very narrow ravine which in early times separated the Capitoline from the Quirinal, and which afforded the only outlet from the neighbourhood of the forum. This was, perhaps, the Porta Ratumesa, which we learu from Iliny (viii. 65: "unde postea nomen est")
 'Patovuèvar кa入oû́iv) was stillexisting in their time. Becker, indeed, disputes the inference of its existence from P'liny's words, and disbelieves the assertion of Plut:urch. But there is not bingat all incredible in the fact, and therefore no reason why we should dishelieve it. We know, from the example of London and other cities, that a gate, aud especially the name of a gate marking its former site, may remain for ages after the wall It which it stood has been removed. Eren the local tradition of its name would bave sufficed to mark its site; but it seems highly probable, from the nature of the ground where it stood, that the gate itself had been preserved. The road through so narrow a gorge could never have been disturbed for building or other purposes; and it is probable that the gate remained standing till the ravine was enlarged by cutting away the Quirinal in order to make room for Trajan's forum. We learn from the passages just cited, as well as from Festus (p. 274), that the gate derived its name from a clariotcer, who, retneniog victorious tronn the Circensian games at Veii, was thrown out of his chariot and killed at this spot, whilst the affrighted borses, thus freed from all control, dashed $n p$ the Capitoline hill, and, as the legend runs, did not finish their mad career till they had thrice made the circuit of the temple of Jupiter Capitolinus. (Plin. viii. 65.) So remarkable an omen would have been quite at sufficient gromd in those days for changing the nane of the gate. But it matters little what f.uith we may be disposed to place in the legend ; for

TOMS OF CAIUS BIELLUS.
even if it was an invention, it mast have been framed with that regard to local circumstances which would have lent it probability, and no other gate can be pointed dut which would have so well suited the tenor of the story. Its existence at this spot is further confirmed by the tomb of Bibulns, me of the fetv remaining monuments of the Republic, which stands in the Macel dei Corvi, and by the discovery of the remains of another sepulchral monument a little farther on, in the liue della Pedacchia. It is well known that, with a few rare exceptions, no interments were allowed within the walls of Rome ; the tomb of Bibulus must therefore have been a little without the gate, and its front corresponds to the directiun of a road that would have led from the forum into the Campus Martius (Canina, Roma Antica, p. 218). Bunsen, bowever, is of opinion (Beschr. vol.iii. p. 35) that it lay within the walls, and iufers from the inseription, which states that the ground was presented as a burial-place to Bibulus and his descendants by the Senate and people " honoris virtutisque caussa," that he was one of those rare exceptions mentioned hy Cicero (Leg. ii. 23) of persons who obtained the privilege of being buried within the city. A moro unfortunate conjecture was hardly ever hazarded. Becker has justly pointed out that the words of the inscription merely mean that the ground was pre. sented to Bibulus, witbont at all implying that it was within the walls : and an attentive consideration of the passage in Cicero will show that it conld not possibly have been so. Ever since the passing of the law of the XII. Tables against interment within the walls, Cicero could find only one example in which it had been set aside, namely, in henour of C. Fabricius. Now if Bibulus had lived in the period between the composition of the De Legibus and the final abolishment of the Republic, we could not have failed to hear of an individual who had achieved so extraordinary a mank of distinction ; and if, on the other band, he lived before that work was written, - of which there can scarcely be a doubt,-then Cicero would ceitainly have mentioned him.

Besides the gates already enumerated between the spot from which we started and the Capitoline hill, there seems also to have been another for which we can.find no more convenient site than the SW . side of the Quirinal, between the Porta Ratumena and Porta Sanqualis, uuless indeed we adopt the net improbable conjecture of I'reller (Sichneidewin's I'hilologus, p. 84), that the Ratumena was one of the gates of the fortification on the Clivus Capitolinus, and that the Porta Forvisalis was the gate in the gorge between the Quirinal and the Capitoline. This latter gate is mentioned by Paulus Diaconas (p. 85, Mitil.), in connection with a festival called Fontinalia. It is also mentioned by Varro (L.L. vi. § 22, Miill.? and other writers; and we leam from Livy (xxxv. [10) that a portico was constructed from it to th? altar of Mars, forming a thoroughfare into the Campus Martius. The same listorian agsin mentions the Ara Martis as being in the Campus ( $x 1.45$ ), but there is nuthing to indicate its precise situation. Numa instituted a festival to Mlars, as a pledge of union between the Romans and Sabines (Fest. p. 3:2, Miill.), and it was probably on this occusion that the altar was erected. It is impossible to place any gate and portico leading trom it in the short strip of wall on the S. side of the Capitoline, and therefore its site was perlaps that already indicated. The altar must have stuod at no great distance from the gate, ath could laardly bave been so far to the W. as the

Piaza di Venezia, as Urlichs assumes (Beschr. vol. v. p. 17), since in that case the portice must have crossed the road leading out of the Porta Ratumena.
A little beyond the last named gate the wall mnst have joined the Capitoline hill, along which, as we Lave said, there was ne ether fortification but the precipitous nature of the gronnd, rendered here and there still more abrapt by escarpment. At the SW. extremity of the bill the wall innst have been resumed, and must undonbtedly have ran in a direct lime across the short space between the Capitoline hill and the Tiber. Between this spot and the Aventine the wall was discontioned; and this is the part alluded to by Dionysius (l.c.) as sufficiently deferded by the river. Tbe piece of wall just meatioued must have shut out the Fornm Olitorium and Circns Flaminius, since Asconus (ad Cic. Tog. Cand. p. 90, Urell.) mentions a temple of Apollo, which was situated between thase places, as being entside the Porta Caementasis. This gate lay just at the fout of the Capitol, and is ene of the mest certain entrances to the Servian city. It was named after a fane or altar of Carmenta, the mother of Evander, which stonl near it. This altar is mentioned by Diouysins (i. 32), and appears to have existed long after his time, since it was seen by A. Gellins (xviii. 7) and by Servius (ad Virg. Aen. viii. 337.) The street called Vicus Jugnrius ran from the Porta Carmeotalis round the base of the Capitaline to the Forum, as we learn from Livy's description ( xxvii .37 ) of the procession of the virgins to the temple of Juno Regina on the Aventine, when two white heifers were led from the temple of Apolle before mentioned through the Porta Carmentalis and Viens Jugarins to the forum. The exact site of the gate was probably a little to the NW. of the charch of S. Omobono.

The principal gates of Rome had commonly more than one thoroughtare. These archways, or passages, were called Fornices and Jani. Cicere's etymology of the latter word shows the meaning attached to it, tbough the etymology itself is absurd ("Ab eundo nemen est ductum: ex que transitienes perviae Jani, foresque in liminibus profanarnm nedium januae nominantur," Nat. Deor. ii. 27). We have already said that the right Janus of the Porta Carmeatalis, on going ont of the town, was regarded as ill-omened, and branded with the name of Porta Scelerata, from its having been that through which the Fatiii passed on their fatal expedition to the Cremera. (Liv. ii. 49.) So Ovid (Fast i. 201): 一
"Carmentis portae dextro via proxima Jano est: lre per hane noli, quisquis es, omen balet."
Festus (p. 285, Mäll.), Servins (Aen. viii. 337), and Orosius (ii. 5) bave completely misunderstood these passages in applying the epithet scelerata to the whole gate, as we have before remarked.

In the short piece of wall between the Capitoline hill and the Tiber there must lave been at least another gate besides the Carmentalis, namely the Poeta Flumentani. It is mentioned by Cicero (ad Att. sii. 3), and its situation near the river may be inferred not only from its name, but alse from passages in Livy, which mention it in connection with inundations (xxxv. 9, 21). Plutarch also (Otho, 4) records a great inundation which had caused mnch danage in the corn-market, at that time held in the Porticus Minuciat Frumentaria, near the Forum Olitorium (Not. Reg. ix.); bit the words of Panlus Daconus are incomprehensible, who says that a part
of the Tiber once actually flowed through this gate ("Flumentana Porta liomae appellata, quod Tiberis partem ea fluxisse affirmant," p. 89, Miill.) The site is further confirmed by a passage in Varro alluding te the populonsness of the suburb just outside the gate: "Nam quod extra urbem est acdificium, niluilo magis ideo est villa, quum eorum aedificia qui habitant extra port:un Flumentanam, aut in Acmilianis" (R.R. iii. 2). This neighbourhood had early beceme very thickly inhabited, as is evident from the many porticoes, theatres, temples and other bnildings, which are menticbed there (see Preller, Regionen, p. 156, seq.) But Livy's narrative of the trial of Manlins (vi. 20) is one of the most striking proofs of the situation of the P. Flamentam, though it is a stumbling-block to those who hold that the temple of Jupiter was on the SW. snmmit of the Capitoline hill. A spot near the place where the Circus Flaminius afterwards stood was at that time nsed for the assemblies of the Comitia Centuriata, by which Manlius was tried. From this place beth the Capitol and the Arx were visible; and Manlins had produced a great effect upon his judges by calling upon them to proaounce their verdict in the sight of those rery gods whose temple he bad preserted: "Ut Capitohum atque arcem intueates, ut ad deos immortales versi, de se judicarent." In order to deprive him of this appeal the tribuncs adjonrned the assembly to a spot just outside the Porta Flumentana, called "lucns P'oetclious," wheoce the Capitol could not be seen (" made conspectus in Capitolium non esset"). A glance at any map of Eome will show that this was the only spot in the Campns Martius where the temple, from its being hidden by the SW. summit, which we assume to have been the Arx, was concealed from view. The tributics would donttless have been glad to conceal the Arx also, had it been in their power; Lut an appeal to the Arx alone would lave lacked the effect of the religis which swayed so much with the superstitious Romans. They were no longer in the presence of those rescned deities in whose sight Manlins had invoked their judgment. There is no occasion therefore to try, with Becker, to alter Livy's rext, by reading Frumentaria for Fiumentana, or seck to place the scene of the trial at another spot. since the Comitia Centuriata were usnally asscmbled in the Campus.

The ancient topographers, as well as the modern Italians (Nibby, $1 / u r a$, y'. p. 132 ; Canina, Indicazione Topogrofica, pp. 34.632, ed. 1850), place another gate, the Pokra Triumihalis, between the Carmentalis and the Flumentana. That there was such a gate is certain, since it is frequently mentioned in classical authors, but unfortanately in such a manner that no decided inference can be drawn respecting its situation. Hence varions theories bave been advanced on the subject, which have led to warm controversies. The German school of topographers, though uot anited among themselves, have agreed in departing from the italian view, chiefly because it appears to them absurd to imagioe that there conld have been three gates in se short a piece of wall. If, however, as it will be shown to be probable, the l'orta Triumplalis was epened only on occasions of state, there really seems to be very little force in this objection. Bunsen and his followers allow that it formed a real entranco into the city, but strangely cnough nake it lead into the Circus Maximns; whilst Becker, on the other hand, holds that it was no gate at all properly
so called, but a mere triumphal arch situated in the Campus Martius. The theory of Bunsen necessarily rests on the assumption of a different line of wall from that laid down in the preceding account; and as another line is also adopted by Niebulir (Hist, i. p. 397 , Ethnogr. ii. p. 49), it will be necessary to examine this point lufore proceeding to the question of the gate. Niebubr and Bunsen are, however, far from coinciding. The line drawn by the former proceeds along the banks of the river; that drawn ly the latter runs from the Porta Carmentalis to the N, angle of the Cireus Maximns, and, adopting the NW. front of the circus, or what was called the Oppidum, as part of the line, proceeds onwards to the Aventine, thas shutting the greater part of the Forum Buariom out of the eity. Buth these theories, however, agree in so far as they assume an enceinte continue, or continued line of wall; and therefore, if this notion can be shown to be false, both tall to the ground. Now it can be proved on the very best evidence that there was no wadl in this part of the city, which was detended mplely by the Tiber. We have already adduced a passage from Dionysius in confirmation of this statement; and the same author in another passage repeats the same thing in so plain a manner that thrre can be no reasonable doubt of the fact :
 $u \bar{u} \sigma \alpha$ éк $\tau \bar{\omega} \nu \quad \pi \alpha \rho \grave{\alpha} \tau \grave{\nu} \nu \pi о \tau \alpha \mu \dot{\partial} \nu \mu \in \rho \bar{\omega} \nu$ (v. 23). But Dionysius does not stand alone. We have Livy also as a voucher for the same fact, who, in narrating the enterprise of Porsena against Rome, wbserves that the citizens regarded some parts of their city as secured by the wall, and otber parts by the Tiler:: "Alia nuris, alia Tiberi objecto videbantur tuta" (ii. 10). The sane fact appears, though not in so direct a manner, from the same author's account of the procession of the virgins from the temple of A pollo, outside the Carmental gate, to that of Juno Regina on the Aventine, to which we have before briefly alluded. The route is described as follows: "A porta (Carmentali) Jugario vico in forum venere. Inde vico Tusco Velabroque per Boarium forum in clivam Publicium atque aeden Junonis Reginae perrectum" (xxvii. 37 ). Now the small space allotted by Bunsen to the Forum Boarium must have been inside of the wall, since the temples of Fortune and Mater Matuta, which stond upin it (Liv. xxxiii. 27), were within the Porta Carmentalis (1d. xsv. 7). The procession, then, after passing through that forum, must lase gone out of the city at another gate,-Bunsen's Flumen-tan:t,-and hiave entered it again loy the Trigemina, botore it contd reach the Clivns Publicius. f.ects which are not mentioned by Liry in his very previse deacription of the route.

Having thus shown on the best evidence that no wall exi-ted at this pont, it would be a mere waste of time to refute arguments intented to show that it prosibly might have existed,-such as whether a wall with a gate would keep out an inondation, whether the Fraii went over the Sublician bridge, nod others of the lake surt, which would have puzzled an aucient harnspex. We will therefore procond to examine Becker's hypothesis, that the I'orta Trumplalis was, in fact, no pate at all, hut merely an arch in the Canpus Martius, a theory which is aboradopted, though with some little variation. by Preller (Regionen, p. 16 i2, and Aldane, p. 239).

Becker phaces thus areli at the sunt where the Camplas Martus joins the Rigen called Cirens

Flaminius, and takes it to be the same that was rebuilt by Domitian (of course he must mean rebuilt, though it is not very clearly expressed. De Muris, p. 92, Handl. p. 153). His conjecture is founded on the following lines in a poens of Martial's (viii. 65) in which he describes the erretion of this arch and of some other buildings near it: -
"Haec est digna tuis, Germanice, porta triumphis, Hos aditus urbem Martis Jabere decet."

Becker. however, is totally unable to prove that this asch and the temple of Fortuna Redux near it were even in the Campus Martius at all. Thus he says (Handb. p. 642): "It is not indeed expressly said that the Ara of Fortuna Redux was in the Campus Martius; lint it becomes probable from the circomstance that Domitian built here, and, as we have conjectured at p. 153, close to the Porta Triumphalis, a temple to the same goddess." The argurrent then procceds as follows: "We know from Martial that Domitian built a temple to Fortuna Redux where her altar formerly stood, and also a triumplisl arch near it. We do not kuow that this altar was in the Campus Martius; hut it is probable that it was, because Domitian built this temple close to it, and also close to the urch, which, as I conjectured, was the Porta Triumphalis !"

There is, however, another passage of Martial, either overlooked or ignored by Becker, which tends very strungly to show that this arch of Domitian's really was in the Campus Martius, but at quite a different spot from that so conveniently fixed upon by him. It is the following ( $x, 6$ ): -
" Felices quibins urna dedit spectare coruseum Solibus Arctois sideribusque ducern.
Quando erit ille dies quo Campus et arbor ct omnis
Lucebit Latia culta fenestra nurn? Quando morae dulces, longusque a Caesare pulvis,

## Totaque Flaminia Roma videnda via?"

There can be no doubt that these lines refer to the same triumphal entry of Domitian's ns those quoted by Becker; and they pretty plainly show, as Canima, without any viess to the present questinn, justly observes (Indicazione, fc. p. 437), that the arch and other monoments stood on the Via Flaminia, and therefore at a very considerable distance from the spot assigned to them by Becker.

This arch having broken down, Preller comes to the rescue, and places the Porta Triumphalis near the Villa Publica and temple of Bellona, close to the Via Lata. For this site he adduces several plausible arguments: near the temple of Belluma was the piece of ager hostilis, where the Fetiales went through the formalities of declaring war; as well as the Columna Belliea, whence a lance was thrown when the army was going to take the field; also a Senacnlum "citra acdem BelInnae," in which audience was given to foreif. anbassalors whom the senate did not choose to aulmit into the city. The Villa Publica also served for the reception of the latter, and probably also of In unan genembls before their trimph, and of all whe, being cum imperio, cuuld not cross the pomocrium, and therefore in the ordinary course toak up their abode there. After this ceased to exist, the Dinibitorium was used in its stead, in which Claudins passed xome rights, and in which probably Vies. [risian and litus slept before their triumph. This
spot therefore had the sigoificance of a kiad of ontpost of the city.
As this theory is evidently framed with a view to the triumph of Vespasian and Titus, and as the account of that triumph is also one of the main arguments adduced by Becker for his Porta Triumpbalis, it will be necessary to examine it. The narrative of Josephus runs as follows (Bell. Jud. vii. 5. § t, p. 1305, Huds.): "The emperor and his son Titus spent the night preceding their triumph in a public building in the Campus Martius, near the temple of Isis, where the army was assembled and marsballed. At break of day the emperors came forth and proceeded to the Porticus Octaviae (uear the theatre of Marcellus), where, according to ancieat custom, the senate were assembled to meet them. Vespasian, after offering the usual prayer, and delivering a short address, dismissed the troops to their breakfast, whilst he himself returned to the gate named after the triumphal processions that nsed to pass throngh it. Here the emperor breakfasted, and, kaving put on the triumphal dress, and sacrificed to the gods whose sbrines were at the gate, caused the pageant to proceed through the circi." Becker concludes from this narrative that the Porta Triumphalis mnst have been outside the town, in the Caunpus Martius, and near the public building where the emperor had slept. A further proof is, he contends, that the procession went through the circi, which must mean the Circus Flaminius and Circus Maximus; and that this was so may be shown from Plutarch (Aem. Paull. 32), who says that Paullus went through the Circi, and in another passage expressly relates (Lucull. 37) that Lucullus adorned the Circus Flatuinius with the arms, \&c. which he had takea, which it would be absurd to suppose he would have done unless the procession passed through that circus. Then comes the supposition we have already noticed, that the procession of Yespasian passed through the arch re-erected by his younger son Domitian some years after his father's death. After passing through the Circus Flarainius, Becker thinks that the procession went through the P. Carmentalis, and by the Vicus Jugarius to the forum, along the latter sub l'eteribus, and finally through the Vicus Tuscus, the Velabrum, and Forum Boarium, into the Circus Maximus, Having conducted the emperors thus far, Becker takes leave of them, and we remain completely in the dark as to the manner in which they got out of the circus and found their way back again to the forum and Capitol, the usual destination of triumphant generals.

Admitting that Becker has here giren a true interpretation of the text of Josephus, as it stands, we shall proceed to examioe the conclusious that have been drawn from it, beginning with those of Preller. That writer has very properly assumed (Regionen, p. 240) that if the triumphal arch did not actually cross the pomoerium it led at all events into a territory subject to the jurisdiction of the city, into which it was unlawful for a general cum imperio to pass without the permission of the senate. Had not this been so the whole business would have been a mere vain and idle ceremony. The account of Vespasian's triumph seems indeed a little repugnant to this riew, since he met the senate in the Porticus Octaviae, whicb on this supposition was considerably beyond the boundary, and which he had therefore crossed before be had obtained authority to do so. Still more repugnaut is Dion's account of the triumph of Tiberius,
who, we are told, assembled the senate at the same place precisely on the ground that it was outside of the pomoerium, and that consequently he did not violate their privileges by assembling then there

 instances occurred in the ituperial times, when it may be said with Becker (IIandb. p. 151, note) that the ceremony no longer had any meaning, we will go back for an example to the early ages of the Republic. First, bowever, we must demand the acknowledgmeat that the triumphal gate passed by Vespasian was the same, or at least stood on the same spot, as that which hal been in use from time immemorial. We canoot allow it to be shifted about like a castle on a chessboard, to suit the convenience of commentators; and we make this dernaod on the authority of Josephus himself in the very passage under discussion, who tells us that it took its name from the circumstance that the triumphal processions had always passed through it

 Livy, io bis account of the trimmph of the consuls Valerius and Horatins, relates that they assembled the senate in the Campus Martius to solicit that honour; but when the senators complained that they were overawed ly the presence of the military, the consuls called the senate away into the l'rata Flaminia, to the spot occupied in the time of the historian by the temple of A pollo. ("Consules ex composito endem biduo ad urbem accessere, senatumque in Martium Campum erocavere. Ubi quum de rebus a se gestis agerent, questi primores Patrum, senatum inter milites dedita opera terroris causa haberi. Itaque inde Consules, ne criminationi esset locum, in prata Flaminia, ubi nunc aedes Apollinis (jam tum Apollinare appellabant) avocavere senatum," iii. 63.) This temple was situated close to the Porticus Octavize (Becker, Mandb. p. 605), and therefore considerably nearer the city than the spot indicated either by Becker or Preller. The consuls therefore must have already passed beyond the Porta Triumphalis before they began to solicit the senate for leave to do so!

Becker, however, has been more careful, and has not extended the jurisdiction of the city beyoud the walls of Servius, at this part of the Campus, before the time of the emperor Clandius. But what resuits from his riew? That the whole affair of the Porta Triumphalis was uere farce, - that it led nowhere, - that the trimmplant geoeral, when be had passed through it by permission of the senate, was as much outside the city boundary as be was before. But that it afforded a real entrance into the town cleally appears from the passage in Cicero's oration against Piso (c. 23): "Cum ego Caelimontana porta introisse dixissem, sponsione ine, ni Esquilina introisset, homo promtissinna lacessivit. Quasi vero id aut ego scire debuerim, aut vestrum quispiam audierit, aut ad rem pertineat qua tu porta introieris, modo ne triumphali; quae porta Macedonicis semper proconsulibus ante te patuit." The Porta Triumplaalis being here pnt on a level with the Caelimontana and Esquilina, the natural conchusion is that, like them, it afforded an actual, though not cnstomary, entrance within the walls. We further learn from the preceding passage that this same Porta Trimphalis bad been open to every proconsul of Macedonia before Piso, inclading of course L. Aemilius Panllus, who triumpled over Persens B. c. 167
vol II.
(Liv, slv. 39), thus establishing the identity of the gate to at least that period.

But to return to Becker's explanation of the passage of Jusephos. Admitting 1'lutarch's account of the trumplas of Paullus and Lucullus, namely, that they passed through the Circus Flamiaius, yet what does this prove? low is it comeeted with the l'orta Triumphalis? Thase generals may have marshatled their processions in the Campus and passed through the Cirens Flaminius in their way to the Porta Triumphalis. The procession mould have been equally visible in the Circus as in the streets of Rome, just as the Lord Mayor's show may, or might, be seen at Westminster as well as in the city. It is passible iodeed that in the case of Yes. pasian there was no procession till he arrived at the gate; but it docs not necessarily follow that the same line was alwars precisely observed. In truth we may perceive a difference between the expressions of Jusephits and those of Plutarch. The former says that Vespasian went $\delta \iota \alpha$ t $\omega \nu$ స̇árpoov; whilst llutarch say:, of Paullus, that the people assembled
 of Lucullus, that he adomed tov 中גapivetov $i \pi \pi \dot{\sigma}$ $\delta \rho o \mu \circ \nu$. Here the circi are precisely designated as hippodromes; but Josephus uses the general term Nedrper, which may include theatres of all kinds. Now we will suggest a more probable route than that given by Becker, according to which the pageant must have crossed the forum twice. After coning out at the forther end of the circns, Vespusian turned dorsn to the left, between the l'alatine and Caelian, the modern Via do S. Gregorio. This would bring him out opposite his own magnificent amphitheatre, the Colnssenm, then in course of construction. Evea if it had not risen much above its foundations, still its ample area by means of sctuffoldings, would have acconmodated a vast number of spectators; and as to Vespasian personally, it would have innurted no small relish to his trimmph to pass through so magnificent a work of his own creation. Hence his road lay plain and direct over the Summa Sacra Via to the forum and Capitol.
Now, taking all these things into consideration, we will woture to suggest a very slight change in the text of Jusephus, a cliange not so great as some of those often proposed by Becker upon mnch smaller occasions, and which will release us from a great deal of perplexity. The alteration is that of au $\mathbf{N}$ into a $\Pi$, a very slight one in the uncial cliaracter; and, by realing àme $\chi$ ब́pes for àve $\lambda$ ópet, we would nake Vespasian depart from the Porticus Octavine towards the gate which had always been und for trimmphs, instead of retracing his steps towards une of which molody can give any account. Dut whatever may he thought of the individual case of Vispraian, still we bold it to be incontestable that the ancient louta Trimuphalis, against which the sule wbjection seens to be that it was near two other gatus, is to be suught in that part of the Servian wail between the P. Carmentalis and the Y. Flumanana. The oljecetion just alluded to wond inded have some forve, if we could assume, with Becker (Hauk. p. 1.54), that the Vorta Trimmphalis, just like an ordinary one, lay ahways open for e.mtuon traffic. But it is surpriving hom anybody could come to that concluwn after ratling the passages which Becker has hunself cited from Suctonius, Tacitns, and Dion Cawins, on that in Cicem's oration azainst Piso before guoted. The first of these anthors relates that alter the death of Augustus
the semate roted, or proposed to vete, that, as an extraordinary mark of honour, his funeral should pass through the trinmphal gate, preceded by the statue of Victory which stood in the curin: " Ut censperint quidam funıs triumphali porta ducendmı, praecedente Victoria, quae est in Curia" (Aug. 100; cf. Tac. Aun. i. 8); and Dion says (1vi. 42) that this was actually done, and the body burned in the Campas Martius. Now if the Porta Triumphadis had been an ordinary gate and common thoronglifare, what honour would there have been in passing through it? or how should the sjectator have discovered that any distinction had been conferred? Wherefore Preller (Kegionen, p. 240) has rightly come to the conclusion that it was usually kept shut.

Between the Capitoline and the Aventine, along the banks of the river, the wall, as we have sbown, was discontinued, but it was recommenced at the spot where the latter hill approaches the Tiber. This may be shown from the well-ascertained position of the Porta Trigemina, wbich, as we learn from a passage in Frontinus, lay just under the Clivus Publicius, at the northermost point of the hill ("incipit distribui Appia (aqua) imo Publicio Clivo ad Portam Trigeminam," Aq. 3); and the Clivus I'ublicius, as we know from a passage in Livy respectiog the procession of the virgins before alluded to, formed the ascent to the Arentine from the Forum Boarium ("inde vico Tusco Velabroque per Boarium formm in clivam Publicium atqne aedem Junonis Reginae perrectum," $x \times x i i .37$ ). There are some difficultics connected with the question of this gate, from its being mentioned in conjunction with the Pons Sublicius; bat there will be occasion to discuss tho situation of that bridge in a separate section ; and we shall only remark here that the natratives alluded to seem to show that it was at ne great distance from the gate. It is probable that the latter derived its name from its bnving three Jani or archways.

A little beyond the Porta Trigemina most topograplers have placed a Porta Navalis, which is mentioned only once, namely, by P. Diaconus in the following passage: "Naralis Porta a ricinia Naralinin dicta" (p. 179, Müll.), where we are told that it derived its name from the vicinity of the government dockyards. It has been assumed that these docks Jay to the S. of the Aventine, in tho plain where Monte Testaccio stands; but Becker has the merit of having shown, as will appear in its proper place, that they were in the Campus Martins. There was, however, a kind of emporium or merchant duck, between the Aventine and Tiber, and, as this must have occasioned considerable traffic, it is probable that there was a gate leading to it somewhere on the W: side of the hill, perhaps near the Priorato, where there seems to have been an ascent, but whether it was called Porta Navalis it is impossible to say. The writer of this article is informed by a gentleman well acquainted with the sutject, that traces of tho Servian wall have very recently been rliscovered at the NW. side of the Aveutine, below S. Sabina and S. Alessio.

The line of wall from this point to the Caelian lill cannot be déternined with any certainty. Round the Aventine itelf it donbtless followed the configmation of the hill; but its course from the S . point of the Aventine las beea varionsly laid down. 1) ence the question arises whether it included tho nameless beight on which the charches of $S$. Sabina
and S. Saba now stand. It seems probable that it must, at all events, bave included a considerable portion of it, since, bad it proceeded along the ralley, it would have beea commanded by the hill; and indeed the most nataral supposition is that it enclosed the whole, since the more extended line it would thus have described affords room fur the several gates which we find mentioned between the Porta Trigemina and the Porta Capeoa near the foot of the Cuelian.
Among these we must, perliaps, assmme a Porta Misecha or Mruvtis, which is twice mentioned by Paulus (pp. 122, 14i), and whose parme, he says, was derived from an ara or sacellum of Minucius, whom the Romans held to be a god. We hear nowhere else of such a Roman deity; hut we learn from Pliny (xviii. 4) that a certain tribune of the people, named Minutius Augurinus, bad a statue erected to him, by pubiic subsscription, beyond the Porta Trigemina, for having reduced the price of corn. This occurred at an early period, since the same story is narrated by Livy (iv. 13-16) B. c. 436 , with the additional information that it was Minutius who procured the condemnation of the great corn monopoliser, Maelins, aod that the statue allnded to was a gilt bull. It is possible therefore that the gate may bave been named after him; and that from the extraordinary honours paid to bim, he may hare come io process of time to be vulgarly mistaken for a deity. If there is any truth in this view, the gate may be placed somerwere on the S . side of the Aventine.
In the mutilated fragment which we possess of Varro's description of the Roman gates (L.L. v. § 163, Müll.) he closes it hy mentiooing three, which it is impossible to place anywhere except in the line of wall between the Aveotine and Caelian. He had been speaking of a p.ace inhabited by Ennius, who lived on the Aventine (Hieron. Chron. 134, vol. i. p. 369, Ronc.), and thea mentions coasecutively a Porta Naevia. Pozta Rauduscula, and Porta Laveramais. He must therefore he enumerating the gates in the order from W. to E., since it would be impossible to find roorn for three more gates, besides those already meationed, on the Arentine. The P. Nrevia, therefore, probabily lay in the valley between that hill and the adjoining beight to the E. It could not have been situated on the Aventine itself, since the Basis Capitolina, mentions in the 12th Regio, or Piscina Publica, a vicas Porta Naevia, as well as another of Porta Raudusculana. But the exact position of the hatter gate, as well as of the Porta Lavernalis, it is impossible to determine further than that they lay in the line of wall between the Areutine and Caelian.
After so much uncertainty it is refreshing to arrive at last at a gate whose site may be accurately fixed. The Porta Capesalay at the foot of the Caelina hill, at a short distance W. of the spot where the Via Latina diverged from the Via Appia. The latter road issued from the P. Capena, and the discovery of the first milestone upos it , in a vinegard a short distance outside of the moders Porta di S. S. bastiano, bas enabied the topographer accurately to determine its site to be at a spot now marked by a post with the letters P. c., 300 yards beyond the lia S. Gregorio, and 1480 within the modern gate. That it was seated in the valley, appears from the fuct that the Rivus Herculaneus, protahly a branch of the Aqna Marcia, passed over it ; which, we are expresaly told, lay too low to
supply the Cuelian bill. (Front. Aq. 18.) Hence Jurenal (iii. 11): -
"Substitit ad veteres arcus madidarque Capenam," where we leara from the Scholia that the gate, which in later times must have lain a good way within the town, was called "Arcus Stillans." So Martial (iii. 47): -

## "Capena grandi porta qua pluit gutta."

A little way beyond this gate, on the Via Appia, between its point of separation from the Via Lationa and the $P$.S. Sebustiano, there still exists one of the most iateresting of the Roman monuments - the tomb of the Si ipios, the site of which is marked by a sulitary cypress.
From the Porta Capena the wall must have ascended the Caelian hill, and skirted its southern side; but the exact line which it descriled in its progress towards the agger can only be conjectured. Becker (Handb. p. 167), following Piale and Bunsen, draws the line near the Ospedale di $S$. Giveunni, thus excludiug that part of the hill on which the Lateran is situated, although, as Canina observes (Indicazione, p. 36), this is the highe.t part of the hill. There was perbaps a gate at the bottun of the present Piazza di Naricella, but we do not know its name; and the nest gate renpecting which there *s any certainty is the Porta Caelmostasa. Bursen (Beschr. i. p. Є38) and Becker, in conformity with their line of wall, place it by the hospital of $S$. Gioranni, now approached by the Jian S. S. Quattro Coronati, the ancient strcet called Caput Atricae. The Porta Querquetulana, if it was really a distinct gate and not another name for the Caelimontana, must have stood a little to the N . of the latter, near the cburch of S.S. Pietro e Marcellino, in the valley which separates the Caelian from the Esquiline. This gate, which was also called Querquetularia, is several times meationed, but nithut any more exact definition. (Plin. xvi. 15; Festus, p. 261.) The Caelias hill itself, as we have before remarked, was anciently called Querquetulanus. From this point the will must lave run Dortbwards in a tolerably direct line till it joined the southern extremity of the agger, where the Ponta Esectinisa was situated, between which and the Querquetulana there does nut appear to have been any other gate. The Esquilioa, like the others on the agger, is aurong the most certain of the Roman gates. We learn from Strabo (r.p.237) that the Via Labicana proceeded from it; whilst at a little distance the Praenestina branched off from the Labicana. It must therefore have lain near the church of $S$. Jito and the still existing arch of Gallienus; but its exact site is connected with the question respecting the gates in the Aurelian wall which corresponded with it, and cannot therefore at present be determined. The site of the Porta Collasa, the pwint from which we started, is determined by the fact mentioned by Strabo (Ib. p 228) that both the Tis Silaria and Via Nomentana startel from it; and it must consequently have stood near the northern curner of the baths of Diocletian at the conmencement of the present lia del Macao. We learn from Paulus Diaconus (p. 10) that this gate was also called Agonensis and Quirinalis. Agoms, us we have said, was the ancient name of the Quiribal bill.

The Porta Collina, then, and the Porta Esquilina were scated at the northicrn and southern externities
of the suger. But besides these, Strabo (IV. p. 234) mentions another lying between them, the P'oera Vimasalas; which is also recorded by Pestus (p.376) and by Fromtiaus (Aq. 19). It must have lain behind the SE. aggle of the hatbs of Diocletian, where sun ancient road leads to the rampast, which, if prolamed, wonld rum to the Ponta Crausa of the walls of Aurelian, just under the southern side of the Cistra Praetoria. It is clear from the words of

 $\lambda \dot{\phi} \phi()$, that there were only three gates in the agger, though some topographers have contrived to find roum for two or three more in this short space, the whole length of the agger being but 6 or 7 stadia (Strab. l. c.; Dionys. ix. 68), or about $\frac{3}{4}$ of a mile. lts breudth was 50 feet, and below it lay a ditch 100 feet hroad and 30 feet deep. Remains of this immense work are still visible near the haths of Diccletian and in the grounds of the lilla Negroni, especially at the spot where the statue of Romia now stands.

Surrey under Tespasian and Circumference of the City.-In the preceding account of the gates in the Sentian wall we have enumerated twenty, ineluding the l'orta Triumphalis. Some topographers have alupted a still greater nuniber. When we consider that there were ooly nine or ten main roads leading out of ancient Tome, and that seven of these issued from the three gates Capena, Esquilina, and Collina alune, it follows that five or sis gates mould have sufticed for the main entrances, and that the remainder must have been unimportant ones, destined orly to affurd the means of convenient communication witi the surrounding country. Of those enumerated onty the Collina, Viminalis, Esquilina, Caelimontana, Caprna, Tricemina, Carmentalis, and Ratmmena seem to have been of any great importance. Nevertheless it appears from a passage in Pliny (iii. 9) that in his time there must bave heen a great number of snaller ones, the origin and use of which we shall endearour to account for presently. As tho passage, though unfortunately somewhat obscure, is of considerable importance in Roman topography, we shall here quote it at length: "Urbern tres portas babuntem Romulus reliquit, aut (ut plurimas tradentibus credamus) quatuus. Nuenia ejus collegere anbitu Inperatorihns Censoribusque Vespasianis num conditae decexxym. pass, xum.ec. Cumpleas montes septem, ipsa dividitur in reciones qnathordecim, compita Larium celix: Rjusdem spatimu, mensura currente a milliario in capite limani fori statuto, ad singulas purtas, quase sunt hodie nuncro triginta septem, ita ut duodecim smin) monerentur, praetereanturque ex veteribus "phom, there mese disiernant, efficit passunm per dnewtm xגxatoctaxy. Ad extrema vero tec(whan cum castris l'ractorio ab endem milliario per vicow muniun siarum measura colligit paulo amplins apptuaguta millia passum." Now there seems to be nu rewas for duubting the correctness of this accomet. 1 liny conld have had no reason for exarggeration, aminst which, in the accoment of the Ro. vultur cates, he carcfully guards limself. Ag in, lu- vems to bave taken the substance of it from the othit ail report of a rectular survey made in his own time and in the reign of Viaposian. The only room for suppicion therefue serms to be that his text may have been corrupted, and that instead of thirty-seven the the mumer of the gatio wo thould insert some swaller one. But an examination of his figures docs
not tend to show that they are incorrect. The survey seems to have been made with a view to the three following objects: $\mathbf{1}$. To ascertain the actaal cireamference of the city, including sll the suburbs which had spreal beyond the walls of Servius. It is well known that mienia signifies the buildings of a city as well as the walls (" muro mocnia amplexus est," Flor. i. 4, \&.c.), and therefure this phrase, which has sometimes cansed embarrassment, veed not detain us. Now the result of this first measurement gave 13,200 passus, or $13 \frac{1}{5}$ Roman miles-a number to which there is nothing to object, as it very well agrees with the circminference of the subsequent Aurelian walls. 2. The second olject seems to have been to ascertain the actnal nomsure of the line of street within the old Servian walls. The utility of this proceeding we do nut immediately recognise. It may have been adopted out of mere curiosity ; or more probably it may have been conneeted with questions respecting certain privileges, or certain taxes, which varied according as a house mas situated within or without the walls. Now the sum of the measurements of all these streets, when put together as if they bad formed a straight line ("per directum"), amounted to 30,765 passus, or 30 Roman miles and ahout ${ }^{3}$. Such we take to be the meuning of "per directum;" though some critics hold it to mean that the distance from the milliariam to these gates was measured in a straight line, as the crow flies, without taking into the calculation the windings of the strects, But in that case it would surely have been put earlier in the seatence -"mensura currente per directum ad siagulas portas." This, however, would have been of little consequence except for the distinction drassu by Becker (Handl. p. 18.5, note 279), who thinks that the measurement proceeds on two different principles, naunely per directum, or as the crow flies, from the milliarium to the Servian gates, andi, on the contrary, by all the windings of the streets from the same spot to the fuithest baildings outside the walls. Such a method, as he obserres, would afford no true ground of comparison, and therefore we can hardly think that it was adopted, or that such was Pliny's meaning. Becker was led to this conclasion because he thought that "per vicos omnium viarum" stands contrasted with "per directum;" but this contrast dues not scem necessarily to follow. By cinc here Pliny seems to mean all the roads leadiog out of the thirty-seven gates; and hy " ad extremit tectorum per vicos omnium viarum" is signified merely that the measure was further extended to the end of the strects which lined the commencements of these roads. Such appears to ns to be the meaning of this certainly somerthat obscure pasage. Pliny's account may be checked, roughly indeed, but still with a sufficient approach to accuracy to guarantee the correctness of his text. If a circumferenee of 13] iniles yielded 70 miles of street, and if there were 30 miles of street within the Servian walls, then the circumference of the latter would be to the former as 3 to 7 , and would measure rather more than 5. miles. Nuw this agrees pretty well with the accounts which we have of the size of the Servian city. Becker, fullowing the account of Thneydides (ii. 13), but without allowing for that part of the walls of Ahens described as mopuarded, with the wholo circuit of which walls Dionysins (iv. 13, and ix. 68) courpures those of ancient Pome, sets the latlatter duwn at 43 stadia, or 5 ? miles. On Nol is

surement eqnal to 10,230 English yards (Burgess, Tupegraphy aud Antiquities of Rome, vol. i. p. 4.58), which agrees as nearly as possible with the number above giren of $5 \frac{3}{3}$ miles. Nibby, who made a laborious but perhaps not very accurate attempt to ascertain the point by walking round the presumed line of the ancient walls, arrived at a considerably larger resnlt, or nearly 8 miles. (Mura, gc. p. 90. )

False and doubtful Gates. - But our present business is with the gates of the Servinu town; and it would really appear that in the time of Vespasian there were no fewer than thirty-seven outlets from the ancient walls. The seven old gates to which Pliny alludes as having ceased to exist, may possibly have included those of the old IWmulean city and also some in the Servian walls, which had been closed. In order to account for the large number recorded by Pliny, we must figure to ourselves what wonld be the natural progress of a city surronnded with a strong wall like that of Servius, whose population was beginning to outgrow the accommodation afforded within it. At first perhaps bouses would be built at the sides of the roads issuing from the main gates; but, as at Rome these sites were often appropriated for sepulchres, the accommodation thans afforded would be limited. In process of time, the use of the wall becoming every day more obsolete, fresh gates would be pierced, corresponding with the line of streets inside, which would be continued by a line of road outside, on which houses would be erected. Gradually the walls themselves began to disappear; but the opetings that liad been pierced were still recorded, as marking, for fiscal or other purposes, the boundary of the city wards. Hence, though Augustus had divided the city and subarbs into fourteen new Regions, we find the ancient boundary marked by these gates still recorded and measured in the time of Vespasian ; and indeed it seems to have been kept up for a long while afterwards, since we find the s.me number of thirty-seren gates recorded both in the Notitia and Curiosum.
Hence we would not tamper with the text of Pliny, as Nilby has done with very unfortunate buccess ( $1 / \mathrm{wra}$, of. p. 213, seq) - a remedy that should never be reserted to except in cases of the last necessity. Pliny's statement may be regarded as wholly without influence with respect to the original Servian gates, the number of which we should rather be inclined to reduce than to increase. We find, indeed, more names mentioned than those ennmerated, but some of them were ancient or cbsolete names; and, again, we must remember that "porta" does not always signify a city gate. Of the former kind was the Pobta Agonensis, which, as we learn from l'aulus Diaconus (p. 10), was another appellation for the Porta Collina. The same author (p.255) also mentions a Porta Qumaxinls as a substantive gate; though possibly, like Agonensis, it was only a duplicate name for one of the gates on the Quirinal. The term "porta" was applied to any arched thoroughfare, and sometimes perhaps to the arch of an aqueduct when it spanned a street in the line of wall ; in which case it was built in a superior masner, and had usually at inscription. Among interual thorouglifares called "portae" were the Stercorabia ou the Clivus Capitolinus, the Limitixfesis in the amphitheatre, the Fenestella, mentioned by Ovid (Fast. vi. 569) as that by which Fortuma visited Numa, \&cc. The last of these formed
the entrance to Numa's regia, as we learn from Plutarch (de Fort. Rom. 10). Among the arches of aqueducts to which the name of gate was applied, may perhaps be raoked that alluded to by Martial (iv. 18):-
"Qua vicina pluit Vipsanis porta columnis," \&c.
Respecting the gates called Fenestiva and Pisce. Laris we have before offered a conjecture. [Sce p. 728.] The Porta Matia rests solely on a fahe reading of Plautus. (Cos, ii. 6. 2, Pseud. i. 3. 97.) On the other hand, a Porta Catularla seems to have really existed, which is mentioned by Paulus 1 taconus (p. 45; cf. Fcstus, p. 285) in coanection with certaio sacrifices of red-coloured dogs. This must be the sacrifice alluded to by Ovid (Fast. iv. 905), in which the entrails of a dog were offered by the flamen in the Lucus Robiginis. It is also mentioned in the Fasti Praenestini, vii. Kal. Mai, which date agrees with Ovid's: "Feriae Robigo Via Claudia, ad miliarium v., ne robigo frumentis noceat." But this is at variance first, with Cvid, who was returning to Rome by the Via Nomentana, not the Via Claudia, and, secondly, with itself. since the Via Clandia did not branch oft from the Via Flaminia till the loth milestone, and, consequently, no sacrifice could be performed on it at a distance of 5 miles from Rome. However this discrepancy is to be reconciled, it can hardly be supposed that one of the Roman gates derived its name from a trifling rustic sacrifice; unless, indeed, it was a duplicate one, used chiefly with reference to sacerdotal customs, as seens to have been sometimes the case, and in the present instance to denote the gate leading to the spot where the annual rite was performed. Paulus Diacunus also mentions ( p . 37) a Porta Collatina, which he affirms to have been so called after the city of Collatin, near Rome. But when we reflect that both the Via Tiburtina and the Via Praenestina issued from the P'orta Fsquilina, and that a road to Collatia must have ruu betreen them, the impossibility of a suhstantive Porta Collatina is at once apparent. The Dconecim Portae are placed by Bunsen (Beschr. i. p. 633) in the wall of the Circus Maximus; but as it appears from Pliny ( $l$. c.) that they stood on the ancient line of wall, and as we have shown that this did not make part of the wall of the circus, this could not have been their situation. We do not see the force of Piale's celebrated discovery that the Duodecim Portae must have been a place at Liome, because Julius Obsequens says that a mule brought forth there; which it might very well have done at one of the gates. Becker's opinion (IIandh. p. 180) that it was an arch, or arches, of the Aqua Appia seems as unfounded as that of Bunsen (vide Preller, Regionen, p. 193). It is mentionsed by the Notitia in the 11tb liegio, and therefore probably stood somewhere near the Aventine ; but its exact site cannot be determined. It seems probable, as Preller remarks, that it may have derived its name from heing a cormplex of twelve arched thorougbfares like the 'Evvéánvioy of the Pelasgicon at Athens.

Transtiberine Wall. - Ancns Marcius, as we have related, fortified the Janicelum, or hill on the right bank of the Tiher commanding the city. Some have conclnded from Lisy (i. 33: "Janiculum qnoque adjectnm, non inopia locorum, sed ne quando ea arx hostium esset. Id non muro solum, sed etian ob commoditatens itineris ponto Sublicio tum primum in Tiberi facto conjuagi urli

3 c 3
placuit "), that a wall was built from the fortress on the top of the hill down to the river, but the construction of conjungi in this passage may be a zeugna. It seems strange that Ancns should have built a wall on the right bank of the Tiber when there was tet none on the left batik; and it is romarkable that Dinnysius (iii, 45), in deseribing the furtification of the Janicolam, makes 110 mention of a wall, nor do we hear of ally gates on this side except that of the fortress itself. The existence of a wall, moreoser, seems harily consistent with the acconnts which we have already given from the same author of the defenceless state of the city on that side. Niehuhr (Ilist. i. p. 396) rejected the notion of a wall, as utterly erroneous, bat unfortunately neglected to give the proofs by which he had arrived at this conclasion. The passage from Appian (K入aisiov 8'

 $\pi \dot{i} \lambda \eta s, B . C$. i. 6s) which Beeker (p. 182, note) scoms to regard as decisive proves little or nothing for the earlier periods of the city ; and, even had there been a wall, the passing it would not have afforded an entrance into the city, properly so called.

## 11. Walls and Gates of Aurelian and Honorics.

1n the repairs of the wall by Honorius all the gates of Aurelian vanished; lhence it is impussible to say with confidence that any part of Aurelian's wall remains: and we must consider it as represented by that of Honorius. Proenpins (B. G. iii. 24) asserts that Totila destroyed all the gates; hat this is disproved by the inscriptions still existing over the Porta S. Lorenza, as wehl as over the closed arch of the P'orta Maggiore; and till the time of Pope Urban V111, the same inscription might be read over the Ostiensis (P. S. Paolo) and the ancient Portuensis. It can hardly be imagined that these inseriptions should have been preserved orer restored gates. The only notice respecting any of the gates of Aorelian on which we can coufidently rely is the account given by Ammianus Marcellinus (xvii. 4. § 14) of the carrying of the Vegptian obelisk, which Constantins H.erected in the Cureas Masimus, through the Porma Ostiensis. It may be assumed, however, that their situation was not altered in the new works of Honorius. By far the greater part of these gates exist at the present day, though some of them are now walled ap, and in most cases the ancient name has been changed fir a modern one. Hence the problem is not so much to discover the sites of the ancient gates as the ancient names of those still existing; and these d.) nut admit of much doubt, with the exception of the g.tes on the eastern side of the city.

Procopius, the principal authority respecting the gates in thic Aurelian (or Honorian) wall, enumerates 14 pincipal ones, or múdat, and mentions some amallim phes by the name of nuriocs (B. $G$. i. 19). The distinction, however, between these two appellations is not very clear. To judge from their present appearance, it was not determinel by the size of the gates: and we find the linciana indifferently called $\pi \nu \lambda$ is and nú $\lambda \eta$. (Urliehs, Class. Mus. val. ini. p. 196.) The conjocture ol Nibby (S/ura, (fe. p. 31\%) may perhaps be correct, that the múnat were probably those which led to the great highways. The unknown writer called the Anonymus Eimsiedlensis, who flourshed nbout the beginuing of
the ninth century, ulso mentions 14 gates, and includes the Pinciana among them; but his account is not elear.

Unlike Servins, Aurelian did not consider the Tiber a sufficient protection; and his walls were extended along its banks from places opposite to the spots where the walls which he built from the Janiculom began on the further shone. The wall which skirted the Campus Dlartins is considered to lanve commenced not far from the Paluzzo Farnese, from remains of valls on the right bank, supposed to have belonged to those of the Javicalum; but all traces of walls on the left bank have vanished beneatb the buildings of the new town. It mould appear that the wails on the right and left banks were connected by means of a bridge on the site of the preseat Ponte Sisto - which thus contributed to form part of the defences; since the arches being secured by means of clains drawn before them, or by ether contrivances, would prevent an enemy from passing through them in boats into the interior of the city: and it is in this manner that Procopins describes Belisarins as warding off the attacks of the Goths (B. G. i. 19).

Fron this point, along the whole extent of the Campns Martias, and as far as the Porta Flaminia, the walls appear, with the exception of some small posterns mentioned by the Anenymous of Einsiedlen to have had only me gate, which is repeatedly mentioned by Procopins under the name of Porti Aureha (B.f. i. c. 19, 22, 28); thongh he seems to bave been acyuainted with its later name of Porta Sti Petri, by which it is called by the Anonymous (Il. iii. 36). It stond on the left bank, opposite to the entrance of the Pons Aelius (Ponte di S. Angelo), lealing to the inausoleam of Hadrian. The name of Aurelia is found only in Procopius, and is somewhat puzzling, since there was another pate of the same name in the Janiculum, spmnning the Via Aurelia, which, however, is called by Procopius (Ib. i. 18) by its modern name of Pancratiana; whilst on the other hand the Anonymous appears strangely enongh to know it only by its ancient appellation of Aareiia. The gate by the bridge, of which no trace now remains, may pussibly have derived its name from a Sova Via Aurelia (Grater, Inscr. ececlvii. 6), which passed through it; bat there is a sort of mystery langing over it which it is not easy to clear up. (Berker, \#andb. p. 196, and note.)

The next gate, proceeding northwards, was the Porta Flaminia, which stood a little to the east of the present Iorta del I'opolo, erected by Pope Pius IV. in 1561. The ancient gate probably stood on the declivity of the Pincian ( ${ }^{2 \nu} \chi \dot{\omega} \rho \varphi, \kappa \rho \eta \mu \nu \omega \bar{\omega} \in t$, Procop. B. G. i. 23), as the Goths did not attack it from its being difficult of access. Yet Anastasins ( 1 it. Gregor. 1I.) describes it as exposed to inundations of the Tiber; whence Nibby (Mura, Sc. p. 304) conjectures that its site was altered between the time of Procopins and Anastasins, that is, hetween the sixth and ninth centuries. Nay, in a great inundation which happened towards the end of the eighth century, in the pootificate of Adrian 1., the gate was carried away by the flood, which bore it as far as the arch of M. Aurelins, then called Tres Faccicellae, and situated in the Vin Flaminia, where the street called della J'ite nuw rans into the Corso. (Ib). The gate appears to have retained its anciont name of Flaminia as late as the 15 th century, as appears from a life of Martin V. is Muratori (Script, Rer, Ital, t. iii. pt. ii. col.
864). When it obtained its present name cannot be determined; its ancient one was andoubtedly derived from the Via Flaminia, which it spanned. In the time of Procopins, and indeed long before, the wall to the east had bent outwards from the effects of the pressure of the Pincian hill, whence it was called murus fractus or inclinatus, just as it is now called muro torto. (Procop. B. G. .i. 23.)
The nest gate, proceeding always to the right, was the Ponta Pisclasa, before mentioned, which was already walled up in the time of the Anonymous of Einsiedlen. It of course derived its name from the bill on which it stood. Belisarius bad a house near this gate (Anastas. Silverio, pp. 104. 106); and either from this circumstance, or from the exploits pefformed befre it by Belisarius, it is supposed to bave been also called Belisaria, a name which actually occurs in one or two passages of Procopius (B. G. i. 18, 22; cf. Nibby, B/ura, fc. p. 248). But the Salaria seems to have a better claim to this second appellation as the gate which Belisarius himself defended; though it is more probable that there was no such name at all, and tiat Bensfapla in the passages cited is only a corruption of Zarapia. (Becker, de Mouris, p. 115; Úrlichs in Class. Jous. vol., iii. p. 196.)

Respecting the two gates lying between the Porta Pinciana and the Praetorias camp there can be no doubt, as they stood over, and derived their names from, the Via Salaria and Via Nomentana. In earlier tinies both these roads issued from the Porta Collina of the Serrian wall; but their divergence of course rendered two gates necessary in a wall drawn with a longer radius. The Porta Salarla still subsists with the same name, althongh it bas undergone a restoration. Pius IV. destroyed the Porta NomesTaxa, and built in its stead the present Porta Pia. The inscription on the latter testities the destruction of the ancient gate, the place of which is marked with a tablet bearing the date of 1564 . A little to the SE. of this gate are the walls of the Castra Pratetis, projecting considerably beyond the rest of the line, as Aurelian included the camp in bis fortification. The Ponta Decrmana, thongh walled up, is still risible, as well as the Prixctrales on the sides.
The gates on the eastern tract of the Adrelian wnlls have occasioried considerable perplexity. On this side of the city fuar roads are mentioned, the Tiburtina, Collatina, Praenestina, and Labicana, and two gates, the Poita Thbertisa and Praesestina. Bot beides these gates, which are commonly thought to correspond with the modern ones of $S$. Lorenzo and Porta Maggiore, there is a gate close to the Praetorian camp, about the size of the Pinciana, and resenbling the Honorian gates in its architecture, which has been walled np from time immemorial, and is bence called Porta Clatsa, or Porta Chiusa. The difficulty lies in determining which were the ancient Tiburtina and Praenestina. The whole question has been so lucidly stated by Mr. Bunhury that we cannot do better than borrow bis words: "It has been generally assumed that the tro gates known in modern times as the Portu S. Lorenzo and the Porta Maggiore are the same as were originally called respectively the Porta Tiburtina and Praenestina, and that the roads bearing the same sppellations led from them directly to the important towns from which they derived their nanie. It is adnitted on all hands that they appear under these
names in the Anonymus; and a comparison of two passages of Procopins (B. G. i. 19, 1b, p. 96) would appear to lead as to the same renilt. Io the former of these Procopios speaks of the part of the city attacked by the Goths as comprising five gates (múlai), and extendiog from the Flaminan to the Praenestine. That he did not reckon the Pinciana as one of these seems probable, from the care with which, in the second passage referred to, he distinguishes it as a audis, or minor gate. Suf pasing the closed gate near the Praetorian camp to lare beeo omitted for the same reason, we have just the five required, riz, Flaminia, Salaria, Nomentana, Tiburtina (Porla S. Lorenzo), and Praenestina (Maggiore). On this suppasition buth these ancient ways (the Tibortina and Praenestina) must have issued originally from the Esquiline gate of the Servian walls. Now we know positively from Straho that the Xia Praenestina did so, as did also a third road, the Via Labicana, which led to the town of that name, and afterwards sejuined the Yia Latina at the station called Ad Pictas (v. p. 237). Strabo, on the other land, does not mention from what gate the road to Tibur issued in his time. Niebultr lias therefore followed Fabretti and Piale in assuming that the lat.er originally proceeded from the Porta Timinalis, which, as we bave seen, stood in the middle of the agger of Servius, and that it passed throngh the walls of Aurelian by means of a gate now blocked up, but still extant, just at the angle where thove walls join on to the Castra Praetoria.
Assaming this to bave been the original Tiburtin, Niebuhr (followed by M1M. Bunsen and Trrichs) corsiders the Porta S. Lorenzo to have been the Praenestina, and the Porta .Noggiore to have been the Labicana: but that when the gate adjoining the Praetorian camp was blocked up, the road to Tivoli was transferred to the Porta $S$. Lorenco, and that to Praeneste to the gate next in order, which thus acquired the name of Praeuestina instead of its former one of Laticana (Beschreibung, i. p. 657, seq). To this soggestion there appear to be two principal objections brought formard by M. Becker, neither of which M. Urlichs laas answered: the first, that, supposing the Via Tivurtina to have been so transferred, which taken alone might be probable enough, there is no appareot reason why the Tis Praene-tina should have been also shifted, instead of the two thenceforth issuing together from the same gate, and diverging immediately afterwards; and secondly, that there is no authority for the existence of such a gate called the Labicana at all. The passage of Strabo, already cited, concerning the l'ia Labicana, certainly seems to imply that that road in his time separated from the Praenestina immediately after leaviog the Esquiiine gate; but there is no improbability in the suggestion of M. Becker, that its conrse was altered at the time of the construction of the new walls, whether ander Aurelian or Hodorius, in order to avoid an nonecessary increase of the aumber of gates. Many such changes in the direction of the principal roads may have taken place at that time, of which we have no account. and on which it is impossible to speculate. Westpbal, in his Römische Campagne (p. 78), has adopted nearly the same riew of the case: but he considers the Via Labicans to have originally had a gate assigued to it, which was afterwards walled up, and the road carried out of the same pate with the Via Praenestina. The only real difficulty in the ordinary view of the subject, supported by M. Becker, appears to

3 c 4

## ROMA.

be that, if the Tia Tiburtima always issued from the Portu S. Lorenso, we have no road to assign to the now closed gate adjuining the Practorian camp, nor yet to the Porta Viminalis of the Servian walls, a circumstance certainly remarkable, as it seems unlikely that such an opening should have been made in the agger without absolute necescity. On the other hand, the absence of all mention of that gate prior to the time of Strabo wothl lead one to suspect that it was not one of the principal outlets of the city; and a passage from Ovid, quoted by M1. Becker, certainly affurds some presumption that the road fron Tibur, in ascient times, actually entered the city by the Porta Esquilina (Fast. v. 684). This is, in fact, the most importaat, perhaps the only important, point of the question; for if the change in the ntmes had already taken place as early as the time of Procopios, which Niebulor hinself scems disposed to acknowledge, it is Lardly worth while to inquire whether the gates had borne the same appellations during the short interval from Honerius to Justinian " (Class. Mus. vol. iii. p. 369, seq.).

The Purta Tiburtina (S. Lorenzo) is built near an arch of the Aquae Marcin, Tepula, aod Jolia, which here flom over one another in three different canals. The arch of the gate corresponds with that of the aqueduct, but the latter is encuubered with rubbish, and therefore appears very low, whilst the gate is built on the rubtish itself. As the inscription on it appeared on several of the other gates, we shall here insert it : S.P.Q.R. Impp. DD. NV. innictissimis principitus Arcadio et Ilonorio victoribus et triumphatoribus semper Augh. ob instauratos urbis aeternue muros portas ac turres egestis inmensis ruderilhus ex suggestione 1.C. et inlustris comitis et matyistri utriusque mititue $F l$. Stitichonis ad perpetuitatem nominis eorum simulacra constitwit curante FI. Macrobio Longiniano I.C Pracf. Lrbi D. N. M. (2. eorum. in like manner the magnificent donthle arch of the Aqua Claudia and Anio Novus, which flow over it, was converted into the Porta Praenestina (Afaggiore). The right arch, from the city side, is walled up, and crncealed on the outside by the Honorian wall. Just beyond the gate is the curious tomb of -Eurysaces, the baker, sculptured with the instru-

TOMU OF EDEIVACES
ments of his trade, which was brouglit to light in 1838 , by the pulliog down of a iower which had been boilt over it in the middle ages. Over the closed Honorian arch was the same inscription as over the Porta Tiburtina. On the aqueduct are thrce ioscriptions, which name Claudius as its builder, and Vespasian and Titus as its restorers. The gate had several names in the middle ages.

Heoce the wall follows for some distance the line of the Aqua Claudia, till it reaches its easterbmost point; when, turning to the S. and W., nnd embracing the curve of what is commonly called the Amphitheatrum Castrense, it reaches the ancient Ponta Asinaria, now replaced by the Porta di $S$. Giovanni, built a Iittle to the E. of it in $15: 4$, by Pope Gregory XIII. It derived its name from spanning the Via Asinaria (Festus, p. 282, Miill.), and is frequently mentioned by Procopius. ( $B . \mathrm{G}_{\text {. }}$ i. 14, iii. 20, \&c.) In the middle ages it was called Lateranensis from the neighbouring palace of the Lateran.

After this gate we find another mentioned, which has entirely vanished. The earliest nutice of it appears in an epistle of Grezory the (ireat (ix. 69), by whom it, is called Ports Metrosis; whilst by Martinus Polonus it is styled Porta Metroni or Metronii, and by the Anonymous, Metrosin. (Nibby, Mura, fc. p. 365.) It was probably nt or sear the point where the Marruna (Aqna Crabra) now flows into the town. (Nibby, l.c.; Piale, Porte Merid. p. 11.)

The two nest gates were the Ponta Latina and Pox:ta APPIL, standing over the roads of those nanes, which, as we have before said, diverged from one another at a little distance outside the Porta Capena, for which, therefore, these gates were sulustitutes. The Porta Latina is now walled up, and the road to Tusculum (Frascati) leads ont of the Porta S. Giovanni The Porta Appia, which still retained its name during the middle ages, but is now called Porta di S. Sebastiano, from the church situated outside of it, is one of the most considerable of the gates, from the beight of its towers, though the arch is not of fine proportions. Nibby considers it to be posterior to the Guthic War, and of Byzantine architecture, from the Greek inscriptions and the Greek cross on the key-stone of the arch. (Jura, कُc. p. 370.) A little within it stands the socalled arch of Drusus.

A Little farther in the line of wall to the W. stands an arcbed gate of brick, ormamented with half columns, and having a heavy architrave. The Via Ardeatinia (Fest. p. 282, Miill.) proceeded through it, which issued from the Porta Raudusculana of the Servian walls. (Nibby, p. 201, seq.) We do not find this gate named in any author, and it was probably walled up at a very early period. The last gate on this side is the Ponta Osmesnsts, now eatled Porta di S, Paolo, from the celebrated basilica about a mile outside of it, now in course of reconstruction in the most splendid manner. The ancient name is metitioned by Ammianus Marcellinus (xvii. 4), but that of S. Pauli appears as early as the sisth century. (Procop. B. G. iii. 36.) It had two arches, of which the second, though walled up, is still visible from the side of the town, though hidden from withunt by a tower buiit before it. Close to it is the pyramid, or tomb, of Cestins, one of the few menuments of the Tiepublic. It is built into the wall. From this poiot the walls ran to the river, inclosing Monte Testaccio, and then northwards along its
banks, till they reached the point opposite to the walls of the Janiculum. Of this last portion only a few fragments are now visible.

On the other side of the Tiher only a fesw traces of the ancient wall remain, which estended lower down the stream than the modern one. Not f.ir from the river lay the Porta Portuensis, which Urban VIII. destroyed in order to build the present Porta Portese. This gate, like the Ostiensis and Praenestina, had two arches, aod the same inscription as that over the Tilurtina. From this point the wall proceeded to the height of the Janiculam, where stood the Porta Aurelia, so named after the Via Aurelia (vetus) which issued from it. We have already mentioned that its modern name (Porta di S. Pancrazio) was in use as early as the time of Procopias ; yet the ancient one is found in the Anonymons of Einsiedlen, and even in the Liber de Mirabitibus. The walls then again descended in a NE. direction to the river, to the point opposite to that whence we commenced this description, or between the Farnese Palace and Ponte Sisto. It is singular that we do not find any gate mentioued in this portion of wall, and we can hardly conceive that there should have been no exit towards the Vatican. Yet neither Procopius (B. G. i. 19, 23) nor the writers of the middle ages recognise any. We find, indeed, a Transtiberine gate mentioned by Spartianus (Sever: 19) as built by Septimius Severus, and named after him (Septimiana) ; but it is plain that this could not have been, originally at least, a eity gate, as there were no walls at this part in the time of Severas. Becker conjectures (de Muris, p. 129, IIandb. p. 214) that it was an archway belonging to some building erected by Severus, and that it was subsequently huilt into the wall by Aurelius or Honorius ; of the probability of which conjecture, seeing that it is never once mentioned by any author, the reader must judge.

## 1II. The Capitol.

In attempting to describe this prominent feature in the topography of Fome, we are arrested on the threshofd by a dispute respecting it which has long prevailed and still continues to prevail, and upon which, before proceeding any further, it will be necessary to declare our opinion. We have before deseribed the Capitoline hill as preseuting tbree natural divisiuns, namely, two summits, one at its NE. and the other at its SW. extremity, nith a depression hetween them, thus forming what is commonly called a sadile-back liill. Now the point in dispute is, which of these summits was the Capitol, and which the Arx? The unfortunate ambiguity with which these terms are used by the ancient writers, will, it is to be feared, prevent the possibility of ever arriving at any complete and satisfactory solution of the question. Heace the conflicting opioions which have prevailed upon the subject, and wnich have given rise to two different schools of topographers, generally characterised at present as the Gerinan and the Italian school. There is, indeed, a third class of writers, who hold that both the Capitol and Arx occupied the same, or SW. summit; but this evidently absurd theory has now so few adherents that it will not be necessary to examine it. The most conspicuous seholars of the German school are Niebuhr, and his fullowers Bunsen, Becker, Preller, and others; and these hold that the temple of Jupiter Capitulinus was seated on the SW. summit of the hill. The $\mathbf{I}$ talian tiew, which is directly
contray to this, was first broug ht into vegue by Nardini in the last century, and lias since been held by most Italian scholars and topographers. It is not, however, so exclusively Italian but that it has been adopted by some distinguished German scholaus, among whom may be named Gïttling, and Braun, the present accumplished Scerctary of the Archacological Institute at Rome.
Every attempt to determine this question must now rest almost exclusively on the interpretation of passages in ancient authors relating to the Capitoline hill, and the inferences to he drawn from then; ald the deeision must depend on the preponderance of probability on a comparison of these inferences. Hence the great importance of attending to a strict interpretation of the expressions used by the classical writers will be at once ap parent; and we shall therefore preface the following inquiry by laying down a few general rules to guide our researches.
Preller, who, in an able paper poblished in Sclaneidewin's Philologus, vol. i., has taken a very moderate and candid view of the question, consoles himself and those who with him hold the German sile, by remarking that no passage can be produced from an ancient and trustworthy writer in which Capitolium is used as the name of the whole hill. But if the question turns on this point - and to a great extent it certainly does - such passages may be readily produced. To begin with Yarro, who was both an ancient and a trustworiliy writer. In a passage where he is expressly descriling the hitls of Rome, and which will therefore admit neither of misapprebension nor dispute, Varro says: "Septimontium nominatum ab tot montibus, quos postea urbs muris comprehendit. Equis Capitolium dictum, quod hic, quom fundamenta foderentur aedis Jotis, caput humanum dicitur inventum. Hic mons ante Tarpeius dictus," \&c. (L.L. v. § +1, Mliill.) Ilere Capitolium can signify nothing but the Capitoline hill, just as Palatium in $\S 53$ signifies the Palatine. In like manner Tacitus, in bis description of the Romulean pomocrium befure cited: "Forumque I'omanum et Capitolium nen a Romulo sed a Tito Tatio additum urbi credidere" (Ann. sii. 24), where it would be absurd to restrict the meaning of Cupitolium to the Capitol properly so called, for Tatius dwelt on the Ara. So Livy in his narrative of the exploit of Horatins Cocles: "Si transitum a tergo reliquissent, jam plus lostium in Palatio Capitolioque, quam in Janiculo, fure " (ii. 10), where its union with Palatium shows that the hill is meant ; and the same historian, in descrihing Romnlus consecrating the spolia opima to Jupiter Feretrius a couple of centuries before the Capitoline temple was foumled, says, "in Capitulium escendit" (i. 10). The Greek writers use $\tau \dot{\delta}$ Kanı $\tau \dot{\omega} \lambda$ tov in the same man-
 ठé $\tau \grave{\delta}$ Kãiтúえzov. (Dionys. ii. 50.) Hence we deduce as a first general rule that the term Capitolium is sometimes used of the whole hill.

Secondly, it may be shown that the whole hill, when cbaracterised generally as the Roman citadel, was also called Arx; "Atque ut ita munita arx circumjectu arduo et quasi circumciso saxo niteretur, ut etiam in illa tempestate horribili Gallici adventus incolunis atque intacta permanserit." (Cic. Rep, ii. 6.) "Sp. Tarpeius Romanae praeerat arci." (Liv, i. 11.) But there is no need to multiply esamples on this heal, which is plain enough.

But, thirdly, we mast observe that though the terms Capitoliam and Arx are thus used gencrally

to signify the whole bill, they are nevertheless frequently employed in a strieter sense to denote acspectisely one of its summits, or rather, the temple of Jupiter Capitoliuss and the opponite summit ; and in this manner they are often found mentioned as two separate localities oppooed to one another: "De arce capta Capitulioque occupato - nuntii veniunt." (Liv, iii. 18.) "Est autem etian aedes Vejovis Stmae inter arcem et Caritolium." (Gell. N. A. v.

12.) On this point also it would be easy to multiply examples, if it were necessary.
Tlie preceding passages, which have been purposely selected from prove writers, suffice to sluw bow Juosely the terms Arx and Capitulium were em ployed; and if we were to inrestigate the language of the prets, we should find the question still further enbarrased by the introduction of the ancient names of the hill, sach as Mons Tarpeius, Rupes Tarpeia,
\&c., which are often used withont any precise signification.

With these preliminary remarks we shall proceed to examine the question as to which summit was occopied by the Capitoline temple. And as several arguments have been adduced by Becker (Handb. pp. $387-395$ ) in farour of the SW. summit, which he deems to be of such force and cogency as "completely to decide" the question, it will be necessary to examine them seriatim, before we proceed to state our own opinion. They are chiefly drawn from narratives of attempts to surprise or storm the Capitol, and the first on the list is the well-known story of Herdonius, as related by Dionysius of Halicarnassus (s. 14): "Herdonius," says Becker, "lands by night at the spot where the Capitol lies, and where the hill is not the distance of a stadium from the river, and therefore manifestly opposite to its western point. He firces a passage through the Carmental gate, which lay on this side, ascends the height, and seizes the fortress ( $\phi$ poúprov). Hence he preseses forwards still farther to the neighbouring citadel, of which he also gains possession. This narrative alone suffices to decide the question, siace the Capitol is expressly mentioned as being next to the river, and the Carmental gate near it: and since the band of Herdonius, after taking possession of the western leight, proceeds to the adjuining citadel" (p. 388).

Io this interpretation of the narrative some things are omitted which are necessary to the proper understanding of it, and others are inserted which are by no meads to he found there. Dionysius does not say that Herdonius landed at the spot where the Capitol lies, and where the hill is only a stade from the river, but that he landed at that part of Rome where the Capitoline hill is, at the distance of not quite a stade from the river. Secondly, Becker assumes that фpoiptay is the Capitol, or, as he calls it, by begging the whole question, "the western height." But his greatest misrepresentation arises from omitting to state that Dionysius, as his text stands, describes the Carmental gate as left open in pursuazoce of some divine or oracular command (катá Ti À $\bar{\sigma} \phi a \tau o \nu$ ): whereas Becker's words ("er dringt durch das Carmentalische Thor") weuld lead the render to believe that the passage was forced by Herdonius. Now it has been shown that the Purta Carmentalis was one of the city gates; and it is impossible to believe that the Romans were so besotted, or rather in such a state of idiotcy, that, after building a huge stone mall round their city at great expense and tronble, they should leare one of their gates open, and that too without a gaard upon it ; thus rendering all their elahorate defences useless and ahortive. We have said without a guard, because it appears from the uarrative that the first obstarle cocountered by Herdomius was the фpoupiov, which according to Becker was the Capitol; so that he must have passed through the Vicns Jugarius, over the forum, and ascended the Clivus Capitolinus without interruption. It is evident, however, that Dionysius could not have intended the Carmental gate, since he makes it an entrance not to the city but to the Capitol (iepal rú入as тố Katıтw入íou); and that he regarded it as seated upon an emiaence, is plnio from the expression that Herdonius made his men ascend through it (ảvabisáo as $\tau \eta ̀ v \delta^{\prime} v v^{2} a \mu \nu$ ). The text of Dionysius is manifestly corrupt or interpolated; which further appears from the fact that when he was describing the real Carmental gate
(i. 32), he used the adjective form Kapuevtis ( $\pi a \rho d$ тais Kapuevtial $\pi \dot{\prime} \lambda$ aus), whilst in the present instance he is made to use the form Kapuévтwos. Herdonius must have landed below the line of wall runoing from the Capitoline to the river, where, as the wall was not continued along its banks, he would have met with no obstruction. And this was evidently the reason why be brought down his men in hoats; for if the Carmental gate had been always left open it would bave been better for him to have marched overland, and thus to have avoiled the protracted and hazardous operation of laoding his men. It is clear, as Preller has pointed out (Schneidewin's Philologus i. p. 85, note), that Dionysius, or rather perhaps his transcribers or editors, has here confounded the Porta Carmentalis with the Porta Pandana, which, as we have before seen, was sented on the Capitoline hill, and always left open, for there could hardly lave been two gates of this description. The Porta Paudana, as we have already said, was still in existence in the time of Varro (L. L. r. $\S 42$. Müll.), and was in fact the entrance to the adcient fort or castellum - the фpoípiov of Diouysius - which guarded the approach to the Capitoline hill, of course on its E. side, or towards the forum, where alone it was accessible. Thus Solinus: "Iidem (Herculis comites) et montem Capitolinum Saturnium nomioarunt, Castelli quoque, qued excitaverunt, portam Saturniam appellaverunt, quae postmodum Pandana vocitata est" (i. 13). We also learn from Festus, who mentions the same castrum, or fort, that it was situated in the lower part of the Clivus Capitolinus. "Saturnii quoque dicebantur, qui castrum in imo clivo Capitolino incolebant" (p. 322, Müll.). This, then, was the фpoiprov first captured by Herdonius, and not, as Becker supposes, the Capitol: and hence, as that writer says, he pressed on to the western height, which, bowerex, was not the Capitel but the Arx. When Dionysius says of the latter that it adjoined, or was connected with, the Capitolium, this was intended for his Greck readers, who would otherrise bave supposed, from the fashion of their own cities, that the Arx or Acropolis formed quite a separate hill.

The story of Herdonius, then, instead of being " alone decisive," and which Becker (Harnung, pp43,44) called upon Braun and Preller to explain, before they ventured to say a word more on the subject, proves absolutely nothing at all; and we pass on to the nest, that of Pootius Cominius and the Gauls. "The messenger climbs the rock at the spot nearest the river, by the Porta Carmentalis, where the Gauls, who had obserred his foutstens, afterwards make the same attempt. It is from this spot that Manlius casts them down" (p.389). This is a fair representation of the matter; but the question remains, when the messenger had clomb the rock was he in the Capitol or in the Ars? The passages quoted as decisive in favour of the former are the following: "Indee (Cominius) qua proximum fuit a ripa, per pracruptun eoque neglectum bostium custodiae saxum in Capitolium evadit." (Liv, v. 46.) "Galli, seu vestigio notato humano, seu sua sponte animadverso ad Carmentis saxorum adsceosu aequo - in summum evasere" ( $I b .44^{\text {i }}$ ). Now, it is plain, that in the former of these passages Livy means the Capitoline hill, and not the Capitel strictly so called; sibce, in regard to a small space, like the Capitol Proper, it would be a uscless and absurd distinction, if it hay, and was known to lie, next the river, to say that Cominius mounted it "where it
was nearest to the river. "Cominins in Capitolium evalit" is here equivalent to "Romolus in Capitolium escendit," in a pussage before cited. (Liv. i. 10.) Fince, to mark the spot more precisely, the histmian imserts "ad Carmentis" in the foll owing chapter. There is nothing in the other authorities cited in Becker's note (no. 750 ) which yields a conclusion either one way or the other. We might, with far superior justice, quote the following passage of Cicero, which we have adduced on another occasion, to prove that the attempt of the Ganls was on the Ars or citadel: " Atque ut ita munita Ars circumjectu arduo et quasi circumciso saso niteretur, ut etiam in illa tempestate borribili Gallici ndventus incolumis atque intactar permanserit" (De Rep. ii. 6). But, though we hold that the attempt was really on the Arx, we are nevertheless of opinion that Cicero here uses the word only in its general sense, and thus as applicable to the whole hill, jnst as Livy uses Couitulium in the preceding passage. Hence, Mr. Lunhury (Class. M/us, vol. ir. p. 430) and M. l'rellew (l.c.) have justly reganded this narrative as affirding no evidence at all, althoung they are adherents of the German thenry. We may further wherve, that the honse of Manlius was on the Arx ; anl thunch this circmustance, taken by itself. preseats nuthing decisire, yet, in the case of so sudden a surprise, it adds probability to the view that the Arx was on the sonthern snmmit.

We now proceed to the next illustration, which is drawn from thic account giren by Tacitus of the attack of the Vitellians on the Capitol. Becker's interpretation of this passage is so full of errors. that we must follow him sentence by sentence, giving, first of all, the original description of Tacitus. It runs as follows: "Cito agmine forum et imminentia foro templa pratervecti erigunt aciem per adversun collem usque wl primas Capitolinae arcis fores. Erant antiqnitus porticus in laterc clivi, dextrae subenntibus: in quarmm tectum egressi saxis tegnlisque Vitellianos ohruehant. Neque illis manus nisi gladios armatse; it arressere tormenta aut missilia tela longum videbatur. Faces in prominentem porticum jecere et sequelantur ignern; ambnstasque Capitolii fores penetrassent, ni Sabinus revulas pndiqne statuas, decora majurum in ipso aditu vice muri objecisset. Tum diversos Capitulii aditus invadunt, juxta lucnm asyli, et qua Tarpeia rupes centum graditus aditur. lmprovisa utrague vis: propior atque nerior per asylum ingracbat. Nec sisti potorant seandentes per conjuncta acelficia, quae, ut in multa pace, in altum edita sulum Capitulii aequabant. Ilic ambigitur, ignem tectis oppognatores injecerint, :th obsens, quae crebrior farna est, quo nitentes ac proustrams depellerent. Inde lapstas ignis in portumy uppositas aedibus: mox snstinmtes fastiginm aquilue vetere ligno traserunt flammam alveruntque. Sic Capitoliun clausis foribns indefensum et indireptern conflagravit." (IIist. iii. 7t.)
"The attark," mays Becker, " is tlitected solely against the Capitol ; that is, the hefpht containing the temple, whei latter is barnt on the occasion" (p. 390). This is so far from being the case, tbat the woris of Tacitus would rather show that the attack wis directed against the Ara. Tae temple is represented as having been slint up, and neither attacked nor defenled: "clansis foribus, indefonsum ct indreptum comflierravit." Such a state of thin $s$ is inconceivable, if, as Becker says, the attack was ainerted soldy atuinst the Capitul. That part of the hill was eridently deserted, and
left to its fate; the besieged had concenlrated themselves upon the Arx, which thus became the puint of ntlack. By that unfortunate ambignity in the ase of the word Capitolnm, which we have before pointed out, we find Tacitus representing the gates of the Capitolinm as having been burnt ("ambistas que Capitolii fores ") which, if Capitolium meant the same thing in the last sentence, would be a direct contradiction, as the gates aro there represented as shut. But in the first passage he means the gates of the fortification which enclosed the whole summit of the hill; and in the scoond passage be means the gates of the temple. The meaning of Tacitus is also evident in another manner; for if the Vitellians were attacking the temple itself, and borning its gates, they must lave already gained a footing on the heigbt, and would consequently have had no occasion to seek accoss by other routes - by the steps of the Rupes Tarpeia, and by the Lucus Asyli. Becker proceeds: "Tucitus calls this (i.e. the height with the temple), indifferently Capitolina Arx and Capitolium." This is quite a mistake. The Arx Capitolina may possibly mean the vehole summit of the hill; but if it is to be restricted to one of the two eminences, it means the Arx proper rather than the Capitol. "The attaching party, it appears, first made a lodgment on the Clivus Capitolinus. Here the portico on the right points distinctly to the SW. height. Had the portico been to the right of a person ascending in the contrary direction, it would have boen separated from the besieged by the street, who conld not therefore have defended themselves from its roof." If we thonght that this argument had any value wc might adopt it as our own: for we also believe that the attack was dirceted against the SW. beigbt, bnt with this differcnce, that the Arx was on this height, and not the Capitol. But, in fact, there was only one principal ascent or clivus, -that leading towards the western height; and the only thing worth remarking in Becker's observations is that he should have thought there might be another Clivus Capitolinus leading in the opposite direction. We maty remark, by the way, that the portico here mentioned was probally that erected by the greatgrandson of Ca. Scipio. (Vell. Yat. if. 3.) "As the attack is here froitless, the Vitellians abandon it, and make anotber attempt at two different approaches ("diversos aditus"); at the Lacus Asyli, that is, on the side wbere at present the broad steps lead from the Palazzo de' Conservatori to Bonte Caprino, and again where the Centum Gradns led to the liupes Tarpeia. Whether these Centum Grados are to be placed by the church of Sta Maria della Consoluziune, or more westward, it is not necessary to determine herc, since that they led to the Caffurelli height is undispnted. On the side of the asylum (I'alazzo de' Conservatori) the danger was more pressing. Where the steps now lead to Monte Caprino, and on the whole side of the hill, were houses which reached to its smmnit. These were set on fire, and the flames then caught the adjoining portico, and lastly the temple."
Our chief objection to this account is, its impossibility. If the Lucus Asy li corresponded to the steps of the present Paluzzo de' Conserratori, which is sested in the depression between the two summits, or present P'iaza del Campiduglio, then the besiceers must have forced the jassage of the Clivas Cajitolinus, whermas Tacitus exproaly says that they were repubed. Being repulsed thry must have retreated
downwards, and renewed the attempt at lower points; at the foot of the Hundred Steps, for instance, on one side, and at the bottom of the Lucus Asyli on another; on both which sides they again attempted to mount. The Palazzo de' Conservator 'i, though not the highest point of the hill, is above the clivas. Becker, as we have shown, has adopted the strangely erroneous opinion that the "Capitolinae arris fores" belonged to the Capitol itself (note 752 ), and that consequently the Vitellians were storming it from the Piasza del Campudoglio (note 754). But the portico from wbich they were driven back was on the clivus, and consequently they could not have reached the top of the hill, or piazza. The argument that the temple most have been on the SW:. height, because the Vitellians attempted to st.orm it by mounting the Ceatum Gradus (Becker, I1'arnang, p. 4.3), may be retorted by those who hold that the attack was directed against the Ars. The precise spot of the Lucus Asyli cannot be indicated ; but from Livy's description of it, it was evidently somewhere on the descent of the hill ("loomm qui nune septus descendertibus inter duos lacos est asylum aperit," i. 8). It is probable, as Preller supposes (Philol. J. 99), that the "aditus juxta lneum Asyli" was on the NE. side of the hill near the present arch of Severus. The Clivus Asyli is a fiction; there was only one clivus on the Capitoline.

We have only one more remark to make on this narratire. It is plain that the fire broke out near the Lucus Asyli, and then spreading from house to house, cauglit at last the front of the temple. This follows from Tacitus' account of the portice and the eagles which supported the fastigium or pediment, first catching fire. The back-front of the Capitoline temple was plaio, apparently a mere wall; since Dionysins (iv. 61) does not say a single word about it, though he particularly dercribes the front as laving a triple row of columns and the sides double rows. Bat as we know that the temple faced the south, such an accident could not have lappened except it stood on the NE. beight, or that of Araceli.

We might, therefore, by substituting Caffarelli for Araceli, retort the triumphant remark with which Becker closes his explanation of this passage: "To hin, therefore, who would seek the temple of Jupiter on the lieight of Caffarelli, the description of Tacitus is in every respect inexplicable."

Becker's next argument in favour of the W: summit involves an equivocation. It is, "that the temple was built on that summit of the hill which bore the name of Mons Tarpeius." Now it is notorious - and as we have alrearly established it, we need not repeat it here - that before the building of the Capitol the whole hill was called Mons Tarpeins. The passages cited by Becker in note 755 (Liv. i. 55; Dionys. iii. 69) mean nothing more than this ; indeed, the latter expressly states
 Kaлit $\omega \lambda$ ivos). Capitolium gradually became the name for the whole hill; but wbo can believe that the name of Tarpeia continued to be retained at that very portion of it where the Capitoline temple Was buift? The process was evidently as follows : the northern height, on which the temple was built, was at first alone called Capitolium. Gradually its superior importance gave name to the whole hill ; yet a jarticular portion, the most remote from the temple, retained the primitive name of Rupes Tarpeia. And thus Festus in a mutilated fragment, -
not however so mutilated but that the sense is plain - "Nolnerunt furestum locum [cum altera parte] Capituli conjungi" ( $\mathrm{P}, 34.3$ ), where 11 tiller remarks, " non multum ab Ursini supplemento discedere licebit."

Becker then proceeds to argue that the temple of Jung Moneta was built on the site of the honse of M. Maulins Capitolinus, which was on the Arx (Liv. v. 47 ; Plut. Cam. 36; Dion Cass. Fr. 31, Sc.) ; and we learn from Ovid (Fast. i. 637) that there were steps leading from the temple of Concord, to that of Juno Moneta. Now as the former temple was situated nnder the height of Araceli, near the arch of Severus, this deternines the question of the site of Juno Moneta and the Arx. Ovid's words are as follows:-
${ }^{4}$ Candida, te niveo posuit lux proxima templa Qua fert sublimes alta Moreta gradus;
Nunc bene prospicies Latiam, Concordia, turbam," Sic.

This is very obscure; but we do not see how it can be inferred from this passage that there were steps from one temple to the other. We should rather take it to mean that the temple of Concord was placed close to that of Moneta, which latter was approached by a flight of lofty steps. Nor do we think it very difficult to point out what these sters were. The temple of Juno was on the Arx; that is, according to our view, on the SW. summit ; and the lofty steps were no other than the Centum Gradus for ascending the Rupes Tarpeia, as deseribed by Tacitns in the passage we have just been discussing. Had there been another flight of steps leading up to the top of the Capitoline hill, the Vitellians would certainly lave preferred them to clamberiog over the tups of houses. But it will be objected that according to this view the temple of Cuncord is placed upon the Arx, for which there is no autherity, instead of on the form or clivus, for which there is autbority. Now this is exactly the point at which we wish to arrive. There were several temples of Concord, but only two of any renown, namely, that dedicated by Furius Camillus, E. C. 367 , and rededicated by Tiberius after his German triumph, which is the one of which Ovid sreaks; and another dedicated by the consul Opimius after the sedition and death of Gracchus. APpian says that the latter temple was in the formo:
 є́тaそєy éveipar (B.C. i. 26). But in ordinary language the clivns formed part of the formm; and it would be impossible to point out any place in the forum, strictly so called, which it conld have vecupied. It is undonbtedly the same temple alluded to by Varro in the fulloning passage: "Senaculum snpra Graecostasin ubi sedis Concordiae et basilica Opinis" (L.L. v. P. 156, Mïll.) : from which we may infor that Opinius built at the same time a basilica, which adjuined the temple. Becker (IIamib. p. $309)$ denied the existence of this bssilica; lut by the time be published his 11 arnung he had grown wiser, and quoted in the Appendix ( $\mathrm{p}, 58$ ) the following passage from Cicero (p.Sest. 67) : " L. Opimius cujus monumentum celeberrinnm in foro, sepulcrum desertissimum in littore Dyrrachino cst relictum ; " maintaining, however, that this passage related to Opimius' temple of Concord. But L'rlichs (Kim. Top. p. 26), after pointing out that the epithet celebervimum, "very much frequented," suited better with a basilica than with a temple, produced
two ancient inscriptions from Marini's $A$ tti de Fral telli Areali (p. 212); in which a hasilica Opimia is recorded; and Becker, in his Autwort (p. 33), confessing that he had overlooked these inscriptions, retracted hisdoubts, and aknowlodged the existence of a basilica. According to Virro, then, the Acdis Concordiae and haslica of Opimius were close to the senaculum; and the situation of the senaculam: is pointed ont by lestus betwecu the Capitol and foram: "Unam (Senaculum) ubi mane est aedis Concordiae, inter Capitohum et Forum" (p. 347, 31ull.). Tbis description corresponds exactly with the site where the present remains of a temple of Concord are unanimously agreed to exist : remains, however, which are supposed to be those of the temple founded by Camillus, and not of that founded by Opimins. According to this supposition there must have been two temples of Concori on the forum. But if these remains belong to that of Camillus, who shall point out tbose of the temple erected by Opimius? Where was its site? What its history? When was it demolished, and its place either left vacant or occupied by another building? Appian, as we have scen, expressly says that the temple built by Opinius was in the formn; where is the evidence that the temple of Camillus was also in the formm? There is pusitively none. Plutarch, the only direct evidence as to its site, says no such thing but only that it looked down upon the formm: z\&nфiбavto

 тoîs $\gamma \in \gamma \in \nu \eta \mu \in \nu=t s$ iópúvanAar (Camill. 42). Now ¿̀фopáw means to view from a distance, and especially from a height. It is equiralent to the Latin prospicere, the very term used by Ovid in deseribing the same temple:-
"Nunc bene prospicies Latian, Concordia, turbam."
These expressions, then, like Ovid's allusion to the "soulimes gradus" of Mloneta, point to the Arx as the site of the temple. It is remarkable that Lucas (Phar's. i. 195) employs the same word when describing the temple of Jupiter Tonans, erected by Augustus, also situated upon the Arx, or Itupes Tarpeia:-

## " <br> $\qquad$ 0 magnae qui moenia prospicis urbis

Tarpeia de rupe Tomans."
This temple indeed. has also been placed on the clivus, on the anthority of the pseudo-Victor, and against the express evidence of the hest authorities. Thus an inscription in Gruter (1xxii. No. 5), consisting of some lines aldressed to Fortuna, likewise places the Jupiter Tonaus on the Tarpeian rock:-

## "Tu quar Tarpeio coleris vicina Tunanti <br> Vutorum vindex semper Fortun meorum," \&c.

 Suctonius (. 1 ag. C. 29 and 91), Pliny (xxxyi. 6) an! the Mon. Auryranum, place it "in Capitolio," maning the Capitoline hill. It hus been absurdly inferred that it was on the clivus, because thon says that those who were gring up to the great temple of Jupiter met with it first, - uit (liv. 4), which thry mis) donbt would do, siace the cluws led first to the western height.

On these groumb, then, we are inclined to belice that the timple of cenmord erected by Camillus stond on the Arx, and combla not, therefore, have had any steps leading to the temple of Imm Noneta. The latter was likewise founded by Camillus, as we learn from Livy and Ovid:-
"Arce quoque in summa Juneni templa Monetae Ex roto memorant facta, Camille, tuo;
Ante domus Manli fuerant" (Fast. vi, 183);
and thus these two great works of the dictator stood, as was nataral, close together, just as the temple of Concord and the basilica subsequently erected by Opimius also adjoined one another on or near the clivus. It is no objection to this view that there was another small temple of Cuncord on the Arx, which had been sowed ly the practor Namlius in Gaul during a sedition of the soldiers, The vow had beel almost overlonked, but after a lapse of two years it was recollected, and the temple erected in discharge of it. (Liv, xxii. 33.) It seems, therefore, to bave been a small affair, and might very well have coexisted on the Arx with another and more splendid temple.

But to return to Becker's arguments. The next proof adduced is Caligula's bridge. "Caligula," he says, as Bunsen has remarked, "caused a bridge to be thrown from the Palatine hill over the temple of Augustus (and probahly the Basilica Julia) to the Capitoline temple, which is altogether inconccivable if the latter was on the height of Araceli, as in that case the bridge must have been conducted over the formm" (p. 393). But bere Becker goes further than bis author, who merely says that Caligula threw a bridge from the Palatine hill to the Capitolive: "Super templum Divi Allgusti ponte transmisso, Palatium Capitoliumque conjunxit," (Suet. Cal. 22.) Becker correctly readers Palatium by the " lalatine hill," but when be comes to the other hill be converts it into a temple. Suetonius offers a parallel case of the use of these words in a passage to which we had occasion to allude just now, respecting the temple of Jupiter Tonans : "Templam Apollinis in P:ilatio (extruxit), nedem Tonantis Jovis in Capitolio " (Aug. 29) ; where, if Becker's view was rigbt, we might by analogy translate, - " he erected a temple of Apollo in the palace."

The next proof is that a large piece of rock fell down from the Capitol ("ex Capitolio") iato the Vieus Jugarius (Liv. xxxv. 21); and as the Vicus Jugarius ran onder the S. summit, this shows that the Capitoline temple was upon it. But pieces of rock fall down from hills, not from luildings, and, therefore, Capitolium bere only means the hill. In like manner when Livy says (xxxviii. 28), "substructionem super Acpuimeliom in Capitolio (ceasures locaverunt)," it is plain that he must mean the hill; and consequently this passage is another proof of this use of the word. The Aequimelium was in or by the Vicus Jugarius, and could not, therefore, have been on the Capitol properly so called, even if the latter had been on the SW. height. Decker wrongly translates this passage, - ${ }^{4}$ a substruction of the Capitol over the Lequimelium" (p. 393.) Then comes the passage respecting the statne of Jupiter being turned towards the east, that it might behold the formm and curia; which Becker maintains to be impossible of a statue erected on the height of A raceli. Those who have seen the ground will not be inclined to coincide in this opinion. The statue stood on a column (Dion Cass, xxxvii. 9; Cic. Die. i. 12; ef. Id. Cat. iii. 8), and most probably in fromt of the temple - it could hardly bave been placed belind it; and, therefore, if the temple was on the S. height, the statue must have been at the extremity of it ; a site which certainly would not afford a I very good riew of the forum. Next the direction
of the Clivas Capitolinus is adduced, which ran to the Western height, and must have led directly to the temple, whence it derived its name. But this is a complete beggiag of the question, aad the clivns more probably derived its name from the hill. If the direction of the clivus, however, proves anything at all-and we are not disposed to lay much atress upon it-it rather proves the reverse of Becker's case. The clivus wats a continuation of the Sacra Yia, by which, as we shall have uccasion to show when treating of that road, the angurs doscended from the Arx after taking the augaries, and by which they carried up their new year's offerings to king Tutins, who lived upon the Arx: and hence in sacerdotal language the elivus itself was called Sacra Via. (Varro, L.L. v. $\S 47$, Mäll.; Festus, pc 290, id.). Lastly, " the contined height of Araceli would not have afforded sufficient room for the spacious temple of Jupiter, the Area Capitolina, where meetiags of the people were held, aad at the same time be able to display so many other temples and monuments." There is some degree of truth in this observation, so far at least as the Area Capitolina is concerned. But when we come to describe the temple of Jupiter Capitolinus, an acquaintance with which is necessary to the complete understanding of the present question, though Becker has chosen to omit it, "as lying ont of the plan of his book" (p 396), we shall endeavour to show how this objection may be obviated. Meanwhile, having now discussed all Becker's arguments in favour of the SW. summit as the site of the Capitoline temple, it will be more convenient shortly to review the whole question, and to adduce some reasons which have led us to a directly contrary conclasion. In doing this we do not presume to think, with Becker, that we have "completely decided" the question. It is one, indeed, that will not admit of complete demonstration; but we venture to bope that the balance of probability may be shown to predominate very considerahly in favour of the NE. beight.

The greater part of Becker's arguments, as we trust that we have shown, prove nothing at all, while the remainder, or those which prove something, may be turned against him. We must clain as our own the proof drawn from the storm of the Capitol by the Vitellians, as described by Tacitas, as well as that derived from Mons Tarpeius being the name of the SW. height, and that from the westerly direction of the Clivus Capitulimus. Another argument in favour of the NE, beight may be drawn from Livy's account of the trial of Maulius Capitolinus, to which we have already adverted when treating of the Porta Flumentana [supra, p. 751 ], and need not here repeat. To these we bhall add a few more drawn from probability.

Tatius dwelt on the Arx, where the temple of Juno Moneta afterwards stood. (Plat. Rom. 20; Sulinus, i. 21.) "This," says Becker (p. 388), " is the height of Araceli, and always retajaed its name of Arx after the Capitol was built, since certain sacred castoms were attached to the place and appellation." He is here alluding to the Arx being the auguraculum of which Festus says: "Auguraculum appellabant antiqui qnam nos arcem dicimns, quod ibi augures publice auspicarentur" (p. 18, where Miiller observes: "non tam arcem quam in aree fuisse arbitror auguraculum "). The templum, then, marked ont from the Arx, from which the city auspices were taken, was defined by a peculiar and
appropriate form of words, which is given by Varro, (L.L. vii. § 8, Mitl.) It was bounded on the left hand and on the riglit by a distant tree; the tract between was the templum or tescum (conntry regiun) in which the omens were observed. The augur who inaugurated Numa led him to the Arx, seated him on a stone, with his face torned towards the South, and sat down on bis left hand, capite velato, and with his lituns. Then, looking forwards over the city and cotntry - " prospectu in urbem agrumque capto"- he marked out the temple from east to west, and determined in his mind the sign (signam) to be observed as far as ever his eyes could reach: "quo longissime conspectum oculi ferebant." (Liv. i. 18 ; cf. Cic. de Off. iii. 16.) The great exteat of the prospect requined may be inforred from an anecdote related by Valerins Maximus (riii. 2. \& 1), where the augnrs are represented as ordering Claudins Centumalas to lower his lofty dwelling on the Caelian, because it interfered with their view from the Arx,-a passage, by the way, which shows that the anguries were taken from the Arx till at all events a late period of the Republic. Now, supposing with Becker, that the Arx was on the NE. summit, what sort of prospect would the angurs lave had? It is evident that a large portion of their view would have been intercepted by the buge temple of Jupiter Capitolinus. The SW. summit is the only portion of the hill which, in the words of Livy, would afford a noble prospect, " in urbem agrumque." It was doubtless this point to which the augur conducted Numa, and which remained ever afterwards the place appointed for taking the anguries. Preller is of opinion that Augustus removed them. to a place called the Auguratorium on the Palatine. (Fhilologus, i. p. 92.) But the situation laid down for that buildiag searcely answers to our ideas of a place adapted for taking the auguries, and it seems more probable that it was merely a place of assembly for the college of augurs.

Another argument that has been adduced in favonr of the SW. summit being the Arx, is drawn from its proximity to the river, and from its rocky and precipitous nature, which made it proper for a citadel. But on this we are not inclined to lay any great stress.

Other argmments in favour of the Italian view may be drawn from the nature of the temple itself; but in order to understand them it will first he necessary to gire a description of the building. The most complete accomat of the TEMpleal Jovis Capitolivi is that given by Dionysins (iv. 61), from which we leara that it stood upon a high basis or platform, 8 pletlira, or 800 Greek feet square, which is nearly the same in Euglish measure. This would give about 200 feet for each side of the temple, for the length exceeded the breadth only by about 15 feet. These are the dimensions of the original construction ; and when it was burnt down a generation before the time of Dionysins, - that is, as we learn from Tacitus (II ist. iii. 72), in the consulsbip of L. Scipio and Norbanus (n, c. 83), -it was rebuilt upun the same foundation. The materials employed in the second construction were, however, of a much richer description than those of the first. The front of the temple, which faced the south, had a portico consisting of three rows of colamns, whilst on the flanks it had only two rows : and as the back front is not said to have had any portico, we may conclude that there was nothing on this side but a plain wall. The interior contained three cells
parallel to one another with common walls, the eentre one being that of Jure, on each side those of Juno and Minerva. In Livy, however (vi, 4), Juwo is represented as buing in the same cella with Jupiter. But though the temple had three cells, it had but one fustigium, or pediment, and a single roof.

TEMPLE OF JUPITER CAPITOLISUS. (From a ('oin of Vespasian.)
Now the first thine that strikes us on reading this description is, that the front being so ornamented, and the back so very plain, the temple must have stood in a situation where the former was very conspicuous, whilst the latter was but little seen. Such a situation is afforded only by the NE. summit of the Capitoline. On this site the front of the temple, being turned to the south, would not orly be risible from the forum, but would also prosent its best asprect to those whe had ascended the Capitoline hill; whilst on the other hand, had it stood on the SW. summit, the front mould not have been visible from the formm, and what is still worse, the temple would have presented only its nude and unadorned back to thuse whe eppronehed it by the usual and most juportant ascent, the Clivns Capitolinus. Such a state of things, in violation of all the rules whielt commonty regulate the disposition of public buildings, is scarcely to be imagined.

We will now revert to Beeker's objection respecting the Abel Caparolisa. It imust be admitted that the dimonsions of tise temple would bave allowed but lattle roun for this area on the height of Araceli, especially th this must bave contained other small temples and monuments, such as that of Jupiter Firetions, \&.c. Vet the Atea Capitulina, we know, was often the seene not only of public meetings but even of combats. There are very striking indications that this area was not coufined to the height on which the temple stond, but that it occupied part at least of the extensive surface of lower ground lying between the two summits. One indication of this is the great hwizht of the steps lealing up to the vestibule of the tumpli, as shown by the story related by livy of Aumins, the aubsasadur of the Latins: who being rubuked by Manius and the fathers for bis insolenee, ru hod fiantically from the vestibule, and falling dumn the steps, was either killed or rendered insenthll (sui 6). That there was a ditherence in the lesel of the C'apitol may be seen from the account Envon by P'aterculus of Scipio N:sisca's adderess to 4/w 1."nde 12: the redtion of the Gracelhi. Standing Hff wath on the ame lofyy steps,-"ex superiare purt. Cipuitulii ammis gradibus insitens" (ii. 3), 一 Nis uts thentel by hts el furice the senators and kumitis to attack tiate hus, who was standing in the area below, with a lange comsed of his adherents, and who was killel in attemptung to escape down the Clivas Cayitulin us. The area must have been
of considerable size to hold the catervae of Gracelus; and the same fact is shown by several other passames in the clavsics (Liv, xxv. 3, slv, 36, \&.e.). Nuw all these circumstances suit much better with a temple on the NE, summit than with one on the opposite height. An area in front of the latter, lesides being out of the way for public meetings, would not have afforded sufficient space for them; wor would it have presented the lofty stepa before described, nor the ready means of escape down the clivus. These, then, are the reasons why we deem the NE. sumnit the mure probable site of tho Capitoline temple.

We have already mentioned that this fameus temple was at least planned by the elder Tarquin; and according to some authors the foundation was completely laid by him (Dionys. iv. 59), and the building continued under Servius (Tac. Mist. iii. 72). However this may be, it is certain that it was not finished till the time of Tarquinins Superbus, who tasked the people te work at it (Liv, i. 56): but the tyrant was expelled before it could be dedicated, which honour was reserved for M. Horatius l'ulvillus, one of the first two consuls of the Republic (Polyb. iii. 22; Liv. ii. 8; Plut. Popl. 14). When the foundations were first laid it was necessary to exaugurate the temples of other denties which stood upon the site destived for it; on which occasion Terminus and Juventas, who had altars there, alone refused to move, and it became necessary to enclose their slarines within the temple; a happy omen for the future greatness of the city! (Lir. v. 54; Dionys. iii. 69.) It is a well-known legend that its nawe of Capitolium was derived from the finding of a human lieal in digging the foundation (Varr, L. L. v. § 41, Miill.; Plin. sxviii. 4, \&c.) The image of the god, miginally of clay, was made by Turanius of Fregellac, and represented him in a sitting posture. The face was pamted with vermilion, and the statue was probably clothed in a tunica palnata and toga picta, as the costume was borrowed by trimpliant generals. On the acroterlum of the pediment stood a quadriga of eartbenware, whose portenteus swelling in the furnace was also regarded as an omen of Rome's future greatness (Plin. xxsiii. \& ; Plut. Iopl. 13). The brothers C. \& \&. Ogulnius subsequently placed a bronze quadriga with a statue of Jupiter on the reof; but this probably did not supersede that of clay, to which so much ominous importance was attached. The same acdiles also presented a brouze threshold, and consecrated some silver phate in Jupiter's cella (Liv. x. 23; ef. Maut. Trin. i. 2. 46.) By degrees the temple grew ex ceediunly rich. Camillus dedicated three galden puterue ont of the spoils taken from the Etrascars (Liv. vi. 4), and the dietator Cincianatus placed in the temple a statue of Jupiter lmperator, which he had carried off from Pracheste (1d. vi. 29). Ab length the pediment tand columns became so encum bered with shields, ensigns, and other offerings that the ceusors M. Fulvius Nobilior and M. Aemilius Lepidus were complled to rid the temple of tbese supertluons ornammes (Id. xl. 51).

As we have before related, the original building lasted till the year 13. C. 83 , when it was burnt down in the civil wars of Sulla, according to Tacitus by desiga (" privata fraude," Hist. iii. 72). "Its restoration was undertaken by sulla, and subseiguently conlided to (2). Lutatims Catulus, net without the opposition of Cacsar, who wished to obliterate tho name of Catulus from the temple, and to substitute
his own. (Plut. Popl. 15; Suet. Caes. 15; Dion Cass. xxxvii. 44 ; Cic. Verr. iv. 31, \&c.) On this oceasion Sulla followed the Roman fashion of despoiling Greece of her works of art, and adorned the temple with columns taken from that of the Olympian Zeus at Athens. (Plin, xxxvi. 5.) After its destruction by the Vitellians, Vespasian restored it as snon as possible, but still on the original plan, the haruspices allowing no alteration except a slight increase of its beight. (Tac. Hist. iv. 53; Suet.
yesp.8; Dion Cass. Ixvi. 10, \&-c.) The new building, however, stood but for a very short period. It was again destroyed soon after Vespasian's death in a great fire which particularly desolated the 9th Region, and was rebuilt hy Domitian with a splendour hitherto unequalled. (Suet. Dom. 15; Dion Cass. 1xvi. 24.) Nothing further is accurately known of its history ; but Domitian's structure seems to have lasted till a very late period of the Empire.

TEMPLE OF JUPITER CAPITOLINES RESTORED.

The Area Capitolina, as we have already seen, Fas frequently used for meetings or contiones; hut besides these. regular comitia were frequently bolden npon it. (Liv. xxf. 3, xxxiv. 53, xliii. 16, xlv. 36 ; Plut. Paul. Aem. 30 ; App. B. C. i. 15, \&c.) Here stood the Curla Calabra, in which on the Calends the pontifices declared whether the Nones would fall on the fifth or the seventh day of the month. (Varr. I. L. vi. § 27, Müll.; Macrob. Sat. i. 15.) Here also was a Casa Romuln, of which there were tro, the other being in the 10th Region on the Palatine; though Becker (Handb. p. 401 and note) denies the existence of the former in face of the express testimony of Macrobios (l. c.) Seneca (Controv. 9 ): Vitruvios (ii. 1) ; Martial (riii. 80) ; Conoa (Narrat. 48). Sc. (v. Preller in Schneidewin's Philologus, i. p. 83). It seems to bave been a little hut or cottage, thatched with straw, commemorative of the lowly and pastoral life of the founder of Rome. The area had also rostra, which are mentioned by Cicero (ad Brut. 3).
Besides these, there were several temples and sacella on the NE. summit. Among them was the simall temple of Jupiter Feretrius, oue of the most ancient in Rome, in which spolia opima were dedicated first by Romulus, then by Cossus, and lastly by Marcellus (Liv. i. 10; Plut, Marcell. 8; Dinnys. ii. $34, \& \mathrm{cc}$.) The last writer, in whose time only the foundations remained, gives its dimensions at 10 feet by 5. It appears, however, to have been subsequently restored by Augustus. (Liv. iv. 20 ; Mon. Ancyr.) The temple of Fides, which stood close to the great temple, was also very ancient, having been built by Numa, and afterwards restored by M. Aemilius Scaurus. (Liv. i. 21 ; Cic. N. D. ii. 23, Off: iii. $29,8 \mathrm{cc}$.) It was roomy enoogh for assemblies of the senate. (Val. Max. iii. $2 . \S 17$; App. B. C. i. 16.) The two small temples of Mens and of Vents Erycisa stood cluse together, separated only by a

VOL, I .
trench. They had both been yowed after the battle at the Trasimene lake and were consecrated two years afterwards by Q. Fabius Naximus and T. Otacilins Crassus. (Liv. xxii. 10, xxiii. 51 ; Cic. N. D. ii. 23.) A temple of Venus Capitolina and Venus Victrix are also mentioned, but it is not clear whether they were separate edifices. (Suet. Cal. 7, Galb. 18; Fast. Amit. VIII. Id. Oct.) We also hear of two temples of Jupiter (Liv, xxxv. 41), and a temple of Ops (xxxix. 22). It by no means follows, however, that all these temples were on the Capitol, properly so called, and some of them might have been on the other summit, Capitolium being used generally as the name of the bill. This seems to have been the case with the temple of Forrune, respecting which we hove already cited an ancient inscription when discussing the site of the temples of Concord and Jupiter Tonans. It is perhaps the temple of Fortuna Primigenia mentioned by Plutarch (Fort. Rom. 10) as having been built by Servius on the Capitoline, and alluded to apparently by Clemens. (Protrept. iv. 51. p. 15. Sylb.) The temple of Howos and Virtus, built hy C. Marius, certainly could not have been on the northern eminence, since we learn from Festus (p. 34, Müll.) that he was compelled to build it low lest it should interfere with the prospect of the augurs, and be shoold thns be ordered to demolish it. Indeed Propertics (iv. 11. 45) mentions it as being on the Tarpeian rock, or southern summit:-
"Foedaque Tarpeio conopia tendere saxo Jura dare et statuas inter et arma Mari."
Whence we discover another indication that the anguraculum could not possibly have been on the NE. height; for in that case, with the huge temple of Jupiter before it, there would have been little cause to quarrel with this bagatelle erected by Marius. It must have stood on a lower point of the
hill than the angumculum, and probably near its declivity. The building of it by Marius is testified by Sitruvias (iii. 2, 5), and from an inscription (Orelli, 543) it appears to have been erectel out of the spoils of the Cimbric and Teutonic war. We learn from Cicero that this was the temple io which the first senatus consultum was made decreeing bis recall. (Sest. 54, Mlanc. 32, de Dir. 1. 28.)

We have slready had occasion to allude to the temple erected by Augustus to Jutiten Toxis. Like that uf Fortune it must have stood on the sil: beight and near the top of the ascent by the Clivus, as appears from the fillowing story. Augustus dreamt that the Capitoline Jore appeared to him and complained that the nem temple seduced awsy his worhippers : to which having answered that the Jupiter Tonans had been merely placed there as his janitor or porter, he cansed some bells to be bung on the pediment of the latter temple in token of its janitorial character. (Suet. Aug. 91.) That the same emperor also erected a temple to Maks Clton on the Capitoline, besides that io his formm, seems rery doubtful, and is testified only by Dion Cassius (lv. 10). Domitian, to commemorate his preservation during the contest with the Vitel ians. dedicated a sacellum to Jupiter Conservator, of the Preserver, in the Velabrum, on the site of the house of the aedituus, or sacristan, in which he had taken refuge; and afterwards, when he had obtained the purple, a large temple to Jupiten Custos on the Capitoline, in which he was represented in the bosom of the god. (Tac. II. iii. it: Suet. Dom. 5.) We also hear of a temple of Beveficexce (Eìvpheala) erected by 31. Aurelius. (1) ion, 1xsi. 34.)
But one of the mast important temples on the SW, summit or Arx was that of Juno Museta, erected, as we have said, in pursuance of a vow made by Camdlus on the spot where the house of M . Manlius Capitolinus had stood. (Liv. vii. 28.) Tbe name of Moneta, however, seems to have been conferred upon the gudiless some time after the dedicstion of the temple, since it was occasioned by a voice heard from it atter an earthquaike, sidvising (monens) that expiation should be made with a pregnant sow. (Cic. de Dír. i.45.) The temple was erected in n. c. 345. The Roman mint was subsequent! y established in it. (Liv, vi. 20; ef. Suidas, Monj̈ra.) It was rebuilt b. ©. 173. (Liv, slii. 7.) Near it, as we have before endeavoured to establish, must be placed the temple of Concord erected by Camillus and restured by Tiberius: as well as the other smaller temple to the sume deity, of no grent renown, dedicated during the Second Punic War, B. c. 217. (Liv. xaii. 33.)

Such were the principal temples which occupied the sum mit of the Capitoline hill. But there were also other smaller temples, besides a multitude of statues, sacella, monuments, and offerings. Among these was the temple of Vevorts, which stood in the place called " inter ducs lucus " letween the Capitol and the Tap poisn height. An ara Jovis l'istoris and nede Vravias Culyak must also be reckoned among
 the statues y ay be menti-ned thase of the Romas Kixas in the temple of Files (App. B. C. i. 16 ; Dion, x in.4.5), anl un the hill the two coldewal statues of Arotlo and Jvirfer. The former of these, which x is 30 ct its hy, wis brunght by M. Lucullus trom Apllunia in Yontus. The Jupiter was made y $\mathrm{S}_{\mathrm{p}}$. Carvit 's out if the armour and helmets of the conçuered Samnite, and was of such a size that
it conld be seen from the temple of Jupiter Latiaris on the Alban Mount. (Pliv. xxxiv. 18.) It would be useless to run through the whole list of objects that might be made out. It will suffice to say that the area Capitolina was so crowded with the statues of illustrious men that Augustus was compelled to remore many of them into the Campus Martius. (Suet. Cal. 34.)

We know only of one profane building on the summit of the Capitoline bill--the Tabulariem, or record office. We cannot tell the exact site of the original one: but it could not have stood far from the C'apitoline temple, siace it appears to have beed burnt down together with the latter during the civil wars of Sulla. Polybius (iii. 26) mentions the earlier one, and its burning, alluded to by Cicero (., D. iii. 30, pro Rubir. Perd. 3), seems to hare been effected by a private band, like that of tho Capitol itself. (Tac, Hist iii. 72.) When rebuilt by Q. Lutatius Catulus it occupred a large part of the eastern side of the depression between the two summits of the Capitolise, behind the temple of Concord, and much of it still exists under the Pala=o Senatorio. In the time of Poggio it was converted into a salt warchouse, but the inscription recording that it was built by Catulus, at his owo expeuse (de suo) was still legible, though nearly eaten away by the saline muisture. (De lariet. Fort, lib, i. p. 8.) This inscription, which was extant in the time of Nardini, is also giveo by him (Rom. Ant. ii. p. 300) and by Gruter (clsx. 6; cf. Orell. 31), with sligh: variations, and shows that the edifice, as rebuilt by Catulus, must have lasted till the latest period of the Empire. It is often called aerarium in Latia suthors. (Liv, iii. 69 \&c.)

AKCR UF TABLLAMEM.
We shall now proceed to cunsider some of the mast remarkable spots on the hill and its declivities. And first of the Asrlem. Becker (Handb. p. 387) a sumes that it occupied the whole depression between the two summits, and that this space, which by modern topographers has been called by the onclassical name of Intermontium, was called "inter duos lucos." But here his suthorities do aot bear him out. Whether the whole of this space formed the original asylum of Romulus, it is impossible to say; but it is quite certain that this was not the as ylum of later timex It would appear from the description of Dionysius (11.15) that in its original state (ivv тótf, к. T. A.) the grove may bave extended from one summut to the other; but it does not appear that it occupied the whole space. It was convenient For Becker to nssume this, on account of his interIretation of the prosage in Tacitus respectiog the
nssault of the Vitellians, where he makes them storm the SW: height from the grove of the asjlum, which he places where the steps now lead ap to the Palazzo de Conservatori. But, first, it is impossible to suppose that in the time of Vitellius the whole of this large area was a grove. Such an account is inconsistent with the buildings which we know to have been erected on it, as the Tahalaium, and also with the probable assumption which we have ventured to propose, that a considerable part of it was occupied by the Area Capitolina. But, secondly, the account of Tacitus, as we have already pointed ont, is quite incompatible with Becker's view. The Vitellians, being repalsed near the summit of the Clivus, retreat dountoards, and attempt two other ascents, one of which was by the Lucus Asyli. And this agrees with what we gather from Livy's description of the place: "Locum, qui nunc septus descendentibus inter duos lucos est, asylum aperit " (i. 8.) Wheace we learn that the place called "inter duos lucos" contained the ancient asylum, the enclosure of which asylum was seen by those who descended the "inter duos lucos." Thirdiy, the asylum must have been near the approach to it; and this, on Becker's own showing (Ilandb. p. 415), was under the NE. summit, namely, betweea the carcer and temple of Concerd and behind the arch of Severus. This ascent bas been erroneously called Clivus Asyli, as there was only me clivus on the Capitoline hill. But it is quite impossible that an ascent on this side of the hill could have led to a Lucus Asyli where the Palazzo di Conservatori now stands. It was near the asylum, as we have seen, that the fire broke out which destroyed the temple of Jupiter Capitolious; and the latter, consequently, must have been on the NE. summit. With respect to the asylum, we need only
further remark, that it contained a small temple, bat to what deity it was dedicated nobody coald tell

 15); and he was therefore merely called the divinity of the asylum (Эैès ávùauas, Plut. Rom. 9).

Another disputed point is the precise situation of the Rites Tarpera, or that part of the summit whence criminals were hurled. The prevalent opinion among the older topographers was that it was either at that part of the bill which overhangs the Piazza Montanara, that is, at the extreme SW. point, or farther to the W., in a court in the I'ia di Tor de' Specchi, where a precipitons cliff, sufficiently high to cause death by a fall from it, bears at present the name of Rupe Tarpea. That this was the true Tarpeian rock is still the prevalent opinion, and has been adopted by Becker. But Durean de la Malle (Mémoire sur la Roche Tarpeienne, in the Mem. de $l^{\prime}$ Acad., 1819) has pointed out two passages in Dionysius which are totally incompatible with this site. In describing the execution of Cassius, that historian says that he was led to the precipice which orerhangs the forw, and cast down from it in the view of all the people (тойтo tù тé入os tîs ठiкns 入abovians,

 катג̀ тท̂s пє́тpas, viii. 78 , ef. vii. 35 , seq.). Now this could not have taken place on the side of the Tor $d e$ ' Specchi, which cannot be seen from the forum; and it is therefore assumed that the true Rupes Tarpeia must have been on the E. side, above $S$. Maria della Consolozione. The arguments adduced by Becker to controvert this assamption are not very conviacing. He objects that the bill is much less precipitous here than on the other side. But this

SUPPOEED TARPELAN RUCK.
proves nothing with regard to its earlier state. Livy, a) we have seen, records the fall of a vast mass of rock into the Yicus Jugarius. Such landslips must have been frequent in later times, and it is precisely where the rock was most precipitons that they would occur. Thes, Flavius Blondins (Inst. Rom. ii. 58) mentions the fall in his own time of a piece as large as a honse. Another objection advanced by Becker is that the crininal woald bave fallen into the Vicas Jugarius. Tiis, lowerer, is absurd ; he would only
latve fallen at the back of the houses. Nothing can be ioferred from modern names, as that of a church now non-extant, designated as sub Tarpeio, as we have already shown that the whole S . summit was Mons Tarpeius. Becker's attempt to expiain away
 the whole, it seems most probable that the rock was on the SE. side, not only from the express testimony of Dionysius, which it is difficult or impossible to set aside, but also from the inherent pro-

ROMA.
bability that among a people like the Romans a public execution wonld take place at a public and cotispienous spot. The Cextra Grabus, or Hunited Steps, were probably near it ; but their exact sitna-

ROMA.
tion it is impossible to point out. The other oljects on the Clivus and slopes of the hill will be described in the next section.

PLAN OF THE FORUM DURING THE REPUBLIC.

1. Basilica Opimia.
2. Aedes Coneordiac.

8. Porta Stereorana.
9. Schola Xantha.
10. Templum Saturni.
11. Bhsilica Sempront:
12. Aedes Castoris.

## IV. The Foruar and its Environs.

The forum, the great centre of Roman life and business, is so intinately connected with the Capitol that we are maturally led to treat of it nest. Its original site was a deep hollow, extending from the eastern foot of the Capitoline hill to the spot where the Volia begins to ascend, by the remains of the temple of Antoninus and Fanstina. At the time of thip lattle between the Romans and Sabines this ground was in its rude and natural state, partly swampy and partly overgrown with wood. (Dionys. ii. 50.) It could, bowever, have been neither a thick wood nor an absolute swamp, or the battle could not have taken place. After the alliance between the Sabines and Romans this spot formed a sort if nentral ground or common meeting-place, and was inproved by cutting down the wood and lilling up the swampy parts with earth. We mast not, mideal, buk for alything like a regular formm F-fon. the reym of Terquinius l'risents: yet some of the pou if.ll lume whin markel its subequent extent fren hern thaced before that periorl. On the E. and W. These an moulsed by the nature of the gromad; on the bormer loy the asenut of the Velia, on the latter by ti. ('apitwine hill. Its northern bondary was tramel by the rowd called Sacra Yia. It is only of late years, humerer, that these boundaries have been recogniod. Among the earlier topographers views equally erroneous and discordant

$d d$. Vicus Tuscus.
prevailed upon the sabject; some of them extending the forum lengthways from the Capitoline hiil to the summit of the Velia, where the arch of Titas now stands; whilst others, taking the space between the Capitoline and temple of Faustina to have been its breadth, drew its length in a southerly direction, so ns to encroach upon the Velabrum. The latter theory was adopted by Nardini, and prevailed till very recently. Piale (Del Foro Romano, Roms, 1818, 1832) has the merit of having restored the correct general view of the furum, though his work is not always accnrate in details. The proper limits of the forum were established by excavations made between the Capitol and Colosseum in 1827, and following yeats, when M. Fea saw opposite to tho temple of Antonimns and Faustina, a piece of the pavement of the Sacra Via, similar to that which runs under the arch of Severus. (Bunsen, Le For. Rom. expliqué, p. i.) A similar piece lad been presiowly discovered during excavations made in the year $1:+2$, before the church of $S$. Adriano, at the eastern corner of the Tia Bonella, which Fienroni ( Westigie di Koma antica, p. 75) righely considered to belong to the Suera Via. A line prolonged through these two pieces tomards the arch of Severns will therefore give the direction of tho street, and the boundary of the forum on that side. The southern side was no less satisfactorily determined by the cxeavations made in 1835 , when the Basilica Julia was discorered; and in front of its
steps another pared street, enclosing the aren of the forma, which was distinguishable hy its being pared with slabs of the ordinary silex. This street continucd eastwards, past the ruin of the three columns or temple of Castor, as was shown by a similar piece of street pavement having been discorered in front of them From this spot it must have proceeded eastwards, past the church of Sta. Maria Liberatrice, till it met that portion of the

Sacra Via which ran in a southerly direction opposite the temple of Faustina ( $S$. Loernzo in Miranda), and formed the eastern boundary of the formm. Hence, according to the opinion now generally received, the forum prescnted an ohlong or rather trapezoidal figure, 671 English feet in Jeneth, by 202 at its greatest breadth under the Capitol, and 117 at its eastern extremity. (Bunsen, Les Forum de Rome, p. 15.)

THE FORUM IN ITS PRESENT STATE.

Sacra Fin. - The Sacra Vin was thus intimately connected with the forum; and as it was both one of the most ancient and one of the most important streets of Rome, it will demand a particular description. Its origin is lost in obscurity. According to some acconuts it must have heen already in existence when the battle before alloded to was fought, since it is said to have derived its name of the "Sacred Way" from the treaty concluded upon it between Romulus and Tatius. (Dionys. 3i. 46; Festus, p. 290, Miill.) This, however, seems highly improbable; not only becanse the road could hardly have existed at so early a period, when the site of the forum itself was in so rude a state, but also because a public highway is not altogether the place in which we should expect a treaty of peace to be concluded. The name of the comitium has also been derived, perhaps with no preater probability, from the same event. It is more likely that the road took its origin at a rather later period, when the Sabine and Roman cities had become consolidated. Its name of Sacra Via seems to have been derived from the sacred purposes for which it was usci. Thus we learn
from Varro (I, L. \& 47, Miill.) that it hegan at the sacellum of the goddess Strenis, in the Carinae; that it proceeded thence as far as the arx, or citadel on the Capitoline hill; and that certain sacred offerings, namely, the white sheep or lamb (oris idulis), which was sacrificed every ides to Jove (Ovid, $F$. i. 56 ; Macrob. S. i. 15 ; Paul. Diac. p. 104, Mïll.), were horne along it monthly to the arx. It was also the road by which the augurs descended from the arx when, after taking the auguries, they proceeded to inaugurate anything in the city below. It likewise appears that Titus Tatius instituted the custom that on every new year's day the angurs should bring him presents of rerbenae from the grove of Strenia, or Stremua, to his dwelling on the arx (" ab vxortu poene urbis Martiae Streniarmm usus adolevit, auctoritate regis Tatii, qui verbenas felicis arboris ex luco Strenuae anni novi anspicia primus accepit," Symm. Epist. x. 35). This castom seems to have been retained in later times in that known as the augurium salutis. (Cic. Leg. ii. 8; Tac. Ann. xii. 23; Lucian, Pseudol. 8.) Hence perhaps the appellation of "sacra;" though the
31) 3
whole extent of road was called Sacra Via only in sacerdotal language, between which and the cotamon usage we have already had occasion to note a diversity when giving on account of the Servian gates. In common parlance only that portion of the road was called Sucra Via which fonned the ascent of the Velia, from the forum to its summit ("Hujus Sacrae Viae pars haee sola vulgo nota quae est a tiro cunti primore clivo," Yarr, l. e.). Hence by the poets it is sometimes called "Sacer Clirus:" "Inde sacro veneranda petes Palatia clivo." (Mart. i. 70.5 ) ; and -
> "- quandoque trahet feroces
> Per sncrum clivum,imerita decorus
> Fronde, Sicambros."

(Hor. Od. iv. 2. 34.)
compared with-
" Intactus aut Britannus nt descenderet Sucra catenutus via." (1d. Epod. vii. 7.)
(Comp. Ambrosch, Studien und Andeut. p. 78 , seq.) The origin of the vulgar opinion is explained by Festus in the following passage: "Itaque ne eatenus quidem, ut vulgus opinatur, sacra appelianda est, a regia ad domum regis sacriticuli; sed etiam a regis domo ad sacellum Streniae, et rursus a regia usque in arcem" (p. 290, Mull.). Whence it appears that only the part which lay between the Regia, or honse of the pootifex maximus, and that of the rex sacrificulus, was commonly regarded, and probably for that very reason, as "sacra." This passage, however, though it shows plainly enough that there must hare been a space between these tiwo residences, has caused some embarrassment on account of a passage in Dion Cassius (liv. 27), in which he says that Augustus presented the bouse of the rex
 because it adjoined their residence ( $\delta \mu$ órotzos $\bar{\eta} \nu)$; and as we know from Pliny ( $E p$. vii. 19) that the restals dweit close to the temple, it seems impossible, if Dion is right, that there should have been a street lying between the two places mentioned. But the matter is plain enough; though Becker (de Muris, pp. 30-35, Handb. pp. 226237) wastes several pages in most far-fetched reasonings in order to arrive at a conclusion which already lies before us in a reading of the text of Dion for which there is actually MS. authority. Augustus was chosen pontifes maximus (á $\rho \chi^{i \epsilon-}$ peús), not rex sacrificulus, as Dion himself says in this passage. But the two offices were perfectly distinct ("Regem sacrificulum creant. Id sacerdotium pontifici subjecere," Liv. ï. 2). Augustus would hardly make a present of a house which did not belong to him; and therefore in Dion we must
 for it $\rho \bar{\omega} v$ : Dion thus, in order perbaps to convey a lively notion of the office to his Greek readers, designatiug the Roman pontifex maximus as "king of tbe priests," instead of using the ordinary Greek term $\dot{\alpha} \rho \chi i e p e$ us. The matter therefore lies thus. Varro says that in ordinary life only the clivus, or ascent from the formm to the Summa Sacra Via, obtained the name of Sacra Via. Festus repeats the same thing in a different manner; designating the space so called as lying between the Regia, or house of the pontifex maximus, and that of the rex sacrificulns. Whence it follows that the latter must have beet on the Summs fiacra Via. It can scarcely be doubted that before the time of Augustus
the Regia was the residence of the pontifex maximus. The building appears to have existed till a late period of the Eimpire. It is mentioned by the younger Pliny ( $E_{p}$. iv. 11) and by Plutarch ( (2.R. 97, Rom. 18) as extant in their time, and also probably by Herodian (i, 14) in his description of the burning of the temple of Peace under Commodus. After the expulsion of the kings, the rex sacrificulus, who succeeded to their sacerdotal prerogatives, was probably presented with one of the royal residences, of which tbere were several in the neighbourhood of the Summa Sacra Via; that being the spot where Ancus Marcius, Tarquinius Priscus, and Tarqninius Superbus had dwelt. (Liv. i. 41; Solin. i. 23, 24 ; Plin. xxxiv. 13.) We cannot tell the exact direction in which the Sacra Via traversed the valley of the Colosseum and ascended to the arch of Titus, nor by what name this part of the road was commonly called in the laoguage of the people; but it probably kept along the base of the Velia. At its bighest puint, or Summa Sucra Via, and perhaps on the site afterwards occupied by the temple of Vemus and Rome, there seems to have been anciently a market for the sale of fruit, and also probably of nick-macks and toys. "Surma Sacra \ia, ubi poma veneunt." (Varr. R. R. i. 2.) Hence Ovid (A. A. ii. 265.) :-
${ }^{6}$ Rure suburbano poteris tibi dicere missa Illa, vel in Sacra sint licet emta Via."
Whilst the nick-nacks are thus mentioned by Propertius (iii. 17.11.): -
" Et modo pavoois candae flabella superbac Et manibus dura frigus habere pila,
Et cupit iratum talos me poscere eburnos Quaeque nitent Sacra vilia doma Via."
The direction of the Sacra Via is indicated by Horace's description of his stroll: " Ibam forte Vis Sacra," \&c. (S. i. 9.) He is going down it towards the forum, having probably come from the villa of Maeceans, on the Esquiline, when he is interrupted by the eternal bore whom he has pilloried. The direction of his walk is indicated by his nnavailing excuse that be is going to visit a sick friend over the Tiber (v.17) and by the arrival at the temple of Vesta (v. 35); the Sacra Via having been thus quitted and the forum left on the right. The tro extremities of the street, as commonly known, sre indicated in the following passage of Cicero: "Hoc tamen miror, cur tu huic potissimum irascere, qui longissime a te abfuit. Equident, si quando ut fit, jactor in turba, non illum accuso, qui est in Summa Sacra Jia, cum ego ad Fabium Fornicem impellor, sed eum qui in me ipsum inearrit atque incidit" ( $p$. Planc. 7). The Fornix Fabius, ss it will be seen hereafter, stood at the eastern extremity of the forum; and Cicero has made the most of his illustration by taking the whole length of the street. Beyond this point, where it traversed the N. sids of the formm, we are at a loss to tell what its vulgar appellation may have bcen; and if we venture to suggest that it may have beun called "Janus," this is merely a conjecture from ltorace (Epish. i. 1.54), where "haee Janus summus ab imo" seems to suit better with a street - just as we sbould say, "all Lombard street" - than with two Jani, as is commonly interpreted, or thao with a building containing several floors let out in counting bouses. (Cf. Sat. ii. 3. 18.) This view is supported by the Scholia on the lirst of these passages, where it is said:

## ROMA.

ROMA.
" Janus antem hic platea dicitur, ubi mercatores et freberatores sortis causa convenire solebaut." In fact it was the Roman Chauge. The ascent from the forum to the summit of the Capitoline bill, where the Sacra Via terminated, was, we know, called Clivus Capitolinus.

It only remains to notice Becker's dictum (de Muris, p.23) that the name of this street shonld always be written Sacra Via, and not in reversed order Via Sacra. To the exceptions which he noted there himself, he adds some more in the Handbuch (p. 219, note), and another from Seneca (Controv. xxvii. p. 299, Bip.) in his Addenda; and Urlichs (Rom. Topogr. p. 8) increases the list. On the whole, it would seem that though Sacra Via is the more usnal expression, the other cannot be regarded as unclassical.

Vicus Jugarius -Of the name of the street which ran along the south side of the forum we are ntterly ignorant; but from it issued two streets, which were among the most busy, and best known, in Rome. These were the Vicus Jugarins and Vicns Tuscus. We have before had oceasion to mention that the former ran close under the Capitoline hill, from the forum to the Porta Carmentalis. It was thougbt to derire its name from an altar which stood in it to Jnno Juga, the presiding deity of wedlock. (Paul. Diac. p. 104, Müll.) It does not appear to have contained any other sacred places in ancient times; but Augustus dedicated in it altars to Ceres and Ops Augnsta. (Fast. Arit. IV ${ }^{*} . I \mathrm{~d}$. Aug.) At the top of the street, where it entered the fornm, was the fountain called Lacus Servilius, which obtained a sad notoriety during the proseriptions of Sulla, as it was here that the heads of the mordered senators were exposed. (Cic. Rosc. Am. 32; Senec. Prov. 3.) M. Agrippa adorned it with the effigy of a bydra (Festus, p. 290, Müll.). Between the Vicus Jugarius and Capitoline hill, and close to the foot of the latter, lay the Aequimaelium (Liv. xxxviii. 28), said to have derived its name from occnpying the site of the bouse of the demagogue, Sp . Maelius, which had been razed (Varr. L.L. v. 157, Mull.; Liv. iv. 16). It served as a market-place, especially for the sale of lambs, which were in great request for sacrifices, and probably corresponded with the modern Via del Monte Tarpeo. (Cic. Div. ii. 17.)

Vicus Tuscus.-In the imperial times the Vicns Jugarius was bounded at its eastern extremity by the Basilica Julia; and on the further side of this building, again, lay the Vicus Tnscus. According to some authorities this street was founded in B. c. 507 , being assigned to such of the Etruscans in the vanquished host of Arous as had fled to Rome, and felt a desire to settle there (Liv, ï. 15; Dionys, v. 36); but we bave before related, on the authority of Varro and Tacitus, that it was founded in the reign of Romulus. These conflicting statements may, perhaps, be reconciled, by considering the later settlement as a kind of second or subsidiary one. However this may be, it is with the topographical facts that we are here more particularly concerned, about which Dronysius communicates some interesting particulars. He describes the ground assigned to the Tuscans as a sort of hollow or gorge sitnated between the Palatine and Capitoline bills; and in length nearly 4 stadia, or half a Roman mile, from the forum to the Circus Maximus (v. 36). We must presume that this measurement included all the windings of the street; and even then it would
seem rather exaggerated, as the whole NW. side of the Palatine hill does not exceed about 2 stadia. We most conclude that it was continued through the Velabrum to the circus. Ita length as Canina observes (For. Rom, pt. i. p. 67) is a proof that the forum must have extended from NW. tu SE., and not from NE. to SW.; as in the latter case, the space for the street, already too short, would bave been considerably curtailed. Thia street, probably from the babits of its primitive colonists, became the abode of fishmongers, fruiterers, bird-fanciers, silkmercers, and perfamers, and enjoyed bat an indifferent reputation ("Tusci turba impia vici," Hor. S. ii. 3. 29.) It was here, however, that the best silks in Rome were to be procared (" Nec nisi prima velit de Tusco serica vice," Mart. xi. 27. 11). In fact, it seems to have been the great shopping street of Rome ; and the Roman gentlemen, whose ladies, perhaps, sometimes induced them to spend more than what was agreeable there, rented their ill hnmour by abnsing the tradesmen. According to the scholiast on the passage of Horace just cited, the street was also called Vicus Turarins. This appellation was doubtless derived from the frankincense and perfumes sold in it, whence the allnsion in Horace (Ep. i. 1. 267):
"Ne capsa porrectus aperta Deferar in vicum vendentem tus et odores, Et piper, et quicquid chartis amicitur ineptis."
Being the road from the forum to the circus and Aventine, it was mach used for festal processions. Thus it was the route of the Pompa Circeusis, which proceeded from the Capitol over the forum, and by the Vicus Tuscus and Velabrum to the circus. (Dionys. vii. 72.) We bave seen that the procession uf the virgins passed through it from the temple of Apollo ontside the Porta Carmentalis to that of Juno Regina on the Arentine. Yet notwithstanding these important and sacred uses, it is one of the cbarges brought by Cicero against Verres that he had caused it to be paved so villanonsly that be himself wonld not have ventored to ride over it. (Verr. i. 59.) We see from this passage that a statue of Vertumnus, the national Etruscan deity, stood at the end of the street next the formm. Becker (Handb. p. 308) places him at the other extremity near the Yelabrum. But all the evidence runs the other way; and the lines of Propertius (iv. 2. 5), whu puts the following words into the god's mouth, are alone snfficient to decide the matter (Class. Mus. vol. iv. p. 444):-

## "Nec me tura juvant, nee templo laetor eburno <br> Romarum satis est posse videre forum."

Comitium.-Having thus described the streets which eitber encircled the forum or affurded outlets from it, we will now proceed to treat of the formm itself, and the objects situated upon and around it, and endeavour to present the reader with a picture of it as it existed under the Kings, doring the Republic, and under the Empire. But here, as in the case of the Capitol, we are arrested in the outset by a difficult investigation. We know that a part of the forum, called the comitium, was distinguished from the rest by being appropriated to more honourable nses; but what part of the forum it was bas been the subject of much dispute. Some, like Canina, have considered it to be a space running parallel with the forum along its whole sonthern extent ; whilst others, like Bunsen and Becker, have thought that it formed
a section of the area at its eastern extremity, 1h -ize about one-third of the whole forum, An argetment advanced by Becker himself (Fkandb. p. 278) Noms decisive against both these riews; namely, that we never hear any building on the S . side of the formon spoken of as being on the comititun. Yet in spite of this just remark, be ends by adopting the theory of Bunsen, according to which the comitium began at or near the rnin of the tbree columns and extended to the eastern extremity of the forum: and thus buth the temple of Vesta and the Regia must have stood very close to it. The two chief reasons which seem to bave led him to this conclusion are, the situation of the rostra, and that of the Tribunal Practoris. Respecting the former, we shall have occasion to speak further on. The argument drawn from the latter, which is by far the more important one, we shall examine at once. It proceeds as follows (Handb. p. 280): "The original Tribunal Praetoris was on the comitium (Liv. vi. 15, xxix. 16; (iell. xx. 1, 11, 47 (fron the X11. Tables); Varro, L. L. v. 32. p. 154; Plaut. Poen. iii. 6. 11 ; Macrob. Sat. ii. 12), which, however, is also mentiuned as being merely on the forum. (Liv. xxvii. 50, sl. 2, 44.) But close to the tribunal was the Puteal Libonis or Scriboniauum, and this is expressly mentioned as being near the Fornix Fitbius, the Atrium Vestae, the rostra, and lastly the aedes Divi Julii (Porphyr, ad Hor. Ep, i. 19. 8: Schol. Cruq. Ib. Id. ad. Sat. ii. 6. 35; Fest. p. 333; Schol. ad Pers. Sat. iv. 49); consequently the conitium also must have been close to all these objects."

We presume that Becker's meaning in this passage is, that the first or original tribunal was on the comitium, and that it was afterwards moved into the forum. It could hardly have been both on the comitium and firmnt, thouch Becker seems to hint at such a possibility, by saying that it is "also mentioned as being merely oo the form: " and indeed there seems to be no physical impossibility in the way, since it is evident that the tribunal at first wis merely a movabie chair (" dictator - stipatus ea multitudine, sella in conitio posita, viatorem ad M. Manlium nuisit: qui agmine ingenti ad tribunal venit," Liv. vi. 15). But if that was his meaning, the passages he cites in proof of it do not bear hinn out. In the first Livy merely says that a certain letter was carried throngh the formon to the tribumal of the praetor, the latter of course being on the comitium ("eae literac per formm ad tribunal practotis latae," xxiii. 50). The other two jassages cited contain nothing at all relative to the subject, ho: can there be any donbt that in the early times of the Republic the comitiun was the usaal place on which the praetor took his seat. But that the tribunal was moved from the comitiun to the formm is shown by the schulasts on Horave whom Becker gquotes. Thus Porphyrio says: " Puteal autem Libunis sedes praetoris fuit proje Ascum Fabianum, distumque quad a Libune ithic primum troumal et subsella locata sint." Primum here is not an adfective to be joined with tribuent - i. e. "that the first or original tribunal wav |' w. 1 there by Libo:" but an adversh "that the tubunal was first placed there by Libo." The firmor vorvion watd be nonsense, beatuse L, abo's thlumal could not prombly have been the first. Besides the meaning is pnathbi nously shown by the Schol. Cruq.: "putial Lifunis ; tribunal: Gund auten ait Liboris, huns sumsit, quod is prinaus tribunal in foro statuerit." If the anthority
of these scholiasts is suspicious as to the fact of this removal, though there are oo apparent grounds for suspieion, yet Becker at all events is not in a condition to invalidate their testimony. He has quoted them to prove the situation of the puteal; and if they are good for that, they are also good to prove the removal of the tribunal. Yet with great incousistency, he tacitly assumes that the tribumal had alrayss stood in its origioal place, that is, on the comitiou, and by the puteal, contrary to the express evidence that the latter was on the furum. ("I'utcal locus erat in foro." Sch. Cruq. ad Sat. ii, 6. 35.) Liho flourished about a century and a half before Christ. [See Dict. of Biogr. Vol. II. p. 779.] Nuw all the examples cited by Becker in which the tribunal is alluded to as being on the comitium, are previous to this date. The first two in note 457 might be passed over, as they relate not to the praetor but to the dictator and consuls; nevertheless, they are both anteriur to the time of Libo, the first belonging to the year B. c. 382 and the second to 204. The passage from Gellius " ad practorem in comitium," being a quotation from the XII. Tables, is of course long prior to the same period. The passage in Varro (v. § 155, Mill.), which derives the name of comitium from the practice of coming togetber there (coire) for the decision of suits, of course refers to the very origin of the place. A passage from Plautus can prove nothing, since he died nearly lialf a century before the change effected by Libo. The passage alluded to in Mlacrobius (ii. 12) must be is the quotation from the speech of C. Titius in favour of the Lex Fannia: " Inde ad comitium vadunt, ne litemi suan faciant; veniunt in comitium tristes, \&c." But the Lex Funnia was passed in B. c. 164 (Macrob, if. 13): or even if we put it four years later, in B. c. 160, still before the probable date of Libo's alteration; who uppears to have been tribune in B. C. 149. Thus the argument dues out merely break down, but absolutely recoils aquinst its inventor; for if, as the Scholis Cruquiama ivform us, Libo moved the tribunal from the cumitium to the forum, and placed it near the puteal, then it is evident that this part of the area could nut have been the comitium.

The comitian, then, being neither on the south nor the east sides of the fornm, we must try our fortune on the north and west, where it is to be hoped we shall be more successful. The only method which promises a satistactory result is, to seek it with other objeets with which we know it to have leen connected. Now one of these is the Vulcanai. We learn from Festus that the comitium stood beneath the Vuleanal: "in Volcanali, quod est supra Comitium " (p. 290, Mitll.). In like manner Dionysius describes the Vulcanal as standing a little above the forum, using, of course, the latter word in a general sense for the wbole area, including

 बтпко́ть ти̂s áyapās (i1. 50). Where iepóv is not to be taken of a proper temile (vaós), but si_nities merely an area consecrated to the god, and having prolably an altar. It was a rule that a temp le of Viulean should be outside the town (Vierur, i. i); and thus in later times we find ono in the Campus Martius ("tactam) de caelo aedem in campo Vuleani," Liv, xxiv. 10). That the Vulcanal was merely an open space is manifest from its ap pellatua of area, and from the accounts we read of ram souling upon it (Lir. xxxix. 46, xl. 19), of buildings beng
erected apon it (Id. is. 46), \&c. But that it had an altar appears from the circumstaace that sacrifices of live fish taken in the Tiber were here made to Vulcan, in propitiation for human souls. (Festus in Piscatorit Ludi, p. 238, Müll.) Another fact which shows it to have been an open space, and at the same time tends to direct us to its site, is the lotus-tree which grew upon it, the roots of which are said to bave penetrated as far as the forum of Caesar, which, as we shall show in its proper section, lay a little N. of the Forum Romanum. "Verum altera lotos in Valcanali, quod Romulus constituit ex victoria de decumis, aequaeva urbi intelligitur, ut auctor est Masurius. Radices ejus in forum nsque Caesaris per stationes municipiorum penetrant." (Plin. xvi. 86.) From which passage - whatever may be thought of the tale of the tree - we deduce these facts : that the Vulcanal existed in the time of Pliny; that it lad occopied the same spot from time imnemorial; that it could not have been at any very great distance from the forum of Caesar, otherwise the roots of the tree could not possibly have reached thither. Let those consider this last circamstance who hold with Cauina that the comitium was on the south side of the forum; or even with Bunsen and Becker that it was on the east. The Vulcanal must originally have occupied a considerable space, since it is represented as having served for a place of consultation between Romulus and Tatins, with their respective senates. (Dionys. ii. 50 ; Plut. Kom. 20.) It extent, however, seems to have been reduced in process of time, since the Graecostasis rras taken out of its area; a fact which appears from Livy mentioning the Aedes Concordiae, built by Flavius, as being " in area Vuicani" (ix. 46); whilst Pliny says that it was on the Graecostasis (" aediculan aeream (Concordiae) fecit in Graecostasi, quae tune supra comitium erat," xxxiii. 6): whence the sitastion of the Vulcanal may be further deduced : siace we know that the Graecostasis adjoined the curia, and the latter, as will be shown presently, lay on the N. side of the forum. Hence the Vulcanal also must have been close to the curia and foram; whence it ran hack in a N . direction towards the spot subsequently occupied by the Forun Caesaris. This site is further confirmed by the Notitia, which places the Area Vulcati, as well as the Templum Faustinae and Basilica Paulli in the 4th Regio. Preller indeed says (Regionen, p. 128), that the ares cannot possibly be mentioned in its right place here, because it stowd immediately over the formm in the ueighbourhood of the temple of Faustina, where the old Curia Hostilia stood; but his only reason for this assertion is Becker's dictum respecting the Vulcanal at p. 286, of which we have already seen the value. The comitinm, then, would occupy that part of the forum which lay immediately under the Valeanal, or the W. part of its N side: a situation which is confirn,ed by other evidence. Dionysius says that, as the judgment-seat of Romulus, it was in tire most
 Tท̄s àyopâs, ii. 29), a description which corresponds adnirably with the site proposed. Livy (i.36) says that the statue of Attins Navius was on the steps of the comitium on the left of the curia, whence it may be inferred that the comitium extended on both sides of the curia. Pliny (xxxiv. 11) speaking of the same statue, says tbat it stood before the curia, and that its basis was burnt in the same fire which consumed that hailding when the body of Clodius was burnt there.

Hence, we are led to suppose that the comitium occupied a considerable part of the N. side of the forum; but its exact limits, from the want of satisfactory evidence, we are unable to define. It must have been a slightly elevated place, since wo hear of its having steps ; and its form was probably curvilinear, as Pliny (xxxiv. 12) speaks of the statues of Pythagoras and Alcibiades being at its horns (" in cornibus Comitii"); unless this merely alludes to the angle it may bave formed at the corner of the forum. It has been sometimes erroneously regarded as baving a roof; a mistake which seems to have arisen from a misinterpretation of a passage in Livy, in which that author says that in B. C. 208 the omitium was covered for the first time since Hannibal had been in Italy ("Eo anno primom, ex quo Hannibal in Italiam venisset, comitium tectum esse, memoriae proditum est," $x \times v i i .36$ ). Hence, it was thought, that from this time the comitium was covered with a permanent roof. But Piale (del F'oro Rom. p. 15, seq.) pointed out that in this manner there would be no sense in the words "for the first time since Humnibal was in Italy," which indicate a repeated covering. The whole context shows that the historian is allnding to a revived celebration of the Roman games, in the usual fashion; and that the covering is nothing more than the vela or canvas, which on such occasions was spread over the comitium, to shade the spectators who occupied it from the sun. That the comitium was au open place is evident from many circumstances. Thus, the prodigious rain, which so frequently falls in the narrative of Livy, is described as wetting it (Liv. xxxiv. 45; Jul. Obseq. c. 103), and troops are represented as marchiog over it. It was here, also, that the fumous Ruminalis Arbor grew (Tac. Ann. sini. 58), which seems to have been transplanted thither from the Palatine by some juggle of Attins Narius, the celebrated augur (Plin. xv. 20; ap. Bunsen, Les Forum de Rom. p. 43, seq.), though we can by no means accede to Bunsen's emendation of that passage.

The principal destination of the comitium was for holding the comitia curiata, and for hearing lawsuits ("Comitium ab eo quod coibant eo, comitiis curiatis, et litium causa," Var. L. L.v. § 155, Mull.), and it must, therefore, bave been capable of containing a considerable number of persons. The comitia centuriata, on the other band, were held in the Campus Martius ; and the tributa on the forum proper. The curiata were, however, sometimes held on the Capitol befure the Curia Calabra. The comitium was also originally the proper place for contiones, or addresses delivered to the assembled people. All these customs caused it to be regarded as more honourable and important than the formm, which at first was nothing more than a mere market-place. Hence, we frequently fiod it spuken of as a more distinguished place than the formin ; and seats apon it for viewing the games were assigued to persous of rauk. Its distinction from the forum, as a place of honour for the magistrytes, is clearly marked in the following passage of Livy, describing the alarm and confusion at Rome after the defeat at Trasimene: " Romae ad primum nuntium cladis ejus cum ingenti terrore ac tumultu concursus in forum populi est factus. Matronae ragae per vias, quae repeus clades adlata, quaeve fortuna exercitus esset, obvios percontantur. Et quuin frequentis contionis modo turbes in comitiom et curian versa magistratus tocaret," \&c. (xxii. 7). When not uc-
cupied by the magistrates it appears to have been open to the people. Thus, the senate being assembled in the curia to hear the ambassadors of those made prisoners at the battle of Camnae, the people are represented as filling the comtium : "Ubi is finem fecit, extemplo ab ea turba, quare in comitio erat, clamor flebilis est sublatos, manusque ad cariam tendentes, \&c." (Id. xxii, 60.) Being the place for the contiones it of course had a suggestum, or rostra, from which speeches were delivered; but we shall have occasion to describe this and other objects on and around the comitium and forum when we arrive at them in their chronological erder.

It was not till after the preceding account of the comitiom had been committed to paper that the writer of it met with the essay on the comitium by Mommsen in the Aunali dell' Instituto (vol. xvi.), to which referevce has before been made. The writer was glad to perceive that his general view of the situation of the comitium had been anticipated, although he is unable to concur with Mommseo respecting some of the details; such as the situation of the Curia Hostilia, of the temple of Jazus, of the Forum Caesaris, and some other objects. In refuting Becker's views, Mommsen bis used much the same arguments, though not in such detail, as those just alduced; bat he bas likewise thougbt it worth while to refute an argument from a passage in Herodian incidentally adduced by Beeker in a note (p. 332). As some persons, bowever, may be disposed to attribute more weight to that argument than we do ourselves, we shall here quote Nommsea's refutation: "Minus etiam probat alterum, qued i Beckero, p. 332, n. 612, affertur, argumentum desumtum ex narratione Herodiani, i. 9, Severum in somnio vidisse Pertinacem equo vectum $\delta \dot{\alpha} \mu \dot{\epsilon} \sigma \eta s$

 subiisse Severo eumque vexisse $\overline{\epsilon \pi l}$ $\tau \bar{\eta} s$ à apopas $\mu \dot{\sigma} \eta \mathrm{s}$. Non intelligo cur verba êvөa - е̇ккл $\eta$ $\sigma i a \zeta \epsilon \nu$ referantur ad $\tau \eta \nu \nu \quad \alpha \rho \chi \eta \eta \nu$ neque ad $\tau \hat{\eta} s$
 quasi in foro insistere videtar qui rerum Romanarum potiturus est, ita de comitio eo tempore inepte haec dicerentur; accedit quod, si ad $\tau \eta \nu \nu ~ \alpha \dot{a} \rho \chi \bar{\eta} \nu \tau \hat{\eta} s$
 fuisset, neque in foro medio.-Nullis igitur idoneis argumentis topographi Germani comitium eam partem fori esse statuerant quae Veliis subjacet " (p. 289).

So much for the negative side of the question : on the positive side Mommsen alduces (p.299) an argument which had not occurred to the writer of the present article in proof of the position above indicated for the comitime. It is drawn from the Sacrum Cluacinae. That shrine, Mommsen argues, stood by the Tabernae Novac, that is, near the arch of Severus, as Becker has correctly shown (Handb. p. 321) from Livy iii. 48: but he has done wrong in rejecting the result that may be drawn from the comparison of the two legends; first, that the conitium was sis called because Romulus and Tatius met upon it after the battle (p. 273); second, that the Romans and Sabines cleansed themselves, after laying aside their arms, at the spot where the statue of Venus Cluacina afterwards stood (Plin. xr, 18.s. 36) : whence it fullows that the statue was on the comitiun. A fresh confirmation, Monansen continnes, may be added to this discovery
of the trutb. For tbat the Tabernae were on the comitium, and not on the forum, as Becker supposes, is pretty clearly shown by Dionysius ( $\tau \boldsymbol{\eta}$

We are not, however, disposed to lay any great stress on this argument. We think, as we have already said, that Varro's etymology of the cemitium, from the political and legal business transacted there rendering it a place of great resort, is a mach more probable one ; since, as the forum itself did not exist at the time when Romulus and Tatius met after thi battle, it is at least very unlikely that any spot should afterwards have been marked out upon it conumemorative of that event. It is, nevertheless, highly probable that the statue of Cluacina stood on the comitinm, but withont any refercace to these traditions. We do pot, however, think that tbe tabernae occupied the comitinm. By à oopá Dionysius means the whole forum, as may be inferred from $\pi \in \rho i \lambda \alpha \in \dot{\omega} \nu$.
The Forum under the Kings.-In the time of Romnlus, then, we must picture the forum to ourselves as a bare, open space, having upm it only the altar of Satorn at about the middle of its western, side, and the Vulcanal on its NW. side. Under Numa Pompilius it received a few improve. ments. Besides the little temple of Janns, which

temple of jaxus. (From a Coin)
did not stand far from the foram, but of which we have already bad occasion to speak, when treating of the Porta Janualis in the first part of this article, Numa built near it his Regia, or palace, as well as the celebrated temple of Vesta. Both these objects stood very Dear together at the SE. extremity of the forum. The Aethes Vestae was a round building (Festus, p. 262 ; Plut. Nium. 11), but no temple is the Roman sease of the word; since it had been purposely left aninaugurated, because, being the resort of the vestal virgins, it was not deemed right that the senate shonld be at liberty to meet itr it (Serv. Aen. vii. 153). Its site niay be inferred from

temiliz, of vesta. (From a Coib.)
several passages in ancient anthors. Thus we learn from Dionysius (ii. 66) that it was in the forum, and that the temple of the Dioscuri, whose site we shall point out further on, was subsequently built close to it (ld. vi. 13 ; Mart. i. 70. 2). It is also said to have been near the lake, or fountain, of Juturna. (Val. Max. i. 8. 1 ; Ov. F. i. 707.) Al] these circumstances indicate its site to have been near the present church of St. Maria Liberatrice; where, indeed the graves of twelve vestal virgins, with inscriptions, were discovered in the 16 th century. (Aldroandue, Memorie, D. 3; Lucio Fauno, Antich. di Roma, p. 206.) In all its subsequent restorations the original round form was retained, as symbolical of the earth, which Vesta represented (Ov. F. vi. 265). The temple itself did not immediately abut upon the forum, but lay somewhat back towards the Palatine; whilst the Regia, which lay in front, and a little to the E. of it, marked the boundary of the form on that side. The latter, also called Atrium Vestae, and Atrium Reginm, though but a small building, was originally inbabited by Numa. (Ov. ib. 265; Plut. Num. 14, Sc.). That it lay close to the fornm is shown by the account of Caesar's budy being burnt before it (App. B. C. ii. 148): and, indeed, Servius says expressly that it lay "in radicibus Palatii fioibnsque Romani fori" (ad den. vuii. 363). At the back of both the buildings mast have been a sacred grove which ran towards the Palatine. It was from this grove that a voice was heard before the capture of the city by the Gauls, bidding the Romans repair their walls and gates. The admonition was neglected; but this impiety was subsequently expiated by building at the spot an altar or sacellum to Aius Luqueas. (Cic. Dio. i. 45.)

Tullus Hostilins, after the capture of Alba Longa, adorned the forum with a caria or senate-house, which was called after him the Curia Hostilia, and continued almost down to the imperial times to be the most usual place for bolding assemblies of the senate. (Varr. I. L. v. \& 155 , Müll; Liv. i. 30.) From the same spoils he also improved the comitium: "Fecitque idem et sepsit de manubïs comitium et curiam " (Cic. Rep. ii. 17) ; whence we can lardly infer that be surrounded the eomitium with a fence or wall, but more probably that be marked it off more distinctly from the form by raising it bigher, so as to be approached by steps. The Curis Hostilia, which from its pre-eminence is generally called simply enria, must have adjoined the eastern side of the Vulcanal. Niebnhr (Beschr. vol. iii. p. 60) was the first who indicated that it mast have stood on the N . side of the forom, by pointing out the following passage in Pliny, in which the method of observing noon from it is described:"Duodecim tabulis ortus tanturn et occasus nominantur ; post aliquot annos adjectus est meridies, accenso consulum id pronuntiante, cum a curia inter rostra et graecostasim prospexisset solem." (vii. 60.) Hence, since the sum at noon could be observed from it, it must have faced the sonth. If its front, however, was parallel with the northern line of the fornm, as it appears to have been, it must have looked a little to the W. of S.; since that line does not run due E., bat a few degrees to the S . of E . Hence the necessity, in order to observe the true meridian, of looking between the Graecostasis and rostra. Now the Graecostasisat a period of conrse long after Tullus Hostilius, and when mid-day began to be observed in this
manner - was a lofty substruction on the right or W. side of the curia; and the rostra were also an elerated object situated directly in its front. This appears from the passage in Varro just alluded to: -" Ante hanc (curiam) rostra; quojos loci id vocabnlum, quod ex hostibus capta fixa sunt rostra. Sub dextra hujus (curiae) a comitio locus substructus, ubi nationum subsisterent legati, qui ad senatum escent missi. Is graecostasis appellatos, a parte ut multa. Senaculum sopra Graecostasim, bbi aedis Concordiae et Basilica Opimia." (L. L. v. § 155,156 .) When Varro says that the Graeco. stasia was sub dextra curiae, he is of course looking towards the south, so that the Graecostasis was on his right. This appears from his going on to say that the senaculom lay above the Graecostasis, and towards tbe temple of Concord; which, as we have had occasion to mention, was seated on the side of the Capitoline bill. It further appears from this passage that the Graecostasis was a substruction, or elevated area (locns substructus) at the side of, or adjoining the comitiom (comp. Plin. zxxiii. 6); and must have projected in front of the curia. The relative situation of these objects, as here described, is further proved by Pliny's account of observing midday, with which alone it is consistent. For, as all these objects faced a little to the W. of S., it is only on the assumption that the Graecostasia lay to the W. of the curia, that the meridian sun could be observed with accuracy from any part of the latter between the Graecostasis and rostra.

A singular theory is advanced by Mommsen respecting the situation of the Curia Hostilia, which we camot altogether pasa over in silence. He is of opinion (l. c. p. 289 , seq.) that it lay on the Capitoline hill, just above the temple of Concord, which be thinks was built up in front of it; and this he takes to be the reason why the caria was rebuilt on the forum by Sulla. His only authority for this view is the following passage in Lisy : "(Censores) et clivum Capitolinum silice sternendam coraverunt et porticum ab aede Saturni in Capitoliom ad Senaculum ac super id Coriaa" (xli. 27). From these words, which are not very intelligible, Nommsen infers (p. 292) that a portico reached from the temple of Satary to the senaculum, and thence to the curia above it, which stood on the Capitol on the spot afterwards occupied by the Tabularium (p. 292). But so many evident absurdities follow from this view, that Mommsed, had he given the subject adequate consideration, could hardly, we think, have adopted it. Had the curia stood behind the temple of Concord, the ground plan of which is still partly visible near the arch of Severus, it is quite impossible that, accordiog to the account of Pliny, mid-day conld have been observed from it between the rostra and Graecostasis, since it would have faced nearly to the east. Mommsen, indeed ( $p .296$ ), asserts the contrary, and makes the Carcer Mamertinus and arch of Titus lie almost due N. and S., as is also shown in his plan at the end of the volume. But the writer can affirm from his own observation that this is not the fact. To a person standing under the Capitol at the head of the formm, and opposite to the column of Phocas, the temple of Faustina bears due E. by the compass, and the arch of Titus a few degrees to the S . of E. To a person stauding by the arch of Severus, about the sssumed site of the curia, the arch of Titus would of course bear a little more S . still. Something must be allowed for variation of the
compass, but these are trifles. The correct bearin are given in Canina's large plan and in Beckit. noap, and are wholly at variance with thnse laid fown by Mommsen. Again, it is not to be inagined that Opimius would have built up his temple of Concord immediately in tront of the ancient curia, thons screening it eatirely from the view of the form and comitiun; a state in which it most have remained for nearly half a century, aecording to the hypothesis of Momunsen. Another decisive refutation of Mommsen's view is that the Basilica Purcia, as we shall see further on, was situated on the forum elose by the curia, whilst according to Mominsen the two buildings were separated by a considerable interval. We hold it, therefore, to be quite impossible that the curia could have stood where Mommsen places it; but at the same time we confess our inability to give a satisfuetory explnnation of the passage in Livy. A word, or several words, seem to have dropped out, as is the case frequently in the very same sentence, where the gaps are marked in the editions with asterisks. Such a corrupt sentence, therefore, does not suffice as authority for so important a change, in the teetb of all evidence to the contrary.

We shall only further observe that the preceding passages of Vairo and Pliny thus appcar, when rightly interpreted, mutually to support and explain one another, aod show the Graecostasis to bave stood to the W . of the curin, first from its prosjunty to the senaculum and temple of Concord, and secondly. from the mid-day line falling between it and the rostra. That the curia was considerably raised appears from the circumstance that Tarquin the Proud nearly caused the death of Nervins Tullius hy hurling him dowa the steps in front of it, which led to the comitium. (Dinoys. iv. 38 ; Liv. i. 48.) It was an inaugurated temple in order that the senate might hold their meetings in it, but not a sacred one. (Liv. i. 30; Varr. L.c.) In the reign of Tullns the forum was adorned with the trophy called Pila HormtliNa, consisting of the spinis woo from the Cariatil; but where it stood cannot be determined. (Dionys. iii. 22; Liv. i. 26.)

The sesaculuas referred to in the preceding accuant appears to have been a raised and open area, adjuining the Graecostasis and curin, on which the senators were accustomed to assemble before they entered the curia in order to deliberate. Thus Varro: "Senaculum mocatum ubi senatus aut nbi semiores consisterent : dictum nt Gerusia apnd Graecos" (r. § 156, Miill.). Valerius Maximus gives a still more explicit acconnt: "Senatus assiduam stationem eo luci perarebat qui hodieque Senaculum apppllatur: nec exspectabat ut edicto contraherptur, sed inde citatus protinus in Curiam re liebat " (ii. 2. §6). Festus mentions that there were three somacrala in all; namely, hevides the one alluded to, another near the Porta Capena, and a third be the ternple of Bellona, in the Campus Mar-tin- Lut as lis account is in sume respects contradictory of the two preceling anthorities, we shall here inseit it: "-whturula tra fuisse Komas, in quibus senatns lazkeni solths sit, memoriac prod:dit Nicostratus in hbro que mastribitur de senatu liabendo: runum, nhis munc est acdis Concordiae ioter Capitoliun et Firtum; in quo solebant magistratus 1). T. cun Senionbus defiberare; alternon ad portam Capenam; tentwo, etra acdem Bellonae, in quo exterarum nationmo legatis, quos in urbero admittere nolebant, sematus dabatur" ( $\mathrm{p}, 347$, Mall.).

Here the senaculam is represented, not as a place in which the senate assembled previously to deliberation, but as one in which it actually deliberated. It is impossible, bowever, that this could have been sn. For in that case what would have been the uso of the curia? in which the senate is constantly represented as assenbling, except in cases where they held their sittings in some uther temple. Besides we have no accounts of the senaculum being an inaugurated place, without which it would have been unlawfil for the senate to deliberate in it. Nicostratus therefore, who, from his name, seems to have been a Greek, probably confounded the senacola with the curia, and other temples io which the senate assembled; and at all events his account cannet be set against the more probable one of Varro and Valerius Maximus. There is, however, one part in the account of Festus, which seems to set the matter in a different point of viers. The words, "in quo snlebant magistratus D.T. cum sentoribos delibesare," seem to point to the senaculum not as a place where the semators deliberated among themselves, but where they conferred with the magistrates: such magistrates we may suppose as were not entitled to enter the curia. Sucis were tbe tribunes of the people, who, durine the deliberations of the senate, took their seats betore the closed doors of the enria; yet as they bad to examine and sign the decrees of the Fathers before they became laws, we may easily imagine that it was sometimes necessary for the tribunes and sebators to confer together, and these conferenees may have taken place at the senaculum (" Tribmis plebis intrare curian non licebat: ante valvas antem positis snbselliis, decreta patrum attentissima cura examinabant; ut, si qua ex eis improbassent, rata esse non siverent. Itsque veteribus senatus consultis T. litera subscribi solebat: eaque nota significabatur, ita tribunos quoque censnisse," Val. Nas. ii. 2. §. 7.) In this manner the senacola mould have answered two purposes; as places in which the senators met previonsly to assembling io the curia, and as a sort of neutral ground for confereaces with the plebeian miagistrates.

With regard to the precise situation of the senacnlum belunging to the Curia Hostilia, we car hardly assume, with Mommsen, that it occupied $\mathrm{U}_{\text {ee }}$ sput on which the temple of C'oncord was afterwards setually built; nor do the words of Varro and Festus,"Senaculum ubi aedis Concordiae"-seem to require so very rigorons an interpretation. It is sufficient if it adjoined the temple: though it is not improbable that the latter may have encroached upoo soune part of its area. After the temple was erected there atill appears to have been a large open space in front of it , part of the atcient senaculum, but which now seems to have obtained the name of "Area Cnocordiae." Its identity with the senaculum appears from its adjoining the Vulcanal, like the latter: "In arra Vuleani et Concordiae satguinetn pluit." (Lit, xl. 19.) "In area Vu" aui per buhum, in areal Concordiae totidem diehus sanguinem pluit." (Iul. Oharq. 59.) The temple of Concord became a very nastal place for assemblies of the senate, as appears from many pasanges in ancient authors. (Ciic, Mhil, ii. 7 ; Lampr. Alex, 6, Nes) From the suea a flight of steps led up to the restilule of the temple: "(Equites Nomani) qui frequentissitoi in gralibus Concurdse steterunt." (Cic. Phil. viis. 8.) According to Macrobius the temple of Naturn also had a senaculum

ROMA.
("Habet aram et ante senatulum," i. 8). This must bave been near the senaculum of the Curia Hostilia, but could harily hare been the same. If Macrotins is right, then Festus is wrong in limitiog the senacula to three; and it does not seem improbable that the areae near temples, where the senate was accustoned to meet, may bave been called senacula.

To Ancus Marcius we can ooly ascribe the Carcer Mameatinus, or prison described by Livy as overhanging the forum (" media urbe, immicens foro," i. 33). It is still to be seen near the arch of Sererus, under the charch of $S$. Giuseppe dei Falegnami.

We have before remarked that a sew architectural era began at Rome with the reign of Tarquains Priscus; and if he bad not been interrupted by wars, he moald doubtless bave carried ont many of those grand schemes which be was destined oaly to project. He may almost be called the founder of the forum, since it was he who first surrounded it with private houses and shops. Accordiog to Varro (ap. Mocrob. § i. 8), be also fonoded the Temple of Satura on the formm at the spot where the altar stood; though, according to anotber account, it was begun by Tullas Hostilius. At all events, it does not seem to have been dedicated before the expulsion of the kings (Macrob. l.c.), and according to Livy (ii. 21), io the censulship of Semproaios and Mioucius, B. c. 497. According to Becker (Handb. p. 312) the ruin of the three colamas under the Capitol are remains of it, and this, he asserts, is a most decided certaiaty, which can be denied only by persons who prefer their own opioion to bistorical sources, or wilfully shut their eyes. It appears to us, bowever, judging from these very bistorical sources, that there is a great deal more authority for the Italian view than for Becker's; according to which the temple of Saturn is the ruin of the eight colnmos, at the foot of the clivus. All the writers who speak of it meotion it as being at the lower part of the hill, and beneath the clivus, while the tiree columns are a good way np, and above the clivus. Thas Servius (Aen. ii. 115, viii. 319) says that the temple of Saturn was " ante clivnm Capitolini;" and in the Origo gentis Romanae (c. 3) it is ssid to be "sab clivo Capitolino." In like maoner Varro (L. L. v. § 42, Müll.) places it "in faccibas (montis Satorni);" and Dionysins,

 Festus (p. 322, Milli.) describes the ara as baving been " in imo clivo Capitolino." Moreover, the miliarinm aureum, which stood at the top of the forum (Plin, iii. 9) was under the temple of Satarn: " ad miliarium aureum, sub aedem Saturni" (Tac.II. i. 27); "sub aedem Saturni, ad miliarium aureum " (Suet. Otho. c. 6.) Further, the Monumentum Ancyranum meations the Basilica Jalia as "inter aedem Castoris et aedem Saturni." Now what bas Becker got to oppose to this overwbelming mass of the very best evidence? His objections are, first, that Servius (Aen. ii. II6) mentions the temple of Saturn as being " juxta Coacordiae templum ; " and though the eight columos are near the temple of Concord, yet they cannot, without awkwardness, be called juxta! Secondly, the Notitia, proceeding from the Carcer Mamertinus, names the temples in the following order: Templam Coocordiae et Saturni et Vespasiani et Titi. Now, as the three columos are next to the temple of Conicord, it follows that they belong to the temple of Saturn. The whole force of the proof here addaced rests on the assamption that the Notitia mentions these buildiags precisely in the order in which they actually occurred. But it is notorious that the aathority of the Notitia in this respect cannot be at all depeaded on, and that objects are named in ft in the most preposterous maoner. We need no other witoess to this fact than Becker himself, who says of this work, " Propterea caveadum est diligenter, ne, quoties plura simul templa nominantor, eodem ea ordiee juacts fuisse arbitremur." (De Muris, \&c., p. 12, note.) But thirdly, Becker proceeds: "This argumeat obtains greater certainty from the inscriptions collected by the Anonymons of Einsiedlen. Fortunately, the entire iascriptions of all the three temples are preserved, which may be still partly read on the ruins. They ruo as follows: 'Senatus populusque Romanas incendio consumptum restituit Divo Vespasiano Aagusto\|. s. P. Q. e. impp. Caess. Severas et Antonious pii felic Aug. restituerant.||l.f.e.e.e. aedem Concordiae vetustate collapsam in meliorenn faciem opere et caltu splendidiore restitueruat." Now as the whole of the first inscription, with the exception of the last three words, "Divo Vespasiano Augasto," are still to be read over the eight columns, and the letters estitver, a fragment of " restituerunt" in the second inscrip-

TABCLARLUM AND TEMPLES OF VESFASLIN, SATURN AND CONCORD.
tion, over the three columns, Becker regards the order of the Notitia as fully confirmed, and the three temples to be respectively those of Concord, Vespasian and Titus, and Saturn.

With regard to these inscriptions all are agreed that the third, as here divided, belongs to the temple of Concord; but with regard to the proper division of the first two, there is grest difference of opinion. Bunsen and Becker divide them as above, but Canina (Foro Rom. p. 179) contends that the first finishes at the word "restituit," and that the words from "Divo Vespasiano" down to "restitnerust " form the second inscription, belonging to the temple of Vespasian and Titus. In the original codex containing the inscriptions, which is in the library of Einsiedlen, they are written consecutively, without any mark where one begins and another edds; so that the divisions in subsequent copies are merely arbitrary and without any authority. Now it may be observed that the first inscription, as divided by Canina, may still be read oo the architrave of the eight columns, which it exactly fills, leaving no space for any more words. Becker attempts to evade this difficulty by the following assertion: "There is no room," be says (Handb. p. 357), "for the dedication 'Diro Vespasiano,' on the front of the temple; and although it is unusual for one half of an inscription to be placed on the back, yet on this occasion the situation of the temple excuses it !" We are of opinion, then, that the whole of the words after " restituit" down to the beginning of the inscription on the temple of Concord, belong to the temple of Vespasian, or that of which three columns still remain. Another proof that the words "Divo Vespasiano Augusto " could never have existed over the temple with the eight columns is that Poggio (de Variet. Fort. p. 12), in whose time the building was almost entire, touk it to be the temple of Concord, which he could not have done had the dedication to Vespasian belonged to it. (Bunbury, in Class. Mus. iv. P. 27, note.) Thus two out of Becker's three arguments break down, and all that he has to adduce against the mass of evidence, from the best classical authorities, on the other side, is a stiff and pedantic interpretation of the preposition jutata in such a writer as Servius! Thus it is Becker himself who is amemable to his owo charge of shutting his eyes against historical exidence. Ilis attempt to separate the altar from the temple (Ifandb. p.313), at leist in locality, is equally unfortunate.

TEMPIE OF SATEHN.

The remains of the temple of Saturn, or the portico with the eight columns at the head of the forum, are in a rude and barbarous style of art, some of the columns being larger in diameter than others. Hence Canina infers that the restoration was a very late one, and probably subsequent to the removal of the seat of empire to Constantinople. From the most ancient times the temple of Suturn served as an aerarium, or state treasury, where the public money, the military ensigns, and inportant documents were preserved (Liv. iii. 69; Plut. Q. R. 42; Macrob. i. 8; Solin. i. 12, \&c.). On account of its Grecian origin sacrifices were performed at the altar of Saturn after the Greek rite, that is, capite aperto, instead of capite velato as among the Romans (Macrob. l.c.).

Adjoining the temple of Saturn was a small cella or Aedes of Ops, which served as a bauk for the public money. The Fasti A miternini and Capranicorrum mention it as being " ad Forum," and " in Vico Jugario," which determines its position here (Calend. Amit. Dec.; Cal. Capran. Aug.). It is several times alluded to by Cicero: "Pecunia utinam ad Opis maneret" (Phil. i. 7, cf. ii. 14). Before the temple stood a statue of Silvanus and a sacred fig-tree, which it was necessary to remove in B. C. 493 , as its roots began to upset the statue (Plin. sv. 20). Behind the temple, in a small lane or Angiportus, and about midway up the ascent of the clisus, was the Porta Stercoraria, leading to a place where the ordure from the temple of Vesta was deposited on the 15th of June every year. (Varr. L. L. vi. § 32, Mïill. Festus, p. 344.) This eustom seems to have been connected with the epithet of Stercutus applied to Saturn by the Romans, as the inventor of applying manure to the fields (Macrob. Sat. i. 7.) Close to the Ara Saturni there was a Sacellim Dinis, in which wax masks were suspended during the Saturnalia. (Ib.11.)

But the most important alteration made by Tarquinius Priscus with regard to the furum was the causing of porticoes and shops to be erected aronnd it (Liv, i. 35; Dionys. iii. 67). This gave the forum a fixed and unalterable shape. We may wonder at the smallness of its area when we reflect that this was the great centre of politics and basiaess for the mistress of the world. But we must recollect that its bounds were thus fixed when she herself was not yet secure against the attempts of surrounding nations. As her power and population gradually increased various means were adopted for procuring more accommodation - first, by the erection of spacions basilicae, and at last, in the imperial times, by the construction of several new fora. But at first, the structures that arose upon the forum were rather of a useful than ornamental kind; and the tabernae of Tarquin consisted of butchers' shops, schools, and other places of a like description, as we learn from the story of Virginia. These TA bernale were distioguishel by the names of Ieteres and Norae, whence it seems prohable that only the former were erected in the time of Tarquin. The two sides of the forum, lengthways, derived their names from them, one being called sub Veteribus, the other sub Noris. A passage in Cicero, where he compares these tabernae with the old and new Acadeny, enables us to determine their respective sites: " Ut ii, qui sub Novis sulem non ferunt, item ille cum acstuaret, veterun, ut Maenishorum, sic Academicorum nmbram secutu est " (Acoud iv. 22). Hence it appears that the Novae, being exprosed to the sun, must have boen on the northern side of the fornm,
and the Veteres of course on the sonth side. This relative situation is alse established by the accounts which we bave of basilicae being built either on or near their sites, as will appear in the sequel. Their arrangement cannot be satisfactorily ascertained, but of course they could not bave stood before the curia and comitium. In process of time the forum began to put on a better appearance by the conversion of the butchers' sheps inte those of silversmiths ("Hoc intervallo primum forensis dignitas crevit, atque ex tabernis lanienis argentariae factae," Varro in Non. p. 532, M.). No clue, however, is given to the exact date of this change. The carliest period at which we read of the argentariae is in Livy's description of the triumple of Papirius Cursor, B. c. 308 (ix. 40 ). When the conitia were declared it seems to have beeu customary for the argentan ii to close their shops. (Varr, L. L. vi. § 91, Miull.) The tabernae were provided with Maeniana or balconies, which extended beyond the columns supperting the porticoes, ane thus formed convenient places fer beholding the games on the forum (Festus, p. 134. Mill.; Isid. Orig. xv. 3, 11.) These Maeoiana appear to have been painted with subjects. Thus Cicero: "Demenstravi digite pictum Gallum in Mariane scuto Cimbrice sub Novis " (de Or. ii. 66). Pliny tnentions another picture, or rather caricature, of a Gaul sub Veteribus, and also a figure of an old shepherd with a stick. The latter appears to have been considered by the Remans as a valuable work, as some of them avked a German ambassador what he valued it at ? But the barbanian, whe had no taste for art, said he would not have it as a gift, even if the man was real and alive (xxxv. 8). According to Varro, queted by the same auther (Ib. 37), the Maeniana sub Veteribus were painted by Serapion.

Another service whicb Tarquin indirectly rendered to the forum was by the construction of his cloacae, which had the effect of thoroughly draioing it. It was now that the Lacus Curtius, whicb bad formerly existed in the middle of the forum, disappeared (" Curtium in locura palustrem, quitum fuit in foro, antequam cloacae sunt factae, secessisse," Piso ap. Varr. L. L. v. § 149. seq. Müll.) This, though net so romantic a story as the self-immolation of Curtius, is doubtless the true representation; but all the tliree legends connected with the subject will be found in Varro ( $l$. c.) It was perhaps in commemuration of the drainage that the shrine or sacellum of Venvs Cluacina was erected on the N. side of the forum, near the Tabernae Novae, as appears from the story of Virgiaius saatching the butcher's knife from a

shrine of cluacisa. (From a Coin.)
shop close to it. (Liv. iii. 48 ; cf. Plin. xv. 36.) The site of the Lacus Curtius after its disappearance was commemorated in another manner. Having been struck with lightning, it seems to have been converted into a dry puteal, which, bowever, still coutinned to bear the name of Lacus Curtius (cf. Varr. v § 150 ):

Cartius ille lacus, siccas qui sustinet aras,
Nunc solida est tellus, sed lacas ante fuit."
(Ov. Fast. vi. 397.)

Every year the people used to throw pieces of money into it, a sort of auguriom salutis, or new yeur's gitt for Augustus. (Suet. Aug. 57.) Close to it grew a fig-tree, a vine, and an olive, which bad been fortuitously planted, and were seduleusly cultivated by the people; and near them was an altar, dedicated to Vulcan, which was removed at the time of the gladiatorial games given at Caesar's funeral. (Plin. xv. 20; cf. Gruter, Inscr. Isi. 1, 2.)

Servins Tullius probably carried oo and completed the works begun by bis predecensor around the forum, just as he finished the wall; but he does nut appear to have undertaken anything original excepting the adding of a lower dungeon, called after him Tullanum, to the Mamertine prison. (" la hoc (carcere) pars quae sub terra Tullianum, ideo quod additum a Tullio rege," Vurr. L. L. v. § 151.) This remains to the present day, and still realises to the spectator the terrible description of Sallust (Cat. 55).

The Roman Ciceroni point out to the traveller the Scalae Gemoniae inside the Mamertine prison, where there are evident remains of an ancient staircase. But it appears from descriptions in ancient authors tbat they were situated in a patb leading down from the Capitol towards the prison, and that they were visible from the forum. (Dion Cass. lviii. 5; Valer. Max. vi. $9 . \S 13$; Tac. Hist. iii. 74.) Traces of this path were discovered in the 16 th century (Luc. Faune, Aut. di Roma, p. 32), and also not many years ngo in excavating the ground by the arch of Severus.

It does not appear that any additions or improvements were made in the forum during the reign of Tarquioius Superbus.

The Forum during the Republic.- One of the earliest buildings erected near the forum in the republican times was the temple of Castur and Pollux. After the battle at lake Regillas, the Dioscuri, who had assisted the Romans in the fight, were seen refreshing themselves and their borses, all covered with dust and sweat, at the little foustain of Juturna, near the temple of Vesta (Dionys. vi. 13 ; Val. Mas. i. $8 . \S 1$; Cic. N. $D$. ii. 2, \&c.) A termple had been vowed to those deities during the Latin War by Postumius the dictator; and the spot where this apparition had been observed was chosen for its site. It was dedicated by the son of Postumius B.c. 484. (Liv, ii. 42.) It was uot a temple of the largest size; but its conspicuous situation on the forum made it one of the lest kaowu in Rome. From the sume circumstance the flight of steps leading up to it served as a kind of suggestum or rostra from which to address the people in the forum; a purpose to which it seems to have been sometimes applied by Caesar. (Dion Cass, xxxviii. 6 ; ef. Cic. p. Sest. 15 ; Appian, B.C. iii. 41.) The temple served for assemblies of the senate, and for judicial business. Its importance is thus described by Cicero: "In aede Castoris, celeberrime clarissimeque monamento, quod templum in oculis quotidianoque conspectu populi Romani est positum ; quo saepenomero senatus convocatur; que maximarum rerum frequentissimae quotidie advocationes fiunt" (in Ferr. i. 49). Though derlicated to the twin gods, the temple was commonly called only Aedes Castoris, as in the preceding passage ; whence Bibulus, the colleague of Caesar in the aedileship, took occasion to compare bimself to Pollux, who, though he shared the temple in common with bis brother, was never once aamed. (Suet. Caes. 10.) It was restered by

Metellus Dalmnticus (Cic. Scaur. 46, et ibi Asson), and afterwands rebuilt by Tiberius, and dedicated th his and Drusus's name, A.D. 6. (Suct. Tib. 20; Dion Cass. 1s. 27.) Caligula connected it with his palace by breaking through the back wall, and took a follish phedsure in exhibiting himself to be adored hetween the statues of the twin deities. (Suet. Cal. 22 ; Dion Cass, lix. 28.) It wals restored to its former state by Clandius (Id. |s. 6). We learn from Dionysius that the Foman knights, to the number sometimes of 5000 , in commemoration of the legend rezpecting the foundation of the temple, made an annual procession to it from the temple of Mars, outside of the Porta Capena. On this oceasion, dressed in their state attire and exowned with olive, they traversed the city and proceeded over the

COLUMNS OF THE TRMHLI: OF CASTOR AND pollex.
fortur the temple (vi. 13). Its neighbourhood was somewhat contaminated by the offices of certain persons who trafficked in slaves of bad character, who might be found there in shoals. ("Num moleste feram si mihi non reddident nomen aliquis ex his, qui ad Castoris negotiantur, nequan mancipia ementes veadentesque, quoruin tabernae pessimorum servorum tnrba refertae sunt," Senec. de Sapient. 13; cf. Plaut. ('urc. iv. 1. 20.) The three elegant columns near the formon, under the Palatine, are most probably remains of this temple. We liave seen in the preceding account that it stood cluse to the forum, as well as to the temple of Vesta, a position which precisely agrees with that of the three columns. None of the other various appropriations of this ruin will bear examination. P'oggio (de Far. Fort. p. 22) absurdly considered these columns to be remains of Caligula's bridge. By the earlier Italian topographers they were regarded as belonging to the temple of Jupiter Stator; but it has been seen that this must have stood a good deal ligher up on the Velia. Nardini thought they were remains of the comitium, and was followed by Nibby (Foro Rom. p. 60) and Burgess (Antiq. of Rome, i. p. 366). We have shomn that the comitium was not at this side of the formom. Canina takes them to have belonged to the Curia Julia (Foro Rom. parte i. p. 132), which, however, as will appear in its proper place, could not have stood here. Bunsen (Les Forum de Rome, p. 58) identifies them with a temple of Minerra, which, as he himself obsertes (p. 59), is a "denomination entieremeat nouvelle," and indeed, though new, not true. It arises from his confounding the Chalcidicom mentioned in the Monumentum Ancyranum, with the Atrium Sinervae mentioned by the Notitia in the 8th Region. But we have already observed that the ruria and Chalcidium, which adjoined it, would be quite misplaced here. The Curiosum, indeed, under the same Rirgion, mentions besides the Atriom Minervae a Templum Castorum et Minervae, but this does not appear in the Notitio. Bunsen was more correct in lis previous adoption of the opition of Fea, that the colomns belonged to the temple of Castor. (Bullettino dell Inst. 1835 ; ef. Buubury in Class. Mus. iv, p. 19.)

The capture of the city by the Ganls, в. C. 390 , which, as we bave before said, inflicted so much injury that the Romans entertained serions thoughts of migrating to Veii, must of conrse liare occasioned considerable damage in the vicioity of the furtum. The Curia Hostilia, however, must have escaped, since Livy represents the senate as debating in it respecting this very matter ( $\mathrm{v}, 55$ ). Such shops and private houses as had been destroyed were probably restored in the fashion in which they had previously existed. It was now that the little temple to Aics Loeuexs, or Locurits, to which wo have befne alluded, was erected on the Nuva Via, not far trom the temple of Vesta (IV. 50). From this period the formm must have remained without aty injnurtant aiterations down to the time of M Porcius Cisto, when basilicae first legan to be erected. During this intersal all that was done was to adorn it with statues and other ornaments, but no buiwing was erected upon it ; for the small ex votus temple to Concord, which appears to have been made of bramze, erected on the Vulcanal by the nedile C. Flwius, B, c. 303 (ld. ix. 46), ean hardly conse under that demomination. It was probably :dso during this period that the Gratcostasts,
or elerated area, which served as a waiting-place for foreign ambassadors before they were admitted to an auflence of the senate, was constracted on the Vutcanal close to the curia, as before described. The :udornment of the suggestum or oratorical phatform on the comitinm with the beaks of the ships takeu from the Antiates, forms, from the connertion of this celehrated object with the history of republican Ronie, and the change of name which it underwent on the occision, a sort of epoch in the history of the forum. This occurred B. c. 337. (Plin. xxxiv. 11.) The Rostra at this time stool, as we Lave stid, on the comitium before the curia - a josition which they continued to occupy even after the time that new ones were erceted by Julius Caesur. ( )ion Cass. sliii. 49 ; Ascon, aul Cic. Milnu. 5.) The rostra were a templum, or place consecrated ly anguries ("Rostrisque earum (navium) suggestan in foro extructum, adornari placnit: Rostraque id templum appellatum, ${ }^{7}$ Liv. viii. 14 counp. Cic. in I'atin. 10.) They are distinguislied by Dion Cassius (Ivi. 34) from those ereeted by
 by Suetonins by that of vetera. (Suet. Aug. 100.) It may be inferred from a passage in a letter of Fronto's to the emperor Antoninus, that the rostra were not raised to any very great height above the level of the comitiom and forum ("Nec tantalo superiore, quanto rostra foro et comitio excelsiora; sed altiores antemnae sunt prora vel potius carina," lib. i. ep. 2). When speaking from the rostra it was usual in the more ancient times for the orator to turn towards the comitium and curia,-a custom first neglected by C. Licinius Crassus in the consulship of Q. Maximus Scipio and L. Mancinus, who turned towards the forum and addressed himself to the people (Cic. Am. 25); though, according to Plutarch (Gracch. 5), this innovation was introduced ly C. Gracelus.

## rostri. (From a Cein.)

The crecting of columns in honour of military achievenents came very early into use at Rome, and scems to have preceded the triumphal arch. The first monument of this sort appears to have been the colmmn on the forum called the Columas Mayse., commemorative of the rictory gained by C. Maenius over the Latins, B. c. 338. (Liv. riii. 13.) Livy, indeed, in the passage cited says that the monument was an equestrian statue; whilst Pliny on the other hand (xxxiv. 11) states that it was a column, which is also mentioned by Cicero. (Sest. 58.) Niebulir would reconcilc both accounts, by assuming that the statue was on a column. (Hist. vol. iii. p. 145.) Pliny in another place (vii. 60) says that the colum afforded the means of determining the last hour of the day (" $A$ columna Maenia ad carcerem inclinato sidere supremam fronnntiabat (accensus)") ; but it is very difficult to see how a column standing on the forum could vol. II.
have thrown a shalow towards the carcer in the evening.

Another celebrated monument of the same kind was the Duilian column, abo called Colemxa Jostrata, from its having the heaks of ships sculptured upon it. It was erected in Lonour of C. Duilius, who gained a great naval victory over the Cartlaaginians, 13. C. 260. According to Servius (Gicorg. iii. v. 29) there were two of these columns, one on or near the rostra, the other in front of the circus. Pliny, indeed (xxxiv. 11), and Quintilian (Inst. i. 7) speak of it as "in foro;" but forum is a generic name, including the comitium as a part, and therefore, as used by these authors, does nut invalidate the more precise designation of Servius. The basis of this column was found at no gruat distance from the arch of Severus (Ciacconto, Columnae Rostratae Inserip. Explicatio, j. 3, ap. Camina, Foro Rom. p. 301. note), a fact which confinns the pusition which we have assigned to the comitium and curia. The iuscription in a flagmentary state is still preserved in the Palazzo de' Conservatori.

## COLEMNA DEILLA

On the forum in front of the rostra stond the statne of Marsyas with uplifted hand, the emblem of civic liberty. (Serv. ad . 4 en. iv. 58 ; cf. Macrob. Sat. iii. 12.) Here was the great resort of the causidici, and also of the Roman courtesuns. Hence Martial (ii. 64. 8): -

## "Ipse potest fieri Marsya causidicus,"

Horace (Sat. i. 6. 120) has converted the pointed finger of the Satyr into a sign of scorn and deriston against an obnosions indivilual :-

## "__obenndus Marsya, qui se Vultnm ferre negat Noviorum posse mineris."

It was here that Julis, the daughter of Augustns, held ber infamous ergies, in company with the

## ROMA.

vilest of the Roman prostitutes. (Sence. Brn, vi, 32 : Plin, xxi. 6.) The accomnt given by Servius of this statue has been the subject of much discussion, into which the limits of this article will not permit in to enter. The whole question has been exhansted by Cremzer. (Stud. ii. p. 282, seq.; cf. Savigny, Gesch. des Röm. Rechts, i. 52.)

Near the rostra were also the statues of the Thiere sinyis (Plin. xxxiv. I1), which are apparently the same as the three Moipal or Fates, mentinned by Irocopius. ( 1. . Gath. i. 25.) These also were at the head of the forum, towards the temple of Janus, a pasition which points to the same result ns the Duilitn column with respect to the situation of the comitium.

Livy's deseription of a great fire which broke ont about the form B. C. 211 affords some topographical particulars: "Interrupit hos sermones nocte. quae pridie Quinquatrus fuit, pluribus simul lseis cirea forum incendium ortum. Eodem tem-p-re septem Tabernae, quae postea quinque, et argentariae, quae nunc Novae appellantur, arsere. Comprehensa postea privata aedificia, neque enim tum basilic:ue erant: comprehensae Lautumiae, formmque piscatorium, et atrium regium. Aedis Vestae vix defenst est" (xxvi. 27). As the fire, wilfully occasioned, broke out in several places, and as the Curia Hoatilia does not seem to have been endangered, we may perbaps conclude that the Neptem Tabernae here mentioned were on the S. side of the fortum. The argentariae afterwards called Novae were undoubtedly on the N. side, and, for the reason just given, they perhaps lay to the E. of the curia, as the fire seems to have spread to the eastward. It was on the N . side that the greatest damage was done, as the fire bere spread to the Lautumiae and Fornm I'iscatorium. The Septem Tibernac appear to have been the property of the state, as they were relnilt by the censors at the public expense, together with the fish-market and Atrium Regium ("Locaverunt inde reficienda quae circa forum incendio consumpta erant, septem tabernas, macellum, atrium regium," Hl xxvii. 11). This passage would seem to show that the reading quinque (tabernae) in that previumsly cited is corrupt. Muretus has observed that one codex has "quae postea ret.," which in uthers wats contracted into $\begin{array}{r}\text { a, and thus taken for a }\end{array}$ numpral. (Becker, IFanlb. p. 297, notes). Hence we maty inter that the Veteres Tabernae on the S. side of the forum were seven in number, and from the word pervert applicd to them, whilst munc is uned of the Nowse, it might perhaps be inferred that the thastinctive appellation of leteres did not whe into use till after thas nechent.

It also appors from this passage, that there were nu b basilieme at Rome at this period. It was not 1 ing sfterwards, however, namely 18. C. 184, that the first of these buildings was fuunded by M. Porama Cato in his censomblip, and called after him B.astitea Porcia. In order to procure the requisite eromod, Cato purchased the honsos of Mienius and Titins in the Lautumise, and four tabernae. (Liv. xaxix 44.) Hence we may iufer that the Lauthmiae lay elose at the back of the forum; which also appears from the circmustance that Maenins, when he sold his honse, reserved for hinsolf one of its colmuns, with a balenny on the top, in order that he and his posterity mighi be able to view from it the Huliatorial shows on the formem. (Ps. Asonn. uub Cie. Hide in Caeril. 16 ; cf. Solnot. ad Hom, Sett. i. 3. 21.) This coluun must not be confounded with
the monument calicd the Columna Maenia, which stood en the forum. The Basilica I'orciamust have stood close to the curia, since it was destroyed by the same fire which consumed the latter, when the body of Clodius was burnt in it (Ascon. ad Cic. pro Mil. Arg. p. 34, Orell.); but it must have been on the eastern side, as objects already deseribed filled the space between the curia and the Capitoline hill. The Forum Piscatomum stood close behind it, since Plautus describes the unsavoury odours from that market as driving away the frequenters of tho basilica into the forum: -
"Tum piscatores, qui praebent populo pisces foetidos Qui advehuntur quadrupedanti crucianti canterio Quorum odos subbasilicanos omnes abigit in formm."
(Capt. iv. 2. 33.)
In the time of Cicero, the tribunes of the people held their assemblies in the Basilica Porcia. (Plut. Cato Min. 5.) After its destruction by fire ar the funeral of Clodins it does not appear to have been rebuilt; at all events we do not fiud auy further mention of it.

The state of the form at this period is described in a remarkable passage of Plautus; in which, as becomes a dramatist, he indicates the different loca. lities by the characters of the men who frequented them (Curc. iv. 1) : -
"Qui perjurum convenire volt heminem mitto in comitium ;
Qui mendacem et glorinsum, apnd Cloacinae sacum Ditis damnosos maritos sub basiliea quaerito:
lbidem erunt scorta exoleta, quique stipulari solent ; Symbolarom collatores apud Forum Piscarimu ;
In foro infimo boni homines atqne dites ambulant ; In medio propter canalem, ibi ostentatores meri ; Confilentes garrulique et inalevoli supara lacum, Qui alteri de nihilo audacter dicunt contumeliam
Et qui ipsi sat habent, quod in se porsit vere dicier. Sub Veteribus ibi sunt, qui dant quique accipiunt foencre ;
Pone aeden Castoris ibi sunt, subito quibns credas male,
In Tusco Vico ibi sunt homines, qui ipsi sese venditant.
In Velabro vel pistorem, vel lanium, vel aruspicem, Vel qui ipsi vortant, vel qui aliis ot vorsentur pracbeant.
[Ditis damnosus maritos apod Leucadiam Oppiam]."
This is such a picture as Greene might have drawn of Paul's, or Ben Jonson of Moor Fiella. The grod inen walking quietly by themselves in the obsenrest part of the formm, whilst the flash gentlenen without a denarins in their pures, sun strutting, conspienonsly in the middle; the gourmanik gathering round the fishmarket and clubbing for a dinner; the gentlemen near the Lacus Curtius $x$ regular set of scandal-mongers, so ready to speak il nf others, and so wholly unconscious that they live in glass-houses thenselves; the perjured witness prowling about the comitium, like the man in Weatminster Hall in former days with a straw in his shoo: the tradestnan in the Vicus Tuscus, whene spirit of trading tis so in-bred that he would sell his very self ; all these sketclies from life present a picture of mamers in "the good ould times" of the Roman Iepublic, when Cato himself was censor, whirli shows that human nature is very much the same thing in all ayes and countries. In a topograythical point of view there is little here but
roma.
what confirms what has teen already said respecting the forum and its environs ; except that the usurers sub ' 'eteribus show that the bankers' shops were not confined to the N. side of the forum. What the canalis was in the middle of the forum is not clear, but it was perhaps a drain. The passage is, in some places, probably corrupt, as appears from thee two obscure lines respecting the mariti Ditix, the second of which is inexplicable, thongh they probally contaio some allusion to the Sacellum Ditis which we have mentioned as adjoining the temple of S.turn. Mommsen, however (l. c. p. 297), would read "dites damnosos marito," \&c.c., taking these "dites" to be the rich usurers who resorted to the tasilica and lent young men money for the purpose of currupting city wives. But what has tended to throw doubts upon the whole passage is the mention of the basilica, sirce, according to the testimony of Cicero (Brut. 15), Plautus died in the very year of Cato's censorship. Yet the basilica is also alluded to in another passage of Plautus before quoted; so that we can hardly imagine but that it must have existed in his lifetime. If we could place the basilica in Cato's aedileship instead of bis censorship, every difficulty would vanisb; but for such a view we can produce no authority.

Mormssen (Ib. p. 301) has made an ingenious, aud not improbable attempt to show, that Plaut us, as becomes a good poet, has mentioned all these objects on the forum in the order in which they actually existed; whence he draws a confirmation of the view respectiog the sitnation of the comitiuta. That part of the foruto is mentioned first as being the most excellent. Then follows on the leff the Sacrum Cluaciose, the Basilica Porcia, aod Forum Piscatorium, and the Fornma Infimum. Returning by the middle he names the canalis, and proceeds down the forum again on the right, or southern side. In the "malevoli supra lacum" the Lacos Servilius is alloded to at the top of the Vicus Jugarins. Then we have the Veteres Taberase, the temple of Castor, the Vicus Tascus, and Velabrum.

The Basilica Yorcia was soon followed by others. The next in the order of time was the Basilica Fcivia, founded in the censorship of M. Aemilius Lepidus, and M. Fulvius Nobilior, n.c. 179. This was also "post Argentarias Novas" (Liv. x1. 51), and must therefure have been very close to the Basilica Porcia. From the two censors it was sometimes called Basilica Aemilia et Fulvia. (Varr. L.L. vi. § 4, 3liill.) All the subsequent embellishments and restorations appear, however, to bave procecded from the Gens Aemilia. M. Aemilins Lepidus, consul with Q. Lutatius in B. c. 78 , adorned it with bronze shields bearing the effigies of lis ancestors. (Plio. xxxv. 4.) It appears to bave been entirely rebuilt by L. Aemilius Paullus, when aedile, B. C. 53. This seems to have been the restoration alluded to by Cicero ( $a d$ Att. iv. 16), from which passage - if the panctuation and text are correct, for it is almost a locns desperatus - it also appears that Paullus was at the same time constructing another newand magnificent basilica. Hence a difficulty arises rexpertiog the situation of the latter, which we are unable to solve, since only one Basuica Paulur is mentioned by ancient authors; and Plutarch (Caes. 29) says expressly that Paullus expended the large sumn of money which be had received from Caesar as a bribe in building on the forum, in place of the Basilica Fulvia, a new one which bove his own naune. (Cf. Appian, B. C. ii. 26.) It ir certain at
least that we must not assume with Becker (II wodll. p. 303) that the latter mas but a poor alfair in comparison with the new one because it was built with the ancient columns. It is plain that in the words " nibil gratius illo monmmentu, nihil gloriosius," Cicero is alluding to the restoration of the ancient basilica, since he goes on to mention it as one which used to be extolied by Atticus, which would not have beeu possible of a new building; and the employment of the ancient columns only added to its beauty. The building thus restored, however, was not destined to stand long. It seens to bave been rebuilt less then twenty years afterwards by Paullus Aemilius Lepidus (Dion Cass. xlix. 42); and in about anuther twenty years this second restoration was destroyed by a fire. It was again rebuilt in the name of the same Paullus, but at the expense of Augustus and other friends (Id. liv. 24), and received further embellishments in the reign of Tiberius, A. D. 22 . (Tisc. Am. iii. 72.) It was in this last plase that Pliny saw it when he admired its maguificence and its columns of Pbrygian marble (xxxvi. 24).

## basilica aemilit. (From a Coin.)

The third building of this kind was the B.ssibica, Semprosia, erected by T. Sempronius Gracchus in his censorship, s.c. 169. For this parpose he purchased the house of Scipio Africanus, together with some adjoining butchers' shops, behind the Tabernae Veteres, and near the statue of Vertumnus, which, is we have said, stood near the forum at the end of the Vicus Tuscus. (Liv, xliv. 16.) This, therefore, was the first basilica erected on the S. side of the foraru. We hear no further mention of it, and therefore it seems probable that it altogether disappeared, and that its site between the Vicus Tuscus and Vicus Jugarius was subseqnently occupied in the imperial times by tbe Basilica Julia.
The Lautumese, of which we have had occasion to speak when treating of the Basilica Porcia, was not merely the name of a district near the forum, but also of a prison which appears to bave been constructed during the Repubibian period. The Lautumiae are first mentioned after the Second Punic War, and it seems very probuble, as Varro says (L. L. v. § 151, Mill.), that the name was derived from the prisou at Syracuse ; though we can bardly accept his second suggestion, that the etymology is to be traced at Rome, as well as in the Sicilian city, to the circumstance that stone quarries formerly existed at the spot. The alder topograplers, down to the time of Bunsen, assumed that Lautumiae was only another appellation for the Carcer Manertinus, a misconception perlaps occasioned by the abruptness with which Varro (l.c.) passes from his account of the Tullianum to that of the Lautumiae. We read of the latter as a place for the custody of hostages and prisoners of war in Liry (xxxii. 26, xxxvii. 3) ; a purpose to which neither the size nor the dungeon-like con-
struction of the carcer would have adapled it. That the Lautnmiae was of considerable size may also be inferred from the circumstance that when the consul Q. Metellus Cder was imprisaned there by the tribunc 1. Flavius, Metellus attempted to assemble the seaate in it. (Dion Cass. xxxvii. 50.) Its distinctuess from the Carcer Manertimus is also shown ber Soncea (Contror: 27, p. 303, Bipont).

An important alteration in the arrangement of the forum, to which we have before alluded, was the remuval of the Tribusal. Praetomes from the comitium to the eastern end of the forum by the tribute L. Suribouins Libo, apparently in B. C. 149. It now stnod near the Puteal, a place so called fromt its bicing open at the top like a well, and consecrated in ancient times either from the whetstone of the augur Navius having been buried there, or from its having been struck by lightning. It was repairel and re-dedicated by Libo; whenee it was afterwards called Petent. Libosis, and Pu teal Somiboniasem. After this period, its vicinity to the juilgment-seat rendered it a noted olject at Fiome, and we find it fregnently alluded to in the classics. (Hor, Ep. i. 19.8, Sut. ii. 6. 35 ; Cic. p.

111 E.AL LIBONIS OR SCMIBONIINUM.
Scet. 8, \&c.) The tribunal of the practor mrbanns mons, however, to have remained on the comitium. Beniles theme we alan find a Timbexal Aunemina mentimed on the formm, which seems th, have stond netar the temple of Castor (Cic. p. Sest. 15, in I'is. 5. p. 'lyent. 34), and which, it is conjectured, was erected by the consul M. Aurelins Cotta n. c. i4. Tluse tribunals were probably constructed of woon, and in such a manner that they might be amoved on wectaion, as for instance, when the whole anat of the form was required for fladiatorial shows in wher purpones of the like kind; at least it appears that the tribumals were used for the purpose of 1ir hume the tire in the curia when the body of Clo,HIN wis burnt in it. (Aseon, ad Cic, Mil. Arg. 1. 34.)

In the year nec: 121 the Thembe of Coscond was butt lyy thie consul I. Opimius on the Cheus Capitulinus juat alove the ornaculum (Varr. L. L. v. $\$ 156$, ذ十:11.); but, as we have alrealy had occasion to discms the lustory of this temple when treating of the C.yntol and of the senaculum, we need not revert to it here. At the same tinge, or a little afterwarls, he alan erected the Basilica Ormata, which is mentioned by Varro in elone commection with the temple of Cunern, and must therefore lave sted d on its bortinero side, simee on no other would there have been space for it. Of this basilica we beat but very little, and it seens not improbable
that its name may have been afterwards changed to that of "Basilica Argentaria," perhaps on account of the silversiniths' and baukers' shops having been removed thither from the tabernae on the formm. That a Basilica Argentaria, about the origin of which nobody can give any account, existed just at this spot is certaim, since it is mentioned by the Notitia, in the sth Regio, when proceeding from the forum of Trajan, as fullows: "Cohortem sextam Vigilam, Basilicam Argentariam, Templum Concordiae, Umbilicum Lomate," \&e. The present Salita di Marforio, which runs close to this spot, was called in the middle ages "Clivns Argentarius;" and a whole plot of buildings in this quarter, terminating, according to the Mirabilin (Montf. Diar. Ital. p. 293), with the temple of Vespasian, which, as we shall see in the sequel, stood next to the temple of Concord, bore the name of "Insula Argentaria" (Becker, Handb. p. 113. seq.).

In the same year the forum was adorned with the triumphal arch called Fosinix Fabies or Fabiasis. erected by Q. Fabius Allobrogicus in cormmemoration of his trimuph over the Allobroges. This was one of the earliest, though not precisely the first, of this species of monuments at Rome, it haviog been preceded by the three arches erected by L. Stertinius after his Spanish victories, of which two were situated in the Forum Boarium and one in the Circus Maximus. (Liv, xxxiii. 27.) We may here remark that fornix is the classical name for such arches ; and that the term arcus, which, however, is used by Seneca of this very arch (Comet. Sup. 1), did not come into general use till a late period. The situation of this arch is indicated br several passages in Roman authors. We have already cited one from Cicero (p. Planc. 7), and in another he says that Memmins, when corning duwn to the formm (that is, of course, down the Sacra Yit), was accustomed to bow his head when passing through it ("Ita sibi ipsum magnum videri Menmium, ut in formm descendens caput ad fornicem Fabii demitteret," de Orat. ii. 66). Its site is stell more clearly marked by the Pseudo-Asconius (ad Cic. Jerr, i. 7) as being close to the liegia, and by Porplyrio (ad LIor. Epist. i. 19. 8) as near the Puteal Libonis.

The tew other works about the fornan during the remainder of the Republican period were merely restorations or aiterations. Sulla when dictator secms to have made some ehanges in the curna (Plin. xxxiv. 12) and in n. c. 51, nfter its destruction in the Clurlian rints, it was reluilt by his som Fanstus. (1)ion Cass. xl. 50.) Caesar, however, caused it to be pulled down in 1, c, 45, under prertence of having vowed a temple to Felicitas, but in reality to efflace the name of sulla. (Id. xiv. 5.) The reconstruction of the Basilica Fulvia, or rathethe superseding of it by the Basilica Puulli, bus been already mentioned.

It now only remains to natice two other objects connected with the Republican Foruat, the origun of which cannot be assigned to any defivite perued. These were the Schola Xistula aml the Jani. The former, which lay back cunsiderably behind the temple of Saturn and hear the top of the Clivus Capithlmus, consisted of a row of arched chambers, of which three are still visible. They appear from insciptiuns to have been the offices of the scriben, capyws, and praecones of the nediles, and seem to be alludel Io by (icero. (Philipp, ii. 7, p. Sost. 12.) Amether I w was discoveral in 1835, at the side of the teriple of

## ROMA.

Veapasian and against the wall of the Tabularium, with a handsome though now ruined portico before them, from which there was an entrance into each separate chamber. From the fragments of the architrave an inscription could still be deciphered that it was dedicated to the twelve Dei Consentes. (Caniua, Foro Rom. p. 207, Bullet. d. Inst. 1835.) This discovery tallies remarkably with the following passage in Varro: " Et quoniam (ut aiunt) Dei facientes adjuvant, prius invocabo eos; nee nt Humerus et Einnius, Musas, sed xur deos consentis; neque tamen eos urbanos, quorum imagines ad forwm auratae stant, sex mares et feminae totiden, sed illos xit. deos, qui maxime agricolarum duces sunt " (R. $K$. i. 1). We nay, however, infer that the inscription was posterior to the time of Varro, probably after some restoration of the building; since in his De Lingua Latina (viii. § 71) he asks: "Item quacrunt, si sit analogia, cur appellant omnes aedes Deun Consentum et non Dcorum Consentium?" whereas in the inscription in question we find it witten "Consentium.". We may further remark that the former of these passages would sanction the including of the whole Clivus Capitolinus under the appellation of "forum."

With respect to the Jani on the forum, it seems rather problematical whether there were three of then. There appear to have been two Jani before the Basilica Paulli, to which the money-lenders chiefly resorted. (Schol. ad IIor. Ep. i. 1. 54.) But when Hurace (Sat. ii 3.18 ) says $\longrightarrow$

## " - postquam omnis res mea Janum

Ad medium fracta est,"
he probably means, as we said before, the middle of the street, and not a Janns which lay between two others, as Becker thinks must necessarily follow from the use of the word medius. (Handb. p. 327, nute.)
The Form ander the Empire. - The important alterations made by Julius Caesar in the dispasition of the forum were the foundation of its subsequent appearance under the Empire. Thiese changes were not mere caprices, but adaptations suited to the altered state of political suciety and to Caesar's own political views. But the dagger of the assassin terminated his life before they could be carried out, and most of them were left to be completed by bis successor Augustus. One of the most important of these desigus of Caesar's was the building of a new curia or senate-honse, which was to bear his name. Such a building would be the badge of the senate's servitude and the symbol of his own despotic power. The former senate-honse had been erected by ene of the kings; the new one would be the gift of the first of the emperors. We have mentioned the destruction of the old curia by fire in the time of Sulla, and the rebuilding of it by lis son Faustus; whicb structure Caesar caused to be pulled down under a pretence, never executed, of erecting on its site a temple of Felicitas.

The curia founded by Pompey near his theatre in the Campus Martius-the building in which Caesar wi:s assassinated - seems to bave been that commonly in use; and $O$ vid (Met. xy. 801), in describing that event, calls it sioply Curia:-
" neque enim locus ullus in urbe
Ad facinus diranque placet, nisi Caria, caedem."
We may suppose that when Caesar attained to supreme power lie was not well pleased to see the
meetings of the senate held in a building dedicated by his great rival.

A new curia was voted a little before Carsar's denth, but he did not live to found it; and the Monumentum Ancyranum shows that it was both begun and completed by Octavianus.

Respecting the site of the Cuma Julis the most discordant opinions have prevailed. Yet if we accept the information of two writers who could not have been mistaken on such a subject, its position is not difficult to fiod. We learn from Pliny that it was erected on the comitium: "Jdem (Augustns) in Curia quoque quam in Comitio consecrabat, dnas tabulas impressit parieti" (xxxy. 10) ; and this site is confirmed by Dion Cassius: $\tau \boldsymbol{0}$ Bou-

 (xlvii, 19). It is impossible to find any other spot for it on the comitium than that where the old curia stood. Besides the anthor last quoted expressly informs us that in consequence of scone prodigies that necurred in the year befure Caesar's murder it laad been resolved to rebuild the Curia Hostilia (kal סia

 when this decree was mnde Caesar was himself pontifex maximus; it would have been a flagrant breach of religion to neglect a solemn vow of this description; and we cannot therefore accept Becker's assertiou that this vow was never accomplished. (Handb. p. 331, note 608.) We cannot doubt that the curia erected by Augustus was in pursuance of this decree, for Caesar did not live even to begin it ("Curiam et continens ei Chalcidicum - feci." Mon. Ancyr); but though the senate-house was rebuilt, it was no longer named Hostilia, but, after its new founder, Julia. Now what has Becker got to oppose to all this weight of testimony? Solely a passage in Gellius,-which, however, he misapprehends,- in which it is said, on the anthority of Varro, that the new curia had to be inaugurated, which would not have been the case had it stood on the ancient spot (" Tum adscripsit (Varro) de lecis in quilus senatus consultum fieri jure posset, docuitque confirmavitque, nisi in loco per augures constituto, quod templum appeliaretur, senatusconsultum factum esset, justum id non fuisse. Propterea et in Curia Hostilia et in Pompeia. et post in Julia, cum profana ea loca fuissent, templa esse per augures constituta," xiv. i. § i.) But Becker has here taken only a half view of thene augural rites. As a temple could not be built without being first inaugurated, so neither could it be pulled down without being first exaugurated. This is evident from the accounts of the exauguration of the fanes in order to make room for the temple of the Capitolnne Jupiter. ("Et, ut libera a caeteris religionibns urea esset tota Jovis templique ejus, quod inaedificaretur, exaugurare fana sacellaque statuit, quae aliquot ibi a Tatio rege, consecreta inaucuratague postea fuemant," liv. i. 55 , of. v. 54 ; Dion. Halic. iii. 69.) When Caesar, therefore, pulled down the curia of Fanstus he first had it exaugurated, by which the site again became a locus profonus, and would of conrse require a fresh inatuguration when a new temple was erected apon it. Tbe curia in use in the time of Propertius (v. 1.11) must have been the Curia Julin; and the following lines seem to show that it had risen on the site of the ancient one:-
"Curia practesto quae nune nitet aita Senatu Pellitos haluit, rustica corda, l'arres."

A further confirmation that the new curia stood on the ancient spot is found in the fact that down to the latest period of the Empire that spot continued to be the site of the senate-louse. The last time that mention is made of the Curia Julia is in the reign of Caligula ("Consensit (senatus) ut consules nou in Curia, quia Julia vocahatur, sed in Capitolium convocarent," Snet. Cal. 60); and as we know that the curia was reluilt by Domitian, the Julia must bave been burnt down either in the fire of Nero, or more prolably in that which occurred under Titus. It is not likely, as Becker supposes (Handb. p. $34 \vec{i}$ ), that Vespasian and Titus would have suffered an old and important building like the curia to lie in ashes whilst they were erecting their new amphitheatre and bathis. The new structure of Domitian, called Senatus in the later Latin ("Senatum dici et pro luco et pro hominibus," Gell. xviii. 7,5), is mentioned by several authorities (Hierunym, an. 92. i. p. 443 , ed. Konc.; Cassiod. Chron, ii. p. 197 ; Catal. Imp. I'ienn. p. 243.) The place of this senatns is ascertained from its being close to the little temple of Janus Geminus, the index belli pacisque ( ${ }^{\prime} \chi \in \mathbb{I}$
 Boudeutmpiov, Procop, B. G. i. 25); and hence from its proximity to Numa's sacellum it was sometimes called "Curia Pompiliana" (Vopisc. Aurel. 41, Tacit. 3.) The same sitnation is confirmed by other writers. Thus Dion Cassius mentions that Didius Juliauus, when he first entered the curia as emperor, sacrificed to the Janus which stood before the doors (Isxiii. 13). In the same manner we find it mentioned in the Notitia in the viiith Region. That it occupied the site of the ancient church of S. Martina, subsequently dedicated to and now known as S. Luca, close to the arch of Severus, appears from an inscription (Gruter, clxx. 5) which formerly existed in the Amho, or lremicycle, of S. Martina, showing that this hemicycle, which was afterwards huilt into the church, originally formed the Secretarium Senatus (Urlichs, Röm. Top. p. 37, seq.; Preller, Regionen, p. 142.) The Janus temple seems to have been known in the middle ages under the appellation of templum fatale, by which it is mentioned in the Mirabilia Uibis. ("Justa eum templum fatale in S. Martina, juxta quod est templum refugii, i. e., S. Adrianoss," Ib.) In the same neighbourhood was a place called in the later ages "Ad Palmam," which also connects the senatus with this spot, as being both near to that place and to the Arcus Severi. Thus Ammianns: "Deinde ingressus urbem Theodoricus, venit ad Senatum, et ad Patmam popalo alloquutus," \&c. (Excerpt. de Olo, 66.) And in the Acta SS., Mai. vii. p. 12: " Ligaverunt ei manus a tergo et decollaverunt extra Capitolium et extrahentes jactaverunt eum juxta arcum triumphi ad Palmam." (ef. Anastas. 1. Sist. c. 45.) The appeliation "ad Palmam " was derived from a statue of Claurius II. clothed in the tunica palmata, which stood here: "llli totius orbis judicio in Rostris posita est columna cum palmata statua superfiza." (Treb. Pollio, Claud, c. 2.)

We cannot doubt, therefore, that the curia or senatus built by Domitian was near the arch of Severus; which is indeed admitted by Becker himself (Handb. p. 355). But, from his liaving taken a wrong view of the situation of the comitium, he is compelled to maintain that this was altogether a new site for it; and hence lis curia undergoes no fewer than three changes of situation, receiving a new one almost every time that it was rebuilt,
namely, first, on the N . side of his comitium, secoodly on the S. side, and thirdly near the Arcus Severi, for which last site the evidence is too overwheiming to be rejected. We trust that our view is more consistent, in which the senatehouse, as was most probable, appears to have always retained its original position. And this result we take to be no slight confirmation of the correctness of the site which we have assigned to the comitium. In their multitudinous variations, Bunsen and Becker are sore puzzled to find a place for their second curia-the Julia-on their comitium, to which the passages before cited from Pliny and Dion ineritably fix them. Bunsen's strange notions have heen sufficiently refuted by Becker (Handb. p. 333), and we need not therefore examine them here. But though Becker has sncceeded in overthrowing the hypothesis of his predecessor, he has not been able to establish one of his own in its place. In fact be gives it up. Thus he says ( $\mathrm{p}, 335$ ) that, in the alsence of all adequate anthority, he will not venture to fix the site of the curia; yet he thinks it prohable that it may have stood where the three columns are; or if that will not answer, then it must he placed on the (his) Vulcanal. Bit his complaint of the want of authorities is unfounded. If he had correctly interpreted them, and placed the comitium in its right situation, and if he had given due credit to an author like Dion Cassius when he says (l.c.) that it was determined to rebuild the $\mathrm{Cu}-$ ria Hustilia, he had not needed to go about sceking for impossible places on which to put his Curiat Julia.

There are three other oljects near the forum into which, from their close connection with the Basilica Julia, we must inquire at the same time. These are the Cualcidictas, the Impenim Graecostasis, and a Temple of Minenva. We have already seen that the first of these buildings is recorded in the $\mathbf{M o -}$ numentum Ancyranum as erected by Augustus adjoining the curia; and the same edifice is also mentioned by Dion Cassius among the works of

 (1i. 22). But regarding what mamer of thing the Chalcidicum wns, there is a great divervity of opinion. It is one of those names which have never been sufficiently explained; but it was perhaps a sort of portico, or covered walk (deanbulatorium), annexed to the crria. Bunsen, as we have mentioned when treating of the temple of Castor in the preceding section, considers the Athenaeum aod Chalcidicum to have been identical; and as the Notitiamentions an Atrium Minervae in the 8th Region, and as a Minerva Chalcidica is recorded among the buildings of Domitian, he assumes that these were the same, and that the unlucky ruin of the three columns, which has been so transmuted by the topographers, belonged to it. In all which we can only wonder at the uncritical spirit that could have suggested such an idea; for in the first place the Monumentum Ancyranum very distinctly separates the aedes Minervae, built by Augustus, from the Chalcidicum, by mentioning it at a distance of five lines apart; secondly, the aedes Minervae is represented to be on the Aventine, where we find one mentioned in the Notitia (cf. Ov. Fast. vi. 728; Festus, $v$. Quinquatrus, p. 257. Mill.), and consequently a long way from the curia and its adjoining Chalcidicum; thirdly, they are also mentioned separately by Dion Cassius in the prassage
thene citnd, whose fext is not to be capriomusly
 Xaxrtōnò covouaruévon, in order to prop a theory which eanot support itself. We need not, therefore, enter furthur into this view. That of Becker (11andb. p. 335 ) seems prubable enomith, that the Clialcidicum usurped the place of the senaculum of the curit, though we slomal be more inclined to sity that of the Graecostasis, as the position of the latter semis at all events to hatve heen shifted about this period. We lean from Iliny (xxxiii. 6) that in his time it no longer stood "supra Comitimm." Yet such a place seems to have existed to the latest proriod, and is mentioned in the Notitia (liegio viii.) under the altered name of Grameostadinm, close to the Basiliva Jula, though the Msis, vary with regard to the position. It had probatily, theretore, been removed br-fore the time of Pliny to the south side of the formm, and perbaps at the titne when the new curia and Chalcidicun were built. If this was so, it would tend to prove That the comitimn did not extend across the whole breadth of the forum. The Atriom Ninervae of the Notitiz must have been of a later perind.

Another change in the disposition of the formm, with refurence to the polities of the times, which was actually carmed out by Caesar in his lifetione, was the removal of the ancient rostra. The comitium, which may be called the wristoratic part of the formm, hat become in a great measure deserted. The popular business was nuw transacted at the lower end of the formm ; and Casesar, who courted the mob, encomazel this armogement. The stepis of the temple of Cistor had been converted iuto a sort of extempore rostria, whone the demafogues hamagued the people. and Camar bimself haul sometimes hehl forth from them. (lhon Cass. xxxviii. 6 ; cf. (ic, p.Sest. 15; App. B. (. iii. 41.) Ihon (Gassius rapressly mentions that the Fonsmoi were changed by Cuesar (xliii. 49). The change is also muntioned by Arcumus: "Erant enim tune rostra non eo loco quo wunc sunt, sed ad Comitium prope juncta Curiat" ( $\alpha d$ eic. Mil. 5), where, by this absolute and maqualified mention of the curia, he must of course have meant the cnina tristivy in his time, which was the Jnlia; tund flis shows that it stood on the ancient site of the Hostilia. Another froof that the rostra were noved in Caesar's lifetime may be denived from Livy (Epit. cxvi.) : "Caestris corpas a plobe ante Fontril cremattum est." For, as $\mathrm{Appian}_{\text {( } 13 . ~ C . ~ i i . ~ 148) ~ i n d i c a t e s ~ t h e ~}^{\text {e }}$ place in another manner, and says that the borning of the buty took jlace before the Recria, it is plain that the rostrat mentioned in the fipitome just cited nust have been very near the Regia. But we have xem that the ancient rostra were on the comitimu, at the other end of the furnm. There are other Imssum from which we may armive it the exact nitation of the new rostra. Thins Surtonins, in his account of the fumeral of Augustus, says that in jammyric wa pronontuced upan him by Drasus from the mostra wher the Tabermac Veteres (" poo Rustris sub Veumbus," Auy. Iot) ; cf. Dion (iss. Ivi. 34). It should be stated, how cever, that the common reading of this pasatge is "pro Rustris veteribus," that is, from the ull rosirit on the comitium; and we shall see flurther on that the wid rostin appear 10 have existed after the ertetion of the new. It is not, howuser, probable that they would be used on this recasion, even it thay sucre ever used at all; :ald wo see from Ihun C.bssius's account of the
fumeral of Octavia, the sister of Augustus, that Drusus aho on that oceasion propounced a panegyric from the new rostris, or those commonly used, as we must conclude from Dion's mentioning thom without any disfinetive epithet ( $\langle\pi l$ тô̂ ßh̆uaros). Camina (Forn Rom, p, $1: 29$ ) adopted the common readiog, with the omission of sub, becsuse he ima. gined that "sub Veteribus" inust mean "nuder some old building," instead of its being an designation for the S. side of the tomun. And (ieero, when prononacing one of his invectives against Antony from the rostra, bids his andience look to the left at the gilt equestrian statue of Antony, which, is appears from what Cicero says a little firther on, stood before the temple of Castor. (Phil. vi. 5.) From a comparison of all these passages we may state with precision that the new rustra were established by Ciw ar on the SE. side of the formm, between the temple of Castor and the Kegia, a spot which, is we lave said, had previotsly berome the regular jlace for the contiones. But, as this spot was on Becker's comitium, - his lower and of the forum being our upper end, - he condel not of course admit that this was the place on which the new restra were erected, and he is therefore obliged to place theon a great deal higher up towards the Capituh, and to the W. of the temple of Castor. As, how ever. in questions of this sort, one error always begets another, he is thas prozied to account for tho circomstance bow Cicero, speaking from these rostra, coald allude to the statue of Antony as being on his left (Htandb. p. 337) ; and, in order to avoid this contradietion, :aserts that Dion Cassius was mistaken, in saying that the rostra wero removel in Casar's lifetime. It must be the old rostra, those on thi: (his) comitiom, before which Cacsar's bady was bornt, and then everything gues right. Unfortunately, bowever, the testimany of Dion is coutirnsed by the expressive silence of the Monwmentum Ancyranum. That record, in which Augustus so ostentatiously recites his buildiocs, lis repairs, and his alterations, says not a worl about the rostri. We have seen a little while ago that Becker contradiets Dion respecting the Curia Julia, and now he contradicts both that anthor and the Monumentum Ancyrunum, and solely because he has atoptel a wrong site for his comitimn. How shall we chatracterise a topographical systrm which at every turn comes into collision with tho best anthoritics? On tho other land, if there is any truth in the systen we have alupted, all the merit we can cham for it is derived from paying due respect to these authorities, and implicitly following what they say, without presnming to set otr own opinion above their teaching. Before we quit thas subject it may be as well to say that, though these new rostra of Cacsar's became the ordinary saggestum, or platform, for the orators, yet the old obes do not appear to have been demolished. We havo before seeln, from a passage in Trebellins 1'ollis, that the ald rostra ad I'almam, or near the arch of Severn-, existed in the time of Clandins II. ; and the Sutitia and Crriosum expressly mention thee rostrat on the forum.

In a bas-reliet on the arch of Constamtine Camina las correctly recognised a representation of this part of the forum, with the buildings on the Clivus Capitolinus. Constantine is seen addreaving the people from a raised phatform or suggestum, provided with a balustrade, whech is undoubtedly intended for the aucient rostra. Canina is further of opinion
that an elerated terrace, presenting the segment of a circle, which was excavated at this part of the forrum some years ago, is the actual rostra (Indicazione, p. 270, ed. 1850. and his Dissertation "Sui Rostri ilel Foro Romano" in the Atti dell Accademia Rom. di Archenlogiu, viii. p. 107, seq.; ef. Becker, Ilandlbuch, p. 359). It seems also to have bren liere that Angustus received the homage of Tiberius, when the latter was celebrating his Gierman triumph: "Ac prissquam in Capitolium flecteret, descenait e carra, seque prassidenti ratri ad genua submisit." (Suet. Tib. 20.) The scene is represented on the larce Vienna Cameo. (Eckhel, Fierres graeirs, 1 ; Mungez, Jconogr. Rom. 19, vol. ii. p. 62.) If these inferences are just the ancient rostra would arppear to have been used occasionally after the erection of the new ones.
The Staters of Stlea and Pompey. of which the former appears to have been a gilt equestrian one, were re-erected near the new rostra, as they had formerly stond by the old mes. After the battle of Pharsalus they were both removed, but Caesar replaced them. Besides these there were two Sratues of Caes.in, and an equestrisn Statue of Octavian. ( Bhion Cass, xlii. 18. xliui. 49, xliv, 4; Suet. Caes. 75: App. B. C. i. 97.)
Caesar also began the large basilica on the S . side of the forum, called after him the Basilica Jowis; but, like most of his other works, he left it to be finished by Augustus ("Forum Julium et Basilicam quae fuit inter aedem Castoris et aedem Saturni, cuepta profligataque opera à patre meo perfeci," $M /{ }^{\circ} n$. Ancyr.). Its situation is here so accurately fixed
that it cannot possibly be mistaken, namely, betreen the temple of Saturn, which, as we have seen, stond at the head of the formin, and the temple of Custor, which lay near that of Vesta: and the Notitio indieates the same position; so that it must have been situated between the Vicus Jogarius and Vicus Tuscus. 1t has been seen before that this was the site of the ancient Basilica Sempronia, a boilding of which we hear no more daring the imperial times: whence it seems probable that it was either pullicd down by Caesar in order to erect his new basilica upon the site, or that it had previously gone to ruin. And this is confirmed by the fact that, in the excarations made in 1780 , it was ascertained that the basilica was erected upon another ancient fuundation. which Canina erronemasly supposes to have been that of the comitium. (Fredenlicin, Erposé d'une Décourerte faite dons le Forum Romain. SMasbourg. 1796: Fea, 1arietli di Notizie e della Basilica Gialia ed olcuni Siti del Foro Romono, ap. Canina, Foro Romano, p. 118.) In sonve excarations made in 183.5 near the culumn of Phocas, another proof of the site of the basilica was discorered. It was the following fragment of an inscription, which taken by iteelf seems too mangled and imperfect to prove anything: . . . a . . . astlica . . . ek reparatae ... set adiectr. It was recollected, howeerer, that this must be the fragment of an inscription discovered in the 16 th century at this spot, which is recorded by Gruter (elsxi. خे) and by Panvinius in bis Descriptio Crbis Romue (Graevius, iii. p. 300). The two inscriptions, when put in juxta-pusition, appear as follows:-

gaminies vethus<br>problanes . v. c. irame. vrb<br>statuabe quae basimicae<br>IVLLE A SE NOVITER<br>REPARATAE, OLXIMEXTO ESSET ADIECIT<br>MEDIC . XY. K.IL . FEERVARI<br>PVBLICOLVM<br>CORNELIO ASNVLINO II<br>ET, AVEID . FRONTONE

[meorum] inchoavi et, si vivus non perfecissem, perfici ab heredibus [meis jussi]." Bot, from a supplement of the same inscription recently discovered, it appears that Augustus lived to complete the work ("Opera fecit nova-forum Augustum, Ba silicam Juliam," etc. ; Franz, in Gerhard's Archüolog. Zeit. Xo, ii. 1843). Nevertheless it seems to have anciently borne the names of his grandsons: "Quaedam ctiam opera sub, nomine alieno, nepotam sclicet et uxoris sororisque fecit: ut porticum basilicamque Lucii et Cuii. \&cc." (Suet. Aug. 29). The addition which Angustus mentions having made to tho building ("ampliato ejus solo ") may probably liave been the portico here mentioned. In A. 13. 282 it was agan destroyed by fire, and was rebuilt by Diocletian (Cotel. Imp. Fienn. p. 247, Pene.)

The Basilica Jula was chiefly used for the sittings of law-courts, and especially for the causae centumvrales (Plin. Epist. v. 21, ii. 14.) Its immense size may be inferred from anuther passage in Pliny (vi.33), from which we leam that 180 jadices, divided into 4 concilia, or courts, with 4 separate tribunals, and numeroas benches of advocates, besides a large concourse of spectators, both men and women, were aceustomed to asemble here. The 4 tribunals are also mentioned by Quintilian (In. Or: xii. 5, 6).

The funcral of Cacsar was also that of the Rupublic. After his death and apotheosis, first an Altas and then an Ampes Divi Juha were erected to him, on the spot where his body had been burnt (Buцóv quva

 "Acdem Dwi Juli-feci," Mon. Ancyr.) We also tind mention of a column of Numidian marble nearly 20 feet high, crected to lim on the forum by the people, with this inscription: "Parenti I'atriac," (Suet. Cues. 88.) This, however, seems to have been the same monament sometimes called ara ; for Suetonius goes on to say that the people continued for a long while to offer sacrifice and make vows at it (" Apad candern longo tempore sacrificare, vota suscipere, controversias quasdam interposito per Caesarem jurejurando distrahere perseseravit"). This ara or columna was afterwards overthrown by 1) sabella (Cic. I'hil, i. 2, au Att. xiv. 15). We have before seen that Caesar's body was burnt on the formm, lefore the Regia and the new rostra which lie had erected, and we must therefore conclade that this was the spot where the altar was set up by the prople, and subsequently the temple by Augustus. But this has heen the subject of a warm controversy. Bunsen placed the temple on the Velisn ridge, so that its front adjoined the Sacra Via where it crosses the eastern boundary of the forum, whilst Becker (IIandb. p. 336) placed it on the forum itself, so that its back adjoined the same road. The autboritics are certainly in favour of the latter view; and the difficulties raised by Urlichs (Röm. Top. p. 21, seq.). who canie to the rescue of Bunsen's theory, arise from the mistake shared alike by alf the disputants, that this end of the formon was the comitum. Urlichs might have seen that this was not so from a passage lie himself quotes (p. 22) from the Fasti Amiternini, XV. Kal. Sept, showing that the temple stood on the formm ("DivoJulioad Foram"). He seeks, lowerer, to get rid of that passage by an unfortunate appeal to the Schol. Cruq. ad Hor, S. i. 6.35, in order to show that after the time of Caesar there was no longer any distinction made between the foram ard comitium, since the puteal is there named as being on the formm, instead of on the comitinm as Urlichs thinks it should be. But this is only trying to support one error by another, since we lave already shown that the puteal really was on the formm and not on the comitium. We need not therefore meddle with this controversy, which concerns only those who lave taken a wrong view of the comitiuin.

We will, however, remark that the passage addnced by Becker in his Antwort, p. 41. from the Scholiast on P'ersius (iv. 49), where the puteal is montioned as "in porticn Julia ad Fabianum arcum." confirms the sites of these plares; from which passage we also learn that the temple had a portico. firmints says (iii. 3) that the temple, which must have been a small one, was of the order called peripteras pycrostylus, that is, having columns all round it, at a distance of one diameter and a half of a column from one another. It mast have been raised on a lufty base or substuction, with its fromt towards the Capitul, as we sce from the following lines of Ovil (Het. xx. 841): -
"ut senijuer Capitolia nostra forumque Divas ab excelsa proapectet Julius aede."

The same circumstance, as well as its close proximity to the temple of Caster, are indicated in the
following verses of the same poct (E.x Itimt. ii. 285):
"Fratribus assimilis, quos proxima templa tenentes
Divus ab excelsa Julius acde videt."
This substruction, or крךтis, as it is called by Dion, served, as we have seen, for a third roblra and, after the battle of Actium, was adorned hy Augustus with the beaks of the captured Eeyptian ships, from which time it was called hosmea Jetia. (Dion Cass. li. 19.)

Such were the alterations made by Julius Caesar in the forum, and by Augustus in honour of his adopitive father. The latter also made a few other additions. He erected at the liead of the formm, under the temple of Saturn, the Mhamata Acrasm, which we have before had occasion to mention. (Dion Cass. liv. 8 ; Suct. Otho, 6; Tac. 11. i. 27.) It was in shape like a common milestone, but seems to have been of bronze silt. Its use is not very

THE MHLALEITM,
clear. as the milestones along the varions rads denoted the distances from the gates. But when we recollect that Augustus included a great extent of new streets in his Regions, it seems not improbahle that it was intended as a measure of distauces within the city; and indeed we find that it was made the starting point in the survey of the city under Vespasian. (Plin. iii, 9.) Hence it might be regarded, as PIntarch says (Galb. 24), tho common centre at which all the roads of Italy terminated. The Umbumets Romae which Beeker confounds with it (p. 344) appears to have been a diflerent thing, as the Notitia mentions both of them separately under leegio viii. The piece of colantin excavated near the arch of Severus must have belonged to this umbilicus, or to some other monnment, not to the miliarium, which appears fiom the Notitia and Curiosum to have retaned till a late period its original position near the temple of Natam at the head of the formm.

We also read of a Fornix Augestr or triumphal arch erected on the formm in honour of Angustus, but its position is newhere accurately defined; though from some Scholia on Virgil (Aen. viii. v. 606) edited by Mai, it is supposed to have been mear the temple of Julius (Camina, Foro Rom. p. 139 note.)

The Ancus Tiberif, another triumplal arch, dedicated to Tiberins, was erected at tbe foot of the Clivas Capitolinus near the temple of Satnrn, in commemoration of the recovery of the Roman standards lost with the army of Varus. (Tac. Ann, ii. 41.) Tiberius also restored the temple of Castor in the name of himself and of his brother Drusus, as well as the temple of Concord, as we bave before bad occasion to remark.

Under the following emperors dorn to the time of Dumitian we do not read of many alterations on the forum. The fire of Nero seems to bave chiefly destroyed its lower part, where the temple of Vesta and the Regis lay; the upper portion and the Capital appear to bave escaped. The Curia Julia was probably barnt down in the fire which occurred in tbe reign of Titus; at all events it was certainly rebuilt by Domitian. The celebrated Statue of VicTORY, consecrated in the curia by Angustus, appears, bowerer, to have escaped, sioce Dion Cassius expressly says that it existed in bis time, and we find it mentioned even later. (Suet. Aug. 100; Dion Cass. 1i. 22; Herodian, v. 5.) It was this statne, or more correctly perhaps the altar which stood before it, that occasioned so warm a contention between the Christian and heatien parties in the senate in the time of Theodosins and Valentinian 11., the fonne: being led by Ambrosius, the latter by Symmachns, the praefectus urbi. (Symmach. Epist. x. 61 ; cf. Ambros. Epist, ad calcem Symm, ed. Par. 1. p. 740 , ii. pp. 473, 482 ; Gibbon, Decline and Fall, vol. iii. p. 409, seq., ed. Smitb.) Ambrose is said to have obtained its removal; though this, perbaps, relates only to the altar, since the statne is mentioned by Clandian as still existing in the time of Honorins. (De VI. Cons. Hon. v. 597):-
" Adfuit ipsa suis ales Victoria templis
Romanae tutela togae: quae divite penna
Patricii reverenda fovet sacraria coetus."
Domitian had a peculiar predilection for tro deities, Janus and Ninerva. He erected so many arclways all over the city that an ancient pasquinade, in the form of a Greek pun, was found inscribed upon one of them: "Janos arcusque cum quadrigis et insignibus trinmphoram per Regiones urbis tantos ac tot extraxit ut cnidam Graece inscriptum sit, ¿д $\kappa \in \hat{\epsilon} \hat{C}^{\prime \prime}$ (Suet. Dom. 13; cf. Dion Cass. lvii. 1.) Among other temples of Minerva he is said by some authorities to have erected one on the furum between those of Vesta and Castor. (Becker, IIandl. p. 356.) But there seems to bave been hardly room for one at this spot; and, as we have before remarked, the Notitia does not mention it. Domitian also built, in honour of his father aod brother, the Temple of Vespasian and Tirt's, nest to the temple of Concord. The tbree columns on the Clisus Capitolinus most probably belong to it . Tbe opinion that the eight lonic columns are remains of this tempie has been already disenssed.

Such was the state of the fornm when the colossal equestrian Statie of Domitiax was erected on it near the Lacns Cortius. Statius (Silvae i. 1) Las written a small poem on this statue, and his description of it affords many interesting topographical particulars, which fully confirm what has been already said respecting the arrangement of the forum:-

[^24]Fiuxit opus? Siculis an conformata caminis Eftigies, lassum Steropem Brontemgue reliquit?

Par operi sedes. Hinc obvia limina pandit, Qui fessus bellis, adscitae munere prolis, Primus ite costis ostendit in aetbera divis.

At lateram passus hine Julia tecta taentor Illine belligeri sublimis regia Panlli.
Terga pater blandoqne videt Concordia vulte. Ipse autem puro celsum caput aere septus Templa superfalges, et prospectare videris An nova contemptis surcant palatia flammis Pulerins; an tacita rigilet face Troïcus ignis Atque exploratas jan laudet Vesta ministras," \&c.
The statne, therefore, must have faced the east, with the head slightly inclined to the right, so as to behold the temple of V'esta and the Palatine. Directly in front of it rose the temple of Divas Julius; on the right was the Basilica Julia, on the left the Basilica Acmilia; whilst behind, in close juxtaposition, were the temples of Concord and of Vespasian and Titus. The site of the statue pear the Lacus Curtius is indicated in the poem (v. 75 , seq ).

The nest important monument erected on the forum after the time of Domitian appears to have been the Temple of Antoninus and Fatstini, considerable remains of which still exist befure and in the walls of the moderh church of S. Lorenzo in Miranda. It stood at the eastern extremity of the N . side of the forum. These remains, which are now sunk deep in the earth, consist of the pronaos or restibale composed of eight columns of cipollino marble supporting an architrave, also part of the cella, built of square blocks of piperino. The architrave is ornamented with arabesque candelabra and griffins. On the front the inscription is still legible:-

DIVO - ANTONINO . ET
divie favstlvae. Ex. s. C.

temble of antoninus and faustina.
But as a temple was decreed hoth to Antoninns Pins and his wife, the elder Faustina (Capitol. Anton. P. c. 6, 13), and to the younger Faustina, their daughter (Ib. c. 26), and as divine honours were also rendered after his death to M1. Aurelius Antoninus, the husband of the latter, it becomes doubtful to which pair the temple is to be referred (Nibby, Foro Kom. p. 183). It seems, however, most probable that it was dedicated to Antoninus Pins and the elder Fanstina. It is stated by Pirro Ligorio (ap. Canina, Foro Rom. p. 192) that in the excarations made here in $\mathbf{1 5 4 7}$, the basis of a
statue was discovered with an inseription purporting that it was erected by the gruild of bakers to Antunims Pins. In the time of Pallado the temple was in great deal more perfect tham it is at present. and had an atrium in front, in the middle of which stond the bronze equestrian statue of M. Aurelius, which now adorns the Cijuitol. (Architattura, lib. is. c. 9.) The inseription in (irnter (eclix. 6) probably belonged to the pedestal of this statue. It was found in thas Sicra Via in 1562 . Sinme difficulty, however, arises with rerard to this account, since from sarions other sonrees we learn that the statue stom for a long while luture the clumeh of St. Iolne Lateran. From l'alladio's acconnt of the corfile, or court, it would appear that the buildng lay some distance back from the Nacrat Via.

In the reinn of Cummorlas a destractive fire, which liverl several days, oceasioned mach danage in the neighburhord of the formm, and destroyed amonz other things the temple of Vesta. (Heroulian, i. 14.) According tu Dion Cassius the same fire extended to the l'alatine and consumed almost all the reconds of the empire (1ssii, 24). It was on the same occasion that the shop of Gialen, which stood on the siacra Vi.s, was burnt down, and also the L'alatim Library, as he himself assures us. (De Compus. Medicam. i. c. 1.)

This damage seems to have been repaired liy Spptimiu. Siverus, the munificent restorer of the loman buillings, who with a rare gencrosity commonly reframed from inscriling his own name upon then, and left their honoms to the rightfu! fomders (- Romae omnes ades publicas, quae vitio temporum labebautur, instanravit: musquam prope suo nomine inscripto, servatis tamen ubique titulis conditorum," spart. Sever. c. ult.). Of the original monuments erected by that emperor thie princijal one was the Alscus Seveail or triumplas arch, which still exists in good preservation at the top of the liman forma. The inseription informs as that it was dedieated to Severus, as well as to his two some, Caracalla and (reta, in his third consulate and the 11th yeat of his reign, corsequently in A. 12. 203 , Between the temple of Concord and the arch, the church of SiS. Sirgio e Buteco was built in the middle ades, with its tower

AKCH OF SEPTHMA'S SEVERES.
resting upon the arel. It appeurs from a memial of Caracallathat a chariot with six horses and prisons within it stood on the summent of the arch, atad other persons on horschack at the sites, suppased to be the emperor's sons. It was eveled partly in front of the temple of Concoral, su as in sane degree to conceal the view of that buldngy, and thus to dis-
turb the whole arrangement of the edifices at this part of the formm. Originally it does not seem to have spanned any road, as the latest excavations show that it stood somewhat elevated above the level of the formm, and that the two side arehes were approached by means of steps. (Canina. Finv Rom. p. 202.) The paved rowd that may be now seen under it innst have been made at a later period. It would be quite a mistake to suppose that the Suera Fiat jassed under it. This road (here the Clicus Capifolamus) began to aseend the liill in froat of the temple of satam and under the arch of Tiberins.

There seen to have been several other arches in the peighbourlood of the curia or senatns, and further on in the street which led into the Campus Martius; but whether these belonged to the numerous ones before alluded to ns erected by Domitian, or were the works of a Jater age, cannot be determined, nor are they of such importance as to justify any extended rescarch in this place. The haplazard names bestowed on them in the middle ages, as Arcus manus carmeae, and perhaps also panis aurri, afford no clue by which to determine their meaning with any cerlainty.

Aurelian erected a golden statue of the GENit's OF THE Boshas PEORI.E on the rostrat; and that these were the ancient rostra inay be inferred from this statue being mentioned as close to the senatus, or curin, in the Notitia. ("Aurehanus-Geniun Populi Iiomani in Rustra posuit," Cutal. Imp. V̈enn. ז. iो. p. $2^{2} 46$, ed. Rone. ; "t continet,-Gumar Populiliomani anream et Eyuum Constantini, Senatum, Atrium Mnervae," \&c. Not. Reg. viii.) The same inference may be dedncma from a passage in Dion Casius (xlvii. 2), which describes some valmes settling on the temple of Concordia, as also on the sacellum of the Geatius of the 1'cople; but as this passarge relates to Augustus and Autony, it likewise proves that the *acellum must have been there long previonsly to the tinse of Aurelian, though when it was erveted cannot lie determinml. The Equis Constantini, re. conded in the preceding passage of the . Votitia, is also montioned by the Anonymus Einsiedlen-is near the archof Severus, under the title of Cavallus Canstantini.

We shall here mention three other statues which stoml in this neighbourhood, since they serve to confirm the topography of it as already described. Pling mentions three Sratees of the Sibyl as standing near the rostra. (" Eynidem et Sibyllae juata Rostra esse non miror, tres sint licet," xxxiv. 11.) That he matat the ancient rostra is evidunt from his froing on to say that loe eonsidered these statues to be among the carliest erected in Jomes. At a late priod of the Empire these seem to have obtained the mame of the Fites (Moipat or Pareae). They are mentioned by l'rocopitss, in a passage before alluded to, as in the vicinity of the curia and

 א $\alpha \lambda \in \hat{1}$, B. (7. 1. 25.) A whole street or district in this guarter seems to lave been amaed after them, since both the modern church of $S$. Adriano, at the eastern eorner of the 1 iia Bonella, and that of $S S$. Cinsmo e Damiano, which stands a little beyond the temple of Faustina, and consequently out of the proper boundanies of the formun, are said to have been foumled in it. ("Fecit ecelesiam beato Adriano martyri in tribus Fatis," Anastas. I. /Ionor: i. p.

121, Blanch: "In ecclesia vero beatorum Cosmae et 1)amiani in tribus Fatis," \&r. Id. V. Hadr. ib. p. 2.i4.) Hence perhaps the name of templum fatale applied to the temple of Janus.
The last object which we shall bave to describe on the formm is the Columin of Phocas. Whilst the glorious monuments of Julius and Augustus, the founders of the empire, have vanisbed, this pillar, erected in the year 608 by Smaragdus, exarch of Ravenna, to one of the meanest and most batefut of their successors, still rears its head to testify the low abyss to which Rome had fallen. It appears from the inscription, which will be found in Canina (Foro Rom. p. 2†3) and Bunsen (Beschr. vol. iii. p. 271), that a gilt statue of Phocas stood upon the summit. The name of $P$ hocas has been erased from this column, protably by Heraclius; but the date suff. ciently shows that it must bave been dedicated to him. Previously to the discovery of this inscription, which happened in 1813, it was thought that the column belonged to some building ; and indeed it was probably taken from one, as the workmanship is much superior to what conld have been executed in the time of Phocas. Byron alludes to it as the "nameless column with a huried base." In the excavations made in 1816, at the expense of the duchess of Devonshire, the pedestal was discovered to be placed on a raised basis with steps of very inferior workmanship. (Jurray's Ilandbook of Rome, p. 62.) It may be remarked that this column proves the formm to bave been in its ancient state, and unencumbered with rubbish, at the commencement of the 7 th century. Between this pillar and the steps of the Basilica Julia are three large bases inteoded for statues.

## V. The Imperial. Fori.

Forum Julium.-As Rome increased in size, its small forum was no longer capable of accommodating the multitudes that resorted to it on mereantile or legal business; and we have seen tbat attempts were early made to afford increased accommodation by erecting various basilicae around it. Under the Eimpire, when Rome had attained to enormous greatness, even these did not suffice, and several new fora were constructed by various emperors; as the Forum Caesaris or Julium, the Forum Augusti, the Forum Nervae or Transitorium, and lastly the Forum Trajami. The political business, however, was still confined to the ancient formm, and the principal use of the new fora was as courts of justice. Probably atnother design of them was that they should be splendid momments of their fonnders. In most rases they did not so much assume the aspect of a forum as that of a temple within an enclosed space, or тépevos, - the forum of Trajan being the only one that pussessed a basilica. From this characteristic of them, even the magnificent temple of l'eace, erected by Vespasian without any design of its being appropriated to the parposes of a forum, obtained in after times the names of Forum Vespasiani and Forum Pacis.
The bint foundation of this kind was that of Caesar, enchoing a Texple of Vevus Gexithix, which he lad rowed before the breaking out of the Ciwil Wiar. After the battle of Pharsalus the whole plan of it was arranged. It was dedicated after liis triumph in n.c. 45 , before it was finished, and indeed so hastily that it was necessary to substitate a plaster model for the statue of Venus, which afterwards occupied the cella of the temple. (Plin. xxav.
45.) Cacsar did not live to see it completed, and it was finished by Augustus, as we learn from the Momumentum Ancyranum. We are told by Appian (B. C. ii. 102) that the temple was surrounded with an open space, or $\tau \epsilon ́ \mu \in \nu 0 s$, and that it was not destined for traffic but for the transaction of legal business. As it stood in the very beart of the city Caesar was compelled to lay out immense sums in purchasing the area for it, which alone is said to have cost him "super H. s. millies," or abont $900,000 \mathrm{l}$. sterling. (Suet. Caes, 26 ; Plin. xxxvi. 24.) Yet it was smaller than the ancient formm, which now, in contradistinction to that of Caesar, obtained the name of Forum Magnum. (Dion Cass. xliii. 22.)

No vestige of the Forum Julium has survived to modern times, and very various opinions have been entertained with regard to its exact site; although most topographers have agreed in placing it belind the N. side of the Forum Romanum, but on sites varying along its whole extent. Nardini was the first who pointed to its correct situation behind the church of Sta Martina, but it was reserved for Canina to adduce the proof.

We must here revert to a letter of Cicero's (ad Alt. iv. 16), which we had occasion to quote when speaking of tho restoration of the Basilica Actnilia under the forum of the Republic. It has an inportant passage with regard to the situation of the Forum Julium, but unfortunately so obscurely worded as to have proved quite a cruc to the interpreters. It appears to have been written in B. C. 54 , and runs as follows : "Paullus in medio foro basilicam jam paene texuit jisdem antiquis columnis; illam autem quam locavit facit magnificentissimam. Quid quaeris ? nihil gratius illo momumento, nihil gloriosius. Itaque Caesaris amici (me dico et Oppium, dirumparis licet) in monunientum illud, quod tu tollere laudibus solebas, ut forum lazaremus et usque ad atrium Libertatis explicaremus, contempsimus sexcenties f. s. Cum privatis non poterat transigi minore pecunia. Efficiemus rem gloriosissimam: nam in Campo Nartio septa tributis comitiis marmorea sumus et tecta facturi eaque cingemus excelss porticu," \&c. Of these words Becker has given two different interpretations. He first imagined (Handb. p. 302, seq.) that Cicero was speaking only of two buildings : the Basilica Aemilia, wbich Paullus was restoring, and a new basilica, which the same person was building with Caesar's money, and which was afterwards named the Basilica Julia. But before he had finished his work he altered his mind, and at p. 460 pronounces his opiuion that Cicero was speaking of no fewer than tour different edifices : 1st, the Basilica J'aulli ("Paullus-Columnis") ; 2nd, the Basilica Julia ("il-lam-gloriosius "); 3rd, the Forum Julium ("ltaque -pecunia") ; 4th, the Septa Julia ("Efficiemus." \&c.). With all these views, except the second, we are inclined to agree; but we do not think it probable that Paullus would be constructing two basilicac at the same time; nor do we perceise how a new one only then in progress could have been a momment that Atticus had been accustomed to praise. Tlise chief beauty of the basilica of Paullus was derived from its columns ( ${ }^{4}$ Nomme inter magnifica dicamus basilicam Paulli columnis e Phrygibus mirahilem," Plin. xxsvi. 24. s. 1); and though it had undergone two or three subsequent restorations before the time of Pliny, we are nevertheless inclined to think that the columns praised by him were the very simue
which Atticus had so often admired. Ifowever this may be, we see throught the ubscurity of Ciecro's letter the rough sketels of a magniticent design of Caesar's, which had not yet bren perfeetly matured. The whole space from the back of the Isasilica Aumilia as far ats the Supta Julia in the Canpas Martius was to be thrown upen; and perhaps even the excavation of the extremity of the Quirinal, ultimately executed by Tajaz, may have bees comprised in the phan. Cicero is evidently lalf ahaned of this vast onthay in favour of Cacsar, and seeks to exeuse it with Atticus by leading him to infer that it will place lis favowite monument in a better point of view. When Cicero wrote the plan was evidently in a crude and ituepient state. The first pretence put forth was probably a mere extension of the Forum Romantun; hut when Caesar a few years hater attained to supreme power the new foundation becaune the Forum Julium. In bis positiou some caution was requisite in these affairs. Thus the euria of Faustus was pulled down under pretence of erecting on its site a temple of Felicitas-a compliment to the boasted good fortume of Sulla, and his name of Felis. But instead of it rose the Curia Julia. The discrepancy in the sums mentioned by Cicero and Suetonius prubably arose from the circumstance that as the work proceeded it was fonnd neeessary to buy more houses. If this buying up of private loouses was nut for the Forum Julium, for what purpose could it possibly have beea? The Curia Julia stood on the site of the Curia Histilia, the Basilica Julia on that of the Semprouia, and we know of no otber buifdings designed by Caesar about the formon.

With regard to the situation of the Atarom Limemtites, to which Cicero says the forum was to be extended, we are inclined to luok for it, with Becker, on that prejection of the Quirinal which was subsepuently eut away in order to make room for the furum of Trajan. The words of Livy, "Censores estemplo in atrium Libertatis escenderunt" (sliii. 16), seem to point to a height. A fragment of the Capituline plan, bearing the inscription memerrans, seems to be rightly referred by Camina to the Basilica Ulpia. (Furo Rom. p. 185 ; ct. Beeker, Anticort, pe: p. 29.) Now. if our conjecture respecting the site of the Athium Libertatis is eorrect, it womld have beea ovcupied by the forum of Trujur and its appurtenances; and it therefore apluars prohable that the Atrinon was comprehended in the Basilica Elpia. Nor is this a mere unfounded phes, since it aplears from some lines of Sidonius Apr Mmaris (Epig- 2), that in his time the Basiliea Thpiat wats the place where slaven received their manumissim. And that the whd Atrium Libertatis was devoted to mammission and other business respecting小lives appusars from several prosages of ancient anthors. Thus Livy: "Pontremo co deacensum est, ut ex ymatur urbanis tribubus uam palan in Atrio Lubertath surtiremtur, in quan omnes, ỵui selvitutem servisome, twe xement " (x1v. 15). And Cimen: "sod quatomis urgent Mifonem, quae sunt hatotaie nuak in Atrou libertativ: Qubunam de servin? 'sc. (MiL.22). Lastly, it may be mentioned that the following fragrien it atr insorption was found near the choreh of $S$. Ifartince, and therefore near this spot: -
skantres . purvinsege [ Ebomanvs] matertath.
(1' mina, Foro Rom. po 391).
the preceding letter of Cleero's pints to the

Forum Julium as closely adjoining the Basilica Aomilia, and there are other circumslances that may be adduced in proof of the same site. Orid (Fust, i. 258) alludes to the temple of Jataus as lying between two fura, and these must have been the Formon Romamum and the Forum Caesaris. Pliny's story (xvi. 86) of the lotus-tree on the Vulcanal, the roots of which penetrated to the formon of Caesar, whatever may be its absolute truth, must at all events have possessed sufficient probability to be not actually incredible; and there is no situation for C'aesar's forum which tallies with that story better than that here assigned to it with relation to the site of the Vulcanal, as established in the preceding payes. Onr Vilcanal need not have been distant more than about 30 yards from the Forum Julinm; that of Becker lies at about five tiunes that distance from it, and would render Pliny's account utterly improbable.

I'allatio mentions that in his time considerable remaias of a temple were discovered behind the place where the statue of Marforio then stood, near the cburch of S. Martina, which, from the cornice being adorned with sculptures of dulphins and trideuts, he took to be one dedicated to Neptune. But as we Lave no accounts of a temple of Neptune in this neighbourhood, and as these emblems would also suit the sea-born goldess, it seems probable that tho remains belonged to the temple of Venus Genitrix. This is still more strikingly confirmed by Palladio's account of its style of architecture, which was pycnostyle, as we know that of Venus to have becn. (Archit. lib. iv. 31 ; comp. Vitruv, iii. 23.)

We can hardly duobt, therefore, that the forum of Ciesar lay on this spot, as is indicated by so many vartuus circumstances. The ouly whjection that has been urged against it is the following passuge of Servius, which places the digne:tum, is district which uadoubtedly adjomed the Forum Julium, ia quite a different jart of the town: " Sunt gealinae belli portae-Swrariun boc Numa Pompilius fecent circa jmun Argiletum just. 1 theatrum Mareelli, qual fuit in dnobus brevissimis templis. Dnobus autem propter Janum bifrontem. Postea captis Faliscis, civitate I'unciar, inventmen est simulacrum Juni cuun fruntibus quatuor. Uude qrod Numa instituevat translatum est ad formu Transitorium et ynathur portarum mum templum est institutum" (od Viry. Aco. vii. 607). That the Arsiletum adjuined the formm of Ciesser is cevident from the followns epigram of Martial's (i. 117. 8): -
> " Quad quaeris propins petas liechit Ar_i nempe soles sut ine letmu: C intra Caesaris est formo taberas suiptis postihas line et inde totis Ounes at cito perlegas poctas. Il ine me pete, ate rie es Atrectum; Hec nomen dunims gerit tabernae."

Hince, if Survius is right, the formm of Cassar mull not have been where we hove placed it. but in the S . side of the C.apituline hall; and thas epimm lus found som: defemders (Mommsen, Amouli dell Instit. vol, xvi. p. 311. seq.) We trust, hewever, that the sitnation of the small temple of danus, the iadex belli pacisiuc: has been clearly established by what we have said in the fommer part of tbis articte Servias is evidently contionding this littie temple with the larger one near the theatre of Mirr Has; and indeed the whole paesure is a heap of trash. For how cas we counct such remute events as the
taking of Falisci, or rather Falerii, and the erection of a Janus Quadrifrons on the Forum Transitorium, which did not exist till many centuries afterwards? Livy also indicates the Janus-temple of Numa as being in the Argiletum (" Janum ad infimum Argiletum indicem pacis bellique fecit," i. 19); whence we must conclude that it was a district lying on the N . side of the forum. We do not think, however, with Becker (Handb. p. 261), that any proof can be drawn from the words of Virgil (Aen. viii. 345, seq.), where, with a protical license, the various places are evidently mentioned withoat regard to their order. But how far the district called Argiletum may have been encroached upon by the imperial fora it is impossible to say.

The forum of Caesar mnst have been very splendid. Berise the temple of Venus stood a statue of the celehrated horse which would suffer nobody but Cacsar to mount him, and whose fore-feet are said to bare resembled thuse of a human being (Snet. Caes. 61; Plin. viii. 64). The temple was adorned with pictures by the best Greek artists, and enriched with many precions offerings (Plin. vii. 38 , ix. 57 , xxxvii. $5,8 \mathrm{c}$.). It was one of the three fora devoted to legal business, the other two being the Foram Romanuan and Augusti: -
"Cansas, inquis, agam Cicerone disertius ipsa Atyue erit in triplici par milhi nemo foro."
(Mart. iii. 38. 2.)
Whether it was ever used for assemblies of the senate seems doubtful; at all events the passage eited by Becker (Hanulb. p. 369) from Tacitns (Ann. xri. 27) proves nothing, as the word curia there seems to point to the Caria Julia. Of the subsequent history of the Forum Caesaris but little is known. It appears to have eseaped the fire of Nero; but it is mentioned among the buildings restored by Diocletian after the fire under Carinus ("Opera publica arserunt Senatnm, Furum, Caesaris patrimonium, Basilicam Juliam et Graecostadium, Catal. Imp. Iienn. where, according to Preller, Reg. p. 143, we mast read "Forum Caesaris, Atrium Minervae.") It is mentioned in the Ordo Romamus, in the year 1143, but may then have been a ruin.

Forum Augusti.-This forum was constructed for the express purpose of affording more accommodation for judicial business, which had now incrensed to such an extent that the Fornm Romanum and Foram Juilmon did not suffice for it. It included in its area a Temple of Mais Uitor, vowed by Augustus in the civil war which he had undertaken to avenge lis tather's death:-
" Mars ades, et satia scelerato sanguine fermm, Stetque favor causa pro meliore tuus.
Templa feres, et, the victore, vocaberis Ultor. Voverat, et fuso laetus ab huste redit."
(Ov. Fust. v. 575 , seq.)
This temple was appointed to be the place where the senate should consult about wars and triumphs, where prosinces cum imperio should be conferred, and where victorinus generals should deposit the insignia of their triumphs (Suet. Avg. 29). The forum was constructed on a smaller scale than Augnstus had interded, because he could not obtain the consent of some neighbouring householders to part with their property (Ib.56). It was opened for busituess before the temple was finished, which was dedicated 5.c. 1 (Ib. 29; Vell Pat. ii. 100). The formm extended on each side of the temple in a semicircular
shape (Palladio, Arelit. iv.), with porticoes, in which Augustus erected the statnes of the most eminent Roman geterals. On each side of the temple were subsequently erected triumphal arches in honour of Germanicus and Drnsus, with their statues (Tac. Ann.ii. 64). The temple is said to have been very splendid (Plin. xxxvi. 54), and was adomed, as well as the forom, with many works of art ( 16 . vii. 53, xxxiv. 18, sxxv. 10; Ov. Fast. v. 555, \&e.). The Salii were accustomed to banquet here; and atu anecdote is recorded of the emperor Claudius, that once when be was sitting in judgment in this forum, he was so attracted by the savonry odour of the dinner preparing for these priests, that he quitted the tribunal and joined their party. (Suet. Claud, 33.) This anecdote has partly served to identify the site of the temple, an inseription having been discovered on one of the remaining walls in which the Sulii and their Mansiones are mentioned (Canima, Foro Rons. p. 150).

The remains of three of the colnmens, with their entablature, of the temple of Mars Ultor are still to be seen near the place called the Arco dé Pantani. It must therefore have adjoined the back of the Forum Caesaris. These three columns, which are tall and handsome, are of the Corinthian order. All we know respecting the history of the Forum Augnsti is that it was restored by Hadrian (Spart. Hadr. 19). The church of S. Basilio was probably built on the site of the temple (Ordo Rom. 1143; Dabill. Mrus. Ital, ii. p. 143).

MARS ULTOR.
Forum Transitorium or Forum Nervae.-This formon was begun by Domitian, but corpleted and dedicated by Nerva (Suet. Dom. 5; Aur. Viet. Caes. 12). We have said that Dumitian had a particular predilection for Minerva, and he funded a large Aedes Minervae in this forum ("Dedicato prius foro, qood appellatur Pervinu, quo aedes Minervae eminentior consurgit et magnificentior," A. Vict. Ib.). From this circumstance it was also called Forum Palladinm ("Limina post Pacis Palladiumque forum," Mart. i. 2. 8) ; besides which it also had the name of Pervium or Transitorium, apparently becanse it was traversed by a strect which connected the N . and S. sides of the city, which was not the case with the other fora (Nicbubr, in the Beschreibung Roms, iii. p. 282). Thus Lampridius (Alex. Se c. 28) : " In foro Divi Nervae, quod Trausitorium dicitur;" and Aurelius Victor in the passage just cited. From the line of Martial's before quoted, it appears to have adjoned the temple of Peace, erected by Vespasian, which we shall bave occasion to describe in another section. There appears to have stood upon it a temple, or rather perhaps fourtold archway of Janus Quadrifrons, probably somewhat resembling that which still exists near S. Georgio in Felabro, connecting the roads which led to the four different forums, namely, the Forum Romanum, Forun Ciesaris. Forum Nerrae, and Formm Pacis, as Vesjasian's temple of Peace was sometimes called. The passage
before quoted from Servius (ad Ach. vii. 607), however absurd in other respects, may at leat be received as evidence of the existence of such a Janms here, expecially as it is confirmed by other writers. Thus

 $\sigma \epsilon \sigma \omega \sigma \mu \in v o \nu($ ele Mens. iv. 1). So also Martial: -
"Nune tual Caesareis cinguntur limina donis
Et fora tot numeros, Jame, quot ora geris"
(s. 28. 5).

In the middle ages this Junus-temple appears to have borne the name of Noutis Ark.

In the time of lope Paul V. considerable remains existed of the promans, or vestibule of this temple of Mincrua, consisting of several columns with their entablature, with the following inscription: map. Neiva. CaEsal. Ayg. pont. max. thib. fot. 11. 191. 11. rnocos. (Canima, Foro Rom p. 171.) l'aul touk these columns to adorn his fonatain, the A'que Paulo, on the Janicalum. In the I'ia Alessazulrina there are still remains of the wall of peperino which formed the enclosue of the forum. together with two large Corinthian columns half buried in the earth, now called the Colonnacce. Their entablature is covered with motilatell reliefs, and over them is an Attic, with a figure of Minersa, also in relief. The situation of the formm of Nerva, and the remains of it existing in his time, are decribed by l'alladio (Architettura, lih. iv.), also by Ih lerac (tom. vi.), who observes, that it was then the most complete ruin of a formm in lone. The Colonnacce aro represented by Gamasci, Antichitit di Roma p. 55; Dexpudetz, ]. 159, seq.; Overbeke, pl. 39. There is a good description of the f ra of Angustus and Nerva by Niebuhr in the Beschrcibung Lioms, val. iii. p. 275 .

Forum Trajoni. -Thus between the Cspitoline and lalation hills, the Velian ridge and the :tscent of the Quirinal, the valley was alnost filled with a splendid series of public places, which we might masine could hardly be surpassed. Yet it was resurved for Trajan to complete another forum, still more magnificent than any of the preceding ones, for the construction of which the Quirinal itself was forced to yicld up part of its mass. Previously to the time of Trajan that hill was connected with the Capitoline by a sort of isthmus, or slender neek; the marrow and uneven defile between them was coverel with private honses, and trasemed ouly by a single road of commuxication Entween the formm and Campus Martius. But on the western side of this detile lay one of the hambamest quarters of lione, containing the Sipta Julia, the Flaminian circns, the theatres of Balbus, lompey, and Mareellus, tosether with those temples :and jerticoes which so mach escited the admiration of strato, and which he has lescribel in a passare quated in the former part of this article. The destan of the fortun of Tratian was, therefore, to comtout this ghanter of the town with the imperial fome in al inamur not anworthy of the magnificent structuce on cither side of it. This geqantic work, a fort part has dissppatas under the united inflomeses of time and barthe: m , is suptumed to have liech projereded, and even bey th, ly Monnitan. (Aur. Viet. Ciucs, 13; Hierom, i. p. 443, lime: ('assimel. Chron. i. p. 197.) It was, hancert. asouted by Trajan, with the a-vistance of the cel-hsetsed architent Apollodoras of Damascus. (Dint (:iss.|xix. 4.) But tho
arcient author has left us a satisfactory descriptinn of it, and we arc obliged to make out the phan, as best we may, from what we can trace of the remains; a tank somewhat aided by the excavations made by the French when they had possession of llome at the commencement of tle present century. (See Tournon, Etudes Statist. Rome, tom. ii. p. 253, pl. 28. 29; Fca, Votizie degli scavi mell' Anfiteatro P'lurive e nel Foro Traiano, Lom. 1813; bunsen. Les Forum de Rome, iide partie, p. 24. seq.) This inmense work consisted of the following parts :

1. The formon, properly so called, a large opeu area immediately adjoining the NW. sides of the fora of Caesar and Augustus, and filling the whole space between the Capitoline and Quirinal, much of the latter hill, indeed, and some of the former, having been cut away in order to make rom for it. This part, which was called the area or atrium fori (ticll. xiii. 24; Amm. Marc. xvi. 10), contaned, in the middle, an equestrian st:tue of Trajan, and wus adomed with many other statues. The SW, and NE: sides of this square where the ground had been cut away from the hills, was occupied with semicircular buildings. There are still lange remains of that under the Quirinal, which are vulgarly called the baths of Paullus Aemilius. The lower part of this edifice, which has only been laid open within the last few years, consists of quadrangular niches, which probably served as little shops; above them was a vaulted portico, with rooms and staircases leading to the upper floors. I'iranesi and other topographers conjectured that there was another similar building on the side of the Capitol, at the place called the Chiari ar Oro; but Canina was the first to demoastrate its existence in liis Indicazione Topografica. Along the frunt of each of the criscents thus furaed there seems to have been a portico, which gave the formm its proper rectongalar form. The formm was thus divided into three parts, through both the exterior ones of which there was a ruad for carliazes, as appears from traces of pavement; whilst the spluare, or middle division was pavel with flag-stones. In the midlle of the SE side there seems to have been a triumphal arch, vestiges of which were discovered in the time of Flamino Vacea (Menorie, no. 41). forming the principal entrance on the side of the imperial fora.

FHETM TEAIANE.
2. Next to the forum on the NW. sile lay the DAshaca Unima, which extembed across it leugth waty, and thus served to form one of its silles. The basilica was ealled Ulpia from Trajan's family name. The jlan of the middle part is now laid entirely upet. It scems to lave been divided internally by foun $r$ ins of colomms, thas forming tive aisles, with circular absuiles or chatcidica at cach end. Doring the ex-

## ROMA.

ROMA.
carations the bases of these columns were discorered partly in their original situation. But it is doubtful whether the fragments of colamns of gray granite now seea there belonged to the interior of the basilica ; it is more probable that it had columns of giallo antico and paonezzato, remains of which have been found (Nibby, For. Trajano, p. 353). The floor was paved with slabs of the same marbles. It is supposed from the authority of two passages in Pausanias to have had a bronze roof (v. 12, x. 5). Un the side which faced the forum were three magnificent eatrances, a large one in the middle and two sinaller on each side, decoratei with columos, as may be seen on medals.

BASILICA VLPLA.
On the NW. side of the basilica stood, and still stands, the Columx of Trajan, the finest momment of the kind in the world. This column was intended to answer two purposes : to serve as a sepulchre for Trajan, and to indicate by its height the depth of soil excavated in order to make room for the formm and its buildings. The latter object is expressed by the inscription, which rons as follows :-

SENATVS . PORVLVSQVE . ROMANTS .
IMP, CAESARI , DIVK . NERVAE , F, NERVAE TRALANO - AVG. GERM. DACICO . PONTIF.
MAXIMO . TR1R. POC. XVH. LMP. VL. COS. VI. P. P. AD . DECLARANDVM • QVANTAE . ALTITVDIXIS
MONS . ET . LUCVS . TANT[IS . OPERT]BYS . SIT [EGESTVS.
(Cf. Anr. Vict. Epit. 13; Dion Cass. 1xviii. 16). The height of the column, including the pedestal, is $127 \frac{1}{2}$ English feet. The diameter at the base is between 12 and 13 feet, and rather more than a foot less at the top. The shaft consists of 19 cylindrical pieces of white marble, in which steps are cut for ascending the interior. Oo the top was a statue of Trajan, now replaced by that of St. Peter, erected hy Pope Sistus V. When the tomb beneath was opened by the same pontiff, in 1585 , it was discovered to be empty. Round the column runs a spiral band of admirable reliefs, representing the wars of Trajan against 1)ecebalus, and containing no fewer than 2500 human figures. The height of the reliefs at the hottom is 2 feet, increasing to nearly donble that size at the top; thus doing away with the natnral effect of distance, and presenting the figures to the spectator of the same size throughout. The best descriptions of this magnificent colnmn will be found in Fabretti, De Columana Trajani, Rome, 1690, with plates by Pietro Santi Bartoli; Piranesi, Trofeo, o sia magnifica Colonna Cuclide, gic., with large folio dravings; De Rossi, Colonna Trajana designata.

The colums stood in an open space of no great extent, being 66 feet long and 56 broad. This YOL, II.
and 56 broad. This
space was bounded on its two sides hy porticoes with double columns. In the NW. side of the bas-

COLLJN OF TRAJAN.
silica, ${ }^{*}$ on either side of the column, were two libraries, the Bibliotheca Graeca and Latina, as indicated by Sidonins:-
> "Cum meis poni statnam perennem Nerva Trajanus titulis videret Inter auctores atriusque fixam

> Bibliothecae."-(ix. Epigr. 16.)

* It is remarkable, however, that the library is called by A. Gellius, "Bibliotheca templi Trajani" ens

3. There are evident traces that Trajian's forum extended still farther to the NW., thongh it is doubtful whether this exteraion was owing to Trajan himself or to Hadrian. Excarations in this direction have brought to light enormous eranite pillars lelonging probably to the temple which Halrian dedicated to Trajan (Spart. Ifodir. 19), and which

TEMPLE OF TRAJAN.

TEMPLE OF TRAJAN.
is mentioned in the Notitia in conjunction with the columo. This is further confirmed by some inacriptions bearing the name of Hadrian which have beea discorered in this quarter. (Bunsen, Les Forum Rumains, iide partie, p. 35.) Thus the space necupied by the ene noble structures extended from the fora of Caesar and Augustus almont to the Via Lata, or to the inodern Piazza degli Apostoli.

How long the formm of Trajan existed is uncertaio. The Anonymous of Finsiedlen mentions it in the way from Forta Nomentana to the Formm Lomanum. In the Mirabilia it seems to be spoken of as a thing that has disappeared.

## VI. Tine Pafatine and Velia.

After the Capit) and form, the Palatine hill is undoubtedly the inost interesting spot at Rome, both from its having been the cradle of the eternal city, and also the seat of its matured power-the residence of the emperors when those emperors ruled the morh, or, in the words of Tacitus, "ipsa imperii ars" (II. iii. 70),-a circumstanee from which it luas given name to the residences of subsequent princes. (Dion Cass liii. 16.) In treating of the topograplyy of this recion, and indeed of that of the remainder of the city, we shall not endeavour to observe a chronological order, as was desirable in treat. ing of the forum, in order that the reader might grin a clear idea of its appearance in the various periods of Roman history; but shall follow the most convenient method without regard to the dates of the
different oljects mentioned. We have already described the situation and height of the lill. The latter, however, cannot be very accurately given, as the suil is corered to a great depth with rubbish, the sole remains of those magnificent edifices which once stood ujon it. On the side of the Circus Maximus, indeed, in the ligna del Collegio Inglese, these ruins assume something of a more definite form; but the gigantic arches and terraces at that part, though they may still excite our wonder, are not sufficiently perfect to enable us to trace any plan of the buildings which they once formed. Ilowever, they must all lave been subsequent to the time of Nero; since the ravages of the fire under that emperor were particularly destructive on the Palatine hill. Hence the chicl' topographical interest attaches to the declivities of the hill, which present more facilities for ascertaining spots connected with and sanctified by the early traditions of the eity, - of which several have already been discussed, as the Porta Romanula and Clives Victorine, the Porta Mugionis, the Curiae Veteres, \&ec.

We have already soen that the declivity towards the Capitoline hill was called Germarus or Cermanes; but theugh in ancient times this was regarded is a separate hill, the reason is not clear, since it by no means presents any distinet features, like the Velia. Here was the Lepercal. according to tradition a grolto sacred to Pan ever since the time of the Arcadians (Dionys. i. 32, 79), and near it the Fices Ruminalis, or sacred fig-tree, under which Romulus and Remus were discovered suckled by the wolf. It is difficult to determine the exact spot of the Lupercal. Evander points it out to Acreas as lying "gelida sub rupe" (Virg. Aen. viii. 343), and Dionysius (l. c.) describes it as on
 Maximus; and his authority is preferable to that of Sprxins, who describes it as "in Circo" (ad Aen. viii. 90). Its most probable site therefore is at the western angle of the hill, towards the eircus. Its situation is in some degree connccted with that of the Cass Romulr. The desoription of the 10.th Regio, or P'alatine, in the Notitia begins at the Casa Romuli, and proceedinz ronnd the base of the hill to the N. and E. ends, in coming from the circus, with the Lupercal; whence it is plain that the Cass Romuli must have stood a little to the N. of it. Plutarch notices the Casa Komuli, which was also called Tugurium Faustuli, in the following manner:

 20). Here the expression $K a \lambda \eta$ ' 'AK $\boldsymbol{\prime} \dot{\eta}$ is puzzling, as an equivalent name does not occur in any Latin anthor. Properly ákt斤 signifies the sea-shore, and caount therefore be applied to the banks of the Tiber; nor, in prose at least, to an inland bank. Hence l'reller js inclined to think that it is merely Plutarclis awkward translation of the Roman name for a place called Pulcra Rupes, which ohtained this appellation after the Lupereal had been restored by Augustus and adorned with architectural elevations. (Regionen, p. 181.) But I'lutarch was surely master of his own language; and thongh he may not have been a very profound Latin scholar. yet as he lived some time in Rome and occupied jhimself with studying the history and manners of the people, we may perlaps give him credt for knowing the difference between rupes and littus. It seems more probable therefore that the looman
name of the place alluded to was Pticrim Littus than Pulcra Rupes (though unfortunatcly we do not find it mentioned in any Latin anthor), and that, like the Casa Romuli and Lupercal, it was a traditionary name, as old as the story of Romulus and Remus itself. According to that story, we must recollect that the Tiber had overflowed its banks and formed a lake here, and that the cradle was washed ashore at the foot of the Palatine; whence the name littus, which is frequently used of the shores of a lake, might without impropriety be applied to this spot. The Bafuoi or steps mentioned by Plutarch in the preceding passage were of course a more recent work, but their date cannot be fixed. Tropertius (v. I, 9) seems to allude to them in the following passage as existiog even io the time of Romulus and Remus:-
"Qua gradibus domns ista Remi se sustulit olim Unus erat fratrum maxima regna focus."
But though we can hardly imagine their existence at that time, yet the passage at all events suffices to prove the existence of the steps in the time of Augustus. Becker, however, will by no means allow this. (Handb. p, 420 and note.) Plutarch goes on to say that in the neighbourhood of the Casa Romali stood the cherry-tree said to have sprung from the lance hurled by Romulus from the Aventine to the Palatine; and that the tree withered and died from the roots having been injured when Caius Cacsar (Caligula) caused the steps to be

 Becker draws the conclusion that this was the origin of the steps, and that they did not exist before the time of Caligula. But this is by no means a necessary conseqnence from Plutarch's words, since è $\pi t-$ oкevágco often signifies to repair or make better. We find the same steps mentiuned by Solinus under the name of Scalae Caci: "Ad supercilium scalarum Caci hahet terminum (Roma Quadrata), ubi tugurium fuit Faustali. Ili Romulus mansitavit," \&ce, (i. I8). It cannot be doubted that these are the same steps mentioned by Propertins and Plutarch. Gerhard proposed to emend this passage hy reading Caii for Caci; an emendation of which Becker of course approved, as it suits his view that the steps did not exist before the time of Calignla. But unfortunately he was nut aware of a passage in Diodorus Siculus which also mentions these steps in a manner confinmatory of the account of Solinus and l'ropertius:

 Ekewoû Kakiay (iv. 21). And as Diodorns wrote in the age of Augustus, the existence of the steps before the time of Calignla is thus proved.

An Aedes Rumicla is also mentioned on the Germalus in the sacred books of the Argives qnoted by Yarro (L. L. r. § 54, Milll.); bat it is not fonnd in any other anthor, and hence it may appear doulitfol whether it is not the same as the Casa Romuli. The round church of $S$. Tcodoro on the W. side of the l'alatine has frequently been identified with this Aedes Romali, and it is very probable that it was huilt over the remains of some ancieut temple; but it is too far from the circus to have been the Cass Romuli, which lay more towards S. Anastasia. Besides the Casa seems to have been nothing more than a little thatched hut; of whichy asme haven
seen, there appears to have been a duplicate on the Capitol.

In the dearth of any more accurate information tre cannot fix the situation of these vencrable relics of Roman antiquity more precisely than may be gathered from the preceding general indications. M. Valerius Messala and C. Cassius Longinus, who were censors in e.c. 154 , projected, and even began, a theatre at this spot, which was to extend from the Lupercal on the Germalns towards the Palatine. But this scheme was opposed by the rigid morality of Scipio Nasica, and all the works were put up to auction and sold. (Vell. Mat, i, 15; Val. Max. ii. 4. § 2 ; Appian, B. C. i.28.) The Lupercal is mentioned in the Monumentum Ancyranum, as reconstructed by Augustns ; whence Camina infers that the ancient one monst have been destroyed when this theatre was commenced. (Indicazione Topogr: p. 460, 1850.) The Casa lomnli is represented by Fabius Pictor, as translated by Dionysius of Halicarnassus (i. 79), to have been carefully preserved in his time, the damage occasioned by age or tempests being made good according to the ancient pattern. Whether the building mentioned in the Notitia was still the samc it is impossible to say.

We have already noticed. when treating of the city of Romulus, the Sanctuary of Victomamost probalily a sacred grote-and the Clivess Victorlie on the NW. slope of the Palatine. At or near this spot an Aebes Matris Deum was erected B. C. 191, to contain the image of the Mater Idaea, which Scipio Nasica had brought from Asia thirteen years before. (Liv, xxsvi. 35; Cic. Har. R. 12.) It must have been to the N. of the Casa Romuli, since it is mentioned after it in the Notitia, when proceeding in that direction, yet at some distance from the $\mathcal{N}$. point of the hill. Letween which and the temple the Dumns Tiberiana must have intervened. It is recorded as having been twice burnt down; once in ı. c. 110, when it was rebnilt by Metellus (Jul. Obs, 99), and acain in A. D. 2, in the same fire which destroyed the palace of Augustus, by whom it was restured. (Val. Max. i. $8 . \S 11$; Dion Cass. Iv. 12 ; Mon. Ancyr.). It mast also have been destroyed in the contlagration nuder Nero, and again rebuilt. Becker (Handb. p. 421) observes that its foont must have faced the E., as the statue of the Magna Mater Idaea is described by Dion Cassins as looking that way (xlvi. 43). But this relates only to the statne; and we fancy that there is some reason to believe, from a passage in Martial, that the temple was a round ove, and could not therefore be properly said to tace any way. In this passage two temples are mentioned (i. 70.9):-
"Flecte vias hac qua madidi sunt tecta Lyaei Et Cybeles jicto stat Corybante tholus."

Becker observes (p.422) that the age and situation of the temples here mentioned cannot be determined, as they occur nowhere else; and this seems to be true of the temple of Bacchus; but there appears to be no reason why the Tholus Cyuelfs-which Becker writes Torks, without any apparent meaning-may not have been the Aedes Matris Deum before referred to. The description of the road to the house of Proculus given in this epigram suits the situation of this temple ; and the house itself is mentioned as "nec propior quam lhwehns amat." Nuw, the temple of Apollo. built by Augustus, lay close to that of the
Nacas Mother as wh shathesec presently; and,
indeed, they are mentioned in one breath in the Notitia. ("Aedem Matris Deum et Apwilinis lihammusii.") That this Tholus C'ybeles may have been the temple which once occupied the site of the present circular church of S. Teotoro befure referred to, we can only offer a conjecture; its situation, at least, admirably corresponds with that of the temple of the Idaean Mother.

We find a temple of this deity, as well as one of Jivextas mentioned in the Monumentum Ancyranum (tab. iv. 1. 8) as crected by Augustus on the Palatine. The first of these may, however, have been ouly a restoration of the ancient temple. We can lardly conclude from the word feci that it was sul entirely ner and separate structure; since we find the same word used in that record with relation to other edifices which were among the most ancient in Rome, and of which it is not likely that there should have been duplicates : sucb as the temple of Jupiter Feretrius on the Capitol, that of Quirinus, that of Juue Regina on the Aventine, and others. In these cases it seems probable that the edifices were in such a ruinous state from long neglect that Auqustus found it necessary to rebuild then trom their fonndations; which weuld justify the use of the word fea insteal of refeci, but lardly the regarding of then as entirely new temples. The great care used by Augustus in restoring the ancient temples is afluded to by Horace (Od. iii. 6). The temple of Juventas may possibly lave been new; at all events it could hardly have been the one dedicated by C. Licinius lucullus about the same time as that of the Mater Magua ldaca, since the former was in the Circus Maximus. (Liv. xxxvj. 36 ; cf. Cic. Brut. 18, ad Att. i. 18.)

What the Pentapyeva may have been which is mentioned in the Notitiu between the teomple of Apollo and the palace of Ausustus, it is difficult to say, except that it was probably a huilding with five gates. Proller (Regionen, p. tS3) cites a prssage from an anonymous describer of the Autiquities of Constantinople in Banduri (Imp. Orient. i. p. 21), in which a building in that city called Tetrapylum, which was used for depositing and bewailing the corpse of the emperor, or of that of any member of his family, is mentioned: and as this building is said to have been imitated from one at Rome, I'reller thinks it lighlily probable that the Pentapylum in question may have afforded the model, and been used for a similar purpose.

Of the temples of Jefiter Victols and J:iliter Stator - the former near the Neva Via and l'orta Mugionis, the latter farther off towards the siacra Via - tre have alrearly spoken when describing the Romulean city; besides which there seems to have been a temple of Jepiter Profugnitor, probably of the time of the Antonines, known only from an inseription. (Gruter. cec. 2; Orell. 42; Canina, Indicaziome, p. 4tis.) We have also had occasion to mention the Cumae Vereras and the sacellun of Formena lismeress. Oher ancient buildings and shrines on the Palative, the sites of which cannot be exactly determined, were the Crmis Smboncs (Palatinorum), where the ancilis and the lituns Romuli were preserved, probably not far from the temple of Vosta (Dionys, ii. 70 ; Cic. Div. i. 17; Gruter, Inser. (lxiii. 5; Orell. 2244) i a famum, or Abs Fissitis (Cic. Legg. ii. 11: Val. Max, ii. 5. § 6: Plin. ii. 5), an ancient sacellum of the Drai Cimplaci, the appeasing deity of connubial quarrely ( vill. 314 in ii. 1. §f. 6 ) and an
'Appobiatov, or Templez of Ventes (Dion Cass. 1xxiv. 3).

When the Romans began to improve their domestic architecture, and to build finer houses than those which had contented their more simple ancestors, the Palatine, frem its excellent and convenient situation, early became a fashiomable quarter. We bavo already alluded slightly to some of the more noted residences ent this hill. The house of Vitrevils Visccus is one of the most ancient which we find mentioned in this quarter. It was pulled down in B. c: $3: 30 \mathrm{in}$ censequence of the treasonous practices of its owner ; after which the site remained unbuilt upon, and obtained the name of Vacet Pratis (Liv, viii. 19 ; Ps. Cic. p. Dom, 38) ; but how long it remained in this state it is impossible to say. Tbe l'ontices Catula rese on the l'alatine from a similar cause. Its site had previously been occupied by the house of M. Fulvius Flaccus, whe perished in the sedition of C. Gracehus : the house was then razed, and the ground on which it stood called Flacciasa Asee., till this portico was erected on it by (). Lutatius Catulus, after his Cimbric victery. (Val. Max. vi. 3. § I ; l's. Cic. p. Dom. 43.) Near it stend the House of Cicero which he bought of Crassus, probably not the celebrated orator, - the fate of which wo have already related. It seems to have been on the NE side of the Palatine, as Cicero is described by Plutarch as traversing the Sacra Via in order to arrive at the ferum (Cic. 22): and Vettius calls Cicero "vicinum consulis," that is, of Caesar, who then dwelt in the Regia ( $a d$ Att. ii. 24). Cathline's House was also on the Palatine, and was amexed by Augustus to his residence. (Suet. Ill. Grumm 17.) Here also was a House of Axvonius, whieln Augustus presented to Agrippa and Messala (Dion Cass. liii. 27) ; and slso the Hovse of Scaures, farned for its magnificence. (Cic. Scaur. 27; Plin. xxxvi. 3.)

With the reign of Augnstus a now era commenced for the l'alatinc. It was now marked out for the imperial residence; and in process of time, the buildings erected by successive emperors monopolised the bill, and excluded all private possessions. Augustus was born in this Region, at a place called ad Cirita Burnta, the situation of which we are unable to determine (Suct. Aug. 5). In early manhood he occupied the house of the orator C. Licinius Calvus " justa forum super scalas arularias" (Ib. 72): but neither can the site of this be more defin itely fixed. Hence be removed to the Palatine, where he at first occupied the Hocse of Hortensics, a dwelling conspicuous neither for size nor splendour. (Ib.) After his victery over Sextus Pompeius, he appears to have purchased sereral houses adjoining his own, and to have vowed the Temple of Apolio, Which he afterwards built (Vell. Pat. ii. 81 ; 1)ion Cass. 1xis. 15.) This temple, the second dedicated to that doity at Rome - the earlier onc being in the Circus Flaminius-does not, however, appear to have been begun till after the hattle of Actium, or at all events the plan of it was extended after that event. It is well known that after that victory Angustus dedicated a temple to the Lencadian Apollo near Actium, and in like manner the new structure on the Palatine was reforred to the same deity ; whence the phrases "Actius Apollo" (Virg. Acm. viii. $704 ;$ Prop. iv. 6. 67), and "Phocbus Navalis" (-"ubi Navali stant sacra Palatia l'hoebo," Prop. iv. 1. 3). It was dedicated in 3s, c, 27. It was surrounded with a portico containing ho Biblotimecae (ikieca
et Latina (Suet. Aug. 29; Dion Cass, liii. 1 Mon. Ancyr.) These far-famed libraries were qnite distinct institutions, as aplears from monumental inscriptions to slaves and freedmen attached to them, who are mentioned as "a Bibliotheca Latima Apollinis," or, "a Bibliotheca Graeca Palatiaa" (1'snvinius in Graevius, Thes. iii. col. 305; Orell. Inser: 40, 41). In them were the busts or clipeatae inagines of distinguithed anthors. (Tac, Ann. ii. 83.) I'ropertius, in a short poem (iii. 29), has givea so rivid a description of the whole building, that we cannot do better than insert it:-
" Quaeris cur veniam tibi tardior? Anrea Phoebo Porticus a magno Caesare aperta fuit.
Tuta erat in speciem Poenis digesta columnis Inter quas Danai femina turba senis.
Hic equidem Phoebo visus mihi pulehrior ipso Marmorens tacita carmen hiare lyra.
Atque aram cirenm steterant armenta Myronis Quatuor artificis, vivida signa, boves.
Tum mediuan claro surgebat marmore templum Et patria Phoebo carius Ortygia.
In quo Solis erat supra fastigia currus Et valvae Libyci nobile dentis opus.
Altera dejectos P'arnassi vertice Gallos Altera moerebat funera Tantalidos.
Deiude inter matren dens atque inter sororem Pythius in longa carmina veste sonat."
Hence we learn that the columns of the portico were of African marble, and between them stood statues of the fifty danghters of Danaus (cf. Ovid. Amor. ii. 2. 4.) According to Acron, fifty equestriao statues of the sons of Danaus also stood in the open space. (Schol. ad Pers, ii. 56.) The temple itself was of solid white marble from Luna (Carrara). (Serv. Virg. Aen. viii. 720.) The statne alluded to by Propertins as "Phoebo pulchrior ipso" was that of Augnstus himself, which reprereoted him in the dress and attitude of Apollo. (Schol. Cruq. ad Hor. Ep. i. 3, 17 : Serv, ad Vïrg. Ec. ir. 10.) Io the library was also a colossal bronze statue of Apollo, 50 feet in height (Plin. axxiv. 18), as well as many precions works of art. (Ib. xxxiv. 8, xuxvii. 5, \&c.) The Sibylline books were preserved in the temple (Suet. Aug. 31; Amm. Marc. xxiii. 3) befor ewlich was the spacions place calied the Area Apollinis.

From all these notices we may gather some idea of the splendour of this celebrated temple; but its exact site, as well as that of the Palice of Augustus, is nowhere clearly intimated. From several passages, however, which have beeo cited when discussing the situation of the Porta Mugionis, we may infer pretty accurately that the latter must have stood at the NE. side of the Palatine, between the arch of Titus and the temple of Vesta. (S, Maria Liberatrice.) It appears from a passage in Ovid ("Inde tenore pari," \&c., Trist. iii, 1. 59), that the temple must have lain some way beyond the palace, and there seems to be no reason why we may not place it near S. Teodoro, though it stood perhaps wo the summit of the hill. This seems to be the spot indicated in the Notitia. The temple is there called " aedis Apollinis Rhammusii"-an epithet not easily explained, notwithstanding the attempt of Preller (Regionen, p. 182); altbough there can be no doubt that the temple built by Angustus is meant.

In the same ducment a Domus Tiberiana, or palace of Tiberius, is mentioned as distinct from that of Augustus; a house, indeed, which he probably
inherited, ns he was born on the Palatine. (Suet. Tib. 5.) In his youth, when he lived in a quiet, retired manner, he first inhabited the house of Pompey in the Carinae, and afterwards that of Maecenas on the Esquiline (Ib, 15); bot when he became emperor, it is most prolable that he resided on the Palatioe, till he secladed bimself in the island of Caprese. The Domus Tiberiana must have stood near the NW. corner of the Palatine, since it is described as affording an exit into the Velabrum ("per Tiberianam domnm in Velabrum," Tac. IIst. i. 27). Suetonius, speaking of the same departure of Otho, says that he hastened ont at the back of the palace (" proripnit se a postica parte Palatii," Otho. 6); from which passages it would appear that the two palaces were connected together, that of Angustus being the more conspicuous towards the formm, whilst that of Tiberius formed the back front. It was fiom the latter that Vitellins surveyed the storming of the Capito!. (Suet. Vit. 15.) At a later period of the Empire we find a Bibliotheca mentioned in the palace of Tiberius, which had probably superseded the Palatine Library, as the latter is no longer mentioned. (A. Gell. xiii. 19; Vopisc. Prob, 2.) All these buildings must, of conrse, have been destroyed in the fire of Nero; but we must assume that, after they were rebuilt, the Dorms Angnsti et Tiberii still continued to be distinguished, as they are mentioned as separate buildings in the Notitia; and indeed Josephus expressly says that the different parts of the complex of buildings forming the imperial palace were naned after their respective founders. (Ant. Jud. xix. 1. § 15 ).

On or near the Palatine we must also place the Temilem Avgusti - one of the only two public works which Tiberins undertook at Rome, the other being the scena of the theatre of Pompey. Even these he did not live to finish, int left them to be completed and dedicated by Caligula. (Tac, A mn . vi. 45; Suet. Tib. 47, Cal. 21.) The circumstance of Caligula using this temple as a sort of pier for his bridge to the Capitoline makes it donbtful whether it could have stood on the Palatine hill. (Suet. Ib. 22.) Yet Pliny (xii. 42) allades to it as "in Palatii templo;" and if it was not exactly on the summit of the hill, it could not have been very far from it. Becker conjectures that the Bridge of Caligula passed over the Basilica Julia; bot the only proof is, that Caligula was accustomed to fling money to the people from the reuf of the basilica, which he might have ascended without a bridge. (Suet. Cal. 37, Jos. Ant. Jud. xix. 1. § 11.) The bridge, perhaps, did not stand very long. Caligula seems to have made extensive alterations in the imperial palace, thongh we cannot trace the $n$ aecurately. ( - Bis vilimus nrbem totam cingi domibus prineipum Caii et Neronis," Plin. xxxvi. 24. s. 5.) We have already mentioned that he connected the temple of Castor with it. Yet in his time there must have been still some private dwellings on the NE. side of the Palatine, as Pliny mentions that the lotustrees belonging to the honse of Crissus at that spot lasted till the fire of Nero. (1b. xvii. 1.) The enormous buildings of the last-named emperor probably engrossed the whole of the lalatine; at all events we bear no more of private honses there alter the commencement of his reign. We lave already adverted to Nero's two palaces. The first of these, or Domus Transitoria, with its gardens, though not finished in the same style of splendour
as its successin. ihe diomus arrea, seems to bive occupied as large an extent of gromed, and to have reached fiom the Palatine to the gardens of Maecenas and the agger of Servins on the Esquiline. (Snet. Nero, 34 ; Tac. Ahn. xv. 39.) The Avkes Domes was is specimen of insane extravarance. Its atrium or vestibule was placed on the Velia, on the spot where the temple of Vonus and Rome afterwards stood, and in it rese the colossal Stitue of Nero, 120 feet ligh, the base of which is still visille at the NW: side of the Colosseutn. We may gain an idea of the vastness of this residence hy comparing the prose description of Suetonins with the poetical one of Martial, wlien we shall see that the latter has not abosed the privilege of his calling. (Suet. Nero, 31 ; Mirt. de Spect. 2). It was never Ierfectly finished, and Vespasian, as we have said, restored the ground to the public. We know but little of the arrangement of the buildings on the Palatine itself under Nero, except that the different pirts appear to lave retained their former names. Dumitian added much to the palace, now again confined to this hill, and fitted it up in a style of extraordinary magnificence; but, though we frequently hear of single parts, such as baths, diaetae, a porticn called Sicilia, a dining-room dignified with the appellation of Coenatio Joris, \&c., yet we are nowhere presented with a clear idea of it as a whole (cf. Plut. Popl. 15; Plin. sxxv. 5. s. 38 : Capit. Pert. 11: Mart. viii. 36; Stat. Silv. iii. 4. 47, iv. $2,18, \& \mathrm{c}$.) The anxiety and terror of the tyrant are strikingly depicted in the anecdote told by Suetonius (Dom. 14), that he cansed the walls of the portico in which he was accustomed to walk to be covered with the stone, or crystallised gypsnm, called phengits,s, in order that he might be able to see what was going on behind his back. It is uncertain where the Arosaza. or Eardens of Adonis, lay, in which Dumitian received Apollonius of Tyama, and which are marked on a tragment of the Capitolme plan (Bellori, tab. si.) Of the history of the palace little more is kuomn. Several accounts mention the domns aurea as having been burnt down in the reign of Trajan (Oros. vii. 12; Hieron, an. 105, p. 447 , Ronc.), and the palace which succeeded it appears to have been also destroyed by fire in the reign of Commodus (Dion Cass. lxxii. 24; Herodian, i. 14.)

At the southern extremity of the Palatine, Septimins Severus built the septizonsis, considerable remains of which existed till near the ent of the

16 th century, when Pope Sixtus V. caused the pillars to be carricd off to the Vatican. Representations of the ruins will be found in Du Pérac (tay. I3) and Gamueci (Antichitit di Roma, p. 83, Speculum Rom. Magmificentiae, t . 45). The name of the building, which, howeter, is very varionsly written in the MSS. of different authors, is by some supposed to have been derived from its form, hy others from the circumstance of seven rnads meeting at this spot. It seems not improbable that a similar place existed before the time of Severus, since Suetonius mentions that Titus was born near the Septizonium (c. 2); though topographers, but without any adequate grounds, have assigned this to the 3rd Region. It has been inferred from the name that the building had seven rows of columns, one above snother, but this nation seems to be without foundation, as the ruins never exbibited traces of more than three ruwThe tomb of Severus must not be confonnded with it, which, as we learn from Spartianus, wats on the Via Appia, and built so as to resemble the Septizonium. The same anthor informs us (Ser. 24) that the design of Severus was to make the Septizomium an atriom of the palace, so that it shonld be the first object to strike the eyes of those coming from Africa, his native country. But the true nature and destination of the building remain enigmatical.

We know of no other alterations in the palace except sorne sliyht ones under the emperors Elagabalus and Alexander Severus. The former conseerated there the 'Teaple of Helletiable's (Lampr. Heliog. 3: Herodian, v. 5), and opened a public bath, also destined apparently as a place of licentiousness (Lampr. Ib. 8). Of the buildings of Alexander Severus we hear only of a diaeta, erected in hunour of his mother Julia Nammaea, and cormonly called "ad Mammam" (Id, Al, Sev, 26). These diretae were small isolated buildings, commonly in parks, and somewbat resembled a modern Roman casino or parilion (Plin. Ep. ii. 17, v. 6). It is also related of both these emperors that they caused the streets of the Palatine to be paved with porphyry and reerde antico (Lampr. Hel. 24. Al. Sco. 25). The Palatium was probably inhabited by Maxentius during his short reign, after which we hear no more of it. That emperor is said to have foumed haths there. (Catul. Imp. Vienn, t. ii. p. 248, Ronc.)

The Victoras Ginamasictans, the only object recorded in the Notitia between the Septizonium and the Lupercal, and which must therefore have stood on the side next the circus, was probably one of thase numerous monuments erected either in bonour of (iermanicus. of which Tacitus speaks ( $A n n$. ii. 8.3 ), or clse to Caracalla, who likewise bore the name of Germanicus (Preller, Regionen, p. 187).

We have already treated generally of the Velis and Sacra Via, and of some of the prineipal objects connected with them, as well as of the Xora Via under the Palative. The Nova Vis was not a very impurtant road, and we have little more to add respecting it It seems to have begun at the Purta Mugionis, where, like the Sacra Via, at the same spot, it was called Summa Nova Via (Solin, i. 1). From this place it ram ahmost parallel with the Sacra Via, and hetween it and the hill, as far as its northern point, where it turned to the S., and still continued to run along the hase of the Palatine as far at least as the Porta Rumanula (near S. Giorgio in Velabro). sume, indecel, earry it on as far as the Circus Maximus (Camina, Indic. Top. p. 331); a view which does not
spem to be supported by any authority. The lower part of it, both on the side of the forum and of the Velabrum, was called Infima Nova Via. (Varro, v. $\$ 43$, Miill.) Ovid describes it as touching the forum (" Qua Nova Romano nunc Via juncta foro est," Fast. vi. 389); whence we must conclade that not only the open space itself, bat also the ground around it on which the temples and basilicae stood, was included under the appellition of forum. A rosd appears, however, to have led from the Nova Via to the forrum between the temples of Vesta and Castor, as is shown by remains of pavement discovered there; and this may have been the junction alluded to by Ovid, which from his words would seem to have been comparatively recent. The Lueus Vestae must have lain behind the Nova Via, towards the Palatine, and indeed on the very slope of the hill, as appears from the following passages: "Exandita vox est a luco Vestae, qui a Palatii radice in Nuvarn Viam devesus est " (Cic. Div. i. 45); " MI. Caedicius de plebe nuntiavit tribunis, se in Nova Via, ubi nunc sacellum est supra aedem Vestae vocem noctis silentio audisse clariorem humana " Liv, v. 32). The sacellum bere alluded to was that of Aius Loqnens. (Cic. l.c. and ii. 32.) It is described by Varro (ap. Gell. xvi. 17) as "in infima Nova Via"; whence we must conclude that it was in the part near the forum that Caedicins heard the voice. Though called Nona, the road must have been of high antiquity, since Livy mentions that Tarquinius lived in it (i. 47); and perhaps it received its name from its newness in comparison with the Sucra Via.

Before we proceed to describe the monuments on the Vela, we must ohserve that some writers, and especially the Italian school of topographers (Canina, Foro Rom. p. 60, sey., Indic. Top. p. 462 ), do not allow that the Velia consisted of that height which lies between the Palatine, the Esquiline, and the eastern side of the forum, hut confine the appellation to the northern angle of the Palatine, which, it is contended, like the Germalus, was in sncient times considered as distinct from the remainder of the hill. Indeed it appears that Niebuhr first applied the name of Velia to the ridge in question (Hist. i. p. 390, Eng. trans.), in which piew he was of conrse followed by Bunsen (Beschr. iii. p. 81). One of the chief arguments addnced against it is the acconnt given of the house of Valerius Pablicola. Valerius is said to have begun building a house on the same spot where Tullus Hostilius had previously drelt (Cic. Rep. ii. 31); and the residence of Tullus Hostilius again is recorded to have been on the Velia, on the spot afterwards occupied by the Aedis Deum Penatium (Varro, ap. Non. xii. 51, p. 363, Gerl.; "Tallus Hostilius in Velia, ubi postea Denm Penatium aedes facta est," Sulin. i. 22). Nuw Bunsen (Ib. p. 85), and after him Becker (de Muris, p. 43, Handb. p. 249), hoid that the Aedes Deum Penatiom here alluded to was that mentioned by Dionysius Halicarnassensis (i.68) as standing in the short cat which led from the foram to the Carinae, in the district called ' $\Upsilon \pi e \lambda a i a t s$. The MS's. vary in the spelling of this name; but we think with Becker that the Yelia, or rather "Sub Velia," is meant, as Cujacins has translated the word: and Casaubon (ad Mon. Anyr:.) reads Oùèial. But, whatever opinion may be entertained on that point, the other part of the description of Dionysius, namely, that the temple stood in the short cut between the foram and the

Carinae, sufficiently indicates the locality; and we are of opinion, with Becker, that Bunsen arrived at a very probable conclusion in identifying this temple with the present circular vestibnle of the church of SS. Cosma e Damiana. Yet, if we assume with those writers that this was the only temple of the Penates on the Velia, and consequently the spot on which the house of Publicolat stood, then we must confess that we see considerable force in the objection of Canina, that such a sitnation does not correspond with the descriptions given by Cicero, Liry, and other writers. All those descriptions convey the idea that Publicola's house stood on a somewhat considerable, though not very great, elevation. Thns Dionysins characterises the spot as $\lambda \dot{\delta} \phi$ а $\boldsymbol{v} \pi$ теркеi-
 ék入є $\xi^{\alpha} \mu \in \nu_{0}$ (v. 19). And Cicero says of the house: "Quod in excelsiore loco coepisset aedificare" (Rep. ii. 31). A still more decisive passage is that of Livy: "Aedificabat in summa Veliu" (ii. 7). For how can that spot be called the top of the Velin, which was evidently at the bottom, and, according to Becker's own showing, in a district called sub Velia? His attempts to evade these difficulties are feeble and unsatisfactory (de Muris, p. 45). Yet they are not incapable of solution, without abandoning Niebubr's theory respecting the Velia, which we hold to be tho true one. There were in fact two temples of the Penates on the Velia, namely, that identified by Bunsen with SS. Cosma e Damiano, and another " in Summa Velia," as Livy says; which latter occupied the site of the residence of Tullas Hostilius, and of the subsequent one of Valerins Publicola. Thus Solinus: "Tallus Hostilins in Velia (habitavit), nbi postea Deum Penatium aedes facta est" (i.22). We cannot determine the length of this postea; but it was most probably after the time of Publicola, and perhaps a great dead later. But the other temple was certainly older, as it is mentioned in the sacred books of the Argives (ap. Varro, L.L. v. § 54: "In Velia apud aedem Deum Penatium"); and thus it is plain that there must have been two temples. The one in the Summa Velia is the Sacellum Laram mentioned by Tacitns, in describing the pomoerium of Romulus (Arn. xii. 24): and this is another proof that there were two temples; for it is impossible to imagine that the pomoerium could have extended so far to the N. as the church of SS. Cosma o Drmiano. The sitnation of this sacellonn would answer all the requirements of the passages before cited. For there is still a very considerable rise from the formon to the arch of Titus, near to which the sacellom mnst have stood, which rise was of comse much more marked when the furum was in its original state, or some 20 fert below its present level. Indeed the northern angle of the Palatine, which Canina sapposes to have beon the Velia, does not present any great difference of height: and thus the objections which he justly urges against the aedes near the temple of Faustina do not apply to one on the site that we have indicated. Besides it appears to ns an insuperable objection to Canina's view that he admits the spot near the temple of Fsustina to have been called Sub Velia, thongh it is separated by a considerable space, and by the intervening height, from the N . angle of the lalatine. The acconnt of Asconins (od Cic. Pis. 22) of a honse of P. Valerins " snb Velia, ubi nune aedis Victoriae est," is too confused and imperfect to draw any satisfactory conclusion from it. By all other authorities the

## ROMA.

## homa.

Aedis Tictoriae is said to be not at the foot of the Velia, but on the summit of the Palutine.
But there is another argument brought forwards by Canina against the height is question being the Velia. He observes that the area on mich the temple of Venus and Rome stands is divided from the Palatine by the Sacra Via, and hence could not have belonged to the Velia; since the Sacra Via, and all the places on the opposite (northern) side of it, were comprebended in the 1st Regio of Servius, or the Suburana, whilst the l'alatine, including the Velia, were contained in the 4 th Regio (Indicaz. Topogr. p. 462, cf. Foro Rom. p. 61). Now if this were so, it would certainly be a fatal objection to Niebubr's view ; but we do not think that any such thing can be inferred from Varro's words. In describing the tst Region, in which a place callied Ceroliensis was iacluded, be says, "Ceroliensis a Carinarum junctu dictus Carinae, postea Cerolia, quod hinc oritur capat Sacrae Viae ab Streaiae sacello," \&c. (L. L. v. § 47.) The passage is obscure, but we do not see how it cae be inferred from it that the Sacra Via formed the boundary between the 1st and 4th Servian Regions. Varro seems rather to be explaining the origis of the name Cerolia, which he connects with the Sacra Via, but in a manner wbich we cannot understand. The Sacra Via traversed the highest part of the ridge, and thus on Canina's own showing must have included some part of it in the 4tb Region, making a division where no natural one is apparent, which is not at all probable. Besides, if this height was not called Velia, what other name can be fonnd for it? And it is not at all likely that an eminence of this sort, which is sufficiently marked, and lies in the very beart of the city, shoold bave been withnut a name.

Assuming the Velia, therefore, to have been that rising ground which lies between the valley of the forum on the one hand, and that of the Colossenm on the other, we shall procued to describe its monaments. The Aedes Penatium, before referred to as standing on the declivity of the ridge, or Sub Velia, and described by Dionysius (i.68), seems to have been one of the most veacrable antiquity. In it were preserved the images of the household gods said to have been brought from Troy, having upoo them the inscription $\triangle$ ENAE, which has given rise to so much controversy ; namely, whether it is a scribe's error for MENA ther it should have been $\triangle I \Sigma$ MarNII (Diis Magnis), \&.c. \&c. (See Ambrosch, Stud, u. Andeut. p. 231, seq.; Clausen, Aeneas u. die Penaten, ii. p. 624 , n. 1116 ; Hertzberg, de Diis Rom, Patriis, lib. ii. c. 18.) We sball here follow our usual rale, and give Dionysius credit for understanding what he was writing abont, as there docs not appear to be any grave objection to doiog so ; and as he immediately adds, after citing the above epigraph, that it referred
 $\sigma \alpha \nu$ тous Гена́тas), we shall assume that this was really the temple of the Trojan Lousehold gods. The Italian writers regard it as the temple of Remus.

We do not find any large buildings mentioned upon the Velia till the time of Nero, who, as we nave seen, oscapied it with the vestibule of his palace. A considerable part of it had perhaps been a market preciously. Close to its NW. fout, inmediately behind the Acdes l'enatium just iudicated, Vespasian, after his trinunpl over Jerusalem, built bis celebrated Temese of Peace, to which we have already had occasion to allude, when describung the itnperial fora.
(Joseph. B.J. vii. 5. § 7; Suet. I esp. 9 ; Dion Cass. lxvi. 15.) It stood in an enclosed space, much like the temple of Venns Genitrix in Caesar's forum, or that of Mars Ultor in the forum of Augustus; and hence, though not designed like them as a place for legal business, it was nevertheless sometimes called Forum Pacis . The temple was built with the greatest splendour, and adorned with precious works of art from Nero's palace, as well as with the costly spoils bronght from the temple of Jerusalem, which made it one of the richest and most magnificent sanctuaries that the world ever beheld. (Joseph. l.c.; Plid. xxxiv. 8, s. 84, xxxvi. 24; Herodian, i. 14.) Hence its attraction and notoriety gave a new name to the 4th Region, in which it stood, which was previously called "Sacra Via," but now obtained the Dame of "Templuin Pacis." The exact site of this temple was long a subject of dispate, the older topographers maintaining that the remains of the three vast arches a little to the E, of the spot just described, and now uoiversally allowed to belong to the basilica of Constantine, were remnants of it. Piranesi raised some doubts on the point, but Nibby was the first who assigued to these two monuments their true position (Foro Rom. p. 189, seq.) ; and his views have been further developed and confirmed by Canina. (Iadicaz. Topogr. p. 131, seq.) As Becker has also adopted the same conclusion, it will not be necessary to state the grounds which led to it, as they would occupy considerable spuce; and we shall therefore refer those readers who desire more information on the sabject to the works just mentioned. Apnexed to the temple was a library, in which the learned were accustomed to meet for the purposes of stody and literary intercourse. (A. Gell. v. 21, xvi. 8.) The temple was burnt down a little before the death of Commodns. (Dion Cass. lii. 24; Herodian, i. 14; Galen, de Comp. Med. i. 1.) It does not appear to have been restored, but the ruins still remained andisturbed, and the spot is several times mentioned in later writers under the name of Forum Pacis, or Formm Vespasiani (Amen. Marc. xvi. 10; Procop. B. G. iv. 21 ; Symm. Ep. x. 78; Catal. Imp. Vienn. p. 243.)
The tiree arches just alluded to as standing near the temple of Peace, and apparently at the commencement of a road branching off from the Sacra Via, belonged, as is almost universally admitted, to the Basilica Constastini, erected by Miaxentius, and dedicated after bis death in the oame of Constantine. Their architecture has all the characteristics of a basilica, and could not possibly have been adapted to a temple. (Canina, Indicaz. p. 124.) The first notice which we find of this building is in Aurelius Vietor (Caesar, 40, 26), who mentions it as having been erected by Maxentius; and this account is confirmed by an accident which bappened in 1828, when on the falling in of a part of an arch a coin bearing the naine of Mlaxentius was discovered in the masonry. (Beschr. iii. 298.) In the Cat. Imp. Jienn. p. 243 , it is mentioned as occupying the site of the horrea piperataria, or spice warehonses of Domitian ("horrea piperataria nbi modo est Basilica Constautiniana et Forum V'espasiani"). These spice warehouses must have been the same that are related by Dion Cassius (1xxii. 24) to luve first caught the flames when the temple of Peace was burnt, A. D. 192,
 кal $\tau \hat{\omega} \nu$ Ai $\gamma \| \pi \tau i \omega \nu$ фaptiav; whence, as the fire spread towards the l'alatine, it may be presumed that they stood on the site of the basilica.

ROMA.
ROMA.

Between the basilica of Constantine and the Colnsscum, and consequently on the eastern side of the Yelian height, Hadrian huilt the splendid Temple of Roma and Vexus, commonly called at a later period Templum Urbis, coosiderable remains of which still exist behind the convent of S. Francesca Romana. In the middle ages it was called Templum Concordiae et Pietatis (Mirabilia Rom. in Effemerid. Letter. i. p. 385); the older topographers gave it various names, and Nardini was the first to designate it correctly. The remains exhibit the plan of a double temple, or one having two cellae, the semicircular tribunes of which are joined together back to back, so that one cella faced the Capitol and the other the Colosseum; whence the description of Prudentius (Contra Symm. i. 214):-
"Atque Urbis Venerisque pari se calmine tollunt Templa, simul geminis adolentur tura deabus."

The cella facing the Colosseum is still visible, but the other is enclosed in the cloisters of $S$. Francesca. In them were colossal statnes of the goddesses in a sitting posture. Hadrian is related to have planned this temple himself, and to have been so offended with the free-spoken criticisms of the great architect Apollodorus upon it that he caused him to be put to death. (Dion Cass. Ixis. 4.) Apollodorus is related to have particularly criticised the extravagant size of the two goddesses, who he said were too large to quit their seats and walk out of the temple, bad they beea so minded. The temple was of the style technically called pseudo-dipteros decastylos, that is, having only one row of ten columns, but at the same distauce from the cella as if there had been
two rows. With its porticoes it occupied the whole space between the Sucra Via and the street which ran past the front of the Basilica Constantini. For a more detailed description of it see Nibby, Foro Romano, p. 209, seq., and Caniua, Edifizj di Roma, classe ii. A ground plan, and elevations and sections of it as restored, will be found in Burgess, Antiquitics and Topography of Rome, i. pp. 268, 280. Servius (ad Aen. ii. 227) speaks of snakes on the statue of Roma similar to those on that of Minerva. From some coins of Autoninus Pins the temple appears to have been restored by that emperor. Silver statues were erected in it to M1. Aurelius and Faustina, as well as an altar on which it was customary for brides to offer sacrifice after their marriage. (Dion Cass. 1sxi. 3t.) It was partly burut down in the reign of Maxentins, but restored by that emperor.

The Areh of Titus, to which from its conspicuous position we have so frequently had occasion to allude, stood close to the SW . angle of this temple, spanning the Sacra Via at the very summit of the Velian ridge. Its beautiful reliefs, which are unfortunately io a bad state of preservation, represent the Jowish triumphs of Titus. The arch could not have been completed and dedicated till after the death of that emperor, since he is called Divus in the inscription on the side of the Colosseum, whilst a relief in the middle of the vault represents his apotheosis. It has undergone a good deal of reston ration of a very indifferent kind, especially on the side which faces the forum. During the middle ages it was called Septem Lucernae and Arcus Septem Lucernarum, as we sce from the Anoaymus.

ARCH OF TITES RESTORED.

We shall here mention two other monuments which, though strictly speaking they do not belong to the Palatine, yet stand in such close prosimity to it that they may be conveniently treated of in this place. These are the Arcif of Constantine and the Meta Sudaos. The former, which stands at the NE. corner of the Palatine, and spans the road now called Via di S. Gregorio, between that hill and the Caelina, was erected, as the inscription testifies, in homour of Constantine's victory over Maxentius. It is adorned with superb reliefs relating to the history of Trajan, taken apparently from some arch or other monument of that emperor's. They contrast strangely with the tasteless
and ill-executed sculptares belonging to the time of Constantine himself, which are inserted at the lower part of the arch This monument is in a much better state of preserration than the arch of Titus, a circumstance which may perhaps be ascribed to the respect eotertained for the memory of the first Christian emperor. Fur detailed descriptions and drawings of this arch see Niebuhr (Beschr. iii. p. 314, seq.), Canina (Edifizj Antichi, classe xii.), Overbeke (Restes de l' An. Rome, ii. t. 8, 9), Piranesi (Aut. Ronı. i.).

The Meta Sudans, so called from its resemblance to the metae of the circus, was a fountain erected by Domitian, remains of which are still to be seeu
between the arch of Constantine and the Colossenm, (Hieron. p. 443, Ronc.; Cassiol. Chron. ii. p. 198.) It stands in the midlle of a large circular basin. which was discovered in the last excavations at that spot, as well as thaces of the conduit which con-
veged the water. A meta sudans is mentioned in Seneca ( $\mathrm{Ep}, 56$ ), whence we might infer that the one now existing superseded an earlier one ( $v$. Besclr, iii. 312, sę.; Canina, Indicaz. p. 119).

ARCII OF CONSTintine.

## Vil. The Avevtine.

We have already adverted to the anomalous character of this hill, and how it was regarded with suspicion in the early times of Rome, as ill-omened. Yet there were several fanous spots npon it, having traditions conneeted with them as old or older than those relating to the Palatine, as well as several renowned and antique temples. One of the oldest of these legendary monuments was the Altar of Evinder, which stood at the foot of the hill, near the Porta Trigemina. (Dionys. i. 32.) Not far from it, near the Sulinae, was the Cave of Cacts, a name which a part of the hill near the river still retains. (Solinus, i. 8: cf. Virg. Aen. viii. 190, seq.; Ovid, Fist. i. 551, seq.) Here also was the altar said to have been dedicated hy Hercules, after be had found the cattle, to Jupiter Inventor. (Dionys. i. 39.) A spot on the summit of the hill, called Remorlis, or Remuria. preserved the menory of the auspices taken by Remns. (Panl. Diac. p. 276 ; Dionys. i. 85 , seq.) Niebuhr, however, asames anotber hill beyond the basilica of $\mathrm{St}^{\prime}$. Paolo, and consequently far outside the walls of Aurclian, to have been the flace called Remoria, destined by Remus for the builling of his city. (Ilist. i. p. 223, setf. and nute 618.) Other spots consected with very ancient traditions, thoush subsequent to the foundation of the city, were the Armilustrium and the Lauretum. The Akshlestnys, or Ammilustrium, at first indicated only a festival, in which the soldiers, armed with anvilia, performed certain military sports and sacrifices; but the name was subsequently applied to the place where it was celebrated. (Yarr. I.L. v. $\$ 153$, vi. $\$ 22$. Miill.; Liv, xxvi. 37 ; Plut. Rom. 23.) Plutarch (l.c.) says that king Tatius was buried here; but the Lauretca, so named from its grove of laurels, is ulso designated as his place of scpulture. (Viar, l.L., v. \& 152; Plim. xv. § 40; Bionys. iii. 4:3; Festus, p. 360.). There was a distinction between the Lauretum Majus and Minus (Cal. Capran. Id. Aug.) : and the Basis Copitolina mentions a Vicus Loreti Dajouis and another 1.oreti Minoris. The same document also recorts a Vieus Arovilustri. Nuna dedhated an altar to Jumper Elicats on the Aventine. (Viarr. L. L. vi.
§ 54; Liv. i. 20; cf. Ov. F. iii. 295, seq.); and the Calendars indicate a sacrifice to be performed there to Consus (Fast. Capran. XII. Kad. Sep; Fast. Amitern. Pr. Id. Dec.); but this is probably the same deity whose altar we bave mentioned in the Circus Maximus.

The Teuple of Drana, huilt by Servius Tullius as the common sanctuary of the cities belonging to the Latin Leaque, with maney contributed by them, conferred more ioportance on the Aventine (Varr. L.L. v. § 43 ; Liv. i. 45 ; Dinnys, iv. 26). This moion has been compared with, and is said to have been suggested by, that of the Ionians for building the Artemisium, or temple of Diana, at Ephesus. It has been justly observed that Rome's supremacy was tacitly acknowledged by the building of the temple on one of the Roman hills (Liv. l.c.; Val. Max. vin. 3. §ु I). Dionysius informs us that he saw in this temple the original stele or pillar containing the Foedus Latinum, as well as that on which the Lex Icilia was engraved. It appears, from Martial (vi. 64.12), to bave been situated on that side of the Aventine which faced the Circus Maximns, and hence it maty have stood, as marked in Bufalini's plan, at or near the church of S. Irisca (cf. Canina, Indirazione, p. 532). . We may further observe that Martial calls the Aventine "Collis Dianae," from this temple (vii. 73, xii. 18. 3). We learn from Suctomins that it was rebuilt by L. Cornificius, in the reign of Augustus ( $A$ ng. 29). That emperor does not appear to have done anything to it himself, as it is not mentioued in the Monumentum Ancyranum.

Another famous temple on the Aventine was that uf Jexo livons.a, built by Camillus after the conquest of Veii, from which city the wooden statne of the grddess was carried off, and consecrated here; but the temple was not dedicated by Camillus till feur years atter his victory (Liv. v. 22, seq. ; Val. Max. i. 8. § 3). Hence, probably, the reason why "cupressen simmlacta," or images of cypress, were subsequently dedicated to this deity (Liv. $5 x$ rii. 3 ; : Jul. Obs. tus); althourh a laronze statue sppears to have been previously erected to her. (Liv, xxi. 62.) We bave already seen from the description of the procession of the virgins in Livy (xxvii. 37) that the

## ROMA.

temple was approached by the Ceives Publicits, which ascent lay at the northern extremity of the Aventine, near the Porta Trigemina; bot its situation cannot be accurately inferred from this circumstance. The Clivas Publicins, made, or rather perhaps widened and paved, by the aediles L. and MI. Publicii Malleoli, was the main road leading up the hill. (Festus, p. 238 ; Varr. L. L. v. § 158 ; Front. Aq.5.) Canina places the temple near the church of $S$. Sabina, where there are traces of some ancient building (Indicazione, p. 536). This is one of the temples mentioned as having been rebuilt by Augustus (Mon. Ancyr. tab. iv.)

From the document last quoted it would appear that there was a Temple uf Jupiter on the Aventine; and its existence is also testified by the Fasti Amiternini (Id. Aug. Feth. Iovi. diavae. vortvmivo. in . Avextivo.); but we do not find it mentioned in any anthor. The passage just quoted likewise points probably to a sacellum or Ar.i of Vortumints, which the Fasti Capranici mention as being in the Loretum Majus. The Temple of Minerva, also mentioned in the MOM. Ancyramum as having been repaired by Augustus, is better known, and seems to have been in existence at all events as early as the Sucond Punic War, since on account of some verses which Livius Andronicus had written to be sung in celebration of the better success of the war; this temple was appointed as a place in which scribes, as it appears poets were then called, and actors should meet to offer gifts in honour of Livius. (Festas, p. 333.) From an imperfect inscription (Gruter, xxxix. 5) it would appear that the temple was near the Armilustrium, and indeed it is named in conjonction with it in the Notitia.

There was a part of the Aventine called "Saxum," or "Saxem Sacrea" (Cic. Dom, 53), on which Remus was related to have storod when he took the anguries, which must therefore be considered as ilentical with, or rather perbaps as the highest and must conspicuons part of, the plate called Remuria, and consequently on the very summit of the hill. Heuce Ovid (Fast. v. 148, seq.):

## "-_interea Diva canenda Bona est.

Est moles nativa, loco res nomina fecit.
Appellant Saxum; pars buna montis ea est.
On this spot was erected a Temple of the Boxa 1)es, as Ovid proceeds to say "leniter acclivi jugo." From the expression jugum, we may conclode that it lay about the middle of the hill; but Hadrian remosed it ("Aedem Bonae Deae transtulit," Spart. Hadr. 19), and placed it under the hill; whence it subsequently obtained the name of Templam Bonae Dese Subsaxoneae, and now stood in the 12 th Region, or Piscina Publica, where it is mentioned in the Notitia, probably under the SE. side of the Arentine. For a legend of Hercules, connected with the rites of the Bona Dea, see Propertius (v. 9) and Macrobins (Sat. i. 12).

Besides these we find a Temple of Lur yand one of Libertas mentioned on the Aventine. T former of these is not to be confounded with the temple of Diana, as Bunsen has done (Beschr. iii. p. 412), since we find it mentioned as a substantive temple in several authors. (Liv. xl. 2; Aor. Vict. Vïr. Ill. 65 ; Fast. Praen. Prid. Kal. Apr. "Lanae in Are . . . ;" whilst in the Capran., Amitern. and Antiat. we find, under I Il. Aug., "Dianae in Aventino.") It probably stood on the side next the circus. The Temple of Libertis was founded by

ROMA.
T. Sempronius Gracclus, the father of the conqueror of Beneventum; the latter caused a picture representing his victory to be placed in the temple. (Liv. xxiv. 16.) Some difficulty has been occasioned by the manner in which the restoration of this temple by Augostus is mentioned in the Monumentum Ancyranum, namely, "Aedes Midervae et Junonis Reginae et Jovis Libertatis in Aventino (feci)" (tab. iv. 3. 6). In the Greek translation of this record, discovered in the temple at Ancyra, and commuticated by Hamilton (Resenrehes in Asich Min. ii. n. 102). the words "Jovis Lihertatis" are rendered $\Delta i \partial s$ ' ${ }^{\text {E }}$ 位e $\theta \in p i o u$, whence Franz assumed that the Latin text was corrupt, and that we ouglit to read "Jovis Liberatoris." (Gerhard's Archüolog. Zeitung, no. ii. p. 25.) But there is no mention of any such temple at Rome, though Jupiter was certainly worshipped there under the title of Liberator (see the section on the Circus Maximus); whilst the existence of a temple of Libertas on the Aventive is attested not only by the passage just cited from Livy, but also by Paulus Diaconus. ("Libertatis templom in Arentino fuerat constructom," p. 121.) Hence it seems most probable that the Greek translation is erronenus, and that the reading "Jovis Libertatis" is really correct, the copola being omitted, as is sometimes the case; for example, in the instance "Honoris Virtutis," for Honoris et Virtutis, \&c. And thus, in like manoer, we find a temple of Jupiter Lihertas indicated in inscriptions belonging to municipal towns of Italy (v. Orell. Inser. no. 1249, 1282; ef. Becker, Handb. Nachträge, p. 721 ; Zumpt, $i$ Mon. Ancyr. Commentar. p. 69). Another question concerning this Templom Libertatis, namely, whetber there was an Atrium Libertatis connected with it, has occasioned much discussion. The Atrinm Litertatis mentioned by Cicero ( $\mathrm{cul} A \mathrm{At}$. iv. 16), the situation of which we have examined in a preceding section, conld not possibly have been on the Aventine; yet the existence of a second one adjoining the temple of Libertas on that hill has been sometimes assumed, chiefly from Martial (xii. 3). The question turns on the point whether the words "Domus alta Remi," in that epigram, necessarily mean the Aventine; for our own part we think they do not. The question, however, is somewhat long; and they who wonld examine it more minutely may refer to Becker (flandb. p. 458, seq.; Urlichs, Röm. Topogr: p. 31, seq.; Becker, Antuontt, p. 25, seq.; Canina, Indicazione, p. 336, seq.; Urlichs, Antwort, p. 5, seq.)

As the Basis Capitolina names among the Vici of the 13th Region, a Vicus Fidir and a Viecs Fortuiae Dtbile, we may perhaps assume that there were temples to those deities on or near the Arentine; but nothing further is known respecting them. The Notitia mentions on the Aventine, "Thenmas Surlinae et Declanaf." The former of these baths seem to have been built by Trajan, and dedicated in the name of his friend Licinias Sura, to whom he was partly indebted fur the empire. ("Hic ob honorem Surae, cujus studio imperium arripuerat, lavacra condidit," Aur. Vict. Epit. 13; cf. Dion Cass. Ixviii. 15 ; Spart. Adri. 2, seq.) The dwelling of Sura was on that side of the Aventine which faced the Circus Maximus, and probably, as we have sadd, near the temple of Diana:-
"Quique videt propins Magni certamina Circi
Laudat Aventinae vicinus Sura Dianae."
(Mart. vi. 64. 12.)

Whence we may perhaps conclude that the baths also were near the same spot (v. Preller, Regionen, p. 200; Canina, Indicaz. p. 533, seq.), where they seem to be indicated by the Capitoline plan (1Bellori, tav. 4) and by traces of ruins. The baths of 1)ecius are mentioned by Eutropius (ix. 4). Near the same spot appears to have been the Houss of Trisas betore he becane emperor, designated in the Nutitia as Privata Trajani, in which neighbourhood an inscription relating to a Domus Ulpiorum was found. (Giruter, slv. 10.) Hence we may conclude that under the Empire the Aventine Lad become a more fashionable residence than during the Republic. when it seems to have been principally inhabited by plebei:n families. The residence of Ennius, whe, as we have said, possessed a house here, was, however, sufficient to ennoble it.

The narrow strip of ground between the hill and the Tiber also belonged to the district of the Aventine. In ancient times it was called "Extra Pontan Thigeminam," and was one of the busiest parts of the city, in consequence of its containing the emporium, or harbour of discharge for all laden ships coming up the river. Here also was the principal coro-market, and the Busis Capitolina mentions a Vicus Frumentarjus in this neighbourhood. The period of its development was between the Second and Third Punic Wars, when the aediles M. Aemilius Lepidus and L. Aemilius Paullus first founded a regalar Emporicsi, and at the same time the Portices Afmilia. (Liv, xxav. 10.) Their ruccessors, MI. Tuecius and P. Junius Bmitus, founded a second portico inter lignarios, which epithet seems to refer to the timber yards at this spot. (Id, xxxy, 41.) Subsequently, in the censorship of M. Aemilius Lepidus and M. Fulvius Nobilior, the building of a liarbour and of a bridge over the Tiber was commenecd, as well as the foundation of a market and of other porticoes. (Liv. xl. 51.) The next censers, Q. Fulvius Flaccus and A. Postumius Albinos, pared the emporium with slabs of stone, constructed stairs leadfing down to the river, restored the Porticus Aemilia, and built another portico on the summit of the Arentine. (Liv, xli. 27.) The neighbourhool still bears the name of La Marmorata; and as numerous blocks of unwrought marble have at different times been discovered near the l'igna Cesarini, sometimes bearing numbers and the names of the exporters, it seems to lare been the priucipal place for landing fureign marbles, and prerhaps also for the workshops of the sculptors. (Viteca, Mem. 95-98; Fea, Miserll. i. p. 93 ; Bunsen, Besclir. iii. p. 432.) Just in this neighbothhowd sthoul a temple of Juritwe Dohsmasts or Dulicenus, indicated in the Notitia mider the name of Ioloccnum. It is connected with the worship of the sun-gol, brought from Ineliopolis in syria, concerniog whirh there are numerous inscriptions, trested of by Marini (Alli, gfe. pp. $538-548$ ). In these the god is called Jup. O. N. 1)otichemus, and sometimes a Juno Assyria hegina Bolnchena is also mentioned. The worship resembled that hrought to Nome by Elagabalns, but was previous to it, as some of the inscriptions relate to the time of Commodus. The temple seems to have been in the neiphburhond of $S$. Alessio, as several inscriptions reiating to the god were found here. (Preller, Regionen. 1,. 202.)

The broad level to the N , of the hill in which the Monte Tesfaccio stands, prohatly wontained the larce and important magazines mentioned in the Notitia, such as the Ifomika tiammaisa ber Antetana, which
seem to have been a kind of wnrehouses for storing imported goods. They are sometimes mentioned in inscriptions. (Gruter, Ixsv. 1 ; Orell. 45.) The Monte Testaccio itself is an artificial hill of potsherds, 153 ft . high according to Conti, and about one-third of a mile in circumference, Its origin is enveloped in mystery. According to the valgar legend it was composed of the fragments of vessels in which the subject nations brought their tribute. A more plausible opinion was that this was the quarter of the potteries, and that the hill ruse from the pieces spouled in the process of manufactore; bot this notion was refuted by the discovery of a tomb, during the excavation of some caves in the interiot to serve as wine-cellars. (Beschr: iii. p. 434.) The whole district roand the lifl is strewed to a depth of 15 or 20 feet with the same sort of rubbish; the Porta Ostiensis, built by Honorius, stands on this faetitious soil, which is thas proved to have existed at the beginning of the fifth centary; but its origia will never, perlaps, be explained.

The last object we need mention here is the Forts Pistonics, or Bakers' Markek so named apparently not becanse they made or sold their goods here, but because this was the place in which they bought their corn. We may remark that it was just opposite this point, under the Janiculum, that the corn-mills lay. (Preller, Regionen, p. 205.)
Vlil. The Velabrem, Forva Boabicm, and Cirecs Maximus.
Between the Palatine, the Aventine, and the Tiber, the level ground was occupied by two districts called the Velabrum and the Fornm Boarium, whilst the valley between the two hills themselves was the site of the Circus Maximus. It will be the object of the present section to describe these districts and the monuments which they contained. They were comprehended in the 11th Region of Augustus, called "Circns Masimus," of which the Velabrum formed the boundary on the $\mathbf{N}$., where it joined the sth Region, or "Forum Romanum."

All accounts conspire in representing the Velanrem as a marsh, or lake, at the time when liome was founded, wlience we may conclude that it could not have beea built upon till the ground had been thoroughly drained by the construction of the Cluaca Maxima. Thus Tibullus (ii. 5. 33): -

> "At qua Velabri regio patet, ire solebat Exiguus pulsa per vada linter aqua."
(Cf. Varr. L. L. v. 43, seq, Miill.; Prop. v. 9. 5; Ov. Fast. vi. 399, \&.c.) Its situation between the Vicus Tusens and Forum Boarium is ascertained from the descriptions of the route taken by triumphal and festal processions. (Liv. xxvii. 37 ; Ov, i.c.; I'jut, Rom. v, \&c.) Its breadth, that is, its extension between the Vicus Tuscus and the Forum Boarium, cannot be accurately determined, but seems not to have been very great. Its termination on the S. was by the Arcus Argentarius, close to the modern chureh of S. Giorgio in I lelabro, which marked the entrance into the Forum Boarium. This site of the Velabrum is also proved by testimonies which connect it with the Xova V'is, the Porta Romanula, and the sepulchre of Acca Larentis. ( Varr. L. L. vi. § 24 , Mlill. ; cf. Cic. ad Irrut. 15 : Marrob. S. i. 10.) It is nncertain whether the Sicrali's Voletase, which also lay on the Nura Via, should be sssigned to the Velabrum or to the Palative. (Yarr. Ib. v. § 164 ; Macrob. Ib.)
noma.
roma.

There was also a Velabrum Nious, which it is natural to suppose was not far distant from the Velabrum Majus. Varro says that there was in the Velabrum Minus a lake or pond formed from a hot spring called Lactolie, near the temple of Janus Geminus (Ib. § 156); and Paulus Diaconus (p.118) describes the Latulue as being "locus extra orbem." Hence it would seem that the Janus Gemious alluded to by Varro, mast have been the temple near the Porta Carmentalis ; bat both the spring and the lake had ranished in the time of larro, and were no longer anything but matters of antiquity.
The Arces Argextirits already mentioned as standing near the church of S. Giorgio in I'elabro appears, from the inscription, to have been erected by the Negotiantes and Argentarii of the Forum Boarium in hooour of Septimius severus and his family. (Gruter, celsv. 2; Orell. 913.) Properly speaking, it is no arch, the lintel being horizontal instead of vnuited. It is covered with ill-executed sculptures. Close to it stands the large square building called Jascs Quadrifrons, vaulted in the interior, and having a large archway in each front. The building had an apper story, wbich is said to have beeo used for mercantile purposes. The architecture belongs to a declining period of art, and the arch seems to have been coastructed with fragments of other buildings, as shown by the inverted bas-reliefs on some of the pieces. (Reschr. iii. p. 339.) The Notitia closes the description of Regio xi. by mentioning an "Arcus Constantioi," which cannot, of course, refer to the triumphal arch on the other side of the Palatine. The conjecture of Bunsen, therefore (Beschr. Anh. iii. p. 663), does not seem improbable, that this Janus was meant; and from its style of architecture it might very well belong to the time of Constantine.
The Fordxi boarics, one of the largest and most celebrated places in Rome, appears to bave extended from the Velabrum as far as the ascent to the Aventine, and to have included in breadth the whole space between the Palatine and Circus Maximus on the E. and the Tiber on the W. Thus it must not be coaceived as a regular forum or market surrounded with walls or porticoes, but as a large irregular space determined either hy natural boundaries or by these of other districts. Its connection with the river on the one side and the circus on the other is attested by the following lines of Ovid (Fast. vi. 477) : -
"Poutibus et Magno juncta est celeberrims Circo Area quae posito de bove nomea bubet."
Its name bas been variously derived. The referring of it to the cattle of Hercales is a mere poetical legend (Prop. v. 9. 17, seq.); and the derivation of it from the statue of a broaze bull captured at Aegina and erected in this place, though apparently more plausible, is equally destitute of foundation, since the name is incontestably much older than the Macedonian War. (Plin. xxxiv. 5 ; Ov. l.c.; Tac. Ann. xii. 24.) It seems, therefore, most probable, as Varro says (L.L. v. § 146 ; cf. Prul. Diac. p. 30), that it derived its name from the use to which it was put, namely, from being the sncient cattle-market ; and it would appear from the inscription on the Arcus Argentarius before alloded to that this traffic still subsisted in the third century. The Forum Boarium was rich in temples and monuments of the ancient times. Amongst the most famous were those of Hercules, Fortuna, and,

Mater Matuta; but unfortanately the positions of them are not very precisely indicated. There seems to have been more than one Temime of Hercellas in this district, since the notices which we meet with on the subject cannot posibly be all referred to the same temple. The most ancient and important one must have been that connected with the Magns Aras Herculss, wbich tradition represented as laving been founded by Evander. ("Et magna ara fanumque, quae praesenti Hereuli Arcas Evander sacraverat," Tac. Ann. sv. 41; cf. Ib. xii. 24; Solin. i. 10) This appears to bave been the Hercales styled triumphatis, whose atatne, during the celebration of triumphs, was clethed in the costome of a triumphant general ; since a passage in Pliny connects it with that consecrated by Evander. ("Hercules ab Evandro sacratns wi produnt, in Foro Boario, qui triamphalis vocator atque per triumplos vestitur habitu triumphali," Xxziv. 16.) It was probably this temple of Hercoles into whieh it was said that neither dogs nor flies coold find admittance (Ib. x. 41 ; Solin. i. 10), and which was adorned with a painting by Pacuvius the poet (Plin. xxxv. 7) A Round Teaple of Hencules, also in the Forum Boarium, seems to bave been distinct from this, since Livy ( . 23) applies apparently the epithet "rotunda" to it, in order to distinguish it from the other. (" Insignem supplicativnem fecit certamen is sacello Pudicitiac Patriciae, quae in Foro Boario est ad aedem rotundam Herculis, inter matronas ortum.") Canina (Indicazione, p. 338) assumes from this passage that the temple to which it refers must have been in existence at the time of the contest alluded to, namely, B. c. 297 ; but this, though a probable inference, is by no means an absolutely necessary one, since Livy may be merely indicating the locality as it existed in his own time. The former of these temples, or that of Hercules Triumphalis, seems to be the one mentioned by Macrobius (Sat. iii. 6) under the name of Hercules Victor; and it appears from the same passage that there was another witb the same appellation, though probably of less importance, at the Porta Trigemina. Besides these we hear of a "Hercales Iurictus" by the Circus Maximus (Fast. Amitern; Prid. Id. Aug.), and of another at the same place "in aede Pompeii Magni" (Plin. xxxiv. 8. s. 57 ), which seems to refer to some Aedes Herculis built or restored by Pomper, though we hear nothing more of any such temple. Hence there wonld appear to bave been three or four temples of Herculea in the Forum Boarium. The conjectore of Becker seems not improbable that the remains of a round temple now existing at the church of S. Maria del Sole, commonly supposed to bave belouged to a

femple of Vesia, may have been that of Hercules, and the little temple near it, now the church of $S$. Maria Egiziaca, that of P'udicitia I'atricia. (Ilandb. p. 478, seq.)

This question is, however, in some degree connected with another respecting the sites of the Temples of Fobtexa and Mater Mateta. Canina ilentifies the remains of the roand temple at the church of S. Maria del Sule with the temple of Mater Matnta ; whilst the little neighbouring temple, now the church of S. Maria Eyizizca, he holds to have been that of Forticxa Vibilis. His chief reason for maintaining the latter opinion is the following passage of Dionysins, which prints, he thiaks, to a temple of Fortuna Virilis, lualt by Servius Tullius close to the banks of the Tiber, a position which would answer to that of S. Maria Egiziaca: kal

 (Ant. Ron. iv. 27.) It should be premised that Canina does not hold the two temples in question to have been in the Forum Boarium, but only just at its borders. ("Corrispondevano da vicino al Foro Boario," Indicaz. p. 338.) The temple of Fortuna Virilis here mentioned by Dionysius was, he contends, a distinct thing from the temple of Fors Fortuna, which he allows lay outside of the city on the other bank of the Tiber (p. 506). Indeed the distinction between them is shown from the circomstance that their festivals were celebrated in different months : that of Fortuna Virilis being in April, that of Furs Fortuna in June. (Comp. Ov, Fast. iv. 145, seq., with the Fasti Praenestini in April: "Frequenter mulieres supplicant . . . Fortunae Virili Inmifiores." Also comp. Ov. Fist. vi 773, seq., with the Fasti Amiternini, I'III. Kal. Jul.: "Forti Fort unae Transtiber, ad Nilliar. Prim. et Sext.")

Now these passages very clearly show the distiaction between Fortuna Virilis and Fors Fortuna; and it may be shown just as clearly that Dionysins confonoded them, as Plutarch has also done. (De Fort. Rom. 5.) Servius Tullius, as Dionysins says, built a temple of Fortuna in the Forum Boarium ; but this Fortuna was not distinguished by any particular epithet. Dionysius gives her none in the passage cited; nor does any appear in passages of other authors in which her temple is mentioned. Thus Livy: " De mambiis duos fornices in fore Boario ante Furtunae aedem et Matris Matutae, nnum in Maximo Circo fecit" (xaxiii. 27). So also in the passages in which he describes the fire in that district (xxiv. 47, xav. 7). One of the two tomples of Fortuna built by Servius Tullius was then that on the Forom Buarium, as shown in the preceding passages from Livy and from Dionysius: that the other was a temple of Fors Fortuna and not of Furtuna Virilis appears from Varro: "Dies Fortis Fortunac appellatus ab Servio Tullio liege, quod is fanum Fortis Fortunae secundurn Tiberim exira L'rbem Romam dedicavit Junio mens." (L.L. vi. §17, Miill.) Nence it is plain that both Iionysins and llutarch have made a mistake whels toreigners were likely enough to fall into. Temples being gencrally named in the genitive case, they lave taken fortis to be an adjective equivalent to àvopeios or virilis (v. Bunsen, Beschr, iii. Nachtr. p. 665 ; Becker, Handl. p. 47 s , note 998 ), and thins comiounded two different temples. But as this temple of Fors Fortuna was "extra U'rbem," it
could not have been the same as that with which Camina indentifies it, which, as Livy expressly says, was "intra portam Carneutalem" (xxv. 7). The site of the temple of Fortuna Virilis cannot be determined, and Bunsen (l. c.) denies that there was any snch temple: but it seems probable from the passage of Ovid referred to above that there was was one, or at all events an altar ; and Plutarch ((luaest. Rom. 74) mentions a Tíxךs "A $\hat{p} \hat{p}$ vas iepóv. On the other hand, there seem to have been no fewer than three temples of Fors Fortuna on the right bank of the Tiber. First, that built by Servius Tullins, described by Varro as "extra Urbem secundum Tiberim." Second, another built close to that of Servins by the consul Sp . CarviIius Maximus (B. c. 293) : "De reliqno sere adena Furtis Fortunae de manubiis faciendam locavit, prope aedem ejus Deae ab rege Ser. Tullio dedicatam." (1.iv. x. 46.) Third, anotier dedicated noder Tiberins (A. D. 16) near the Tiber io the gardens of Caesar. and heuce, of course, on the right bank of the river: "Acdis Fortis Fortunae, Tiberim justa, in hortis unos Caesar dictator populo Romano legaverat." (Tac. Ann. ii. 41.) That the Horti Caesaris were on tive right bank of the Tiber we know from Horace (S. i. 9. 18) and Plutarch. (Brut. 20.) The temple built by Servius must also have been on the right bank, as it seems to be referred to in the following passage of Dunatus: * Fors Fortuna est cujus diem festum colunt qui sine arte aliqua virunt : hujus nedes trans Tiberim est" (ad Terent. Phorm, v. 6. 1). The same thing may be inferred from the Fasti Amiternini: "Forti Fortunae Transtiber, ad Milliar. Prim. et Sextum" (1'111. Kal. Jul.). The temple in the gardens of Caesar seems here to be alluded to as at the distance of one mile from the city, whilst that of Servius, and the neighbouring one erected by Carvilins appear to have been at a distance of six miles. But this need not excite our suspicion. There are other instances of temples lying at a considerable distance from Rome, as that of Fortuna Muliebris at the tourth milestone on the Via latina (Fest. p. 542 ; cf. Val. Max. i. $8 . \S 4$, v. $2 . \S 1$; Liv. ii. 40 , \&c.) It would appear, too, to have been some way down the river, as it was customary to repair thither in buats, and to empluy the time of the voyage ia drinking (F'ast. vi. 777): -
" Pars pede, pars etiam celeri decurrite ç̧mba Nec pudeat potos inde redire domm.
Ferte coronatae juvenum convivia lintres Multaque jer medias rinat bibantur aquas."
We lave entered at more length iato this subject than its importance may perlapis seem to demand, becanse the elegant remains of the temple now forming the Armenian church of S. Maria Eyisiaca camnot fail to attract the notice of every admirer of classical nntiquity that visits Rome. We trust we have shown that it could not pussibly have been the temple of Fortuna Virilis, as assumed by Camina and others. The assumption that the neighbonring round temple was that of Mater Matuta may perhaps be considered as disposed of at the same time. Thie only grounds for that assumption seem to be its vicinity to the suppused temple of Fortuna Virils. Livy's description (xxxiii. 27) of the two triumphal arches erected in the Fon um Boarimn befure the two temples appearing to indicate that they lay closo together.
With regard to the probability of this little church
having been the temple of Pudicitia Patricla, it might be objected that there was in fact no such temple, and that we are to assume only a statue with an altar (Sachse, Gesch. d. S. Rom. i. p. 365). Yet, as Becker remarks (Handb. p. 480, note 100), Livy himself (x. 23) not only calls it a sacellum, a name often applied to small temples, but even in
the same chapter designates it as a templum ("Quum se Virginia, et patriciam et pudicam in Patriciae Pudicitiae templum ingressam vero gloriaretur "); and Propertius (ii. 6.25) also oses the same appellation with regard to it. On the other hand some have fixed on S. Maria in Cosmedin as the site of this temple, but with little aypearance of

TEMPLE OF PCDICITA PATRICLA.
probatility. Becker seeks in the charch just naned the temple of Fortuna built by Servius Tullins in the Forum Boarium. The church sppears to have beeo erected on the remains of a considerable temple, of which eight columns are still perceptible, built into the walls. This opinion may be as probatle as any other on the sulject; but as on the one hand, from onr utter ignorance of the site of the temple, we are uoable to refute it, so on the other we mnst confess that Becker's long and laboured argument on the snbject is far from being convincing (Handb. p. 481, seq.). The site of the Temple of Mater Matuta is equally uncertain. All tbat we know about it is that it was founded by Servius Tullius, and restored by Camillus after the conquest of Veii (Liv. v. 17), and that it lay somewhere on the Forum Boarium (Orid, Fast. vi. 4\%1). If we were inclined to conjecture, we should place both it and the temple of Fortuna near the northern boundary of that forum; as Livy's description of the rarages occasioned by the fire in that quarter seems to indicate that they lay at no great distance within the Porta Carmentalis (xxiv. 47, xxt, 7). The later history of both these temples is noknown.

In the Forum Boarium, near the mouth of the Cloaca Maxima, was also the place called Dolrola, mentioned in the former part of this article as regarded witb religions awe on account of some sacred relics having been buried there, either duriog the attack of the Gauls, or nt a stili more ancient period. (Liv. v. 40; Varr, L.L. v. § 157, Mäll.) When

fs.
CLOACA MLIXIMA.
the Tiber is low, the month of the Cloaca Mixima may be seen from the newly erected iron bridge connecting the Ponte Rotto with the left bank. The place called Ad Busta Gallica where it is said that the bodies of the Gauls were burnt who died during or after the siege of the Capitol, has also been assumed to have been in this neighbourhood because it is mentioned by Varro (Ib.) between the Aequimeliom and the Doliola (cf. Liv, v. 48, xxii. 14). But sach an assumption is altogether arbitrary, as Varro follows no topographical order in naming places. Lastly. we shall mention two ohjects named in the Notitia, which seem to have stood on the Forum Baarium. These are the Afollo Coelispex, and the Herctles Olfvaries, apparently two of those statues which Augustus dedicated in the different Vici. Becker (Handb. p. 493) places them in the Velabrum, and thinks that the epithet of Olivarins was derived from the oil-market, which was estnblished in the Velabrum (Plaut. Capt. iii. 1. 29), but it seems more probable that it denoted the crown of olive worn by Hercules as Victor (Preller, Regionen, p. 194). The Forum Boarium was especially devoted to the worship of Hercules, whence it seems probable that his statne stood there; besides both that and the Apollo are mentioned in the Notitia in coming from the Porta Trigemina, before the Velabrum,

Before we quit the Forum Boarium we mast adrert to a barbarous custom of which it appears to have been the scene even to a late period of Roman history. Livy relstes that after the hattle of Cannae a Gallic man and woman and a Greek man and Woman were, in accordance with the commands of the Sibylline books, buried alive in a stone sepulchre constructed is the middle of the Forum Boarium, and that this was not the first time that this barbarous and on-Roman custom had been practised (xxii. 57). Dion Cassius adverts to the same iostance in the time of Fabius Maximas Verracosus (Fr. Tales. 12), and Pliny mentions another wbich had occurred even in his own time ("Boario vero in foro Graecum Graecamque defossos, ant aliarum gentium, cum quibus tum res esset, etiam nostra actas vidit," xxviii. 3; cf. Plat. Q. R. 88). It may also he remarked that the first exhibition
of gladiatorial combats at lome took place on the Forum Baarium，at the funeral of the father of Marcus and Decimus Brutus，及，c．264．（Val． Max．ii．4．§ 7．）

The valley between the Palatine and Aventine， occupied by the Circus Maximus was，as we have had occasion to mention in the former part of this article，in earlier times called Varas Mericis，from an altar of the Dea Murcia，or Venus，which stood there．He who mounts the enormons mass of ruins which marks the site of the imperial palace on the S．side of the Palatine hill may still trace the extent and configuration of the circus，the area of which is occupied by kitchen gardens，whilst a gas manufac－ tory stauds on the site of the carceres．The de－ scription of the circus itself will be reserved for a separate section devoted to objects of the same description，and we shall here only treat of the different monuments contained in it as a Region or district．The whole length of the circus was $3 \frac{1}{2}$ stadia，or nearly balf a mile，the circnlar end being near the Septizoninm，and the carceres or starting place nearly uuder the church of $S$ ．Anastasia，where the circus aljoined the Forum Boarium．Its prox－ imity to the latter is shown by the circumstance that the Naxima Ara Hercnlis before alluded to is some－ times mentioned as being at the entrance of the Circus Maximus，and sometimes as on the Forum Boarium （＂Ingens ara Herculis pos jannas Circi Maximi，＂ Serv，ad Acr．viii．271；cf．Dionys．1．40；Ovid，Fast． i． 58 I ；Liv．i． $7,8 . \mathrm{c}$ ．）The large Temple of Her－ cules must undoubtedly have been close to this altar，but on the Forum Boarium．

The Vallis Murcia contained several old and famous temples and altars，some of which were in－ cluded in the circns itself．Such was the case with the altar or Sicellim of Nerela herself （＂Intamus Circus ad Narcim vocatur－ibi sacellum etiam munc Murteae Veneris，＂Varr．L．L．v．§ 154， Nïll．）；but its exact site cannot be determined． Cossus had also a subterranean altar in the circus， which was opened during the games and closed at other times．It is described by Tertullian as being ＂ad primas metas，＂and therefore probably at a dis－ tance of about one－third of the whole length of the circus from the carceres，and near the middle of the $S$ ． side of the Palatine till．（Tert．de Spect． 5 ；Varr．L．L． vi．§ 20，Miill．；Tac．Ann．sii．24；Plut．Rom．14．） But the chief temple on the circos was the Temple of ture Su＇n，to which deity it was principally conse－ crated（＂Cirens Soli principaliter consecratur：cujus acdes medio spatio ct effigies de fastigio audis emicut，＂Tert．Spect．8）．Tacitus meations the same ancient temple as being＂apud Circum＂（Ann．xv． 74）；and from a comparison of these passages we may conclude that it stood in the middle of one of its sides，and probably under the Aventine．The Nistitia and Curiosum mention it anbignonsly in con－ juaction with a Temele of Lev．i，so that it might possibly be inferred that both deities had a common temple（＂Templum Solis et Lunae，＂Reg．xi．）．It seems，howeser，more probable that there were two distinct temples，as we freqnently find them men－ tioned scparately in anthors，but never in conjunction． It is perhaps the same temple of Luna which we have alreuly mentioned on the Aventine，in which case it might have been situated on the declivity of that liill faeing the cirens，and behind the temple of Sol．Luna，Jike Sol，was a Circensian deity， both performing their appuinted cironits in qua－ drigae．（Juh．Lydus de Mens，i．12；Tert．Spect．

9；Cass．Var．iii．51．）The situation of the Temples of Jenfccay，mentioned nest to the two preceding ones in the Curiosum，may be determined with more accuracy，if we may believe an account recorded by Nardini（Rom．Ant．lib．vii，c．3）on the authority of a certain Francesco Passeri，respecting the dis－ covery of the remains of a small temple of that deity in a vineyard between the Circus Maximus and the Aventine．The remains were those of a little tetra－ style temple，which was identified as that of Mcreury from an altar having the caduceus and petasus sculptured on it．The temple is represented on a medal of M．Anrelius，who appears to have restored it．The site agrees with that described by Ovid （Fast．v．669）：－

## ＂Templa tibi posucre patres spectantia Circum Idibus：ex illo est baec tibi festa dies．＂

A comparison of this passage with Livy，＂nedes Mercurii dedicata est Idibus Maiis＂（ii．21），shows that the same ancient sanctuary is alluded to，the dedication of which caused a dispute between the consuls，в．c． 495 （Ib．c．27）．We next find men－ tioned in the Notitia an Aedes Mitris Delm，and another of Jovis Armoratoris，for which we should probably read＂Liberatoris．＂The Magna Mater was one of the Circensian divinities．Her image was exhibited on the spina（Tert．Spect．8），and it would appear that she had also a temple in the vicinity．Of a temple of Jupiter Liberator we know nothing further，though Jove was certainly wor－ shipped at Rome under that name（Tac．Ann．xv． 64，xvi．35），and games celebrated in his honour in the month of October．（Calend．Tindob．ap．Preller， Reg．p．192．）

Next to these an Aedes Ditis Pithis is named in the Notitia，but does not appear in the Curiosum． Some writers would identify lispater with Sc：m－ minus．quasi Sommus Maninm（v．Groter，MXV． 7 ； Mart．Capell．ii．161）；but there was a great dif－ ference of opinion respecting this old Sabine god， and even the Romans themselves could not tell pre－ cisely who he was．Thus Ovid（Fast．vi．725）：－ ＂Reddita，quisquis is est，Suminano templa feruntur Tunc cnm Romanis，Psrrbe，timendus eras．＂
The temple to him here alluded to was，however， certainly near the Circus Maximus，since Pliny mentions some annual sacrifices of dogs as made ＂inter aedem Juventatis et Summani＂（xix． 4）；and that the Temple of Juyentas was at the Circus Masimus we learn from Livy：＂Juven－ tatis aedem in Circo Maximo C．Licinins Lacullus trinmvir dedicarit＂（xxxvii． 36 ；cf．Calend．Amert． Xll．Kal．Jut．：＂Summano ad Circ．Max．＂）．The temple of Summanus，therefore，must have been dedicated daring the war with Pyrrlus，and that of Juventas in B．c． 192.

Close to the W．extromity of the circns，and towering as it were over the carceres，from its being built apparently on the slope of the Aventine（i） aívàs iठppuévos tàs àфé⿱㇒日ts．Dionys．vi．94），stood a fammis Tyaple of Cenes，dedicated also to Liber Ans Lubera．Thus Tacitns，relating the dedieation of the temple by Tiberius，it haring been restored by Augustus，says：＂Libero，Liberseque et Cereri， joxta Circum Maximum，quan A．Pnstumius dic－ tator voverat（dedicavit）＂（Ann．ii．49）．It is men－ tioned by other writers as＂ad Circum Maximum＂； whence Camina＇s identification of it with the charch of S．Maria in Cosmedin seems improbable（Indicas
p. 498), since that building is at some little distance from the circus, and certainly does not stand on higher ground. The temple of Ceres contained sonse precious works of art (Plin. xxsv. 10. s. 36 . § 99), especially a pieture of Dionysus by Aristides, which Strabo mentions that he saw (viii. p. 381), but which was afterwards destroyed in a fire which consumed the temple.
We also find a Temple of Venus mentioned at the circus, founded by Q. Fabius Gurges, B. c. 295, very appropiately out of the money raised by fines levied on certain matrons for incontinence. (Liv. x. 31.) It seems to have been at some distance from the Forum Boarium, since the censors M. Livius and C. Claudius contracted for the paving of the road letween the two places. (Id. xxix. 37.) Yet we have no means of delining its site more accurately, nor can we even tell whether it may not have been connected with the altar of Venus Murcia before mentioned. But the Temple of Flora, founded by the aediles L. and M. Publicius, the same who constructed the clivus or ascent to the Aventine which bore their name, must have lain close to that ascent, and consequently also to the temple of Ceres just described ; since Tacitus, after relating the re dedication of the latter under Tiberius, adds: " eodemque in loco aedem Florae (dedicavit), ab Lucio et Marco Publiciis aedilibus constitutam." (Ann. ii. 49.) The Publicii applied part of the same money - raised by fines - with which they had constructed the clivus, in instituting floral games in honour of the divinity which they had here consecrated, as we learn from the account which Ovid puts inte the mouth of the goddess berself (Fast. v. 283).

These are all the temples that we find mentioned in this quarter; but before we leave it there are one or two points which deserve to be noticed. The Cave of Cacts was reputed to have been near the Clivus Publicius, Solius mentions it as being at the Salinae, near the Porta Trigemina (i. 8); a situation which agrees with the description in Virgil of the meeting of Aeneas and Evander at the Ara Dlaxima of Hercules, from which spot Evander points out the cave on the Aveatine (Aen. viii. 190, seq.): -
"Jam primum saxia suspensam hanc adspice rupem," \&c.
Of the Duodecist Portae mentioned in the Notitias in this Region we bave already spoken [Part 11. p. 757].

## IX. The Caelian Hill.

The Caelins presents but few remains of ancient bnilllings, and as the notices of it in the classica are likewise scanty its topngraphy is consequently involved in considerable obscurity. According to Livy (i. 30) Tullus Hostilius fixed his residence upon it; but other accounts represent him as residing on the Velia. (Cic. Rep, ii. 31.) We find a Sacellem Dlanae mentioned on the Caeliolus - an undefined part of the eastern ridge (de Har. Resp. 15); another of the Dei Carna "in Caelio monte" (Macrob. S. i. 12); and a little Texple of Minerva Carta situated on the declivity of the hill:-

## "Caelius ex alto qua Mons descendit in aequum,

Hic ubi non plana est, sed prope plana ria est,
Parra licet videas Captae delubra Mlinerrae."
(Ov. Fash. iii. 837, seq.)

Hence it was probably the same ancieat sanctuary, called "Minervium" in the sacred books of the Argives, which lay on the northern declivity of the Caelian towards the Tabernola ("Circa Minervium qua e Caelio monte iter in Tabernola est," Varr. L. L. v. § 47), and probably near the modern street 1 iu della Navicella.

The most coasiderable bnilding known on the Caelian in later times was the Temple of Dives Clidedies, begun by Agrippina, destroyed by Nero, and restored by Vespasian. (Suet. Jesp. 9; Aur. Vict. Caes. 9.) The determination of its site depends on the question how far Nero conducted the Aqua Clandia along the Caelins, since we learn from Frontinus that the arches of that aqueduct terminated at the temple in question. (Front. Aq. 20, 76.) These Arcus Neroniani (also called Caelimontani, Gruter, Inscr. clxxxvii. 3) extead along the ridge of the narrow hill, supposed to be the Cacliolus, from the Porta Maggione to the Santa Scala opposite the Lateran, where they are inter. rupted by the piazza and buildings belonging to that basilica. They recommence, however, on the other side in the Via di S. Stefano Rotondo, and proceed with a small gap as far as that charch. There are further traces of them on the W. side of the arch of Dolabella; and the opinion of Canina seems probable ennugh, that they terminated near the garden of the convent of SS. Giovanni e Paolo, and that the remains of a huge substruction at this spot belonged to the temple of Claudius. (Indicaz. p. 73, seq.) Canina is further of opinion that the Aqua Claudia was distributed a little beyond this spot, and that one of the uses to which it was applied by Nero was to replenish his lake, which occupied the site of the Flavian amphitheatre. Others, however, are of opinion that the aqueduct did not proceed beyond the church of S. Stefano Rotondo, and therefore that the temple of Claudius stood near that spot, or tbat the church may even have been built on its foundations. But there are no sufficient groands for arriving at any satisfactory conclusion on these points, and altogether the view of Canina is perhaps the more probable one.

The Arch of Dorabella, just alluded to, appears from the inscription on it to have been erected ir the consulship of Dolabella and Silanus, A. D. 10. Its destination has been the subject of various conjectures. Some have imagined it to be a restoration of the Porta Caelimontana; but this can hardly be the case, since, if the Servian walls had run in this direction, half of the Caelian hill would have been shut ont of the city. On the other hand, its appearance excludes the notion of a trimmphal arch; and it could not originally have formed part of an aqueduct, since it was erected previously to the construction of the Aqua Claudia. It seems most probable therefore that it was designed as an entrance to some public place ; but there are appearances tbat Nero subsequently conducted his aqueduct over it. (Canina, Indicaz. p. 77.) The road which led up to it from: the Via di S. Gregorio seems in ancient times to have been called Clivus Scauri. It is mentioned under that name in the Epistles of $S$. Gregory (vii. 13), and the Anonymus Einsiedlensis calls it Clivus Tauri, which is probably a scribe'a error.

Next to the temple of Claudius, the Notitio mentions a Macellum Maonum, probably the maiket recorded by Dion Cassius as founded by Nero ( $\tau \grave{\nu}$

vol. It.

Otépwoध, lxi, i8). Nardini, who is followed by Canina (Indicuzione, p. 83), is of opinion that the church of S. Stefieno Rotondo was part of the macellum, perhaps a slangliter-house with a dome, and surrounded with porticoes.

M.ACELLIJ.

The Castra Peregrisa recorded in the Notitia are not mentianed by any anthor except Ammianus Marcellinus, tho relates that Chnodomar, when conquered by Julian, was conducted to and died in this camp on the Caelian (xyi. 12, extr.) The name, however, occurs in inscriptions, and sometimes in comnection with a temple of Jupiter Redux, as in that found in the church of $S$. Maria in Dumnica (Gruter, xxii. 3; Orell. 1256). These inscriptions also mention a Princeps Peregrinorum, the nature of whese office we are unacquainted with; but it seems probable that he was the commander of the foreign tronps stationed in this camp. Near the same church were found several little marble ships, apparently votive offerings, and one which stood a long while befure it gave to the church and to the surrounding place the name of della Navicella.

An Issum, or temple of 1 sis, is mentioned by Treb, Pollio (NXX. Tyran. 25) on the Caelian, but it occurs nowhere else. It was probably one of the many temples erected to this goddess by Caracalla (Lampr. Carac. 9.) The spring called the Aut't Mercener recorded by Ovid near the Porta Capena (Fasti, v. 673) was rediscovered by M. Fea in 1228, in the vigu: of the Pudri Camaldulesi ai S. Gregorio. On the Caelian was also the Canpers Marmialis in which the Equiria were held in March, in case the Campus Martins was overflowed (Ovid, Fast. v. 673; Panl. Dac. p. 161). Its situation rests chiefly on conjecture; but it was probably near the Latemn; where the neighbouring church of S. Greyonio, now S. Maria Imperatrice, wa called in the middle ages " in Campo Martio" (Canina, Indicazione, p. 84.)

In the lmperial times the Caelian was the residence of many distinguished Romatus; and it is here that Martial places the "limina potentiorum" (xii. *). We have already had occasion to allude to the Holse: of Claudu's Cextumales on this hill, which was of such an extraorlinary heisht that the augurs comoanded him to lower it ; hut this was during the lequblic. Under the Empire we may mention the Howst of Mamirra, a Roman knight of Formiae, and pracfoctus fabrum of Caesar in his Garlic wars, the splendour of which is described by Pliny (xxxvi. 7), and hampooned by Camullus (xlii. 4). Here also was the Horse or Ansics Viames, the grandether of Mareus Aurelins, in which that emperor mas edneated, situated near the honse of the Laterani (Jul.Capit. M. Aut. 1.) It appears to have been surroundel with gardens; and according to the Italian writer Vacca (Memor: 18) the noblo eques:
trian statue of Nareus Aurelins whleh now idorns the Cajuitol was discovered in a vineyard near the Scala Santz. On the same hill were the Aynes Victihanabe where Cemmodns sought refage from the uneasy thoughts which tormented him in the palace, but where he conld not escape the snares of the assassin (Lampr. Comm. 16; Jul. Capitol. Pert. 5). But the must remarkable of all these residences was the Palace of the latprani, characterised by Juwenal ( $\mathrm{x}, 18$ ) as the "egregiae Lateranorum aedes," the residence of the consul Plautius Lateranus, whose participation in 1'iso's enspiracy against Nero cost hin his life (Taw, Inn. xv. 49, 60). After this event the palare of the laterani seems to have been confiscated, and to have become imperial property, since we find Septimins Severus presenting it to his friend Lateranus. probably a descendant of the family to witieh it bad once belonged (Aur. Vict. Epit. 20). Subsequently, however, it appears to liave been in the possession of the emperor Constantine, who erected upon its site the celelrated basilica which still bears the name of the Lateram, and presented it to the bishep of Tome (Niceph. vii. 49). The identity of the spot is proved by several inscriptions found there, as well as by the discovery of chambers and baths in making the façade of the modern basilica (Venuti, Roma Ant. P. i. c. 8 ; Canina, Indic. p. 85). The Domus Philiffi mentioned in the Votitia was probibly the private bonse of the emperor of that mame. Lastly, we may mention that on the Caelian was the Horse of Symmachos, the strenuous defender of paganism in the reign of V alentinian (Symm. Epist. iii. 12, 88, vii. 18, 19).

There are a few other objects on the Caelian mentioned in the Votilit, some of which, bowever, hardly admit of explanation. Such is the Atriex or Antrin Cycloris, respecting which we cannot say whether it was a cavern, or an area surrounded with porticoes. Whatever it was it seems to bave stork un the S . side of the hill, since the vicus Ab Cyclopis in the 1st Region, or Porta Capena, was probably named after it (Preller, Reg. p.119.) The Capet Aflicar of the Notitia, which likewise appears in several inscriptions (Orell. 2685, 2934, 2935), is thunght to have been a street in the neighbourhood of the Culossoum, since the Anonymus Einsiedlensis mentions it between the Meta Sulans and the church of SS. Quattra Coronati; whence it is held to have corresponlei with the modern street which bears the name of that church (Nibby, Jfura di Roma, p. 173, note 140: Urlichs, Röm. Topogr. p. 101). Becker cibserves (IIandb. p. 508), that the uane ducs not appear in any earlier writer, and connects it rith some building fonnded by Septimius Severns, in orter to strike his countrymen, the Africans, who arrived at Rome by the Via Appia; though, as Crlicl.s observes, they must bave gone rather out of their way " to be inpused upon." Varre mentions a Vicus Atricus on the Esquiline, so named becanse the African hostages in the Punic War were said to have been detained there (" Rixquilis vicus Africus, quod ibi obsides ex Afria bello Punico dicuntur custoditi," L. L. v. § 159). Hence it is very prebable, as Camina remarks (indicaz. po 91), that the head, or begiming, of this street stood at the spot indicated by the Anonymus, namely, near the Colossenm, whence it ran up in the direction of the Esquiline, although Becker (Handb. p. 560) denies that the Caput Atricao had any connection with the Vicus Africus. The Arbon Sincta is inesplicable

The Lipus Matctines et Gallects (or Dacicus), the Spoliarium, Saniariem, and AnmamentaRIUM, were evidently gladiatorial schools with their appurtenances, situated apparently on the northern side of the Caelian, not far from the amphitheatre. Officers attached to these institutions are frequently mentioned in inscriptions. The Spoliarium and Armanentarium speak for themselves. The Suniarium is a word that does not occur elsewhere, and is thronght by Preller to denote a bospital (a sanie) where the wounded gladiators were received. For a further account of these institutions see Preller, Regionen, pp. 120-122. Lastly, the Mrca Aurea appears from an epigram of Martial's to bave lieen a banqueting room of Domitian's (ii. 59): -
" Mica vocor; quid sim cernis; coenatio parva.
Ex me Caesareum prospicis, ecce, tholum."
It is nlso mentioned, along with the Meta Sudans, as built by Domitian in the Chronica Regia Coloniensis, in Eccard's Corpus Historicum (vol, i. p. 745.)

## X. The Disthict to the S. of the Caellan.

To the S . of the Caelian lies a somewhat billy district, bounded on the W. by the Aventine, and compreliending the Ist and 12th Regions of Augustus, or those called Porta Capena and Piscina Publica. The latter of these is decidedly the least Important district of Rome, but the former presents several objects of considerable interest. Of the Porta Capena itself we bave already treated. In its immediate vicinity stood the double Temple of Hovos ind Virtus, vewed by Marcellus in his Gallic wars, but not erected till after bis conquest of Syracuse. It was the first intention of Marcellus that both the deities should be ander the same roof: and, indeed, the temple seems to have been a mere restitution of ao ancient one dedicated to Honos by Q. Fabins Verracosus many years before. (Cic. N: D. ii. 23.) But when Marcellus was about to dedicate it, and to introduce the statue of another deity within the sanctuary, the pontifices interposed, and forbade him to do so, on the ground that the procuratio, or expiation of any prodigy occurring in a temple so constructed, would be difficult to perform. (Liv. xxvii. 25.) Heace, Marcellus was constrained to add another temple of Virtus, and to erect two images of the deities "separatis aedibus;" but though the work was pressed on in baste, he did not live to dedicate them. (Liv. l. c.; Val. Max. i. I. § 8.) Nevertheless, we freqnently find the temple mentioned in the singular namber, as if it had formed only one building (" ad aedem Hoooris stque Virtutis," Cic. Verr. ir. 54 ; cf. Ascon. ad Cic. in Pis. 19; also the Notitio and Curiosum.) Hence, perbaps, the most natural conclusion is that it consisted of two cellae under the same roof, like the temple of Venns and Rome, a form which agrees witb the description of Symmachus: "Mijores nostri-aedes Honori ac Virtuti gemella facie junctim locarant." (Epist. i. 21.) The temple was adorned with the spoils of Grecian art brought hy Mareellus from Syracuse; an instance noted and condemned by Livy as the first of that kiod of spoliation, which te observes was subsequently inflicted upnn the Roman temples themselves, and especially ppon this very temple of Marcellus; for, in Livy's time, few of those ornaments remained, which had previonsly rendered it an object of attraction to all strangers who visited Rome ( $x \leq y, 40$, cf, xxxiv. 4).

They probably disappenred during the Civil Wars, in which the Roman temples seem to have suffered both from neglect and spoliation: for in the time of Cicero the Syracusan spoils still existed in the temple (in Verr. iv. 54). It appears to have been burnt in the fire of Nero, since it is mentioned as laving been restored by Vespasian. (Plin. xxxv, 37.)

According to Aurelius Victor (Vir, Ill. 32) the annual procession of the Roman knights to the temple of Castor started from this temple of Honos aod Virtus, whereas Dionysius (xi. 13) names the temple of Mars as the starting-place. Becker (Handb. p. 311) regards the discrepancy between these accounts as tending to prove the correctness of his assumption that the temples must have lain close tagether. That one of the accounts is erroneous is a more probable conclusion, and it is a certain one that it is fallacious to draw any topograpbical deductions from such very shadowy premises. The true site of the Temitle of Mars has been ascertained as satisfactorily as that of any of the monuments which do not actually speak for themselves; such, we mean, as the Colosseum, Trajan's column, tbe Pantheon, and others of the like description. There can be no donbt that the temple of Mars, instead of being close to the Porta Capena, or at S. Sisto, as Becker places it (Handb. p. 513), lay on the Via Appia, at the distance of about $1 \frac{1}{2}$ miles from that gate. The proofs are overwhelining. In the first place an inscription, still preserved in the Vatican, recording the levelling of the Clivus Martis, was found in the Vigne Nari, ontside of the Porta Appia (the modern S. Sebastiann). Fecondly, another inscription, in the Palazzo Barberini, recorded by Fabretti (Inser. p. 724, no. 443), Marini (Frotr. Avv. p. 8), and others, testifies that Salvia Marcellina gave a piece of ground to the Collegium of Aescalapius and Hygia for a smaln temple, close to the temple of Mars, between the first and second milestone on the Via Appia, on the left-hand side in going from the city. Thirdly, buth the Notitia and Curiosum place the Aedes Martis at the extremity of the first Kegio, close to the Flumen Almonis. The Almo flows outside the Porta Appia, near the Vigna Nari:-

* Est locus ante urbem, qua primum nascitur ingens Appia, quaque Italo gemitus Alnone Cybebe
Ponit, et Idaeos jam non reminiscitur amnes."
(Stat. Silv, r. 1. 222.)
A brook now flows between the Porta S. Sebastiano and the church of Domine quo vadis, which, with great probability. has been identified with the Almo. (Cluver, Ital. Ant. p. 718 ; Westphal, Röm. Campogna, p.17.) Fourthly, the same locality is indicated by several documents of the middle ages. Thus, in the Acts of the Martyrs: "Tunc B. Stephanus ductus a militibus foras muros Appiae portae ad T. Martis" (Act of S. Stephanus and S. Julius). "Diacooes duxerunt in clivum Martis ante templum et ibidem decollatus est" (Act of S. Siztus). And the Mirabilia (io Mortfaucon, Diar. Ital. p. 283): "Haec sunt loca quae ioveniuntur in passionibus sanctorum foris portam Appiam, ubi beatus Syxtus decollatns fuit, et nbi Dominus apparuit Petro, Domine quo radis? Ibi templum Martis, intus portam, arcus Syllae." Now, the passages in the classics which relate to the subject do not mon counter to these indications, bat, on the contrary, by Microsoft ${ }^{2}$
tend to confirm them. Appian (B. C. iii. 41) mentions a temple of Mars 15 stadia distant from the city, which would answer pretty nearly to the distance of between 1 and 2 miles given in the inscription q⿴oted. Ovid says (Fast. vi. 191): -
* Iux caden Marti festa est; quen prospicit extra
Appositum tectae l'orta Capena viae."
The word prospicit denntes a long view; and as the temple of Mars stool on a hill, as is evident from the Clivus Martis, it might easily be visible at the distance of a mile or two. The words of statius (" qua primum nascitur," \&c.) must be corrupt, being both tantological and contrary to fact. The paving of the road from the Porta Capena to the temple would not have been worth twice recarding by Livy, had it Jain oniy at a distance of some 300 yards (x. 23, xxxviii. 28). The only way in which Becker can escape from the legitimate conclusion is by assuming two temples of Mars in this quarter; in which few, we suspect, will be inclined to follow him, and which may be regarded as equivalent to a confession of defeat. (Becker, Handb. p. 511, seq.; Autuc. p. 63, seq.; Urlichs, Rön. Topogr. p. 105, seq.; Preller, Regionen, p. 116, seq.; Canina, Indicazione, p. 56, seq.)

Close to the Porta Capena and the temple of Honos et Virtus lay the Valley of Efieris with the Lecus and Ardes Cimenartm, the traditionary spot where Numa sought inspiration and wisdom from the nymph Fgeria. (Liv. i. 21 ; llnt. Nunu. 13.) In the time of Juvenal, whose description of the spot is a locus classicus for its topography, the greve and temple bad been profaned and let out to the Jews:-
"Substitit ad veteres arcus madidamque Capenam
Ilic ubi nocturnae Numa constituehat amicae. Nune sacri fontis nemus et delubra locantur Judaeis, quorum cophinus foenumque supellex. Otmis enins populo mercedem pendere jussa est Arhor, et ejectis mendicat silva Camenis. In vallem Egeriae descendimus et speluncas Dissimiles veris. Quanto praestantius esset Numen aquae, viridi si margine clauderet undas
Herba, nee ingenuum riolarent marmora tophum." (Sut. iii. 10, seq.)
It is surprising how Becker could doubt that there was an Aedes Camenarum bere, since it is nut only alluded to in the preceling passage, but also expressly mentioned by Pliny ( $\mathrm{x} x \times \mathrm{xiv}, 10$.) The modern Ciceromi point out to the traveller as the valley of Egeria a pretty retired spot some distance outside of the I'orta S. Sebastiano, in the valley calledf La Caffiarella, near which are the remains of a little temple, called liy some the temple of Honos et Virtus, by others a temple of Bacchus, with a grove said to be sumed to the latter decty. But though at present our imagination would more gladly fix on this spat as the seene of the cunfernees between Numn and his nymph, and though respectable authorities are not wanting in favour of this view (Venuti. Hescr. di Rom, ii. p. 18; (iuattani, Rum. Iescr. ii. p. 4.), yet the preceling passages, to which may he added Symmachus (th Sed enim propter eats (acdes Ilonoris ot Tirtutis) Camenarum religio sacro finti advertitur," Epist, i. 21) and the Nutitiu, which places the temple of the Canenae
close to that of Ilonour and Valour, are ton decisive to allow us to do so; and we must therefore assune the valley of Ereria to have been that nesu the church of S. Sisto, opposite to the baths of Caracalla. The little fountain pointed out as that of Egeria in the valley Caffarella, is perlaps the remains of a nymphaeum. llere was probably a sanctuary of the Almo, which waters the valley.

Near the temple of Mars, since it is mentioned itr the Notitia in conjunction with it, lay the Temple or Tearpestas, built by L. Cornelius Seipio, the victor of Aleria, in comnembration of the escape of the Roman fleet from shipwreck of the island of Corsica, as appears from the inscription on lus tomb. The temple and the occasion of its foumation are alluded to by Ovid (Fusti, vi. 193) in the follusing lines:-
> "Te quoque, Tempestas, meritam delubra fatemur,
> Cum paene est Corsis obrata classis aquis."

But of the Temple of Minerra, also mentioned at the same time with that of Mars, we know notbing more. Near the last was preserved the Lapis Manalis, a large cylindrical stone so called from manare, " to flow," hecause during seasons of drought it was carried in procession into the city, for the sake of procuring rain. (Paul. Diac. p. 128; Varr. ap. Nom. xv. p. 375, Gerl.)
Close to the Porta Capena, and probably ontside of it, lay one of the three Sexictela mentioned by Festus ; but the only time at which we find meetings of the senate recorded there is during the year following the batile of Cannae, when they appear to have been regularly held at this place. (Liv. xxiii. 32.) During the same period the tribunal of the prator was erected at the Piseina Pubbica. This last object, which seems to have been a swimmingplace for the people in the Republican times (Festus, p. 213), gave name to the 12th Regio, which adjoined the 1st, or that of Porta Capena, on the W. (Armm. Marc, xvii. 4; cf. Cic. ad (laint. Fr. iii. 7.) The pond had, however, vanished in the time of Festus, and its exact sitnation cannot be determined. There are several other objects in this district in the like predicament, such as the Lacus Peomethei, the Baf.secm Toberitr, and others mentioned in the Notitia. The Thermae Commodianae and Severianae will be considered under the section which treats of the thermae. The Metatosinai Ciesaris, perhaps a kind of imperial villa (Preller, Reg. p. 115), appears to have been situated near the modern church of S. Balbina. (Montfaucon, op. U'rlichs Rim. Topogr. p. 112.) The three Tarviphal Arches of Trajan, Venus, and Duustrs, mentioned by the Notitict in the 1st Regio, probably spanned the Via Appia in the space between the temple of Mars and the Porta Capena. The arch still existing just within the Porta $S$. $S$-basticun is generaliy thought to be that of Drusus, the father of the enperor Claudius. (" Praeterea Senatos, inter alia complura, marmoreum areum cum tropacis via Appia decrevit (1)ruso)," Suet. Claud. 1.)

For many miles the tombs of distinguished Romans skirt hoth sides of the Via Appia; and these remains are perhaps better calculated than any other object to impress the stranger with an adequate idea of Rome's former greatness. For the most part, however, they lie heyond the bounds of the present subject, and we shall thereforc conteut ourselves

ARCH OF DRUSUS.
with mentioning a few which were contained within the actual boundaries of the city. They appear to have commenced immediately outside the Porta Capena ("An to egressus porta Capena, cum Calatini, Scipionum, Serviliorum, Metellorum sepulera vides, miseros putas illos?" Cic. Tuse, i. 7); and hence many of them were included in the larger circuit of the walls of Aurelian. Tbe tomb of Huratia, slain by the hand of her victorious brother, seems to have been situated just outside the gate. (Liv.i.26.) Fortunately the most interesting of those mentioned by Cicero-the Tomb of the Scipios - is still in existence. It was discovered in 1780 in the Vigna Sassi, on the left-band side of the Via Appia, a little beyond the spot where the Via Latina branches off from it, and about 400 paces within the Porta S. Sebastimo. Its entrance is marked by a single tall cypress tree. In Liry's time the tomb was still adorned with three statnes, said to be those of Publius and Lucius Scipio, and of the poet Ennius, who was interred in the sepolchre of his patrons. (Hieron. Chron. p. 379, Ronc.) It was here that the sarcophagus of L. Scipio Barbatns, consul in B. c. 298 , now preserved in the Vatican, was discovered, together with several monumental stones with inscriptions relating to other members of the family, or to their connections and freedmen. The oricinals were carried off to the Vatican and copies inserted in their stead. The most remarkable of these inscriptions are that of Scipio Barbatus; of his son Lucius Cornelins Scipio, the conqueror of Corsica, consul in B. c. 259: of Publius Scipio, son of Africanus Major, whose feeble state of health is alluded to by Cicero (Cato Maj. 11), and whose touching epitaph shows that he died young; of $L$. Cornelius Scipio, grandson of the conyueror of Spain, gathered to his fathers at the early age of 20 ; and of anotber of the same name, the son of Asiaticus, who died aged 33, whose title to honour is summed up in the laconic words, "Pater regeni Antiochum subegit." A complete acconnt of this tomb will be found in Visconti (Mon. degli Scipipni, Rom. 1785)
and in the Beschreibung Roms (vol. iii. p. 612, seq.), where the various epitaphs are given.

Also on the left-hand side of the Via Appia in going from the Porta Capena was the Mausolewa of Setrimius Severus, which he caused to be erected for himself in his lifetime, in imitation of his Septizonium, but probably on a reduced scale. (Spart Getu, 7.) In the same neighbourhood are some of those Columbamia, or subterranean chambers, which formed the common resting-places for the ashes of persons of a lower condition. One of these, not far from the tomb of the Scipios, is said to contain the remains of the courtiers and domestics of the Caesars, from Julins to Nero. Among others there is an inscription to M. Valerius Creticus, with a hust. The walls, as well as a large pier in the middle, are hollowed throughout with vaulted recesses like large pigeon-holes, - whence the name,- in which are contained the ashes of the dead. The Macsoletim of Caecilia Metelli, which stands on the Via Appia, about 2 miles outside the Porta S. Sebastiano, though it does not properly belong to our subiect, demands, from the maguificence of its construction, as well as from Byron's well-known lines (Childe Harold, canto iv.), a passing word of notice here.

The remaining part of the district, or that forming the 12th Regio, and lying to the W. of the Via Appia, does not present many monuments of interest. The most striking one, the Thermae Antoninianae, or baths of Caracalla, will be spoken of under its proper head. We have already treated of the Bona Dea Subsaxanea and of the INinm. Close to the baths just mentioned Caracalla built the street called Nova Via, reckoned one of the handsomest in Rome. (Spart. Carac. 2; Aur. Vict. Caes. 2I.) Respecting the Fontuna Mamatosa, we know nothing more than that the Basis Capitolina mentions a street of the same name in this neighbourhood. In the later period of the Empire this district appears to have contained several splendid palaces, as the Seftem Domus Pintuonima, the

TUMB OF METELLA C:AECLLIA.

Dome's Chionis, and Domes Cornificies. The Domus Parthorum and Cllonis seem to have been some of those palaces erected by Septimius Severus, and prenented to his friends. (Aur. Vict. Epit. 20.) Cilon is probably the siune person mentioned by Dium (Ixxiii, 4), spartian (Carac, 3), and in the Digest (i. 12. 1, ami15. 4.) The Parthi seem to have been Parthian uobles; whom severus brought with him to Rome, and of whose luxurious habits Tertullian has drawn a characteristic picture. (De Mab. M/ul. 7.) The I'rivata Anelinis and the Domes Connimicons (Conificiae) mentioned in the Nutitict, lay doutitless cluse together. The former must have been the private residence of Hadrian, where M. Antonimns iwelt after his adoption by that emperor. (Jul. Capit. M. Anton. 5.) M. Antoninus had a younger somer named Anna Corniticia, to whom the house hastring her name doubtless belonged. (Ib, c. 1; Preller, Regionen, p. 198.)

## Ni. The Esqciline and its Neighbourhood.

The Esquiline (Esquilitue, or in a more ancient firm Erquiline) was originally covered with a thick wond, of which, in the time of Varro, the only remains were a few sacred groves of inconsiderable "xtront, the rest of the hill hasing been cleared and (anved with buildings. (Varr. L. L. v. § 49, Miill.) Yet the derivation of the ame of the hill firnu tesculetum seems to have been unknown to inhquity, winl is a uere conjecture of Miller's (uel lue.): the ancient ethmology being derised eithor finm eroubiue ragis, lieesance servius Tullius had gisad his shoule theres, or tron coxvolde, because the hull was liss cloared and settled by that king (Varr. i. ©., Os. Ficst. iii. 24is)

We have alretuly dearribed the Espuline as throwing out two tongues or progertions, called ro-petirdy, in the nume ancient time of Pame,
 dicatel in the thlowine paseage of Fintus: "Op. pius authon :uppllaths ist, it ait Xampo reruin Gumanarnu L. sun., ab opita Oppio Tuseulano.

 (tone fat itt Catmis et ibi castat hatiturat. Simi-

Jitur Cispium a Laevio Cispio Anagnino, qui ejusdem rei camsa cam partem Esquiliarmm, quae jacet ad vicum l'atricium versus, in qua regione est aedis Nefitis, tuitus est " (p. 348, Miill.). Hence we learn that the Cispias was that projection wbich adjuined the Vicus Patricies, and must connequently have been the northern one, since the Vicus Patricius is known to have corresponded with the modern streets called I'ia Crbrana and Via di S. Pudenziana, which traverse the valley lying between the Viminal and the Esquilone. The following passage of Paulus Diaconus shows that the Yicus Patricius must bave lain iu a valley: "Patrieius vicus Romae dictus en, quod ibi patricii habitavermen, jubente Servio Tullio, ut, si quid molirentur adversus ipsum, "x loeis superioribus opprimerentur" (p. 221, Muill.); and its identity with the modern streets just mentioned appears from Anastasius ( 1 iita Pii l.): " IIic ex rozatu beatac I'rassedis dedicavit ceclesiam thermas Novati un vico Patricii in bunorem sororis suac sanctate Putentianae " (p, 14). This charch of $S$. Irudentiana still exists in the strect of the same name. It is also mentioned by the Anonymusa of Einsiedlen, in whose time most of the streets still bore their ancient names, as being " in vico Patricii." That the Cispius was the smaller and more northern tongue likewise appears from the sacoed borks of the Argives (ap. 1'arr. L. L. v. § 50), which, in procecding northwards from the Caclian, first name the Oppius, which bad four sacraria or chapels, and then the Cappius, which, heing the smaller hill, had only two, namely, the Lueus Puetelous and the Aedes Junonis Lacinae.

From the passage of Festus just queted, it ap. jears that part of Mons Olpius bore the name of Camoxaf; and this appellation continued to exist when the names Uppius and Cispius lad fallen out of nse and been suprisded by the general name of Fisquiliac. Yiet it is one of the contested punts of Roman tuporsaphy whether the Carinae formed part of the Lill. The ladians still cling to the allcient opinion that under that uane was compichended the low ground from the Formm Transtoriun to the Colosseum. Becker (Ilandh. p. 522. sel.) partly adopted this view, but at the same time'
extended the district so as to embrace the webtern extremity of the Oppius; whilst Urlichs, on the contrary, confined the Carinae entirely to that bill. (Beschr. vol. iii. part ii. p. 119, seq.) That the Italian view is, at all events, putly erroneous, cau hardly admit of a question. Besides the preceding passage of Festus, which clearly identifies the Carinae as part of the Oppins, there are other places in ancieat writers which show that a portion at least of the district so called lay on a height. Thus ihonysius, speaking of the Tigillum Sororiam, says that it was situated in the lane which led down from the Carinae to the Vicus Cyprius ( $\kappa \sigma \pi 1 \delta^{7}$

 Again Varro (L. L. v. § 48), in describing the Subura or valley at the foot of the Oppius, says that it lay " sub muro terreo Carinarum;" obviously indicating that the latter place was on a height. Becker, indeed, maintains that walls of earth or aggeres were used in fortification only where the ground was level. But a wall on a beight was certainly the usual mode of fortification in ancient Italy; and, as Mr. Bunbury justly remarks (Class. Mus. vol. v. p. 222), the peculiar appellation of "murus terreus" clearly distinguishes this wall from a cummon agger. Nor, as the Subura lay behind the gorge between the Esquiline and Quirinal, is it easy to see how any murus terreus in the district of the Carinae could have been so situated as to overhang the Subura, except apon the bill. The folluwiug words of Varro (l. c.) are even perhaps still more conclusive. He identifies the Subura with the Pagus Succusanus, - the ancient aame of Subura being Succusa, by an interchange of $b$ and $c$, - and holds it was thus samed "quol succurrit Carnis:" where, whatever we may think of his etymology, it is plain that he regarded the Carinae as a height. It may be added that the western part of the Oppius, where the church of S. Pietro in Vincoli now stands, bore the name of le Carre as late as the 16 th century. (And. Fulvius, de Urb. Ant. p. 304; cf. Niebulir, Hist. i. p. 390, seq.)

It cannot therefore be doubted that the Carinae occupied the extremity of the Oppius; but how far that district extended eastmards cannot be said. It is a more difficult question to determine whether part of the valley lying at the western foot of the hill also bore the name of Carinas. Its solution is connected with avother question respecting the site of the Temple of Telles We know that this temple -which was a considerable one, since assemblies of the senate were sometimes held in it -lay in the Carinae, and that it was built on the site of the house of Sp. Cassius, which was confiscated and pulled down when that demagogue was convicted of a design to make himself sovereign of Rome. (Liv. ii. 41 ; Val. Max. vi. 3. § 1 ; Plin. xxxiv. 14.) That event took place B. c. 485 ; but the terople does not seem to have been built till B.c. 269 . Its site is further determined by notices respecting the house of Pompey, which subsequently came into the prssession of M. Antony, the situation of which is known to bave been in the Carinae, and at the same time close to the temple of Telins: "Docnit (Lenneu:) in Carinis, an Telluris aedem, io qua regione Pompeiorum domns fuerat." (Suet. Ill. Gramn. 15, cf. Id. Tib. 15; Vell. Pat. ii. 77; Aur. Viet. Fir. IUL. 84; Dion Cass. zlviii. 38.) And Servius says expressly, though in some respects unintelligibly, "Carinae sunt aedificia facta is Caridarum modum,
quae erant circa templum Telluris " (cul den. viii. 361).

There is nothing in the preceding passages to exclude the possibility of the Templum Tellaris having been on the summit of the lill ; since it is not neressary to assume with Urlichs that it atood on its very edge (Kön. Topogr. p. 117) ; in which case, as there was an area attached to the temple, its back front must bave been turned towards the road leading up to it from the valley, and the area have laid before it on the summit of the liill - a dispusition which does not appear very probable. I't there are some other circumstances tending to the inference that the temple was situated in the valley. Diongsius mentions it as being, not in the Carinae, but on the road leading to the Carinae (kãà $\tau \dot{\eta} \nu$ ${ }^{2} \pi 1$ Kapivas фépovaav $\dot{\delta} \delta \delta \nu_{\nu}$, viii. 79.) A curions view, taken by Urichs (l.c.) of the construction of $\dot{\pi} \pi l$ in this passage is ooe of the reasons which led him to place the temple on the hill. He thinks that it must necessarily mean "up to : " but it might just as well be said that it means "down to," in a passage quoted a little while ago from the same author respecting the situation of the Carinae and the Vicus Cyprius. In both cases it simply means "to." It will be perceived that Dionysius is here at variance with the anthorities hefore quoted respecting the site of the temple. If the appellation of Carinae extended orer some part of the adjacent valley it is possible that Dionysius, as a foreigner, might have been unaware of that fact, and have attached the name only to the more striking part of the district which lay on the hill. And there is a passage in Yarro, a very obscure one indeed, from which it might he inferred that part of the Ceroliensis, which seems to have been the name of the valley betweea the Caelian, the Esquiline, and the Velan rilge, had likerrise borne the oame of Carinae ("Ceruliensis a Carinarum junctu dictus Carinae, postea Cerolia, quod hide oritur caput Sacrae Vise," L.L. v. § 47). These passages would seem to indicate that the temple of Tellus lay in the valley between $S$. Maria de' Monti and the Tor de' Conti, where indeed we find traces of the name : sioce the churches of $S$. Salratore and of S. Pantaleone, the latter of which still exists near the Tia del Colosseo, hure in the midale ages the epithet of "in Tellure." Passages are also adduced from the Acts of the Martyrs to show that the temple of Tellus stood opposite to that of Pallas in the Forum Transitorium. ("Clementianus praecepit ei caput amputari ante templuon in Tellure, corposque ejns projici ante Palladis aedem in locnm supradictum," Act. S. Gordian.) Hence it seems not improbable that the district of the Carinae, in which the temple undoubtedly stood, may have extended over a considerable part of the ralley; hut the passages relating to the sabject are far from being decisive; and the question is one of that kiad in which much may be said on both sides.

Two striking legends of early Roman history are connected with the Esquiline and its vicinity ; that of the murder of Servins Tullius by his inhuman daugbter, and that of the Tigillum Sororium, or typical joke, by passing under which Horatius expiated the murder of his sister. We have before related that Servius Tullius resided on the Esquiline, and that he was the first to clear that hill and make it habitable. It was on bis return to his residence on it, after his ejection from the curia ly his son-iolaw, Tarquinius Superbus, that le was murdered by the hirelings of that usurper. Liry's account of the

## ROMA.

transaction is clear and graphic, and the best guide to the topography of the neighbourhoud. The aged monarch had reached the top of the Victs Cypints ( ${ }^{4}$ ad summum Cyprium vicum") when he was nvertaken and slain. His daughter followed in her carriage, and, baving arrived at the same spot where stood a temple of Diana a little before the time whea Livy wrote, she was just turning to the right in order to ascend the Cutyus Crest's, which led to the sammit of the Esquiline, when the affrighted driver reined his horses, and pointed out to Tullia the bleeding corpse of ber murdered father ; but the fiend-like Tullia bade him drive on, and arrived at home bespattered with the blood of her parent. From this onnatural deed the street which was the scene of it obtained the name of Vicus Scelerates (i. 48). The question that has been sometimes raised whether Tullia was returning to her father's or to her hasband's house, does not seem to be of much importance. Solinas, indeed (i. 25), represents Servins Tullius as residing "supra clivam Urbium," and Tarquinius Superbus, also on the Esquiline, but, "Supra clivum Pullium ad Fagutalem lucum." The hoose of the latter therefore must have been apon tbe Oppius, on which the Lacus Fagutalis was situated, ard most probably upon the soutbern side of it; but he may not have resided here till after he became king. On the other hand, as Tullia is represented as turning to the right in order to ascend the Clisus Urbins to the royal residence, it is plain that the Vicus Cyprius must have lain on the north side of one of the tongues of the Esquiline ; and as we are further informed by Dionysius, in a passage before quoted (iii. 22), that there was a lane which led down from the Carinae, or western extremity of the Oppius, to the Vicus Cyprius, the eanclusion is forced upon us that the palace of Servius Tullius must have been sitnated upon the eastern part of the northern side of the Oppius, and that consequently the Vicus Cyprius must have corresponded with the modern Via di S. Lucia in Selci. The Summus Cyprius Vicus was evidently towards the head of the ralley, the lower part of the street running under the Carinae; and hence the Clivus Urbius and the residence of Servias may be placed somewhere near the church of $S$. Martino. Before the usurpation of Tarquin, he and his wife may have resided near his father-in-law, or even under the same roof; or, what is still more probable, Tullia, as Orid represents her (" patrios initura Penates," Fast. vi. 602), was proceeding to take possession of her father's palace, siace his deposition had been effected in the senate before his murder. Urlichs (Röm. Topogr. p. 119) admits that the Vicus Cyprius answered to the Via di S. Lucia, yet holds that Servius resided on the Cispius; a view otterly irreconcilable with the fact that the Clivus Crbius and palace lay on the right of that street. The passages before adduced prove the direction of the Vicus Cyprous as clearly as any locality in Rome can be proved which depends for its determination solely on notices in the classics. Yet Becker shuts his eyes to this satisfactory evidence, and maiutains that the Vicus Cyprius correspouded with the modern I'ia del Colusseo (Antwort, p. 78); although in that case also it would have been impossible fur Tullia to have ascended the Esquiline by turaing to the right. The only ground he assigns for this incomprehensible view is on arbitrary estimate of the distances between the objects mentioned in Regio IV. of the Notitia, founded also on the assumption that
these objects are enumerated strictly io the order in which they actually followed one another. But we have already shown from Becker himself that this is by no means always the case, and it is evidently not so in the present iastance ; since, after mentioning the Tigilliam Sororium, which lay in or near the Subura, the order of the catalogue leaves that spot and proceeds onwards to the Colosseum, and then again at the end of the list reverts to the Subura. The chief objection to placing the Vicas Cyprius under this side of the Oppius is, as Mr. Bunbnry observes (Class. Mus, vol. v. p. 227), that it would thus seem to interfere with the Subura. But this objection is not urged either by Becker or Urlichs; and indeed the Subura, like the Velabrum, seems to have been a district rather than a street, so that we may conceive the Vicus Cyprius to have run through it.

The position of the Tigillia Sororita is determined by what has been already said; namely, in a narrow street leading down from the Carinae to the Vicus Cyprius. It seems to have been a wooden heam erected across the street. As it is mentioned in the Votitia, this monument, connected with one of Rome's early legends, must have existed down to the 5th century; and indeed Livy (i. 26) informs us that it was constantly repaired at the public expense. We learn from Dionysius (iii. 22) and Festus (p.297, Mïll.) that on each side of it stood an altar; one to Juno Sororia, the other to Janus Curbatics.

Having lad occasion to mention the Subrra, it may be as well to describe that celebrated locality before proceeding further with the topography of the Eqquiline. We have already seen from Varro that it was one of the most ancient districts in Rotne; and its importance may be inferred from ita having given name to the 1st Servian Region. We have also alladed to a passage in the same author (L.L. . v. § 4 s, Mitll.) which shows it to have been originally a distinct village, called Succusa or Pagos Succusanus, lying onder the Carinae. Varro adds, that the name still continued to be written with a $\mathbf{C}$ instead of a B; a statement which is confirmed hy the fact that in inscriptions the Tribus Suburana is always denoted by the abridged form turn. sra. (Cf. Festus, s. v. Subura, p. 309, Müll.; Quintil. Inst. Or. i. 7. § 29; Mommsen, Die Röm. Tribus, p. 79, seq.) A piazzer or place under the chnrch of S. Pietro in I'incoli still bears the name of Subura; and tbe church of $S$. Agata over the I'ia de' Serpenti, which skirts the eastern foot of the Quirinal hill, bore in the middle ages the name of "in Saburra" or "super Saburra." Hence it seems probable that the Subora occupied the whole of the valley formed by the extremities of the Quirinal, Viminal, and Esquiline, and must consequently have been, not a street but, a region of some extent; as indeed we find it called by Gregory the Great in the 6th century (" in regione urbis illa quae Subura dicitur," Hial jii. c. 30). But that it extended westward as far as the Forum Transitorium, a supposition which seems to rest solely on the order of the the names in the 4 th Region of the Notitia, we can hardly conceive. We have shown that the district between the back of the imperial fora and the western extremity of the Fsquiline may perhaps have furmed part of the Caninae; but it can laardly have been called both Carinae and Subura. Tbe latter seems to have properly begun at the point where the Quirinalis approaches the extremity of the and Oppius;

Digitized by Microsoft(1)
this seems to have been the spot called by Martial the primae fouces of the Subura (ii. 17):-
" Tonstrix Suburae faucitus sedet primis, Cruenta pendent qua flagella tortorum Argique letum multus obsidet sutor."

Juvenal (v. 106) represents the Cloaca Maxima as penetrating to the middle of the Suhura, and this fact was established by excavations made in the year 1743. (Ficoroni, Vestigia di Roma, ap. Bunbary, Class. Mus. vol. v. p. 219.)

From its situation between the imperial fora and the eastern hills, the Subura most have been one of the most frequented thoronghfares in Rome; and hence we are not surprised to find many allusions to its dirt and noise. It was the peculiar aversion of Juvenal, - a man, indeed, of many aversions ("Ego vel Prochytam praepono Suburae," Sat. iii. 5); a trait in his friend's cbaracter which had not escaped the notice of Martial (xii. 18):-

## "Dum tn forsitan inquietus erras Clamosa, Juvenalis, in Subura."

The epithet clamosa here probably refers to the cries of itinerant chapmen: for we learn from other passages in Martial that the Suburs was the chief place in which he used to market (vii. 31, x. 94, \&c.; cf. Juv. xi. 136, seq.) It appears also to have been the abode of prostitates (vi, 66; comp. Hor. Epod. v. 58). It was therefore what is commonly called a low neighbourhood; though some distinguished families seem to have resided in it, even Caesar himself in his early life (Suet. Caes. 46), and in the time of Martial, L. Arruntius Stella (xii. 3.9). The Suburanenses, or inhabitants of the Subura, kept up to a late period some of the ancient customs which prohably belonged to them when they formed a distinct village; especially an annoal contest with the Sacravienses, or inhabitants of the Sacra Via, for the head of the horse sacrificed to Mars in the Campus Martius every October. If the Suburanenses gained the victory they fixed the head on a tower in the Subura called Turmis Mamilia, whilst the Sacravienses, if successful, fixed it on the Regia. (Festus, s. v. October Equus, p. 178, Mïll.; Paol. Diac. p. 131.)

Throughout the time of the Republic the Esquiline appears to have been by no means a favourite or fashionable place of residence. Part of it was ocenpied by the Casipus Esquilinus, a place used as a burying-ground, principally for the very lowest class of persons, such as panpers and slaves; whose bodies seem to have been frequently cast ont and left to rot here without any covering of earth. But under the Empire, and especially the later period of it, many palaces were erected on the Esquiline. Maecenas was the first to improve it, by converting this field of desth, and probably also part of the surrounding neighbourhood, - the pauper burial-ground itself appears to bave been only 1000 feet long by 300 deep,-into an agreeable park or garden. Horace (S. i. 8. 14) mentions the laying out of these celebrated Horti Maecenatis:-
"Nanc licet Esquiliis babitare salubribus atque Aggere in aprico spatiani, qua modo tristes Albis informem spectabant ossibus agrum."
It appears from these lines that the Campus Esquilinus adjoined the agger of Servius Tullius, which, by the making of these gardens, was converted into a cheerful promenade, from which people were no
longer driven by the disgusting spectacle of mouldering bones. The Campus Esquilinus being a cemetery, must of course have been on the outside of the agger, since it was not lawful to bury within the pomoerium; and Varro (L.L. v. § 25) mentions it as "ultra Exquilias," by which be must mean the Servian Region so called, which was bounded by the agger. Its situation is also deternined by a passage in Strabo (v. p. 237), where the Via labicana, which issned from the Esquiline gate at the southern extremity of the agger, is said to leave the campus on the left. It appears to have also been the place of execution for slaves and ignoble criminals (Suet. Claud. 25; Tac. Ann. ii. 32, xv. 60; Plaut. Mil. ii. 4. 6, ed. Ritschl.). There dues not seem to be any authority for Becker's assumption that the whole of the Esquilive outside of the Servian walls was called Campus Esquilinus (Handb. p. 554), nor that after the laying out of the gardens of Maecenas the ancient place of execution was transferred to the Sessorinm, near S. Croce in Gerusalemme. Part of the campus was the field given, as the scholiast on Horace says, by some person as a barying-place. The Sessoriam mentioned in the Excerpta Volesiana de Odoacre (69) was a palace; and though Theodoric ordered a traitor to be bebeaded there it can hardly have been the ordinary place of esecution for common malefactors. Besides the Sessorium mentioned by the scholiasts on Horace (Eport. v. 100, Sat. i. 8. 11) was close to the Esquiline gate, a fuli mile from S. Croce, and seems, therefore, to have been another same for the Campus Esquilinus, if the seholiasts are right in callng it Nessorium. The executions recorded in the passages before quoted from Suetonius and Tacitus took place long after the gardens of Maecenas were made; yet when Tacitus uses the words "extra Portam Exqnilinam," there can be no doubt that he means just without the gate. It would be a wrong conception of the Horti Maecenatis to imagine that they resembled a private garden, or even a gentleman's park. They were a common place of recreation for the Roman populace. Thus Juvenal describes the agger as the usual resort of fortune-tellers. (S. vi. 588.) We see from the description of Horace that not even all the tombs had been removed. Canidia comes there to perform her incantations and evoke the manes of the dead; at sight of which infernal rites the moon hides herself belind the sepulchres ( v . 35):-

> "-_ Innamque rubentem,

Ne foret his testis, post magna latere sepulcra."
Such a place, therefore, might still have been used for executions ; though, doubtless, bodies were no longer exposed there, as they had formerly been. These "magna sepulcra" would also indicate that some even of the better classes were huried here; and the same thing appears from Cicero. (Phil, ix. 7.)

The Horti Maecenatis probably estended within the agger towards the baths of Titus, and it was in this part that the House of Maecenas seems to have been situated. Close to these baths, on the NE. side, others, built by Trajan, existed in ancient times, although all traces of them have now vanished. They have sometimes been confounded with those of Titus; but there can be no doubt that they were distinct and separate foundstions. Thus the Notitia mentions in the 3rd Region the "Thermae Titianae et Trajamae ;" and their distinction is also shown
by the inscription of Ursus Togatus: Themans
 (Gruter, dexxxvii. 1). The site of the baths of Tiajan, close to the clurch of S. Martino, may be determined from mnother inscription found near that church, in the pontifitate of l'aul III., which records some improvenents made in them; as well as from is notice by Anastasins, in his Life of Symmachus (p. 88, Blanch.), stating that the church alluded to was erected " juxta Thermas Trajunas." It is a very common opinion that the house of Maecenas occupied part of the site of the baths of Titus, and this opinion is as probable is any other. It was a very lofty building. Horace describes it as a "molem propinquaun nubibus arduis " ( $O$ d. iii. 20. I0), and from its situation and beight must no doubt have commanded a view of Tibur and its neighbourhood; though we do not draw that conclusion from the immediately preceding lines, where we thitk the far better reading is, " $U$ ' $t$ semper udum Tibur," $\& c$ c., the semper beloaging to " udum," and not to "contemplere " (cf. Tate's Horace, Prel. Diss. p. 24). We have before related how Nero beheld the fire of Rome from the house of Maecenas. Suetonius, in his accoust of that scene, calls the bouse "turris Mazcenatiana" (Nero, 38), by which, perbaps, we are nut to understand a tower, properly so called, but a lufty superstructure of several stories over the lower part of the honse (Becker, Charikles, i. p. 195). Maecenas bequeathed his house and gardens to Augustus; and Tiberius lived there after his retarn from Rhodes, and before he succeeded to the empire (Suet. Tib. 15). The suhsequent history of the house is unknown; but, as we have said. it may probably bave been included in the butbs of Titus.

Close to the gardens of Muecenas lay the Hormi Lamaxi (Philo Jud. vol. ii. p. 597, Mang.), belonging perhaps, to the Aclius Lamia celebrated by Horace (Od. i. 26. \&c.). We learn from Valerius Maximus (iv. 4. 8) that the ancient familiy of the Aelii dwelt where the monument of Marius afterwards stood: whence it seems probable that the Horti Lamiani may have lain to the E. of those of Maecenas, towards the church of S. Bibiana. It was here that the hody of Caligula was tirst bastily buried, which was afterwards burat and reioterred by his sisters (Suet. Cal. 59).

There appear to have been several more gardens between the Porta Esquilina and the modern I'onta Maggiore; as the Horti Paliantiana. founded ap-pur-itly by Pallas, the powertul freedman of Claudius (Tic. Ann.xi. 29) Suet. Claud. 28 ; Plin. Ep. viii. 6); aut which, trom several passazes of Frontimus ( $A q$. 19, 4.7.). appear to have beed situated between $P$. Magniore, the Marian monument, and the church of $S$. Bilikna. Frontinus also mentions ( $4 q$. 6s) artain Honv Erapheoprtant, perlaps betongiug to E.pmphanditus, the libertus of Nero, whonssisted in puttue that emperor to death (Sinet. Ser.49, 1 rom.
 Qt athas: ( c ! 5 ) , afparenty in the same neighlourhond. The Cammo Viminales ste Agemere of the Nitition was probably :an exercise ground for the I'rachaian triajus on the outside of the agger near The Porta Viminalis. Hence the eastern ridge of the Viminat and lisquilne heyond the , terviam walls must bave ben very opm and airy.

The Eagmline derives thone interest from its having ocen the residence of sescoal distiagnisherl poets and authors than the mont splemind palaes coulid have conferred upon it. Jingt dywedt upon the Esquiline
close to the gardens of his patron Maccenas. Whethet Horace also bad a house there caonot be said ; bus he was certaibly a frequent guest with Maecenas; he loved so saunter on "the sumny agger," and he was at last buried close to the tomb of his munificent twenefactor at the extremity of the hill. (Suet. V. Hor. 20.) I'ropertius himself informs as that his abode was on the Esquiline (iii. (iv.). 23. 23); where also dwelt the younger Pliny, apparently in the house formerly belonging to the puet Pedo Albinovanus (Plie. Ep. iii. 21; Mart. x. 19). Its precise situa. tion will be examined a little further ou, wheo treating of the Lacus orphei.

The Esquiline and its neignbourhood did oot contain many temples of note. That of Tellus, already mentioned, was the most important one; the rest seem for the most part to have been more remarkable for antiquity than for size or beauty. We bave already adverted to the ancient sacraria unentioned bere by Varru (L. L. v. 49, seq.); as the Luces and sicelhem of Jopiter Fagutalis, on the southern side of the Oppins; the Luces Eser: mixcs. probably near the Escuiline gate; a Lucus Poetelils; a Luccs Mefitis, with an aedes, lying pear the Vicus Patricius (Festus, s.v. Septimontio, p. 351, Mill.) ; and a Luces of Jexo Lucisa, where, according to Pliny (xvi. 85). a temple was built to that goddess, B. C. 374 : althongh it would appear from Dionysius (iv, 15) that there must hase been one there previously in the time of Servius Tullius. An inscription relating to this temple was found in 1770 , in digging the fuundations of the monastery delle Paollotte, in the road which separated the Oppius and Cispius, We learn from Ovid (Fust. ii. 435) that the grove lay beneath the Esquiline; but as it appears from Varro that the temple stood on the Cispius, whilst the stone with the inscription in question was found on the side of the Oppius: it is probable that it may have rolled down from the monastery of the Filippine on the opposite heigbt (Nibby, Roma nel Anno 1838, p. 670; Urlichs, Rom. Top. p. 120); Canina, Indic. p. 151). The Sacelley Strexiae, where the Sacra Via began, probably lay on the S . side of the Cariuse near the C'olosseum. It seems not improbable that the Lices Vexeris Libiminae may also have been situated un the Eiquiline, on account of the neighbourhood of the Campus Esquilinus; but there are no authorities by which its site can be satisfactorily determined. It was the great magazine for funereal paraphernalia (cf, Dionys, iv. 15; Festus, s. v. Rustica Tinutia, p. 265 : Plut. Q. R. 23). On the Esquiline were also Altaits of Mala Fortuna add of Fenmes, the latter cluse to the Marian monument ( (ic, , V, D), iii. 25; Plin, ii. 5; Val. Max. ii. 5. §6), We may likewise mention a Traphe of Fortexa Respreasiss (1]ht. Fort. R.JU), of Fortexa Sela in the Vicus Nandaliarius (Inser, ap. Graev. Thes, iii. p. 288: Plin. xxyvi. 46), and one of Drana in the Vicns l'atricius, from which men were excluded (Plat. 12. $R, 3$ ). The Hfretles Victor or Hercilfs stlasivi's of the Aotitia was perhaps only a statue. We shall clase this list by mentioning a l'eurle or Spes Ietus, near the Horti Pallantiani, several times alluded to by Frontinus: of Lsis Pisteich, probably in the Vicus latricins; and of Mixe:rva Medici, commonly identified with the ruins of a large curcular buildine in a vincyand near the Porta Baggiore. This building bore, in the middle ages. the name of le Cialuzse, whence Canina is of opinion that it was the place where the cmperor Gallienus
was accustomed to divert himself with his comrt. (Treb. Pollio, Gall. Dhw, c. 17.) The temple of Minerva Medica mentioned in the Notitio may probably have stood in the neighbourhood; but the building in question seems too large to be identified with it.

Among the profane monuments of this district we have had occasion to mention once or twice an olject called the Trorhies of Marius. Valerius Maximus relates that Marius erected two tropoea (vi. 9. § 1-4); and that these mnst have been on the Esquiline appears from a passage of the same anthor (ii. 5. § 6 ), quoted a little while ago respecting the site of the altar of Febris. A building which stands at the junction of the Via di S. Bibiana and Iia di P. Maggiore a little way outside the ancient Porta Esquilina bore during the middle ages the name of Templum Marii, or Cimbrum, and was adorned with tbose sculptured trophies which were removed in the pontificate of Sixtus V. to the balustrale of the Piazza del Campidoglio, where they still remain. (Ordo Rom. an. 1143, ap. Dlabill. Mus. Ital. ii. p. 141; Pugkio, de Jar. Fort. p. 8, ed. Par. 1723.) There can be no donbt, however, that the building so called was no temple, but the castellum of an aqueduct, and is in all probability tbe object mentionerl in the Notitia as the Nrmpheors Divi Alexandri. It must have been one of the principal castella of the Aqua Julia, and from the trophies which stood in the neighbourbood having been applied to its adormment it was mistaken in a later age for a temple erected by Marins. (Canina, Indicaz. p. 156, seq. ; Preller, Regionen, p. 131.)

Between this Nymphaeum and the Porta Esquilina stands the Arcus Gallieni, which must bave spansed the ancient Via Praenestina. It is a simple arch of travertine, and we learn from the inscription upon it, which is still legihle, that it was erected by a certain M. Anrelius Victor in honour of the emperor Gallienus and bis consort Salonina. Originally there were smaller arches on each side of it (Spec. Rom. Magn. trb. 24), but at present only the middle one retnains.

Close to this arch and between it and the basilica of S. Meria Moggiore, lay the Forum Lsqulasum and Macellum Lividieme This position of the macellum is certain. The basilica just named was built "juxta Macelium Liviac." (Anastas. V. Liberii and V. Sist. III.) That it was cluse to the arch of Gallienus appears from the Ordo Romusus. ("Intrans sub arcum (Gallieni) ubi dicitur Dlacellum Lunanum (Livianam) progreditur ante templan Marii quol dicitur Cimbrum," Ann. 1143, p. 141.) And the chnrch of $S$. Tito close to the arch was designated as "in Macello." (An. Fulrius, Ant. R. ii. c. 6.) But it is a more difficult question to determine whether the Formm Esquilinum and Jacellum Livianum were distinct objects or one and the same. We know that the Forum Esquilimm was in existence in B. c. 88 , since it is mentioned by Appian (B. C. i. 58) as the scene of the struggle between Marius and sulla. Hence Nibly (Roma nell' Anno 1838, tom. ii. p. 25 ), assuming that the macellnm and formin weie identical, regarded it as founded by M. Livius Salinatur, who was censor with Claudius Nero, b. C. 204. But this view is unsupported by any authority, nor is it probable that the foriam had two appellations; whence it seems most likely that the matellum was quite a distinct but adjoinug marke!
founded by Augastas, and named after his consort Livia. (Ireller, Regionen, p. 131.)

There was also a l'okticus Liviae somewhere on the Esquiline, named in the Notition in the 3rd Region after the baths of Titus. It was a quadrangular porticns ( $\pi \in \rho i \sigma \tau \varphi a \nu$ ), built by Angustus, B. C. 14, on the site of the house of Vedius Pollio, which he had inlierited. (Dion Cass. liv. 23.) As the same anthor (lv. 8) calis it a $\tau \in \mu \hat{\nu} v \sigma \mu a$, we may conclude tbat it contained the Temple of Concukd mentioned by Uvid. (Fust. vi. 633.) It is alluded to by Straho (v. p. 236), and by both the Plinys. (xiv. 3; Ep. i. 5 ; cf. Becker. Hondb. p. 542, Antw. p. 78.) We also read of a Poktices Julna, built in bononr of Caius and Lncius Caesar (Dion Cass. Jvi. 27, as enended by Merkel od Ov. Fast. p. cxli.), but its situation cannot be determined.

Near the church of $S$. Croce in Gerusalemme, towards the side of the Porta Mogyiure, lie the ruins of a large building already alluded to, which in the middle ages bore the name of Sessorium. We have remarked tbat in the Excerpta Valesiuna at the end of Ammianns Marcellinus it is called a palace (" in palatio, quod appellatur Sessorium," de Odoac. 69). It is identified by a passage in Anastasins stating that the church of S. Croce was erected there. (Vit. Silvest. p. 45, Blancb.)

Also near the same church, hut on the other side of it, and built into the wall of Aurelian, are the remains of a considerable amplitheatre which are usually identified as the Amphitheatrum Castrense of the Notitia. Becker, however (Handb. p. 552 , seq.), denies this identity, his chief objection being the great space which the 5th Regio must have oceupied if this building is included in it, and holds that the trne Amphitheatrum Castrense must bave been near the Castra Praetoria. There are, bowever, no traces of the remains of an amphitheatre in that direction, and Becker acknowledges (Handb. p. 555 ) that he is unable to give any name to that by S. Croce. But there conld not have been many structures of this description in Rome, and on the whole it seems most reasonable to conclude with Preller (Regionen, p. 132) that the one in question was the Castrense; especially as we know from Procopius (B. G. i. 22, seq.) that there was a vivarium, or place for keeping wild beasts used in the sports of the amphitheatre, close to the Porta Praenestina.

In the valley under this amphitheatre were the Gardens and Carces of Elagabalus (Lampr. Helioy. 14, 23), where the obelisk was found which now stands on the promenade on the Pincian ( Li gorio, Sui Cerchi, p. 3 ; Canina, Indic. p. 178). Jast ontside the Porta Maggiore is the curious Moncment of Eumysaces the baker, which has been spoken of above, p. 760 .

The remaining monuments in the distriet under consideration are few and unimportant. The Arollo Sandillabies mentioned in the Nutitia in the 4 th Region was one of those statues which Augustus erected in the different Vici. (Suet. Aug. 57.) We lave said that the temple of Fortuna Seia stood in the Vicus Sandaliarius; and as this temple was included in the domain of the golden honse of Nero (I'lin. xxsvi. 46) we may conclude that it was in or near the Carinae. (Becker, Handb. p. 561.) The Colosseua will be deacribed in a separate section. The 3rd Region, in which it was situated, must douhtless have contained a splendid Tample of

Ists and Semapls, from which the Region derived its name, but the listory of the temple is unknown. The same remark applies to the Nosema mentioned in this Region, which scems to have been the imperial mint. (l'reller, Keg. p. 124.) It is mentioned in inscriptions of the time of Trajan. (Matini, Atti, gic. P. 488.) The Srmanm Cho. hagirm is inexplicable. The Laces Pastomes or P'sstonts was a fountain near the Colosseum, as appears from the Acta Sanctorum (in Eusebio). The Donus Brutti Prafsentis probahly lay on the Esquiline. Marcus Aurelius affianced Commodus with the daughter of a Bruttus Praesens. (Capitol. M. Anton. Ph. c. 27.) A 'ourices ClavdIA stood at the extremity of Nero's golden house, not far from the colossus of that emperor:-
"Claudia diffusas ubi porticus explicat umbras Ultima pars aulae deficientis erat."
(Mart. de Spec. 2.)
It is mentioned by the Anonymus Eirsiedlensis aud in the Mirabilia under the name of "Palatium Claudii," between the Colosseum and S. Pittro in Tincoli. The Ludus Mageves was a gladiatorial school apparently near the I'ia di $S$. Gioranni. (Canina, Indie. p. 108.) The Nchola Quaesforuat et Caplatores or Capllatorem seems to have been an office for the scribes or clerks of the quaestors, as the Schola Xantha on the Capitoliae was for those of the curule aediles. The Capulatores were those officers who had charge of the capides or capulae, that is, the bowls with handles used in sacrifices (Varr. L.L. v. § 121); but where this schola may have been cannot be said. The Castri Misensrium were the city station for what we may call the marines, or soldiers attached to the fleet and naval station at Misenum, establislred by Augustus. (Tac. Ann. iv. 5 ; Suet. Aug. 49.) 'This camp appears to have been situated near the church of $S$. I ito and Via Merulana, where also there was an aedicula of Neptune. (Canina, Indicaz, p. 110.) The Balxfim D.arinidis, perhaps alluded to by Martial (iii. 5. 6). was probably near the Subura and Carinae. Lasily the Lact's Orfies, or fumatain of Orpheus, scems to have lann near the church of S. Lucia, which bore the epithet in Orfeo, or, as the Anomymous calls it, in Orithea. It is described in the lines of Martial, in which he desires Thalia to carry his book to Iliny (x. 19. 4, seq.) :
> " J , perfer, brevis est labor peractae Altum vincere tramitems Suburae. Hilic Orphea protemus videhis Idi vertice lubricum theatri, Mirantesque fcras avemque regis Laptum quae Phryga pertulit Tonanti. Hic parva tui domus Pedonis Caclata est aquilae minore penna."

From this lescription it wonld appear that the fountain was in a circular basin-for such seems to be the meaning of " udum theatrum," berause a statue of Orpheus playing on the lyre stond high in the midst of the Lasin, wet and shining with spray, and surrounded by the fascinated beasts as ant audience. (Becker, Mandb. 1. 559, note.) The situation of the fountain near the church mentioned is very clearly indicated in thuse lines. As Martial lived on the sonthem extrenity of the Quirinal the way from his house to that spot would of course lie thruagh the Subura. At the top of the strcet lead-
ing through it, which, as we have seen, must have been the Vicus Cyprius, a short but steep ascent brought the pedestrian to the top of the Esspuiline, where the first object that met his eves was the fuuntain in question. The locality is identified by another poem of Martial's aldressed to Paulus, who also lived on the Esquiline (v. 22. 4) :-
"Alta Suburani vincenda est semita clivi Et nunquam sicco sordida saxa gradu;"
where we must not take Clivas Suburanus to be the name of a road, like Clivus Capitolinus, I'ublicius, \&c., but nercly a synonymous appellative with what Martinl calls "altus trames" in the other poem. It may he further observed that this situation of the fountain agrees with the order of the Notitia, where it is named immediately before the Macellum Liviannm. Close to it lay the small house formerly irhabited by Pedo Allinovanus, and in Martial's time the residence of his friend the younger l'liny.
XiI. The Colles, on the Vimlxal, Qumisil, and Pinclan Hills.

We have already remarked that the three northermmost hills of Rome were called Colles, in contradistinction to the others, which were called M/untes. Only two of the former, the Viminal and Quirinal, were enclosed within the walls of Servius Tullius, and considered as properly belonging to the city; but part of the I'incian was included within the walls of Aureliau.

The Collis Vimisalis, the smallest of the three hills, is separated from the Esquiline by the valley through which ran the Vicus Patricius, and by a loollow running towards the rampart of Servius. On the other side, towards the Quirinal, is anuther valley, which divides it from that hill, at present traversed by the strcets called ria de' Serpenti and Iia di $S$. Jitale. The most northern part of the valley, through which the latter street runs, was the ancient Vallis Qumini (Juv, ii. 133). The hill derived its name from the usiers with which it was anciently covered ("dictum a vimine collem," 1d. iii. 71 ): and upon it was an Altur or Junten Viminalis, auswering to the Jupiter Fagutalis of the lisquiline. (Varr. L. L. v. §51; Fest. p. 373.) The Viminal was never a district of much importance, and seems to have been clieffy inhabited by the lower classes. The only remarkable building which we find recorded on it is the splendid I'Atace of C. Agtitics (Plin. xyii. 2). The existence of some baths of Agrippina upon it rests only on traditions of the middle ages. The baths of Drocletian, which lay on the ridge which united the Viminal and Enirinal, will he deseribed in the section on the thermae. The Sicelism of Nassia lay without the Porta Viminalis. (1'anl. Hiac. p. 163.)

After the Palatine and Capitoline hills, the QrIrival. was the most ancient quarter of the city. As the seat of the Sabine part of the population of Dome. it acquired importance in the period of its early history, which however it did not retain when the two nations had become thoronghly amalgamated. The Quirinal is separated from the Pincian on the N. by a deep valley; its western side is skirted by the Campus Martins : the manner in which it is parted from the Viminal by the Vallis Quirini has been ulreudy described. The strect which ran
through this last ralley was called Vicus Longus, as we learn from the Anonymoas of Einsiedlen, who mentions the church of S . Vitalis as situated "in vico longo." We find its name recorded in Liry (x. 23), and Valerias Maximus (ii. 5. § 6). Of the different ancient divisions of the Collis Quarinalis and of the origin of its name, we have already spoken in the former part of this article.

The Quirinal abounded in ancient fanes and temples. One of the earliest forusdations of this sort was the Temple of Quirinus, erected by Numa to Romulus after his apotheosis. The first practical notice that we find of it is, however, in B. C. 435 , when Livy (iv. 21) records a meeting of the senate in it; a fact which shows that it inust have been a considerable bailding. A new one was dedicated, probably on the same spot, by L. Papirius Carsor, s.c. 292. (Liv. x. 46 ; Plin. vii. 60.) This stractare appears to have been barnt in B. c. 48 , and we do not hear of its re-erection till B. c. 15 , when Augustas rebuilt it, as recorded in the Monumentum Ancyranum, and by Dion Cassius (liv. 19). Yet in the interval between these dates we find it alladed to as still existing (Id. xliii. 45 ; Cic. ad Att. xiii. 28), wheace we may conclude that it had been only partially destroyed. Dion (liv, 19) describes the new structare of Augustus as having 76 colamns, equalling the years which he had lived. Hence, it appears to have been the same bailding as that adduced by Vitruvius (iii. 2, 7) as an example of the dipteros octastylos ; for that kind of temple had a double row of columns all round; namely, two rows of 8 each at the front and back; and, without counting the oatside ones of these over again, two row's of 11 each at the sides $(32+44=76)$. This noble portico appears to have been the same alluded to by Martial as the resort of the idlers of the vicinity (ix. 1.9). Topographers are universally agreed that it was situated on the height over $S$. Vitale in the neighbourhood of S. Andrea del Noviziato. (Becker, Handb. p. 573 ; Urlichs, Beschr. iii. 2, 366 ; Csnina, Indic. p. 185.) There appears to have been also a Sacellum Quirinalis near the Porta Collina.

All the more interesting traditions respecting the Quirinal belong to the reign of Numa. One of the residences of that Sabine monarch was situated on this hill (Plat. Num. 14; Solin. i. 21), where he also founded a citadel, or capitol; and where his snccessor Tullas Hostilius, in porsuance of a vow made in the Sabine War, repeated, as it were in daplicate, Noma's peculiar institution of the Salian worship (Liv. i. 27; Dionys. ii. 70). All these things show very clearly the distinction between the Roman and Sahine cities doring the reigns of the first monarchs. On the Qoirinal, the Salian priests with their ancilia were attached to the worship of Quirinus, as, in the Romalean city, they were to that of Mars ("Qaid de ancilibus vestris, Mars Gradive, tuque Quirine pater (loquar)?" Liv. v. 52): and the priests were called, by way of distinction, Salii Agonenses, or Collini, from the name of the hill (" In libris Saliorum quorum cognomen Agonensium," Varr. L. L. vi. § 14; cf. Dionys. .. c., where, however, be erropeously speaks of a $\lambda$ ó $\phi$ os Ko $\lambda \lambda i$ ivos.)

Next to the temple of Quirinus, proceeding in a westerly direction, as may be inferred from the order in which the objects are mentioned in the Curiosum (the Notitia somewhat differs), stood a Statee of Mamurius; and then, after an interval occupied in
later times by the baths of Constantine, - the site of the present Palazzo Rospigliosi, - followed the Vetus Capitolicm, or citadel of Numa. Whether Jlamarins was another name for Mamers, the Sabine god of war, of which, according to Varro (L. L. v. § 73), the Roman name of Mars was only a corruption, or whether it was the name of the reputed maker of the ancilia (Paul. Diac. p. 131, Müll.), matters but little; the statue is equally connected with the ancient Salian rites, and therefore one of the most venerable objects in the city. We find a Cliyts Mamuri mentioned in the middle ages in the neighbourhood of S. I'tale (Anastas. V. Innoc. I. p. 64, Blanch.), which no doubt took its name from this statue, whence we may infer that it stood near the temple of Quirinus: since the chorch of S. Vitale and that of S. Andrea, where the temple stood, are close together.

We bave remarked in the former part of this article that the ancient Capitol of Numa probably stood on the height of Magnanapoli. It contained, like the Palatise before it and the Capitoline subseqnently, a temple to the three divivities, Jupiter, Jano, and Minerva, as we learn from Varro: "Clivos proximas a Flora susus versas Capitoliam vetus, quod ibi sacellum Jovis, Junonis, Ninervae; et id antiquius quam aedis, quae in Capitolio facta" ( $L, L$. v. § 158). Its site may be determined by that of anotber ancient sanctaary, the Temple of Flora. In the order of the Curiosum and Notitio that temple stands between the Capitolium Vetus and the temple (or temples) of Salus and Serapis. The temple of Salas mast undoubtedly have been situated near the Porta Salutaris, which, as we bave before remarked, took its name from that sanctuary; and we must consequently seek for the temple of Flora on the W. side of the Quirinal, nr that which faced towards the Campus Martins. That it stood on this side is confirmed by what Martial says respecting the situation of his house, which, as we learn from one of his epigrans, lay near the temple of Flora (v. 22. 2): 一

## "Sed Tiburtinae sum proximus accola pilae Qua videt antiqunm rustica Flora Jovem."

(Cf. vi. 27.) From which we also learn that the temple of Flora could not have been very far from that of Jupiter in Numa's Capitol; as indeed likerwise appears from the passage of Varro before quoted, with the addition that it must have lain on a lower part of the hill. But as Martial's house is thus shown to have beea near the temple of Flora, so also that it was on the W. side of the bill appears from another epigram (i. 108. 2):-

## "At mea Vipsanas spectant coenacula laorus Factas in hac ego sum jam regione senex."

It can hardly be doubted that this passage contains an allusion to some laurel trees growing near the Porticus Vipsania, erected, as will appear in a subsequent section, near the Via Lata by Acrippa, whose family name was Vipsanius. This portico is plainly alladed to in another passage of Martial (iv. 18), under the name of Vipsaniae Columnae. There is nothing surprising in Martial's indicating a locality by certain trees. Io ancient Rome trees were noted objects, and claimed a considerable share of public attention, as we have already seen with regard to several that grew in or abont the forum. Two laurel trees grew before the imperial palace (Tert. Apol. 35) ; and in front of the temple of Quirinus
just described were two sacred miytles, which were eharaeterised by distinctive appellations as patricia and plebeia, But, to have faced the Porticns Vipsania, Martial's house must not only have been situated on the western side of the Quiriual, but also towards its southern extremity; which likewise appears from what has been said in the preceding section respecting the route from it to that of his friend Pliny being through the Subura and Xicus Cyprius: for this would have been a rommabout way had Martial dwelt towards the northern part of the hill.

All these circumstances tend to shom that Nama's Capitol nust have stood on the spot betore indicated, and the temple of Flora a little to the N. of it. The part of the bill whieh it occopied mas probably that called Latiabis in the Argive fragments. The part styled Collis Salttaris most have been that near the gate of the same name, derived from the ancient Sacellum of Sales, which stood near it; in place of which a regular Temple: of saivs was dedicated by C. Junius Bubuleus, n. C. 203 (Liv. ix. 43, x. 1), and adorned with paintings by Fabins Pietor. These were still to be seen in the tine of Pliny, when the temple was destroyed by fire in the reign of Claudius (sxxv. 7; cf. Val. Max. viii. 14. §6).

Cicero's friend Atticus lived close to the temple of Salus ("-tuae vicinae Salutis," ad Att.iv. 1), and at the same time near that of Quirinus: "Certe non longe a tuis aedibus inambulans post excessum sum Romulus Proculo Julio dixerit, se deum esse et Quirinum vocari, templumque sihi dedicari in eo loco jusserit." (De Leg. i. 1.) The vicinity of the temples is likewise indicated in another passage relating to a statue of Caesar, which bad been ereeted in that of Quirinus: " De Caesare ricino scripseran ad te, quia cognoram es tuis literis: eum oúvyaoy Quirino malo quam Suluti" (ad Att. sii, 45). Hence the sites of the two temples in question are still further established. For as tbat of Salus lay on the N. side of the hill, near the Porta Salutaris, and that of Quirinus some 200 yards to the S. of it, at the chareb of $S$. Andrea, so we may assume that the lonse of Atticus lay betreen the two, and he would thus be a close neighbour to both.

Another ancient sacrariom on the Quirinal was that of Semo Saxces or Dir's Fidics. We have shown, when treating of the Servian gates, that the Porta Satiqualis took its name from this sacellum; and Livy (viii. 20) describes it as facing the temple of Quirinus. Hence it must have stood ont or near the site of thic Palazzo (Quirinale, between the temple of Salus and that of Flora. It bad a perforated root, for the deity loved the open air, whenee his title of Dius; and some thought that no oath by this god should be sworn under a root. (Varr. E. L. v. § 66.) Sincus was an old sibine deity, and his eernple at Rome appears to have been founded by Tatius. (Uf. Frast. vi. 213; Prop. v. 9. 74; Tertull. ad Nit, ii. 9.) Its antiquity is attested by the circumstance that the distaff and sandals of Tanaquil, the wife of Tarquinius Pris us, are recordel to have been preserved in it, and are said to have been in existence down to the time of Angustus. (Plin. viii. 7t; Plut. Q. R. 30.) It appears to have been rebuilt by Tarquinius Superbus, but its dedieation was roserved for ip. Postumins. (Dionys. is. 60.) The part of the hill where it stood nust have been the Collis Mrcialis of the Argive fragments. (Varr \& $522_{\mu}$ )

There were severnl Temples of Fortund on the Quirinal, but they do not seem to have been of nuch importance; and the notices respecting them are very obscure. Vitruvius (iii. 2) mentions theec which stond close together at the Porta Collinu, belonging perhaps to those alluded to by Ovid under the name of Forsuxia Punltia (Fast. iv. 375. s. 7-29), and by Livy, who mentions a tenuple of Fortixa Pmmagexia on this hill (xaxiv. 53). There was also an Altar of Fontesa in the Vicus Longus. (P'lut. Fort. Rom. 10.)

In the street just named stond also a Sacelderat Pidictriar PlebviaE, fuunded by Virginia, the daughter of Anlus, after the quarrel between the matrons in that of Pudicitia Patricia alluded to in a former section (Liv, x. 23). Outside of the Porta Collina was a temple of Vexus Erycisa, near which the Ludi Apollinares were held when the circus had been overflorred by the Tiber. (Iiv sxx. 38: Appian, B. C. i. 93.) Of the Tempte of Serapis, mentioned in the Notitia slong with that of Sulus. nothing further is known, except that from the fragnent of an inscription found near the church of S. Aynta alla Subura, where possibly the temple may have stood, it may be inferred that it was dedicated by Caracalla. (Gruter, lexxv. 6; Preller, Reg. p. 124.)

These are all the ascertained temples that lay on the Quirinal; for it is a disputed point whether we are to place on this hill the splendid Temples of Sol, erected by Aurelian. (Aur. Viet. Caes. 25: Eutrop. ix. 15 (9); Vopisc, Aurel.) Altogether, howerer, the most probable conclusion is that it stood there, and Becker's objections admit of an easy answer (Hundb. p. 587, seq.). By those who assume it to have been on the Quirinal it is commonly ideatified with the remains of a very large boilding, on the deelivity of the bill, in the Colonna gardens, on which spot a large Mithraic stone was disenvered with the inscription "Soli Invicto." (Vignoli, de Columnn Autoniniana, p. 174.) This position may be rery well reconciled with all the ancient aecounts respecting the temple. Becker objects that it is mentioned in the Notitia in the 7 th Region (Via Lata). But this Region adjoined the restern side of the Quirinal, and the temple of the Sun may lave heen recorded in it, jost as many bnildings on the declivity of the Aventine rre ennmerated in the 11th Region, or Circus Maximus. In the Cntalogus Imperatorum Iienn, (ii. p. 246, Ronc.) it is sais of Aurelian, "Templam Solis et Castra in Campo Agrippae dedicavit;" and it will appear in the next section that the Campus Agrippae must bave been situated nnder this part of the Quirinal. Becker assumes from the description given by Vopiscus of his ride with Tiberianus, the ennversation during which was the occasion of his writing the life of Aurelian, that the temple in question could not have been so near the Palatino as the spot indicated ("Ibi quom animus a causis atque a negotiis publicis solutus ac liber vacaret, sermonem moltum a Palatio usque ad hortos Valerianos institnit, et in ipso praecipue de vita principum. Quamqne ad templum Selis venissemus ab Aureliano principe consecratum quod ipse monnihilum ex ejus orisine sangoinem duceret, qusesivit." \&c. Vopisc., Aurel. 1). We do not know where the Horti Valeriani lay; they might possibly, as assumed by Preller, have been identical with thavo of Lucullas on the l'incian, subsequently in the prosxission of Valerius Asjatious (Tac. Ann, xi. 1),
though these continued to bear in general the name of Lucullus. But Becker interprets the passage wrongly when he thinks that the temple of Sol lay beyond these gardens: on the contrary, the passing that temple gave rise to the conversation, which lasted till Vopiscus and his friend arrived at the HortiValeriani, wherever these may have been ; and if they were on the lincian, the temple of Sol, in the locality indicated, would have been on the road to them from the Palatium. Lastly, we may observe that the Quirinal had, in very early times, been dedicated to the worship of Sul, who was a Sabine deity (Varro, L. L. ₹. § 74); and there was a Pulvinar Solis in the neighhourhood of the temple of Quirinus. (Quint. Inst. Or. i. 7; Fast. Capran. Id. Aug.; cf. Urlichs, Beschr. iii. 2. p. 386 ; Cauina, Indic. p. 210, seq.; Preller, Regionen, p. 137.)

Such were the sanctuaries of the Quirinal. The ancient topographers, who are followed by the modern Italians, have assigned two circi to this quarter: the Circus Fioraf: near the temple of the same name, and the Cracus Sallustir in the gardens of Sallust, between the Quirinal and Pincian. The former has certainly been invented by misconstruing an inscription relating to the games of Flora in the Circus Maximus. (Becker, Handb. p. 673.) It is mare doubtful whether a Cirens Sallustii may not have existed. We have seen from a passage of Livy that the Ludi A pollinares were performed ontside the Porta Collina when the overflowing of the Tiber prevented their performance in the asnal place; and, according to Canina (Indicaz. p. 199), traces of a circus are still visible in that locality. But none is mentioned in the catalogues of the Regions, nor does it occur in any ancient anthor. The Hobti Sallustiani, however, undoubtedly lay in the valley between the Quirinal and Pincian, but their exact extent cannot be determined. They were formed by Sallust the historian with the money which he had extorted in Numidia. (Dion Cass, xlii. 9.) The house of Sallust lay near to the (subsequent) Porta Salaris, as we learn from Procopins, who relates that it was burnt in the storm of the city by Alaric, and that its half-consamed remains still existed in his time. (B. V.i. 2.) The Anonymons of Einsiedlen mentions some THERmab Sallustianae near the church of S. Susonna; and the older topographers record that the neighbourhood continued to be called Salustricum or Salustium even in their days. (Andr. Fulvius, de Urb. Ant. p. 140 ; Lac. Fauno, Ant. di R. iv. 10. p. 120.) Becker (Handb. p. 585) raises a difficulty about the situation of these gardens from a passage in Tacitus (Hist. iii. 82), which, however, presents none if rightly understood. The Flavian troops which had penetrated to the gardens of Sallnst om their left were those which marched on the Flaminian, not the Salarian, way, just as Nero is described as finding his way back to these gardens from the same road. (Tac. Ann. xiih. 49.)

The Horti Sallustiani suhsequently became imperial property, though in what manner is unknown. The first notice which we find of them as snch occurs under Nero in the passage just cited from Tacitus. Several emperors are described as residing in them, as Vespasian, Nerva, and Aurelian. (Dion Cass. lxvi. 10 ; Vopisc. Aur. 49 ; Hieron. p. 445 , Punc.)

Also close to the Porta Collina, but inside and to the right of it, lay the Campug Scelkratus, im-
mediately under the agger. The spot obtained its name from being the place where Vestal Virgins convicted of unchastity were bnried alive; for even in this frightful panislment they retained their privilege of being interred within the walls. Dionysius attributes the introduction of this mode of execution to Tarquinius Priscus; and, according to Livy, the first example of its application was in the case of Ninucia, B. C. 348 . Dionysius, however, calls the first vestal who suffered Pinaria. (Dionys. ii. 67, iii. 67 ; Liv. viii. 15; Plut. Num. 10.)

The emperors appear to have shared with the vestals the privilege of intramural interment, althongb they did not nlways arail themselves of it. Indeed, sccording to Hieronymus (vol. i. p. 449 , Ronc.), Trajan was the only emperor buried within the walls; but this statement is certainly erroneous, since Dumitian erected a magnificent mausoleum fir the Flavian family somewhere between the gardens of Sallust and the spot subsequently occupied by the baths of Diocletian. It is the object mentioned under the name of "Gens Flavia" in the Notitia, and is alluded to in several epigrams of Martial, in one of which he designates it as being near his own dwelling (v. 64.5) : -
"Tam vicina jubent nos vivere Mansolea, Quum doccant ipsos posse perire deos."
(Cf. ix. 2 and 35; Stat. Sitv, iv. 3. 18.) It was commonly called Templedr Geviis Fiaviae, as appears from Snetonius (Iom. 17) ; but the same passage shows it to have been a sepulchre also, since the ashes of Julia, the danghter of Titus, as well as those of Domitian himself, were deposited in it. (Cf. Becker, de Muris, \&c, p. 69.) It was erected on the site of the honse in which Domitian was born, designated as being Ad Malem PtNicust (Snet. Dom. 1); which name occors again in the Notitia, and conld not, therefore, have been applied to the whole Region, as Preller supposes (Regionen, P. 69), but mast have denoted some particular spot, perhaps a vicus, called after a pomegranate tree that grew there. We hare already adverted to the importance attached to trees growing within the city.

The only other object that remains to be noticed on the Quirinal is the Praetorian Camp, since the baths of Diocletian will be described under the proper head. We have selated in the former part of this article that the Castra Practoria were established in the reign of Tiberins outside the Porta Collina, to the eastward of the agger. They were arranged after the nsnal model of a Roman camp, and were enclosed within a brick wall, of which there are still some remains. (Canina, Indicaz. p. 194.) They were included within the wall of Aurelian, which preserved their outline. We need only add that the 6th Region of Augustus, of which the Esquiline formed the principal part, was called Alta Semita, from a road which ran along the whole back of the hill, suswering to the modern Strada di Porta Pin.

The Plivian Hill presents but few objects of importance. Its earlier name was Collis Honтoress, or Hontwlonem, derived from the gardens which covered it; and it was not till a late feriod of the empire that it obtained the name of Dons Pincius, from a magnificent palace of the Piucian family whicls stood upon it. (Urlichs, Beschr. vol. iii. part. ii. p. 572 , Röm. Top. p. 136.) This Dowws Pinciana is rendered iuteresting from
its having been the residence of Belisarius during his defence of Rome. It is the same building mentioned hy Procopins under the name of màátiov. (Procop. B. G. ii. 8. 9 ; Anastasius, V. Silver. pp. 104. 106, Blanch ) The part of the Lill incladed within the later city was bounded by the wall of Aurelian, by the valley which separates the lincian from the Quiriusl, and by the Campus Dartius on the west.

The most famous place on the I'incian was the Gabiens of Luculus. Their situation is determined by a passage in Frontinus, from which we learn that the arches of the Aqua Virgo began under them. (Aq. 2.) This must have beed in the street called Capo le Cuse, since the arches are still in existence from that spot to the Fontana di Trevi. (Canina, Indic. p. 395.) The early history of these gardens is obscure. They were probably formed by a Lucallus, and subsequently came into the possession of Valerius Asiaticus, hy whom they were so much improved that Messalina's desire of possessing them caosed the death of Valerius. (Tac. Ann. xi. 1, 32, 37.) They appear to have been also called after him" Horti Asiatici" (Becker, Handb. p. 591), and it is possible, as we lave said before, that they may sometimes bave borne the name of "Horti Valeriani." They were the scene of Messalina's infamons marriage with Silius (Juv. S. x. 334) and of ber death by the order of Claudius. (Tac. Aun. xi. 37.) The gardeas remained in the pussession of the imperial family, and were reckoned the finest they had. (Plut. Lucull. 39.) The family of the Domitii, to which Nero belonged, had previonsly possessed property, or at all events a sepulctre, on the Pincian; and it was here that the ashes of that emperor were deposited. (Saet. Ner. 50.) Popular tradition places it on that part of the hill which overhangs the church of S. Maria del Popolo dear the gate of the same name.

## Xill. The Campes Martics, Carces Fliminics, and Via Lata.

The whole plain which lies between the Pincian, Quirinal, and Capitoline bills on the E. and the Tiber on the W., -on which the principal part of modern Rome stands,-may be designated generally by the name of Casipus Martics, though strictly speaking it was divided into three separate districts. It is narrow at the nortbern part between the Pincian and the river, but afterwards expands to a considerable breadth by the winding of the Tiber. It is terminated by the approach of the latter to the Capitoline bill, between which and the stream a part of the Servian wall forming its southern boundary ancieatly ran. It was cut through its whole leagth by a straight road, very nearly corresponding with the modern Corso, running from the Porta Flaminia to the foot of the Capitol. The southern part of the district lying between this roud and the hills formed, under the name of Viat Lata, the 7th of the Augustan Regions; but how far it extended to the N . cannot be determined. From its northern boundary, wherever it may have been, to the Porta Flaminia and beyond that gate, the road before described was called Yia Flaminia. The southern portion of the Campus Martius lying between the same road and the Tiber, as far N. as the modera I'usza Navona and Piazzí Cultuna, constituted the 9th Riegion of Augustus, uotier the name of Chrets Flamisitis.

In the earlier times all this district between the
hills and the river was private property, and was applied to agricultural parposes. We have already related in the furmer part of this article, bow, after the expulsion of the Tarquias, the Campos Martius was assigned, or rather perbaps restored, to the public use. But the southern portion of the plain appears still to have belonged to private owners. The most considerable of these possessions was the Prata Flaminia, or Campus Flaminies, which, however, must soon have become pablic property, since we find that assemblies of the people were held here ander the decernvirs, (Liv. iii. 54.) Among these private estates must bave been the Agra Catt, in which was a fountain whence the stream called Petronia flowed into the Tiber, and seems to have formed the sonthern boundary of the proper Campus Martins (" Petrogia amnis est in Tiberim perfluens, quam magistratos auspicato transeunt com in Campo quid agere voluat," Fest. p. 250; cf. Paul. Diac. p. 45) ; also the Campus Tiberines, the property of the vestal Taracia, or Suffetia, which she presented to the people. (Plin. xxxiv. 11.)

We shall begin the description of this district from its southern side; that is, from the Serrian wall between the Capitoline hill and the Tiber. Immediately before the Porta Carmentalis lay the Forus Olitomum. It was, as its name implies, the vegetable market. (Varr. L.L. v. § 146.) The Elephas Hebbarius, or bronze statue of an elephant, which stood near the boundary of the 8th Region (v. Notitia) has by some topographers been coanected with this foram, merely, it wonld seem, from the epithet leerbarius; but the wall must have made here a decided separation between the 8 th and 9th Regions. There were several temples in the Fornm Olitoriam, as those of Spes, of Juno Sospita, of Pietas, and of Janus. The Temple of Sres was foanded by M. Atilius Calatinus in the First Punic War. (Tac. Ann. ii. 49; Cic. N. D. ii. 23 ; Liv. xxi. 62.) It was destroyed in the great fire which devastated this neighbonrhood doring the Second Punic War (Lir, xxiv. 47), and though soon rebuilt, was again burnt down in B. C. 30; after which the restored temple was dedicated by Germanicus. (Tac. l. c.) The Teniple of Jexo was consecrated by C. Cornelius Cethegus in B. C. 195. There is a confusion in Livy between the names of Sospita and Mateta applied to this deity (xxsii. 30, xxxiv. 53); and it is difficult to decide which epithet may be the correct one. The Temple of Pietas is connected with the well-known legend of the Roman daughter who nourished her father (or mother) when in prison with the milk of her breast, and is said to lave resided on the spot where the temple was erected. (Festos, p. 209 ; Val. Max. ii. 5.§ 1.) It was dedicated in B. C. 180 by the son of M. Acilius Glabrio, in pursuance of a vow made by his father, on the day when he engaged king Antiochas at Thermopylae. (Liv, xl, 34.) It was pulled down in prder to make room for the theatre of Marcellos. (Dlin. vii. 36.) There appears, bowever, to lase been another temple of Pietas is the Circus Flaminius itself. (Jul. Obs. 114.) Close hy was the Temple of Javus, to which we have already adverted in the former part of this article. The greater portion of the Forum Olitorion must bave been engrossed by the Theatee of Marcelles, of which we shall speak in another section; and it may therefore be duabted whether it continued to serve the purposes of a maket when the theatre was
erected. On the Forum Olitorium also stood the Columa Lactarla, so called becanse children were provided with milk at that spot. (Paul. Diac. p. 118.) The supposition tbat there was likewise a Forum Piscamua in this neighbourhood rests only on a doubtful reading in Varro. (L. L. v. § 146.)

The Campus Flaminius began at an early perior to be occupied with temples and other public buildings. One of the most ancient and renowned of the former was the Temple of Apolio. The site appears to have been sacred to that deity from very early times, and was called Apolliniare, probably from some altar which stood there. (Liv, iii. 63.) The temple was dedicated is в. c. 430 , in consequence of a vow made with the view of averting a pestilence. (Liv. iv. 25,29 .) It remained down to the time of Augustus the only temple of Apollo at Rome, and must bave been of considerable size, since the senate frequently assembled in it. It lay between the Fornm Olitorinm aod Circus Flaminius, or, according to Pling's designation, which amounts to the same thing, close to the Porticus Octaviac. (Ascon. ad Cic. in Tog. Cand. p. 90, Orell.; Plin. xxxvi. 5. s. 34.)

Another celebrated and important temple was the Aedes Bellonae, since it was the chief phace for assemblies of the senate when it was necessary for them to meet outside of the pomoeriam ; as, for instance, when generals cum imperio were soliciting them for a triumph, for the reception of foreign ambassadors whom it was not advisable to admit into the city, and other similar occasions. Close to it was one of the three Senicula mentioned by Festus (p. 347). The temple of Bellona is said to have been built in pursuance of a vow made by Appius Clandius Caecus, in the battle against the Etruscans, B. C. 297 (Liv. x. 19) ; but according to Pliny (xxsv. 3) it was built by Appins Clandius Regillensis two centuries earlier, who placed the images of bis forefathers io it, B. c. 494 ; in which case the vow of Appins Claudins Caecus must have been accomplished by restoring the former temple. In front of the temple lay a small area, on which stood the Columina Bellica, so called because it was the spot whenice the Fetialis threw a lance in the ceremony of declaring war. When the war with Pyrrhus broke out tbis custom could oot be observed in the nsual manner by throwing the lance into the enemy's country; wherefore, a captured soldier of Pyrrhos's was made to buy ${ }^{\text {a }}$ piece of ground near the temple, which symbolised the territory of the enemy; and into this the lance was flung on all subsequent occasions of declaring war against a people whose country lay beyond the sea. (Serv. ad Aen, ix. 53.) This custom was observed as late as the time of Marcus Aurelins. (Dion Cass. 1xsi. 33.) There are two points is dispute about this temple; first, whether the area containing the Columna Bellica stood before or behind it; and secondly, whether the temple itself stood at the eastern or western end of the Circus Flaminius; which latter question also concerns the site of the temple of Hefcules Custos, as will be seen from the following lines of Ovid (Fast. vi. 206) :
"Prospicit a templo summum brevis area Circum: Est ibi uon parvae parva columna notae.
Hinc solet hasta manu, belli praenuntia, mitti,
Iti regem et gentes quam placet arma capi.
Altera pars Circi custode snb Hercule tnta est
Quod deus Euboico carmine munus habet."
VoL. 11.

In the first line Becker (Ifandl. p. 607) reads "a tergo," with Merkel, iustead of "a templo," which is the reading of lleiusius, and of most editions, and thus places the area behiud the temple. But this was not the usual situation for an area, and there is express authority that the column stood before the temple. (Panl. Diac. p. 33; Serv. l. c., where Becker admits that we should read " ante aedem" for "ante pedem.") The other point respecting the site of the temple depends on whether "summus circus" means the pant where the carceres were, or the circular end. Becker adopts the former meaning, and consequently places the temple of Bellona at the eastern end of the circus, and that of Hercules Custos at the western end. Urlichs reverses this order, and quates in support of his view Salmasins, ad Solin. p. 639, A.: "Pars circi, ubi metae ultimae superior dicitur; inferior ad carceres." (Antw. p. 31.) This is a point that is nut altogether established; but Becker's view seems in this case the more probable one, as will appear a little further on, when we come to treat of the Vilia Publica.

The Circus Flamisius itself, which will be described in another section, lay under the Capitol, on which side its carceres were, and extended in a westerly direction towards the river. Between it and the theatre of Marcellus lay the Porticus Octaytae, - which must be carefully distinguished from the Porticus Octavia, bnilt by Cu. Octavius, enclosing Temples of Jufiter Stator and Juno. This portico occupied the site of a former one built by Q. Caecilius Metellus, after bis Macedonian triumph, and called after bim Porticus Metelli. It seems most probable that the two temples before alluded to were in existence before the time when Metellus erected his portico ; but the notices on this subject in ancient antliors are obscure and contradictory. (Becker, Handb. p. 608, seq.) There can be no donbt, however, that the Porticus Octaviae superseded that of Metellus. (Plin. xxsiv. 14 ; cf. Plut. C. Gracch. 4.) It was erected by Augustus, and dedicated in the name of his sister; but at what date is uncertain. (Suet. Aug. 29 ; Ov. A. A. iii. 391.) It contained a library, which was destroyed in the great fire in the reign of Titus, with all its literary treasures. (Dion Cass. xlix. 43, lxvi. 24; Suet. Ill. Gramm. 21.) This library was probably in the part called the "Schola in purticibus Octaviae," and, like the Palatine library, was sometimes used for assemblies of the senate. (Plin. xxxv. 10. s. 114, xxxvi. 5, s. 22. s. 28; Dian Cass. Iv. 8.) Hence, it was even called Octavia Curia, and sometimes Octaviae Opera. The charch of S. Angelo in Pescaria now stands opposite to its principal entrance towards the river.

Close to the Porticus Octaviae, on its western side, lay the Ponticus Philifpi, enclosing a temple of Hercules Musarum. This temple was built by M. Fulvius Nobilior, the conqueror of the Actolians (Cic. p. Areh. 11), and rebuilt by L. Marcins Philippus, the step-father of Augustus, who also surrounded it with the portico. (Suet. Aug. 29.) The name of the temple dues not sigoify, as Becker supposes (Handb. p. 613), that it was dedicated to Hercules and the Nuses, but to Hercules as leader of the Mnses (Movarayधтทs), the geoitive, Musarum, depending on Hercules, as appears from coins of the Gens Pomponia, where he is represented in that character, with the legend neracvies mussRyan, as well as from an inscription iu Gruter (milxx.
5) mancila . Mrs.unva . Pyturs (Urlichs, Röm. Topogr. P. 140, and Antw. 11. 32). Indeed Kinmenius expressly says that Fulvius Nobilior when in (irecee hat heard "Herculem Nusagetem esse comitem dncemque Musarmm" (pro Inst. Schol. Aug. p. 195, Arutz.); and we learn from Ovid that the statue of llerenles represented him with a lyre (Fust. vi. 810) : -

## "Annuit Alcides, inerepuitque lyram."

The vicinity of the temple and pertico is indicated in Martial (v. 49.8).

It is shrpmesel that the Timeatmox Bame lay close to the western side of this portien, and, a little farther on, opposite the round cal of the circus, but rather to the north of it, the Theatream Pomereit; of which latter there are still some remains at the Palazzo Rio. Pompey's theatre must have lain close to the boundary between the Campus Martins and Cirens Flaminins since Pliny mentions that a culossal statue of Jupiter, erected by the emperor Claudins in the Campus, was called Pompuitmus from its vicinity to the thentre ("Talis in Campo Martio Jupiter a Divo Clandio Caesare dieatus, qui vacatur Pompeianus a ricinitate theatri," xxxiv, 18). The same thing might also be inferred from ('icers ("Quid enim loci natura afferre potest, ut in portien Pompeii potius quam in Campo ambulemus," de Fictu, 4.) Ilence it wonld nppear that the boundary of the two districts, after proceding along the northern side of the Cirens Flaminins, took a north-westerly direction towards the river: The Ponturs Pomivis aljoined the seena of his theatre, and afforded a shelter to the spectators in the event of bad weather. (Vitruv. v. 9.) But what conferred the greatest interest on this group of buildings was the Cuma Pomera, a large hall or hexedra in the purtico itself, sometimes used for the represpatation of plays as well as for assemblies of the senate. It was here that Caesar was assassimated, at the base of Pompery's statue; an event which caused it to be regarded as a locus sceleratus, and to be walled up in consequence. (Cic, Dir, if. 9; Dion C:ss. xliv. 16, 52; Snet. Caes. 80, 88 ; Plut. Brut. 14, (ines. 66. Sce) The statue of lompey, however, was first taken out by order of Augustus, and placed under a marble arch or Janns, opposite the portico. (Suet. Aug. 31.) It is a question w!ether the pertion styled Hecatostruos. frotn its baving a hondred columns, was only another name for the portico of l'ompey, on quite a distinct building. It is sometimes mentumed in a manner which would seem to intimate that it was identical with the Porticus Pompeii. Thus both are said to have bad groves of planetreo (1'rm, ii. 32.11), and to have been consumed in one and the same fire. (Hienn. Chron. p. 475, Shace.) The following lines of Martial, however, appar to show that they were separate, but adjoining lanildings (ii. 14. 6). -

* Inde putit centrun jendentia tecta colnunis; 1/line lompeii dan: nemascque daplex "
From these lines, and from two fragments of the Capituline Plan. C.anina has correctly inferred that there were two distimet purtiones, and that the Ilscatestylon ad ined the N. sille of that of lomper. (Inelic. p, 3:3.) l'ompey also built a private dwell-ing-huse near his theatm, in addition to the house which he possessed in the Carinne. The former of these seems to have been situated in some gardens.
(Plut. Pomp, 40, 44.) We find other Ilorti Posrvis mentioned with the epithet of superiores, probably from their lying on the lincian hill. (Avcen. ad (ic. Mil. Arg. p. 37, and c. 25. p. 50, Orell.)

Near the theatre of Pumpey was also the Porruce Oetavis, whieh, as we have said, mast be carefully distinguished from the Porticus Octaviae. It was a denble portico originally ereeted by Cn . Octavius after his triumph orer Perseus. It was likewise enlled Comantula, from its celumns being adomed with bromze eapitals. (Plin. xxxiv. 7: Vell. 1'at. ii. 1; Fest. p. 178.) Augustus rebuilt it, hat dedicated it ngain in the name of its foander. Also near the theatre was the Triempilal Anct of Tienerius, erected by Clandius. (Suet. Cland. 11.)

Other temples in the distriet of the Cirens Flaminius, besides those already enumerated, were a Traifle of Diana, and amother of Juno Reorsa, - different from that of Jme in the Porticus Octa-viae,-buth dedicated by MI. Aemilius Lepidus, B. C 179. (Liv. xl. 52.) An Agdes Fortunae Eetrestus vowed by Q. F'nlvins Flacens in a battle against the Celtiberians, n. C. 176. (Liv. xl. 40, 44, xlii. 3, 10.) It strod near the thentre of Pompey in the time of Vitruvius (iii. 3. § 2, scln.), but seems to have disappeared before that of Tacitus, (Ama. iii. 71.) A Tearile of Mars, founded by D. Junius Brutus Callaiens (Plin. xxxvi, 5. s. 26); one of Nertine, eited as "delubrum Cn. Domitio" (1b.; Gruter, Inser. ceesviiii. 5); one of Castor ann Pohlex (Yitruv. iv. 8, 4); and probably also me of Vurcas. (Fast. Capran. X. Kal. Sep.) sume of these last, however, were perbaps, mere socella in the circus itself.

A few profane ebjects will close the list of public buildings in this quarter. The Stancla iv. FicTustom of the Notitia must have been the stables in which the horses of the four factions or colonrs of the circus, albata, prasina, russata, and veneta, were kept. Domitian added two more colours, the nurata and purpurea, and another reading of the Curiosum mentions six stables, whilst the Notitia - certainly erronaonsly - names eight ; but it seems most prohable that there were only fom. (Preller, Regionem, p. 167.) Some of the emperors paid great attention to these stables. Tacitus represents Vitellins as building some (Ilist. ii. 94); and Caligula was constantly dining and spending his time in the stables of the Green Faction. (Sinet. Cal. 55.) The four in question were probably situated under the Capitol, near the carceres of the Cireus Flaminius. Between the Porticns 1 hilippi and the theatre of Balbns lay two Portices Misuchaz, styled respectively Vistes and Feemextaria, both built by Minucius wha was consul in B. c. 111 . (Vell. Pat, ii. 8.) The Irumentario appears to have been the place in which the tesserae were distributed to those entitled to share the publice gifts of eorn. (Appul. de Mund. extr. p. 74. 14. Elmı; ef. Cic. Phil. ii. 34 : Lampr. ('ommi. 16.) Tho Cuypta Balab mentioned in the Notitia was probably a peculiar species of partico, and most likely attached to the theatre of Balbus. A crypta differed Irom a portico by having one of its sides walled, and by being corered with a roof, in which were windows. (Urlichs, Beschr. vol. iii. pt. ii. p. 62.)
such were the public buildings in the district called Circus Flaminius ; immediately to the N. of which lay the Came's Martits, sometimes called merely Campuls. The purposes to which this plain
was applied were 1 wofold; it served for gymnastic and warlike exercises, and also for large political assemblies of the people, as the comitia and contiones. At first it must have been a completely open field with only a few scattered sacred places upon it; and it was not till the 6th century of the city that regular temples began to be built there. By degrees it became covered with buildings, except in that part devoted to the public games and exercises, and especially the equiria, or horse-races, instituted by Romulas in honour of Mars (Varr. L. L. vi. § 13; Paul. Diac. p. 81.) The spot where these twok place is iodicated by Ovid (Fast. iii. 519):-

## " Altera gramineo spectabis Equiria campo

Quem Tiberis curvis in latus urget aquis.
Qui tamen ejecta si forte tenebitur unda
Caelius accipiet pulveruleritus equos."
The part of the Campus the side of which may be said to be "pressed upon" by the stream of the Tiber, is that lying between Piazza Nazona and the bridge of $S$. Angelo, where the ground forms an angle opposed to the descending waters. Here also was the bathing-place of the Roman youth. (Hor. Od. iii. 7.25 ; Comp. Cic. pro Coel. 15.)

Some writers have assumed that this spot was regarded as forming a distinct division called Campus Minor, whilst the remainder of the plain was called Campus Major. (Preller, Regionen, p. 160 ; Urlichs, Rüm. Marsfeld, p. 19; Canioa, Jrdic, pp. 384, 412.) But this distinction does not appear to rest on adequate authority. It is derived from a passage in Catullus: "Te campo quaesivimns minore" (liii. (lv.). 3); and from another in Strabo, quoted in the former part of this article, where, in describing the Campus Nartius, be speaks of another field, or plain, near it ( $\pi \lambda \eta$ -

 observes (Handb. p. 599), Strabo has already described the Campus Martius as the nsual place for
 cannot be the part of it just described. It seems most probable that he meant the Campus Flaminias, which still retained its uncient name, though for the most part corered with the porticoes and other buildings which be describes ; just as we have a Moorfields and Goodman's Fields in the heart of London. The Campus Minor of Catullus may have been the Campus Martialis on the Caelian ; or, as Preller obserres, the panctuation may be:-
"Te campo quaesivimus, minore Te in circo."

The ancient loci religiosi on the Campus Martius were the fullowing:-The Palus Carreae, or Caprae, where Romulus is said to have disappeared during the bolding of an assembly of the people: its situation is uaknown; but it does not seem improbable, as Preller suggests (Regionen, p. 137), that its site may have been marked by the AEDicula Caprarla, mentioned is the Notitia in the 7 th Region, and tbat it may consequently have lain somembere ander the Quirinal. (Liv. i. 16; Or. Fast. ii. 489, \&.c.) A place called Tarentes, or Terexte3t, which appears to bave been rolcanic (campus ignifer), with a subterranean Ala Ditis Patris et Proserifinie, where the ladi saeculares rere performed. The legend of Valesius and his children, and an account of the institation of the games, will be found in the Dictionaryonf Antiqui-
ties, p. 716. We are here only concerned for the situation of the place, which is very variously assigacd by different writers. Urlichs placed it in the Foram Boariam, which, however, must be wrong, as it was undoubtedly in the Campus Martius (Val. Max, ii. 4. §5; Festus, p. 329), though at one extremity of it. (Zns. ii. 4.) Hence Becker placed it near the mansoleum of Augastus, being led to this conclusion by the Sibylline oracle recorded by Zosimus (l.c.):-

Becker refers the word $\sigma \tau \epsilon t \nu$ '́tatov in this passage to $\pi \in \delta i o \nu$, and bence selects the northern part of the Campus for the site of Tarentum, as being the parrowest. But it may equally well refer to $\delta \delta \omega \rho$; and the narrowest part of the Tiber in its course tbroagh the Campus Martius - taking that appellation in its more extended sense-is where it is divided by the Insula Tiberima. Other passages addaced are undecisive, as those of Orid (Fast. i. 501) and Seneca (de Morte Claudii, 13); and therefore though Preller (Regionen, Anhang, p. 241) pronounces against Becker's site, we must leare the question andetermined.

The Arai Mlirtis, near which, when the comitia were ended the newly-elected ceasors took their seats in curule chairs, was probably the earliest holy place dedicated to the god on the Campas which bore bis name. We bave already observed, when treating of the Porta Fontinalis, that it must have been near that gate, and that it was perhaps erected by Numa. There was also an Aedes Martis on the Campos, probably at the spot where the equiria were celebrated. (Dinn Cass. Ivi. 24: Or. Fast. ii. 855.) It seens to have been a distinct temple from that already mentioned in the Circus Flaminius. Tbe site of the Temple of the Lares Permarini, dedicated by the censor M. Aemilius Lepidos, в. c. 179, in pursuance of a vow made by L. Aemilius Regillos after his naval victory over the fleet of Aatiochus, cannot be determined (Liv. xl. 52; Macrob. Sat. i. 10); but it may probably have stood, as Preller conjectures, near the Naralia. The Aedes Juttrnae, built by Q. Latatios Catulus towards the end of the Republic, stood near the arches of the Aqua Virge, and consequently Dear the Septa. (Serv, ad Aen. xii. 139; Ov. Fast. i. 463; Cic. pro Cluent. 36.)

Such was the Campus Martius down to the imperial times; when the great works andertaken there by Julius Caesar and Augustus gave it quite a new appearance. But, before we proceed to describe these, we must ssy a ferr words respecting the Nivalia, or goveroment dockyards. The older topographers placed them onder the Aventine, from confuunding them with the Einporium or commercial docks. Piale first pointed out the incorrectness of this riew; but erred bimself in placing the Naralia on the opposite bank of the Tiber, from bis ignorance of certain passages which determine them to have been in the Campus Martins. These passages, Which were first adduced by Becker (de Muris, yc. p. 96, Handb. p. 159), are the following: " spes unica imperii populi Romani, L. Quiactius, trans Tiberim contra cum ipsum locum, ubi nouc Navalia sunt, quatuor jugerum colebat agrum, quase prata Quinctia vocantur:" (Liv. iii. 26.) This pasage shows the Navalia to have been on the left bank of the Tiber, opposite some fields ealied prata Quinctia; and the fullowing one from Plips fises the situation
of these fields it the district called Vaticanns: "Aranti quatuor sua jugera in Vaticano, quae prata Quinctia appellantor, Cincinnato viator attulit dictaturam" (xviii. 4). That the Nuvalia were in the Campus Martins may also be inferred from Livy (xlv. 42) : "Naves recrine captine de Macedonibus inusitatae ante magnitulinis in Campo Martio subductae sumt"; and from Plutarcl's accunnt of the return of the yonnger Cato from Cyprus, in which he relates that although the magistrater and senate, as twell as a great part of the Roman population, were ranged along both banks of the Tiber in order to greet him, yet he did not stop the crurse of his vessels till be arrived at the Navalia (Cut. Min. 39) ; a circumstance which shows that this arsenal must have lain towards the upper part of the stream's course through the city. Hence, thongh we cannot define the boundary between the Janiculum and the Vatican, nor consequently the exact situation of the Prata Quinctia, yet the site fixed upon by Becker for the Navalia, manely, between the Piaca Narona and Porto di Ripetta, seems sufficiently probable. Preller is disposed to place them rather lower down the stream, but without any adequate reason (Regionen, Auh. p. 242).

It was Caesar who began the great changes in the Campus Martius to which we have before alluded. He had at one time meditated the gigantic plan of diverting the course of the Tiber from the Milrian bridge to the Vatican hill, by which the Ager Vaticanus would have been converted intu a new Campus Martius, and the ancient one appropriated to building; but this project was never carried intur execution. (Cic. ad Alt xini. 33.) The only building which he really beran in the Campus was the septa Jubta. It has been said, when treating of the Porta Flumentana, that a spot sear the Circu, Flaminius was appropriated to the holding of the Comitin Centuriata. In early times it was enclined with a rude kind of fence or boundary, pribably if lurdles: whenre, from its resemblance to a sheep-foll, it obtained the name of Ovile, and subsequently of Septa. (Liv, xxvi. 22; Juv, vi. 528 ; Serv. ad Ving. Fic. i. 34.) For this simple and primitive fence Caesar subatitntel a marble building (Supta marmorea), which was to he surrommted with a purtico a mile square, and to be connected with ther Villa Publica. (Cic, ad Att, iv. 16.) It was prohatly not innch adranced at the time of Caesar's $x$-sussination: since we find that it was continued by the trimmir Lepidus, and finally dedicated by Asrippas (Diun Cass. hiii. 23); but whether it was cumpteted on the magnificent plan described by Cicem cannot be said. Its situation may be determatied hy a gassage in Frontinus, in which he says that the arches of the Aquat Virgo ended in the 'Camp no Martus in front of the seppa. (Aq. 22.) These arches, which, as we have seen before, began under the eardens of lawnllas on the I'imeian, were conds ted to the bath of A rrippa. Donati mentions that remains of them were discovered in his time in tron of the chomelr of S. Ignazin (near the Collegio Remamo). (De (ib. R. iii. 18.) This eninchdes with remains of the portico of the Septa existivg und + the P'atuzzo thortia and charch of S. Maria in Via Lata in the Cursu (Canina, Indic. 400 ): and we may thervore conelade that the Sopta Julia stood it this spot. The partico must have enclased a large opeti spee where the assemblies were held, and in wiuh peyintorial show, and un
one occasion even a naumachia, were exhibited. (Suet. Aug. 43, Cal. 18, Ner. 12; Dion Cass. Iv. s. lix. 10.) There was of course a suggestom or rostra, for haranguing the people. (Dion Cass. Ivi. 1.) The Septa were destroyed in the great fire under Titus (Dion Cass. Ivi. 24), but must have been restored, since, in the time of Dumitian, whes they had lost their political importance, they appear to have been used as a market, in which the most valuable objects were exposed for sale. (Mart, ix. 60.) They appear to have undergone a subseqvent restoration under Hadrian. (Spart. /ladr, 19.)

The Villa P'enlica adjoined the Septa Julia, and must have leeen on its S . side, since it is described by Varro (R. R. iii. 2) as being " in Campo Martio extremo," and must consequently have lain between the Septa and the Circus Flaminius, near the Palazo di Jenesia. The original one was an ancient and simple building, and is mentioned by Livy (iv. 22) as early as the year b. c. 436 . It was used by the consuls for the levying of troops, and by the censors for taking the census (Varr. l. c.); also for the reception of foreign ambassadors whom it was not thought advisable to admit into the city, and of Roman generals before they obtaioed permission ta enter the gates in triumply (Liv. xxx. 21, xxsiii. 24.8 c. ). It was the scene of the massacre of the fiur Marian legions by Sulla (Val. Max, ix. 2. §1; Liv. Epit. Ixxxviii.; Strab. v. 249). A passage in Lucan respecting this horrible transaction confirms the position of the Villa P'ublica close to the Septa (ii. 196): -
"Tunc flos Hesperiae, Latii jam sola jurentos
Concidit et miserae maculasit Oviha Romae"
And another passage in Plutarch shows that it must have adjuined the Circus Flaminius on the other

 డis to $\tau \hat{\eta} s$ 'Evuoús ípóv, Sull. 30.) Seneca (de Clem. i. 1.2) likewise mentions the assembling of the senate in the neighbuuring temple of Belloua, there the cries of the massacred soldiers were heard; and this circumstance would rather lead us to suppose that the temple in question was sitnated at the eastern end, or towards the carceres, of the Circus Flaminins, since the Septa and Villa Publics must have lain towards that end of it nearest to the Capitol. The simple building described by Varro must have been that rebuilt in the censorship of S . Adlius Paetus and C. Cornelius Cethegus, B.c. 194. Caesar could hardly have done anything to it, since a coin of C. Fontrius Capito, consul in r. c. 33, testifies that the latter either restored or rebnilt it.

The name of M. Vipsanins Agrippa, the son-inlaw of Augustns, is comected with the principal changes and the most important buildings in the Campus Martius. The latter consisted of the l'antheon, the thermase, a portico, and the large structure calleal the Diribiturium. The Campus Agrippae and its buiidings will be described when we cone to treat of that part of the district usder consideration called Via Lata.

The Pantueos of Agrippa, which is still in so good $n$ state of preservation that it serves for public worship, is one of the finest monuments of ancient. Rome. An inscription on the frieze of the portico testifies that it was erected by Agrippa in his third consulate; whilst another below records repairs by the emperors Suptiguiu Severus and Caracalia. From
a very corrupt passage in Pliny ( $5 \Sigma x v i .24$. s. I), topographers have related that the temple was dedicated to Jupiter Ultor; but this is altogether inconsistent with other accounts of its destination; and it appears from an emendation of Jan, derived from the Codex Bambergensis, that we should read Diribitorii for Jovi Ullori (Becker, Handb. p. 635). Dion Cassins states that it received the pame

LROMA.
of Pantheon because it contained the images of many gods (iiii. 27 ), which, however, seem to have been those of the deities mythically connected with the Julian race, and among them that of Caesar bimseif. The teraple is circular, and its magnificent portico with triple ror of columns, though perhaps not quite in harmony with the main building, cannot fail to excite the admiration of the beholder. It owes its

PANTHEON OF AGRIPPA.
excellent state of preservation partly to the solidity of its construction, partly to its having been consecrated as a Christian church as early as the reign of Phocas, under the title of S. Marin ad Martyres, or della Rotonda. To the lover of the fine arts it is doubly interesting from containing the tomb of Rapbael. Some architects have thought that it was not originally intended for a temple, but as part of the baths; a notion, however, that is refuted by rassages in ancient mriters, where it is styled templum (Plin. xxxvi. 5. s. 38 ; Macrob. Sut. ii. 13). The Pantheon stood in the centre of the Campus Martius, taking that name in its widest sense. The Tiermase, of which only a few unimportant remains exist, adjuined it on the S., and must bave extended to near the Hecatostylon. The Diatnitorium was a large building destined, according to Becker (Handb. p. 638), to the examination of the roting tablets used in the comitia, in order to determine the result of elections, and must therefore have been situated riear the Septa. It seems to have been left onfinished at Agrippa's death, and was dedicated by Augustus, B. c. 7. Its vast unsupported roof was one of the wonders of Rome, and, when destroyed in the fire of Titus, could not be replaced. (Dion Cass. Iv. 8 ; Plin. svi. 40.) In hot weather Caligula sometimes converted it into a theatre (Dion Cass. lix. 7). The portico which Agrippa erected in the Campus Martius appears to have been called Porticus Argonautarum, from its being adorned with a picture of the Argonauts, and was erected in commemoration of Agrippa's naval victories (Dion Cass. Jiii. 27 ; Mart. iii. 20. 11). Becker (Handb. p. 637) contends that this was the same building called Basilica Neptuni by Spartian (Hadr. 19), and Moaciốvion by Dion Cassius (Ixvi. 24). But a basilica is not equivalent to a portico, nor can we inugine that Dion would have used the term $\Pi$ o$\sigma \in i \delta \dot{\omega} v i o \nu$ of a $\sigma \tau o \dot{a}^{\text {; whence }}$ it seems more probable, as assumed by Canina (Indic. p. 406) and other topographers, that Agrippa also erected a Temile of Neptune, which was connected with, or probably surrounded by the portico. Nardini and Caniuathe latter from recent researches-are of ofimion that
the eleven columns now existing in the front of the Dogana di Terra in the Piazza di Pietra, near the Antonine column, belonged to this temple. Of a Porticts Meleagri mentioned in the Notitia in connection with that of the Argonautarum, we know nothing further.

Augustus also erected a fer monuments on the Campus Martias. Among them was the Solariuar Avgusti, an obelisk which now stands on Monte Citorio, which served as a gigantic gnomon, and, on an immense marble flooring that surrounded it, exhibited not only the hours, hut also the increase and decrease of the days (Plin. xxxvi. 15). In the northern part of the Campus, between the Via Flaminia and the Tiber, he caused to be constructed doring his life-time that superb Mausolevar, a deacription of which by Strabo bas already been cited in the former part of this article. This district had for some time previonsly served as a burying place for the most distinguished persons. Among others buried near this spot were Sulla, Caesar together with his annt and daughter, and the two consuls IIrrius and Pansa, who fell at Mutina. Several members of the family of Augustus had been entombed in the mausoleum before the asbes of Augustus himself were deposited within it ; as Marcellus, Acrippa, Octavia, and Drusus (Ition Cass. liii. 30; Virg. Aen. vi. 873 , seq.; Ov. Cons. ad Liv, 67). By the time of Hadrian it was completely filled; which caused him to build a netr one on the opposite side of the river (Dion Cass. 1xix. 23). There are still considerable remains of the monument of Augustus. The area on which the sepulchre of the Caesars stood is now converted into a sort of amphitheatre for spectacles of the lowest description : sic transit gloria mundi. It is doubtful whether a tbird building of Augustas called Portices ad Nattones, or xiv. Natioxes, stood in the Campus Martius or in the Circns Flaminius. It appears to have been near the theatre of Pompey, and contained statues representing different nations (Plin. xxxvi. 5. s. 4 ; Serv. ad Aen. viii. 721.)

Near the Mausoleum appears to bave been a porfica called Via Teers the pogingof which is un-
known. Its situation near the flace nasifand of determined by the following prasage in Sencea's Apocolocyntusis: " hyjicit illi (Claudio) manum Talthybius deorum nuntius et trahit capite obvoluto, ne quis enm possit agnoscere, per Campum Martium; et inter Tiberim et Vian Tectam descendit ad inferos" (p. 389, Bip.). If this descent to the infertal regions was at the subterranem altar of Pluto and Prosurpine before mentioned, it would p.? far to fix the situation of the Tarentum in the nothern part of the Campus ; but this, thunuth probable, is not certain. The Via Tecta is mentioned once or twice by Martial (iii. 5, viii. 75)

Among the other montuments relating to Augustus in the Campus Martins, was an Ars. Pacrs. dedicated to Augustus on his return from Germany, 1. c. 13. (Dion Cass. liv. 25; Ov. Fast. iii. 882 ; Fust. Pruen. I/I. Kul. Feb.) The Ara Fontcwae Rentets was another similar altar (Dion Cass, liv. 19): but there is nothing to prove that it was on the Canipus Martius.

In the reign of Augustus, Statilius Taurns erected an Ampimpenme on the Campus, - the first built of stone at Rome; but its situation camnt be deternined. (Dion Cass. 1i. 23; Suet. Aug. 29.)

A long interval ensued after the reign of Augustus before any new public buildings were erected on the Campus Martius. Caligula began, indeed, a large amphitheatre near the Septa ; but Cladius caused it to be pulled down. Nero erected, close to the baths of Agrippa, the Themale Nerosianse, which seem to bare been subsequently enlarged by Alexander Severus, and to have obtained the name ot Theimlie Alexindrinie. The damage occasioned in this district by the fire of Nero cannot be stated, since all that we certainly know is that the amphitheatre of Statilius Taurus wis destroyed in it (Dion Cans. Ixii. 18). The fire under Titus was considerably mure destructive in this quarter (lid. Ixvi. 24); but the danage appears to have been made goorl by Domitian. Among the buildings restored by him on this occasion we find the Templish of lass axib Senarts mentioned; but we have no accunts respecting their foundation. Their site may, however, be lixed betweel the Sopta Julia and the baths of Agrippa, near the modern chureh of S . Muria sopra Minerea. Thus Juvenal (vi. 527):-
" A Meroe portabit aquas, nt spargat in acdem Isidis, antiqno yuac prosima surgit Osili."
(Cf. Juseph. B. fud. vii. 5. § 4.) It was near the sput midicated that the celebrated group of the Nile way ifscovered wi.ich now adorns the Vatican (Braun, Mustums of Rome, p. 150), together with several uther Eigyptian olyjects (Flammio Vacea, J/ens. nos. 26,27 ; Bantoli, Mom. no. 112, \&e.). Alesander everas devotsi wuch attention to these temples (Lampr, 1. So: 26) and they must have existed till a late periohl, suce they are enimerated in the Notitios.

Iomitian alo restored a temple of Ninerva which stowd near the same spot, the Mrxbevi Craichrtis of Cassmdorus (Cluron. sub lomit.) and of the Notitia. (Mntf. Iniar. Ital. p. 292). It must have been the temple originally founded by Pompey in commemoration of his eastern victories, the insecription ots which is recorded by 1 liny (vit. 27). It was from this temple that the rhurch of $S$. Marrict jat me tionted derived its epithet of supro Mineren; and it seens $t$, brave bewn near this spot that the ceplated statue of the (itustiniani 1'allis, now in the Braccio . Nuovo of the Vaticau,
was discovered ; though according to other, but less probable, accounts, it was found in the circular temple nosr the Porta Maggiore (Braun, Museumse, gic. p. 154). Some topographers assume that the temple built by Pompey was a different one from the above, with the barbarons title of Minerva Campensis, but in the same neighbourhood; which does not seem probable (Canina, Indicaz. p. 405).

Domitian also founded in the Campus Martius an Oneum and a Stablum (Suet. Dom. 5), which will be tlescribed in the proper sections. The situation of the former cannot be determined. The Stadium, in all probability, occapied the site of the Piazza Navona, the form of which shows that it must have been a circus. The name of Natonct is a corruption of in Agone, and important remains of this Stadinm

ANTONINE COLUMX. (COLUMS OF M. ALRELI'S.)
were in existence in the time of the Anonymons of Einsiedlen (Preller, Regionen, p. 171). The assumption that this place was occupied by a stadium built by Alexander Severus - in which case that of Donitian must be sougbt in some other part of the Campus - rests enly on traditiens of the middle ages (Canina, Indic. p. 392).

Trajan is ssid to have built a tbeatre in the Campus Martius, which, however, was destroyed by Hadrian. (Spart. Hadr. 8.) The same emperor probably erected wbat is called in the Notitia the Basllica Marclines (Marcianae), which was probably a temple in honour of his sister, Marciana. The Antenines appear to have adorned this quarter with many buildings The Basslica Mamiotes (Matidiae) was perhaps erected by Anteninus Pius, and consecrated to Matidia, the wife of Iladrian; as well as the Hadelaxum, or temple to Hadrian himself, also mentiened in the Notitia. (Preller, p. 175.) The Templum Astoxini and Colema Cochlis were the temple and pillar erected in honour of M1. Aurelius Antoninus. (Capitol, M. Ant. 18; Aur. Vict. Epit. 16.) All these buildings stood near together in the vicinity of the Piazza Colonna, on which the column (Celumnk Antoninian:i) still exists. For a long while this column was theught to be that of Antoninus Pius, and was even declared te be such in the inscription placed on the pedestal during the pontificate of Sixtus V . But the sculptures on the column were subsequently perceived to relate to the history of Antonine the philosupher; and this view was confirmed not only by the few remaining words of the original inscriptiun, but also by another inscription found in the neighbouring Piazza di Monte Citorio, regarding a permission granted to a certain Adrastus, a freedman of Septimius Severus and Caracalla, to erect a sunall house in the neighbeurhood of the column, as curator of it. This inscription, which is new preserved in the corridor of the \atican, twice mentions the column as being that "Divi Marci." (Canina, Indic. p. 417, seq.) The column is an imitation of that of Trajan, but not in so pure a style of art. Buth derive their name of cochlis from the spiral staircase (cochlea, кoх入(as) in the interior of them. (1sid. Orig. xv. 2, 38.) The Columsa Axtonisi P11 was a large pillar of red granite, erected to

PEDESTAL OF COLVMN OF ANTONINES RIES.
him, as apparrs frem the inscription, by M. Aurelins and L. Verus. It was discovered in the pontificate of Clement $\mathbf{~ M}$. ., in the garden of the Padri della Missione, on the E. side of the Palazzo di. Monte Citorio. It bruke in the attempt te erect it in the Piazza di Monte Citorio, where the ebelisk now stands; but the pedestal with the inscription is
still preserved in the garden of the Vatican. (Canina Indic. p. 419.) The sculptures on the pedestal represent the Apotheosis of Antoninus Yius and Faustina.
The Thermae Combodhnif and Alexandervie will be treated of in the section on the baths. After the time of Alesander Severus we tind but few new buildings mentioned in this district. Gordian III. is said te have entertained the design of building an enormons portico under the lincian liill, but it does not appear that it was ever executed. (Capitol. Gord. III. c. 32.) Respecting the Porticus Flaminia, see the article Poss Mnsvits. Some porticoes near the Pons Aclius, which appear to have borne the name of Maximac, were terminated by the Triumpual Arch of Ghathan, Vilestinlin, asid Theodosies; the inseription on which will be found in the Anonymous of Eiusiedlen, and in Gruter (clsxii. 1). Claudius, who was prefect of the city underTalentinian 1 ., erected a portico near the baths of Agrippa, which he called Pokticts Boxi Evextus, after a nerghbouring temple with the same name (Ainm. Marc. sxis. 6. § 19); but with regard to this temple we have no information.
We shall now proceed to that part of the district under consideratien comprised in the 7 th liegion of Augustus, and subsequently called Via Lati, from the road which bounded its western side, and which formed the seuthern estremity of the Via Flaninia. The most important topographical question connected with this district is the situation of the Campus Agrifpae, and the buildings connected with it. We have already shown from the situation of Nartial's beuse, as well as from the probablo site of the temple of Sol, that the Campus Acrippue must have lain under the western side of the Quiriual, and not under the Pincian, where Becker places it. It is probable, too, that it lay on a line with the Pantheon and tbermae of Agrippa, allhough divided from them by the Via Lata; and bence Canina correctly describes it as facing the $S_{i p t a}$ (Indic. p. 215), whilst Urlichs and l'reller, in like mamer, place it between the Picuza degli Apostoli and the Fontana Trevi. (Beschr: vol. iii. pt. iii. p. 112; Regionen, p. 138.) The Canpus Agrippae contained gardens, porticoes, and places for kymnastic exercises, and was, in short, a kind of Campus Martius in miniathre. It was aloo a favourite lounge and promenade. (A. Gell. xiv. 5.) It appears frem a passage in Dion Cassius, that the Caupus was not finished before Agrippa's death, and that it was opened to the puhlic by Augustus (1v. 8.) It contained a Portices l'olak, so named after Agrippa's sister Pola or Polla: which is probably the same as that alluded to by Martial, in sume passages before quoted, under the name of Virssinis. The latter name seems to be corrupted in the Notitiau into $l^{\prime}$ orticus Gypsiani. Becker (Ilandb. p. 596) would identify the Porticus Pohe with the Pormers Ecror-x. butthey seen to be different structures. (Urlichs, Rivm. Topogr. p. 139.) The latter, which derived its namu from a pieture of the rape of Europa, is frequently mentioned by Martial (iii. 14, iii. 20, xi. 1). Its situation cannot be deternined; but most topwgraphers place it in the Canpus Martius, omong the other buildings of Agrippa. (Canina, Indica:- p. 400 ; Urlichs, Rima, Marsfeld, p.116) It appears fron the Notitia that the Campus Agrippae containod C.ssrk, which, from the Catalogus Inperat. Iicmn. (t. ii. p. 246, Ronc.), appear to have been dedicated by Aurelian; but the l'orticus Vipsumia served as a

## ROMA.

sort of barracks as early as the time of Galla. (Tac. II. i. 31 ; Plut. Galb. 25.)

Several objects mentioned in this district are dunbtful as to site, and even as to meaning, and are not important enongh to demand insentigation. It contained Themphal. Archifs of Ciakdits and M. Aurelits. The latter subsisted in a tolerably perfeet state near the Piaiza Fiana in the Corso, till the year 1662 , when prop Alexander V'II. caused it to be palled down. Its reliefs still adorn the stairease of the Pulazzo de' Conservatori. (Canina, Indicaz. p. 220.)

ARCH OF ALRELIES.
We shall-conclude this section with noticing a very humble but very useful object, the Foncm Suanicar. Bacon was an article of great consmoption at Rome. It was distributed, as well as bread, among the people, and its amnual consumption in the time of Valentinian 1II. was estimated at 3.628 .000 pounds. (Gibbon, Decline and Fall, vol, iv. p. 85 , ed. Smith.) The custom of distributing it had been introduced by Aurelian. (Fopisc. -furel. 25.) A country in which hags-flesh is the cheapest meat betrays a low state of farming. The swine still abounds in Italy; lut in ancient times the Roman market was principally supplied from the forests of Lucania. The market wats important enough to have its special tibume, and the "pismen of the eternal city" ("P'orcinarii Uibis aetornae") were considered such a useful body that peculiar privileges were granted to them. (Corl. si, tit. 16: Xit. Dignit. Purt. Occ. p. 16; Gruter, Inser. celsax. 4.) The market is alluded to in a anrt of proverbial manmer by Pbilostratus (ăтиа́ $\tau \in \kappa$ каi
 p. 283. 19, ed. Kayser.). It is supposed to have stood near the present church of S. Crore dei Iucchesi, which was substituted for that of $S$. Niculo in Porcilibus. (Canina, Indic. p. 209 ; Preller, Regionen, p. 139.)

## XIV. The Trinstiberine District.

Although the district beyond tbe Tiber formed one of the 14 Regions of Augustus, and although part of it may perhaps have been euclosed with a wall as carly as the time of Ancus Marcius, and was certainly included in that of Aurelian, yet, while it was considered a part of Rome, it never belonged to the Urbs, properly so called. The distijection be-
tween Roma and Crbs was at least as old as the time of Augustus, and was thus laid down by Alfenus Vanus: " Ut Alfenus ait, Urbs est Roms, qua muro cingeretur: Roma est ctiam, qua contirentia aedificia essent." (Digest.1. tit.16. 1. 87.) This cirenmstance rather tends to strengthen Niebubr's opiniun that Ancus Marcius only built a citadel on the daniculum, without any walls extending to the river. [Sce above, Part II. Sect. I. sub fin.] The district in quevtion is natnrally divided into three parts, the Mons Janiculus (or Janicuhm), the Mons Vaticanus, - each with their respective plains towards the river, - and the Insula Tiberina, We shall begin with the last.

We have already mentioned the legend respecting the formation of the Ixstla Trberina tbrough the carn belonging to the Tarquins being thrown into the river. In the year a. c. 291 the island became sacred to Aescalapius. In consequence of a pestilence an embassy was despatched to Epidauras to bring back to Rume the image of tbat deity ; but instend of the statue came a snake, into which it was perfectly known that the god himself had entered. As the vessel was passing the Tiberine island the snake swam ashore and hid itself there; in conseqnence of which a Temtipe of Aesculapies was built upon it, and the island ever afterwards hore the name of the god. (Liv. Epit. xi.: 0v. IJet. xr. 739; Val. Max. i. 8. § 2; Dionys. v. 13; Suet. Claud. 25.) Siek persons resorted to this temple for a cure; but it does not appear that there was any hospital near it, as was the case at Epidaurus. Thete is no classical authority for the fact that the sides of the island were afterwards walled round in the shape of a ship, with the prow against the current, typifying the ressel which brought the deity ; but it is said that vestiges of this substruction are still visible. (Canins, Indic. p. 574.) Tbe island also contained a Temple of Jupiter and a Teaple of Facit's, both dedieated in B. C. 193 . (Liv, xxxiii. 42, xxxiv. 53.) The temple of Jupiter appears to have adjoined that of Aesculapins. (Ov. Fast. i. 293.) It has been concluded, from the following rerses of Ovid, that the temple of Faunus must lave stood on the upper part of the island (Fast, ii. 193):-
" Idilns agrestis fumant altaria Fanni
Hic, ubi discretas insula rumpit aqnas ; ${ }^{\text {" }}$
but this, though a probable, is nut a necessary inference. Skalo Saxcus, or Dens Fidius, seems slso to have had a sacellum here, as well as Tiaraints, as the river-god is called in the Indigitamenta, or religious books. (Fast. Amit. 51. Id. Dec.) By a curious error the early Christian writers confounded the former deity with Simon Magus, and thought that he was worshipped on the island. (Juat. Mart. Apol.2; Euseb. H.Eccl. ii. 12.) After the building of the two bridges which connected the island on either sile with the shore, it seems to have obtained the name of "Intee duos Pontes" (Plut. Publ. \&) ; and this part of the river was long famous for the delicious pike canght in it; which owed their flavour apparently to the rich feeding afforded by the proxinity of the banks. (Plut. Popl. 8; Ma. crob. Sat. ii. 12.) In the Acta Martyrum the island is repeatedly styled Insula Lycaonia ; it is at present called Isola di S. Bartolommeo, from the church and convent of that name.

The Jasiccuest begins at that point opposite the Campus Blartins where the Tiber reaches farthest

Digitized by Mulcrosofte
to the W., whence it stretches in a southerly direction to a peint opposite the Aventine. The masculine form of the name (Janiculus), though employed as a substantive by some mudern writers, seems to rest on no classical authority, and can only be allowed as an adjective form witb mons or collis. (Becker, Handb. p. 653.) The name Janiculum is ususily derived from Janus, who is said to have had an arx or citadel here. (Os, Fast. i. 245; Macrols. Sat. i. 7.) As the ridge rans in a tolerably straight line nearly due S . from the point where it commences, the curve described by the Tiber towards the E. leaves a considerable plain between the rive: and the hill, which attains its greatest breadth at the point opposite to the Forum Boarium. This was the original Regio Transtiberina. It appears to have been covered with buildings long before the time of Angustus, and was principally inhabited by the lower classes, especially fishermen, tanners, and the like, though it contained some celebrated gardens. Hence the Ludi Piscatorii were held in this quarter. (Ov. Fast. vi. 237 ; Fest. pp. 210, 238.) It was the ancient Ghetto, or Jews' quarter, which now lies opposite to it. (Philo, de Virt. ii. p. 568, Mangey.)
The Regio Transtiberina contained but few temples or other public buildings. Of the temple of Fors Fortuni we have already spoken when discussing the question respecting that of Pudicitia Patricia [supra, p. 814]. Of other loci religiosi in this quarter little more is known than the name. Such was the Lucus FurinaE, mentioned in the narratives of the death of C. Gracchns. (Aur. Vict. I'ir. Ill. 65; Plut. C. Gracch. 17.) Cicero connected this grove with the Enmenides, or Furies (Nat. Deor. iii. 18); but there is no account of those Attic deities liaving been naturalised at Rome, and we shonld rather infer from Varro that the grove was consecrated to some ancient indigenous goddess. (L. L. vi. § 19, Miill.) It was a universal tradition that Numa was buried in the Janiculum (Dionys, ii. 76; Plut. Num. 22; Val. Max. i. 1. § 12). Cicero, in a corrupt passage, places bis tomb "hand procul a Fonti Ara" (or Fontis Aris) (de Leg. ii. 22); but of such a deity or altar we bave no further account. We also find a lucus Corntscarcm Divariem mentioned by Paulus Diaconns (p. 64, Müll.) as "trans Tiberim;" but though the names of these goddesses are also found in an inscription (Gruter, lxxxviii. 14), what they were cannot be told. Lantly, as the Basis Capitolina records a Vicus Larem Ruralica in this district, we may conclude that they had a sacellum here.

Among the profane places trans Tiberim were the Mucha Prita and the field called Coneta. The former-the land given to Nucius Scaerola by the Senate as a reward of his valour (Liv, ii. 13) -may, however, hare lain beyond the district now under consideration, and probably farther down the Tiber. The Codeta, or Ager Codetanus, was so named from a plant that grew there resembling a horse's tail (coda) (Paul. Diac. Pp. 38 and 58, Miill.), - no doubt the Equisetis, or Equisetums palustre of Linnaeus. ("Invisa et equisetis est, a similitudine equinae setae," Plin. xriii. 67. s. 4.) There seems to have been a Codeta Major and a Dinor, since Suetonius relates that Caesar exhibited a naval combat in the latter, where he had formed a lake (" in minore Codeta defosso lacu," Caes. 39) Dion Cassius, on the other hand, represents this
naumachia as taking place in the Campus Martius (xliii. 23). Becker (Handb. Y. 656, note) would reconcile these divergent accounts by assuming that the Codeta Minor lay in the Campus Martius, and the Corleta Major opposite to it, on the otker side of the Tiber. (Cf. Jreller, Regionen, p. 218.) But there scem to be some grave objections to this assumption. It is not probable that two places bearing the same name should have been on different sides of the river, nor that there should have been a marshy district, as the Codeta evidently was, in the Campus Martius, in the time of Caesar. Besides, had the latter contained a place called Codeta Minor, - which must have been of considerable size to afford room for the exhibition of a naval combat,we should surely have heard of it from some other sonrce. Becker adduces, in proof of lis view, another passage from Suetonins (Ib. c. 44), from which it appears that Caesar contemplated building a magnificent temple of Mars, on the site of the lake, after causing it to be filled up; a project, however, which does not seem to bave been carried into execution. Becker assumes that this temple mnst of course have been in the Campus Martins; thongh on what grounds does not appear, as we have already seen that there was a temple of Mars a long way outside the Porta Capena, besides a subsequent one in the formm of Augustus. We are, therefore, of opinion, that the word 'Apeio, in Dion Cassius, mnst be a mistake either of his own, or of his copyists, and that the Campus Codetanus of the Notitia must have lain rather below the city, on the right bank of the Tiber. (Cf. Caninn, Indic. p. 566 , seq.) The Notitia mentions a Campes Bruttianes in connection with the Campus Codetanus, but what it was cannot be said. Sume have conjectured that it was called after the Brutti, who were employed at Rome as public servants. (Panl. Diac. p. 31.)

Near the same spot must have been the Hormi Caesaris, which Caesar bequeathed to the Roman people. (Suet. Caes. 83; Tac. Ann. ii. 41 ; Cic. Ihil. ii. 42.) According to Horace, they must have lain at some distance:-
"Trans Tikerim longe cubat is, prope Caesaris bortos."
(Sat. i. 9. 18.)
And it may be inferred from the situation of the Temple of Fors Fortuxd, which we have already discussed [sopra, p. 814], that they must have been at about a mile's distance from the Porta l'ortuensis. (Fust. Amit, VIII. Kal. Jul.) It seems probable that they were connected with the Nemts Cafsarus, where Augustus exhibited a naumachia, and where a grove or garden was afterwards laid out. ("Navalis proelii spectaculum populo dedi trans Tiberim, in quo loco nunc nemus est Caesarum," Mon. Ancyr.) This wonld rather tend to confirm the riew that the codeta was in this neighbourhnod. In Tacitus (Ann. xii. 56: ' Ut quondam Augnstus structo cis Tiberin stagno ") we are therefore probably to read $u$ s for cis, which ancient form seems to have been retainel in desiguating the Transtiberine district ("Dicebatur cis Tiberim et uls Tiberim," Aul. Gell. sii. 13: cf. Varr. L. L. v. § 83 , Müll.; Pompon. Dig. i. tit. 2.1.2.§ 31.) The Nemus Caesarum seems to have been so called from Caius and Lucius Caesar. (Dion Cass. 1xvi. 25.) We are not to suppose that it occupied the site of the lake excavated for the naumachia, but was planted round it as we learn from Tacitus (-" apud
nemus quod navali stagno circumposuit Augustus," Ann. xiv. 15). There are several passates which show that the lake existed long after the time of Augustus. Thus statins (Silv. iv, 4. 5): -
" Continno dextras flavi jete Tybridis oras,
Lydia qua penitus staguum navale coercet
lipa, suburbanisque vadum practexitur bortis."
This passage likewise confirms the sitnation of the lake on the right, or Eitroscan, bank (Lydia ripa) with the Nemus round it (cf. Suct. Til. 72). It was used by Titus to exhibit a naumachio (Suct. Tit. 7; Dion (lass. l. c.) : atd remains of it were visible even in the time of Alexander Severus (ld. 1s. 10). Although the passage in the Monumentum Ancyranum in which Angustus mentions this lake or basin is rather mutilated, we may make out that it was 1800 feet leng by 1200 browl.

The Nufitia mentions five Nuumacthas in the 14 th Region, but the number is probably corrupt. and we shonld read two. (Preller, Regionen, p. 206.) We know at all events that Domitian also made a basin for ship-fights in the Trathatiberine district. (Suet.Iom.4.) The stone of whichat was constructed was subsequently employel to repair the Circus Maximus ( $I 6.5$ ). That it was in a new situation
 1xvii. 8). It prolably lay under the Vatican, since St. Peter's was designated in the middle ages as "apud Naumachiam." (Flav. Blond. Instaur. R. i. 24: Anastas. 1: Lea, IH. p. 30f, Blanch.; Montf. Dïur: Ital, p. 291.) The namnachitt ascribed to the emperor Philip (Aur. Vict. Cizes. 28) was perhays only a resteration of this, or of that of Aucustus.

Among ether oljects in the district of the Janiculum, we nemd oaly mention the Hosti Getae and the Castina Lecticablorem. The former were probably fomuled by Septimius Severus, and inherited by hin son fieta. We know at all erents that

Severus founded some baths in this district (Sparl. Sept. Sev. 19; cf. Becker, de Mfuris, p. 127) and the arch called Pohera Seimimlana; and it likewise appears that lie purchased some large gardens before his departure into Germany. (Sjart. Ib, e. 4.) The Lecticurii were either sedan-chaimen, or men employed to carry biers, and their costra means nuthing more than a station for them, just as we hear of the Castra Tabellariorum, Vietimariorum, \&c. (Preller, Regionen, p. 218.)

The Mo.xs or Combis Vaticinus rises a little to the NW: of the Mons Janiculus, from which it is separated only by a narrow valley, now l'alle d $/ n$ ferno. The oriyin of the name of this district, at preent the mest famous in Rome, cannot be determined. The most common derivation of it is from a story that the Romans pained possession of it from the Etruseans through an oracular respumse ("Vatum responso expulsis Ltruscis," Paul. Diac. p. 379.) We have already remarked that there is no gromad for Nirbulu's thsumption respreting the existence here of an Etruscan city called I'atica or I'aticum [see p. 724]. This district belonged still less than the Janienlum to the city, and was not even ineluded in the walls of Aurelian. It was noted for its unhealthy air (Tac. II. ii. 93), its unfruitful soil (Cic. de Leg. Agr: ii. 35), and its execrable wine. ("Vaticana bibis, bibis vetenum," Mart. vi. 92.93 ; cf. $\times, 45$.) In the Republican times the story so beatifilly told by Liry (iii. 26) of the great dictator 1.. Qninctins Cincinnatus who was saluted dictator bere whilst cultirating his farm of four acres, the Pruta Quxctia, lends the only interest to the scene, whether it may belong to the romance of history or not. There were ne buildings in this quarter before the time of the emperors, and almost the only one of any note in all antiquity was a sepulchre-the Dhasotezal or Moles Hadmasi, now the Cinstello di s. Anyelo. (Dion Cass. Ixix. 23;

MOLE OF HADHBLAN RNSTORED.
 the unst impotant is that of Promplus. (B. G. i. 22. p. 106. cal. Bomin.) A romplate hisatory of it is giver, by Bumen (Rescher: val. ni. F1, 404. seq.), and deacriptions will be foum in all the emoic-hooks. emperors and their fanutios, tortainly till the time of Commedus, ant perlays till that of Caracalla ( 1 . Becker Ifonull. note 14:50). It was built in the Hown Jowatha: (Cuphtal. Aut. P. 5), if we are to moderstand the word collona-it in that passage of

These gardeos of the Domitian family are frequently mentioned in inscriptions; and those who are curions respecting their history will find a long account of them io Preller's Regionen (p. 207. seq.). They appear to have existed under the same name in the time of Aurelian. (Vopisc. Aurel. 49.) In the same district were also the Hormi Agirippinie. These came inte the possession of her son, Caligula, who built a circus in them, afterwards called the Circus Neronis. It will be treated of in another section; and we shall only mention bere that this was the place in which the Christians, having previously bcen wrapped in the turica molesta or picata, were burnt, to serve as torches for the midoight games. (Tac. Ann. xv. 44.) Both the gardens mentioned came into the possession of Nero, and may therefore bave also beed called Horti Neronis. (Tac. Ib. and c. 39.)
The veighbourbood seems to have been a chosen spot for the sepulchres of the great. One of them, a pyramid larger than the still existing monument of Cestius, existed till the end of the 15 th century, and was absurdly regarded sometimes as the sepulcrum Romuli, sometimes as the sepulcrum Scipionis Africani. It appears from notices belonging to the middle ages that on or near the spot where St. Peter's now stands, there was anciently a Templum Apollivis, or more probably of Sul. (Anastasius, Wit. Silvestri, p. 42 ; Montf. Diar. i. p. 155.)

Haviog thus gone over the varions districts of the city, and ooted the principal objects of interest which they contained, we shall now proceed to give an accontt of certain objects which, from their importance, their general similarity, and the smallwess of their number, may be most conrenieutly ranged together and treated of in distinct sections. Such are, - (1) the siructures destined for public games and spectacles, as the Circi, Theatres, and Amphitheatres; (2) the Thermae or Baths ; (3) the Bridges ; and, ( $t$ ) the Aqueducts.

The general characteristics of these objects have been so fully described in the Dictionary of $\mathrm{A} n$ tiquities that it will be unnecessary to repeat the descriptions bere, and we shall therefore confine ourselves to what may be called their topographical bistory ; that is, an account of their origin and progress, their situation, size, and other similar particulars.

## XV. The Cinci, Theatres, ind Ashehthe.itres.

Horse and chariot races were the earliest kind of spectacle known at Rome. The principal circus in which these sports were exbibited, and which by way of pre-eminence over the others came ultinnately to be distinguished by the title of Cincts Miximus, was founded, as we have already related, by the elder Tarquin, in the railey between the Palatine and Aventine. That king, homever, probably did little more than level and mark out the ground; for certain spaces around it were assigned to the patricians and knights, and to the 30 curiae, on which, at the time of the games, they erected their own seats or scaffolds, called spectaculn and fori. (Liv. i. 35 ; cf. Dionys, iii. 68.) According to Livy, the same custoin continued to prevail under Tarquinius Superbus (ll. c. 56 ); though Dionysius represents that monarch as surremnding the circus, with por-

ROMA.
ticoes (iv. 44). It was not till the year B.c. 228 that curceres for the chariots were built. (Liv. viii. 20.) We cannot tell what the original number of carceres may have been, but it was probably adapted to that of the chariots which started in the race. Aecording to Tertullian (de Spect. 9) there were originally only two Circensian factions, or colours, the albata and russata-that is, winter and summer; but these distinctions of colours and factions do not seem to have been known till the time of the Empire. Joannes Lydus (de Mens. iv. 25 , Beck.) states the origioal number of the factions to have been three, the russata, albata and prasina; and this seems to agree with the fullowing passage in Cicero-if, indeed, it is to be interpreted strictly, and is anything more than a fortuitous coincidence: "Neque enim in quadrigis eum secundum numeraverim, aut tertiun, qui vix e carceribus exierit, cum palmam jam primus acceperit." (Brut. 47.) However this may be, we know that in the early part of the Empire there were foor colours, though by whom the fourth, or veneta, was added, cannot be said. Domitian added two more the aurata and purpurata (Suet. Dom.7), bat these do not seem to bave come into customary use. The usual missus, or start, consisted of four chariots, as we learn from Virgil with the note of Servius : -
"Centum quadrijoges agitabo ad flumina currus"
(Gearg. iii. 18);
where the commentator remarks from Varro:-"Id est, unius diei exhibebo circenses ludos, quia, ut Varro dicit in Tibris de gente popali Romani, olim xxv. missus fiebant." It appears probable that the carceres were twice the number of the chariots which started, in order to afford egress to those which had finished the course, whilst fresh charioteers were waiting in those which were closed to begin a new course (v. Becker, de Muris, p. 87). Thus in the Lyons mosaic eight carceres are represented; but in the Circus Maximus, after the increase of the factions to sis, there were probably twelve carceres; and such also appears to have been the number in the circus on the Via Appis. (Cf. Cassied. Var. iii. 5t.) The Circus Naximus seemis to have remained in a very rude and imperfect state till the time of Julius Caesar. He increased it by adding to both its extrenuities; and its size when thus enlarged appears to have been 3 stadia in length and 1 in breadth. Cacsar also surrounded it with a camal, culled Eumpes, in order to protect the spectators from the fury of the elephants; but this was filled up by Nero and conrerted into seats for the equites, whose increased numbers probably required more accommodation. (Suet. Caes. 39; Plitu. viii. 7, xxxvi. 24. s. 1.) The description of the circus by Dionysius (iii. 68) is the clearest and longest we possess, but the measurements which he gives duffer from those of Pliny, as he makes it $3 \frac{1}{2}$ stadia long and 4 plethra, or 2 j ds of a stade, broad. But perbaps these anthorities may be reconeiled by assuming that one took the inver and the other the outer circumference. The reader will find a lengthened examination of these different measures in Canina's Indicazione Topografica, p. 491, seq. In Caesar's circus it was only the lower rows of seats that were built of stone; the upper rows were of wood, which accornts for the repeated fires that happened there. The first of these occurred in e. c. 31, a little before the battle of Actium, and destrejed a considerable

## homA.

part of the building. (Dion Cass. 1. 10.) Augustus rebuilt the Pulvinar, or place on which the images of the gods were laid, anil crected the first obehisk between the metae. (Mon. Ancyr.; suct. Aug. 45 ; Pliti. xxxvi. 14. : 5.) The sile towards the Aventine was again burnt in the reign of Tiberins. (Jac. Aun. vi. 4n.) Claudias much improved the alpearance of the circus by substituting marble carceres for those of tufo, and methe of gilt bronze for the previous ones of wood. He also appropriated certain seats to the seaators. (Sinet. Claud. 21.) We have seen that the fire of Nero broke ont in the circus, whence it is natural to conclude that it must have been completely destroyed. Yet it must have been soon restored, since Nero caused his ridiculons triamphal procession to pass through it, and hung his triumphal wreaths round the obelisk of Augustus. (Dion Cass, Ixiii. 21.) The effects of another fire under Domitian were repaired with the stone from his nammachiou, and it was now, perbaps, tbat 12 carceres were first erected. (Suet. Jom. 5, i.) We read of another restoration on a still biore magrificent scale by Trajan. (Dion Cass. lviii. 7.) During the celebration of the Ludi Apollinares in the reign of Aatonimus Pius, some of the rows of seats fell in and killed a large number of persons. (Capitol. Anton. P. 9 ; Catal. Imp. l'ienn, ii. p. 244.) We know but little more of the history of the Circus Masimus. Constantine the fireat appears to have made some improvements (Aur. Vict. Caes. $40 . \$ 27$ ), and we hear of the games being celebratel there as late as the 6th century. (Cassiod. Var. iii. 51.) The circus was used for other games besides the charint races, as he Ludus Trojue, Certamen Gymaticum, Tinatio, Ladi spollinares, \&c. The number of perams it was capable of accommolating is rariously stated. Pliny (xaxvi. 24. s. 1) states it at 260,000. One colex of the Notitia mentions 485,000 , anotlier 385.000 ; the latter mumber is probably the more correct. (I'reller, Regionen, p. 191.) The circus seems to have been enlarged after the time of Pliny, in the reigo of Traju.

The emees Filaminte's was fommed in R.C. 220) by the censor of that name. (Lav. Epit, xx.; Cass. Chron, p. 178.) We have bit few notices yesperting this circus, which lay under the Capitolime with its carceres towards the hill, and its cirrular end towards the river. The Ludi Plebeiib, and thuse called Taurii, were celebated here (Vid. Max. i. 7. S. 4; Virt. L. L. v. § 154), and Ancustus afforited in it the spectacle of a crocuatile elase. (1)ion Cass. 1r. 10.) It also served for meetings of the perphl, which had previonsly beem held in the Prata Fłluminia. (Lix, xxvif. 21; Cic. at Att. i. 14.) We find no mention of the Citrens Flannius after the first century of our erat ; and in the early part of the 9 th centmry it hal been so completely firgotten tint th. Anonymons of Einsiedlen mistook thic Prizan Varona for it. Yet rematins of it are sail to have existel till the 16 th century, at the clurch of S. 'utrrina de' Fonari and the Palaz=n Mattei. (And. Finkio, Ant. Vrb. lih. iv. p. 264 ; 1.ucio Faum, Aut. di Romn, iv, 23. p. 138.)

What is sometinus called by modern topagraphers the Cinces Abosalas, ocenpied, as we have satid, the site of the Pini: Xamona. But the Agonatia were certainly not celebratell with ('ircensian games, and there are porot reasons for doubting whether this was a circus at all. Its form, however, shows that it was a diage of the same kind,
and hence Becker's conjecture seems not improbable (IIandb. p. 6io), that it was the Stadiuar founded by Homitian. The Grecian fuot-races had been introduced at liome long before the time of Dumitian. Both Caesar and Augustus had built temporary stadia in the Campus Martius (Knet. Caes. 39; Dion Cass. liii. 1), and Domitian seens to have constructed a more permaneat one. (Suct. Domt. 5; Cassiod. Chron. t. ii. p. 197.) We are not indeed told that it was in the Campus Martius, but this is the most probable place for it ; and the Notitia after mentioning the three theatres and the Odeum in the 9th Region names the Stadium. It is also mentioned in conjunction with the Odeum by Atnmianus Marecllinus (xvi, 10. § I4). It is discriminated from the circi by Lamprilius: "Omnes de circo, de theatro, de stadio - meretrices collegit." (Ifcliog. 26.) In the middle ages it seems to have been called "Circus Alexandrimus," an appellation donbtless derived from the neighbouring thermae of Alexander Severns. By the Anonymus Einsicdlensis it was confunoded, as we have said, with the Circus Flaminius.

Putting this on one side. therefore, the third circus, properly so called, founded at Rome, wonh be that which Caligula built io the gardens of his mother Agrippina in the Vatican. (Plin. xvi. 40, xxxvi. 11 ; Suet. Claud. 21.) From him the place subsequently obtained the name of Caranum (Dion Cias. lix. 14), by which we find it mentioned in the Notitia. (Reg. xiv.) This circus was also used by Nero, whence it commonly obtained tha name of Chects Nenosis. (1'lin. i.c.; Snet. Ner. 22 ; Tac. Anm. xiv. 14.) In the middle ages it was called Pulatiun Neronis. Some writers assume another circus in this neighbourhood, which Canina (Indic. p. 590) ealls Curces H.dorioni, just at the back of the mansoleum of that emperor: but this seems hardly probable. (Cf. Uilichs, in Class. Mus. vol. iii. p. 20.2.) The chief passage on which this assumption is founded is Procopius, de Bell. Goth. ii. 1 (Preller, Regionen, p. 212).

A fourth cirens was that of Mixestics about two miles on the Via $\Lambda_{Y p l}$ ia, near the tomb of Caecilia Netella. It used to be commonly attributed to Caracalla; but an anscription dug up in 1:25 meations Romulus, the son of Masentins (Orell. Inser. 1069): and this agrees with the Catalogus Imperatoram. liennensis, which a-eribes the building of a circus to Masentins (ii. p. 248 , Ronc.). This building is in a tolerable state of preservation; the spina is entire, and great part of the external walls remains; so that the spectator call here gain a clear idea of the arrangements of an ancient circos. A complete description of it has been published hy the Rev. Richard Burgess (London, Murray, 1828.)

The firth and hast of the circuses at Rome, which can be assumed with certainty, is the Craces Hebrocianali, which lay near the Amphitheatrum Castrense, outside the walls of Aurelian. (Urlichs, Röm. Topogr: p. 126. seq. ; Becker, Antuort, p. 81.) Wie have already said that the existence of a C'mets Flomase in the 6th Region, is a mere invention ; and that of a Cuncers Sularstit, in the same district, rests on no satisfactory authority.

Athough theatrical entertainments were introduced at Rome at an early period, the city possessed no permanent theatre before the Tnkithea Ponrovt, built in the second consulship of Pompey, B. c 55 . (Vell. Pat. ii 48 ; Plut. Pomp. 52.) Pro-
siously to this period, plays were performed in wooden theatres, erected for the occasion. Some of these temporary buildings were constracted with extravagant magnificence, especially that of M. Aemilius Scamrus in B. c. 59, a description of which is given by Pliny ( $x x x v i .24 . s, 7$ ). An attempt, to which we bave before alloded, was indeed made by the censor Cassins, B. c. 154 , to erect a stone theatre near the Lupercal, which was defeated by the rigid morality of Scipio Nasica (Vell. Pat. i. 15; Val. Max. ii. 4. § 2 ; Liv. Epit. slviii.; Oros. iv. 21). A good deal of this old Roman feeling remained in the time of Pompey; and in order to overcome, or rather to evade it, he dedicated a temple to Venus Victrix on the summit of his theatre, to which the rows of seats appeared to form an ascent (Tac. Ann. xiv. 20 ; Tert. de Spect. 10 ; Plin. viii. 7). Gellius places the dedication of the theatre in the third consulship of Pompey, which is at variance with the other authorities (N, A. x. 1). We bave spoken of its situation in a preceding section, and shall refer the reader who desires any further information on this bead to Canina (Indicaz. p. 368, seq.) , who has bestowed much labour in investigating the remains of this building. There is great discrepancy in the accounts of the number of spectators which this theatre was capable of accommodating. According to Pliny, in whose MSS. there are no variations, it held 40,000 persons (xxxvi. 24. s. 7); and the account of Tacitus of the visit of the German ambassadors seems to indicate a large number (" Intravere Pompeii theatrum, quo magnitudinem populi viserent," Ann. xiii. 54). Yet one of the codices of the Notitia assigns to it only 22,888 seats, and the Curiosum still fewer, or 17,580. It was called theatrum lapileum, or marnoreum, from the material of which it was built; which, however, did not suffice to protect it from the ravages of fire. The scena was destroyed in the reigo of Tiberius, and rededicated by Clandius (Tac. Ann. iii. 72 ; Dion Cass. 1x. 6). The theatre was burnt in the fire noder Titus, and again in the reign of Pbilip; but it must have been restored on buth occasions, as it is mentioned by Ammianus Marcellinus among the objects most worthy of notice in his acconnt of the visit of Constantius II. (xvi. 10). We learn from the Catalogus Imperatorum, that it had been repaired by Diocletian and Maximian; and it was also the object of the care of Theodoric (Cassiod. Var. iv. 51 ).

The Theatre of Balnus, dedicated in b. c. 12 (Suct. Aug. 29 ; Dion Cass. liv. 25), was a building of much less importance, and but few acconnts have been preserved of it; yet it must have lasted till a late period, as it is recorded in the Notitia. According to the Curiosum it accommodated 11,600 persons; whilst the MSS , of the Notitia mention 11,510 and 8088 .

The Theathum Marcelli was begun by Caesar (Iion Cass. xliii. 49), and dedicated by Augnstns, B. C. I2, to the memory of his nephew, Marcellas. (Mon. Ancyr.; Suet. Aug. 29 ; Dion Cass. liv. 26.) We have already mentioned its situation in the Forum Olitorium; and very considerable remains of it are still to be seen in the Piazza Montanara. Its arches are now occupied by dirty worksbops. It does not seem to have enjoyed so mncb celebrity as Pompey's theatre. According to the Curiosum it was capable of accommodating 20.000 spectators. The scena was restored by Vespasian (Suet. Iesp. 19) ; and Lampridins mentions that Alesander

Severus contemplated a renovation of the theatre (Alex. 44.)

THEATLE OF MAFCELLES.
These were the three lloman theatres, properly so called (Ov. Tr. iii. 12. 24.):-
"Proque tribus resonant terna theatra foris."
Some of the MSS. of the Notitia mention four theatres, including, of course, the ODEUM, which was a roofed theatre, intended for musical performances. According to the most trustworthy accounts, it was bnilt by Domitian, to be used in the musical contests of the Cupitoline games which he instituted (Suet. Dom. 4: Cassiod. Chron. p. 197, Ronc.) ; and when Dion Cassius (1xix. 4) ascrines it to Trajan, we may perhaps assume that it was finisbed or perfected by him. Nero appears to have first introduced musical contests (Tac, Ann. xiv. 20), but the theatre in which they were beld was probably a temporary one. The Odeum was capable of holding 10,000 or 12.000 persons. It is mentioned by Ammianus Marcellinns ( $x$ vi. 10).

The Amphitheatre of Statilies Taures was the first permanent building of that kind erected at Rome. After the chariot races, the gladiatorial combats were the most fawourite spectacle of the Romans; yet it was long before any peculiar boilding was appropriated to them. We have already related that the first gladiators were exhibited in the Fornm Boarium in n.c. 264 ; and subsequently these combats took place either in the circus or in the Forum Romanum: yet neither of these places was well adapted for. such an exlibition. The former was

## ROMA.

inconvenient, from its great length, and the mefae and spince were in the way; whilst the latter, besides its moral unsuitableness for such a spectacle, became by degrees so erowded with monuments as to leave but little space for the evolutions of the combatants. The first temporary amphitheatre was the wonderful one built of wond by Cacnar's partisan, C. Scrihonius Curio. It consisted of two separate theatres, which, after dramatic entertainments had been given in them, were turned round, with their audiences, by means of hinges or pivots, and formed an amphitheatre (Plin. xxxvi. 24. s. 8). Caesar himself afterwards erected a wooden amphi-
thealre (Dion Cass. xliii. 22); but that of Statilius Taurns was the first bnilt of stone, and continned to be the only one dumn to the time of Vespasian. We have mentioned that it was in the Campus Martius. It was dedicated in the forth consulship of Augustus, b. c. 30. (1)ion Cass. li. 23 ; Suet. Aug. 29.) The amphitheatre erected by Nero in the Campus Martius was a temporary one of wood. (Suet. Nero. 12.) The amphitheatre of Tauras, whieh does not appear to have been very magnificent (Dion Cass. lix. 10). was probably destroyed in the fire of Nero; at all events we hear no more of it after that event. The Ampinthentrum Flaviest,

COLOSSEU゙M.
erected by Vespasian, appears to liave been originally 2. 5), and was capable of containing 87,000 per- $^{2}$ designed by Augustus. (Suct. I'csp. 9.) It stood on the site previously occmpied by the lake of Nero, between the Velia and the Esquiline. (Mart. Spect.
sons. (Votitia, Reg. iii.) A complete description of this magnificent building will be found in the Dictionary of Antiquities, and need not be re-

GROTXD PLAN OF TYE COLOSSEI'M.
peated here. It was not completely finished till the reign of Domitian; thongh Titus dedicated it in the year 80. (Suet. Tit. 7 ; Aur. Vict. Cues. 9. 7.) In the reign of Macrimus it was so much damaged by a fire, necasioned by lightning, that it was necessary to exhibit the gludiatores and exnamones for several years in the Stadium. (Dion Cass. Inxviii. 25.) The restoration was undertaken by

Elugnbalus, and completed by Alexander Sererus (lampr. Hel. 17. Alex. 24.) It suffered a similar calamity under becin. (1lieron. Chron. p. 475); but the damage was again made good, and venafionet, or combats with willd beasts, were exhibited in it as late as the 6th eentury. In the middle ages it was converted into a fortress ; and at a later period a great part of it was destrosed by the

Romans themselves, in order to build the Cancelleria and the Palazzo Farnese with the materials. Enough, however, is still left to render it one of the
most striking and important monuments of imperial Rome. Its name of Colosseunt, first mentioned by Bede (ap. Ducange, Gloss. ii. p. $40{ }^{-}$, ed. Bas.)

## ELEVATION OF COLOSSELM.

under the form Colyseus, was either derived from the vast size of the building, or, more probably, from the colossus of Nero, which stood close to it. (See Nibby, Dell' Anfiteatro Flavio, in the Appendix to Nardini, i. p. 238, which contains the best history of the building down to modern times.) Of the Amphithe.atrum C.astnense, near S. Croce, we have already spoken [p. 827].

## XVI. The Thermae, or Baths.

We, of course, propose to speak here only of those large public institutions which were open either gratis or for a mere trifle to all, and of which the first were the Thermle Agripfae, near his Pantheon. The thermae must not be regarded as mere bolneae, or places for lathing. They likewise contained gymnasia, mr places for gymnastic exercises; hexedrae, or rooms for the dispntations of philosophers; as well as apartments for the delivery of lectures, \&ce. The thermae of Agrippa do not seem to have been so splendid as some of the subsequent ones ; yet, though they suffered in the fire under Titus, they were preserved till a late period, and are mentioned more than once by Martial (iii. 20.15, 36.6). The Thermae Neroniaxie were erected by Nero very near to those of Agrippa (Tac. Ann. xiv. 47 ; Suet. Nero, 12). After their restoration by Alexander Severus, who appears, however, to have also enlarged them (Lamprid. Alex. 25), they obtained the name of Thermie Alexindrinae (Cassiod. Chron. vol. ii. p. 194, Rone.). They must have lain between the Piazza Narona and tbe Pantheon, as they are thrice mentioned by the Anonymous of Einsiedlen between the latter building and the Circus Flaminius, which was the name be applied to the Piazza Navona. Hence the probability that the place just named was the Stadiam of Nero. The Thermae Neronianae are frequently mentioned in a way that indicates considerable splendour (Dlart. ii. 38. 8, rii. 34. 5; Stat. Silv. i. 5. 62); but their name was obliterated by that of the Thermae Alexandrinae, by which they appesr in the Notitia.

The third baths erected at Rome were the Thermae Titi, on the Esquiline, uear the Flavian amphitheatre. (Mart. Spect. 2). There are still considerable remains of these baths; but the plan of them is difficult to make out, from their having been erected on the site of a large previous building. Canina's account of them is the best (vide Memorie Romane di Antichitả, vol. ii. p. 119, Indicas. p. 101). The site on which they stand was perhaps previously occupied by the golden house of Nero. Near them stand the Timermae Tnajavi, which Canina has correctly distinguished from those of Titns (Preller, Regionen, p. 126; Becker, Handb. r .687 ). They are named in the Notitio as distinct,
and also in the Chroniclers, who however, singularly enough, place the building of both in the reign of Domitian. (Cassiod. Clerom. vol, ii. p. 197, Rone. ; Hieron, vol. i. p. 443.) The baths of Titus had been run up very expelitiously (" velocia munera,"," Nart. Spect. 2; " thermis juxta celeriter extructis," Suet. Tit. 7), and might consequently soon stand in need of restorations ; and it seems not improbable, as Becker suggests (Handb. p. 687), that Trajan, whilst he repaired these, also built his own at the side of them, before he had yet arrived at the imperial dignity. Cassiodorus (l.c.) expressly mentious the year 90 . Those actually built by Trajan must have Leen the smaller ones lying to the NE. of those of Titus, since Anastasius mentions the church of S. Martino de" Monti as Leing built "juxta thermas Trajanas" (Iit. Symmachi, P. 88, Blanch.). His object in building them may have been to separate the baths of the sexes; for the men and women bad hitherto bathed promiscuously: and thus the Catal. Imp. I ienn. notes, under Trajun: "Hoc Imperat. mulieres in Termis Trajanis laverunt."

The emperur Commodus, or rather his freedman Cleander in his name, is related to bave built sorne batlis (Lampr. Comm. 17; Herod. i. 12); and we find the Thermae Commodhaxae set down in the lst Regiun in the Notitia; whilst, by the Anonymous of Einsiedlen, on the contrary, they are three or four times mentioned as close to the Rotunda. Their listory is altogether obscure and impenetrahle. The Thermae severlanae are also recorded in the Notitia in the 1 st Region in connection with the Commodianae. They are mentioned by Lampridius (Secer. 19); but no traces of them remain.

The Thermae Antoninlinie or Caracallie present the most perfect remains of any of the Roman baths, and from their vastness cannot fail to strike the spectator with astonishment. The large ball was regarded in antiquity as inimitable. (Spart. Carac, 9. Sever. 21.) They were dedicated by Caracalla; but Elagabalas commenced the outer porticoes, which were finished by Alexander Severns. (Lampr. Hel. 17, Alex. 25.) They are situated under the church of $S$. Balbina, on the right of the Via Appia.

But the largest of all the baths at Rome were the Thensaae Dioclethixae. Unfortnnately they are in sucb a ruined state that their plan cannot be traced so perfectly as that of the baths of Caracalla, thongh enough remains to indicate their vast extent. They are situated on the inside of the agger of Servius, between the ancient Porta Collina and Porta Viminalis. Vopiscus mentions them in connection with the Bibliotheca Clipia, which they contained (Prob. 2). Thesp wers followed by the

Roma.
Thermae Constantinionae, the last erected at Home. They are mentiosed by Aurelius Iictor as an "opus cacteris haud multo dispar" (Caes. 40. 27). In the time of Da l'érac, there were still some restiges of them on the Quirinal, on the site of the present Palazzo Rospigliusi; but they have now entirely disappeared. At one time the colossal figures on Monte Cavallo stood near these baths, till Sistus Y. catased them to he placed before the Quirinal palace. Tradition connects them with the Equi Tiridatis Regis Armeniomun, mentioned in the Notitia in the 7 th Remion ; in which case they would belong to the time of Nero. On the other hand they clain to be the works of Phidias and Praxiteles; but there is no means of deciding this matter.
Besides the baths here enumerated, the Notitia and Curiosum mention, in the 13th Region, but under mutilated forms, certain Thermae Subanae et Declinae, to which we have already alhoded in the 5 th Section. They do not, however, seem to have been of much importance, and their history is unknown.

## XVII. The Bringeq.

Tome passessed eight or nine bridges; but the accounts of them are so very imperfect that there are not above two or three the history of which can be satisfactorily ascertained. The Poss Sublicuss, the oldest and one of the most frequently menfioned of all the Roman bridges, is precisely that whose site is most doubtful. It was built of werd, as its name imports, by Aucus Marçius, in order to comnect the Janiculum, which he had fortified, with the city. (Liv. i. 33; Dionys, iii. 45.) It was considered of such religions inportance that it was under the special care of the pontifices (Varr. L. L. v. §83), and was repaired from time to time, even down to the reign of Antonims l'ius. (Capitol. Aut. P.8.) Nay that it must bave existed in the time of Constantine is evident, not only from its being mentioned in the Notitit, but also from the fact of a bridge at Constantinople heing mansed after it, no doubt to perpetuate in that city the remembrance of its sacred character. (Descr. Const, Reg. xiv.) Yet the greatent difference of opmion pierails with regard to its situation; and as this question also involves another respecting the site of the Poxs Aembles, we shall examine them both together.

## ROMA.

We shall first consider the circumstances under which the sublician bridge was built: and then inquire into the passactes in ancient authors regarding it. Whether Ancus Marcins likewise built walls on the right bank of the Tiber when he built the bridge is, as we have before observed, very problematical. seeing that in his time there were none on the left bank, and therefore there could have been no impediment to his choosing whatever site he pleased for his bridge, due regard being paid to the nature of the ground. But, as before the time of Tarquinius l'riscus, the district about the Furum Boarium and circus was little better than a swamp, it does not seem probable that such a spot should have been selected as the approach to a bridge. The ground beyond the subsequent Porta Trigemina lies ligher and drier, and would consequently have afforded a more eligible site. Then comes the question whether, when Servius Tullius built his walls he included the Sublician bridge within them, or contrived that it should be left outside of the gate. As the intention of walls is to defend a city, it is evident that the latter course would be tbe safer one; for had the bridge afforded a passage to a spot within the walls, an enemy, after forcing it, would have found himself in the heart of the city. And if we examine the passages in ancient authors relating to the subject we shall find that they greatly preponderate in favour of this arrangement. Pulybius expressly says that the bridge was $\pi \rho \delta \quad \tau \bar{\eta} s$ $\pi$ ónews, befone or outside of the city (vi. 55). Becker, indeed (p.697), would rob $\pi_{r} 6$ of its usual meaning here, and contends that the expression cited is by no means equivalent to $\pi \rho \delta \delta_{0} \pi \hat{\omega} \nu \pi \nu \lambda \bar{\omega} \nu$ or ${ }^{\epsilon} \xi \omega \tau \hat{\eta} s$ módecs ; but he does not support this assertion with any examples, nor would it be possible to support it. The narratives of the flight of Caius Gracchus likewise prove that the bridge must bave been outside of the town. Thus Valerius Maximus: " Pomponius, quo is (Gracelus) facilius evaderet, concitatum sequentium agmen in l'orta Trigemina aliquaudiu acerrima pugna inhibuit - Lactorius autem in ponte Sublicio constitit, et cum, donec Gracchus transiret, ardore spiritus sui scpsit " (iv, 7. § 2). In like manner the account of Aurelius Victor (Vir. Ill. c. 65) plainly shows that tiracchus must have prassed the gate before he arrived at the bridge. There is nothing in Livy's narrative of the defence of the bridge by Huratius Cocles to determine the question eitber one way or

IUNS SCBLKH'S, IEESTORED HY CANINA.
the other. An inference night perhaps be drawn from a passume in Nenera, conpared with another in Plantas, in favour of the bridge being ontside of the Porta I'rigemina: "In Subliciun Pontem me transfor et inter earentes me abige: non ideo tamen me despiciam, quod in illormon monero considen, qui manum ad stipeen purrignt." (Sm. de I. Beat. 25.) As the Pons Sublicins is here shown to have been the haunt of beggars, so Plautus intimates that their
station was bryond the P. Trigemina (Capt, i. 1. $22):-$
"Ire extra Portam Trigeminam ad saccum licet."
When the Tiber is low the piles of a brilge are still visible that existed just outside of the l'orta Irigemima, near the I'orto di Ripa Grande (Catima, Indica: p. $555^{\text {) }}$ ) ; and the Italian topographers, as well as Bubsen, have assumed them to be the re-

## ROMA.

RONA.
mains of the Sublician bridge; whilst Becker, in his De Muris, held them to belong to the Pons Aemilins. That writer in the treatise alluded to (p. i 8 , seq.) made three assertions respecting the Aemilian bridge: (1) That it was not the same as the Sublician; (2) that it stood where the Sublician is commonly placed, i, e. just below the Porta Trigemina; (3) that it was distinct from the Pons Lapileus, or Lepidi. But in his IIundbuch, published ouly in the following year, he rejected all these assertions except the first.

According to the most probable view of this intricate and much disputed question at which we can arrive, the matter appears to us to have stood as foilows: the Pons Sublicius was outside of the Porta Trigemina, at the place where remains of a bridge still exist. The reasons for arriving at this conclusion bave been stated at the beginning of this discussion. Another bridge, of stone, also called Sublicius, was erected close to it to serve the purposes of traffic; but the wooden one was still preserved us a venerable and sacred relic, and as indispensable in certain ancient religious ceremonies, such as the precipitating from it the two dozen men of straw. But the stone bridge had also another name, that of Lapideus, by way of distioction from the wooden bridge.
Becker is of opinion that the notion of Aethicus, or Julins Orator, that Pons Lapileus was only a vulgar error for Pons Lepidi, is a " falsie eruditionis conjectura," and we think so too. We do not believe that the bridge ever bore the name of Lepidus. We may see from the account given of the wooden bridge by Dionysius, that, though preserved in his time, it was useless for all practical purposes (iii. 45).

We may be sure that the pontifices would not bavo taken upon themselves the repairs of a bridge subject to the wear and tear of daily traffic. Ovid (Fosst. v. 622) adverts to its existence, and to the sacred purpuses to which it was applied: -

## " Tunc quoque priscorum virgo simulacra virorum Mittere rubareo scirpea ponte solet."

The coexistence of the two bridges, the genuine wooden Sublician, and its stone substitute, is shown in the following passage of Plutarch: ou' $\gamma \dot{\alpha}$.p

 тащє匕́ovтos. (Num. 9.) Still nore decisive is the testimony of Servius: "Cum per Subliciun puatem, hoc est ligneum, qui modo lapideus dicitur, transire conaretur (Porsena) " (ad Aen. viii. 646). There must certainly have been a strong and practicable bridge at an early period at this place, for the heavy traffic occasioned by the neighbolurhoud of the Emporium; but when it was first erccted cannot be said. The words of Plutareh, $\dot{v} \pi^{\prime}$ Aiminiov та, $\mu=$ evolovos, are obscure, and perhaps corrupt; but at all events we must not confound this nutice with that in Liry respecting the building of the Pons Aemilius ; the piles of which were laid in the censorship of M. Aemilius Lepidus and M. Fulvius Nobilior, B.C. 179, and the arches conpleted some years afterwarkls, when P. Scipio Africanus and L. Mummius wete censors ( sl .51 ). There is 120 proof that the Pontc. Rotto is the Pons Aemilius; but Becker, in his secoul view, and Canina assume that it was; and this view is as probable as any other.

INSULA TIBERINA, WITH THE PONS FABRICIUS AXD PONS CESTIUS.

There were several bridges at Rome before the Pons Aemilins was built, since Livy (xxxv. 21) mentions that two were carvied away by the stream in E. C. 193; and these could hardly have been all, or he would undoubtelly have said so. The Insula Tiberioa was, in very early times, connected with each shore by two bridges, and hence obtained the name of Inyer. Duos Foxtes. (Plut. Popl. 8; Macrob. Sat. ii. 12.) That nearest the city (now Ponte Quattro Copr) was the Poxs Fabricies, so named from its founder, or probably, its, restorer, YOL. 11.
L. Fabricius, as appears from the inscription on it, and from Dion Cassius (xxxvii. 45). It was the favourite resort of suicides :-
" jussit sapieutem pascere barbam
Atque a Fabricio non tristem ponte reverti."
(Hor, S. ii. 3. 36.)
The bridge on the farther side of the island (now Ponte S. Bartolommeo) is commonly called Posas Clssius, and appears to haye borne that unme in
the middle ages. In the inscription, however, whin is still extant upon it, it is called lows firsthasts, and its resturation by Valentinian, Valens, and (iratian is commemorated (Canima, Indic, p, 5;-6; ef. Amm. Mate. xsvii. 3; Symı. E'pist. v, 76, x, 45).
Besides these bridees we find four others recordend in the summary of the Notitio, namely, the Aelins, Aurelins, Probi, and Milsius. The last of these lay two miles N. of Rome, at the punt where the Flaminian Way crossed the Tiber, mut has been already described in this dictionary. [P'ons Mavies.] The Poss Aelits (now Pomte S. Angelo) was buitt by Halrian when be founded his mausoleun, to which it directly leads. (Spart. Hadr. 19.) In the time of the Amonymous of Einsietlen, who has presersed the inscription, it was called Pons S. Petri. But before the tine of Hadrian there was a brilge which connected the district of the Vatiean with the city near the gardens of Caligula and Nero, remains of which still exist near $S$. Spirito. This is probably the bridge which is called in the Nirctilia " Poss Xemoxriviss," and by the ancient tupographers "Pons Vaticinto." The l'oxs Thtemphatas has also been sometimes identified with this hridge; but liranesi, who is followed by Bunsen, places the Pons Triumphalis above the Aelian bridge: and it is said that there are still remains of one of the piles near Tor di Sona. But in the time of Procopius these had disappeared, and the Pons Aelius formed the only commanieation between the city and the Vatican district.

The Puxs Atretu's was mast probably the present Ponte Sisto, leading to the Janiculum and the l'orta Aurelia. It appears to have been called Joss Antosints in the middle ages. What the Puss Paom may have been it is impossible to say. Becker assigns the name to the bridge by the Porta Trigemina, but merely because, haring denied that to be the Sublicius, he has nowhere elve to place it. Canina, on the contrary (Indic. p. 609), places it where we have placed the Pons Aurelins.

## XVII. Aquedects.

In the time of Frontinus there were at Pome nine principal apueducts, viz., the Appia, Anio Vetus, Marcia, Tepula, Julia, Virqu, Alsietina, Claudia, Anto Nous ; and two subsidiary ones, the Augusta and Kivus Herculaneus. ( 1 q. 4.) Between the time of Frontinus and that of I'rocopius their number had considerably increased, since the latter historian relates that the Coths destroyed 14 aqueluets that were without the walls. (B. G. i. 19.) The Notitia enumerates 19, viz. the Trajana, Amia, Attica, Marcia, Claudia, Herculea, Cerulea, Julia, Augustes, Appias, Alseation, Ciminia, Aurelia, D.aumati, Vugu, Tepula, Severianat, Antominiana, Alex:tultima. 'Io enter into a complete history of ath thome would almost require a separate treatise; and we einail therefore confine ourselves to a statethent of the hum wuportant particulans concerning them, reforisus those realers who are decirons of 1.an" infomation the the sulject to the Dicfionary $\because!^{\prime}$ Iutiquities. ant. Ant.amerters.

The Agl:A Armat was, as we have alrouly reLitcl, the first :agredact conferred on hame by the care of the censor $\mathrm{A}_{1 \mathrm{~g}}$ fius ('landius Cowtis, after whom it was mancil. It combenced on the Vin I'racocstim, betwern the ith and sth milestone, and extonded to the salinae, near the Porta Trigemint. The whole of it w.is thulergt turd, with
the exception of sixty passus conducted on arches from the l'orta Capena. Its water began to be distributed at the imus Cliyus l'ublicius, near the 1'urta Trigemına. (Front. Aq. 5.)

The Avio leters was commenced by the censor M. Curins Dentatus in B.C. 273, and completed by MI. Fulvius Flacens. (Ib. 6; Aur. Vict. Vir. Ill. 33.) It began above Tibur, and was 43 miles long; but only 221 passus, or less thatn a quarter of a mile, was ahove ground. It entered the city a little N. of Porta Maggiore.

The Aqvi Marcia. ne of the noblest of the Roman aquedncts, was built hy Q. Marcios Rex, in purauance of a commission of the senate, B. c. 144. 1t began near the Via Valeria at a distance of 36 miles from lome: but its whole length was nearly 62 miles, of which 6935 passus were on arches. lespecting its somece, sce the article Fuctuves Lacts [Vil. 1. p. 918.] It was lofty enough to supply the Mons Capitolinns. Augustus added another source to it, lying at the distance of nearly a mile, and this duet was called atter him, Aecis Acoesta, but was not reckoned as a separate aqueduct. (Frontin. Aq. 12.; Plin. xxxi. 24; Strab. v. p. 240.)

The Age: Treplen was built by the censors Con. Servilios Caepio and L. Cassins Longinns, B. C. 127. Its source was 2 miles to the right of the 10th milestonc on the Via Latina.

The preceding aqueluet was urited by Agrippa with the Ag1:A Juln, which began 2 miles farther down ; and they flowed together as far as the Piscina on the Via Latima. From this point they were condurted in separate channels in conjunction with the Aqua Marcia, so that the Ayun Julia was in the upprimost camal, the Darcia in the lowest, and the Tepula in the middle. (Eront. Aq. 8, 9, 19.) Rematis of these three aqueducts are still to be sean at the Pinta S. Iorenzo and Porta Vaggiore.

The Aqi a Virio was also conductel to Rome by Asrippa in order to supply lis baths. Acenrding to Fsontinus (Aq. 10) its name was derived from its source having been pointed out by a yonng waiden, but other explanations are given. (Plin. sxxi. 25; Cassiod. Var. vii. 6.) It commenced in a marshy district at the 8 th milestone on the Yia Collatina, aud was conducted by a very circuitous route, aod mostly underground, to the Pincian Jill; whence, as we have before mentioned, it was continued to the Campus Martius on arches which began under the gardens of Lucuilus. It is the only aqueduct on the left bank of the Tiber which is still in some degree serviceable, and supplies the Fonfona Trevi.

The Auca Alsietina belonged to the Transtiherime Region. It was constructed by Ansustus, and had its snuree in the Lacus Alsietinus (now Lago di 3 /artignano), lying 61 miles to the $\mathrm{rl}_{3}$ bt of the 1 tiln milestone min the Via Claudia. Its water was bal, and only fit for watering garlens and such like purposes. (Front. 11.)

The Aur'a Ctateda was begun by Caligula, and dedicated by Clandius, 1. ? 50 . This and the Anio Novus were the most gigantic of all the Roman aquedncts. The Clandia was derived from two abundant sources, called Cacrulas and Curtius, near the 38 th milestone of the Vian Sublacensis, and in its course was augmented by another spring, the Alhudinus. Its water was particularly pare, and the best after that of the Marcia.

The Asho Nove's began $t$ miles lower down the Via Sublacensis than the preceding, and was the
longest and most lofty of all the aqueducts, being 58,700 passus, or nearly 59 miles, long, and its arclies were occasionally 109 feet bigh. (Front, 15.) This also was conpleted by the emperor Clandius, as appears from the inscription still extant upon its remains over the Porta Maggione; where both enter the city on the same arch, the Anio Novus flowing over the Claudia. Hence it was conducted orer the Caelian hill on the Abcts Neroniaxi or Caelimontant, which terminated, as we have already said, near the temple of Clandins.

As Procopius mentions fourteen aqneducts, five new ones must liave been added between the time of Frontinus and of that histurian; bat respecting only two have we any certain infurmation. The first of these is probably the Agua Trajana, which we fink recorded upoo coins of Trajan, and which is also meationed in the Acta Martyr. S. Anton. The water was taken fiom the neighbourhood of the Lacus Sabatinus (Lago di Bracciano), and, being cunducted to the height of the Janieulam, served to turn the mills under that hill. (Procop, B. G. i. 19.) This duct still serves to convey the Acqua Puola, which, however, bas been spuilt lis water taken from the lake. It was also called Conisis.

The Aqua Alexixdrina was constructed by the emperor Alexander Severus for the use of his haths, (Lamprid. Alex. 25.) Originally it was the same as that now called Acqua Felice, but conducted at a lower Jevel.

The Aqua Sevebiaxi is supposed to have been made by the emperor Septimius Sererus for the use of his baths in the lst Region; but there is no eridence to establish its execution.

The Aqua Antosisianis was probably executed by Caracalla for the service of his great baths in the 12th Region ; but this also is unsapported by any satisfactory proofs, (Canina, Indic. p. 620.) The names and bistory of a few other aqueducts which we sometimes find mentioned are too ubscure to require notice here.

It does not belong to this subject to notice the Roman Viae, an account of which will be found under that head.

## Soleces and Litehitire of Romin Topography.

Witb the exception of existing monuments, the chief and most authentic sources for the topography of Rome are the passages of ancient authors in which differeot localities arc allnded to or descrihed. 1nscriptions also are a val uable source of ioformation. By far the mest important of these is the Montmenticim Ascrranom, or copy of the record left by Augustus of his actions; an account of which is given elsewhere. [Vol. 1. p. 134.] To what is there said we need only add that the best and most useful edition of this document is that puluished at Berlin with the emendations of Framz, and a commentary by A. W. Zampt ( 1845 , 4:0. pp. 120). Another valuable inscription, though not nearly so important as the one just mentioved, is that called the Basis CaplToLisis (Gruter, ecl.), containing the oames of the Vici of 5 Regions (the 1st, 10th, 12 th, 13th, and 1 th $)$, whose curatores and vicomngistri erected a monument to Hadrian. It will be found at the end of Becker's Handbuch, vol. i. We may also mention among sources of this description the fragments of Calendars which have been found in varions piaces, and which are frequently useful by marking the sites of temples where certain sacrifices
were performed. For the wost part the wicinal marbles of these flaments have disappeard, and the inscriptions on them are consequently only extant in MIS. copies. One of the most ancient momuments of this kind is the Fasts Mlaffeonemp or Calemdamua Maffeancis, so called from its haviog been preserved in the Palazzo Muffei. With a few lacunce, it contaios al! the twelve months; but what little information that is to be found iu it, besides the principal festivals, relates chiefly to Augustus. The next in importance is the Fasmi Praenestini, discovered at Praeneste (Palestrina) in 17it. Verrius Flaceus, the celebrated grammarian, arranged and annotated it, cansed it to be cut in marble, and erected it in the fornm at Praeneste. (Suet. Ill. Gramm. c. 17.) Only four or five months are extant, and those in an imperfect state. The Calendahicm Amiteisnisem was discovered at Aniternum in 1703, and contains the months from Nay to December, bat not entire. The calendar called Fasti Capraniconla, so named from its baving formerly been preserved in the $P a$ luzzo Capranica, contains Augnst and September complete. Other calendars of the same sort are the Antlatinum, Vencsinus, \&c. Another lapidary document, but unfortunately in so imperfect a state that it often serves rather to puzzle than to instruct, is the Capitoline Plan. This is a large plan of Rome cut upon marble tablets, and apparently of the age of Septimius Severus, though with subsequeat additions. It was discorered by the architect Giovanoi Autonio Dosi, io the pontificate of Pios 15., under the church of SS. Cosmo e Damiuno; where, broken into many pieces, it was used as a covering of the walls. It came into the possession of Cardinal Farnese, but was put away in a lumber room and forgotten for more than a century. Being rediscovered, it was published in 1673 , in 20 plates, by Gioranni Pietro Bellori, librarian to Queen Christina; and subsequently at the end of the 4 th volume of the Thesaurus of Graerius. The original fragments were carried to Naples with the other property of the Farnese fanily, and were subsequently given by the kiog of Naples to Pope Benedict XIV. In 1742 Benedict presented them to the Capitoline Museum at Rome, where they now appear on the wall of the staircase; but several of the pieces had beeo lost, for which copies, after the designs of Bellori and marked with a star, were substituted. On these fragments the plans of some ancient buildings may be made out, but it is very seldom that their topographical connection can be traced.
Amongst the literary records relating to Boman topography, the first place must he assigned to the Notimb. The full title of this work is: Votitia Dignitatum utriusque Imperï, or in Partibus Urientis et Occidentis; and it is a statistical view of the Roman empire, of which the description of Rome forms only a small portion or appendix. It cannot be later than the reign of Constantine, since no Christiao charch is mentioned io it, and indeed no building later than that emperor; nor, on the other hand, can it be earlier, since numerous buildings of the 3rd century, and even some of Constantive's, are named in it. The design of it seems to have been, to name the principal luildings or other objects which marked the boundaries of the different liegioos; but we are not to assume that these objects are always named in the order in which they occurred, which is far from being the case. This By Microsoft (1) siz
catalogue has come down to us in various shapes. One of the simplest and most genuine seems to be that eatitled Curiosum Urbis Romae Regionam XIIII. cmm Breviariis suis, the MS. of which is in the Vatiran. Some of the nther MSS, of the Notitia seem to have been interpolated. The spelling and grammar betray a late and babbarons age; but it is imporssible that the work can have been composed at the time when the MS. was written.

Benifes these there are two catalogues of the socalled Liegionami, Pebuns Vhtok, and swatis RuFl's, which till a very recent period were regarded as genuine, and formed the chief basis of the works of the Italian topogmphers. It is now, however, universally allowed that they are compilations of a very late date, and that even the names of the writers of thea are forgeries. It womld be too long to enter in this place into the reasons which have led to this conclusian ; and those readers who are desirous of more information will fiad a full and clear statement of the matter in a paper of 91 r . Bunbury's in the Classical Museum (vol. iii. 1. 373, seq.).

The naly other authorities on Roman topography that can be called original are a few notices by travellers and others in the middle ages. One of the priacipal of these is a collection of inscriptions, and of routes to tbe chief churches in Rame, diiscovered by Mabillon in the monastery of Einsiwdten, whence the author is commonly cited as the Anosymus Elxsiembessis. The work appears to belong to the age of Charlemagne, and is at all events older than the Leorinc city, or the midtle of the 9 th century. It was published in the 4 th wol. of Mabillon's Analicta: but siace more currectly, arcording to the arramement of Gustav Haenel, in the Archio fir Ihilulugie mal Palugngik, vil. ©. p. 315, seq. In the Rantes the prinerpal objects on the right and left are mentioned, though often lying at a cumsiderable distance.

The treatise called the Mu:abnit Powne, prefixed to the Chrumicon Romualdi Salmutani in a MS. preserved in the Vatian, and letonging apparently to the 12 th century, seems to have been the first attempt at a regular deacription of ancient Rome. It was conjuiled from statistical notices. narratives in the Acta Martyrmm, and popmiar legends. It appears, with rariations, in the Liber Censuum of Cencius, and in many subsequent manuscripts, and was printed as early as the 1 fith century. It will be found in Montfincon, Diarimn Itul. p. 283 , sel., and in Nibby's Effemerili lett. rurie, Rome, 1820, with nutes. A work ascribed to Matitists Pohnexts, beluming probably to the latter part of the 13 th century, seens to have been chiefly fumbled on the Mirabilia. Accounts of some of the gates of Rome will be fonnd in Whan, ans of Mamsabulay's work the Gistis Regran Anglorum (brok iv.).

The thoser:ine Pogato, who flourished in the 15th century, paid great attention to Ruman antijuities. His doweription of Rome, as it existed in lus time, is a mere sketch, but elegant, scholar-ike, :und tondhing. It is containel in the first book of his work entitled the lierivtate Porfunne t'rbis Romac, and will be found in Sallen re, Nine. Thesaur. Ant. Rom. val. i. p. 501. A separate edition of his work was alon pub ished in Paris, 1723. His predecessor, Pistratecis, las siven a few partientars respecting the state of the city in his time; but he treats the shlaret in an uncritio. on anan

The fraveller Kivmacts, ailed from his native town Anconitanus. who accompanied the emperor sigismund, passed a few days in Rome daring the time that Poggio was alon there, which he spent in collecting inscriptions, and noting down some remarks. Ilis work, eatitled Kyriaci Ancmaitani Itinerarium, was published at Florence in 1742.
Such are the chicf original sources of Lbman toperraphy. The literature of the subject is abundantly ecpious, but our space will fernait us to do little nome than present the realer with a list of the pincipal works. The first regular treatise on the antiquities of Rome was that nf Biondn Flavio (Blondus Flavius) ( $1388-1463$ ), who was at wince a man of business and a 11 an of letters. His work entitled Rumas Instanrata, a gigantic step in Roman topograplyy, was publisted by Frohen at Busle, 1513, fol. An Italian transtution by Lacio Fanno, lowt imperfect, appeared at X'chice in ists. Tomands the ead of the 15 th centary, Julius Pomponius Lactus fuunded the Ruman Acadeny. Lactus was an enthu-iastic collector of inscriptions, but his fondness for then was such that he sometimes inve: ted what he failed ia discovering, and he is accused of having forged the inseription to the statoe of Claudian found in the forum of Trajan. (Tirabocchi, Storin della l.ett. vol. ii. lib. iv.) Ilis bouk, De Romanae Crbis vetustate, is uncritical, and of small value. Janus Parrhasins had a little previously publisbed the preudo-Victor. To the same perial belong the De C'rbe Roma Collectanea of the bishop Fabricius Varranus, a compilation chicfly borrowed from Biondn, and publishem, like the work of Lactus, in the collection of Mazucehi, Fome, 1515, 4:a Bemandu Ruccellai, a friend of Lorenzo de' Medici, commenced a description of Rome, by way ol conmentary on the sotalled Victor. It was neser coupleted, and the MS., which is of considerable value, was first priatel among the Florentine "Siriptores," in an Appendix to Muratori's collection (val, ii. p. 755 ).

The next work that we need mention is the Antiquitutes l"rbis Romne of Aadreas Fulvius, liome, 1527 , fol. Bresc. $1545,8 \mathrm{mn}$. This production is a grast step in alsance. Fulvius procured from Raphael a sketeh of the 14 Regions, accorling to the restoration of them by himself, but it dues not seem to lave been preseived. In 1534 the Milanese knight Bartholomaens Marliaaus published his Urbis Romae Topegraphin, a work in many puints still unnurjassed. An angmented and much improvel edition was published in 1544; but that of 1.588 is a mere reprint of the first. It will also bo found in the Thesaurus of Graevins, vol. iin. Marliano was the first to illustrate his work with plans and drawings, though they are not of a very sugeriou kind. Lucin Faun's Delle Autichifia della Cittio di Foma appeared at Venice in 1548 . It contuins a ferr facts which lad been overlooked b; lis predecessors. The celebrated hermit Onuphrins Panvimins of Verona, published at Venice in 1.5 .5 s his Commentarium Reimblicac Romanne Librilll. The first book, eatitlel Antiquace l'rbis Imago, which is the topographical part, is written with much leaming and acoteness. It was intended merely as a preface to a complete deseriptiun of Rone according to the Iicgions of Augnsths, but the early death of I'aavimins preseated the execution of this plaa. His work is contained in the callection of Graevius, vol. iii. It was Panvinits, who first published Sextus Rufins, and he alse greatly augmented Publius

Victor. George Fabricius, of Chemnitz, author of Antiquitatum Libri 11., Basle, 1550, accused Panvinius of stealing from him; but if such was the case, he greatly improwed what he purloined. Jean Jacques Boissard, of Besançon, published at Frankfort in 1597 a Topographia Romance Urbis, which is not of much value; but the sketches in his collection of inscriptions have preserved the aspect of many things that have now disappeared. The next work of any note is the Roma V'etus et Recens of the Jesnit Alex. Donatus of Siena, in which particular attention was paid to the illustration of Roman topography by passages in ancient antbors. It was published at Jume, 1638, fto, and also in the Thesuurus of Graerius, vol. iii. But this production was snon obscured by the more celebrated work of Fumimiano Nardini, the Roma Autica, which marks an epoch in Roman Topography, and long enjoyed a puramount authority. So late ns the year 1818. Hobhouse characterised Nardini as "to this day the most serviceable condnctor." (Hist. Illustrations of Chitde Harold, p. 54.) Yet, in many respects, he was au incompetent guide. He knew no Greek; le tonk the works of the pseudo-Regionaries for the foundation of his book; and it is even affirmed that, though he lived in Rome, he laad never visited many of the buildings which he describes. (Bunsen, lorrede zur Beschreibung, p. xxxix.) His work was published at liome, $\mathbf{I} 668$, 4 to; but the best edition of it is the 4th, edited by Nibby, Rome. 1818, 4 vols. 8ro. There is a Latin translation of it it Graerius, vol. iv. It 1680, Raphael Fabretti, of Urhino, secretary to Cardinal Ottoboni, published a valuable work, De Aquaeductibus, which will also be found in the same volume of Graevius.

Towards the end of the fith century two learned French Benedictines, Mabillon and Muntfaucon, rendered much service wo Roman topograply. Mabillon first published the Anonymus Einsiedlensis in his Analecta (vol. iv. p. 50, seq.) Montfancon, who spent two years and a halt in Rome (16981700), inserted in his Diariun Italicum a description of tive city divihed into twenty days. The 20th chapter contains a copy of the Virabilia. In 1687 Olans Borrichius published a topographical sketch of lome, accoräing to the Regiuns. It is in the 4 th volume of Graevius. The work of the Marquis Ridolfinu Venuti, entitled Accurata e succinta Descrizione Topografica delle Autichità di Roma (Roma, 1763, 2 vols. 4 to.), is a book of more pretensions. Venuti took most of his work from Nardini and Piramesi, and the new matter that he aided is generally erroneous. The 4 th edition by Stefano Iiale, liome, 1824, is the best. Francesco Ficoroni's lestigia e Raritie di Roma Antica (Koma, 1744, 4to.) is not a very satisfactory performance. The most useful portions of it have beea inserted in the Miscellanea of Fea (part i. pp. 118-178). The work of our eountryman Andrew Lumisden, Remarks on the Antiquities of Rome and its Eneirons (London, 1797,4 tu.) was, in its day, a book of sotne authority. Many valuable observations on Roman topography are scattered in the works of the learned Gaetano Marini, and especially in his Atti de' Fratelli Arvali; but he treated the subject only incidentally. The same remark applies to Visconti. The Roma descritta ed illustrata (Roma, 1806, 2 vol. 4to.), of the Albate Guattani is the parent of most of the modera guide books. Antonio Nibby has published several useful works on Roman topography, which, if sometimes deficient in accurate
scholarship, display nevertheless considerable at uteness and knowledge of the subject. His principal works are, Del Foro Romano, della l'ia Sacra, y'c., Ruma, 1819, svo.; Le Mura di Roma, disegnate da Sir W. Gell, illustr. da A. Nibby, Ruma, 1820; and his Roma Antica, published in $1 \times 38$. Sir Wm. Gell's Topography of Rome and its Vicinity (2nd Edit., revised and emlarged by Bumbury, London, 1846) contains some useful information. The Miscellanea filologica, critica ed antiquaria (Rome, 1790), and the Nuova Descrizione di Roma (Rome, 1820, 3 vols. 8vo.), by Carlo Fea, are useful works. Hoblruse's Ilistorical Illustrations of Childe IIarold, with Ihissertations on the Rurins of Rome (London, 2nd ed. 1818, Sro.) are chiefly raluable for their account of the gradual destruction of the city. The works of two other Englishmen are now out of date viz. Edward Burton's Description of the Antiquities of Rome (Oxf, 1821; London, 1828, 2 vols. 8vo.); and the Rev. Richard Burgess's Toporraphy and Antiquilies of Rome (Londou, 1831, 2 vols. 8vo.). Fursytih's Italy is of little service for Rome. Sachse's Gieschichte und Beschreibung der alten Stadt Rom (Hanover, $1824-1828,2$ vols. 8vo.), though still in some respects a useful production, must now be regarded as superseded by more recent works.

We are now arrived at the Beschreibung derStadt Rom, with which may be said to commence the modern epoch of Roman topograply. This work was projected in 1817 by some German literati then residing at Rome, among whom were the present Chevalier Bunsen, and Erost Platuer, Ednard Gerhard and Wihelm Röstell. They were joined by the celebrated historian B. G. Niebulir, who undertook the superintendence of the ancient part; for the scheme of the look embraced a complete description of the modern city, with all its treasures of art, besides an account of ancient Rome. It is, however, of cumse only with the latter that we are here concerned, which was undertaken by Niebubr. Bumsen, and subsequently L. Urlichs. Niebuhr's connection with the work was not of long duration, and only a few of the descriptions are from his hand, which form the most raluable portion of the book. The views of the German scbolars theitened a complete revolution in Ruman topograply. They seemed to bave come to Rume with the express design of overturning the paper city, as their ancestors many centuries before had subverted the stone one. In exteat and accuracy of erudition they were far superior to their Italian antagonists ; but this advantage is often more than countertalanced by that want of sober and citical good sense which so frequently mars the productious of German scholars. They have succeeded in throwing doubt upon a great deal, but have established very little in its place. To Piale, and not to the Germans, beloogs the merit of having reestablished the true situation of the forum, which may be considered as the ruost important step in the modern topography of Rome. The German views respecting the Capitol, the comitium, and several other important points, lave found many followers ; but to the writer of the present article they appear for the most part not to be proved; and he has endeavoured in the preceding pages to give his reasons for that opimion.

It cannot be denied, however, that the appearnnce of the Beschreibung did good service to the cause of Foman topography, by awakening a slarper and more extended spirit of inquiry. The first volune

ROMA.
appeareth at Stuttgard in 1829, the last in 1842. As a literary proluction - we are suraking of comse of the ancient parts - it is of little semvice to the scholar. The descriptions are verbose, and the ancient ones being intermingled with the modern lave to be sought through a voluminous mork. A still graver defect is the almost entire absence, especially in the earlier volumes, of all citation of authorities.

At this perioul in the history of Ruman topography W. A. Recker, pail a short visit to liome. Becker took up the subject of bis researehes as a puint of national honowr; nod in his first tract, the Rumae Veteris Muris atque Portis (Leiparg, 1842), desoted two pages of the preface to an attack upon Cuma, whom he suspeeted of the grave offence of a want of due reverence for German sebolarship. But with an iuborn pugracity his weaponswere alsoturned against his own countrymen. Amida little faint praise, the labours of Bansen and Urliclos were censared as inctuplete and unsatisfactory. In the following year (1843) Becker published the first rolume of his Mandbuch der Remisclien Alfcrthüuser, containing a view of the topography of Rome. A roriew of his work by L. I'reller, which appeared in the Neue Jenaische Allyemeise Literatur-Zeitung. though written with candour and moderation, seenis to have stung Becker into fary. He anstrered it in at gamphlet entitled Die Rümische Topographie in Rom, eine Warnung (Leipsig, 1844), in which be aecused Preller of having taken up the cudgels in farour of Canitia, though that gentleman is a moderate adherent of the German school of topographers. Nothing can exceed the arrogant tone of this pamplilet, the very title of which is offensive. It was answered by Urlichs in his Römische Topagruphic in Leipzig (Stuttgart, 1845), in which. though Becker well deserved castigation, the author adopted too much of the virulent and persomal tone of his adversary. The controversy was brought to a close by a reply and rejoinder, both written with equal bitterness: but the dispute has served to throw light on smme questions of Roman topography. In at parely literary point of view, Beeker's IImadlurk must be allowed to be a very useful production. IIis views are arranged and stated with great clearness, and the constant citation of anthorities at the bottom of the page is very convenient to the stadent. The writer of this article feels himself bound to acknowledge that it would not have been pussible for him to have prepared it without the assistance of Becker's work. Nevertheless he is of ogomion that many of Becker's views ma the thast important points of lioman topography are entirely erromeots, and that they have gained acceptation only from the extraurdinary confidence with which they are asserted and the dusplay of learning by which they are supported. Amonest other German toper aphens we need only mention here L . I'relles, who has done good service by some able papers athl by his useful work on the Regions of Angustus (l)ir Regionen dir Stadt Rom, Jena, 1846, 8ro.). We may add that the Enylish reader will find a succinct and able sketch of the views of the Geman scheol, and particularly of Becker, in a series of very valuable papers by Mr. Bunbury, published in the Classical Muscum (vils. iii. iv. and v.).

We shall close thas list with the names of two modern Italian topograjhers, Butwern the years 1820 and 1835 , Stefian Piale publivied some very

ROMA.
Pu raphy, among which the following 11 ay be partienlarly mentioned: Delle I'orte settentrionali del Recinto di Servio: Jelle Porte orientali, delle meridionali, e di quelle del Nonte Aventino della stessa cinta; Hella grandezza di Roma al tempo di Ilinio; Del Foro Komano; Delle 1 Ifra Aureliuse; e degli untichi Arsenali detti Naralia, d'c. Bat at the head of the modern Italian school mast we placed the Commendatore, Lnigi Canina. Carina has a real enthusiasin for his subject, which, frum his profession, he regards from an arehitectoral rather than a philutagical point of view ; and this, combined with the adrantages of a residence at Rome, gies far to compensate the absence of the profounder, but often unwieldy, erudition of the Germans. The later editions of his works have beon freed from some of the ervors which disfigared the early ones, and contain much uspful information, not unmixed sometimes with erroneous views; a defect, however, which in a greater or less degree must be the lot of all who approach the very extensive and very debatable subject of Roman topograpby. Canina's principal works are the Indicazione lopografica di Koma antica, 4th ed. Rome, 1850, 8vo.; lel Furo Romano e sue Adjaceare. 2nd ed. 1845 ; and especially his magnificent work in fuur large folio volumes entitled Gli Edifizi di Roma antica, with views, plans, and restorations.

It now only remaias to notice same of the prineipal maps and other illustrations of Rome. The Floreutine San Gallo, who flourished in the 15 th century, drew several of the most remarkable monuments. The sketches and plans of Antonio Labaceo, executed at the beginning of the 16 th century, are valuable but scarce. We bave already meationed that Kaphaet designed, or thought of designing, a plan of the restored city. This plan, if ever executed, is no longer in existence; but a description of it will be fomm in a letter addressed by Castiglione to Poje Leo K. (Published in the works of Castiglione, Padua, 1733. There is a (rasslation of it in the Beschreibuag, vol. i. p. 266, seq.) Serlio of Bologna, architcet to Francis I., gave many plans and setches of ancient Roman buildings in the Srd book of his work nn archieteture (Venice, 1544, fol.). to which, however, he added restorations. Leonardo Buffalini's great plan of Rome, as it was in 1551, was most important for Ronan topograply. It was drawn on wood in 24 plates; but pufortunately all that now remains of it is an imperfect copy in the Barberini palace. Pirro Ligorio and Bernardo Gamueci published several riews in Pome about the middle of the 16th century. In 1570 appeared the great work of Palladio, Libri /5'. dell' Architetturo. ge. (Venice, fol.), in the 4th book of which are several plans of uncient temples: bat the collection is not so rich as that of Serlio. Scamozzi's Discorsi sopra le Antichitía di Roma (Venice, 1852, ful.) contains some good views, but the letter-press is insiguiticant. In 1574 Fulvias Ursinns assisted the I'arisian architect 1) ( Pérac in drawing up a plan of the restored eity, which was publisbed in several sheets by Giacomo lauro. It is erroaenas, incomplete, and of little service. Of much more value are the views of ancient monaments pullished by Du Peme in 3573 , and republished by Lossi in 1773 . In the tinne of Da Pérac several monuments were in existence which have now disappeared, as the formm of Nerva, the Septizonimm, and the trophies of Marius. The sketches of P'ictro Sasti Bartoli, first frublished in $17+3$, ph clever but full of mannerisa.

Antuine Descodetz, sent to Nome by Colbert, published at Paris in 1682 his work in folin, entitled Les E'difices antiques de Rome mesurés et dessines. The measurements are very correct, and the work iodispensabile to those who would throrouglily study Roman architecture. Nulli's great plan of Rome, the first that can be called an accurate one, appeared in 1748. In 1784 Piranesi published bis splendid work the Antichita Romane (Rome, 4 vols. fol.), containing the principal ruins. It was continued by his som, Francesco Piranesi. The work of Mich. d'Overbeke, Les restes de Vancienne Rome ( $\$ 1$ la Have, 1673,2 vols. large fol.), is also of great value. in 1822 appeared the Antichitia Romane of Lnigi Kossini (Rome, 1822, large fol.). To the plans and restorations of Canina in his Edifici we have already allnded. His large map of Rome represents of course his peculiar views, hut will be found useful and valuable. Further information on the literature of Ruman topography will be found in an excellent preface to the Beschreibung by the Cbevalier Bunsen.

## COIN OF ROME.

ROMATI'NUS. [CoNCOHDIA.]
ROME'CHIUN, a place on the E. coast of the Bruttian peninsula, mentioned only by ovid, in bis description of the voyage of the Epidamian serpent to Rome (Ovid, Met. xv. 705). The geography of the passare is by no means very precise; but according to local topagraphers the name of Romechi is still retained by a place on the sea-coast near Roccella, abont 12 miles N. of the ruins of Locri (Romanelli, vol. i. p. 156. Quattromani, Not. ad Barrii Calabr. iii. 13.)
[E. H. B.]
Ro'MlLLA, a place in Upper Pamonis, on the raad leading from Aemona along the river Savus to Sirmium. (It. Ant. p. 274; Tab. Peut.) It is perhaps the modern Carlstadt, the capital of Croatiz.
[L. S.]
ROMLLA. [DACIA, f. 744. b.]
ROMIULEA ('P $\mu \mu \nu \lambda i \alpha$, Steph. B.: Bisaccia), a city of Samniam, mentioned by Livy (x.17), as being taken by the Roman consul P. Decius, or according to others by Fabius, in the Third Samaite War, B. c. 297. It is described as being a large and opulent place; but seems to have afterwards fallen into decay, as the name is not noticed by any otber writer, except Stephanns of Byzantinm, and is not found in any of the geographers. But the Itineraries mention a station Sub Romula, which they place on the Appian Way, 21 miles beyond Acenlanum, and 22 miles from the Pons Aufidi (Itin. Ant. p. 120). Buth these stations being known, we may fix Romulea, which evidently occupied a bill above the road, on the site of the modern town of Bisaccia, where various ancient remains have been discavered. (Romanelli, vol. ii. p. 348 ; Cluver. Ital. p. 1204. Pratilli, Via Appia, iv. 5). [E. H. B] ROSCIA'NUM (Rossano), a town of Bruttium, situated on a hill abont 2 miles from the sea-coast. or the gulf of Tarentum, and 12 miles from the mouth of the Crathis. The onge is not found in
the geographers, or mentiooed by any earlier writer: but it is fonnd in the Itinerary of Antoninus, which places it 12 miles from Thurii, and is noticed by Procopits during the Gothic wars as a strong fortress, and one of the most important strongholds in this part of Italy. (Itin. Ant. p. 114; Procup. B. G. iii. 30.) It was takeo by Totila in A. D. 548 , but continned throughout the middle ages to be a place of importance, and is still one of the most considerable towns in this part of Calabria. [E.H.B.]

Rostrum NEMAV1AE, a place in the central part of Vindelicia, on the river Virdo. (it. Ant. pp. 237. 258.)
[L. S.]
Rotoshagus ('Patóparos), in Gallia Lagdnnensis, is mentioned by P'tolemy (ii. 8. § 8) as the capital of the Veneliocasi, as the name is written in some editions. [Vellocasses.] In the Table the name is written Pattomagus, with the mark which indicates a capital town; and in the Antonine 1 tin. it occurs in the corrupted form Latomagus on the road which runs from a place called Carocotinum. Ammianns (xv. 11) speaks of it in the plural number Rotomagi. There are said to be coins with the legend Fatnmacos.

Rotomagns is Roues on the north side of the Seine, and the capital of the department of Seine Inferieure. The old Gallic name was shortened to Rotomam or Rodommm, and then to Rouen, as Rodumna has been shortened to Roanne. The situation of Rouen probably made it a town of some itmportance moder the Roman Empire, but very few Roman remaios have been found in Rotuen. Some Roman tombs have been mentioned. - [G. L.]

ROXOLA'N1 ( $\mathbf{P} \omega \xi_{0} \wedge a \nu v!$ ), a people belonging to the Sarnatian stock, who first appear in history about a century before Christ, when tbey were found occupying the steppes between the Dnieper and the Don. (Strab. ii. p. 214. vii. pp. 294, 306, 307.309; Plin. ir. 12; Ptol. iii. 5. §§ 19, 24, 25.) Afterwards some of them made their footing in Dacia and behind the Carpathians. Strabo (vii. p. 306) bas told the story of the defeat of the Roxolani and their leader Tasius by Diophantus, the general of Mithridates, and takes the opportunity of describing some of their manners which resembled those of the Sarmatian stock to which they belonged. Tacitus (Hist. i. 79) mentions another defeat of this people, when making an inroad into Moesia during Otho's short lease of power. From the inscription (Urelli, Inscr: 750) which records the honours paid to Plantins Silvanns, it appears that they were also defeated by him. Hadnian, who kept bis frontier quiet by subsidising the needy tribes, when they complained about the payment came to terms with their king (Spartian, IIadr. 6) - probably the Rasparasanus of the inscription (Orelli, Inser. 833). When the general rising broke out among the sarmatian, German and Scythian tribes from the Thine to the Tanais in the reign of M. Anrelins, the Rosolani were included in the number. (Jul. Capit. 1. Anton. 22.) With the inroads of the Goths the naune of the Roxolani almost disappears. They probably were partly exterminated, and jartly united with the kindred tribes of the Alani, and slared the general fate when the Huns poured down from the interior of Asia, crossed the Don, and oppressed the Alani, and, later, with the help of these, the Ostro-Goths.

It has been assumed that the name of the FinsC.llast (Paka入avot, Ptol, iii. 5. § 24) is not different frome that of the Rosulanisywh, wecording to

Schafarik (Sler. Alt, vol. i. p. 342), recrived then appellation from the Sarmatian "lasa,"- perhaps the lolga or some other river in their se:tle. ments.
[E. B. J.]
RI'ADITAE. [Marsuraca, p. 278 , a.]
R'TBI (Eth. 'Pubaotewós, Rublastinus: Ruro). a eity of Apulia, situated on the branch of the Appian Way between Cammia and Butuntum, and abont 10 miles distant from the sea-cuast. It is mentioned by llorace, as one of the places where Maecenas and his companions slept on the journey from Fome to Brundusium. (Hor. Sat. i. 5. 94.) The distance from Camsium is given as 23 miles in the Antonine Itinerary, and 30 in the Jerusalem Itinerary, which is the more correct, the direct distance on the map being above 28 miles. (Itin. Ant. p. 116; Itin. Hier. p. 6t0.) Neither Strabo nor I'toleny notices the existence of Rubi, but the inhabitants are mentiuned under the name of Rubustini by I'liny, among the municipal towns of Apulia, and the " Rulusstinns Ager" is enumerated in the Liber Coloniarum among the " ('ivitates Apuliae." (Plins iii. 11. s. 16; Lib. Colon. [1. 262.) An inscription also attests the municipal rank of Rubi in the reign of the younger (iordian. (Mommsen, Inscr. K. N. G24.) The singular etlonic form civen by Pling is confirmed by the evidence of coins which bave the name P $\backslash B A \Sigma$ TEIN $\Omega N$ at full. These coins show also that Rubi must have receivel a considerable amount of Creek influence and cultivation ; and this is still more strongly confirned by the discoveries which have been recently made by excavations there of nume:ons works of Greck art in bronze and terra cotta, as well is of vast numbers of painted rases, of great variety and beauty. These, however, like all the others found in Apulia and Lucania, are of inferior execution, and show a declining state of art as compared with those of Nola or Volei. All these objects have been discovered in tombs, and in some instances the walls of the tombs themselves have been found covered with paintings. (Romamelli, vol, ii. p. 172; B'ullott, dell' lust. Arch. 1829, p. 173, 1834, pp. 36, 164. 228, ※心.) The modern town of Ruru is still a considerable place, with an episcopal sce. [E.H.B.]

COLS OF REMI.
IUBBICON ('Poofikwy), a small river on the E. roast of Italy, flowing into the Adratic sea, a few mates N . of Aliminum. It was a trifling stream, one of the least considerable of the nmmerous rivers that in this part of Italy have their rise in the Apennines, and dibcharge their waters into the Adriatic; but it derived some importance from its having formed the boundary between Umbria, or the part of the (iaulish turritory included in that province, aud Cisalpine ti.uil. properly so called. Hence, when the limits of Italy were considered to extond only to the frontiers of Cisalpine tiaul, the Rubicon became on this side the northern bonndary of Italy. (Strab, v. p. 217: Plon. iii. 15. s. 20; Lutan. i. 215.) This was the state of things at the outhreak of the Civil War between Carsar and l'unpey: Cisalpine Gisul was included in the govermment of the former, and the labicon was therefore the limit of his province; it was this which rendervel the passige of
(hat.) trifling streain sn momentous an event, for it was, in fact, the declaration of war. Caesar himself makes 10 mention of its passage, and it is difficuit to believe that he would have set out on his march from Ravenna withoul being fully prepared to advance to Arminum; but the well-known story of his halt on its bauks, his hesitation and ultimate decision, is related in detail by Suetonius and Plutarch, as well as by Lucan, and has given a proserbial celebrity to the name of the Rubicon. (Suet. Caes 31; Phut. Cues. 32; Appian, B. C. ii. 35: Lucan, i. 155, 213-227.) The river is alluded to by Cicero a few years later as the frontier of tianl; and 21. Antonius was ordered by a decree of the senate to withdraw his army neross the Rubicon, as a proof that he abandoned lis designs on the Gaulish province. (Cic, I'hil. vi. 3.) Strabo still reckors the Rubicon the limit between Gallia Cisalpina and Uinbria; but this seems to have been altered in the division of Italy by Augustus; and though Pliny alludes to the Rubicon as "qnondam finis Italiac," he includes Ariminum and its territory as far as the river ('rustumius, in the sth Region or Gallia Cispadana. (Plin. l. c.; Ptol. iii. 1. § 23.) Its name, however, was not furgotten; it is still found in the Tabula, which places it 12 miles from Ariminum (Tab. Pent.), and is mentioned by Sidonius Apollinaris. (Ep. i. 5.) But in the middle ages all trace of it seems to hare been lost ; even the Geographer of Ravenna does not notice it, notwithstanding its proximity to his native city.

In modern times the identification of this celebrated stream has been the sulject of much controversy, and camnt yet be considered as fully determined. But the question lies within very narrow compass. W'e know with certainty that the Rubicon was intermediate between Ariminum and Ravenna, and between the rivers Sapis (Savio), which flowed some miles S. of the latter, and the Aximinus or Marecchia, which was immediately to the N . of the former city, Between these two rivers only two streams now enter the Adriatic, within a very short distunce of each other. The sonthermmost of these is called the Luso or Lusa, a considerable stucam, which crosses the high-road from Rimini to Ravenna about 10 miles from the former city. A short distance further N . the same road crosses a stream now called Fiumicino, which is formed by the united waters of three small streams or torrent.s, the most considerable of which is the $r$ isatello (the uppermost of the three); the other two are the higosa or Rigone, called also, according to some writers, the Riugone, and the Plusa, called also the Fiumicino. These names are those attested by the bent old maps as we!l as modern ones, especially by the Allas of Magini, published in 1620, and are in arcordance with the statements of the carliest writers on Italinn topagraphy, Flavio Biondo and Leandro Allerti. Cloverins, howerer, calls the northernmost stream the Rugone, and thie one next to it the pisatello. This juint is, however, of little itho portance, if it be certain that the two streams aiways united their waters as they do at the present day befure reaching the sea. The question really lies between the Luso and the Fiumicino, the latter being the outlet both of the Kiugonc and the Pisatello. A papal bull, issued in 1756, pronowneed in favour of the Luso, which has, in cansequence, been since commonly termed the Rubicon, and is still called by the peasants on its banks It Nebicone, But it is cvident that such an anthority has no real
weight. The name of Rugone, applied to one of the three branches of the Fiumicino, would be of more value, if it were certain that this name had not been distorted by antiquarians to suit their own purposes. But it appears that old maps and books write the nawse Rigosa. Two argnments, however, may be considered as almost decisive in farour of the Fiumi. cino as compared with the Luso: 1st. The distance given in the Tabula of 12 miles from Avinioum, coincides exactly with the distance of the Fiumicino from that city, as stated by Cluverius, who examined the question on the spot; and $2 n d l y$, the redness of the gravel in the bed of the stream, from which it was supposed to have derived its name, and which is distinctly alluded to by Sidonius Apollinaris, as well as by Lucan (Sidon. Ep. i. 5 ; Lucan, i. 214), was remarked by Cluverius as a character of the Fiumicino, which was wholly wanting in the Luso. The circumstance which has bcen relied on by some authors, that the latter river is a more considerable and rapid stream than the other, and would therefore constitute a better frontier, is certainly of no value, for Lucan distinctly speaks of the Rubicon as a trifling stream, with little water in it except when swollen by the winter rains.

The arguments in favour of the Fiumicino or Pisatello (if we retain the name of the principal of its three confluents) thus appear decidedly to preponderate; but the question still requires a careful examination on the spot, for the statements of Cluverius, though derived from personal observation, do not agree well with the modern maps, and it is not improbable that the petty streams in question may have undergone considerable changes since his time: still more probable is it that such changes may have taken place since the time of C'aesar. (Cluver. Itol. pp. 296-299; Blondi Flavii Itulia Illustrata, p. 343 ; Alberti, Descrizione $d^{3}$ Italia, p. 246; Magini, Corta di Romagna; Mammert. Geographie von Italien, vol. i. p. 234 ; Murray's Handbouk for Central Italy, p. 104. The ohder dissertations on the subject will be found in Graerius and Burmann's Thesaurus, vol. vii. part 2.) [E. H. B.]
RUBRAE and AD RUBRAS, a town in Hispania Baetica, now Cabezas Rubias. (It. Ant. P. 431.)
[1.H. D.]
RUBRESUS LACUS. [Atax.]
RUBRICATA ('Poufpikata, Ptol. ii. 6. § 74 ), an inland city of the Laeëtani in the NE. part of Hispania Tarraconensis, on the river Rubricatus; aecorcing to Reichard, Olesa.
[T. H. D.]
RUBRICA'TUS or -UM ('Pouspíkatos, Ptoi. ii. 6. § 18 ), a river of Hisprnia Tarraconensis flowing into the Mare Internum a little W. of Barcino, the modern Llobregat. (Mela, ii. 6. §5; Plin. iii. 3. s. 4.)
[T.H.D]
RUBRICA'TUS, in Numidia. [Phubmicates.] RUBRUM MARE, or ERITHRAEUY MARE ( $\grave{\eta}$ Éputpà సें $\lambda a \sigma \sigma \alpha$, Herod. i. 180, 202, ii. 8, 158, 159 , iv. 39; l'olyb. v. 54. § 12, ix. 43. § 2; Strab. i. pp. $32,33,50,56$, xvi. pp. 765,779, x rii. pp. 804, 815 ; Pomp. Mela, ïi. 8 . §§ I Plin. vi 2. s. 7). The sea called Erythra in Herodotus has a wide extension, including the Indian Ocean, and its two gulfs the Red Sea and the Persian Gulf [P'ensicus sixus], which latter he does not seem to have considered as a gulf, but as part of a continuous sealine; when the Red Sea specitically is meant it bears the name of Arabicus Simus [Arabicus Sines]. The thick, wall-like masses of coral which form the shores or fringing reefs of the cleft py which the
waters of the Indian Ocean advance tlirungh the straits of Bab-el- Mandeb, with their red and purple hues, were no doubt the original source of the name. Thus also in Hehrew (Exod. x. 19, xiii. 18; I's. evi. $7,9,22$ ) it was called "yam st̂ph," or the "weedy sea," from the coralline forests lying below the surface of the water. Ramses Miamoun (Scsostris) was the first (from 1388 to 1322 , e. c.) - so said the priests - who with long ships subjected to his dominion the dwellers on the coast of the Eryth. racan, until at length sailing onwards, he arrived at a sea so shallow as to be no lunger navigable. Diodorus (i. 55, 56 ; comp. Herod. ii. 102) asserts that this conquevor adranced in India beyond the Ganges, while Strabo (xvi. p. 760) speaks of a memorial pillar of Sesostris near the strait of Deire or Bab-el-Mandeb. It appears that the Persian Gulf had been opened out to Phoenician navigation as three places were found there which bore similar if not identical names with those of Phoenicia, Tylus or Tyrus, Aradus, and Dora (Strab. xvi. pp. 766, 784, comp. i. p. 42), in which were temples resembling those of Phomeia (comp. Kenrick, Phoenicia, p. 48). The expeditions of Hiram and Solomon, conjoint undertakings of the Tyrians and Israelites, sailed from Ezion Geber through the Straits of Bah-el-Mandeb to Ophir, one locality of which may be fixed in the basin of the Erytlratan or Indian Ocean [Ophin]. The Lagid kings of Aegypt availed themselves with great success of the chamel by which nature brought the traffic and intercourse of the Indian Ocean, within a few miles of the const of the Interior Sea. Their vessels visited the whole western peninsula of India from the gulf of Barygaza, Guzerat, and Cambay, zlong the coasts of Mulabur to the Brabminical sanctuaries of Cope Comorin, and to the great island of Taprobane or Ceylon. Nearchas and the companions of Alexander were not ignorant of the existence of the periudical winds or monsoons which favour the narigation between the E. coast of Africa, and the N. and W. coasts of India. From the further knowledge acquired by navigators of this remarkable local direction of the wind, they were afterwareds emboldened to sail from Ocelis in the straits of Bab-el-Mandeb and hold a direct course along the open sea to Muziris, the great mart on the Malabar coast (S. of Mangalor), to which internal traffic brought articles of commerce from the E. const of the Indian perinsula, and even gold from the remote Chryse. The Ruman empire in its greatest extent on its E. limit reached only to the meridian of the Persion Gulf, but strabo (i. p. 14, ii. p. 118, xri. p. 781, xvii. pp. 798, 815) saw in Aegypt with surprise the number of ships which sailed from Myos Hormos to India. From the Zend and Sanscrit words which have been preserved in the geographical momenclature of P'tolemy, his tabular geography remains an historic monument of the commercial relations between the West and the most distant regions of Southern and Central Asia. At the same time P'tolemy (iv. 9, vii. 3. § 5) did not give up the fable of the "unknown southern land" connecting Prasum Prom, with Cattigara and Thinae (Sinarum Metropols), and therefore joined E. Africa with the land of Tsin or Chinu. This istlmus-hypothesis, derived from views which may be traced back to Hipparchus and Marinus of Tyre, in which. however. Strabo did not concur, made the Indian Ocean a Mediterranean sea. About half a century later than l'tolemy a minute, and ns it ap-
pears a very fathful, account of the coast was given in the Periphus of the Erythrasun Nia (a work erroneously atributed to Arrim, and probably not anterior to septimins Soverns and his son Caracalla) (comp. Cooley, Chandius Itolenay and the Nite, 1. 56). During the long was with l'ersia, the Aegyptian and Syrial $l^{\text {uppulation, cut off from their }}$ ordinary communication with Persia and Indin, were supplied by the channel which the shores of the l'ersiun Gulf and the Reel sra afforded; and in the reign of Justinian this conmerce was very important. After the disturbances caused hy the wars of Heraclius and Chosroes, the Arabs or Saracens fiaced upon the contines of Syria, Aucypt, and Persia, had the greatest purtion of the rich trade with Aethiopia, S. Alrica, and India thrown into their hands. From the middle of the ninth century the Arab population of the /ledjaz maintained commercial relations with the northern countries of Europe and with Maulaguscar, with E. Africa, Iulice, and China, diffusing their langnage, their soins, and the Indian system of numbers. But from the time that the Kiliph Al-Mlansur clased the canal connecting the Ked Sea with the Nile, the inportant line of communication bet ween the commerce of Aegypt and India and the E. coast of S. Africa has never been restored. For all that concerns the data furnished by the ancient writers to the grograpiy of the Erythraean sea the Atlas appended by Mitlier to his Geographi Graeci Minores (I'aris, 1855) should be consulted. He has brought togetber the positions of Agatharclides, Artemidorus, Pliny, P'tolemy, and the P'seudo-Arrian, and compared them with the recent surveys wade by Moresby, Carless, and others.

HLCCU'NiUMI. [1)acta, p. 744. b.]
RUESSIUM, [Revessio]
1RLFIXIA'NA ('Pooфuviava). 1'tolemy (ii.9.§ 17) names Noemagus [Noviomiges. No. 2.] and Rufimana as the two towns of the Nemetes, a peuple on the lahine in Galliat Belgica. If we place lentiniana with 1)'Anville and others at Ruffuch in Ipper Alsace and in the present department of Intrut Rhin, we most admit that I'tolemy has made a great mistake, for Kuffuch is within the territory of the Rauraci. But 5 Anville observes that it is not more entraordinary to find Rufinama misplaced in P'olemy than to find him place Argentoratum in the territory of the Vangiones.
[i. L.]
LiUFRAE, a town of the Somnites on the borders of C'ampuna, mentioned by Yirgil (Aer. vii. 739) in atmaner that would lead us to anppose it situated in Canpania, or at least in the neighbourhood of that conntry; while silius ltalicus diatinetly includes it :amoug the cities of the Sumites (viii. 56 ik ), and Livy also memtions Rufriun (in all probability the same place) among the towns taken from the Smanites at the commencement of the Sicond Sumite War, B. c: 326. (Liv. viii. 25.) None of these panalyen afforl any clue to its pusition, which camut be dutermined: though it must certainly be sought for in the region above indieated. The sites suggested hy lamanalli (vol. ii. p. 463) and ather local toporraphers are mere conjectures. [E. 11. B.]

RLFRITM. [R"rkne.]
Rt (iII, $1 \mathrm{R}^{\prime} \mathrm{GI}$ ('Po yot or 'Pórot), an important peple in the muth of Gurmativ, occupying a conaderable part of the cuant of the Waltic: (Tace (irrm. 43.) Thaje country estended from the river Vialns in the nest to the Vistula in the east, and was surroumled in the west by the Sidenj, in the
south by the lelverones, and in the east by the Sciri, who were probably a Sarmatian tribe. Strabo does not mention them, and Ptolemy (ii. 11. § 14) apeaks of a tribe 'Paotikגetot, who are probably the same as the Rugii. After their first appearance in Tacitus, a long time passes awny during which they are not noticed, until they suddenly reappear during the wars of Attila, when they play a conspicuous part. (Sidon. Apoll. Paneg. ad Avit. 319; Paul. Dise. de Gest. Rom. p. 5.34, ed. Erasm.) After the death of Attila, they nppear on the nurth side of the Danube in Austria and Upper Hungary, and the country there inhabited by them was now called lougia, and formed a separate kingelom. (Procop. Bell. Goth. ii. 14, iii. 2; Paul. Diac. Longob. i. 19.) But while in this latter country no trace of their name is now left, their name is still preserved in their original home on the Baltic, in the island of Rugen, and in the town of Rigemwalde, and perhaps also in Rego and Regenucalde. (Comp. Lathan on Tac. l. c., and Prolegom. p. xix., who strangely believes that the Rugii of Tacitus dweit on the fiulf of Riga.)
[L. S.]
HUG1CM ('Poúgov), a town in the north of Germany on the coast of the Baltic (Ptol. ii. 11. § 27), the site of which seems to correspond exactly with that of the modern Regenwalde, on the river Rega, thongh others seek it elsewhere. (Wilhelm, Giermanien. p. 273.)
[L. S.]
IUUNICATAN: ('Роoviкüтat), an Alpine tribe in the north-east of Vindelicia between the Ocnus and Danubius. (Ptol. ii. 13. \& 1.) In the inscription of the Alpine troply quated by Pliny (iii. 24) they are called lucinates.
[L. S.]
11UKA (Ruhr), a river of Western Germany, which flows into tbe Rline from the cast near the town of IMisburg. (Geugr. Rav. iv. 24) [L.S.]
lURADA (Ruradensis Resp?), a place in llispania Baetica, the name of which appears only upon coins, the present Rus near Bcezu. (Florez, Eisp. Sayr. vii. p. 98.)
[T. H. D.]
 § 7; lussuder, Itin. Aut.), a colonia of Mauretania, stuated near Mletagonites Prom., which appears sometimes to have been called from the town Rusadir (1'tul. iv. 1. § 12). It is represented by the "baridero" of Melilla, or Spanish penal fortress, on the bight formed between C. Tres Forcas and the I/líia.
[E. B, J.]
hisaztes. [Malretinia, p. 298, b.]
 Voleae Tectosages in Gallia Narbonensis. (1'tol. ii. 10. §9.) When 1 Iamibal cutered Gallia by the P'yrenees, he came to lljiberis (Elue), and thence marched past Ruscino (Liv, xxi, 24). Ruscino stood on a river of the same name ( 1 'tol. Strab.): "There was a lake near Ruscino, and a swamy place n little abose the sea full of salt and containing inullets ( $\kappa \in \sigma \tau \rho \in i s)$, which are dug out; fur if a man digs down two or three feet, and drives a trident into the muddy water, he may spear the fish, which is of comvilerable size: and it freds on the mud like the ecls." (Strab. iv. p. 182.) Polybius (xxxiv. 10, ed. Bekk(r) has the sume about the river and the fish, which, howerer, he says, feed on the plant agrostis. (Athen. viii. p. 332.) The low tract which was divided by the liuscino is the Cyneticum Littus of Avienus (Or. Mier. v. 565):-
"post l'yrenaeum jugum,
dacent arenae littoris C'ynetic,
Kas que late sulcat amnis Koschsinus."

Mela（ii．5）names the place a Colonia，and so the litle appears on coins，COL Riss．hege，vi． Pliny calls it＂Oppidum Latinoram．＂It seems to have been a Colonia Latina．
The name is incorrectly written Ruscione in the Antonine Itin，and in the Table．It is placed be－ tween Combusta［Comnusta］and Llliberis，and it is represented by Castel－Roussillon or the Tour de Roussillon on the Tet，the ausient Ruscino，a short distance from Perpignan，the capital of the French department of the Pyrénés Orientales．Perpignan lies on the high－road from France into Spain，and there is no other great road in this part of the Py－ renees．
Ruscino is named Rosciliona in middle age docn－ ments，and from this name the modern name Rous－ sillon is derived．Roussillon was a province of the ante－revolutionary history of France，and it corre－ sponds to the modern department of Pyrénées Orientales．
The river Ruscino or Ruscinus is the Telis of Mela（ii．5），the Tet ；and we may probably con－ clade that the true reading in Nela is Tetis．The Tet rises in the Pyrenees，and flows past Perpiynuen into the Mediterranean，after a course of about 70 miles．Sometimes it brings down a great quantity of water from the mountains．
［G．L．］
RUSELLAE（＇Pouvérरal：Eth．Rusellanns ：Ro－ selle），an ancient and important city of Etruria， situated abont 14 miles from the sea，and 3 from the right bank of the river Ombrone（Umbro）．In cammon with several of the ancient Etruscan cities， we have very little information concerning its early history，thongh there is no donbt of its great anti－ quity and of its having been at a very early period a powerful and important city．There is every probability that it was one of the twelve which formed the Etrnscan Leagne（Mitller，Etrusker，vol． i．p．346）．The first mention of it in listory is during the reign of Tarquinins Priscns，when it united with Clasiam，Arretium，Volaterrae，and Vetulonia，in declaring war against the Roman king． apart from the rest of the confederacy，－a sufficient proof that it was at that time an independent and sovereign state．（Dionys．iii．51．）From this time we hear no more of it unti）the Romans had earried their arms beyond the Ciminian forest，when，in r．c． 301，the dictator N．Valerins Maximus carried his arms，apparently for the first time，into the territory of the Rusellae，and defeated the combined forces of the Etruscans who were opposed to him．（Liv．x． 4，5．）A few years later，in B．C．294，the consul L．Postnmius Megellos not only land waste the territory of Rusellae，but took the city itself by storm，taking more than 2000 of the inhabitants eaptives（Id．x，37）．No other mention of it occurs during the period of Etruscan independence；but daring the Second Punic War the Rusellani are mentioned among the＂pupuli Etruriae＂who came forward with voluntary supplies to equip the fleet of Scipio（B．c．205），and furnished him with timber and corn（Id．exviii．45）．It is erident that at this time Rusellae was still one of the principal cities of Etruria．We find no snbsequent nutice of it under the Roman Republic，but it was one of the places selected by Augustus to receive a colony（Plin．iii． 5．s． 8 ；Zumpt，de Colon．p．347）；notwithstanding which it seems to have fallen into decay；and though the name is mentioned by Ptolemy（iii．1．§ 48）we mret with no later notice of it in ancient times．It did not，however，altogether cease to cxist，till a much
later period，as it retained its episcopal see down to the twelfth century，when it was transferred to the neighbouring town of Grosseto．（Repetti，Diz．Top． vol，ii．pp，526，822．）

The site of Rusellae is now wholly desolate and overgrown with thickets，which render it very difti－ cult of access．But the plan may be distinctly traced，and the line of the ancient walls may be followed in detached fragments throughout their entire circuit．It stood on the flat top of a hill of considerable elevation，about 6 miles from the mo－ dern city of Grosseto，orerlooking the broad valley of the Ombrone and the level plain of the Maremma， which extends from thence to the sea．The walls follow the ontline of the hill，and encluse a space of about 2 miles in cirenit．They are constructed of very rude and massive stones，in some places with an approach to horizontal strocture，similar to that at l＇olterra and Populonia；but in other parts they lose all traces of regularity，and present（according to Mr．Dennis）at strong resemblance to the rudest nod most irresular style of Cyclopian construction， as exemplified in the walls of Tixyns in Argolis． （Dennis＇s Etruria，vol．ii．Pp．248，249．）The sites of six gates may be traced；but there are no indications of the manner in which the gateway itself was formed．Within the walls are some frag－ ments of rectangular masonry and some vaults of Ruman construction．It is remarkable that no traces of the necropolis－so often the most interesting remnant of an Etruscan city－have yet been dis－ eovered at Ruvellae．But the site is so wild and so little visited，that no excavations have been carried on there．（Denuis，l．c．p．254．）

About 2 miles from the ruins，and 4 from Gros－ seto，are some hot－springs，now called I Bagni di Roselle．On a hill immediately above them are the mediaeval ruins of a town or castle called Moscona， which hare been often mistaken for those of Rusellae． （Deanis，l．c．）
［E．H．B］
RU＇SGU＇N1A（Itin．Ant．；＇Pou⿱㇒⿻丷木⿱⿴囗十丌 2．§ 6），a town of Manretania，and a colonia，which lay $15 \mathrm{M} . \mathrm{P}$ ．to the E．of Icosium．Its rains have been found near Cape Matafu or Temendfuz（Barth， Handerangen，p．55）．For an acconnt of these， see Ausland，1837，No．144．
［E．B．．I．］
RUSICADE（1＇lin．v．2；Mela，i． $7 . \S 1$ ；＇Pough－ ка $\delta a$ ，Ptol．iv．3．§ 3；Rasiceade，Itin．Ant．，Peut． Tab．），the harbour of Cirta in Numidia，and a Roman colonia，at the montb of the small river Timarsts （Vib．Seq．de Flum．p．19：U．Safsa），and probably therefore identical with the Thapsa（équa），a harbont－town，of Sicylax（p．50）．Its site is near Stora；and the modern town of Philippeville，the Kas－Skikda of the Arabs，is made in part of the materials of the old Rusicade（Barth，Wanderungen， p． 66 ）．
［E．B．J．］
RUSIDA＇VA．［DAC1A，p．744，b．］
HUSPE（Peut．Tab．；；＇Poû̃ ${ }^{\text {＇Pat }}$ al．＇Poû $\sigma \pi \varepsilon$ ，P＇tol． iv．3．§ 10），a town of Numidia bet ween Acholla and Usilla，near the Caput Vaponers（Corippas，Jo－ hann．i．366：C．K＇abridiah），and the see of Fralgen－ tius，well－known in the Pelagian controversy；he was expelled from it by the Vandal Thasimond． Barth（IVanderungen，p．177）found remains at Schebba．
［E．B．J．］
RUSPI＇NUM（＇Pougrivov，Strab．xvii．p．831； Ruspina，Auct．B．Afr．6；Plin．v． 3 ；Peut．Tab．）， a town of Africa Proper，where Caesar defeated Scipio，and which lie aftermards made his position while waiting for reinforcements．It is probably the

## RUTUPIAE.

same place as the Tmenanar of the Cimstalewhet (Studiasm. § 114, ed. Niiller), near the ruins in Leptis Parva.
[1. B. J.]
HUSTIC1A'NA ('Poogтikava, 1'tol. ii. 5. § 7), : city of the Vettomes in Lusitania, on the righe bank of the Tagus. Variously illentified with C'orchuela and Gatistco. (It, Ant. D. 433.)
[T. 11. D.]
 1; It. Aut.; 'Рообооккб́pat. P'tol. iv. 2. \& 8), a town of Mauretamia, which Claudius mate a mumicipiun (Plin. l.c.), but which was afterwards a colonia (Itin. Ant.). Bharth (Handerungen, p, 60) has identified it with the landing-place Dellys in Algeria, where there is gond anchorage. [E, B, J.]

1LITE'NI ('Puvt $\hat{\eta} v o t$ ), and 'Poutaval in I'tolemy (ii. $7 . \S 21$ ), who places them in (callia Aquitania. Illiny (iv. 19) says that the Ruteni border on the Nathonensis Provincia ; and Strabo (iv. p. 191) places them and the Gabaleis or Gabali next to the Narbonensis. Their cumutry was the old prorince of lankrque, which extended from the Cêocnnes, its eastern loundary, ahout 90 milex in a western direetion. The chief town was Mhodez. The modern departinent of A veyrom comprehends a large part of the Rozergue, There were silver mines in the country of the Ruteni and their neighbours the Gabati [GABALI], and the flas of this country was good.

The Arverni and liuteni were defeated by Q. Falius Maximus, B. c. 121, but their country was not reduced to the form of a loman province (Cam. B. (i. i. 45). In Capsar's time part of the liuteni were included in the l'rovineia under the name of Rutent Proviaciales (B, G, vii. 5, 7). Veringetoris in 3s. c. 52 sent Lacterius of the Cadurci into the country of the Ruteni to briag them over to the Gallic confederation, which he did. Caesar, in order to protect the Provincia on this side, placed troops in the country of the Ruteni Provinciales, and anong the Volcae Arecomici and Tolosates. Jhay, who chumerates the Ruteni among the people of Aquitamia, also mentions lateni is the Narbonensis (iii. 4), but he means the town Segodunum [Segomovom]. The Rinteni Provinciales of course were nearer to the Tectosages than the other Kuteni, and we may perlape plave them in that part of the departments of I reyrom and Turn which is south of the Jarnis (Torn). It may be conjectured that part of the Ruteni were abded to the l'rovincia either after the deteat of the liuteni by Muximus, or aftor the conquent of Tolusa by Caepio (5.c. 106.) [G.L.]

RITTHBA (Rojit), a river of Livmia, which rises in the Maritime Alps. near the Col de Fende, and flows into the sea at I'intimerglia (Albium Intemelium). Its name is fomm in Pliny (ini. 5. s. 7), who plares it appourntly to the W: of Allimen Intemelium, whysas it raally flows on the E. side of that town; Luman alon moties it aumy the streams which flow from the Apermines (ii. 422), anul gives it the cpithet of " ravor," from its flowing through a deep land or ravine. Firum the mention of the Jiber just after, smu writers have supposed that he a ust mean another river of the nane: but there is no reasum to inpuet sum stret grougraphical order fium a juet, and the mention of the Macrat a few lines lower down suffigently shows that mone such was intended. Vihius sequenter ( 1,17 ) whu makes the Lantuba fall into the lither, has obvously mistandestomil the pasaste of Lancan.
[E. II. B.]
RUTUBLS (Polyb. ap. I lin.v. 1; 'Ponor6is, Ptol.
3. 5. § 1), in port of Mauretamia, which must be identified with the low rocky point of Mazagan. The town situated upon this was the last possessed by the Portugnese in Muroceo, and was abandoned by them in 1769. (Jackson, Marocco, p. 104; Journ. of Geogr. Soc. vol. vi. p. 306.) [E. B. .I.]
liU'TUL1 ('Poútoodot), a people of ancient Italy, who, according to a tradition generally received in later times. were settlel at a rery early petiod in a part of Latium, adjoining the sea-coast, their capital eity being Ardes. The prominent part that they and their king Turms bear in the legendary history of Arnras and the Trujan settlement, especially in the furm in which this has been worked up by Virgil, has given great celebrity to their name, but they appar to have been, in fact, even according to these wery traditions, a small and unimportant people. Their king Turmus himself is represented as dependent on Latinus ; and it is certain that in the historical period Ardea was one of the cities of the Latin League (1)ionys. v. 61), while the name of the Liutuli had become merged in that of the Latin peopile. Not long before this indeed livy repreecnts the Rutuli as a still existing peuple, and the arms of Tarquinius Sujerbus as directed against them when he pruceeded to attack Ardea, just before his expulsion. (Liv, i. 56, 57.) According to this narrative Ardea was not taken, but we learn from much better authority (the treaty betwen lome and Carthage preservel by Polybius, ini. 22) that it had fallen under the power of the Romans lefore the close of the monarcly, and it is possible that the extinction of the lautuli as anindepeodent people may date from this period. The only other mention of the Rusuli which ean be called listarical is that their name is found in the list given by Cato (ap. Prisciar. iv, 4. p. 629) of the cities that took part in the foundation of the crlebrated temple of Diana at Aricis, a list in all prohability founded upon some ancient reenod : and it is remarkable that they here figure as distinct from the Ardestes. Therc were some obseure traditions in antiquity that. represented Ardea ns founded by a culony from Argos [Andea], and these are regmiod by Niebuhr as tending to prove that the Rutuli were a Pelangie race. (Nieb, vol, i. p. 4t, vol. ii. 1. 21.) Schweyler, on the other hand comsiders then as comected with the Etruseans, and protably a relic of the perind when that people lad extendel their duminion throughout Latium and Campania. This theory finds some support in the name of Turnus, which may probably be connected with Tymbonus, as well as in the union which the legend represents as subsisting between Turnus and the Etrusan king Mezentius. (Selwegler, Rum. Gesch. vol. i. pip. 334, 331.) But the whole subject is so mixed up with fable and poetical invention, that it is improssible to feel confilence in any snch conjectures.
[E. H. B.]
RIL TUNILN (It, Ant. p. 469), apparently a town of the Comavii in the W . part of Britansia Romana. ('amuln (p. 655) identities it with Routon in Shopshite, Hursley (1.41K) with II'em. [1. H. D.]
Lil'TE'J'lAE ('Роотсintau, 1'tul, ii. 3. §27; in the Tab. Peat and Not. Imp. Ruturae; in the Itin. Aut. Ritupae, also Portns Rutupensis and l'ortus Ritupins: Adj. Rutupinus. Lnc. I'hars. vi. 67 ; Juv. iv. 141), a town of the Cautii on the E. coast of Britumia l'riwa, now Richburough in Kent. Rutaplac and Portus Rutupensis were prolably distinct, the former being the enty, the latter its harbour at some little distunce. The harbour was probably

Stonar, not Sandurich; which latter town scems to lave sprung op under the Saxons, after Rutupiae had begon to fall into decay, and was indeed probably built with materials taken from it. Accurding to Camden (p. 244) the etymology of the name of Rutupiae is analogous to that of Sunducich, being derived from the British Rhydtufeth, signifying "sandy bottoms"; a derivation which seems much more probable than that from the Ruteni, a people who occupied the district in France now called La Rocrgue. The territory around the town was styled Rutupinus Ager (Auson. Parent. xviii. 8) and the coast Rutupinus Littus (Luc, l.c.). Tlie latter was celebrated for its oysters, as the coast near Margate and Reculver is to the present day. Large beds of oyster-shells have been found in the neighbourhood, at a depth of from 4 to 6 feet under ground. The port is undoubtedly that mentioned hy Tacitus (Ayric. 38), under the erroneous name of Trutulensis Portus, as occupied by the fleet of Agricola. It was a safe harbour, and the usnal and most convenient one for the passage between France and Eugland. (Amm. Mare, sx. 1, xxvii. 8. § 6.) The principal Roman remains at Richberough are thase of a castrum and of an amphitheatre. The walls of the former present an extensire ruin, and on the N . side are in some places from 20 to 30 fect in height. Fragments of sculptured marbles found within their circuit show that the fortification must have contained some handsome buildings. The foundation walls of the amplitheatre were excavated in 1849 , and are the first remains of a walled building of that descriptioo discovered in England. There is a good description of Richborough, as it existed in the time of Henry VIIl., in Leland's Itinerary (vol, vii. p. 128, ed. Hearne). Leland mentions that many Roman coins were found there, which still continues to be the case. Other Roman antiquities of various descriptions have been discovered, as pottcry, fibulae, ornaments, knives, tools, \&c. Rutupiae was under the jurisdiction of the Comes litoris Naxonici, and was the station of the Legio Ilda Augusta. (Notitia, c. 52.) A complete account of its remains will bc found in Roach Smith's Antiquities of Richborough. London, 1850.
[T. H. D.]
RYSSADIUM ('Pu $\sigma \sigma \alpha ́ \delta ̊ \iota o y ~ \delta ́ p o s, ~ P t o l . ~ i v . ~ 6 . ~ § 8), ~, ~$ "a mountain of Interior Libya, from which flows the Stacheir (Gambia), making near it the lake Clonia; the middle of the monntain (or lake?) $17^{\circ}$ E. long., $11^{\circ}$ N. lat." (Ptol. l.c.) This mountain terminated in the headland also called liyssadium ('Purádoov axpop), the position of which is fixed by Ptolemy (iv, 6. § 6) at $8^{\circ} 30^{\prime}$ E. long., and $11^{\circ} 30^{\prime}$ N. lat. We assume, with Rennell and Leake, that Arsinarinm is C. Verde, a conjecture which ean be made with more conlidence because it is found that Ptulemy's difference of longitude between Arsinarium and Carthage is very nearly cor-rect,-according to that assumption this promontory must be looked for to the N. of the month of the Gambia. The monntain and lake must be assigned to that elevated region in which the Senegal and the Gambia take their rise, forming an appendage to the central lighlands of Africa from which it projects northwards, like a vast promontory, into the Great Sihara.
[E. B. J.]

SABA, SABAEI ( $\Sigma a ́ b \eta$ or इabaí: Eth. इasaĩos, fern. ミaEaia), were respectively the principal city and nation in Vemen, or Arabia Felix. [Anaran.].] Ancient gengraphers differ considerably as to the extent of territory uccupied by the Sabaeans, Bratosthenes assigning to it a much larger area than Ptoleny. The difference may perhaps be reconciled by examining their respective accounts.

Our knowledge of the sabaeans is derived from three sources: the Hebrew Scriptures, the Greek historians and geographers, and the Roman puets and encyclopedists, Pliny, Sulinns, \&c. The Arabian geographers, also, throw some light upon this ancient and far-extending race.

1. In the Hebrew genealogies (Genesis, x. 6, xxv. 3) the Sabaeans are described as the descendants of Cush, the son of Ham. This descent was probably not so mach from a single stem, ts from several branches of Hamite origin; and as the tribes of the Sabseans were numerons, some of them may have proceeded immediately from Cush, and others from later progenitors of the same stock. Thus one tribe descended from Soba, the son of Cush, another from Jokshan, Abralaam's son by Keturah; a third from Sheba, the son of Raamalsthe 'Pє $\quad$ дà of the LXX. (Compare Psalm 1xxii. 10; Isoiuh, x]v, 14 ; Ezeliel, xxvii. 22, 23, $\mathbf{x x} \times$ viii. 13.) The most material point in this peligree is the fact of the pare Semitic blood of the subaeans. The Hebrew prophets agree in celebrating the stature and noble bearing, the enterprise and wealth of this nation, therein concurring with the expression of Agatharchides, who describes the Sabaeans
 pations appear to have been varions, as would be the case with a mation so widely extended ("Sabaci . . . ad utraque maria porrecti," Plin. vi. 28. s. 32): for there is no doubt that in the south they were actively engaged in cotomerce, while in the north, on the borders of Idumea, they retained the predatory habits of nomades. (Job, ii. 15.) The " Queen of the Suuth," i. e. of Yemen or Sabaea, who was attracted to Palestine by the fame of Sulomon, was probably an Arabian sovereign. It may be uhserved that Yemen and Saba have nearly the same import, each signifying the right hand; for a person turning his face to the rising sun has the south on his right, and thus Maba or Iemen, which was long regarded as the southern limit of the liabitable zone, is the lefthand, or southern land. (Comp, Herod, iii. 107113; Forster's Geogr. of Arabia, vol i. P1. 2438.) A river Sabis, in Carmania (Juela, iii. 8. § 4), and a chain of mountains Sabo, at the entrance of the Persian Gulf (Arrian, Periphus. M. Erythr:, üpn
 apparently indicate an extension of the Sibaeans beyond Arabia Proper. That they reached to the eastern shore of the Red Sea is rendered probable by the circumstance that a city named Sabu or Nabe stood there, about 36 miles S . of Podnn, in lat. $14^{\circ} \mathrm{N}$. (Ptol, vi. 7. § 38, v. 22. § 14.)
2. The first Greek writer who mentions the Sabaeans by name is Eratusthenes. His account, however, represents a more recent condition of this nation than is described by Artemidorts, or by Agatharchides, who is Strabo's principal authority in his narrative of the Sabaeans. On the other liand, Diodorus Siculus professes to have compiled his
acenunts of them from the historical books of the Aeseyptian kings, which he consulted in the Alexandreian Library. (Diod. iii. 35, 41.) There can be little question that lierodotus, although he does not name the Sabaeans, describes then in varions passages, when speaking of the Arabians, the southernmost people of the earth. (Herod. ii. 86, iii. 107 -113.) The commerce of Yemen with Pluenicia and Aegypt under the Pharawhs would render the name of the Sabaeans familiar in all the havens of the Ked sea and the eastern Mediterranean. The Aegyptians imponted spices largely, since they empluyed them in embaliming the dead; and the Phoenicians required them for the Syrian markets, since perfumes have in all ages been both favourite Juxuries and among the mest popular medicines of the East. At the time when Ptelemy wrote (in the second century A.D) their trade with Syria and Aegypt, as the carriers of the silks and spices so much in request at Rome, brought the Sabacans within ken of the scientific gengrapher and of the learned generally.
3. Accordingly, we meet in the Roman puets with numerous, although vague, allusions to the weaith and luxury of the Sabaeans. "Molles," "divites," "beati," are the epithets constantly applied to them. (See Catull. xi. 5 ; Propert. ii. 10. 16, ih. 29. 17, iii. 13. 8; Virgil, Genrg. i. 57, ii. 150, Aeneid, i. 416 ; Horace, Carm. i. 29. 2, ï. 12. 24; 11. Epist. i. 6. 6, ib. 7.36; Statius, Sile. iv. 8. 1 ; Scnec. Hercules, Det. v. 376.) The expedition of A-lius Gallus, indeed (B. C. 24), may have tended to bring Southern Arabia mere immediately under the notice of the Romans. But their knowledge w.as at best very limited, and rested less on taets than on rumeurs of Sabsean opulence and luxury. Pliny and the geographers are rather better infermed, hut even they had very erroneous conceptions of the physical or commercial character if this nation. Not until the pasage to India by the Cape had been discevered was subaea or I'men really explored by Eurepeans.

Assuming, then, that the Sabeans were a widelyspread race, extending from the Persian Gulf to the Ned Sea, and running up to the borders of the desert in the Arabian peninsula, we proceed to examine the grounds of their reputation for excessive opulence and luxury. A portion of their wealth was mudoubtedly mative; they supplied Aregyt and Syria from the remotest perieds with fraukincense and aromatics; and since the soil of Jemen is highly productive, they took in exchange, net the corn or wine of their neighbours, but the precions motals. lint aromatics were by to means the capital source of their wealth. The subarans pussessed for many centuries the keys of Indian commerce, and were the iutermeliate fictors between Aegypt and Syrich as these countries were in turn the indian agents for Euroqe. During the Plarannic eras of Acgypt, no attempt was made to disturb the monopoly of the Sabaeans in this traffic. Ptelemy Philadelphos (B.c. 274) was the first Aegyptian sovereign whe disremed the value of the Red Nea and its hatbours to his kiugdom. He established his Indian emporium at $\mathrm{Mros}-11$ ormus or Arsinoc, and under his succes. sors Berenice, which was connected with Coptns on the Nale by a caual, shared the protits of this remunerative trade. But even then the Sabacans lost a small portion only of their former exclusive advantages. Thry were no longer the carriers of Iudian expoits to Auvyt, byt, they were still the
inporters of them from India itself. The Aceyptian fleets proceeded no further than the haven of Sab. batha or Mariaba; while the Subaeans, long prior even to the voyaze of Nearchus (B. C. 330), ventured across the ocean with the munsoon to Ceylon and the Malabar coast. Their vessels were of largur build than the ordinary merchant-ships of the Gireeks, and their mariners were more skilful and intrepid than the Greeks, who. it is recorded, shruwk back with terror from the Indian Ocean. The track of the Sabaean navigators lay along the coast of Gedrosia, since Nearchns found alung its shores many Arabic names of places, and at Possem engaged a pilot acquainted with thuse seas. In proportion as luxury increased in the Syro-Macedonian cities (and their extravagance in the article of perfumes alune is recerded by Athenaeus, xii.), and subsequently in Reme, the Indian trade became more valuable to the Sabaeaus. It was cemputed in the third century of the Empire, that, for every pound of silk brought to ltaly, a pound of silver or even gold was sent to Arabia; and the computation might fairly be extended to the aromatics employed so lavislily by the Romans at their banquets and funerals. (Comp. Petronius, c. 64, with Plutarch, Sulla, c. 38.) There were two avenues of this thaffic, one overland by Petra and the Elanitic gulf, the other up the lied Sea to Arsinoe, the P'olemaic canal, and Alexandreis. We may therefore fairly ascribe the extraordinary weath of the Sabaesns to their long monopoly of the Indian trade. Their country, however, was itself highly productive, and deubtless, from the general character of the Aiabian peninsula, its southern extremity was densely populated. The Sabaeans are described by the Hebrew, the Greek, and the Arabian writers as a numerous people, of lofty stature, implying abundance of the means of life; and the recurrence of the name of Saba theughout the entire region between the Red Sea and Carmania shows that they were populens and powerful enough to send out colonies. The general barrenness of the nerthern and central districts of Arabia drove the population down to the south. The highlands that border on the Indian Ocean are distinguished by the plenty of weod and water; the air is temfreate, the animals are numerous (the herses of Kemen are strong and serviceable), and the fruits delicious, With such abundauce at home the Subreans were enabled to devote themselves to trade with undivided energy and success.

Nothing more strikingly displays the ignorance of the ancient geographers as regards Sabaea thau their descriptions of the opulence of the country. Their marratives are equally pompous and extravagant. According to Agatharchides and Dindorns, the odour of the spice-woods was se potent that the inhabitants were liable to apeplexies, and ceunteractel the nosious pertumes by the ill odours of burnt goats'-hair and asphaltite. The decorations of theit houses, their furniture, and even their domestic utensils were of guld and silver: they drank from vases blazing with geans; they used cinnamon chips for tirewood; and ano king could compete in luxury with the merchant-princes of the Salaseans. We lasve only to remember the real or imputed sumptuonsness of a few of the Dutch and Einglish Finst India Companies' merchants in the 1 xth century, while the trade of the Bast was in a few hands, in order to appreciate the worth of these descriptions by Agatlarchides and Dodorus.
-The delusions of the ancients were first dis-
pelled by the traveller Niebuhr．（De：cription de l＇Arabic，p．125．）He asserts，and he has not been contradicted，that Yemen neither prodnces now，nor ever could have prodnced，gold；but that， in the district of Saade，it has iron－mines，－a fact unnoticed by earlier describers，－which were worked when be visited the country．He states，moreorer， that the native frankincense is of a very ordinary quality，Sabaea yielding only the species called Li－ bân，while the better sorts of that gum are imported from Sumatra，Siam，and Jace．The distance from which the superior kinds of myrrh，frankincense， nard，and cassia were fetched，probably gave rise to the strange tales related about the danger of gathering them from the trees，with which the Sa－ baeans regaled the Aegyptian and Greek merchants， and through them the Greek geographers also．One canse of danger alone is likely to have been truly re－ ported：the spice－woods were the abode of venomous reptiles；one of which，apparently a parple cobra，was aggressive，and，springing on intruders，ioflicted an incurable wound．The avcients，however，said and be－ lieved tbat cinnamon was brought to Yemen by large lirds，which build their nests of its chips，and that the ledonum was combed from the beards of he－goats．

The Satbaeans were governed by a king．（Dion Cass．liii．29．）One inexorable condition of the royal office was，that he should never quit his palace： found beyoud its precincts，it was allowable to stone him to death．The rule which governed the succes－ sion to the throne was singular．A certain namber of noble families possessed equal claims to the crowo： and the first child（females were eligihle）born after an accession was presumptive heir to the reigning monarch．This seclasion of the king，aod the strange mode of electing him，seem to indicate a sacerdotal inflnence，similar to that which regnlates the choice of the Grand Lama and the homage paid to him by the Thibetians．

The precise boundaries of Sabaea it is impossible to ascertain．The area we bave presumed is com－ prised witbin the Arabian Sea W．，the Persian Gulf E．，the Indian Ocean S．，and an irregular line skirt－ ing the Desert，and running up in a narrow poist to Idumea N ．

For the principal divisions of the Sabaeans see the articles on Arabla；Adramitae；Minael．

The decline of the Sabaeans seems to have pro－ ceeded from two causes ：（1）the more direct inter－ course of the Aegypto－Greeks with India，and（2） the rivalry of the powerful tribe of the Homeritae， who suljugated them．In the acconst of their eastern traffic，and of the characteristics of their land，we have traced the features of the race．Com－ pared with the Arabs of the Desert，the Sabaeans were a highly civilised nation，under a regular go－ vernment，and，as a mercantile community，jealous of the rights of propeity．The author of the Periplus remarks apon similar security among the Adramitae； the interests of the merchant had curbed and softened the natural ferocity of the Arab．This also，according to Niebulir（Descript．de l＇Arabie，P．315），is still observable in Yemen，in comparison with the inland provinces of Hejuzz，and Neged．
［W．B．D．］
SABA．Three cities of this name are disting uished by ancient geographers：the name indeed was a conmmon appellation of towns，and signified head of the province，or of its lesser divisions．（Comp．Plin． vi．28．s．32．）

1．（ $\mathbf{\Sigma} a 6 a i$, Steph．B．s．v．इ $\alpha 5 \bar{s}$ ，Agathareh．ap． Phot．p．63），was the chief eity of the ，jabacans．It
is described hy Diodorns（iii．46）as situated upon a lofty wouded hill，and within two days＂journey of the frankincense country．The position of Saba is， however，quite uncertain：Mannert（Geogr．der＊ Griech．u．Röm．vol，vi，pt．i．p．66）places it at the modern Saade：other geographers identify it with Mareb［Marman］；and again Sabbatha，both from its site in the interior and its commercial importance， seems to have a good title to be considered as Saba （ $\Sigma a ́ b \eta$ of Agatharchides）or Sheba，the capital of the Sabaeans．

2．（ ª́ $6 \eta$ ．Ptol．vi． $7 . \S § 38,42$ ；Plin．vi．23．s．34）， was also seated in the interior of the Sabaean territory， 26 miles NE．of Aden．Niebuin（Dencript．de IAra－ bie，vol．ii．p．60）identifies it with the modern Suuba．
3．（ ミábal，Strab．xvii．p．771；इabát，Ptol． iv．7．§ 8），on the western shore of the Red Sea， was the capital city of the Sabueans，and its har－ bonr was the Sabaiticum 0s（ミabaitıкoy otóma， Sitab．xvii．p．770）．The position of Subae，like that of so namy Aethiopian races and cities，is very nncertain．Some writers place it at the entrance of the Arabian gulf（ITeesen，Histor．Rescarches，vol． i．p．333）；others carry it up as high as the bay of Adnle，lat． $15^{\circ} \mathrm{N}$ ．Bruce（Travels，vol．iii．p．144） identifies the modern Azab with the Sabae，and places it between the tropics and the Abyssinian highlands．Cumbes and Tamisier（loyages，vol．i． p．89）consider the island Massonoca to have a better claim：while Lord Valentia（Travels，vol．ii．p．47） finds Sabae at Port Mornington．Bnt although neither ancient geographers nor modern thavellers are agreed concerning the site of the Aethiopian Sabae，they accord in placing it on the sea－coast of the kingdom or island of Meroe，and between the Sinus Avalites and the bay of Adule，i，e． between the 12 th and 15 th degrees of N ．latitnde． On the opposite shore were seated the Sabaeaos of Arabia，and as there was much intercourse between the populations of the opposite sides of the Red Sea，the Aethiopian Sabaeans may have been a colony from Arabia．Both races are de－ scribed as lofty in stature and opulent（Psalnt Ixxii．； 1 Kings，x． 1 ；Isaiah，slv．14），and this description will apply equally to the Sabaeans who dwelt in the spice country of Arabia，and to those who enjoyed almost a monopoly of the Libyan spice－ trade，and were not far removed from the gold－ mines and the emerald and topaz－quarries of the Ae－ gyptian and Aethiopiatu mountains．The remarkable personal beauty of the Sabaeans is confirmed by the monuments of Upper Ninbia，and was probably reported to the Greek geographers by the slave－dealers，to whom height and noble features would be a recom－ mendation．The Sabaeans，at least in earlier pe－ riods，may be regarded as one of the principal tribes of the Aethiopian kiugdom of Meroe．［Jlenoe．］ Jusephus（Antiq．ii．5）affirms that the Queen of Sleba or Saba came from this region，and that it bore the name of Saba before it was known by that of Heroe．Tbere seems also some affinity between the wurd Saba and the name or title of the kings of the Aethiopians，Satba－co．
［W．B．D．］
SABADI＇BAE（さabaס́єi̊at $\nu \bar{\eta} \sigma o \iota$ ，Ptol．vii． 2. § 28 ），three islands，mentioned by Ptolemy，in the neighbourhood of the Aurea Chersonesus in India extra Gangem．From the great resemblance of the name，it is not unlikely that he has confounded it with that of the island of labadius（or Sabadins），now Java，which he mentions in his next section．［1A－
 $\gamma_{(v a}$ ），a town in Lesser Armenia，is mentioned only by Ptolemy（ $\mathrm{v}, 7 . \S 10$ ）as belonging to the pre－ fenture of laviniane．
［L．S．］
sABAL1NGll（इaba入 $(\gamma \gamma \circ t)$ ，a German tribe， placel by Ptoleny（ii．11．§ 11）：above the Saxones in the Cimbrian peninsula，the modern Schleswig． In the absence of all farther information about them， it has been inferred．from the mere resemblance of name，that they dwelt in and atrout the place called Suthophont in the island of Lulened．
［L．S．］
SABARLA（Saouapia），nn important town in the north of Upper I＇mmonia，was situated in a plain between the river Arrabo and the Deserta Beiorum，on the raad from Carnuntum to Potovium．The town， which seems to have been an ancient settlement of the Boii，derived its importance partly frow the ferti－ lity of the plain in which it was situated，atol partly from the fict that it formed a kind of ceatral ponat at which several roals met．The emperor Clandius raised it th the rank of a Kuman coluny，whence it received the surname of Claudia．（Plin．iii．27； Ptol．ii．15．§ 4．）In this town Neptimius Severus was proclaimed An－n－tus（Aurel．Vict．Epit．19）， and the emperor Valentinian resided there some time．（Amm．Marc．sxa．5．）Owing to this and other circumstances，the town rose to a high degree of prosperity during the latter period of the Loman Empire；and its ancient greatness is still attested by its numerous remaios of temples and squedncts． Many statues，joscriptions，and coins also have been found at Stein am Anger，which is the modern naue，or，as the Huogarians call it，Ssombathely． （It．Ant．pp．233，261，262，434；Orelli，Inscript． n． 200 and 1789 ；Schönwisser，Antiquitates sitt－ bariac，p． 45 ；Muchar，Vuricum，i，p．167．）［L．S．］
sAbARICUS SINUS．［Indices Oce，isus］
sABATA or SABDATA（I＇lin．vi． 27, b， 31 ），a town of A－syria，probably the same place as the SabaOá of Zosinus（ini．23），which that writer de－ scribes as 30 stadia finm the ancient Sclenveia．It is also mentioned by Abulteda（0．253）under the name of Sabath．

## S．lBA＇TLA VADA．［V．ama Sabatia．］

SABATINUS LACLS（ $\operatorname{sdbata} \lambda t \mu \nu \eta_{1}$ Strab： Lago di Braccianu），one of the mast considerablo of the lakes of Etruria，which，as Strabo observes，was the most soatherly of them，and coasequently the nearent to Cume and to the sea．（Strab，v．p．226．） It is，like most of the other lakes in the same region， formed in the crater of an extinct voleams，and has consequentiy a very rerular baxin－like form，with a （inenit of about 20）miles，and is surrounded on all sim by a ridere of hills of bo great elevation．It is prohathe that it derived its name fiom a town：of the name－fismeate．which stood on it．shoese，but the rame is mit tound in the ge arghlers and the ordy penition cudpure of its existence is its mention in tie Tapula as a station on the Via Claudia．（Tab． I＇tut．）The lishe itsolf is called Sabata by Strato， and Sibate by Festus，from whon we learn that it gave name to the silutame tribe of the Roman citi－ rons，one of thone which was formed ont of the new citizens added to the state in r．． 387 ．（Liw，si． 4．5；Fest．s．v．Suthetinet，11．342，343．）silius Italiens ypeaks of the＂Shtatra stazna＂in the plomal （vini， 492 ），probably itschuding tumber the thanse the much smaller lake on the same netghbouhood called the Laens Alsietin is or Lagu di Murtignano．The same tradition was reported of thes lake at of the Ciminian，and of many others，that there was a city
swallowed up by it，the remains of which couti still oceasionally be seen at the bottorn of its clear waters． （Sotion，de Mir．Font．41，where me should cer－ tainly read ¿ábatos for さ̇ícatos．）It abounded in fish and wild－fowl，and was even stocked artilicially with fish of varions kinds by the luxurious Romans of late times．（Columell．viii．16．）

The Tabula places sabate at the distance of 36 miles from lione，hat this number is much beyond the truth．The true distance is probably 27 miles， which would coincide with a site near the W．ex－ tremity of the lake about a mile beyond the modern town of Bracciorn，where there are some ruins of Roman date，probathly belonging to a villa（Tab． Peut．；Hulsten．Not．ad Cluver．p．44：Westphal， Rom．Kianpagne，1p．156，158．）The town of Bracciano，which now gives name to the lake，dates only from the midule ages and probably dues not nccupy an aucient site．
［E．II．B．］
SABATUS 1．（Sabbato），a river of Samnium， in the country of the Hirpini，and one of the tribu－ taries of the Calor（Calore），with which it unites under the walls of Beneventati．［CALoH．］The name of the river is nut found in any ancient author， but Livy mentions the Sabativi among the Caul－ panians who were punished for their defection to Hannibal in the Second Punic War．（Liv．xxvi． 33，34．）These may mean generally the people of the valley of sabatus，or there may have been，as supposed by Cluver，a town of the same name on the banks of the river．（Cluver．Ital，p．1199．）

2．（Socuto），a river of Bruttinm，or the W．coast of the peninsula，flowing into the sea between A mantea and Citpo Surero．Its name is known only from the Itinerariex，from which we learn that it was crossed by the high－roul to Rhegium 18 miles S．of Consentia（Cosenze），a distance which，com－ bined with the name，clearly identifies it with the mudern Savati．（Itin．Ant．pp．105，110．）It is generally identified by geographers with the Ocinarus of Lycopliron，on the banks of which the Greek city of Terina was situated；but this assumption rests of no sufficient grounds．［Teresa．］［E．H．B．］
sABBATA or sABBA ITA．［TADA SADA－ TiA．］

SA＇BBATHA（इásbaba，Ptol．vi．i．§ 38 ；Sa－ botha，Plin．vi．28．s．32），was the capital of the Adramita，a Sabaean tribe inlabiting the S．cnast if Arabia Felix（lat． 14 天．）．［Auromamak］ Its mhalututs are cuiled sabbathae by Festus Avi－ enus（1）eser．Orb．Terr．v．1136）．Sabbatha was stated far inland，on the conast of a navigable river （l＇rion？）－iun unusnal circumstance in that re－ gion，where the sticams are bifef in their culrse atod seldom naxigable．（Peripl．Mar．Erythr：p． 15．）If it ceally contaned sisty temples withio its wall．，Subhatha mast have a anked second to none of the cities of Arabia．Its monopoly of the Indian trade doubtess remered it a wealthy and important plawe．At no other haven on the conat were the spices， Lums，and silks of India permitted to be landed： If exposed to sale elserwhere，they were confiscated， and their vendors purishitd with death．They were conveyed up the river to Sabbatha in buats nade of leather，straninel over wooden frames．One gate al me－probably for the couvenience of detecting fraud－of Sabbatha was assigued to this branch of commerce；and after the bales had been examined， the guols were not laanded over to their owners until a tithe land been deducted for a deity named Nibls（ $=$ dominus），and also a portion for the king．

Geographers attempt to identify Sabbutha with Mariaba ( 1 areb), but the proofs of their identity are unsatisfactory ; and it may even be questioned whether Sabbatha be not an elongated form of Saba, a common appellation for cities in Arabia Felix. The Kabátavoy of Strabo (xvi. p. 768) is supposed by his translator Groskurd (vol. iii. p. 287) to be an error for $\mathrm{\Sigma aba}$ apavov, and the latter to be a form of Sabbatha. [Nee Martaba, Vol. II, p. $274]$
[W. B. D.]
SABI'NI ( Sasivai), a people of Central Italy, who inlabited the rugged mountain country on the W. of the central clain of the Apennines, from the sources of the Nar and Velinus to the neigbbourhood of Reate, and from thence sonthwards as far as the Tiber and the Anio. They were bounded on the N. and W. by the Umbrians and Etruscans, on the NE. by Picenum, from which they were separated by the main ridge of the Apennines; on the $\mathbf{E}$. by the Vestini, the Marsi and Aequiculi, and on the S. by Latium. Their country thus formed a narrow strip, exteuding about 85 miles in length from the lofty group of the Apennines above Nursia, in which the Nar takes its rise (now called the Monti della Sibilla), to the junction of the Tiber and Anio, within a few miles of Rome. The sonthern limit of the Sabines had, howerer, undergone many changes; in Pliny's time it was fixed as above stated, the Anio being generally received as the boundary between them and Latium; hence Pliny reckons Fidenae and Nomentum Sabine cities, though there is good ground for assigning them both in earlier times to the Latins, and Ptolemy again includes them both in Latium. Strabo, on the other hand, describes the Sabine territory as extending as far as Nomentum, by which he probably means to include the latter city; while Eretam, which was only about 3 miles N. of Nomentum, seems to have been universally considered as a Sabine city. (Strab. v. p. 228; Plin. iii. 5. s. 9,12 s. 17 ; Ptol. iii. 1. § 62.) In like manner Pliny includes the important city of Tibur among the Sabines, though it was certainly commonly reckoned a Latin city, and never appears in the early history of Rome in connection with the Subines. The fact appears to be, that the frontier between the Sabines and Latins was in early times constantly fluctuating, as the Sabines on the one band were pressing down from the N., and on the other were driven back in their turn by the arms of the Romans and Latins. But on the division of Italy into regions by Augustus, the Anjo was estaWished as the boundary of the First Region, and for this reason was considered by Pliny as the limit also between the Latins and Salines. (Plin. l. c.) It is remarkable that no name for the country is found in ancient writers, standing in the same relation to that of the people whicb Samnium does to Samnites, Latium to Latini, \&ec.: it is called only "the land of the Sabines" (Sabinorum ager, or Sabinus ager, Liv. i. 36. ii. 16, \&c.; Tac. Hist. iii. 78), and Roman writers would say " in Sabinis versari, in Subinos proficisci," \&c. The Greeks indeed used ì Eabion for the name of the country (Strab. v. pp. 219, 228, \&c.; Steph. Byz. s. v.), wbich is called to the present day by the Roman peasantry La Sabina, but we do not find any corresporiding form in Latin authors.

All ancient authors agree in representing the Sabines ns one of the must aticient races of Italy, and is constituting one of the elements of the Roman people, at the same time that they were the progenitors of the far more numerous sraces which had vul. II.
spread themselves to the $\mathbf{E}$. and $\mathrm{S}_{\text {, }}$, nnder the names of l'icentes, l'eligni, and Samnites, the last of whom had in their turn become the parents of the Frentani, the Lucanians, Apuliams aud Bruttians. The minor tribes of the Marsi, Marracini and Vestini, were also in all probability of Sabinc origin, though we have no distinet testimony to this effect [Marsi]. These various races are often comprehended by modern writers under the general narue of Sabellian, which is convenient as an ethuic designation; but there is no ancient authority for this use of the word, which was first introduced by Niebuhr (vol. i. p. 91). Pliny indeed in one passage says that the Samnites were also called Sabelli (Plin. iii. 12. s. 17), and this is confirmed by Strabo (v. p. 250). Sabellus is found also in Livy and other Latin writers, as an adjective form for Samnite, though never for the name of the nation (Liv. viii. 1, x. 19); but it is frequently also used, especially by the poets, simply as an equivalent for the adjective Sabine. (Virg. G.ii. 167, Aen. vii. 665 ; Hor. Carm. iii. 6.37; Jav. iii. 169.)

But notwithstanding the important pusition of the Sabines in regard to the early history and ethnography of Italy, we have very little infurmation as to their own origin or afinities. Strabo calls them a very ancient race and antuchthons (v. ए. 228), which may be understood as meaning that there was no account of their immigration or origin which he considered worthy of credit. He distinetly rejects as a fiction the notion that they or their Samnite descendants were of Laconian origin (16. 1. 250); an idea which was very probably soggested only by fancied resemblances in their manners and institutions to those of Sparta (Dionys. ii. 49). But this notion, thungh nut countenanced by any historian of authority, was tnken up, by the Roman puets, who frequently allude to the Lacedaemonian descent of the Sabines (Ovid. Fast. i. 260, iii. 230 ; Sil. Ital. ii. 8 , viii. $412, \&$ e.), and adopted also by some prose writers (Plut. Rom. 16; Hygin. ap. Serc. ad Aen. viii. 638). A much more important statement is that preserved to us by Dionysius on the authority of Zenodotus of Troezen, which reprevents the Subines as an offishoot of the Umbrian race (Dionys, ii. 49). The authority of Zenodotus is indeed in itself not worth much, and his statement as reported to us is somewhat confused; hut many analogies wonld lead us to the same conchusion, that the Sabines and Umbrians were closely cognate races, and branches of the same original stock. We learn from the Eugubine tables that Sancus, the tutelary divinity of the Sabine nation, was an object of especial worship with the Umbrians also; the same documents prove that various other points of the sabine religion, which are spoken of as peculiar to that nation, were in fact common to the Umbrians also (Klenze, Philol. Abhandl. p. 80). Unfortunately the Sabine language, which would have thrown much light upon the subject, is totally lost; not a single inseription has been prescrved to us; bat even the few words recorded by ancient writers, though many of them, as would naturally be the case in such a selection, words peculiar to the Sabines, yet are abundantly sufficient to show that there could be no essential difference between the language of the Sabines and their neighbours, the Umbrians on the one side, and the Oscans on the other (Klenze, l. c.; Donaldson, I arronianus. p. 8). The general similarity between their dialect and that of the Oscan was probsbly the cause that thes adopted with facility in the more suuthern regions of haly, which they had conquered,
the languge of their Oscan snbjects; urdeed all the extant inseriptions in that language may be considered as Sathello-()scan, and have probably received some influence from the language of the conquerors, though we have no means of estamating its amount. The original Sabines appear' to have eatly lost the use of their own language, and adopted the general use of Latin; which, considerine the rugged and se Inded character of their country, and their primitive habits of life, could hardly have been the case, had the two languages been ralically distinct.

On the whole, therefore, we maty fairly conclude that the Sabines were only a branch of the same great famly with the Oscans, Latins, and Umbrians, but apparently most closely related to the last of the three. Their name is generally derivel from that of Sabus, who is repreaented as a son of Sancus, the chief tutelary divinity of the nation. (Cato, ap, Dimys. ii. 49 ; Sil. Ital. siii. 422 ; Sery. oud Aen. viii. 638.) But another ctymuluy given by ancient witers derives it frem their religions babits and devation to the wanship of the gond. (Varr. ap, Fest. p. 343; Plin. iii. 12. s. 17.) This last derivation in fact comes to much the same thing with the preceding one, for the name of sabus (inbriumsly a mytholugical personage) is itself connectel with the Greek $\sigma \in b_{w}$, and with the word "sevam" found in the Eugubine tables in the sense of venerable or holy, just as Suncus is with the Latin "sauctus," " sancire," Scc. (Donaldsun, $L$ c. .)

The original abode of the Sabines was, according to Cato, in the upper valley of the Aterons, about Aniternum, at the foot of the loftiest group of the Apennines. We cannot indeed understand literally, at least as applying to the whole nation, his assertion (as quoted by Dinnysius) that they procecded from a village called Tetrina, near Amiternum (Cato, ap. Dionys. i. 14, ii. 49); though this may have been true of the particular band or clan which invaded and occopied Reate. But there is no reason to doubt the general fact that the Sabines, at the earliest perind when their name appears in history, occupied the lofty mountain group in question with its aljacent valleys, which, from the peculiar comfiguration of this part of the Apemines, would affurd natural and convenient oatlets to their migrations in all directions. [Almexinus.] The seading forth of these migrations, or mational colmies, as they may be called, was comected with an ancient castom which, though not miknown to the other mations of It.ly, seoms to have been more peentiatly characteristic of the Sahnes - the Ver Socrum or "sacred spring." This consinted of dedieating, by a soldem vow, usially in time of pressure frow war or famine, all the proluce of the coning year, to some dwity: Namers or Mars seems to lawe leen the one commonly selected. The cattle burn in that yeur were accordingly sacrificed to the divinity chosen, while the chitdren were allowed to grow up to man's "atare, and were then sent fonth in a body to find for themedies now place of abode beyond the limits of their mative whatry. (Strab. v. J. 250; Fent. *.re. Mamertini, 1. 158, Sucroni, p. 321. 1er Sitcrum, p. 379 : Sisema, ap, Son, p. 522: Varr. K. R. iii. 16. §29; Lax. xxii. 9, 10.) Such colomies were related by tralition to have given ongin to the nations of the Jienotes, the Sumaites, and the Hirpini, and in accerface with the motion of their consecration to Nars they were regorted to have been guided by a woulpecker, or a wolf, the animals peculially conuected with that deity, (Strab. v.
pp, 240, 250; Fest. pp. 106. 212.) Whe have no statements of the perioul at which these sucressive enigrations towaris the E., and S. tork place: all that is known of the carly history of the nations to which they gave rise will he found in the respective articles, and we shall here content ourselves with tracing that of the Subines themselves, or the people to whom that appellation continued to be confined by the Romans.

These, when they first emerged from their upland valleys into the neighbourhood of Reate, fuus that city, as well as the surrounding territory, in the possession of a peuple whom Dionysius talls Aborigines, and who, finding themselves unable to withatand the pressure of the Sabines, withdrew, after the capture of their capital city of Lista, towards the lower valloy of the Tiber, where they settled themselves in Latiam, and finally became one of the constituent clements of the Latin people. (Cato, ap. Dinnys. i. 14, ii. 48. 49.) [Abemgines; Lathem.] Neanwhile the Sabines, after they bad firmly established themselves in the porsession of Rate and its neighbourboul, gradually pressed on towards the S. and W., and occupied the whole of the hilly and rugged country which extends from lieate to the plain of the Tiber, and from the neighourhond of Ocriculum to that of Tibur (Tivo iz.) (Dionys, ii. 49.) The conquest and colonisation of this extensive tract was probably the work of a long time, but at the first dawn of history we find the Sabines already established on the left bank of the Tiber down to within a fow miles of its confluence with the Anio; and at a period little sulbsequent to the foundation uf Rome, they pushed on their advanced posts still further, and established themselves on the Quirinal hill, at the very gates of the rising city. The listory of the Sabines under Titus Tatius, of the wars of that king with lomulus, and of the settlement of the Sabines at Rome upon equal terms with the Latin inhabitants, so that the two beeme gradually blended into me people, has been so mixed up with fables and distorted by pretical and mythological legends, that we may well despair of recovering the truth, or extricating the real history from the maze of various and discorlant traditions; but it does not the less represent a real series of events. It is an nnquestionable listonical fact that a large part of the population of the city was of Sabine origin, and the settlement of that people on the Quirinal is attested by numerous lecal traditions, which there is certainly no reason to doubt. (Sclwegler, Röm. Ciesch, vol. i. pp. $243,478,8 \mathrm{se}$ )

We cannot attempt here to disenss the varions thearies that have been suggested with a view to explain the real nature of the Sabine invasion, and the origin of the lesends comected with them. Who of the must jhansible of these is that which suppooen Thome to have been really conquered by tho Sabines, and that it was only by as subsequent struggle that the Latin settlers on the Palatine attained an equality of rights. (Ihne, Researches int", the Mistory of the Roman Constitution, p. 44, Ac.; Silweyter, vol, i. pp. 491-493.) It tannot be denied that this view has much to recommend it, and explains many obscture points in the early history, but it can be scarcely rezurded as based on such an amount of cridence us would entitle it to be received as a historical fact.

The Sabine intluence struck deep into the character of the komam people; bit its effect was especially prominent in its feaming on theiv sacred
rites, and on their sacerdotal as well as religious institutions. This is in entire accordance with the character given of the Sabines by Varro and Pliny; and it is no wonder therefore that the traditions of the Romans generally ascribed to Numa, the Sabine king, the whole, or by far the greater part, of the religious institutions of their conntry, in the same mauner as they did the military and political ones to his predecessor Romulus. Numa, indeed, became to a great extent the representative, or rather the impersonation of the Sabine element of the Roman people; at the same time that he was so generally regarded ns the founder of all religions rites and institutions, that it became enstomary to ascribe to him evell those which were certainly not of Sabine origin, bat belonged to the Latins or were derived from Alba. (Ambrosch, Studien, pp. 141 -148 ; Schwegler, R. G. voi. i. pp. $543,554$. )
Thronghout these earliest traditions concerning the relations of the Sabines with Rome, Cures is the city that appears to take the most prominent part. Tatins himself was king of Cures (Dionys. ii. 36); and it was thither also that the patricians sent, after the interregnum, to seek out the wise and pacific Numa. (Liv, i. 18; Dionys. ii. 58.) A still mure striking proof of the connection of the Roman Sabines with Cures was found in the name of Quirites, which came to be eventually applied to the whole Roman people, and which was commonly considered as inmedistely derived from that of Cures. (Liv. i. 13; Varr. L. L. vi. 68; Dionys. ii. 46 ; Strab. v. p. 228.) But this etymology is, to say the least, extremely doubtful; it is far more probable that the name of Quirites was derived from "quiris," a spear, and meant merely " spearmen" or "warriors," just as Quirinus was the "spear-god," or god of war, closely connected, thongh not identical with, Mamers or Mars. It is certain also that this superiority of Cures, if it ever really existed, ceased at a very early period. No subsequent allusion to it is found in Roman history, and the city itself was in historical times a very inconsiderable place. [Cures.]

The close union thus established between the Romans and the Sabines who had settled themselves on the Quirinal did not secmre the rising city from hostilities with the rest of the nation. Already in the reign of Tullns Hostilius, the successor of Numa, we fiud that monarch engaged in hostilities with the Sibines, whose territory he invaded. The decisive battle is said to have taken place at a forest called Silva Malitioss, the site of which is unknown. (Liv. i. 30 ; Dionys. iii. 32, 33.) During the reign of Ancns Marcius, who is represented as bimself of Sabine descent (he was a grandson of Numa), no hootilities with the Sahines ocenr ; but his successor Tarquinius Priscus was engaged in a war with that people which appears to have been of a formidable description. The Sabines, necording to Livy, began hostilities by crossing the Anio ; and after their final defeat we are told that they were deprived of Collatia and the adjoining territory. (Liv. i. 36-38; Dionys. iii. 55-66.) Cicero also speaks of Tarquin as repulsing the Sabines from the very walls of the city. (Cic. de Kep. ii. 20.) There seems therefure no doubt that they had at this time extended their power to the right bank of the Anio, and made thenselves masters of a considerable part of the territony which had previously belonged to the Latins. From this time no turther mention of them occurs in the history of Rome till after the expulsion of the kings ; but in B. C. 504 , after the repulse of Pursena?
a Sabine war agails broke out, and from this time that people appears almost as frequently among the enemies of Rome, as the Veientes or the Volscians. But the renewal of hostilities was masked by one incident, which exercised a permanent effect on Roman history. The whole of one clan of the Salunes, headed by a leader named Atta Clausus, dissenting from the palicy of their countrymen, nigrated in a body to Rome, where they were welcomed as citizons, and gave rise to the powerful family and tribe of the Claudii. (Liv, ii. 16 ; Dionys. v. 40 ; Virg. Aen. vii. 708 ; Tac. Ann. xi. 24 : Appian, Rom. i. Fr. 11.) It is umecessary to recapitulate in detail the accounts of the petty wars with the Sabines in the early ages of the Repulilic, which present few featu es of historical interest. They are of much the same general character as those with the Veientes and the Volscians, but for some reason or other seem to have been a much less favourite sulject for popnlar legend and national vanity, and therefore aford few of those striking incidents and romantic episodes with which the others have been adorned. Livy indeed disposes of them for the most part in a very summary manner; but they are related in considerable detail by Dionysius. One thing, howerer, is evident, that neither the power nor the spirit of the Nabines had been roken; as they are represented in n. c. 469 , as carrying their ravages up to the very gates of Rome; and even in B. C. 449, when the decisive victory of M. Horatins was followed by the capture of the Sabine camp, we are told that it was found full of booty, obtained ly the plunder of the Roman territories. (Liv. ii. 16, 18, \&c., iii. 26, 30, 38, 6163 ; Dionys. v. $37-47$, vi. 31, \&c.) On this, as on several other occasions, Eretum appears as the frontier town of the Sabines, where they established their head-quarters, and from whence they nade incursions into the Roman tervitory.

There is nothiog in the accounts transmitted to us of this victory of M . Horatias over the Sabines to distinguish it from numerous other iostances of similar successes, but it seems to have been really of importance ; at least it was followed by the remarkable result that the wars with the Sabines, which for more than fifty years had been of such perpetual recurrence, ceased altogether from this time, and for more than a century and a half the namo of the Sabines is scarcely mentioned in history. The circumstance is the more remarkable, becanse during a great part of this interval the Romans wore engaged in a fierce contest with the Samnites, the descendants of the Suhines, but who do not appear to have maintained any kind of politieal relation with their progenitors. Of the terins of the peace $v \mathrm{~h} \mathbf{c h}$ subsisted between the Salines and Ronans dmring this period we have no acconnt. Niebuhr's conjecture that they enjoyed the rights of isopolity with the Romans (vol. ii. p. 44\%) is certainly without foundation; and they appear to have maintained a position of simple neutrality. We are equally at a loss to nuderstand what shonld hase induced them at length suddenly to depart from this policy, but in the year B. C. 290 we find the Sabines once more in arms against Rome. They were, lowever, easily vanquished. The consu! M'. Curius Dentatus, who had already put an end to the Third Samnite War, nest turced his arms against the Sabines, and rednced them to submission in the course of a single campuign. (Liv. Epit. xi.; Vict. Jïr. Ill. 33 ; Oros. iii. 22; Flor. i. 15.) They were severely punshod lor-their defoction, great numbers of pri-

soners were sold as slaves; the remanima cititen. were almitted to the lioman franchise, but without the right of suffrage, and their principal towns were reduced to the subordinate conlition of Praefecturae. (Yell. Pat. i. 14 ; Festus, s. $v$. Praefecturae; Serv, ad -ien. vii. 709, whose statemeat can only refer to this period, though erranenusly transferred by lim to a much carlier one.) The right of suffirage was, however, granted to them about 20 years later (13. C. 268) ; and from this time the sabines enjoyed the full rishts of Roman citizens, and were jucluded in the sergian tribe. (Vell. Pat. l. c.; Cic. pro Balb. 13, in Vatin. 15.) This circunastance at once separated them from the cause of the other nations of Italy, including their own kinsmen the Samnites, Picentes, and Jeligni, during the great contest of the Social War. On that vecasion the Sibines, as well as the Latins and Campanians, were arrayed on behalf of Rome.

The last occasion on which the name of the Sabines as a people is found in history is during the Sceond Punic War, when they came forward in a body to farnish volunteers to the army of seipin. (Liv, xxviii. 45.) After their ineurporation with the Roman state, we scarcely meet with any separate notice of them, thongh they contimed to be regardel as among the btavest and hatrdiest of the subjects of Rume. Hence Cieero culls them "florem Italiae al robur rei publicac." (I'ra Ligar. 11.)

Ender the Empire their name did not even continue to be used as a territorial desipnation. Tbeir territory was included in the Fourth Region by Augustus. (Plin. iii. 12. s. 17.) It was subsequently reckoned a part of the prowince of Valeria, and is included with the rest of that province under the appellation of Picenum in the Laber Coloniarusn. (Lib. Col. pp. 253. 257, \&c.; P. Dtac, Mist. Lang. ii. 20; Nommsen, ad Lib. Col. p. 212.) But though the name of the Sabines thus disappeared from official usage, it still continued in current popular use. Indeed it was not likely that a people so attached to ancient usuges, and so primitive is their hakits, would ramily lose or abandon their old appellation. Hence it is almost the only instance in which the ancient name of a district or region of Itnly has been transmitted without alteration to the present day: the provinice of La Salaina still forms one of the twelve into which the States of the Church are divided, and is comprised within very nearly the same limits as it was in the days of Strabu. (Hampuldi, Diz. Corog. d Italie, s. $r$.

The country of the Salnines was, as already meationed, for the most pat of a rugged and mountainous chanacter; even at the prosent day it is calcalated that above two-thirds of it are incapable of any kind of cultivation. But the valleys are fertile, and even lixuriant ; and the sides of the hills, and lower slopes of the mountains, are well adapted for the growth looth of vines and olives. The northernmost tract of thoir territory, including the upper valleys of the Nir and Velinus, especially the neighbourhood of Niusia, was indeed a cold and blak hishlamd country, shat $i=$ n all sides by some of the highest ranges of the Apenpines: and the whole broad tract which extends from the group of the Monte $J^{*}$ ctino, AF.. of lieate, to the front of the mowntain ranges that bonler the Campargat of Rome, is little more than $\pi$ mass of lroken and rugged mountains, phipfoumporyation to the mope
central ranges of the Apennines, but still far from inconsiderable. The Ifunte Gennaro (the Nuis Jucretilis of Horace), which rises direetly from the plain of the Compagna, attains to sn elevation of 4285 English feet above the sea. But the isolated mountain called Monte Terminillo near Leonessa, NE. of Rieti, which furins a conspicuous object in the view from Rome, rises to a lieight of abore to00 feet, while the Monte I'elino, SE. of Rieti, on the confines of the Sabines and the Vestini, is not less than 8180 feet in height. The whole of the ridge, also, which separates the Sabines from I'icenum is one of the most elevated of the Apennines. The Monti della Sibilln, in which the Nar takes its rise, attain the height of 7200 feet, while the Monte Vettore and Pizzo di Sevo, which form tho eontimation of the same chain tanwards the Gran Sasso, rise to a still greater elevation. There can be no doubt that these lofty and rugged groups of mountains are those designated ly the ancients as the Moss Fiscelles, Tetrica (" Tetricae horrentes rupes," Virg. Aen. vii. 713), and Srvemus; but we are wable to identify with any certainty the particular mountains to which these names were applied. The more westerly part of the Sabine territory slopes gradually from the lofty ranges of these central Apennines towards the valley of the Tiber, and though always billy is still a fertile and productive country, similar to the part of Umbria, which it adjoins. The lower valley of the Velinus abont Reate was also celebrated for its fertility, and even at the present oay is deservedly reckoned oae of the most beautiful districts in Italy.

The plysical character of the land of the Sabines evidently exercised a strong influence upon the cbaracter and manners of the peuple. Highlanders and nountaineers are generally brave, hardy, and frugal; and the Sabires scem to have possessed all these oualities in so higls a degree that they beeame, as it were, the types of them among the Romans. Cicero calls them "severissimi homines Sabini," and Livy speaks of the "disciplina tetrica ac tristis reterum Subinorum." (Cic. in Vatin. 15, pro Ligar. I1; Liv, i. 18.) Cato abo described the severe and frugal mode of life of the early Romans as inberited from the subines (ap. Serv. ad Aen. viii. 638). Their frugal manners and moral purity continned indeed, even under the lioman government, to be an object of admiration, and are often introduced by the puets of the Empire as a contrast to the luxury and disoluteness of the eapital. (Hor. Carm. iii. 6. 38 - 44, Epod. 2. 41, Epist. ii. 1. 25; Propert. iii. 24. 47: Juv. iii. 169.) With these qualities wers combined, as is not onfreguently found annong sceluded mountaineers, an carnest piety and otrong religions fecling, together with a streunous attachment to the religious nsages and forms of worship which liad been transmitted to them by their atcestors. The religion of the Sabines dues not appear to have differed essentially from that of the other nejghbouring nations of Italy; but they had several pecmliar divinities, or at least divinities unknowa to the Latins or Etruscans, thongh same of them seem to have been common to the Cinlrians alsu. At the head of these stond sancus, called also Semo Sancus who was the tutelary divinity of the nation, and the reputed father of their inythical progenitor, of cponymous hern Subus. He was considered as the peculiar guardinn of natlis, and was thence generally identified by the lonans with Jins Fidins; while y hers for des ybuionsyrasons, identified him with

Hercules. (Ovid. Fast. vi. 215 ; Sil. Ital. viii. 420 ; Lactant. i. 15; Augustiu, Cic. Dei, sviii. 19; Ambresch. Studien. p. $170, \& \mathrm{cc}$.) Among the other deities whese worship is expressly said to have been introduced at Rome by the Sabines, we find Sol, Feronia, Minersa and Mars, or Mamers, as he was called by the Sabines and their descendants. (Varr. L. L. v. i4.) Slinerva was, however, certainly an Etruscan dirinity also; and in like manner Vejovis, $O_{p s}$, Diana, and several other deities, which are said to be of Sabine extraction, were clearly common to the Latins also, and probably formed part of the mythology of all the Italian nations. (Varro, L c.; Augustin, C. D. iv. 23 ; Schwegler, Rom. Gesch. i. p. 250 ; Ambrosch. h.c.pp. 141-176.) On the other hand Quirinus was certainly a Kabine deity, notwithstanding bis subsequent identification with the deitied Romulus. His temple, as well as that of Sancus, stood on the Quirinal bill, to which indeed it probably gave name. (Varr. L. L. v. 51 ; Ambrosch, pp. 149, 169.)

Connected with the religious rites of the Sabines may be mentioned their superstitions attachment to magical incantations, which they ontinued to practise down to a late period, as well as their descendants the Marsi and other Sabellian tribes. (Hor. Epod. 17. 28, Sat. i. 9. 29.) They were noted also for their skill, or pretended skill, in divination by dreams. (Fest, p. 335.) The rites of augury, and especially of anspices, or omens from the flight of birds, wele also considered to be essentially of Sabine erigin, though certainly common io more or less degree to the other nations of Central Ltaly. Attus Navius, the celebrated augur in the reign of Tarquin the Elder, who was regarded by many. as the founder of the whole science of augury (Cic. de Div. ii. 38), was a Sabine, and the institution of the "auspicia majora" was also referred to Nums. (Cic. de Rep. ii. 14.)

The Sabine language, as already observed, is known to us enly from a few words presersed by ancient writers, Varro, Festus, \&c. Some of these, as "multa," "albus," "imperator," \&c., are well known to us as Latin words, though said to have originally passed into that language from the Sabines. Others, such as "hirpus" or "irpus" for a wolf, "caris" or "quiris" (a spear), "nar" (sulplhur), "teba" (a bill), \&c., were altogether strange to the Latin, though still in use ameng the Sabines. A more general peculianty of the sabine dialect, and which in itself proves it to have beeo a cognate language with the Latin, is that it inserted the digamma or F at the commencement of many words instead of the rough aspirate; thus they said "fircus," "fedus," "fostis," " fostia," \&e., for the Latin "hircus," "hedus," " hostis," "hostia," \&ce. (Varro, L. L. v. 97 ; Fest. pp. 84, 102 ; Kienze, Phiinlog. Abhandl. pp. 70-76; Mommsen, U. I. Dialehte, pp. 335-359.) The two last authors have well brought together the little tbat we really know of the Sabine language. It is not quite clear from the expressions of Varro how far the Sabine lan. gnage ceuld he considered as still existing in his time; but it seems probable that it could no longer be regarded as a living language, though the peculiar expressions and forms referred to were still in use as provincial'sms. (Klenze, l. c.)

The Sabines, we are told, dwelt principally in villages, and even their towns in the earliest times were unwalled. (Strab. v. p. 228 ; Dionys. ii. 49.) This is one of the points in which they sxere thought
to resemble the Lacedaemenians (Plut. Rom. 16); though it probably arose merely from their simplicity of manners, and their retaiuing unchanged the habits of primitive mountaineers. In accordance with this statement we find very fes towns mentioned in their territory ; and cven of theso Reate appears to have been the ouly one that was ever a place of much importance. Ixtenocrea, about 14 miles ligher up the valley of the Velinus (the name of which is still preserted in Antrodoco), seems never to have been a municipal town; and it is probable that the whole upper valley of the Velinus was, municipally speaking, included in the territory of Reate, as we know was the case with the lower valley also, down to the falls of the river, which formed the limit of the territory of the Sabines on this side: Interamna, as well as Narnia and Ocriculum, being included in Umbria. FalacntNUM, the birthplace of Vespaxian, situated near the seurces of the Velinus, was certainly a mere village; as was also Fonulr (Civita Tommasa), situated in the cross valley which led from Interocrea to Amiternum and formed the line of communication between the valley of the Velinus and that of the Atermus. Amiternem itself, though situated in the valley of the Atermas, so that it would seem to hare more naturally belonged to the Vestini, was certainly a Sabine city (Plin. iii. 12. s. 17; Strab. v. p. 228), and was probably, next to leate, the most considerable that they pissessed. Nursia, in the upper valley of the Nar, was the chief town of the surrounding district, but was never a place of much importance. The lower country of the Nalines, between Reate and Rome, seems to have contained several small towns, which were of municipal rank, theugh said by Strabo to be little more than villages. Among these were Forvis Novis, the site of which may be fixed at l'escorio, en the banks of the Imele, and Forem Decin, the situation of which is wholly unknown. Both these were, as the names show, Roman towns, and not aocient Sabine cities ; the former appears to have replaced the Sabine Casperid, which was probably sitmated at Aspro, in the same neighbourhood. On the other hand Cures, the supposed metropolis of the Sabines that had settled at Rome, still retained its municipal rauk, though not a place of much importance. The same was the case with Eretim, which was, as already observed, the last of the strictly Sabine towns in proceeding towards Rome ; though Pliny includes Nomentum and Fidenae also annong the Sobines. Besides these there were two towns of the name of Trebula, both of which must probably be placed in the sonthern part of the land of the Sibines. Of these Thearla Mutesea (the Mutuscac of Virgil, Aen. vii. 711) is represented by Nonte Leone, about 15 miles S. of Rivti, and on the right of the Salarian Way; while Trebula Sufrevas may perhaps be placed at S. Antimo near Stroncone, in the hills W. of Rieti. Lastly, Varli, in the valley of the Anio, 4 miles above Tibur, still called Ficovaro, would appear to have been certainly a Sabine town; the whole valley of thic Digentia (Licenza), with its villages of Dlandela, Digentia, and Fanum Vacunae (the well-known neighbourhood of Horace's Sabine firm), being iucluded among its dependencies. [Digestia.]

The territory of the sabines was traversed throughout its whole extent by the Sularian Way, which was from an early period one of the great ,highroads of Italy. This proceeded from Rome
direct to Reate，and thence ascended the valley of the Velinus by Interocrea and Falacrinum，from whence it crossed the ridge of the Apennines into the valley of the Truentos in Picenum，and thus descended to Asculam and the Adratic．The stations between Rome and lisate were Eretum， which may be fised at Grolla Marozera，and Vicus Novas，the site of which is marked by the Osteria Nuora，or Osteria dei Mossacci， 32 miles from Rome．（IVestplaal，Rom．Kump．p．128．）［［is S．llabia．］

Notwithstanding its momitainous character the Sabine territory was fir from being poor．Its pro－ ductions cunsisted chiefly of oil and wine，which， though not of first－rate quality，were abondant，and supplied a great part of the quantity used by the lower classes at Rome．（INor．Carm．i．9．7，20．1； Juv．iii．8．5．）The sabine hills produced aho in abun lance the plant which was thence known as Sabina herba（still called Siovin），which was used by the natives for incense，before the more costly fiankincense was iutroduced froun the East．（ 1 linn． xri． 20 s． 33 ，xxiv．11．s． 61 ；Virg．Cul． 402 ；Ovid， Fast．i．342．）The neighbourhond of Reate was also famons for its breed of mules and horses；and the mountains afforded excellent pasturage for shee？．The wilder and more inaccessitle sumnits of the Apenniaes were said still to be frequented by wild goats，an animal long siuce extinct tbronghout the continent of laly．（liam．R．R．ii．1．§ 5 ， 3．今3．）
［E．H．B．］
S．ABIS（ $\Sigma \alpha^{5}(5)$ ）a small river of Carmama，which is mentioned by Dela in connection with two other small streans，the Andamis and Coros（iii．8）． It is also noticed by Pliny，who places it in the neighbourhood of Harmuza（ 0 maniz，vi．23．s．27）． Ptolemy spoaks of a town in Carmania of the same name with this river（vi．8．§ 14）．

SABIS（Siambre），a river of Belgica，which joins the Musa（Maas）at Churleroi．Caesar（B．C． 5 5） marched against the Nervii and their confederates from the south，and he found the enemy posted on the north side of the Sobis（B．（i，ii．16）．In this batthe the Belgat were defeated with great slangbter． ［Nemvit．］
［G．L．］
sablones，in Gallia Belgica，is placed by the Antumine ltin．on a ruad from Colonia Trajana （Kelln）to Juliacum（Juliers）and Colonia Agrippi－ nensis（Colonne）．Sablones is supposed to be a place named Iut－Sandt near Strälen，a town on the river－liers，a branch of the Maas．But see Mertolavem in Gallia，No． 3.
［ $\mathrm{G}, \mathrm{L}$.
 § 2（1），a perple of European sirmatia，who from the termination＂boki，＂＂batak，＂so uften nocurring ia Russian and Polish local nanes，must be looked for in the bamin of the river Som，one of the largent attluents of the Iistula，and which drains a greater part of Cializitu．（Schatarik，shev．Alt．vol．i． p．206．）

SABORA，a place in 1lispania Baetica in the monntams above Malugn，near Camete；koown only from inseriptions．（Carter，Travels．p．252； Lkort，val．ii．pt．i．p，360．）
［T．II．D．］
AABRACAE，a people who dwelt，accordine to Cortias，in the sonthem part of the I＇unjub，in the neichbourhood of the Insula Pattalene（ix． 8. § 4 ）． They are mentioned in connection with the Pmesti as forming part of the realur of Mhasicanas．（Ar－ rian．Anub，vi．15；Droki．xvii．102．）［V．］
s．5；Solin．37；Itin．Arton．；Peut．Tab．；Sabapa日a， Procop．de Aed．vi． 4 ：ミabpá日a，Stadiasm．§§ 99， 100），a Phoenician town（Sil．Ital．iii．256）ou the coast of N．Africa between the Syrtes．The nume， which is Phoenician and oceurs on coins（Mluvers， Die Ihöniz．vol，ii．p．491），received the Graecised form Amotonem；fur althongh Pliny（l．e．）dis－ tinguishes the two towns they are undoubtedly the same places．It became afterwards a Roman co－ Ionia，and was the birthplace of Flavia Domitilia， the first wife of Vespasian，and mother of Titus and Domition．（Sueton．Tespas．3）．Justinian fortified it（Procop．l．c．），and it remained during the middle ages one of the most frequented markets upon this eoast，to which the natives of central Africa brought their grain（comp．Ibn Abd－el－Hakem，Journal Asiatigue， 1844 ，vel．ii．p． 358 ）．Barth（H＇ander－ ungen，p．277）has given an accomnt of the extensive nuins of Salrata，which he found to the W．of Tripoli，at Tripoli Tecchio，or Soara－esch－Schurkic， lat． $32^{\circ} 49^{\prime}$ ，Jung． $12^{\circ} 26^{\prime}$ ．（Suryth，Meditervanecm， p．4．56．）
［E．B．J．］
AABRINA（called by Ptolemy इabpááa，ii． 3. § 3；probably also the surva of the Geog．Rav．v．31）， a river on the W．const of Britannia Komana，which falls into the sea near Venta Silurnm，now the Sivern．Its month formed an estuary of the same nume．（Comp．Tac．Aun．xii，31．）［T．H．D．］
$\therefore A B U S$ ，a fortified place io Armenia Dlinor，at the foot of Antitaurns．（Lt．Ant．p．209；Not， Imp．c．27．）In the Peating．Table it is called Suba．
［L．S．］
SACAE．［Scythi．］
SACALA（rà ミákaia），a desert spot on the sea－ shore of Gedrosia which was visited by the fleet of Nearchns（Alrian，fnd，c．22）．It is not satisfac－ torily identified with any modern place．（Vincent， Voyage of Nearchus，i．p．202．）
［V．］
SACANI．［SARMMTLA］
sacapene．［Sacaswe．］
SACAKAl：L1（ ミakapaìioL，Strab．xi．p．511），a nomad people of Central Asia，belonging to the oldest stock of the Turks of the Altai．In Ptolemy （vi．14．§ 4）this people appenr under the name of Sugaraucae（ฐаүараükaı）（comp．Ritter．Erdlkunde， vol，vii．P．696）．
［E．B．J．］
SACASSE＇NE（इaka $\sigma \sigma \eta \eta^{\prime}$, Strab．ii．p．i3，xi． pp．509，511，529：Eth．Sacassani，Plin．vi．11），a province of Amucnia，on the borders of Gugarene， which it separated from the valley of the Araxes， and which extended to the river Cyrus．St，Martin （．Mém．suer $l$ A rmenie，vol．i．pp． $143,209,210$ ） identifies it with the Annenian province of Sinwuik＇h， which was governed up to the $1 \cdot 2$ h century by a race of princes who traced their descent to Ifaig，fint king of Armenia，and who in the 9 th century had 1 witical relations with the Byzantine court．（Cunst． Porph．de Caeren．Aul．Byz．vol，i．p．397．）The Sacapene of l＇tolemy（v，13，§9）appears to be the same as this proxince．
［E．B．J．］
SACASTE：NE（さakaन interior of i）rangiana，which was occupied by the suase or Scythisns，who appear to have devcended through the P＇unjúb，and to have settled there． （Isidor．Mans．Parth．c．I8．）According to Isido－ rus，it bore also the name of Paactacene．It has been soppesed that the modern name of this country， Si gestan or Seistun，is derived from Sucastene（Waht， Turder u．Mittel－Asien，i．p．569；comp．Ritter， viii．p．120）．Fuar towns，Baida，Min，Palacenti， nud sigal，are mentioned in it ：of these，Min may
be compared with Min－nagara，a town on the Indus belonging to the same people．（Arrian，Peripl．Mar． Eryth．§ 38．）［MixNig．IRA．］
［V．］
SACCASENA，a place in Cappadocia，probably in the neighbourhood of the modera C＇rgub or Crkup． （It．Ant．p．296．）
［L．S．］
SACCO＇PODES（इakkomóbes），according to Strabo，a name given to the people of Adlabene in Assyria（svi．p．745）．There has heen a great dispute among learned men as to this name，which does not appear to be a genuine one．Bochart has suggested Saucropodes（इavkpónodes）．Un the whole，however，it would seem that the emendation of Tzschukke is the best，who reads इau入imo $\delta \in s$ ． （Groskurd，ad Strab．vol．iii．p．225．）［V．］

SACER MONS（ $\tau \partial$＇ $1 \in \rho \partial \nu \nu$ ǒpos）was the name given to a hill about 3 miles from Rome，across the Anio and on the right of the Via Nomentana．It is mentinned only on occasion of the two secessions of the plebeians from Rume ：the first of which，in B．C． 494，was terminated by the dexterity of Menenins Agrippa，and gave occasion to the election of the first tribunes of the people．（Liv．ii．32；Eionys．vi． 45；Appian，B．C．i．1．）In memory of this treaty and the＂Lex Sacrata＂which was passed there to confirm it，an altar was erected on the spot，which thencefinth always bore the name of＂the Nacred Mouat．＂（Dionys．ri． 90 ；Appian，l．c．）．The se－ cond occasion was during the Decemvirate；when the plebeians，who had at first seceded only to the Arentine，on finding that this produced no effect， withdrew to the Stered Mount（Liv．iii．52）．Cicero， on the contrary，represents the secession on this occasion as taking place first to the Sacred Mumst， and then to the Arentine（Cic．de R．P．ii．37）． Hardly any spot in the neighbourhood of Rome，nut marked by any existing ruins，is so clearly identified by the descriptions of ameient writers as the Sacer Mons．Both Livy and Cicero concur in placing it 3 miles fron Rome，across the Anio ；and the former expressly tells us that the plebeians，on the second occasion，proceeded thither by the Via Numentam， which was then called Ficulensis（Liv．ii．S2，iii．52； Cic．Brut．14，pro Comel．，ap．Ascon．p．76）．Now the third mile along the Via Nomentana brings us to a point just across the Anio；and on the right of the road at this point is a hill overlooking the river，in some degree isolated from the plateau beyond，with which it is，however，closely connected，while its frout torards the valley of the Anio is steep and almost precipitous．

On its E．side flows a small stream，descending from the Casale dei Pazzi（npparently the one known in ancient times as the Rivus Ulmanus）；so that the position is one of considerable strength，especially on the side towards Rome．The site is now nninhabited，and designated by no peeuliar appel－ Iation．（Nibby，Dinturni di Roma，vol．iii．pp．54， 55．）
［E．H．B．］
SACHALI＇TAE（Z $a \chi a \lambda i \pi a i$ ）．a people upon the S．coast of Arabia Felix（Ptol，vi．7．§§ 11，24，25）， and upin the bay called after them Sichanites Sinvs（ 氵axa入it of this bay there was a difference of opinion among the ancient geographers，Marinns placing it towards the went，and Ptolemy towards the east，of the pro－ montory Syagrus（Ras Fartak）．（Ptol，i．17．§ 2. comp．vi．7．\＄\＄ 11,46 ．）M．urciants（ $\mathrm{p}, 23$ ）ayrees with Pioleny；and says that the bay extended from this promontory to the month of the Persian gulf

（Peripl．Mar．Erythr．p．17．§ 29）on the other hand agrees with Marcian，and places the bay be－ tween Cane and the promontory Syagrus．（See C． Miller，ad Arrian，l．c．）

SACILI or SACILI MARTIALIUM（Plin．iii． 3. s．3；called by Ptolemy ミakıגis，ii．4．§ 11），a town of the Turduii in Hispania Baetica，at a place near Peraburd，now called Alcorrucen．（Murales，Antig． p．96：Florez，Esp．Sagr．p．147．）［T．11．1）．］

SA＇COIA（ Eakopa），a town in the interior of Paphlagotia，is mentioned oniy by Ptoleny（v，4． § 5）．
［1．S．］
SACORASA（さd́kopoa），a town in the interior of Papillagonia，is mentioned onily by Ptolemy（v， 4. § 6 ）．
［i．． S ．
SACRA＇N1，was the name given by a tradition， probably of very ancient date，to a conquering people or tribe which invaded Latium at a period long before the historical age．Festus represents them as proceeding from lieate，and expelling the siculi from the Stptimontium，where Rome afterwaris stood． He tells us that their name was derived from their being the offapring of a＂ver sacrum．＂（Fist，s．v． Sacrani，p．321．）It hence appears probable that the Sacrani of Festus were cither the same with the people called Aburigines by Dionysius（i．16） ［Abcimoines］，or were at least one clan or tribe of that people．But it is very doublful whether the name was ever really used as a national appellation． Virgil indeed alludes to the Sacrani as anong the inhabitants of Latiun in the days of Aeneas（Sa－ cronae acies，den．vii．796），but apparently ns a sinall and obscure tribe．Servius in his commen－ tary on the passage gives different explanations of the name，all varying from one another，and from tbat given by Festus，which is the most distinct statement we have upon the sulject．In another passage（ad Aen．xi．317）Servius distin－ guisbes the Sacrani from the Aborigines，but little value can be attached to his statements on such subjects．
［E．H．B．］
SACRARIA［Clitcmes．］
SACRIPORIUS（ó＇$\epsilon \rho \overline{\text { i }} 5 \lambda_{1} \mu \eta \nu_{1}$ Appian，B．C．i． 87），aplace in Latium，between Signia and Praeneste， celebrated as the scene of the decisive battle between Sulla and the younger Marius，in which the latter was totally defeated，and compelled to take refoce within the walls of Praeneste，B．C．S2．（Lis．Epit． Isxxvii．：Appian，B，C．i． 87 ；Veil．Pat．ii．26， 28 ； Flor．iii．21．§ 23；Vict．I ir：Ill．68，75；Lucan，ii． 134．）The scene of the battle is universally de－ scribed as＂apud sacriportum，＂but with no more precise distinction of the locality．The name of Sacriportus does not occur upon any other oceasion， and we do not know what was the meaning of the name，whether it were a village or small tom，or merely a spot so designated．But its locality may be approximately tised by the acconnts of the battle； this is described by Appian as taking place near Prueneste，aud by Plutarch（Sull．28）as near－Sipuia． We learu moreover from Appion that Sulla having besieged and taken Setia，the younger Marius，whon had in vam endeavoured to relieve it，retrentel step by step before him until he arrived in the neigh－ bourhood of Praeneste，when he halted at Sucriportno． and gave battle to his pursuer．It is therefine evident that it must have been situated in the plain below Praeneste，between that city and simia，and probably not far from the opening between the A ban fills and the Volseian mountains，thooush which
but it is impossible to fix the site with more precision.
 iii. 1. 137), the SW: extremity of Lusitania; according to Strabo (l.c.), the most W. point, not only of Europe, but of the known world; the present Cupe St. Jincent. Stralo adds that the surrounding district was called in Latin "Cuncus." Straboalso says that the geographer Artemidorus, who had been there, compared the promontory with the bow of a ship, and said that there were three small islands there; which, however, are not mentioned by any other writer, nor do they now exist. (Cff. Melit, ii. 1 ; 1lm. iv. 22. s. 35 , \&e.)
2. ( $\tau \delta$ i ípòv ǎкрov, Ptol. ii. 2. § 6) the SE. point of Hibernia, now Carnsore Point. [T. H. 1).]
 §8), the western point of the Acmlleos Dromos.
[E. B. J.]
SACRUAI RRONL. a promontory of Lycia ujon the borders of I'amphylia, opposite the Chelidonine Insulite, whence the pronontory is called by Livy Chelidonium Prom. [For details, see Vol 1 . p. 606, b.]
 situated on the great road from Coropassons and Garnabora to Mazaca. (Strab. siv. p. 663.) [L.s.]

SADAME: (Hint. Ant. p. 230; in Geug. Rav. 4. 6, written Sadanua), a town in the NE. part of Thrace, on the roal from Hadrianopolis to Develtus, its distance from the latter, according to the Itinerary, being 18,000 paces. This would give as its site the present town of Kanareh, situated noar the source of a small river which runs throngh a narrow valley and falls into the Blaek Sea at Cape Kaitun. But aecording to Rejehard it was in the neighburhood of Omar-Fathi, which is perhaps the Sar-bazan of Vondencourt.

SADOS ( $\Sigma$ á $\delta o s$ ), a small river of the Aurea Chormonens, which fell into the Bay of Bengal (Ptal, vii. 2. Ş 3). It has been suppusen by forhiger to the the same as the present Sundoway. Pukny mentions also in the same locality a town ealled Suda, whieh was, in all probability, on or near the river.

SAELINI. [Astures. Vil. I. p. 249.]
SAEI'l'NUM or SEP'I'NUM (the name is variously written both in Mss. and even irseriptions, but Sapinum is probably the most correct form: इalmovor, J'tul: Eth. Saepinns: Altilia near Sepino), a city of Sommium, in the coontry of the Pentri, on the E. slope of the great group of the Monte Mutesc, and near the sources of the Tamaro (Tamarns). It secms to have been in early times one of the chief towns of the Samnites, or rather one of the few which they possmed worthy of the mame. From its pokitiou in the heart of their eountry it was not till the Third samnite War that it was attacked by the Roman arme; but in R.c. 293 it was besieged by the consul L. Papirins Curvor, and though vigorously defanded by a sartison imounting almost to an ammy, was at length carried by assault. (Liv. x. 44, 45.) From this time the mane of Saepinum disapy ars from history, but it is found agsin at a later period among the muniripal towns of Sambium under the Luman Enupire. Its name is not indeed mentioned by Strabo, among the few surviving cities of Samnium in lis day : but it received a coluny under Niso (Lib. Colon. p. 237), and appears for a time to have recovered some degree of importance. Its name is found both in Ptoleny and Pliny among
the municipal towns of Samnium; and it is certain from inseriptions that it did not bear the title of a Colonia. (Plin. iii. 12. s. 17; Ptol. iii. 1. §67; Orell. Inser. 140; Mommsen, Inser. R. N. 4918 , 4929,4934, \&.e.) Its name is mentioned also in the Tabula, which places it 30 M. P. from Beneventum, the intermediate station being a place called Sirpium, the site of which is unknown. (Tab. Peut.)

Saepinum became an episcopal see before the fall of the Roman Einpire ; it had, however, fallen into great decay in the time of the Lombards, but was repeupled by lomoaldus, duke of Beneventum (P. Diae. v. 30 ), and survised till the 9th century, when it was taken and plundered by the Saracens; after which it seens to liave been abandoned by the inhabitants, who withdrew to the site occupied by the modern town of Sepino, about 2 miles from the site of the ancient one. The ruins of the latter, which are nuw called Altilia, are evidently of Koman date, and, from their regularity and style of construction, render it probable that the town was entirely rebuilt at the time of the establishment of the Roman colony, very probably not on the same site with the ancient Sumnite city. The existing walls, whieh remain in almost complete preservation throughout their whole circuit, and which, as we learn from an inseription over one of the gates, were certainly erected by Nero (Mummsen, I. R. N. 4922), enelose a perfeet square, with the angles slightly rounded off, and four gates, placed at the four eardinal points, flanked by massive square towers. The masonry is of reticulated work, the arches only of the gates being of massive stone. Within the enclosure are the remains of a theatre, besides the substructions and vestiges of several other buildings, and numerous fragments of an architectural character, as well as inscriptions. (1) these last the most interesting is one which is still extant at the gate leading to Bovianum, and has reference to the flocks which then, as now, passed annually backwards and forwards from the thirsty plains of Apulia to the upland pastures of Samnium, espes cially of the Matese; and which appear to lave even then followed the same line of ronte: the tratturo or sheep-track still in use passing directly through the ruins of Altilia. (Craven's Abruzzi, vol. ii. pp-130-135; Romanelli, vol. ii. pp.444-448;Nommsen, $I . R$. . . 4916.)
[E. H. B.]
SAEPONE, au iuland town of Hispania Battica, near Cortes in the Sierra de Romda. (Plin. iii. 1. s. 3.)
[T. H. D.]
NAETABICULA ( SaitaBlkou入a, Itol. ii. 6. s.62), a town of the Contestani in Hispania Tarraconensis, probably the present Alzira in I'ulenticu. (Lahorde. Itin. i. p. 266.)
[T. H. 1).]
SALTABIS, St:TABIS, or SAETABI (Eairabis, Strab. iii. $\mathrm{p}, \mathrm{t}(\mathrm{i} 0)$, a town of the Cuntestani in llispania Tauracunensis, It was a lionan muricipiom in the jurisdiction of Carthago (Murat, fuscr. ii. p. 1183. 6), and had the surname of Augustanorum. (Plin. iii. 3. s. 4.) It lay upou an eminence (Sil. Ital, iii. 372) to the S. of the Sucro, and was famed for its flax and linen manue ficture. (1'lin. xix. 2. s. 1; (atull. xii. 14, \&e.) Ninv Jatica. (Cf. Laborde, Itin. i. p. 266 : Marea, //isp. ii. 6. p. 118.)
[T. H. D.]
SAE'TABIs (さatrabis, P'tol. ii. 6. \$ 14), a river S. of the Sucro in the territory of the Contestani, on the L. coast of Hispania Tarraconensis. Most probably the Alcoy. (Ukert, ii. pt. i. p. 294.) [T.H.D.]

SALIHANI. [GCYTHA.]
SAFTTAE: [sezav.]

SAGALASSUS（ $\Sigma a \gamma a \lambda a \sigma \sigma o ́ s: E t h . ~ \Sigma a \gamma a-~$
 and furtress near the north－western liontier of Pisidia，or，as Strabo（xii．p．569）less correctly states，of lsaria，while I＇tolemy（v．3．§ 6）erro－ nemaly mentions it among the towns of Lycia， （Comp．Steph．B．s．v．）Alexander the Great touk the town by assanlt，having previously defeated its brave Pisidian inhabitants，who met the aggressor drawn up on a hill ontside their town．（Arrian， Anab．i．28．）Livy（xxxviii．15），in his account of the expedition of Co．Manlius，describes Sagalassus as situated in a fertile plaio，abounding in every species of produce；he likewise characterises its in－ habitants as the bravest of the Pisidians，and the town itself as most strongly fortified．Manlios did nut take it，but by ravaging its territory com－ pelled the Sagalassians to come to terms，to pay a contribution of 50 talents， 20,000 medimni of wheat，and the same quantity of barley．Strabo states that it was one of the chief towns of Pisidia， and that after passing under the dominion of Amyn－ tas，tetrarch of Lycaonia and Galatia，it became part of the Roman province．He adds that it was only one day＇s march from Apanea，whereas we learn from Arrian that Alezander was five days on the road between the two towns ；but the detention of the latter was not occasioned by the length of the road but by other circumstances，so that Strabu＇s account is not opposed to that of Arrian．（Comp． Polyb．axii．19；Plin，v．24．）The town is men－ tioocd also by Hierocles（p．693），in the Ecclesi－ astical Notices，and the Acts of Councils，from which it appears to bave been an episcopal see．

The traveller Lacas（Trois 1＇oyages，i．p．181， and Second l＇nyage，i．c．34）was the first that re－ ported the existence of extensive ruins at a place called Aglasoun，and the resemblance of the name led him to identify these rains with the site of the ancient Sagalassos．This conjecture bas since been fully confirmed by Arandell（A l＇isit to the Seven Churches，p．132，foll．），who describes these ruins as sitnated on the long terrace of a lofty mountain， rising above the village of Aglasoun，and consisting chiefly of massy walls，heaps of sculptured stones， and innumerable sepolchral vaults in the almost perpendicular side of the mountain．A little lower down the terrace are considerable remains of a large building，and a large paved oblong area，full of fluted columns，pedestals，\＆c．，about 240 feet long； a portico nearly 300 feet long and 27 wide；and be－ youd this some magniticent remains either of a temple or a gymnasium．Above these rises a steep hill with a tew remains on the top，which was pro－ bably the acropolis．There is also a large tbeatre in a fine state of preserration．Inscriptions with
 as to theve noble rains belonging to the ancient town of Sayalassus．（Comp．Haniton，Researches， vol．i．p．486，foll．；Felluws，Asia Minor，p．164， foll．）
［L．S．］
SAGANUS（ $\Sigma$ ayavós，Marcian，Peripl．p．21．，ed． Hudsun），a small river on the coast of Carmania， abont 200 stadia from Harmuza，It is mentioned also by Ptolemy（vi． $8 . \S 4$ ），and Pliny（vi．25）．It is probably the same stream which is called by Am－ nianos Marrellinns，Saganis（xxiii．6）．Vincent thinks that it may be represented by a small river which flows into the Persian Gulf，near Gomeroom． （1．oy．of Nearclus，vol，i．p．370）．
［V．］

Ptol．iv．6．§§ 8，14，16，17），a monntain of Interior Libya，from which flows the Subus，the position of which is fixed by Ptolemy（l．c．） $13^{\circ}$ E．lang．， $22^{\circ}$ N ．lat．It may be assumed that the divergent which Ptolemy describes ns ascending to this moun－ tain trom the Nigeir is one of the tributaries which flow into the Djoliba or Quorra，from the high－ lands to the N．of that river（comp．Journ．Geog． Soc．vol．ii．p．13．）
［E．B．J．］
SAGARAUCAE．［Sachrauli．］
SAGARIS，a river of Earopean Sarmatia（Ov． ex Pont．iv．104\％），which has been assumed，from the name，to have discharged itself into the Sinves Stganits．（Plin．iv．26．）
［E．B．J．］
sagatrtil．［Persis．］
SAGIDA（ミá $\gamma i \delta \alpha$ or ミ $\dot{\gamma} \eta \eta \delta \alpha$, Ptol．vii．1．§ 71）， a metropolis of Central India，which is perhaps the same as the present Sohajpur，near the sonrees of the river Soane．

SAGRAS（方 $\Sigma d y p a s$, Strab，vi，p．261），a river of Bruttium，on the I．．coast of the peninsula，to the S．of Caulonia，between that city and Locri．It is celebrated in bistory tor the great battle fooght on its banks，in which an army of 130,000 Crotoniats is said to have been totally defeated by 10,000 Lo－ crians：an event regarded as so extraordinary that it passed into a kind of proverb for something that appeared incredible，though true．（à $\bar{\theta} \dot{\epsilon} \sigma \tau \epsilon \rho a \tau \bar{\omega} \nu$ $\epsilon \pi l$ इá $\gamma \mu a$, Suid．s．v．；Strab．vi．p． 261 ；Cic．de N． D．iii． 5 ；Justin．7x． 3 ；Plin．iii．10．s．15．）The victory was ascribed by the Locrians to the direct intervention of the Dioscuri，to whom they in con－ sequence erected altars on the banks of the river， whicb were apparently still extant in the time of Strabo．It was added that the news of the victory was miracnlonsly conreyed to the Greeks assembled at Olympia the sume day that the battle was fought． （Strab．L．c．；（ic．de N．D．ii．2．）But notwith－ standing the celcbrity tbus attached to it，the date and cocasion of the battle are very uncertain：and the circumstances connected with it by Strabo and Justin would lead to opposite conclusions，［Cno－ tonA．］The date assigned by Heyne is B．C． 560 ， while Strabo certainly seems to imply that it took place after the fall of Sybaris in r．C． 510 ．（Grote＇s Greece，vol．iv．p．552，note．）But whatever un－ certainty prevailed concerning the hattle，it seems certain that the Sagras itself was a well known stream in the days of Strabo and Pliny；both of whom concur in placing it to the N．of Lucri and S． of Canlonia，and as the latter city was a colony and perhaps a dependency of Crotona，it is probable that the battle would be fonght between it and Locri． Unfortunately the site of Caulonia cannot be de－ termined［Caulosia］，and we are therefore quite at a loss whicb of the small streams flowing into the sea between Locri and the Punta di Stilo should be identified with the celebrated Sagras．The Alaro has been generally fixed upon by local writers，but bas really no better claim than any other．（Rio－ manelli，vol．i．p．161；Swinburne＇s Travels，vol．i． p． 340 ．）．
［E．H．B．］
SAGRUS（ $\Sigma$ áypos ：Sangro），one of the most considerable of the rivers of Samnium，which has its sources in the lofty gronp of the Apennines S．of the Lago di Fucino，and has a conrse of above 70 miles from thence to the Adristic．It flows at first in a SE．direction，passes under the walls of Aufidena as well as of the modern Castel di Sangro，and in this part of its course flows thrungh a broad and level，
but，upland yalley，bounded on both sides by lofty
monntains．After passing Aufidena it turns abruptly to the NE．，and pursues this course till it reaches the sea．In the lower part of its coturse it enters the territory of the Frentani，which it traverses in its whole brealth，flowing into the sea between IIis－ tonitm and Ortona．Strabo indeed represents it as forming the boundary betwees the Frentani and the Peligut，but this is certuinly a unistake，as the Pe－ ligni did not in fact descend to the sea－coast at all， and Ortona，one of the chief towns of the Frentani， was sitnated to the N．of the Sagrus．（Strab．v． p． 242 ；Ptol iii．1．§ 19 ；where the name is er－ ronensly written Sipos．）The upper valley of the Sagrus，with its adjoining mountains，was the terri－ tory of the Somnite tribe of the Caraceni．（Ptol． iii．1．§ 66．）
［E．H．B．］
SAGU＇NIIA．1．（さayovpria，Ptol．ii．4．§ 13）， a town in the SW．part of Hispania Daetion．（Liv． xxsiv．12：1＇lin．iii．I．s．3．）Now Nigonza or （iigonsa，NW．from M／rdina Sulmia，where there are many ruins．（Morales，Antig．p． 87 ；Florez， Esp．Sagr．x，p．47．）
2．A town of the Arevaci，in Hispania Tarra－ cmensis，SIV．from Bolbilis．It was in the juris－ diction of Clunia，on the road from Emerita to Caesaraugusta，and was the scone of a battle be－ tween Sertorius and Metellus．（Plat．Sert． 21 ； Apl．B．C．i．110．）The name is written Segontia in the Itim． 4 nt ．pp． 436 and 438 ．and in the Geog． Lav．iv． 43 ；but must not be confounded with that of a town of the Celtiberi．Now Signenaa on the If narez．（Florez，Esp．Sugr：viii．1．18；Morales， Antig．p 87．）
［T．H．D．］
sAGUTTl：3（ミ́́youvtov．I＇tol．ii．6．§ 63）， aiso called SAGUNIU＇s（Mela，ii． 6 ；ミáyourras， Steph．B．s．v．），a town of the Eletani or Sedetani in Hispamia Tarraconensis，seated on an eminence on the banks of the river Pallantias，between Sucro and Tarracn，and not far from the sea．Strabo （iii．p．159）erronemsly places it near the mouth of the Iberus，though it lies near 100 miles to the SW：of it．The same author states that it was founded by Greels from Zacynthus；and we find that Stephanus calls it Zókavөa and Záкuvөos． Livy adds that the foumlers were mised with Rutuli from Adra（Liv，xxi，7）；whence we sometimes find the eity called Ansonia Saguntus．（SiI．Ital． i．332．）Another tradition ascribed its foundation to llerenles．（ $1 \mathrm{~h} .263,505$ ．）Saguntum lay in a very fertile listrict（lolyb．xvii．2），and attained to freat wealth by moans of its commerce．It was the immediate cause of the Sucond Punic War， from its being besieged by Mannibal when it was in the al iance of the Romans．The sigge is me－ morable in history．The town was taken，after n．desperate resistance，in 7．C 218，and all the aldult males put to the sword；but how long the sioge lasted is mucertain．（Liv，xxi．14，15；Cf． sil．Ital．i．271，sep．）Fight yeurs afterwards Sayuntum was recovered by the Romans．The Canthagmians had partly destroyed it，and had used it as a plate for the cuntoly of their lostages． （Polyh，jii． 98 ：Liv，xxix，42．）The eity was te－ stored by the loonans and made a lioman eoloty． （Liv．xxviii， 39 ；Plitn，in．3．e．4．）sactuntum was fanmos fire its otannfintwe of earthenware eups （calices Sugnstini）（1＇lin，xxxy．12．s． 46 ；Mart． iv． 46, siv．108），ant the fies grown in the neigh－ bourhood were emsinhed very fine．（Plin，xv．18． s．19．）Its site is naw occuptied by the town of A1urviedro，which iovy is istrine from piremancight
fortifications（muri veteres）．But little now remains of the mins，the materials having been unsparingly used by the inhabitants for the purpose of building． ＂The great tumple of Diana stoud where the convent of Lu Trinidad now does．Here are let in some six Roman inscriptions relating to the families of Sergia and others，At the back is a water－course， with pontions of the walls of the Cireus Jlaximus， In the suburb San Salrador，a mosaic pavement of Bacchus was discovered in 1745 ，which soon after－ wards was let go to rnin，like that of Italica．The famons theatre is placed on the slope above the town，to which the orchestra is turned；it was much destroyed by Suchet，who used the stones to strengthen the castle，whose long lines of wail and tower rise grandly above；the general form of the theatre is，however，easily to be made out．．．．The local arrangements are such as are cornmon to Ruman theatres，and resemble those of Merida． They have been measured and described by Daan Marti；Ponz，iv．232，in the Esp．Sugr，viii．151．＂ （Furd＇s Mandlook for Spain，p．206．）For the eoins of Suguntuin see Florez，Med．ii．p．560； Mionnet，i．p． 49 ，Suppt．i．p． 98 ．The accompany－ ing coin of Saguntum contains on the obverse the head of Tiberins，and on the reverse the prow of a ship．
［T．II．D．］

COIN OF SAGINTLM．
SAGUTE SINTS（Polyb．ap．Plin．v．1），a gulf on the W．coast of Mauretania，S．of the river Lixus， which must be identified with the Emponters Sincs．The Phoenician word＂Sucharut＂signities ＂Emporia，＂and by an elision not uncommon among the Afrieans assumed the form under which it ap－ pears in Polybins．（Movers，Die Phüniz．vol．ii． p． 541 ．）
［E．B．J．］
SAGY＇LIUM（ $\Sigma a \gamma \mathcal{U}^{\prime} \lambda i o \nu$ ）a castie sitnated on a steep rock in the interior of Pontns，which was orie of the strongholds of the P＇ontian kings．（Strab． xii．pp． 560,561 ．）
［1．S．］
SAls（ $\mathbf{\Sigma}$ äis，Herod．ii． $28,59,152,169$ ；Strab． xvii．p．802；Strph．B．s．v．；Dela，i．9．§ 9：Plm． v．10．s．11：Eth．इaitns，fem．इäitıs），the eapital of the Saitic Nome in the Delta，and occasionally of Lower Aegept also，stood，in lat． $31^{\circ} 4^{\prime} \mathrm{N}$ ．，on the right bank of the Canopic arm of the Nile．The site of the ameient city is deternined not only by the sppollation of the modern town of Sa－el－Hadjar， which occuples a portion of its area，but also by mumds of ruin corresponting in extent to the im－ portance of Sis at lenst under the later Pharaohs． The city was artificially raised ligh above the level of the Delta to he out of the reach of the inun－ dations of the Nile，and served as a landmark to all who asrended the arms of the river from the Mediterranean to Memphis．Its ruins have been sery imperfectly explored，yet traces have beell found of the lake on whach the inysteries of Isis were per－ formel．as will as of the temple of Neith（Athenè） and the necropulis of the saite kings．The wall uf
unbarat brick which surrounded the principal buildings of the city was 70 feet ti:ick, and probably therefore at lcast 100 feet hizh. It enclosed an area 2325 feet in length by 1960 in breadth. Befond this enclosure were also two large cemeteries, one for the citizens generally, and the other reserved for the nobles and priests of the higher orders. In one respect the Saites differed from the other Aegyptians in their practice of interment. They buried their kings within the precinets of their teinples. The tomb of Amasis attracted the attention of $\mathrm{He}-$ rodotus (ii. 169), and Psammiticins, the conqueror and successor of that monarch, was also buried withio the walls of the temple of Neith.

Sais was one of the sacred cities of Aegypt : its principal deities were Neith, who gave oracles there, and lsis. The mysteries of the latter were celebrated annually with unusual pomp on the evering of the Feast of Lamps. Hevidutus terms this festival (ii. 59) the third of the great fearts in the Aegyptian calendar. It was held by right; and every one intending to be present at the sacrifices was required to light a number of lamps in the open air aroond his house. The lamps were small saucers filled with salt and oil, on which a wick floated, and which continued to burn all night. At what season of the year the feast of burding lamps was celebrated Herodotus knew, but deemed it wrong to tell (ii. 62); it was, however, probably at either the verial or autumnal equinox, since it apparently had reference to one of the capital revolutions in the solar course. An inscription in the temple of Neith declared her to be the Mother of the Sun. (Plutarch, Is.et Osir. p. 354, ed. Wyttenbach; Proclus, in Tïmaeum, p. 30.) It ran thus: "I min the things that have been, and that are, and that will be; no one has uncorered my skirts ; the fruit which I brought forth became the Sun." It is probable, accordingly, that the kindling of the lamps referred to Neith as the author of light. On the same night apparently were performed what the Aegyptians designated the "Mysteries of Isis." Sais was one of the supposed places of the iuterment of Osiris, for that is evidently the deity whom Herodotus will not name (ii. 171) when he says that there is a burial-place of him at Sais in the temple of Athene. The mysteries were symbolical representations of the sufferings of Osiris, especially his dismemberment hy Typhon. They were exhibited on the lake behind the temple of Neith. Portions of the lake may be still discerned near the hamlet of Sa-el-Hadjur.

Sais was alternately a provincial city of the first order and the capital of Lower Aegypt. These changes in its rank were prohably the result of political revolutions in the Delta. The nome and city are said by Manetl:o to have derived their appellation from Saites, a king of the aviiili dynasty. The xxivth dynasty was that of Bocchoris of Sais. The xxvith dynasty contained nine Saite kings; aad of the xxviith Ansyrtaens the Saite is the only monarch: with him expired the Kaite dynasty, B. C. 408.

Bocchoris the Wise, the son of Tnephactus (Diodor. i. 45. § 2, 79. § 1), the Technatis of Plutarch (ls. et Osir. p. 354; coinp. Athen. x. p. 418; Aelian, H. A. xi. 11), and the Aegyptian Pehor, was remarkable as a judge and legislator, and introduced, according to Diodorus, some important amendments into the commercial laws of Sais. He was put to death by burning after revoiting from Subaco the Aethiopian. During the Aethiogiart dypasty; Sais
seems to have retained its independence. The period of its greatest prosperity was between is. c. 697 524, under its nine native kings. The strength of Aggypt generally had been transferved from its southern to its northern provinces. Of the Suite monarchs of Aegypt Psammitichus and Amasis were the most powerful. Psammitichus maintained himself on the throne by his Greek mercenaries. He established at Sais the class of interpreters, caused bis own sons to be educated in Greek learning, and encouraqed the resort of Greeks to his capital. The intercourse between Suis and Athens expecially was promoted by their worshipping the same deity -Neith-Athene; and hence there sprung up, although in a much L:ter age, the opinion that Cecrops the Saite led a colony to Athens. The establishment of the Greeks at Cyrene was indirectly fatal to the Saitic dynasty. Uaphris, Apries, or Hoplish, was defeated by the Cyrenians, n. c. 569 ; and bis discontented troops raised their comnamier Amasis of Siouph to the throne. He adorted Sais with many stately buildings, and enlarged or decorated the temple of Neith; fur he erected in front of it propyliea, which for their leight and magnitude, and the quality of the stones employed, surpassed all similar structures in Aegrpt. The stmes were transported from the quarries of El -Mokattam near Memphis, and thence were brought also the colossal figures and androsphinses that adorned the Dromos. To Sais Amavis tram-ported from Eleplantine a monolithal shrine of granite, which Hervdotus expecially admired (ii. 175). Though the ordinary passage from Elephanatine to Sais was performed in ${ }^{\text {B }}$ twenty days, three years were employed in conveying this colossal mass. It was, however, never erected. and when Herolotus visited Apgypt was still lying on the ground in froot of the temple. It measured, according to the historian, 30 feet in height, 12 feet in depth from fiont to back, and in bread\$l 21 feet. After the death of Amasis, Sais sank into comparative obscurity, and does not seem to have enjived the favour of the Persian, Macedonian, or Boman masters of Aegypt.

Suis indeed was more conspicuons as a seat of commerce and learning, and of Greck culture generally, than as the seat of government Necliepsus, one of its kings, las left a name for his learning (Auson. Epigram. 409), and his writings on a.tronomy are cited by Pliny (ii. 23. s. 21). Pythagoras of Samos risited Sais in the reign of Amasis (comp. Plin. xxxvi. 9. s. 14); and Solon the Athenian conversed with Sonchis, a Saite priest, about the same time (Plut. Solon, 26; Herod. ii. 177; Clinton, Fast. Hellen. vol. ii. p. 9). At Sais, if we may credit Plato (Timaeus, iii. p. 25), Solon heard the legend of Atlantis, and of the ancient glories of Athens some thousund years prior to Phoroneus and Niobe and Deucalion's flood. The priests of Suis appear indeed to have been anxious to ingratiate themselves with the Athenians by discavering resemblances between Attic and Aegyptian institutions. Thns Diodorus (i. 28). copying from earlier narratives, says that the citizens of Sais, like those of Atbens were dwided into eupatrids, or priest-nobles; gennori, land-owners liable to military service ; and craftsmen or retail traders. He adds that in each eity the upper town was called Astu. The Greek population of Sais was governed, according to Manetho, by their own laws and masyistrates, and had a separate quarter of the city assigned to them. So strpys indeglays the Hellonic ceisynent in Suis that

SALA．
it was doubted whether the Saites colonised Attica， or the Athenians Sais；and Diodorus says incon－ sistently，in one passage，that Sais sent a colony to Athens（i． $28 . \S 3$ ），and in another（v． $57 . \S 45$ ） that it was itself founded by Athenians．The prin－ cipal value of these statements consists in their establishing the Gracco－Aegyptian character of the Suite people．

The ruins of Sais consist of vast heaps of brick， mingled with fragments of granite and Syenite marble．Of its numerous structures the position of one only can be surmised．The lake of Sa－el－ Hadjar，which is still tracenble，was at the back of the temple of Neith：but it remains for future travellens to determine the sites of the other sacred or civil structures of Sais．（Champollion，le Eoppte， vol．ii．p．219：14．Lettres，50－53；Wilkinson，Mod． Egypt and Thelus．）
［W．B．D．］
－ALA（इ́di $\alpha a s$ ）．1．A river in Germany，be－ tween which and the Rhine，according to Strabo （vi．p．291），Drusus Germanicus lost his life． That the river was on the east of the Rhine is im：－ plied also in the account which Livy（Epit．140） and Diun Cassius give of the occurrence；and it has thesefore been conjectured with some probability that the sala is the same river as the modern Soale，a tributary of the Elbe，commonly called the Thuringian Soale；though others regard the Sala as identical with the Yisel．

2．A river of Germany，alluded to by Tacitus （ $4 n n$. xiii． 57 ），who，withont mentioning its name， calls it＂flomen gignendo sale fecundum．＂It formed the boundary between the country of the Chatti and Hermonduri and near its banks were great salt－ works，about which these two tribes were perpetually involved in war．From this circumstance it is clear that the river alluded to by Tacitus is none other but the Sane in Franconia，a tributary of the Moe－ nus or Main ：and that the salt－springs are，in all probability，those of the modern town of Kissingen．

3．A town in U＇pper Pannonia，on the road from Sabaria to P＇oetoriom（Ptol．ii．15．§ 4；It．Art． p．262，where it is called Salle；Geugr．Rav．iv． 19，where it is called Sallis）．Some identify the place with the town of Suala Egerssck，and others with Luriv on the river Szala．（Comp． Muchar，Noricum．i．p．251．）

4．A town in the sonth－western part of Phrygia， on the frontiers of Caria and Pisidia，on the north－ west of Cibyra．（I＇tol，v．2．§ 26．）

5．A town in the north－western part of Armenia Minor，on the eastern slupe of Mount Muschus． （1＇tu），v．13．§ 10．）
［L．S．］
SA1．A（צג́入a，Ptol．ii．4．§ 12），a town of the Turdetani in Hisjania Batica hetween P＇tueci and Nabrina．
［T．H．D．］
SAl．A（さ́́ $1 \alpha$, Ptol．iv，1．§ 2；Plin．v．1），a town of Mauretania，on the W．coast of Africa， situated hoar a river of the same name，＂noticed by the loomans as the extreme object of their power and atunst of their geography．＂（Gibbon，c．i．）In the Antonine Itinerary the name occurs as Sala－ conia，which has been supposed to be a corruption of Sala Colonia；but from the Viemna Ms．it appears that the word＂conia＂hats been inserted by a later hand．（Itim．Anton．ed．l＇arthey，p．3．）The mo－ dern Sla or Sulkie，near the mouth of the river Bu－ Kegraib，retains the name，though the site of the ancient town must be sunglit at Rabat．on the S ． side of the river，where there are IVman remains．

## SALAMIS．

SALACIA．1．（इa入akeía，Ptol．ii．5．§ 3），a municipal town of Lusitania，in the territory of the Turdetani，to the NW．of Pax Julia and to the SW：of Ebora．It appears from inseriptions to have had the surname of Urbs Inperatoria．（Gru－ ter，p．13．16；Mionuet，i．p．4；Sestini，p．16．） Salacia was celebrated for its manufaeture of fine woollen cloths，（ 1 lin．viii．48．s．73；Strab．iii．p． 144，with the note of（iroskurd．）Now Alaçer do Sal．（Flurez，Esp．Sagr．xiii．p．115，xis．p．241； comp．Nela，iii．I；It．Ant．pp．417，418，and 422．）

2．A town of the Callaici Bracarii in the NW．of Hispania Tarraconensis．（／tin．Ast．p．422．）Ideu－ tified either with Salamonde or Poubeiro．［1．H．D．］

SALAMBOREIA（ $\Sigma \alpha \lambda a \mu 86 p e c a$ ），s town of Cappadocia，in the district Garsauritis．（Ptol，r． 6．§ $14 ;$ Tnb．Peut．，where it is called Salabe－ rina．）
［L．S．］
SALAMI＇NIA．［Silamis．］
SALAMISIAS，a town in Coele－Siria in the district Chalybonitis（It．Anton．p．197；Not．Imp．）． which Reland（Pulaest．i．p．217）identities with Salamias（ $\Sigma \alpha$ גauas）in the Not．Leonis Imp．，and witb Salemjat in Abulfeda（Tab．Syr．p．105）．It is said still to bear the name Selnen．（Richter， Wallfahrten，p．238．）

SA＇LAMIS（ $\mathrm{Z} \alpha \lambda a \mu \mathrm{f}$ ，Aesch．Pers．880：Scyl． p． 41 ：Ptol．v．14．§ 3，viii． 20. § 5；Stadiasm． §§ 288， 289 ；Pomp．Mela，ii． 7. § 5 ；Plid．v． 35 ； Horat．Carm．i． 729 ；Sarauiv，Enstath ad／l．ii． 558 ；士adauias，Malala，Chrom．xii．p．313，ed， Bonn：Eth．Za入auivios，Bückls，Inser．nos．2625， 2638，2639），a city on the E．coast of Cypus， 18 M．P．from Tremithus，and 24 M．P．from Chytri． （Peut．Tab．）Legend assigued its fuundation to the Aeacid Tencer，whose fortunes formed the sulb－ ject of a tragedy by Sophorles，called Teikpos，and of one with a similar title by Pacuvius．（Cic．de Orat．i．58，ii．46．）The people of Salamis showed the tomb of the archer Tencer（Aristot，Antholognia， i． 8,112 ），and the reigning princes at the time of the lonic revolt were Greeks of the Teucrid＂Gens，＂ although one of them bore the Phoenician name of Siromus（Hirain）．（Herod．r．104．）In the 6th cen－ tury B．t：Salamis was already an important town，and in alliance with the Battiad princes of Cyrene， though the king Evelthon refused to assist in rein－ stating Arresilaus 1II，opon the throne．（Herod． iv．162．）The descendant of this Evelthon－the despot（iorgus－was unwilling to join in the lonic revolt，but his brother Onesilus shut him ont of the grates，and taking the command of the united forces of Salamis and the other cities，flem to arms．The battle which crushed the independence of Cyprus was fought under the walls of Salamis，which was compelled to subnit to its former lord，Gorgas． （Herod，v．103，104，108，110．）Afterwarls it was besjeged by Anaxicrates，the succensor of Cimon，but when the convention was made with the Pexians the Athenians did not press the siege． （Diod．xii．13．）After the preace of Autalcilas the Persians had to struggle for ten years with all their forces against the indefatigable and gentle Evagoras． Isocrates compesed a pariegyric of this prince ad－ dressed to his son Nicocles，which，with every allowance for its partiality，gives an interesting pic－ ture of the struggle which the Hellenie Evagoras waged against the Phoenician and Oriental intluence under which Salamis and Cypras hat languished： （Coppe－（irute，Uide of Srece，vol．x．с．Ixxvi．）

Evagoras with his sen Pnytagoras was assassinated by a ennuel，slave of Nicocreon（Aristot．Pol．v． 8．§ 10；Divdor．xv．47；Theopomp．Fr：iii．ed． Didut），and was succeeded by another son of the name of Nicucles．The Graeco－Aegyptian fleet un－ der Menelans and his brother Ptolemy Soter was utterly defeated off the harbour of Salamis in a sea－ fight，the greatest in all antiquity，by Demetrins Poliorcetes，B．c．306．（Diodor．xx．45－53．）The famous courtezan Lamia formed a part of the booty of Demetrius，over whom she soon obtained un－ bounded influence Finally，Salamis came into the hands of Ptolemy．（Plut．Demuetr． 35 ；Polyaen． Strateg．5．）Under the Roman Empire the Jews were numerous in Salamis（Acts，xiii．6），where they had more than one synagogue．The farm－ ing of the copper mines of the island to Herod （Joseph．Antiq．xv．14．§ 5）may have swelled the numbers who were attracted by the advantages of its harbour and trade，especially its manufactures of embraidered stuffs．（Athen．ii．p．48．）In the memorable revolt of the Jews in the reign of Trajan this populous city became a desert．（Milman，Hist． of the Jews，vol．iii．pp．111，112．）Its demolition was completed by an earthquake；but it was rebnilt by a Cliristian emperor，from whom it was named Constantia．It was then the metropulitan see of the island．Epiplanius，the chropicler of the heretical sects，was bishop of Constantia in A．D． 367．In the reign of Heraclius the new town was destroyed by the Saracens．

The ground lies low in the neighbonrhood of Salamis，and the tomn was situated on a bight of the coast to the N．of the river Pediaeus．This low land is the largest plain－Salaminia－in Cyprus， stretching inward betweea the two mountaia ranges to the very heart of the country where the modern Turkish capital－Nicosin－is situated．In the Life and Epistles of St．Paul，by Coneybeare and How－ son（vol．j．p．169），will be found a plan of the har－ buur and ruins of Sulamis，from the survey made by Captain Graves．For coins of Salamis，see Eckhel， vol．iii．p． 87.
［E．B．J．］
SA＇LAMIS（ $\Sigma a \lambda \alpha \mu i s,-i \nu 0 s: E t h$ ．and $A d j$ ．$\Sigma \alpha-$入auívos，Salaminius：Adj．ミa入auivıaoós，Sala－ miniacus：Kulüri），an island lying between the western coast of Attica and the eastern coast of Megaris，and forming the southern boundary of the bay of Eleusis．It is separsted from the coasts both of Attica and of Megaris hy only a narrow chasuel．Its form is that of an irregular semicircle towards the west，with many small indentations along the coast．Its greatest Jength，from N．to S．， is about 10 miles，and its width，in its broadest part，from E．to W．，is a little more．Its length is correctly given by Strabo（ix．p．393）as from 70 to 80 stadia．In ancient times it is said to have been called Pitynssa（חıtvov̂ббa），from the pines which grew there，and also Scimas（Ekrpas）and Cychrela（Kuxpeia），from the names of two be－ roes Scirus and Cychrens．The former was a native hero，and the latter a seer，who came from Dodona to Atbens，and perished along with Erech－ thens iu fighting against Eumnlpus．（Strab．ix． p．393；P＇ans．i．36．§ 1；Plilochor．ap．Plut． Thes．17．）The latter name was perpetnated in the island，for Aescinylus（Pers，570）speaks of the àктal Kuхpeiau，and stephanus B．mentions a Kuxpeios adyos．The island is salid to have ob－ tained the name of Salamis from the mother of Cychreus，who was also a diughter of Asophs
（Paus，i．35．§ 2．）It was colonised at an early period by the Aeacidae of Aegina．Telamon，the son of Acacus，fled thither after the murder of his half－brother Phocus，and became sovereign of the island．（Paus，i．35．§ 1．）His son Ajax accom－ panied the Greeks with 12 Salaminian ships to the Trojan War．（Hom．1l．ii．557．）Salamis can－ tinued to be an independent state till about the beginniog of the 40 th Olympiad（B．C．620），when a dispnte arose for its passession betu een the Athenians and Megarians．After a long struggle，it first fell into the hands of the Megarians，but was subsequently taken possession of by the Athenians through a stra－ tagem of Solon．（Plut．SoL．8，9；Paus．i．40．§5．） Both parties appealed to the arbitration of Sparta， The Athenians supported their claims by a line in the lliad，which represcnts Ajax ranging his ships with those of the Atherians（Il．ii．558）．but this verse was suspected to have been an interpolation of Solon or Peisistratus ：and the Megarians cited anotber version of the line．The Athenians，more－ over，asserted that the inland had been made oter to them by Philaens and Eurysaces，sons of the Telamonian Ajas，when they tuok up their own residence in Attica．These arguments were con－ sidered sufficient，and Salamis was adjudged to the Athenians．（Plut．Sol． 10 ；Strab．ix．p．394．） It now became an Attic dernus，and contisued in－ corporated with Attica till the times of Macedonian supremacy．ln B．c． 318 ，the inhabitants volun－ tarily received a Macedonian garrism，after having only a short time before successfully resisted Cas－ sander．（Diod．xviii． 69 ；Polynen．Strat．iv． 11. § 2：Paus．i．35．§ 2．）It continued in the bands of the Macedonians till B．C．232，when the Athenians， by the assistance of Aratus，purchased it from the Macedonians together with Munychia and Suninm． Tbereupon the Salaminiuns were expelled from the island，and their lands divided among Athenian clernchi．（Plot．Arat． 34 ：Pans．ii．8．§6；Bückh， Inser．val．i．p．148，seq．）From that time Silamis probahly continued to be a dependency of Athens， like Aegina and Oropus；since the grammarisns never call it a $\delta \bar{\eta} \mu a s$ ，which it had been originally， but generally a $\pi \delta \dot{\lambda}$ ıs．

The old city of Sulamis，the residence of the Te－ lamonian Ajax，stood upon the southenn side of the island towards Aegina（Strab，ix．p．393），and is identified hy Leake with the remains of some Hellenic walls upon the south－westem coast near a small port，where is the only rivulet in the island，perliaps answering to the Bocabes or Bocalias of Strabo （ix．p． 394 ：Leake，Demi，p．169）．The Bocaros is also mentioned by Lycophron（451）．In another passage，Strabo（ix．p．424）indeed speaks of a river Cephissus in Sulamis；hut as it occurs only in an enumeration of varions rivers of this name， and immediately follows the Athenian Ceplissus withont any mention being made of the Eleusinian Cephissus，we ought probably to read with Leake

When Salamis became an Athenian demus，a new city was hoilt at the head of a bay upon the eastern side of the island，and opposite the Attic coast．In the time of Pausaniss this city also had fallen into decay．There remained，however，a ruined agora and a temple of Ajax，containing a statne of the hero in ebony；also a temple of Artemis，the trophy erected in honour of the vietory gained over the Persians，and a temple of Cychreus．（l＇ans．i．35．

statue of Solon, which was erected in the agora, with one land corered by his matle. (bem. de Fals. Leg. p. 420; Aeschin. in Tim. p. 52.) There are still some remains of the city close to the village of Ambelakio. A portion of the walls may still he traced: and many ancient fragments are fonnd in the walls and churches both of Ambelatia and of the neighbomring village of Kuluri, from the latter of which the molern nane of the island is denived. The uarrow meky promuntory now called Cape of St. Burbura, which forms the SE. entrance to the bay of A mbelikio, was the Sileniae (इiAnviai) of Aeschylus, atterwards cailed TroPAEA (Tpotaia), on account of the troply erected there in memory of the victory. (Asch. Pers. 300, with Sichol) At the extrenity of this promontory lay the small island of Psyttileli ( $\Psi u \tau \tau \alpha \dot{\lambda} \lambda \in i a$ ), now ealled Lipsokutali, about a mile long, and trom 200 to 300 yards wide. It was bere that a picked budy of Persian troops was ent to pieces by Aristides duning the battle of Salamis. (Herod. viii. 95; Ausch. Pers. 447, seq ; Plut. Arist. 9; Paus. i. 36. § 2, iv. 36. § 3 ; Strab. ix. p. 393; Plin. iv. 12. 8. 20 ; Steph. B. s. v.)

In Salamis there was a promuntory Scimadium ( $\begin{gathered}\text { кıpódov), containing a temple of the god of war, }\end{gathered}$ etected by Silen, because he there defeated the Megariaus. (I'lat. Sol. 9.) Leake identifies this site with the temple of Athena siciras, to which Adei-

SALAMIS.
mantus, the Corinthian, is said to lave fled at the commencement of the battle of Salamis (Herod. viii. 94); and, as the Corinthians could not have retreated through the eastern opemimg of the strait, which was the centre of the scenc of action, beake supposes siciradium to have been the south-west promontory of Salamis, upon which now stands a monastery of the Virgin. '1lis monastery now occupies the site of a Hellenie building, of which remains are still te be seen.

Blitorem (Bovioupoy or Bouówpon) was the name of the western pronontory of Salams, and distant only three miles from Nisaea, the port of Megara. On this peninsula there was a fortress of the same name. In the attempt which the Peloponnesians made in B.C. 429 to surprise Peiraeels, they first zailed from Nisaea to the promontory of Bndorum, and surprised the fortress; but after overroming the island, they retreated without renturing to attack Peiraeeus. (Thuc. ii. 93, 94, iii. 51 ; 1hod. xii. 49 ; Strab. si. p. 446; Steph. B. s. v. Boviowpoy.)

Salamis is chiefly memorable on accourt of the great buttle fouglit off its count, in which the Persian fleet of Xerxes was defeated by the Greeks, B. c. 480 . The details of this battle are given in every history of Gieece, and need not he repeated here. The battle took place in the strait between the eastern part of the island and the coast of Attica, and the position of the contending forces is

shown in the annexed plan．The Grecian fleet was drawn up in the small bay in front of the town of Sulamis，and the Persian fleet opposite to them off the coast of Attica．The battle was witaessed by Xerxes from the Attic coast，who had erected for himself a lofty throne on one of the projecting declivities of Mlt．Aegaleos．Colonel Leake has dis－ cussed at length all the particulars of the battle， but Mr．Blakesley has controverted many of his views，following the authority of Aeschylus in pre－ ference to that of Herodotus．In opposition to Col． Leake and all preceding anthorities，Mr．Blakesley supposes，that though the hostile fleets occupied in the afternoon before the battle the position de－ lineated in the plan annexed，yet that on the morn－ ing of the battle the Greeks were drawn up across the southern entrance of the strait，between the Cape of St．Barbara and the Attic coast，and that the Persians were in the more open sea to the south． Into the discussion of this question our limits pre－ vent us from entering；and we must refer our readers for particulars to the essays of those writers quoted at the close of this article．There is，how－ ever，one difficulty which must not be passed over in silence．Herodotus says（viii．76）that on the night before the battle，the I＇ersian ships stationed about Ceas and Cynosura moved np，and beset the whole strait as far as Munychia．The only known places of those names are the island of Ceos，distant more than 40 geographical miles from Salamis，and the promontory of Cynosura，immediately N．of the bay of Marathon，and distant more than 60 geogra－ phical miles from Salamis，Both of those places， and more especially Cynosura，seem to be too distant to render the movement practicable in the time required．Accordingly many modern scholars apply the names Cens and Cybosura to two promontories， the southernmost and south－easternmost of the island of Salamis，and they are so called in Kiepert＇s maps． But there is no authority whatever for giving those names to two promontories in the island；and it is evident from the narrative，as Mr．Grote has ob－ served，that the names of Ceos and Cynosura must belong to some points in Attica，not in Salamis． Mr．Grote does not attempt to indicate the position of these places；but Mr．Blakesley maintains that Ceos and Cynosura are respectively the well－known island and cape，and that the real difficulty is occa－ sioned，not by their distance，but by the erroneous notion conceived by Herodotus of the operations of the Persian fleet．（Leake，Demi of Atticr，p． 166, seq．，and Appendix II．On the Buttle of Salamis； Blakesley，Excursus on Herodotus，viii．76，vol．ii． p．400，seq．；Grote，Hist．of Greece，vol．v．p．17I， seq．）

COIN OF SALAMIS．
SALANIA＇NA，a town of the Callaici Bracarii in Gallaecia（Itin．Ant．p．427．）Variously iden－ tified with Cela Nora，Moymenta，and Portela de Abade．
［T．H D．］
SALA＇PIA（ ミa入ania：Eth．इa入amivos；Sulapinus： Salpi），one of the most considerable citics of Apulia， situated on the coast of the Adriatic，but separated
from the open sea by an intervening lagune，or salt－ water lake，which was known in anciedt times as the Salapina Pales（Lhean，v．377；Vib．Suq．p．26）， and is still called the Lago di Sulpi．This hume has now only an artificial outlet to the sea through the hank of sand which separates them；but it is pro－ bable that in ancient times its commomications were more free，as Salapia was certainly a consitierable sea－port and in Strabo＇s time served as the port both of Arpi and Canusium（Strab，vi．p．284）．At an earlier period it was an independent city，and apparently a place of considerable importance．Tra－ dition ascribed its foundation．as well as that of the neighbouring cities of Canusium and Arpi，to Dio－ medes（Vitriv，i．4．§ 12）：or，accorling to others， to a Rhodian colony under Elpias（11，il．；Strab．xir． p．654）．＊There is no trace of its having received a Greek colony in historical times，though，in common with many other cities of the Damnian Apulians，it seems to have imbibed a large amount of Hellenic influence．This ras frobably derived from the Tarentines，and did not date from a very eauly perind．

The name of Salapia is not mentioned in history till the Second Punic War，in which it bears a con－ siderable part．It was evidently one of the cities of Apulia which revolted to Hamibal after the battle of Camnae（Liv．xxii．61）；and a few years after we find it still in his possession．It was apparently a place of strength，on which account he collected there great magazines of corn，and established his winter quarters there in B．c．214．（1d．xxiv．20．） It remained in his hands after the fall of Aipi in the following year（Id．xxiv．4i）；hut in B．C． 210 it was betrayed into the power of Dareellus by Blasius， one of its citizens，who had been for some time the Jeader of the Roman jarty in the place，and the Nuntidian garrison was put to the sword．（Id．xxvi． 88：Appian，Annil．45－47．）Its loss seems to have been a great blow to the power of Hannibsl in this part of Italy ；and after the death of Mareellus，B．c． 208，he made an attempt to recover possession of it by stratagem ；but the fraud was discovered，and the Carthaginian troops were repulsed with loss．（Liv． xxvii．1， 28 ；Appian，A unib．51．）No subsequent mention of it is found till the Social War，in the second year of which，when the tide of fortune was beginning to turn in favour of Rome，it was taken by the Roman praetor C．Cosconius，and burnt to the ground（Appian，B．C．i．51）．After this time it appears to bave fallen into a state of decay，and suffered severely from malaria in consequence of the exhalations of the neighbouring lagune．Vitruvins tells us，that at length the inlabitants applied to M1．Hustilius，who caused them to remove to a more healthy situation，about 4 miles from the furmer site， and nearer the sea，while he at the same time ppened fresh communications hetween the lagune and the sca （Vitruv．i．4．§ 12）．We have no clue to the tince at which this charge took place，but it could hardly bave been till after the town had fallen into a de－ elining condition．Cicero，indeed，alludes to Salapia as in his day notorious for its pestilential climate （de Leg．$A \mathrm{gr}$ ．ii．27）；hut this may be understeod as relating to its territory rather than the actual town．Vitruvius is the only author who natices the change of site；but if his account can be depended

[^25]upon，the Salapia mentioned by Pliny and Ptolemy ns well as Strabo，must have been the new town，and not the origimal city of the name．（Strab．vi．p． 284 Plin．iii．12．s．17：1＇tol，iii．1．§ 16．）The Liber Coloniarum also speaks of it as a colony adjoining the sea－const，which doubtless refers to the new town of the name．This does not，however，seem to bave ever risen into a place of much importance，and the name subsequently disappears altugether．
lixtensive ruins of Salapia are still visible on the southern shore of the Lago di Salpi，in a tract of country now almost wholly desolate．They evidently belong to a city of considerable size and importance， and mnst therefore be those of the ancient Apulian city．This is further confirmed by the circumstance that the coins of Salapia，which of course belong to the period of its independence．are frequently found on the spot．（Swinburne＇s Travels，vol．i．p．81．） The site of the Roman town founded by M．Hostilius is said to be indicated by some remains on the sea－ shore，hear the Torre di Salpi．（Romanelli，vol．ii． p．201．）

The lagune still called the Lago di Salpi is abont 12 miles in length by about 2 in breadth．At its castern extremity，where it communicates with the sea by an artificial cut，are extensive salt－works， which are considered to be the representatives of thase noticed in the ltineraries nuder the namie of Salinae．It is by no means certain（though not improbable）that these ancient salt－wurks occupied the same site as the modern ones；and the distances given in the 1 tineraries along this line of coast，being in aoy case corrupt and confused，afford no clue to their identification．（Itin．Ant．p．314：Tab．Peut．） It is probable that the name of Salapia itself is con－ nected with sal，the lagune having always been well adapted for the collection of salt．

The coins of Salapia，as well as those of Arpi and Canusium，Bave freek legends，and indicate the strong hafluence of Greek art and civilisation，though apparently at a late period，none of them being of an archaic style．The magistrates names which oceur on them（ $\triangle A Z O \Sigma, ~ \Pi Y A A O \Sigma$ ．\＆r．）are，on the con－ trary，clearly of mative origin．（Mummsen，$C$ ．J．D． pp．©2，83．）
［E．H．B．］

Cols of s．llaila．
SALARIA．1．（ミa入ápia．l＇tol．ii．6．§ 61），a town of the Bastitani，in the SE．part of Misponia Tarraconensis．According to Pliny it was a Roman colbin：（Culonia Salariensis，iii．3．s．4．）Ukert （ii．pt．1．p． $41 /$ ）identifies it with Sabiote，between C＇beda and Bacsar．

2．A town of the Oretani，in the same neigh－ bourhowed．（1＇tol．ii．6．§ 59．）［I．H．D．］

SALAS［SNLA．］
SALASSt（ ミanarani），one of the most powerful of the Alpise tribes in the X．of Italy，who orcupied the great valley of the Bumas or Ihora Baltea，now called the I＇al $d$ Aasta，from the phans of the $P$ o to the foot of the Graian and Pemme Alps．Their country is correctly described by Strabo as a deep
and narrow valley，slut in on both sides liy very lofty mountains，（Strah．iv．j．205．）This valley， which extends above 60 miles in length from ita entrance at Ierea to its head among the very highest ranges of the Alps，must always lave been one of the natural inlets into the leart of those mountains：hence the two passes at its head，now called the Great and Little St．Bernard，seem to have been frequented from a very early period．If we may trust to Livy，it was by the former of these passes，or the Pennine Alps，that the Buii and Lin－ gones crossed when they first migrated into the plains of the N．of Italy．（Liv．v．35．）It was the same pass by which Hannihal was commonly sup－ pused in the days of Livy to have crossed those moun－ tains，while Coelius Antipater represented him as passing the Little is．Bernard，an opinion com－ monly adopted by modern writers，though still sub－ ject to grave difficulties．One of the most serions of these arises from the character of the Sulassi them－ selves，who are uniformly described as among the fiercest and most warlike of the Alpine tribes，and of inveterate predatory habits，so that it is difficult to believe they would have allowed an army like that of Hannibal to traverse their country without oppo－ sition，and apparently without molestation．（See Arnold＇s Rome，vol．iii．p．481．）

The Salassi are commonly reckoned a Gaulish people，yet there are reasons which render it more probable that they were in fact，like their neighbours the Taurini，a Ligurian race．The Ligurians indeed seem，at a very early period，to have spread them－ selves along the whole of the western chain of the Alps，and the Gaulish tribes which occupied the plains of the Padus passed through their country， But the ethnical relations of all these Alpine races are very ubscure．No mention of the Salassi is found in history till B．C． 143 ，when they were at－ tacked without provncation by the consul Appius Claudins，wlio was，however，punishell for his aggres－ sion，being defeated with the loss of 5000 men． But he soon repaired this disaster，and having in bis turn slain 5010 of the mountaineers，clained the honour of a triumph．（Dion Cass．Fr．79；Liv． Fipit．liii．；Oros．5．4）From this time they appear to have frequently been engaged in hostilities with Rome，and though nominally tributary to the republic，they were continually breaking out into revolt，and ravaging the plains of their neighbour－ hood，or plundering the Roman convoys，and haras－ sing their troops as they marched through their country．As early as R．c．I00 a Roman colny was established at Eporedia（Lurea），at the mouth of the valley（Vell．Pat．i．15），with the view of keeping them in check，but it suffered severely from their incursions．Even at a mach later period the Salassi plundered the hagstage of the dictator Caesar when marching through their country，and cam－ pelled Decimus Brutus，on his way into Gaul ufter the battle of Mutina，to purchase a passage with a large sum of muney．（Strab．iv．p．205．）In n．c． 35 they appar to have broken out afresh into revolt， and for some time were able to defy the efforts of Antistius Virtus；but the next year they were re－ daced to submission by Valerias Messala．（Bion Cass．xlix．34， 38 ；Appian，Illyr．17．）Sill，how． ever，their suhjection was imperfect，till in n．C． 25 Terentius Varro was sent aguinst then，who having compelled the whole nation to lay down their arms， sold them without distinction as slaves．The mum－ ber of captives thus sold is said to have amounted to

36,000 persons, of whom 8000 were men of military age. The tribe of the Salassi being thus extirpated, a Roman colony was settled at Praetoria Augusta (Aosta), and a highroad made through the valler. (Dion Cass. liii. 25; Strab. iv. p. 205; Liv. Epit. cxaxv.) The name of the Salassi, however, still remained, and is recognised as a geagraphical distinction both by Pliny and Ptolemy, but no subsequent trace of them is found as an indepenuent tribe. (Plin. iii. 17. s. 21 ; Ptol. iii. 1. § 34.)
One of the main causes of the disputes between the Salassi and Romans lad arisen from the goldwashings which were found in the valley, and which are said to have been cxtremely productive. These were worked by the Salassi themselves before the Roman invasion; but the Romans seem to have eariy taken possession of them, and they were farmed out with the other reverues of the state to the Publicani. But these were, as might be expected, inrolved in constant quarrels with the neighbouring barbarians, who sometimes cut off their supplies of water, at other times attacked them with more open violence. (Strah. iv. p. 205; Dion Cass. Fr. 79.)
The line of road through the country of the Salassi, and the passes which led from Augusta Praetoria over the Penaine and Graian Alps, are described in the article Alpes [Vol. 1. p. 110]. [E. H. B.]
SALA'SSII. [Mauretanla, Vol. II. p. 298, b.]
SALATARAE (ミa^arápar, PtoI, vi. 11. § 6), a tribe of the Bactrians who lived along the banks of the Oxus. Forbiger suspects that they are the same as the Saraparae, noticed by Pliny (vi. 16. s. 18). [V.]
SALÁTHUS ( $\sum \dot{d} \lambda a \theta 05$, Ptol. iv.6. § 5 ), a river on the W. coast of Africa, with a town of the same name. This river, which took its rise in Mt. Mandrus, is represented by one of the Wadys, which flows into the sea in the district occupied by the ancient Autololes, on the coast to the N. of Cape Mirik. [E. B.I.]
SALAURIS, a town on the coast of Hispania Tarraconensis, mentioned in the Ora Marit, of Avienus (v. 518).
[T. H. D].
SALDA, a town in the south of Lower Pamonia, on the southern bank of the Sarus, and on the great highroad from Siscia to Sirmium. (Tab. Peut.; Geogr. Rav. iv. 19, where it is called Suldum.) It is very probably the same as the town of Sallis ( $\Sigma a \lambda$ is ) mentioned by Ptolemy (ii. 16. § 8). The site is commonly believed to be occupied by the modern Szlatina.
[L. S.]
SALDAE ( $\Sigma \dot{\alpha} \lambda \delta \alpha a$, Strab. xvii. p. 831 ; Ptol. iv. 2. § 9, viii. 13. §9; Plin. v. 1; Itin, Anton.; Peut. $T_{a} b_{\text {. }}$, a town on the coast of Mauretania Caessriensis, with a spacions harbour, which was in earlier times the E. boundary between the dminions of Juba and those of the Romans. (Strab. l.c.) Under Augustus it became a Roman "coloaia." (Plin. l.c.) In later times it was the W. limit of MLauretamia Sitifensis, against Manretania Caesariensis in its more coatracted sense. It is identified with Bujeiyah. the flourishing city of the Kaliphat, taken by Pedro Navarro, the general of Ferdinand the Catholic, after two famons battles, A. D. 1510 (comp. Prescott's Ferdinand and Isabella, vol. ii. p. 457), or the C. Bongie of the French province. (Barth, Wanderungen, p. 62.)
[E. B. J.]
SALDAPA, a town of Moesia (Theophyl. Simocat. i. 8), which was ravaged by the Avars in their wars with the emperor Maurice (Le Bean, Bas Empire, vol. x. Pp. 248, 369). Schafark (Slav, Alt. vol. ii. p. 158) bas fised the site at the ruins

Dikelrick upon the Danube.
[E. B. J.]

SALENTINI.
SALDU'BA. 1. A small river in the territory of the Turduli in Hiypania Baetica, probably the same called $\sum a \delta o u ́ k \alpha$, (with var, lect.) by Ptolemy (ii. 4. § 7). Now Rio Ferde.
2. A town at the month of the preceding riuer ( $\Sigma \dot{\alpha} \lambda \bar{\delta} o v 8 \alpha$, Ptol. ii. 4. § 11), of no great importan. . (Mela, ii. 6; Plin. iii. 1. s. 3), near the prescut Marbella.
3. [Caesaraugusta.]
[T. H. D.]
SALE, a tuwn on the S. coast of Thrace, warar the W. mouth of the Hehrus, and vearly equidictait from Zone and Doriscus. It is mentioned by 11 criodotus (vii, 59) as a Samothracian colony. [J. I..]

SALEM. [Jerusalfm.]
SALENI, a people of Hispania Tarraconensis. probably in Cantabria, mentioned by Mela (iii. 1). They are perhaps the same as the $\Sigma$ aud poi of Puhlemy (ii. 6. § 34).
[I. 11. D.]
SALENTI'NI or SALLENTI'N1 (buth forms seem to rest on good authority), (इa入evtivas), a people of Southern 1:aly, who inbabited a part of the peninsula which furms the SE. extremity, or as it is very oftea called the heel, of ltaly. Their territory was thus incladed in the region known to the Greeks by the name of lapygia, as well as in the district called by the Romans Calabria. Strabo remarks that the peniusula in question, which he considers as hounded by a line drawn acrass fiom Tarentum to Brondusium, was rariously called Messapia, lapygia, Calabria, and Salentina; but thent some writers established a distinction between the names. (Strab. vi. p. 282.) There seems no doubt that the names were frequently applied irregularly and vaguely. but that there were in fact two distmet tribes or races inhabiting the peninsula, the Salurtines and the Calabrians (Strab. vi. n. 277). of whom the latter were commonly known to th. Greeks as the Messapians [Calaninu]. Both were, however, in all probability kindred races belonging to the great fanily of the Pelasgian stock. Tradition represented the Salentines as of Cretan origin, and, according to the habitnal form of such legends, ascribed them to a Cretan.colony nnder Idomenens after the Trojan War. (Strab. vi. p. 282; Virg. Aen, iii. 400; Fest. 8. v. Salentini, p. 329; Varr. ap. Prob. ad Virg. Ecl. vi. 31.) They appear to have inhahited the southern part of the peninsula, extending from its southern extremity (the Capo di Lenca), which was thence freqnently called the Salentine promontory (" Salentinum Promontorium," Mll. ii. 4 § 8; Ptol. iii. 1. § 13), to the neighhourhood of Tarentum. But we have no means of distiaguishing accurately the limits of the two tribes, or the particular towns which belonged to each.

The name of the Salentines does not seem to lave been familiarly known to the Greeks, at least in early times: as we do not hear of their name in any of the wars with the Tarentines, though from their position they must have been one of the tribes that early came into collision with the rising coleny. They were probably known uader the general appellation of lapygians, or confunded with there neighbours the Messapians. On the contrary, as suon as their name appears in Roman history, it is in a wider and more general sense than that to which it is limited by the geographers. Livy pwaks of the Salentini as acceding to the Samnite allance in r. c. 306, wher the consul L. Volumuius was sent into their conntry, who defeated them in seseral battles, and tork some of their towns. (Liv. ix. 42.) It is alinost inpossible to believe that the Rumaus 3 s.
had as early as this pusbed their arms into the Iapygian peninsula, and it is probable that the Salcutines are here confounded with the Peucetiaus, with whem, aceording to some aceonnts, they were closely connected. (Plin. iii. 11. s. 16.) Biut the name is usel with still greater laxity shortly after, when Lisy speaks of Thuriae as "urbem in Sallentinis " (x. 2), if at least, as there seens little doubt, the place there mant is the well-known city of Thurii in Lueania [Timern].

The name of the Sallentines does not again occur in history till the Fourth Samnite War, when they joined the confederacy formed by the samaites and Tarentines against Rome; and shared in their lefeat by the consul L. Aemilius Rarbula in 1. C. 281, as we find that general celebrating a triumph over the Tarentines, Sannites, and Sallentines. (Fast. Capit. aill. 473.) For some time after this the aplearance of Pyrribus in 1taly drew eff the attention of the lomans frem mere ignoble adversaries, but when that monareh had finally withdrawn from Italy, and Tarentum itself bad fallen into the lands of the Romans, they were left nt leisure to turn their arms against the fess tribes that still maintained their independence. In B. C. 267 war was declared against the Salentines, and botls consuls were emiployed in their subjagation. It was not likely that they could effer much resistance, yet their final conquest was not completed till the following year, whea betb censuls again celebrated triumphs "de Messapiis Sallentinisque." (Fast. Capit, ; Zooar. viii. 7; Liv. Epit. sv; Florus, i. 20; Eutrop. ii. 17.) All the Romae writers on this eccasioa mention the Salentives alone; the Triumpbal Fasti, however, record the name of the Dlessapians in conjunction witb thern, and it is certain that both nations were included both in the war and the cenquest, for Brundusium, which is ealled by Flerus "caput regionis," and the occupation of which was evidently the main object of the war (Zoriar. l. c.), seems to have been at that period certainly a Messapian eity. The Saleutines are again mentioned as revolting to Hamibal during the Second Punic War (b,c. 213), but seem to laare been again reduced to subjection without difficulty. (Liv. xxv. 1, xxvii. 36, 41.) From this time their oame disappears from history, and is not even found among the nations of taly that touk up arons in the Sucial War. But the "Sallentinus ager" continued to be a recognised tern, and the people are spuken of both by Pliny and Straho as distinet frem their neighbours the Calabri. (Strab. vi. p. 277 ; 1’lin. iii. 11. s. 16: Ptol. iii. 1. § 13 ; Mel. ii. 4 ; Cic. pro Rose. Am. 46.) The "regio Salentina" is even mentioned as a distinct portion of Calabria as late as the time of the Lembanls. (P. Diac. Ilist. Leng. ii. 21.)

The physical claracter and toporraphy of the country of the Salentines are given in the article Calabila. The following towns are assigned by Pliny to the Salentines, as distinguished from the Calabrians, strictly so called: Ahetiem, Basta, Nemetum, Uxen rum, and Vebetum. All these are situated in the extreme southern end of the Japygiau peninsula. The list given by I'toleny nearly atgrees with that of Pliny; but he adds Khudiae, which was considerably further N., and is reckoned on good authority a Calabrian city [ BHU nhaE ]. The place he calls Banota is probably the Basta of Pliny. To these inland towns may probably be added the seaports of Calmifolis, Castmem Mineivae, and perhaps Hidnentis also, though
the last seems to have early received a Greek colong. But it is probable that at an earlier period the territory of the Salentines was considerably mere extensive. Stephanus of Byzantium sppaks of a city of the name of Sallentia, from whel wiss derived the name of the Sallentines, but no mention of this is found in any other writer, and it is probably a mere mistake.
[E. H. B.]
SALIERNLM ( ミá入єpvov; Eth. Salernitanus: Salerno), a city of Campania, but situated in the territery of the Picentini, on the N. shore of the gulf of l'osidenia, which now derives from it the name of the Gulf of Salemo. We have ne nccount of its origin or carly history; it has been snpposed that it was like the neighbouring Marcina a Tyrrhenian or Pelasgic settlemeot [Mascisa]; but there is no nuthority for this, mod its name is never mentiened in history previous to the settlement of a Roman eolony there. But when this was firmt decreed (in n. . . 197, it was not actually founded till B. C. 194), Livy speaks of the place as Castrum Salerni, whence we may infer that there was at lenst a fortress previeusly existing there (Liv. xxxii. 29, xxaiv. 45; Vell. Pat. i. 14: Strab. v. p. 251.) The Ruman colony was established, as we are expressly tuld by Strabu, for the purpose of holding the Picentines in check, that people having actively espoused the cause of Hannibal during the Second l'unic War (Stuab, l. c.) Their town of Piceutia being destroyed, Salernum became the chief town of the district; but it does not appear to have rised to any great importance. In the Social War it was taken hy the Samnite general C. Papius (Appian, B. C. i. 42): but this is the only occasion on which its name in mentioned in histury. Horace alludes to it as having a mild elimate, on which account it had apparently been resommended to bin for his health (Hor. Ep. i. 15. 1.) It continued to be a municipal town of some consideration under the Roman Empire, aod as we learn from inscriptions retained the title of a Colonia (Plin. iii. 5. s. 9 ; Ptol. iii. 1. § 7 ; 1 tin. Aut.; Tab, I'eut.; Mommsen, Inscr. R. N. pp. 9 -12.) But it was not till after the Lombard conquest that it became one of the most flourishing cities in this part of Italy; so that it is nssuciated by Paulus Diaconus with Caprea and Neapolis amoug the " opulentissimae urben" of Campania (1). Diac. Hist. Lang, ii. 17). It retained this consileration down to a late period of the middle aqes, and was eopecially renowned for its selrool of medieine, which, under the name of Schola Salernitana, was long the most celebrated in Europe. But it scems certain that this was derived fronit the Arabs in the 10th or 11th century, and was not transmitted from more ancient times. Salerne is still the ree of au archbislop, with a pupulation of about 12.000 inhubitants, though greatly fallen from its mediaeval grandeur.

The ancient city, as we learn from Strabo (r, p. 251), stood on a hill at some distance from the seat, and this is confirmed by local writers, whe state Uhat many ancient remains lave been found on the hill which rises at the lack of the modern eily, but no ruits are now extant. (Rouanelli, vul. iii. p. 612.) From the foot of this hill a level and marsly plain extends withont interruption to the month of tho Silarns, the whole of which seems to have been included in the municipal territory of Salernum, as Lucan speaks of the Silarus as skirting the cnltivated lands of that city (Lucan, ii. 425.) The distanco from Salernum itself to the mouth of the

Silarus is not less than 18 miles，though erroneously given in the Tubula at only 9．（Tub．Peut．）［E．H．B．］

SALE＇TIO，in Gallia．This name occurs in the Not．Imp．，in the Antouine Itin，and in the Table． Ammianus（xvi．2）names it Suliso：＂Argento－ ratum，Brocomagum，Tabernas，Sulisonem，\＆c．＂ The Itin．places Saletio between Argentoratim （Strassburg）and Tabernae；and the Table places it between Tabernae and Brocomagus（Brumath）， which is north of Strassburg．The numbers are not earrect in the Itin．；but there is no doubt that the place is Setz near the Rhine．A diploma of Otho the Great names it＂Salise in Elisazium，＂in Elsaz or Alsace．（D＇Anville，Notice，fic．）
［G．L．］
SALGANEUS（ a a $\lambda$ yaveús；Liv．uses the Gr． acc．Salgauea：Eth．Sa入 $\alpha$ divios），a town upon the eastern coast of Boeotia，and between Chalcis and Antbedon，is said to have derived its name from a Boeotian，who served as pilot to the Persian fieet of Xerses，and was put to death npon suspicion of treachery，because no outlet appeared to the channel of the Earipus；but the Persian commander，baving found out bis mistake，erected a monument on the spot，where the town was afterwards built．（Strab． ix．p．403；Dicaearch．Stat．Graec．p． 19 ；Steph．B． s．v．）．Salganeus was considered an important place from its commanding the nerthern entrance to the Euripus．（Diod．xix． 77 ；Liv．xxxv．37，46，51．） The remains of the town stand directly under the bighest summit of Mount Messapium，in the angle where the plain terminates，and apon the side of a small part．The citadel occupied a height rising from the shore， 90 yards in length，and about 50 broad，and having a flat summit sloping from the SE．towards the sea．There are remains of walls on the crest of the summit，and on the SE．side of the height．（Leake，Northern Greece，vol．ii． p． 267 ．）

SALí（乏á $\begin{gathered}\text { dot，Ptol．iii．5．§ 22），a people of }\end{gathered}$ European Sarmatia，whom Schafarik（Slav．Alt． vol．i．p．302）places on the river Salis in the Baltic province of Livonia．
［E．B．J．］
SA＇LIA，a river in the territory of the Astures， on the N．coast of Hispania Tarraconensis．（Mela， iii．1．）Nuw the Sella．
［T．H．D．］
SA＇LIA，a branch of the Masella（Mosel），men－ tioned by Venant．Fortun．（iii．12．5），which must be the Seille（Forbiger，vol．iii．p．126）．The Seille ioins the Mosel at Metz．
［G．L．］
SALICA（之á入ıка，Ptol．ii．6．§59），a town of the Oretani in Hispania Tarraconenois．［T．H．D．］

sALODURUM，in Gallia，is placel in the An－ tonine 1tin．x．from Petinesca［Petinesca］，and the distance from Salodurum to Augusta Raura－ corum（Augst near Basle）is xxii．Salodurum is Solothurn，as the Germans call it，or Soleure，and though the distance between Basle and Sulothurn is somewhat less than that in the Itins．，this may be ewing to the passage over the bills which separate the caotons of Basle and Solothurn．It is said that there are Roman renuans at Soleure，and an in－ scription of the year B．c．219，＂Vico Salod．＂，has been found there．Salodurum is one of the towns of the Helvetii with $n$ Celtic termination（dur）． Cluver conjectured that Ptalemy＇s Ganodurum ［GAnodurem］might be salodurum．（D＇Anville， Notice，gic．；Ukert，Gallien．）
［G．L．］
SALOE（इa入ón，Paus，vii．24．§ 7），or Sul．k （Plin．v．31），a small lake of Lydia at the foot of Mount Sipylas，on the site of Tiantalis or Sipyl is． the ancient capital of Mseonia，which had probably perished during an earthquake．（Strab．i．p． 58 ， xii．p．579．）The lake was surrounded by a naralh； and the P＇hyrites，which flowed into it as a brook， issued at the other side as a river of some im－ portance．
［L．S．］
SALOMACUM or SALAJIOCUM，is placed by the Antonine Jtin．on a road from Aquae Tarbellicae （Dax）to Burdigala（Bordeaux）．Salomacum is the next place on the road to Burdigala and xviii． distant．The distance and the name Sules show that Sales is Solomacum．
［G．L．］
SALONA，SALO＇NAE（さん入ஸ̂ya，さa入んvas； this Jatter is the more nsual timm，as found in Inscriptions，Orelli，Inscr．nos．502，3833，4995； and on coins，Rasche，vol．iv．pt．i．p． 1557 ：Eth， Ea入aviт $\eta s$ ，Ea入avev́s），a town and harbour of Dalmatia，which still bears its ancient name，situated on the SE．corner of the gulf into which the Alriatic breaks（Can，di Castelli），on the N．of the river laner（il Gíudro）．Lucan＇s description （viii．104）－

## ＂（）aa maris Adriaci longas ferit unda Salonas <br> Et tepidum in molles Zepbyros excarrit lader＂－

agrees with its ohlong form，still traceable in the ruins，and with the conrse of the river．Thouth the public boildings and bouses of ancient Sulonae have been destroyed，enough remains of the wall to show the size，as well as pusition，of the city： and the arch of the bridge proves that the course of the river is unchanged．The city corsisted of two parts，the eastern and the western；the latter stamis on rather higher ground，sloping towards the N．， along which the wall on that side is built．Little is known of Salunae before the time of Julias Caesar； after the fall of Dalminion it hecame the chief fown of Dalmatia，and the bead－quarters of L．．Caecilius Metellas，B．C．117．（Appian，Mllyr：11．）It was besieged a second time，and opened its gates to Cn ． C scoulns，n．c．78．（Entrop．vi． 4 ；Oras．v．23．） When the Pomperan flect swept the lonian kulf from Corcyra to Salorae，M．Octavits，who com－ manded a squatron for l＇ompeins，was compelled to retreat with loss from before this stronghold of

Cansar's. (Cace, B. C. iii. 9.) The profligate (ishuins, after being cooped up for months in the fintress, died here. (Auct. B. Alex. 43 ; Dion Cass. alii. 12.) In b. c. 39 Asinius Pollio defeated the Partheoi, who had espoused the cause of Brntus and Cassius, and took Silonae, in commemoration of which his son Asinius Gallus bore the "aznomen" Saloninus (Comp. Virg. Bucol. viii. 7 ; Hor. Carm, ii. 1. 14-16.) From the time it received a colony it was looked upon as the great hulwark of the Roman power on that side the Adriatic, and was distinguished for its loyalty, as was shomn in the siege it inaintained against Bato the native leader, A. D. 6 . All the great Roman roads in Dalmatia met at this point, and when the conntry was divided into three "conreotus," or assize towns, as many as 382 "decuriae" were convened to it. (Plin. iii. 26.) Under the earlier emperors the town was embellished with many public buildings, the number of which was greatly increased by Diocletian, who, according to Porphyrogenitus (de Adm. Imp. 29), corapletely rebuilt the city. No great change tork place for nearly two centuries after the death of that emperor; hut if we are to believe Porphyrogenitus ( $l . c$. .) the "long Salonae" attained to half the size of Constantinople. In A. D. 481 Salonae was taken by Odoacer, king of the Heruli, but was recovered from the Goths by the Gepid prince Mundus, the general of Justinian. Totila occupied it for a time. Little is known of these sieges, except that it was partially destroyed. (Procop. B. G i. $5,7,17, \& \mathrm{cc}$.) It aoon recorered from these diasters; and it was from Salonae that Belisarius in 544, and Narses in 552, set out to rescue Italy from Totila and the Goths. (Comp. Gibhoo, c. sliii.) The Avars invaded Dalmatia in 639, and, advancing upon Salonae, pillaged and burnt the torn, which from that time bas been deserted and in ruins. (Const. Porph. l.c.) The town possessed a dockyard, which, from Strabo's (vii. p. 315) account, seems to have been the only one deserving that name on the Dalmatian coast. The present state of the place offers many illustrations of past events ; the following works tonch very fully upon the remains of the fortifications and other ruins: Wilkinson, Dalmatia, vol. i. pp. 151-164; Neigebaur, Die Sud-Slaven, Pr. 151-164; Lauza, Antiche Iapide Salonitane inedite, Zara, 1850; F. Carrara, Topografia e Scavi di Salona, Trieste, 1850.

The fame of Salonae mainly rests upon its neighbourhood having been cbosen by Diocletian as the place of his retirement. That emperor, after his resignation, spent the last nine years of his life in the seclusion of the palace which has given its name to Spalato. Spalato, often erroneously called Spalatro, in Illyric Split, is a corrupted form of Salonae Palatium or S. Palatium. The building of the palace, withit the precincts of which the greater part of the modern town is constructed, occupied twelve years. The stone, which was very little inferior to marble itself, was brought from the quarries of Tragurinm. After the death of Diocletian, hat little is known of the palace or its occupants. Part of it was kept by the magistrates of Silonae, as a state palace; and part was occupied hy the "Gynaecinm," or cloth manufactory, in which women only were employed, - whence the name. It was tenanted by the phantom emperors of the West, Glycerius and Julius Nepos, the latter of whotn was murdered here. When Salonae was captured by the Avars, the houseless citizens fled to
the inassive structure of the palace for shelter: the settlement swelled by the arrival of thrir countromen became a Ronan city unter the name of Aspalathess. and paid an annual thibute of 2.0 pieces of gold to the Eastern etuperors. (Const. Porph. l. e.)

The palace is nearly a square, terminated at the four corners by a quadramgular tower. According to the latest and most accurate admeasurements, the superficial content, inclading the towers, occupies a space of a little more than cight acies. (Wilkinson, Dalnatia, vol, i. pp. 114-143; Neigebaur, Die Sud-Slaven, pp. 134-151.) The entire building was composed of two principal sections, of which the one to the S . contained two temples - ore dedicated to Jupiter the other to Aesculapius - and the private rooms of the caiperor. Two streets intersected each other at igsht angles, nearly in the centre of it; the princijal one led from the Porta Aurea, the main entrance on the N . front, to a spacious court before the vestibule; the other ran in a direct line from the W, to the E. gate, and crossed the main street just below the court. What remains is not enough to explain the distribution of the various parts of the interias. By a comparison of what existed in his time with the precepts of Vitrovius, Allams (Antiquities of Diocletian's Palace, 1764) has composed his ingenions restoration of the palace. (Comp. Gibbon, c. siii.) All the gates, except the Porta Argentea, were defended by two octagonal towers; the principal or "golden gate" still remains nearly perfect. The temple of Jupiter is now the "Duom?," and that of Aesculapius is a baptistery dedicated to St. John. Diocletian's palace marks an aera; - columnar was so combined with arched architectare, that the arches were at first made to rest opon the entablature, and afterwards were even forced inumediately to spring from the abacus, in vinlation of the law of statics, which requires undiminished and angular pillars under the arch; at length the entablature itselt took the form of an arch. (Nüler, Ancient Art, § 193.) But although this architecture offends agraiust the rales of good taste, yet these remains may serve to show how directly the Saracens and Christian arcbitects borrowed from Roman models many of the claracteristics which have been looked upon as the creation of their own imagination. (Comp. Hupe, Architecture, vol. is c. viii, Freeman, Hist. of Architecture, P 152.) A plan of the palace of Tiocletian, taken fron Alams, will be fond in Fergusson's Handbook of Architectwire, vol. i. p. 356, accompanied by an account of the general arrangements of the buidiug. [E.B J.]

SALl'ESA, a Roman municipium in Hispania Baetica, SE. of Mispalis, at the mined Ficialcazar, between Ctrera and Coronil. (Florez, Esp.Sagr. ix. p. 17; Mionnet, Suppl. i. p. 44.) [T. H. D.]

SALPl'NUM (Eth. Salpinas), an aticient city of Etruria, mentioned only by Livy (v. 31, 32), who speaks of the Salpinates as assisting the Volsinians in their war against Rotne in B. c. 389 . It is clear from the manner in which they are bere spoken of that they were an independent people, with a coosiderable territory and a fortified city ; and the manner in which they are associated with the powerful Volsinians would lead to the inference that they also must have been a people of considerable powerYet no subsequent mention of their aame is fruad, and all trace of their existence disppears. Niebulir conjectures that Silpinum occopied the site of tho
modern Orvieto, the name of which is evidently a corraption of Urbs Vetus, the form used by Paulus Diaconus in the serenth centary (P. Diac. iv. 33): there is, therefore, little doubt that the site was one of a more ancient Eitruscan city ; and its proximity to Vulsinii readers it probable enongh that it may have been Sulpinum. But no reliance can be placed upon any such conclusion. (Niebular, vol. ii. p. 493.)
[E. H. B.]
SALSAS or SALSA, a river of Carmania, noticed by Pluy (vi. 25). Reichand inagines that this is the simue streathas that called by Marcian, Cathraps (p. 21, ed. Hudron), and by Ptoleny, Araps or Cathrap (vi. 8. §8 4); and he identities it with the montern Shrir: but this seenis very doubtful. [V.]

SILsLLLAE, in (iallia. Mela (ii. 5) deseribes the Sal-ulae Fons as mot sending forth fresh water, but water salter than the sea. He places the Fons south of the lake Rubresus, and near the shore wheh he calls Leucate [Levecite]. Salsulae is in the Antonine Itin. on the road from Narbo to the Pyrenees. Salsulae is Salses or Salces, where there is a salt-spring. Near the Fons, says Nela, is a plan very green with fine and slender reeds, under which is water. This is the place, he says, where fisin are got by striking down with a prong or something of the sort; and this is the origin of the fables told by the Greeks and some Romans about fishes being dug out of the ground. He alludes to Polybius (xxxiv. 10). [Rescino.]
[G. L.]
SALSUM FLUMEN, a tributary of the Bactis in Hispania Baetica, between Attegua and Attubis. (Hirtias, B. A, c. 7.8) Variously identified with the Guadijoz and Saludo.
[T. H. D.]

## salsts [stachir.]

[T. H. D.]
sALTICl, a tuwn of the Celtiberi in Hispania Tarraconensis, (Itin, Ant. p. 447.) Variously identified with Jorquera and S. Maria del Cimpo. [T. H. 1).]

AAITIGA ( $\mathrm{\Sigma} \dot{\mathrm{~d} \lambda \lambda \tau \tau \gamma a, \text { Prol. ii. 6. §61), a town of }}$ the Bu-titani in Hispania Tarraconensis. [T. II. D.] SALTOPYRGUS. [TEGLICHM.]
SALURNIS (Siduria), a town in Rhaetia, on the river Athesis, io the north of Tridentum, is mentionel only by Paulus Diaconus. (Hist. Langob. iii. 9.)
sALUTARIS PIIRIGIA. [PHRygia, p. 625.]
SALVA ( Eadaria) a town in the northerestera eatromery of Lower l'anomia, on the right bank of the D):unte. (1'tol ii. 16. \& 4 : ltin. Ant 1p. 266, 267.) Aveordug to the Nutitia Inperit, where it is called Solva, it contuined a garrimon of a body of horvenen. The site of this place caunot be ancertained with certainty.
[L.S.]
SA'LYES (इ $\alpha \lambda v \in s$ ), SA'LYI, SALLE'VII, or SA'LLI'Es (Steph. Byz s. v.), a Liguriau people in (i,ullia. There are other varieties in the writing of the word. The carly Greeks gave the name of Ligges th these Salyes; and their territory, which Was in the pooserssion of the Masaliuts, when Strabo wrote, was originally called Ligystice. (Strab iv, p. 203.) The geographer means to say that the old Grecks were not wequaintel with the name of salyos. but only with the nathe of the nation to whach they belonged. Livy (v. 34) speaks of the I'locamans who founded Massilia being attacked by the Salyes, for in lis tume the name Silyes was familhar to the Romans.

Strabo speaks of the Sulyes in his description of the Alps. He makes their country extend frun Antipolis to Massilia, and even a little further. They occupied the hilly country which lies ithland and some parts of the const, where they were miagled with the Greeks (iv. p. 203). They extended west as far as the Rhone. The Sulyes had also the country north of Massilia as far as the Druentia (Durance), a distance of 500 stadia; bitt on erossing the Drueatia at Cabellio or Caballio (Caxail$l_{0 n}$ ) a man would be in the country of the Cavares (Strab. iv. p. 185), who extended from the Dtuentia to the laras (Isire). [Cavanes.] Strabo adds that the salyes occupy both plains and the mountains ahove the plains. In this passage ( $O \hat{t} \mu \dot{\epsilon} \nu$ oỉv इádues tev à̀rois) Groskurd (Transl. Strab. vol. i. p. 3I8) has altered इ́áhves into Kaovapot, and so he has spoiled the meaning. Ukert has defended the true reading, thongh he has not correctly explained iv avizois. The Salyes occupied the wide plains east of Tarascon and Arles, une of the best parts of the country between the Durance and the Mediterranean; and so Strabo conld correctly say that the Volcae Tectosages who reach to the Rhme had the Salyes extending along their border and opposite to them on the other side of the river, and the Cavares opposite to them (north of the Durance).

The Salyes are sometimes distinguished from the Ligures, as when Strabo (iv. p. 178) speaks of the cuast which the Massaliots possess and the Salyes as far as the Iigyes to the parts towards Italy and the river Varus, the boundary of the Narbonitis (Prorincia Narbonensis) and Italy. Livy also (xxi. 26) speaks of P. Curnelius Scipio sailing along the const of Etruria and of the Ligures, and then the coust of the Salyes till he came to Massilia. This shows that the Ligurians of Gallia, or the country west of the Lar, became knowa to the Romans by the name of Silyes. Strabo's remark that these Salyes, whom the early Greeks named Ligures, were called Celtoligyes by the later Greeks, may explain how livy or his Epitoniser has called the Silyes both Ligurians ("Transalpinos Ligures," Epit. 47) and Galli (Epit. 60). They were a mixed race of Galli and Ligures.

The Salyes were a warlike people. They had both infantry and cavalry, distributed into ten tribes or divisions. They were the first of the Transalpine nations which the Ronaans subdued. (Florls, iii. 2.) The Komans fought for a long time with the Ligurians east of the Var, and with the Salyes west of it, for these jreople being in possessinn of the sea-coast closed against the Romans the way into Spain. They pluadered both by sea and land, and were so fornidable that the road through their land was hardly safe for a large army. After eighty years of fighting the Romans with difficulty succeeted in getting a road of 12 stadia in width allowed for the free passage of thase who went on the pullice service.
Livy (xxxi. 10) tells us that in the Second Punic War the lnsubres, Cenotoani, and Boii stirred up the Sulyes and other Ligurians to join them; and all together under Hamilest attacked Placentia. There is no gromend, as Ukert remarks, to alter the reading "Salyis," for we see no reason whiy the Silyes as well us other Ligurians or mixed Ligurians shuald not aid the enemies of lome. Buth the Ligurans and the Cisalpine Galli dreaded the arans and the encroachnent of the Romans. The alliance with

Massilia first brought the Romans into the conntry of the Salyes；and in B．C． 154 the Oxybii and Deceates，or Deeiates，who were tbreatening Massilia， were defeated by the consol Q．Opimins．The Salyes or Salluvii are not named on this occasion by tbe historians，and the Deceates and Oxybii，who were certainly Ligurians，may have been two smaller trihes incladed under the general name of Salyes or Salhuvii，［Dechates；Oxynir．］The consol M． Fulvins Flacens in B．c． 125 defeated the Salyes， and in B．c． 123 the consul C．Sextins Calvinus completed the subjugation of this people，and fonnded Aquale Sextiae（ $A i x$ ）in their territory．

Ptolemy（ii． 10 ．§ 15）enumerates Tarascon， Glanum，Arelatum（Arelate）Colonia，Aqpae Sex－ tiae Colonia，and Ernaginum as the towns of the Salyes．Tarascon，Glamm（St．Remi），Arelate，and Ernaginnm［Ernaginum］all lie west of Aquae Sextiae（Aix）and of Marseille；and we may con－ clade that the country of the Salyes is the western half of the tract between the Var and the Rhone， and between the Durance and the Mediterranean．

The tribes east of the Salyes，the Allici，Suetri， Nernsi，Oxyluii，and Deciates，and there may be some others［Commoni］，were perhaps sonetimes included onder the name of the more powerful nation of the Salyes；but Strabu＇s statement does not ap－ pear to be strictly correct，when be makes the Sa－ lyes extend along the coast to Antipulis．The coast inmediately west of the lar belonged to the Dece－ ates and Oxybii．Pliny says＂Ligurinm celeberrimi ultra Alpes，Salluvii，Deciates，Oxybii＂（iii．5）；the three tribes of Transal pine Ligures whose names occur in the history of the Roman conquestof this country．

In Pliny＇s list of the Coloniae in the interior of Narbonensis east of the Rhone there is＂Aquae Sextiae Salluviorum，＂and we may conclude that the head－quarters of the Salyes or Salluvii were in the plain country ahove Aix，and thence to Arles． Orving to their proximity to the Greeks of Massilia they would be the first of the Lignres or the mixed Gaili and Ligurians who felt the effect of Greek civilisation，and there can be no doubt that their race was erossed by Greek blood．Possessing the town of Arelate，at the head of the delta of the Rlone，they wonld bave in their hands the navi－ gation of the lower part of the river．The history of this brave and unfortonate people is swallowed up in the lilood－stained annals of Rome；and the race was probably nearly extirpated by the consul Cal－ vinus selling tbem after his conquest．
［G．L］
SANIAICA（ （apaikर́，Ptol，iii．11．§ 9），is de－ scribed by Ptnlemy as a $\sigma$ тparnүia of Thrace，on the borders of Macedonia and the Aegean．［J．R．］

SAMACHONI＇TIS LACUS（ $\Sigma \alpha \mu a \chi \omega v i \tau i s ~ \lambda i \mu \nu \eta$ al．$\Sigma \xi \mu \in \chi \omega \nu \hat{\nu} \tau t 5)$ ，the name given by Jonephns to the small lake of the Upper Jordan，called in Scrip－ ture the＂waters of Merom，＂where Joshua routed the army of Jabin，king of Hazer，which city，accord－ ing to Josephus，was situated ahove the lake．（Comp． Josh．xi．5，7，and Judg．iv．with Josephus，Ant．v． 5．§ 1．）He elsewhere describes the lake as 60 stadia long by 30 broad，extending its marshes to a place called Daphne，which Reland is probably right ill altering to Dane，i．e．Dan，as Josephus im－ mediately identifies it with the temple of the Golden Calf．（Joseph．B．J．iv．1．§ 1；Feland，Palaest． p．263．）The name，which is not elsewhere fonnd， has been variously derived，but the most prolable etymology would connect it in rense with the He－ brew name Derom＝aquae superiores，deriving the
word from the Arabic＂samaca，＂altus fuit．（Reland， l．c．P．262．）It is singolar that no other notices occur of this lake in sacred or in other writiugs．Its modern name is Bahr－el－Huleh．Pococke writes： ＂Josephus says the lake was 7 miles long，but it is not above 2 miles broad，except at the north end， where it may be about 4 ．The waters are muddy and esteerned unwholesome，having something of the nature of the water of a morass．＂（Observations on Palaestine，vol．ii．p．73．）Dr．Robinson＂estimated its length at ahont 2 hours，or from 4 to 5 ger－ graphical miles；its breadth at the northern end is probably not less than 4 miles．＂It had the ap－ pearance almost of a triaugle，the northern part being far the broadest；＂or rather the map gives to it in some degree the shape of a pear．＂（Bibl．Res．vol． iii．pp．339，340，Biblioth．Sacr．vol．i．p．12：Stan－ ley．Sinai and Palestine，p．383，1．1．）

## SAMBROCA．

that ？mri buit it merely as a palatial residence （Sinai and Palestine，p．240）；but Dr．Robinson perhaps more justly concludes that it was chosen as the site of the capital，and remarks that＂it would be difficult to find in all Palestine a situation of＂qual strength，fertility，and beauty combined．＂ （ $B i b l$ ．Res．iii．p．146．）lts great strength is at－ tested by the fact that it endured a siege from all the pormer of the Syrian army under Hazael，in the h．y．if Jchoram（cir．B．c．892），little more than 30 years after its first foundation，and was not taken Hutwithatanding the frightfol effects of the famine within the walls（ 2 Kings，sii．24－siii．20）；and When robsequently besieged by the Assyrians（cir． 8．c． 721 ）it was only reduced after a siege of three years（xwni．9，10）．After the captivity it was taken by Julan Hyrcanus，after a year＇s siege，when he is said to lave sajped the fonndations of it with water and destrosed all traces of a city．It was subse－ quently occapied by the Jews nntil Pompey restored it to its own inhabitants．It was further restored hy Gabinius．（Juseph．Ant．xiii．10．§ 3，15．§ 4， xiv． 4 § 4，5．§ 3，xiii．10．§ 3，15．§ 4．）It was granted to Herod the Great by Augustus on the death of Antony and Cleopatra，and was by bimi con－ verted into a Roman city under the name of sebaste $=$ Augusta．in honour of bis imperaal patron．（Ant． xv．3．§§ 3，7，8．§ 5，B．J．i．20．§ 3．）The town was surronoded with a wall 20 stadia in length：in the middle of the town wis a temple built in bonour of Cuesar，itself of large diniensions，and standing in a temenos of $1 \frac{1}{2}$ stadium square．It was colonised with 6000 veterans and others，to whom was as－ sianed an extremely fertile district around the city． （B．J．i．21．§ 2．）Dr．Robinson imagines tbat it was in this city that Philip firat preached the Gos－ $1^{4+1}$ ，and that the church was founded by the apostles St．Peter and St．Julm（Acts，viii．5，\＆c．）；but con－ sidering the absence of the article in the original， suppled in the English tramslation，and comparing the pasage with the ideutical expression in St．John （iv．5），it is nore probable that the same town is in－ tended，viz．Srchar，or Neapolis，the chief sest of the Sumaritan worship．Nor does the expression in Aets（viii．14），that＂Sannaria had received the word of Gool，＂mitate against this view；for here also the coontry maty be very well understood，and it is well remarked by Dr．Lobuson that＂it is sometimes difficult to distinguish whether，under the name Si－ maria，the city of the region is meant．＂（Bibl．Res． in．p．146．）It is most probable，however，that the sacred writers would have osed the classical name then in vogue had they had occasion to mention the city．Septimius Severus placed a culony there in the bersiming of the third ceatury（Clpian，quoted by Kokinson，$l$ ．c．p 148, п．1），and it was probably at that time an epiecopal see；for its bishop．Narius or Marims，was present ai the Council of Nicaes and subsrribed its acts．（Le Quien，Oriens Chrietianus， 14．iii．col．549－5．52．）The tradition which as－ ：Nyns Sobaste as the place of St．John Baptist＇s ims－ primonment and martyrdom is first found in St．Je－ roun（Comment in Osee，i．5）．who also places there the tombs of Obadialt and Elisha（Comment．in Ab－ diam，i．1，Fpitaph．Pauke，c．6），and militates against Jusephus，whose statement，boweser，is inad－ misible．［Macmakstes．］The modern village which represents in its name and site the magnificent rity of IIerod the Great is situated on an isolated hili 6 mile，N．of Niabluis，reckosed by Josephus a day＇s journcy fiom Jerusalem．（Ant．玉x．It．）

The village occupiea only the eastern extremity of the bill，and stands at the height of abont 926 feet above the sea．Its only conspicuons building is the ruined church of St．John，overhanging the brow of the eastera declivity：at the forther extremity of the hill，are the remains of an ancient gateway，and near it stand 60 columns in situ，the commencement apparently of a colomade which extended the whole length of the hill，for at some distance eastward 20 more still stand，and otbers，whole or in fracments， lie prostrate over the whole hill，while the delris of the buildings have raised the surrounding valleys， remarkably fulfilling the prophecy of Mirali（i．6）： ＂1 will make Samaria as an heap of the field，as plantings of a vineyard；and 1 will pour down the stunes thereof into ithe valley，and 1 will discover the foundations thereof．＂At about half its beight the hill is girt about with a distinct belt of level ground， while similar terraces，not so well defined，may be traced abose and below，which it is thought may have once served as the strects of the city．（Ritter，Erd－ kunde Paliistina，iii．Pp．661－666．）Coins of the city are quoted by Vaillant，Noris，Eckbel，and otliers，chiefly of the earlier emperors．［G，W．］

SAMARIANE，a town of Hyrcania，mentioned by Strabu（si．p．50s）．It is no doubt the same as that ealled Samarame by Ptulemy（vi．9．§ 2），and by Ainmianus Marcellinus，Suramanna（sxiii．6）．It cannot he identified with any modern place．［ V ．］

SAMAROBRIVA，in Gallia，the ford or pasage of the Samara，was a town of the Ambiani on the Samara（Somme）．Caesar beld a meeting of the states of Gallia at Samarobrixa in the autumn of B．c． 54 ，before putting lis troops in winter－quarters， Caesar bimself stayed at Samarobriva，as his narrative shows（B．G．v．24，46，47，53），and as appeans from thase letters of Cicero addressed to bis friend Trebatius，who was abuut Caesar at that time（ad Fum．vii．11，12，16）．Ptolemy mentions Samaro－ briva as the cbief town of the Ambiani（ii．9．§ 8）． The town afterwards took the name of＂Ambiani wrbs inter alias eaminens＂（Amm．Marc．xv，11），or ＂Ciritas Ambianorum＂in the Notitia Prov．Gallia， The name of Samarobriva aplears in the Antonine Itin，and in the Table；but the Itin．has Ambiani also．There seems min reason for fixing Samarobriva at any other site than 4 miens，thougb some geo－ graphers would do so．
［G．L．］
SAMBANA（さdubava），a small place mentionel by Dicdorus Siculus（svii．27）．There can be little donbt that it is the same as the Sabata of Pliay（vi． 27．§ 31）．It was situated about two days＇journey N．of Sittake and E．of Artemita．
［V．］
SAMBASTAE（玉apfactai），one of the many small tribes in the district of Pattaleue mentioned by Arrian（vi．15）as noticed ly Alexander and his tioops near the mouths of the Indus．It has been conjectured that the present rains of Sexcistan ur Schucan indicate the site of the chief fortress of this people；and Burnes appears to believe that this is the same place noticed by Curtius（ix．8）as a strong－ hold of the Brachmani（Burnes，Travels in Bukhara， iii．p． 57 ）．
［V．］
SAMBRACITAND＇S SINL＇S in Gallia，is placed in the Maritime 1tin．betweell Forom Julỉi and Heraclea．It is the gulf of Grimaud．［G．1．］ SAMBROCA（ $\sum_{\alpha \mu 6 p o к a, ~ l ' t o l, ~ i i . ~ 6 . ~ § ~ 2 v), ~ a ~}^{\text {a }}$ river of Hispania Tarraconensis，which entered tbe seal between the Pyrenees and the lberus．Ukert（ii． pt．i．p．292）takes it to be the same river called Alba l．y lliny（iii．3．s．4）；the modern Ter．［T．H．D．］

SANbULOS, [Bagistanes Mons.]
SAMBUS ( $\Sigma$ ́á $\mu$ ©os), a small river which forms one of the tributaries of the Jumna, It is mentioned by Arrian in his list of Indian rivers (Ind. c. t.).
[1.]
 Sumo), the most ancient city in Cephallenia, which is also the name of this island in the poenis of Homer. [Cephallenia.] The city stood upon the eastern coast, and upon the channel separating Cephallenia and Ithaca. (Strab. x. p. 455.) Along with the otber Cephallenian towns it joined the Athenian alliance in B. C. 431. (Thuc. ii. 30.) When M1. Fulvius passed over into Cephallenia in B. c. 189, Sumos at first submitted to the Romans along with the other towns of the island; but it shortly afterwards revolted, and was not taken till after a siege of four months, when all the inhatitsnts were sold as slaves. (Liv. xxxviii. 28, 29.) It appears from Liry's narrative that Sume had two citadels, of which the smaller was called Cyatis ; the larger be designates simply as the major arx. In the time of Strabo there existed only a few vestiges of the ancient city. (Strab. L. c. ; comp. Plin. iv. 12. s. 19.)
Same has given its name to the modern town of Samo, and to the bay upon which it stands. Its position and the remains of the ancient city are described by Leake. It stood at the northern extremity of a wide valley, which borders the bay, and which is overlooked to the southward by the lofly summit of Mount Aerrus ('Elato). It was built upon the north-western face of a bicipitons beight, which rises from the shore at the northern end of the modern town. "The ruins and vestiges of the ancient walls show that the city occupied the two summits, an intermediate hollow, and their slope as far as the sea." On the northern of the two sunmits are the ruins of an acropolis, which seems to have been the majur arx meritioned by Livy. On the sunthern height there is a munastery, on one siode of which are some remains of a Hellenic wall, and which seems to be the site of the Cyatis, or smaller citadel. There are considerable remains of the town walls. The whole circuit of the city was barely two miles. (Leake, Northern Greece, vol, iii. p. 55.)

CORN OF SAME.
SA'MIIA. [SAmicum.]
SA'MICUM ( ミaukóv: Eth. इapikev́s), a town of Triphylia in Elis, situated near the coast about balf-way between the mouths of the Alpheius and the Neda, and a little north of the Anigrus. It stood upon a projecting spur of a lofty mountain, which here approaches so near the coast as to leave only a narrow pass. From its situation commanding this pass, it is probable that a city existed here from the earliest times; and it was therefore identified with the Arene of Homer (Il. ii. 591, xi. 723), which the poet places near the mouth of the Minyeius, a river supposed to be the same as the Anigrus [Anene.] According to Strabo the city was originally called Samos ( $\Sigma \dot{\alpha} \mu o s$ ), from its being situated npon a hill, because this word formerly signified "heights." Samioum mas at first the
name of the fortress. and the same name was aloo given to the surrounding plain. (Strab. viii. $\mathrm{H}^{2}, 546$, 347; Paus, v. 5. § 3.) Pausanias speaks (v. $6 . \S$ 1) of a city S.min ( Sapía), which be aplaremly distinguishes from Satnicum; but Sanlicum is the only place mentioned in history. [See some romarks I her Macistus.] Samicum was occupied by the Artolian Polysperchon against the Arcadians, and was taken hy Philip, B, C. 219. (Pans, v. 6. § 1 ; Polyb. iv. 77, 80.) The ruins of Samicum are found at Khaiaffa (written Xaidema), which is unly the name of the guarded pass. The ruined walls are 6 feet thick, and about $1 \frac{1}{2}$ mile in circunference. They are of the second order of Hellenic masonry, and are evidently of great antiquity. The towers towards the sea belong to a later age.

Near Sanicunn upon the coast was a celebrated temple of the Samian Poseidon, surrounded by a grove of wild olives. It was the centre of the religious worship of the six Triphylian cities, all of whom contributed to its support. It was under the superintendence of Macistus, the most powerful of the Triphylian cities. (Strab viii. pp. 344, 346, 34i.) In a corrupt pasage of Strabo (p. 34t) this teruple is said to lue 100 stadia equidistant from Lepreum and the Annius (rov̄ 'Avviov) ; for the latter name we ought to read Alpheius and not Anigrus, as some editors have done.

In the neighbourhoud of Eamionm there were celebrated medicinal springs, which were said to cure cutaneous diseases. Of the tro lagoons which now stretch along the coast, the larger, which extends as far as the mouth of the Alpheins, begins at the northern foot of the hill upon which Samicum stands; the southern extends along the precipitous siles of the hill, which were called in antiquity the Achaean rocks. (Strab viii. p. 347.) The river Anigrus flows into the latter of these lagoons, and from thence flows out iuto the sea. The lagoon is deep, being fed with subterraneous sonrees; in summer it is said to be very fetid, and the air extrencly unwholesome. Strabo relates that the witers of the lake were fetid, and its fish not eatable, which he attributes to the Centanrs washing their wounds in the Anigrus. Pausanias mentions the same circumstances; and both writers describe the efficacy of the water in curing cutanems diseases. There were two caves, one sacred to the Nymphs Anigrides ('Avirpí̄es, Pans.; 'Avı $\gamma$ ptáócs, Strab.), and the other to the Atlantides; the fornier was the more important, and is alune mentioned by Pausanias. It was in the cave of the Anigrides that the persons who were going to use the waters first offered up their prayers to the Nymphs. (Strab. viii. p. 346, seq.; Paus. v. 5. §§ 7-11.) These two caves are still visible in the rocks; lut they are now accessible only by a boat, as they are imniediately above the surface of the lake. General Gordon, who visited these caverns in 1835, found in one of them water distilling from the rock, and bringing with it a pure yellow sulphur. (Leake, Morea, vol. i. p. 54. seq., Peloponnesiacia, p. 108; Boblaye, Recherches, gic. p. 133, seq.; Curtius, Peluponnesos, vol. ii. p. 78 , seq.)

SAMINTHUS ( $\Sigma \alpha^{\prime} u \downarrow \theta_{0}$ ), a town in the Argeia, on the western edge of the Argive plain, which was taken by Agis, when he marched from Pllius into the territory of Argos in B. c. 418 . (Thuc. v. 58.) Its position is uncertain. Leake, who suppuses Agis to have marched over Mlt. Lyrceium and the adjoining hills, places it at Kutzopödhi (Morea,
vol. ii. p. 415), and Foss at the village of Ph..ia, on the southern side of MIt. Tricaranon, across which is the shortest pass from the Phliasia into the Argive plain. ( $P$ lloponnes, p. 27.)

SAMMO'NIUM, [SAMOsiUs.]
SA'MNIUT (ì Sauvitis, Pol, Strab. : Fth. SAas-
 vita, Ptol.), one of the principal regions or distriets of Central ltaly. The name was sometimes nsed in i more extensive, sometimes in a more restricted, sense, the Samnites being a numerous and powerfal people, who einsisted of several distinct tribes, while they had founded other trabes in their innmediate neighbourhood, who were sonctimes included under the same apyellation, though they did not properly form a part of the nation. But Samnium proper, according to the inore usual sense of the nane (excinsive of the Frentani, but including the Hirpini), was a wholly inland district, bounded on the N. by the Marsi, Pelipui, and Prentani, on the E. bs Apulia, on the S. by Lucania, and on the SII. and W. by Campruia and Latinu.

## I. General Description.

The territory thas lioited was alinost wholly mountainous, being filled op with the great mountain masses and ramifications of the Apernines, Which in this part of their course have lost even more than elsewhere the character of a regular chain or range, and consist of an irregular and broken mass, the configuration of which it is not very easy to understand. But as the whole topograpliy of Samnium depends upon the formation and arrangemont of these mountain groups, it will be necessary to examine them sumewhat in detail.

1. In the northern part of the district, adjoining the Maws and Peligni, was a lnoken and irregnlar n:Ls of mountains, containing the sources of the Sugrus (Sangro), and extending on buth sides of the valley of that river, as far as the fromtiers of the Firentani. This was the land of the Caracesi, the mast northerly of the samnite tribes, whose chiet city was Aufidena, in the valley of the Sagrus, abous is uiles abuve Costel di Sangro, now the chief town of the surrounding district.
2. The salley of the Sagrus was separated by a monntain pass of coosiderable elevation from the valluy of the Vulturnas, a river which is commonly considured as belonging to Campania; but its sources, as well as the upper part of its course, and the valleys of all its earliest tributaries, were comprised in Samnium. Aescrnia, situated on one of these tributaries, was the principal torm in this part of the country; while Venafrum, about 15 miles Iower down thie valley, was already reckoned to belonz to Campania. This portion of Samnium was one of the richest and most fertile, and least mountainous of the whole country. From its proximity to Latiom and Campania, the valley of the Vulturnus was one of the quarters which was must accessible to the Itman anns, and served as one of the highroads into the enemy's country.
3. From Acsernia a pass, which mas probably used from very early times, and was traversed by a road in the days of the Roman Empire, led to Bovianum in the valley of the Tifersus. This city was situated in the very hoart of the Samnite country, surrounded on all sides - ly lofty mourtains. Ot these the mint iluportant is that on the SW., the Monte Matose, at the present day one of the most celebrated of the Apenvincs,

I it for which no a:vient name has been preserved. The name of Mons Tifirmus may indeed lave been applied to the whole group: but it is more probable that it was confined, as that of Monte Biferno is at the preseut day, to one of the offshonts or minor summits of the Matese, in which the actual sonrces of the lifernus were situated. The name of Matese is given to an extensive group or mass of mountains filling ap the whale space between Bojano (Bovianum) and the valley of the Vultarmus, so that it sends down jts ramifications and underfalls quite to the valley of that river, whence they sweep round by the valley of the Calor, and thence by Jorcone and Sppino to the sources of the Tamarus. Its highest summit. the Monte Miletto, SW: of Bojanoo, ries to a height of $67+4$ feet. This rugged group of momitaios, clothed with extensive forests, anil retaining the snow on its surnmits for a large part of the year. must always have been imiccessible to civilisation, and offered a complete barricr to the arms of an invader. There conld never have been auy road or frequented pass between that which followed the valley of the Vulturnos and that whilit skirts the eastern base of the Matese, from the valley of the Calore to that of the Tamaro. This last is the line followed by the modern road from N'oples to Campubusso.
4. N. of Brjano the mountains are less elevated, and hare apparently no conspicuous (or at least 110 celebrated) summits; but the whole tract, trom Biojano to the frontier of the Frentani, is filled up with a mass of rugged mourtains, estending from Agnone and the valley of the Sangro to the neighbourhood of Campobasso. This moontainous tract is traversed by the deep and narrow valleys of the Trigno (Trinins) and Biferno (Tifernus), which cariy off the maters of the central chain, but without afforling any convenient means of communitation, The mountain tracts extending on all siles of Buvianum constituted the country of the Pextit, the nowt powertul of all the Samnite tribes.
5. S. of the Matese, and spparated from it ly 1he valley of the Calor (Calore), is the group of the Moss Tinnersu's, still called Monte Taburno, somewhat resembling the Matese in char racter, but of inferior elevation as well as extent. It formed, together with the adjoining valleys, the land of the Caudini, apparently one of the smallest of the Samnite tribes, and the celebrated pass of the Caudine Forks wis situated at its foot. Clusely connected with Mount Taburnas, and in a manner depersient wn it, thouch separated from it by the narrow salley of the Isclero, is a lang ridge which extends from Arpaja to near Capua. It is of very inferior elesation, hat rises boldly and stecply from the plain of Campania, of which it seems to form the ratural bundary. The extrenity of this ridge rearest to Capua is the Mons Tifati, $=0$ celebrated in the campaigns of Hannibal, from which he su long l loked down upon the plains of Campania.
6. At the eastern foot of Mhons Taburnus was sit atel Bemeventum, the chief towa of the Hmarist, and which, from its pecnliar prosition, was in a manner the key of the whole district inlabited by that pople. It stund in a plain or broad valley firmed by the junction of the Calor with its tributaries the Solatus anl Tamarus, so that considerable vallers frocel up from it in all direstions into the momtains. The Calor itec' is not only the nust considerable of the vibutariss of the Vultumus, but at the pwint of it. junction with that river, abont 20 miles below

Beneventom, is little if at all inferior to it in magnitude and volume of waters. The Calor itself rises in the lofty group of mountains betweea $S$. Angelo dei Lombardi and Eboli. This group, which is sometimes designated as Monte Irpino, and is the most elevated in this part of the Apennines, sends down its waters to the N . in the Calor and its tributary the Sabatus ; while on the E. it gives rise to the Aufidus, which flows into the Adriatic sea, after traversing mere than two-thirds of the breadth of Italy; and on the S. the Silarus flows by a much shorter course into the Gulf of Salerno. From this point, which forms a kind of knot in the main chain of the Apennines, the mountains sweep round in a semicircle to the NE. and N. till they reach the head waters of the Tamarus, and adjoin the mountaios a'ready described in the neighbourhond of Bojano and Campobasso. In this pat of its course the main chain seads down the streams of the $\check{C f i t a}$ and the Miscano on the W. to swell the waters of the Calore, while on the E. it gives rise to the Cerbalus or Cerroro, a stream flowing into the Adriatic.
7. From the Monte Irpino towards the E. the whole of the opper valley of the Aufidus was included in Samninm, though the lower part of its course lay through Apulia. The exact limit camot be fixed,-the confines of the Hirpini towards Apulia on the ooe side, and Lucania on the other, being, like the boundaries of Samnium in general, almost wholly arbitrary, and not marked by any natural limit. It may be considered, indeed, that in general the mountain country belonged to Samnium, and the lower falls or hills to Apulia ; but it is evident that such a distinction is itself often arbitrary and uncertain. In like manner, the rugged mountain chain which extends along the right bank of the Aufidus appears to have been included in Samnium ; but the line of demarcation between this and Lucania cannot be determined with accuracy. On the other band, the detached rolcanic mass of Mons Vulter, with the adjacent city of Venusia, was certainly not considered to belong to Samnium.

## 11. History.

All ancient writers agree in representing the Samnites as a people of Sabine origin, and not the earliest occupants of the country they iohabited when they first appear 10 history, but as having migrated thither at a comparatively late period. (Varr, L. L. vii. 29; Appian, Samnit., Fr. 4, 5; Strah. v. p. 250; Fest. s. v. Samnites, p. 326 ; A. Gell. si. 1.) This account of their origin is strongly confirmed by the evidence of their name; the Greek form of which, Eavvirat, evidently contains the same root as that of Sabiai (Sav-nitae or $S a f$-nitae, and $S a b$-ini or Saf-ini) ; and there is reason to believe that they themselves nsed a name still more closely identical. Fur the Oscan form "Safinim," found on some of the denarii struck by the Italian allies during the Social War, cannot refer to the Sabines usually so called, as that people was long hefore incorporated with the Romans, and is, in nll probability, the Oscan name of the Sumnites. (Mommsen, Unter Ital. Dialekte, p. 293; Friedländer, Oskische Münzen, p. 78.) The adjective form Sabellus was also used indifferently by the Romans as applied to the Sabines and the Samnites. [Sanini.]

The Samnite emigration was, according to Strabo (r. p. 250), one of those seat forth in pursuance of a vow, or what was called a "ver sacrum." It was, as usual, under the special protection of Mars, and
was supposed to have been guioud by a bull. (Strah. l. c.) It is probabic from this statement that the emigrants could not have been numerous, and that they established themselves in Sammium rather as conquerors than settlers. The previously existing population was apparently Oscan. Surabo tells u3 that they established themselves in the land of the Oscans (l. c.); and this explains the circumstanco that throughont the Samnite territory the language spoken was Oscan. (Liv. x. 20.) But the Oscans themselves were undoubtedly a cognate tribe with the Sabines [ITALIA]; and whatever may have been the circumstances of the conquest (concerning which we have no infermation), it seems certain that at an early period both branches of the population had completely coalesced into one people under the name of the Samnites.

The period at which the first emigration of the Samnites took Ilace is wholly unknowa; but it is probable that they had not been long in possession of their mountainous and inland abodes before they began to feel the necessity of exteoding their dominion over the more fertile regions that surrounded them. Their first movearents for this purpose were probably those by which they occupied the hilly but fertile tract of the Frentani on the shores of the Adriatic, and the land of the Hirpini on the S. Both these nations are generally admitted to be of Samnite origin. The Frentani, indeed, were sometimes reckoned to belong to the Samnite oation, though they appear to have had no political union with them [Fhentani]: the Hirpini, on the contrary, were generally regarded as one of the component parts of the Samnite nation; but they appear to have been origioally a separate colony, and the story told by Strabo and others of their deriving their name from the wolf that had been their leader, evidently points to their having been the result of a separate and subsequent migration. (Strab. v. p. 250; Serv. ad Acu. xi. 785.) The period of this is, however, as uncertain as that of the first settlement of the other samnites: it is not till they began to spread themselves still further hoth towards the S. and W.. and press upon their oeighbours in Lucanis and Campania, that the light of bistory begins to dawa npon their movements. Even then their chronology is not clearly fixed; but the conquest and occupation of Campania may be placed from about B. C. 440 to B. C. 420 , and was certainly completed by the last of theve dates. [Campasin.] That of Lucania must probably be placed romewhat later; but whatever were the causes which were at this time urging the movements of the Sabellian tribes towards the S., they seem to have continued steadily in operation; and within less than lalf a century (B. C. $410-360$ ) the Samnites spread themselves through the whole of Lucauia, and almost to the southern extremity of Italy. [LUcanla.] The subsequent fortunes of these comquering races. and their contests with the cities of Magna Graccia, do not belong to our present subject, for the Lucanians seem to bave early broken off all political connection with their parent nation, the Samnites, jost as the latter had done with their Sibine ancestors. This laxity in their political ties, and want of a common bond of union, seenis to have been in great measure characteristic of the Sabellian races, and was one of the causes which undonbtedly pared the ray for their final subjection under the Foman yoke. But the Samnites seem to have retained possessicn, down to a much later period, of
the tract of constry from the Silarus to the Sarmus, which was subsequently nceupied by the Piecutimi. (Serlax, p. 3. § 11 ; Niebulır, vul. i p 94.) They cert:inly were still in possession of this distract in the Second Samuite War; and it is probable that it was not till the close of their long struggles with Rome that it was wrested from them, when the Romans transplanted thither a colony of Picentines, and thas finally cut off the Samnites from the sea. Oo the side of Apulia the progress of the Sumnites was Iess definite: and it does not appear that they established themselves in the permanent possession of any part of that country, though they were certainly pressing hard upon its frontier cities ; and it was probably the sense of this and the fear of the Samnite arms that induced the A!ulians early to court the alliance of Rome. [Apulis.]

The samnite nation, when it first appears in Roman history, seems to have consisted of four different tribes or cantons. Of these the Presthi and the Hiretni were much the most powerful; so much so indeed that it is difficult to understand how such jeetty tibles as the Caraceni and Cacdrai could rank on terms of equality with them. The FrexTANi are frequently considered as forming is fitth cantun; but though that peopie was certainly of sammite race, and must have been regarded by Scyiar as forming an integral part of the samnite nation, as he describes the Samnites as occupying a considerable part of the coast of the Adriatic (Feripl. p. 5. § 15 ), they seem to have already ceased to form a jart of their political body at the time when they first came into contact with Rome. [Frestini.] We have no acconnt of the oature and character of the pulitical constitution that bound together these different tribes. It seems to bave been a mere federal league, the bonds of which were drawn closer together in time of war, when a supreme general or commander-in-chief was chosen to preside over the forces of the whole confederacy, with the title of Embratur, the Sabellian form corresponding to the Latin Imperator. (Lir. ix. 1; Niebuhr, vol. i. p. 107.) But we find no mention, even on occasions of the greatest emergency. of any regular council or deliberative assembly to direct the poliey of the nation; and the story told by Livy of the manner in which Herennius Pontius was consulted in regard to the fate of the Roman army at the Candine Forks seems to negative the supposition that any such body could have existed. (Liv. ix. 3 ; see also viii 39.)

The first mention of the Sumnites in Poman history, is in B. c. 354, when we are told that they concluded a treaty of alliance with the republic, the progress of whose arms was already beginning to attratet their attention (Liv, vii. 19 : Diod, xvi, 4.5). It is probable that the Samnites, who were already masters of Acsernia alid the upper valley of the Vulturnus, were at this time pusling forward their arms down the course of that valley, and across the mountain country from thence to the Liris, then occupied by the Volscians, Aurnacans, and other tribes, of Ausonian or Oscan origin. It was not hong before these onward movements brought them into collision with the R-mans, notwithstanding their recent alliance. Among the minor tribes in this part of Italy were the Sidicini, who, though sitnated on the very borders of Campania, liad hitherto preserved their independence, and were not incloded in the Campanian people [Sinternt]. This petty perple having been assailed by the Sumnites, bpon
what cause or preteat we know not, and finding themselves unable to eope with such powerful neighbours, invoked the nssistance of the Campanians. The latter, notwithstanding their connection with the Samnites, readily espoused the cause of the Sidicini, but it was only to bring the danger upon their own heads; for the Samoites now turned their aruns against the Campanians, and after occupying with a strong force the ridge of Mount Titata, which immediately overlonks Cappa, they descended into the plain, defeated the Campamans in a pitched battle at the very gates of Cappa, and shut them op within the walls of the city (Liv, vii. 29). In this extremity the Campanians in their turn applied for assistance to Rome, and the senate, after some hesitation on account of their reeent alliance with the Samnites, granted it ( $l 6.30,31$ ). Thus began the First Samnite War (b. c. 343), the commencement of that long straggle which was eventually to decide whether the supremacy of Italy was to rest with the Romans or the Samnites.

This first contest was, however, of short duration. In the first eampaign the two consuls M. Valerins Corvns and A. Comelius Cossus gained two decisive victories; the one at the foot of Miont Gaurus, tho other near Saticula. The first of these, as Niebulir observes (vol. iii. p. 119), was of especial importance; it was the first trial of arms between the two rival nations, and might be taken as a sort of omen of the ultimate issire of the eontest. A third battle near Suessula, where the remains of the army that haul beed defeated at Mount Gaurus, after having been reinforced, again attacked Valerius, terminated in an equally decisive victory of the Romans; and both cansuls triumphed over the Samuites (Liv; vii. $32-38$; Fast. Capit.). The next year the military operations of the Ronans were ehecked by a mutiny of their own army, of which the commons at Rome took advantage; and the city was divided hy disseosions. These causes, as well as the increaving disaffection of the Latins, natnrally disposed the Romans to peace, and a treaty was concluded wich the Samnites in the following year, B. c. 341 . The account which represents that people as hunihated and suing for peace, is sufficiently refuted hy the fact that the Romans abandoned the Sidiciri to their fate, and left the Samnites free to carry out their aggressive designs against that unfortunate people (Liv. viii. 1, 2).

The peace which terminatel the First Samnite War renewed the alliance previously existing between the Romans and the Saminites. In consequence of this the latter took part in the great war with the Latins and Campanians, which almost immediately followed, not as the enemies, but as the allier, of Home: and the Ronan arnies were thns enabled to reach Campanias by the eircnitous ronte through the eountry of the Massi and Peligni, and down the valley of the Volturnus (Lir. viii. 6). During the fifteen years that followed, down to the renemal of the contest between Rome and Sumnium, the course of events was ahnost uniformly favourable to the former power. The successfnl termination of the war with the Latins and Campanians, and the consolidation of the Roman power in both those coantries hall aulded greatly to the strength of the republic; and the latter lad followed up this advantage by the reduction of several of the smaller independenic tribes in the same neighbourhood-the Ausones, Sidicini, and the Privernates, who appear on this occusion as independent of, and separate from, the
other Volscians [Privervur]. But the power of the Volscians seems to bave been by this time very much broken up; and it was apparently during this interval that the Samnites on their side carried on snccessful bostilities agaiost that people, and wrested from them or destroyed the cities of Sora and Fregellae in the valley of the Liris, while they threatened Fabrateria with the same fate (Liv. viii. $19,23, \mathrm{x} .1)$. This movement, however, gave umbrage to the Romans, while the Samnites on their side could not view with indifference the reduction of the Sidicini, and it was evident that a fresh rupture between the two nations could not be long delayed (Id. viii. 17, 19). The attention of the Samnites was, however, drawn off for a time by the danger that threatened them from ancther quarter, and they jonned with their kiasmen the Lucauians to oppose the arms of Alexander, king of Epirus, who was advancing from Paestum into the heart of the country. Both Samnites and Lucanians were defeated by hiut in a pitched battle; but he subsequently turned his arms towards the south, and his death in ค. c. 326 relieved the Samoites from all apprebeusion in that quarter. (Liv. viii. 17, 24.)

The same year (в. с. 326) witnessed the ontbreak of the Second Samnite War. The immediate occasion of this was the assistance furnished by the Samnites to the Greek cities of Palaepolis and Neapolis, agaiost which the Romans bad declared war, when the Samnites and Nolans (who were at this time in alliance with Samnium) thres into their cities a strong body of auxiliaries as a garrison. They did not, however, arert the fall of Palaepolis; while Neapulis escaped a similar fate, only by espousing the alliance of Rome, to which it ever after steadily adherel (Liv, viii. 22-26). The Romans had about the same time secured a more important alliance in another quarter; the Lucanians and Apulians, with whorn, as Livy remarks, the republic had previously hail no relations, either friendly or hostile, now concluded an alliance with Rome (Ib, 25). The Lucanians indeed were soon persuaded by the Tarentines to abandon it agaia (Ib, 27), but the Apulians contianed steadfast; and though it is evident that the whole nation was not woited, and that many of the chief towns took part with the Samnites, while others continued to side with Rome, yet such a diversion must bave been of the greatest consequence. Hence thronghout the war we find the contest divided into two portions, the Romans on the one side being engazed with the Samnites on the frontiers of Campania, and in the valley of the Vulturnus, from whence they gradually pusbed on into the heart of Samnium; and on the other carrying on the war in Apulia, in support of their allies in that country, ay.dinst the hostile cities supported by the Samnites. It is evident that the Frentani must have at this time already separated themselves from the Samnite alliance, otherwise it would bave been impossible for the Romans to march their armies, as we find them repeaterlly doing, along the coast of the Adriatic intu Apolia. (Liv. ix. 2, 13.)

The first operations of the war were unimportant; the Rumans conquered some small towos in the valley of the Vnlturnus (Liv. viii. 25); and we are tuld that Q. Fabius and L. Papirius gained repeated victories over the Samnites, so that they eren sued for peace, but obtained only a truce for a year, and, without observiag even this, resumed the contest with increwed forces. ( $16.30,36,37$.) It is evident therefore that no real impression had been made
upon their power. Nor did the victory of A. Cornelius Arvina in the following year (n. c. 322), though it again induced them to sue for peace without success, produce any permanent effect; for the very next year (B. C. 321) the Samnites under the command of C. Pontius were not only able to take the field with a large army, hat inflicted on the Romans one of the severest blows they had ever sustained in the celebrated pass of the Candine Forks. [Caudium.] There can be little doulit that the circumstances and character of that disater are greatly disguised in the acconnts transmitted to us; but, whatever may have been its true nature, it is certain that it cansed no material interruption of the Roman arms, and that, after repudialing the treaty or capitulation conciveded by the consuls, the Romans renewed the contest with undiminished vigour. It is jmpossible here to follow in detail the operations of the succeeding campaigns, which were continued for seventeen years with many fluctuations of fortune. The disaster at Caudinim shook the faith of many of the Roman allies, and was followed by the defection even of their own colonies of Sutricom, Fregellae, and Sora. Some years later (B. c. 315) the espture of Saticula by the Romans and of Plistia by the Samonites shows that both armies were still eogaged on the very fiontiers of Samnium ; while the advance of the Sumnites to the pass of Lautulae, and the victory which they there a second time obtained over the Romans (Liv, is. 22, 23; Diod. xix. 72), obce more gave a shuck to the power of the latter, and for a moment endangered their supremacy in Campania. Bot they speedily recovered the advantage, and the victory gained by them at a place called Cinna (of uncertain site) decided the submission of the revolted Camparians. (Liv. ix. 27 ; Diol. xis. 76.) Their arms had meanwhile been successfol io Apulis, and had ultimately effected the reduction of the whole province, so that in B. c. 316 the consul Q. Aemilius Barbula was able to carry the war into Lucania, where he took the town of Nerulum. (Liv. ix. 20.) The decisive victory of the consuls of B. c. 314 had also for the first time opened the way into the heart of Samnium, and they laid siege to Bovianuu, the capital of the Pentri. The next year was marked by the fall of Nola, followed by that of Atina and Calstia (Cajazo); and it secmed probable that the war was at length draming to a close in favour of the Romans, when the ontbrenk of a fresh war with the Etruscans in E. c. 311 divided the attention of that people, and, by oecupying a large part of their forces in another quarter, operated a powerful diversion in favour of the Sanuites. To these additional enemies were added the Umbrians as well as the Jlarsi and Peligni; yet the Fomans not ouly made head against all these nations, but at the same time carried their victorious anms into the heart of Samnium. Bovianum, the capital city of the Pentri, was twice taken and plunderea, once in 311 by C. Junius, and again io 305 by T. Minucius. At the same time Sora and Arpinum were finally added to the Roman dominion. These successive defeats at length compelled the Samnites to sue for peace, which was granted them in B. c. 304 ; but on what terms is very uncertain. It seems impossible to believe that the Romans, as asserted by Livy, should have restored them their ancient treaty of alliance, and it is probable that they in some form conseuted to acknowledge the supremacy of Rome. (Liv, ix. 45; Dionys. Exc. p. 2331 ; Niebuhr, vol. iii.p. 269.)

But the peace thas concluded was of short duration. Little unre than five years elapsed between the close of the Second Samnite War utid the commoucement of the Third. It might well have been thought that, after a struggle of mure than twenty years' duration, the resources of the Samnites, if not their spirit, would have been exbansted; bat they seem to have been actively caraged, even before the actual outbreak of hostilities, in organising a fresh coalition against lome. A new and formidable auxiliary had appeared in a large body of Ganls, which had recently crossed the Alps, and, uniting witb their countrymen the Senones, threateaed the Romans fom the N. Rome was at this time engaged in war with the Etruscans and Umbrians, and the Etruseans hastened te secure the services of the Gauls. Meanwhile the Samnites, deeming the attention of the Romans sufficiently eagaged elsewhere, utticked their neighbours the Lucanians, probably with the view of restoring the power in that country of the party faveurable to the samnite alliunce. The opposite party, bowever, called in the lomatns to their assistance, who declared war against the Smmites, and thus began the Third Samnite War, b. c. 298. (Liv. ג. 11.) The contest had now assumed larger dimensions; the Sumuites concluded a league with the Etruscans, Uubrians, and Gauls, and for several successive canpayns the operations in Samium were subordinate to those in the valley of the Tiber. But the territory of Samnium itself was at the same time ravaged by the Roman generals in so systematic a.mamer, that it is clear they had obtained a decided saperiority in the field; and though the Samites on one eccasion retaliater by laying waste the Campanian and Faternain plains, they were soon again driven back to their mountain fiastnesses, (Liv, x. 15. 17, 20.) At lencth, in 18. c. 295 , the great battle of Sontianm, in which the united forces of the Gauls and Sumnites were totally defeated by, the Ruman consul Q. Fubins, decided the fortune of the war. Gellius Equatius, the Summite geacral, who had been the main organiser of the confederacy, was slain, and the leacue itself virtaally bruken up. (Liv, x. 27-30.) Nevertheles the Sammites continued to carry on the war with unaliated energy; and in E.c. 293 they raised a fre.h army of 40,000 men, levied with sulcmn sacred rites, and arrayed in a pecaliar garb. There circmustatices sufficiently prove the importance which they attached to this campaiga, yet its result was not nore surcessful than those which had preeceded it, and the Samite armies were again defeated lyy the consuls L. Papirius Cursor and Sp. Carrilins in two successive battles near Aquilonia and Cominimm. (Liv. x. 38-45.) The operations of the subsequent eampaigns are imperfectly kumsu to as, from the lons of the broks of Livy in whi ho they were related: bat the nest year ( $\mathrm{n}, \mathrm{c}$. 292) C. Fontias, the victor of the Caudine loorks, reappears, atter a lony interval, at the head of the Summite andes; he defeated ©. Fubins, but was in his turn defeatad in a far more decisive engagement, in which it is said that 20,000 sammites were slain, and 4000 taken prisomers, including C. Pontius himself, who was lob in trimuph by Fabius, and then put to ileath. (Oros. iii. 22 ; Liv. Fpit. xi.) It is probable that this battle gave the final blew to the Sabuite power. yet their resistance was still prolunged for two years more; and it was not till B.C. 290 that they comsunted to lay down their arms and sue for peace. Even in that year the consul

N'. Curius Dentatus could still earn the honeur of a triumph, and the fane of haviag put an eed to the Samnite wars after they lad lasted for mere than fifty years. (Liv. Epit. xi.; Eutrop. ii. 9.)

The conclasion of the Third Sanunite War is regarded by some of the Reman bistorians as the close of the struggle between Rome and Samaium, and not without reason, for though the name of the Fourth Samaite War is given by modern writers to the war that broke out afresh in B. C. 282, the Sunanites on that eccasion certainly figure rather as ausiliaries than as priscipals. They, however, joined the league which was formed at the instigation of the Tarentines against Rome; and bere a part in all the subsequent operations of the war. They seem indeed to have at first looked with jealousy or suspicion upon the proceedings of Pyrrhus; and it was not till after the batle of Heraclea that they sent their contingent to his support. (1'lut. Pyrrh, 17.) Bat in the great battle at Asculum the following year (B. C. 278) the Samnites bore an important part, and seem to have sustained their ancient reputation for valeur. (Dionys. xx. Fr. Didot.) The departure of Pyrrhus for Sicily shortly after, and his fimal defeat by M'. Curias ut Beucventum after his retarn (в.c. 274), left tbe Samnites ad their allies to bear the whole brunt of the war, and they were whelly unable to contend with the power of Rome. We know nothing in detail of these last campaigos: we learn ot ly that in B. C. 272, just before the fall of Tarentun, the Samnites, as well as their allies the Lucanians and Brattians, made their final and absolate sabmission; and the consul Sp. Carvilius celebrated the last of the loag series of triamphs over the Samnites. (Zunar.viii. 6; Liv, Epit. xiv.; Fast. Capit.) A fresh revelt indeed broke oat in the N . of Samnium three years afterwards, among the petty tribe of the Caraceni, but was speedily suppressed, befere it had attained any more formidable character. (Zonar. viii. 7; Dionys. xx. 9, Fr. Mai.)

We have no account of the terms on which the Samnites were received to submission by the Romans, or of their condition as subjects of the repablic. But there can be ne donbt that the policy of the deaninant people was to break up as much as possible their mational organisation and all bends of union between them. At the same tine two colonies were established as fortresses to keep them in check: ene at Beneventam, in the country of the Hirpini ( $\mathrm{n} . \mathrm{c}$. 268 ), and the other at Acsernia, in the valley of the Vultarnus (B. C. 264). All these precautions, however, did not suffice to secure the fidelity of the Sumaites during the Second Punic War. After the battle of Caanae (o.c. 216), the Hirpini were among the first to declare themselves in favour of Hanibal, and their example is said to have been followed by all the Samnites, except the Pentrians. (Liv. xxii. 61.) It is singular that this tribe, long the most powerfal and warlike of a!l, should have thus held aloof; bat the statement of Livy is conFirmed by the subsequent course of the war, during which the l'entrinas aever seem to bave taken any part, while the land of the Hirpini, and the southern portions of Sumnium bordering on Lucauia, were frequently the scene of hostilities. But the Roman colonies Aesernia and Beneventam never fell into the hauds of the Carthagimians; and the latter whs through a great part of the war held by one of tho Rornan generals, us a posit of the nemost military importance. In B. C. 214 and agaia in D. C. 212,
the land of the Hirpini was still in the laands of the Carthaginians, and became the scene of the operathens of Haanibal's lieutenant Hanno against Semprotius Gracchus. It was not till s. c. 209 that, Hamnibal having been finally compelled to relinquish his hold upon Central Jtaly, the 1lirpiai (and appareatly the other revolted Sumaites also) reaewed their submission to Rome. (Liv. xxvii. 15.)

From this time we hear no mere of the Samnites in history till the great outbreak of the Italian nations, commonly known as the sweial War, B. C. 90 , in which tbey once more tuak a pruminent part. They were not indeed among the first to take up arms, but quickly followed the eximple of the Picentes and Marsi; and so important an element did they constitute of the confederation, that of the two consuls chosen as the leaders of the allies, one was a Sarnite, Caius Papius Mutilus. (Diod. xxxvii. 2. p. 539.) Besides Papius, several of the most distiuguished of the Italian generals, Marins Egnatius, Pontius Telesinus, and Trebatins, were also of Samnite origin; and after the fall of Corfinium, the seat of governmeat and head-quarters of the allies mas transferred to the Samnite towa of Bovianum, and from thence subsequently to Aesernia. The Samnites indeed suffered severely in the second camprign of the war, being attacked by Sulla, whe defeated Papius Mutilus, toek Aeculanum and Bovianum by assault, and reduced the Hirpini to submission. The other Samnites. bowever, still hel 1 out, and an army which had throwa itself into Nola was able to prolong its resistance against all the efforts of Sulla. Heace at the end of the second year of the war (B. C. 89), when all the other nations of Italy had successively submitted and been admitted to the Roman franchise, the Samnites and Lucanians were still unsubdued, and maintained a kind of guerilla warfare in their mountains, while the streng fortress of Nola enabled them still to maiatain their footing in Campania. (Vell. Pat. ii. 17 : Liv, Epit, Ixxx; Diod. xxxvii. 2. p. 540; Appian, B. C. i. 53.) In this state of things the civil war which broke out between Sulla and Jimius altered the nature of the centest. The simnites warmly espoused the Marian cunse, from a natural feeling of cumity towards Suila, from whose arms they had recently sufferel so severely; and so important was the share they took in the struggle that ensued afier the retarn of Sulla to Italy (B. C. 83), that they in some measure imparted to what was otherwise a unere civil war, the character of a rational contest. A large number of them served in the army of the younger Marius, which was defeated by Sulla at Sucriportus (Appian, B.C. i. 87) : and shortly afterwards an army, composel principally ef Samnites and Lucanians, under the command of C. Pontius Tclesinus, made a desperate attempt to relieve Iraeneste by marching suddenly upon Rune. They were met by the arny of Sulla at the very gates of the city, and the battle at the Colline gate (Nov. 1, m. c. 82), thengh it terminated in the complete victory of Sulla, was long remembered as oue of the greatest dangers to which Fime had ever been expased. (Fell. Iat, ii. 27 ; Appian, B. C. i. 93 : Plut. Sull. 28; Lucan, ii. 135-138.) Pontins Telesinus fell in the field, and Sullat displayed lis implamble hatrel towards the Samnites by patting to the sword, withent mercy, 8000 prisoners who had been taken in the battle. (Appian, L.c.; Strab. v. 249 ; Plut. Sull. 30.) Ilc had already put to death all the Samuites thom he had takeli prisoners at the
battle of Sacriportus, alleging that they were the eternal eaenies of the Roman name; and he now followed up this declaration by a systematic devantation of their country, earried on with the expres purpose of extirpating the whole nation. (Strab. l.c.) It can hardly be believed that he fully cautided ont this saaguibary resolution, tint we learn from Strabo that more than a century afterwards the province was still ia a state of the utmost desolation,-many of what had oace been flowishing cities being reduced to the conditioa of mere villages, white others had altugether cemsed to exist. (Strab. l.c.)

Nor is it probable that the province ever really recovered from this state of depressiom. The rhetorical expressions of Florus point ta its beins in his day still in a state of almont complete desclation. (Flor. i. 16. § 8.) Some nttempts seem indeed to have been made under the Roman Empire to rectuit its population with fresh coloni-ts, rapecially by Nero, who founded culnies at Suepinum, Tilesia, and Aesernia (Lib. Culun. IP. 259, 260. \& ) ; but none of these attained to any great prosperity, and the whole regiun seems to have been very thinly populated and given up chiefly to pasturage. Bencventum alone retained its importance, mil continmed to be a flowrishing city thronghout the perind of the Roman Empire. In the division of 1taly under Augustus the land of the Hirpini was reparated from the rest of Sammium, and was placed in the Second Region with Apulia and Calabria, while the rest of the Samnites were included in the Fourtb Regiom, tocether with the Sabines, Freatani, I'cligni, \&c. (Plin. iii. 11. s. 16,12 s. 17.) At a later perid this district was brokea up, and Sammium with the land of the Frentani constituted a separate province. This is the arrangement which we find in the Notitia, and it was probably introduced at an earlier period, as the Liber Coloniarum in one part gives under a separate liead the "Civitates Regionis Samnii," including muler that name the towns of the Peligni, as well as the l'rentani. (Votit. Dign. ii. pp. 9, 10; Lib. Colon, p. 259.) In another part of the smme ducument, which is undoubtedly derives from difletent rources, the Sarnite towas are classed uader the head of Campania: but this union, if it ever really subsisted, could have been but of very brief duration. The "I'rovincia Sammii" is repeatedly mentioned in inseriptions of the 4 th $\mathrm{c} \cdot \mathrm{n}$ tury, abll was governed by an officer istyled " J'racses." (Mommsen, Die Lib. C'ol. p. 206.) The same appellation contiatued in use after the fall of the Roman Eupinc, and the name of Samnium as a separate province is found both in Cassiodorus and Patulus Dhaconus. (Crasiod. Jor, xi. S6; P. Diac. Hist. Lang. ii. 20.) The only tawns in it that retained any considention in the time of the last writer were Aufilena, Aesernia, and Bencventum. The last of these cities becane muder the Lombards the capital of an inderendent and powerful duchy, which long survived the fall of the Lombard kingdons in the N. of Italy. But in the revelutions of the midile azes all trace of the name and ancient limits of Samium was lost. At the present day the name of Sumnio is indeed given to a province of the kingdon of Naples; but this is merely an official devignation, recently restored, to the district, which hat previously bren called the Contado di Malise. This and the adjuining province of the Prineiputo L'tra comprise the greater pat of the ancient Samnimm; but the molern boundaries lave no reference to the ancient divisions, and a considerable fortion
of the Samnite territory is included in the Terra ali Lavoro, while a comer in the NW. is assigned to the Abruzzi.

Of the national character of the Samnites we learn litte more than that they were extrenely brave and warlike, and hal inherited to a great degree the frugal and simple habits of their ancestors the Sabines. We find also indications that they retained the strong religious or superstitious feelings of the Nabines, of which a striking instance is given Ly Livy ia the rites and ceremonies with which they consectated the troops that they levied in B. c. 293. (Liv. x. 38.) But they had almost ceased to exist as a nation in the days of the Latin poets and writers that are preserved to us; and hence we camnot wonder that their name is seldom alluded to. They are said to bave dwelt for the most part, like the Sabines, in upen villages; but it is evident, from the accounts of their earliest wars with the lomans, that they possessed towns, and some of them, at least, stronsly furtified. This is confirmed by the reunains of walls of a very ancient style of construction, which are still preserved at Aesernia and Bovianum, and still more remarkably at Aufidena. (Abeken, Nittel Italien, pp. 142, 148.) But from the very mature of their country the samnites most always bave been, to a great extent, a rude and pastoral people, and had probably received only a taint ture of cirblasation, throngh their intercourse with the Campanians and Apulians.

## 1II. Torography.

The rivers of the Sumnite territory have been alreally noticed in connection with the mountain chains and groups in which they take their rise. From the purely inland character of the region, none of these rivers, with the exception of the Calor and its tributaries, belong wholly to Samnium, but traverse the territories of other mations befine they reach the sea. Thus the sigrus and Trioius, after quitting the mountains of Sumnium, flow throu:h the land of the Frentani to the Adriatic; the Tifernus separates the territary of that people from Apulia. while the Frento and the Aufidus traverse the plains of Apulia. On the other side of the central chain the Vulturms, with its affiuent the Calor, and the tributaries of the latter, the Sabatus and Tanarns, carry down the whole of the waters of the Aprmines of Samnium, which flow to the Tyrrhenian sea.

The topurraply of Samrium is the most obscure and coufused of any part of Italy. The reasom of this is obvions. From the continued wars which Latad deva-tated the conntry; and the state of desolation to which it was reduced in the time of the fengitaphers, only a few towns hal survived, at lowt in such a state as to be deemed worthy of notice by them; and many of the nanes mentioned by Liry and uther anthors during the cally wars of the Rumans with the Sumites never reappear at a later persis. It is indeal probable that some of these were scarculy towns in the stricter sense of the term, but merely tortitied villages or strungholds, in which the inhabrants collected their cattle and property in time of war. Thone which are mentioned by the geographers as still existine under the Konan Empire, or the site of witich in clearly indicated, may be brufly enumerates. Atimesa, in the upper valley of the Sagrus, is the muly town that ean be assigned with aoy certanty to the Caraveni. In the upper valley of the Vulturnas wis Avskrania, the terri-
tory of which bordered on that of Venafrum in Campania. At the northern foot of the Monte Matese was Bovlisum ; and in the monutain tract between it and the Frentani was Trevesti's or Tereventim (Trivento). SE. of Bovianum Lay Siefinum, the ruins of which are still visible near Sepino ; and at the sonthern foot of the Monte Matese, in the valley of the Cabor, was Telivsta. Allifas lay to the NW. of this, in the valley of the Vulturnns, and at the foot of the Matese in that direction. In the country of the Hirpini were BEneventem, the capital of the whole district; Akctlavum, near Hirabella, about 15 miles to the SW:; Eques Tuticus, near the frontiers of Apulia; Aqutlonia, at Lacedomm, on the same frontier; Abeldisum, bear the frontiers of Campania; and Compss, near the sources of the Aufidus, bordering on Lucania, so that it is assigned by Ptolemy to that country. On the boriers of Campania, between Beneventum and the plains, were Caudium, apparently once the eapital of the Caudine tribe; and Saticula, the precise site of which has not been determined, but which must have been situated io the neighbourhood of Mount Tifata. The Samnite Casathi, on the other hand, was situated N. of the Vulturnus, at Cajazzo ; and Compulteria, also a Samnite city. Was in tbe same neighbourhood. The group of hills on the right bank of the Vulturnus, extending from that river towards the Via Latina, must therefore have been included in Samnium; but Teanum nnd Cales, situated on that ligbroad, were certainly both of them Campanian towns. It is probable, however, that in early times the limits betweeo Campania and Samnium were subject to many fluctuations; and Strabo seems to regard them as imperfectly fixed even in his day. (Strab, v. p. 249.)

Of the minor towns of Samsium, or those which are meationed only in history, may be noticed: 13rnowla (Liv. x. 39), identified, but on very slight kruunds, with Civita Iecchio, N. of Bojano; Mungantia (Liv. x. 17), supposed to be Baselice, on the frontiers of Apulia, new the sources of the Frento (Forture); Rosulles, on the frontiers of Apulia, between Aeculanum and Aypilonia; Trsvoum, in the same neighbourhool, still called Trerico; Plisila, near Sta Igata dei Goti, on the frontiers uf Campania; Callifak and Eufnrus, buth of them mentioned by Liry (viii. 25) in connection with Allifae, and probably sitnated in the neighbunrbod of that eity; Comsama (Liv. x. 39, 44), of very nueertain site; Aeublonla (Liv, l.c.), also of uncertain site, but which must be distingnished from the city of the same name in the country of the Ilirpini; Maronea, nuticel by Livy in the second P'unic Wiar, when it wats recosered by Marcellus, in B. C. 210 (Liv, xxvii. 1) ; Melak, Fulfulaw, and Orbitanium, all of which are noticed on only one necasion (Liv. sxiv. 20), and the situs of which are wholly undetennined.* To these mist be aided Cluvia, Cimetra, Volans, Palumbinum, and Herculanemm, all of them mentioned as towns taken from the Sammites (Liv. ix. 31, x. 15, 45), but of which nothing more is known; Imhraniun (Liv. viii. 30), where Fabius gained a victory wer the Samnites in B. c. 325 ; Cima, which is repre-

* It has beenthought unnecessary to repeat in these and other similar cases the modern sites assigned by Italian or Gernan topographens, where theso rest on no other foundation than mere conjreture.
sented by Diodorus as the scene of the decisive victory in B．C． 314 （Diod．xix．76）；and several places of which the names are found only in Virgil and Silius Italicus，－Mucrae，Ruffae，Batulum，and Celenna（Virg．Aen．vii．739；Sil．Ital．viii．564）， which seem to have been sitoated on the borders of Campania，so that it is donatful to which country they are to be assigned．The minor towns of the Hirpini have been already discnssed in that article； Pauna，or Panna，a nume found in Strabo（v．p．250） as that of a place still existing in his time，is probnbly corrupt，but we are wholly at a loss what to substitute． On the other hand，inscriptions attest the existence under the Roman Empire of a town called Juvavium， or Juvauum，of municipal rank，which is not men－ tioned by any of the geographers，but is probably the one meant by the Liber Coloniarum，which notices the＂Iobanus ager＂among the＂civitates Samnii．＂（Lib．Col．p．260．）It was probably sitnated in the neighbourhood of Sta Maria di Palazso，a few miles N．of the Sagrus，and on the very frontiers of the Marrucini．（Mommsen，Inser． R．N．p．271．）The existence of a town named Tifernum is very doubtful［Tifernus］；and that of a city of the name of Samnium，though adopted by many local writers（Romanelli，vol．ii．p．490），cer－ tainly rests on no adequate authority．

Samnium was traversed in ancient times by several lines of highway．One of these，following nearly the same hive with the modern mad from Naples to Aquila，proceeded up the valley of the Vulturnus from Venafrum to Aesernis，thence crossed the mountain ridge to Aufidena in the valley of the Sagrus，and from thence again over another moan－ tain pass to Sulmo in the land of the Peligni． Another branch led from Aesernia to Bovianum，and from thence to Equas Tuticus，where it joined the Via Appia or Trajuna．A third followed the valley of the Valturnus from Aesernia to Allifae，and thence by Telesia to Beneventum．There seems also to have been a cross line from the latter place by Saepinum to Buviannm．（Itin．Ant．p．102；Tab． Peut．）But these different lines are very confusedly laid down in the Tabula，and the distances given are often either corrupt or erroneons．The course of the Via Appia，nind its branch called the Via Trajana，through the land of the Hirpiui，has been already noticed in thit article．［See also VIA Apria．］

SAMOS or SAMUS（ さáuos：Fth，and A $1 j$ ．ミá－
 in the langnage of the modern Greeks，who call the island Samo，ミó $\mu \omega$ ：the Turks call it Susam Adassi）， a large island in that part of the Aegaean which is called the Icarian sea，and the must important of the Sporades next atter Rhodes．The word denotes a height，especially by the sea－shore．（Siee Coost． Porphyrog．de Them．16．p．41，ed．Bonn．）Hence Samothracla，or the Thracian Samos，which is said by Pausanias（vii．4．§ 3）to have been colonised and named by certain fugitives from the lcarian Samos，－and S．ame，one of the names of Ceplialonia， which is inversely connected with it by one of Strabo＇s conjectares（x．p．457）．How applicable the idea of elevation is to the island before us may be seen in the narratives and views given by Dr． Clarke（Travels，vol．ii．p．192，vol．iii．p．366），who uses the strongest lagguace in describing the conspi－ cuous height of Samos above the surrounding islands．

The following earlier names of Samos are men－ tioned by Pliny（v，3i）and other writers，Par－ thenia．Anthemus，Alelamphylus，Dryusa and Cy－ parissia．Some of these have evidently arisen from the physical characteristics of the island．Samos was，and is，well－wooded．It is intersected from E． to W．by a chain of mountains，which is in fact at continuation of the range of Mycale，being separated from it only by the narrow channel，hardly a mile in breadth，which the Turks call the Little Boghaz． Here was fought the decisive victory against the Persians，B．C．479．The Great Boghaz，which is nearly 10 miles in breadth，separates the other ex－ tremity of Samos from the comparatively low issand of IcARia．The length of Samos，from E．to W．，is about 25 miles．Its breadth is very variable．Strabo reckons the circuit at 600 stadia，Pliny at 87 miles， though he says that Isidorns makes it 100 ．These ditferencea may be readily accounted for by omitting or including Port tathy，which is a wild－lonking bay，though a very serviceable harbour，on the north． Here the modern capital is sitnated：but in ancient times the bay of Fathy seems to have bean com－ paratively deserted－perhaps，as Tournefort suggests， because it was peculiarly exposed to pirates，who infested the straits and bays of an island which lay in the route of commerce betweea the Busporus and Egypt．What Tournefort tells us of his travels through Samos gives ns the idea of a very ragged， though picturesque and productive，island．（l＇ussibly the Palinurus and Panormus of Samos．memtimed by Livy，xxxvii．11，may have been in the bay of Jathy） The highest pont，Mount Kerkis，the ancient Cerceteus（Strab．x．p．488），which is nearly always covered with snow，and reaches the height of 4725 Euglish feet，is towards the west．A ridge， which branches off in a south－pasterly direction from the main range，and ends in the promontory of Poseidium，opposite Mycale，was called Ampeius， which name seems also to have been given to the w hole mountain－system（Strab，xiv．p．637）．The western－ most extremity of the island，opposite Icaris was an－ ciently called Cantharium．Here the cliffs are very bare and lofty．A landslip，which bas taken place in

3 s
this part nf the island, has probably given rise to the name by which it is now called ( $\eta$ катаi\&at $\eta$ ).

The position of Samns was nearly opposite the houndary-line of Caria and Lonia; and its carly tralitions connect it, first with Carians and Leleges, and then with lonians. The first Junian culony is said to have consisted of settlers from Epidaurus, who were expelled from thence by the Argives. However this may be, we find Samos at an early perind in the position of a porterful member of the Imic confederacy. At this time it was highly distinguished io maritime enterprise and the science of navigation. Thocrdides tells us (i. 13) that the Samians were amung the first to make advances io naval construction, and that for this purpose they arailed themselves of the services of Ameinocles the Corinthian shipbuilder. The story of Pliny (sii. 57), that either they or Pericles the Athenian first constructed transports for the conserance of horses, thourh less eatitled to literal acceptaace, is well worthy of meation ; and Samus will always be lamous for the voyage of her citizen Colaeus, who "not without divine direction" (Herod. iv, 152), first penetrated through the Pillars of Hercoles into the Ocean, and thas not only opened out new felds of commercial enterprise, but enlarged the geographical ideas of the Greeks by making them for the first tive familiar with the phenomenon of the tides.

Uuder the despot Polycrates, Samos was in fact the greatest Greek maritime power. This famous man, about ten years after the tnking of Nindis by Cyrus, held Samos in a pasition of prond independence, when leebus and Chius had submitted to the Penians. He had 1000 bormen in his pay; be possessed 1 (10 ships of war, and made considerable con fuests buth among the islands and the mainland. He frught surcessfully agaiast the Mmesians ard Lehians, and moule a treaty with Amasis, king of Erypt. Whether we are to take the stury in the poencal form in which it is presented to us by Herodutul, or to attribute the change to the murre pratable mutise of selt-interest, this treaty was broke, wiftior an alliance with Cambyses. In connection with this monarch's expedtiton to the Nile, some Samian nalentents were so treacherously twated by Polycrates, that they sought and obtained a-vivance tr in Greece. A joint force of Lacedacmanians and Corinthians besieged Polycrates in S:mus for forty days: bat in this struggle also he was sue easfol. At last his amn cupidity, acted on hy the fr.und of Uroetes, a neighbouringsatrap, brought him to a wretelied death on the maimand. The time whe eh neceentol whs finll of crime and calamity for simmes. In the end, Sylosm, the brother of Phlycration (wla so assuciation with Camberses is the thioert of ane ther rumantic story in Herodotus). lin al with a Persiant army on Samos, and became a it itary despot: but not till his native island lar! I men sodepapulated as to give rise to the proverb
 live nt Ponezcmares and sybosen in the thes: of Ein,$\pi_{y}^{\prime} y$. It was at this peront that I'ythagoras, whi uas : satuve of Samos, left the ixland to travel in flatio ntrres. hing partly nreed to leave his If act 'a - .nd reg to Putardh, l'acit. i. 3) thrugh do- itont unuler the govemment of Polyerates. who, inewerer. was a patron of literature, and had Arai- al many years at his court. Fir the chro-ta- Iey of this perind see Clinton, Fast. Hell. vol, in. 130te B. Pp. 230-232.

Sumus was nory l'ersian, It was from Samos that

Datis sailed to Marathon, taking Naxos on his way. But the dominion of the Persians did not last long. When their fleet was gathered at Samos again, after the battle of Salamis, to the number of 400 sail, it was io a great measure the urgency of Samian envoys which induced the commanders of the Greek fleet at Delos to go across to the eastern side of the Aegaean. Then followed that battle in the strait, which completed the liberation of the Grecks.

In the maritime confederacy which was organied soon afterwards ander Athenisn rule, Sumos beems to have been the most powerful of the three islands which were exempted from paying tribute. It was at the instance of ber citizens that the common treasure was removed from Delos to Athetis. But this friendship with Athens was turned into bitter enmity in consequence of a conflict with Miletus about the territory of Prieae. Samos openly revolted; and a large force was despatched from Athens aganst it under the command of ten generals, two of whom were Suphocles and Pericles. The latter pronounced io the Cerameicas the funeral oration over those who had fallen in the war which, after a resistance of nine months, reduced Sames to complete subjection.

From 4.39 to 412 Samos remaioed without fortifications and withont a fleet. Bot about this latter date it became the hinge upon which all the concluding events of the Peloponnesian War really turned. The first movements torards the establishment of an oligarchy at Athens began at Sames thrungb the intrigues of Alcibiades; and yet this island was practically the bome of the Athenian demucracy doring the struggle which ensued. It was at Samos that Alcibiades rejoined his fellow-citizens; and from samos that he fioally sailed for the Peiraeus in 407. Even till after the battle of Arginosse Samos was, more than any other place, the headquarters and base of operations for the Athenian flet.

Our notices of the island now become more fragmentary. After the death of Alexander the Great it was for a time subject to the kings of Egypt. (Polyb, v. 35.) Subsequently, it took the part of Antioclus the Great in his war with Rome. It also acted with Dlithridates accainst Rome; but was binally united with the provioce of Asia B, c. 84 . After the battle of Actiom, Augustos passed the winter there. Under the Roman emperors it was on the while a place of no great inportance, thongh it hud the bonour of being a free state. (Plin. v. 37.) This privilege was taken nway under V'espasian. (Suet. Jesp.s.) In the division of the Empire contained in the Synecdenus we fod it placed with lihodes, Cies, Chios, \&ec, in the Irovince of the Islands. In tho later division into themes, it seems to be again rsised to a distinguished position. It gave its name to a separate theme, which included a large portion of the mainland, and was divided into the two turms of :phesus and Adramyttiom, the governor having bis residence ( $\quad$ pairúpiov) at Sinyma; and this arrangement is spoken of in snch a way (Const. Purphyroe. de Them. l.c.) as distinctly to connect it with the ancient renowa of Sames.

It wald be difficult to follow the fortunes of Samos through the midale nges. (See Finlay's History of the Byzantine and Grack Enypires, vol. ii. p. 112.) There are some points of ennsiterable interest in its moiern history. In 1550, after being sacked by the Ottomans, it was given by Selin 4 the Capitan l'aclia Ochiali, who introduced culonists
from varions other places; whence the names of some of the modern villages in the island, Metelinous, Albaniticori, and Vourlotes (Vourla giving the name to some islands at the entrance of the bay of Smyrna). Samos was much injured by the ravages of Morosini. In Tournefort's time the largest part of the island was the property of ecclesiastics; and the number of convents and nunneries was considerable. He reckoned the population to be 12,000; now it is estimated at 50,000 , nearly the whole being Christian. Samos performed a distioguished part in the War of Independeoce. The Turksoften attempted to effect a landing: the defences constructed by the Samiotes are still visible on the shore: and the Greek fleet watched no point more carefully than this important island. On the 17th of August, 1824, a curious repetition of the battle of Mycale took place. Formidable preparations for a descent on the island were made by Tahir-Pacha, who had 20.000 land-troops encamped on the promontory of Nycale. Canaris set fire to a frigate near Cape Trogillium, and in the confusion which followed the troops fled, and Tahir-Pacha sailed away. At this time the Logothete Lycurgus was tupanvos of the island " in the true classical aense of the word," as is observed by Ross, who describes the castle bnilt by Lycnrgus on the ruins of a mediaeval fort, adding that he was then (1841) residing with the rank of Colonel at Athens, and that he was well remembered and much regretted in Samos. This islaad was assigned to Turkey by the treaty which fixed the limits of modern Greece; but it continued to make struggles for its independence. Since 1835 it has formed a separate Beylick under a Phanariot Greek named Stephen Vogorides, who resides in Constantioople with the title of " Prince of Samos," and sends a governor as bis deputy. Besides other rights, the island has a separate flag exhibiting the white Greek cross oo a blue ground, with a narrow red stripe to denote dependence on the Porte. It does not appear, hawever, that this goveroment of Greeks by a Greek for the Sultad is conducive to contentment.
The present inhabitants of this fruitful island are said to be more esteemed for their industry than their honesty. They export silk, wool, wive, ail, and froits, If the word Sammet is derived from this place, it is probable that silk bas been an object of its industry for a considerable time. Pliny (xiii. 34) mentions pomegranates among its fruits. At the present day the beans of the carob-tree are exported to Russia, where a cbeap spirit for the common people is made from them. We might suppose from the name of Dlount Ampelus, that the wine of the island was celebrated in the atcient world; but such a conclusion would be in direct contradiction to the words of Strabu, who notices it as a remarkable fact, that thongh the wine of the surruunding islands and of the aeighbouring parts of the mainland was excellent, that of Samos was inferior. Its grapes, bowever, under the name of $\delta_{\mu} \mu \eta \lambda i \delta \bar{\epsilon}$ or $\dot{\alpha} \mu a \mu \eta \lambda i \delta \epsilon s$, are commended by Athenseus (xiv. p. 653; see Poll. Onomast. vi. 11), and now they are one of the most valued parts of its produce. Ross saw these grapes ( $\sigma \tau \alpha \phi i \delta a$ ) dryiog io large quantities in the sun; and other authorities speak highly of the Malmsey or sweet muscato wine exported in large quantities from Samos. Its marble is abundant; hut it bas a greater tendency to split into small fragments than that of Pentelicus or Paros. A stone found in the island is
said hy Pliny (xxxvi. 40) to bave been used for polishing gold. He also mentions in several places (l.c., also $x$ viiii. $53,77, ~ x x x i .46$, xxxv. 19,53 ) the rarious medicioal properties of its earth. The Samian eartheoware was in high repute at Rome ("Samia etiamoum in esculentis iaudantur," Plin. xxav. 46), and the name bas been traditionally given by modern writers to the "red lustrous pottery" nade by the Romans themselves for domestic use. (See Marryatt's Pottery and Porcelain, Landon 1850, pp. 286, 290.) For the natural Flora and Fauna of the island we must be content to refer to Tournefort, who says, among other facts, that tigers sometimes swim acroos to it from Mycale, which Cbandler describes as a monntain infested with wild beasts. The woody flanks of Mount Kerkis still supply materials for shipbuilding. It is said in Athenaens (l. c.) that the roves aod fruits of Samas came to perfection twice a year; and Straba informs us that its general fruitfulness was such as to give

The archaeological interest of Samos is almost entirely concentrated in that plain on the S., which contained the sanctuary of Hera at one extremity and the ancient city on the other. This plain is terminated at the SW. by a promontory, which from its white cliffs is called $\measuredangle \sigma \pi \rho 0$ кábo by the Greeks, but which received from the Genoese the name of Cape Colonna, in consequesce of the single column of the Heraenm which remains standing in its immediate neighbourbood. Tirgil tells us (Aen, i. 16), that Samos was at least second in the affections of Juno; and ber temple and worship contributed much to the fame and affluence of Samos for mavy centuries. Herodotus says that the temple was the largest he had seen. It was of the Ionic order; in form it was decastyle dipteral, in dimensions 346 feet by 189. (See Leake, Asia Minor, p. 348.) It was never entirely figished. At least, the fluting of the columns was left, like the foliage on parts of our cathedrals, incomplete. The original architect was Rhoecus, a Samian. The temple was burnt by the Persians. After its restoration it was plundered by pirates in the Mitbridatic War, then by Verres, and then by M. Antony. He took to Rome three statues attributed to Myron ; of thesc Augustus restored the Athene and Heracles, and retained the Zeus to decorate the Capitol. The image of the godiess was made of word, and was supposed to be the work of Smilis, a contemporary of Daedalus. In Strabo's time the temple, with its chapels, was a complete picture gallery, aod the bypaethral purtion was full of statues. (See Orig. c. Cels. 4.) In the time of Tacitus, this sanctuary bad the rights of asylom. (Ann. iv. 14.) When Pausanias was there, the people pointed out to hin the shrub of Agnus Castus, under the shade of which, on the banks of the river Inabrasus, it was believed that Hera was horn. (Paus. l. c.) Hence the river itself was called l'arthenias, and the goddess Inbrasia. (Comp. Apoll. Rhod. i. 187. 'I $\mu$ Eparins é $\delta 0$ " ${ }^{\text {H }}$ pms.) The anchorage in front of the sanctuary was called 8 opuos 'Hpaitms. (Athen. xv. p. 6i2.) Tize temple was about 200 paces from the shore, according to Ross, who found its whole hasement covered with a masa of small fragments of marble, ainong which are portions of the red tiles with which the temple was roofed. He discovered hardly anything of interest, except an inscription with the wurd vaonoiat.
The appearance of the watercuumes of the Imbrasus shows that they are often swollen by raios,
$3 \times 2$
and thns harmonises with the natural derivation of the word．In the plain which extends along the base of the mountains eastwards towards the city， Ross says that there are traces of ancient channels made for the purpose of irrigation．He regands the marshy places near the temple to be the Ká入auou and the＂E入os mentioned hy Athenaeus（xiii．p．5；2） in connection with the expedition of Pericles．（Tbe former place is likewise referred to by Herodotus，ix． 96．）Acress this plain，which is about two miles is length，there is no doubt that a Sacred Way extended from the sanctuary to the city，like that which connected Athens with Eleusis．Somewbere on this
 §6）was the tomb of Rhadine and Leontichus， where levers used to make their vows；and traces of funeral monnments are still seen at the extremity of the line，close to the city－wall．

The modern town of Chora，clase to the pass lead－ ing through the mountains toVathy，is near the place of the ancient city，which was situated partly in the plain and partly on the slope of the hill．The western wall runa in a straigbt line from the moun－ tain towards the sea，with the exception of a bend inwards near the tombs just mentioned．Here is a brackish stream（ $\bar{\eta} \gamma \lambda \nu \emptyset \dot{\partial} \overline{0} \alpha$ ），which is the Cbesius， the second of the three streams mentioned by Pliny． （See Etym．Magn．s．v．＇A $\sigma \tau v \pi a \lambda a i a$.$) The southern$ wall does not touch the sea in all its length，and is strengthened by being raised on vaulted substruc－ tions．Here and elsewhere the ruins of Samos touch the question of the nse of the arch among the Greeks．On the east side of the city the walls are very considerable，being 10 or 12 feet thick，and about 18 feet high．The masonry is partly qna－ drangular and partly polygonal；there are round towers at intervals on the outside of the wall，and in one place are traces of a gate．In the eastern part of the city was the steep citadel of Astypalaea， which was fortified by Polycrates（Polyaen．Strat．i． 23．§ 2），and bere probably was wbat Suetonius calls the palace of Palycrates．（Suet．Calig．21．） In the higher part of the town the theatre is dis－ tinctly visible；the marble seats are removed；un－ derneath is a large cistern．The general area is covered with small fragments，many of the best having furnished materials for the modern castle of Lycurgus near the shore on the SE．；and little mare remsias of a city which Herodotus says was， under Polycrates，the greatent of cities，Hellenic or Barbarian，and wbich，in the time of comparative decay，is still called by Horace Concinna Samos．

Herodotus makes especial mention of the harbour and of an immense tannel which formed an aque－ duct for the city．The former of these works（ $\tau 0$ Tiraiv，as it is now called，from being shaped like a frying－pan）is below Astypaliea；and，though it is now accessible only to stmall craft，its fannous males remain，one extonding eastwards from the castle of Lycurgus，the other estending to meet it from the extrenity of the east city－wall soutbwards．Here Ross saw subterranean passages hewn in the rock，

 iii．146），constructed by Maeandrius after the death of Polycrates．The tunnel has not been clearly identified；but，from what M．Musurus told Prof． Ross，it is probable that it is where Tournefort placed it，and that it penetrated the hill from Mete－ linous to Chora，and that thence the water was taken inte the city by a covered chamel，traces of which re－
main．It is clear that it cannot be in the quarry pointed ent to Ross；both because the cleavage of the rock is in the wrong direction，and because water from such a lieight would fall like a cascade on the city．

The autborities，to which reference bas heen made in this article，are．Tournefort（Voyage du Lerant， 1717, Pp．404－436），who has given a very copions account of the i．land；and Ross（Reisen auf den Griechischen Inseln des Agüzscher Meeres，vol．ii． 1843，pp．139－155），who has examined the sites and remains of the ancient city and Heraeum more carefully than any one else．（See also Clarke， Travels，vol，ii．pp． 192 194，vol．iii．pp． $364-367$. ） Maps of the island will be found in Tuarnefort and Choiseul－Gouffier；but the best delineation of it is given in three of the English Admiralty clarta， There is a small sketch of the neigbbourhood of the city in Kiepert＇s Hellas（1841），and a larger ene in Ross．In Kiepert＇s general map the rivers Im－ brasus and Chesiua are wrongly placed，and siso （prohably）the ridge of Ampelus．It is very ques－ tionable whether the point called Poseidion can be where it is（donbtfully）placed in Ross＇s plan：the position of the little island Narthecis in the strait seems to show that this promentory ought to be further to the east．（See Strab．xiv．p．637．）A little volume was pablished in London，and dedi－ cated to James Duke of York，in 1678，entitled＂A Description of the present State of Samos，Nicaria， Patmos，and Mount Athes，hy Joseph Georgirenes （「ewpyetpj$\nu \eta \mathrm{s})$ ，Archbishop of Samos，now living in Lendon，translated by one that knew the author in Constantinople．＂From this book it appears that Dapper bas taken much directly，and Tournefurt indirectly．Panofka bas written a book on Sumns （Res Samiorum，Berlin，1822）：and more recently （1856）Guérin has published a work on this island and Patmos．
［J．S．H．］

coln of s．inios．
SANOS，in Tiphylia．［samecer．］
sAllos or SADIE，in Cephallesia．［Sime：］
SAMOSATA（さ $\alpha \mu \dot{\sigma} \sigma \alpha \tau a$ ），a strongly fortified city of Syria，placed by Ptolemy（v．15．§ 11） and Strabo in the district of Commagene．It con－ tained the royal residence，and was a province in the time of Strabo，surrounded by a small but very rich country，and situated at the bridge of the Euplirates． （Strab． xvi ．2．§ 3, p．749．）Its distance from the bar－ ders of Cappadocia in the vicinity of Tomisa across Monnt Taurus was 450 stadia．（Ib．xiv．2．§ 29， p．664．）It was besieged and taken by Mark Antony during his campaign in Syria．（Joseph，Ant．xıv． 15. §\＆．）Its strategic importance is intimated by Caesen－ nius Paetus，prefect of Syria under Vespasian，wha， having represented that Antiochus，king of Comma－ gene，was meditating an alliance with the Parthiass to enable him to throw off the Roman yoke，warned hia imperial master＂that Samosata，the largest city of Commagene，was situated on the Euphrates，and woald therefore secure the I＇arthians an casy passage
of the river and a safe asylum on the western side." The legate was therefore instructed to seize and hold prosession of Samosita. (B. J. vii. 7. § 1.) This town gave birth to Lucian, and became infamous in the third century in connection with the beretical bishop "Panl of Samosata," who first broached the heresy of the simple homanity of our Lord; and was condemned in a council assembled at Antioch (A. D. 272, Euseb. H. E. vii. 27, 28). The modern pame of the town is Sempsat or Samisat, about 40 miles S. of the cataracts of the Enphrate, where it passes Mount Taurus, but Pococke could hear of no ruins there. (Observations on Syria, vol. ii. pt. 1, p. 156.)
[G. W.]

coin of samosata.
SAMOTHRA'CE, SAMOTHRA'CA, or SAMO-
 Eppitikn in Herodotus, who uses the adjective इxuoOppicuos, and calls the inhatitants इauoөp $\dot{\operatorname{coses}}$. In Pliny (iv. 23) we find the form Samothrace; in the Itin. Ant. (p. 522, Wess.), Samothraca; in Livy (xiii. 25, 50, sliv. 45, 46), both Samothracs and Samothracia. Properly it is "the Thracian Samos."
 sometimes simply Záuos. Hence the line in Virgil (Aen, vii. 208):
"Threiciamque Samum quae nunc Samothracia fertar."
By the modern Greeks it is called Samothraki, and often also Samandraki ('̇s tò $\mu a v \delta \rho \dot{\alpha} \kappa$ ), which is merely a corruption of the other, formed in ignorance, after the analogy of Stamboul and Stalimni,- $\mu a v$ סिpákı denoting "a sheepfold"). An island in the north of the Aegaean, opposite the mouth of the Hebrus, and lying N. of Imbrus, and NE. of Lemnos, Its distance from the coast of Thrace is estimated at 58 miles by Pliny (l.c.), who says its circuit is 32 miles. It is of an oval shape, and, according to the English survey, 8 miles in length and 6 in breadth. It was traditiooally said to have been diminished in size, in consequence of an outburst of watera from the Hellespont; and perhaps some great physical changes took place in this part of the Aegaean at no very remote period. (See Admiral Smyth's Mediterranean, pp. 74, 119.) However this may be, Samothrace is remark able for its extreme eleration. No land in the north of the Archipelago is so conspicuous, except Mt. Athos; and no island in the whole Archipelago is so high, except Candia. The elevation of the highest point, called Sacce by Pliny (l.c.), is marked 5240 feet in the Admiralty Chart (No. 1654). The geographical position of this point (the modern name of which is $M /$. Fingaree) is $40^{\circ} 26^{\prime}$ $57^{\prime \prime}$ N. lat, and $25^{\circ} 36^{\prime} 23^{\prime \prime}$ E. long. Though there are several anchorages on the coast of Samothrace, there is an entire absence of good harbours, a circumstance in harmony with the expression of Pliny, who calls it "importuosissima omnium." Scylax, bowerer
(p. 280, ed. Gail), mentions a port, which possibly was identical with the harhour Demetrium spoken of by Livy. The ancient city (of the same name as the island) was on the north, in the place marked Palaepolis on the chart.

The common name of the Ttracian and the Jonian Samos was the occasion of speculation to Strabo and Pausanias. The latter (vii. 4. § 3) says that the Thracian island was colonised by emigrants from the other. The former ( x . pp. 457, 472) mentions a theory that it might be named from the Saii, a people of Thrace. Scymnns Chius (692) says, that aid came from Samos to Samothrace in a time of famine, and that this brought settlers from the lonian to the Thracian Island. The truth seems to be, that $\sigma$ duos denotes any elevated land near the sea, and that the name was therefore given to the island before us, as well as to others. [Cephallexia; Samos.] The earlier names of Samotbrace were Dardania, Electris, Melite, and Leucosia. Diodorus Siculus (v. 47) speaks of its inhabitants as Autochthons, and dwells on peculiarities of their language as connected with their religious worship. The chief interest of this island is connected with the Canems. For these mysterious divinities we must refer to the Dict. of Biography and Mythology. Pelasgians are said by Herodotus (ii. 51) to bave first inhabited the islard, and to have introduced the mysteries.

The lofty height of Samothrace appears in Homer in a very pictaresque connection with the scenery of Troy. He describes Poseidon as gazing from this throne on the incidents of the war: and traveliers in the Troad have noticed the view of Samothrace towering over Imbros as a proof of the trutbfulness of the lliad. Bearing in mind this geographieal affinity (if we may so call it) of the monotain-tops of Saoce and Ida, we shall hardly be surprised to find Scymnus Chins (678) calling Samothrace a Trojan island ( $\nu \hat{\eta} \sigma 0$ os T $\rho \omega u \boldsymbol{\prime} \hat{\eta}$ ). The tradition was that Dardanus dweit there before he went to Troy, and that he introduced the Cabeiric mysteries from thence into Asia.

A few detached points may be mentioned which connect this island with Greek and Roman history. Its inhahitants joined Xerxes in his expedition agaiost Greece; they are spoken of as skilful in the use of the javelin; and a Samothracisn ship is said to have sunk an Athenian ship, and to have been sunk in turn by an Aeginetan one, at the battle of Salamis. (Herod. viii. 90.) At that time the Samotbracians pussessed forts crected on the mainland. (1b. vii. 108.) Philip of Macedon and his wife Olympias were both initiated in the mysteries. It would seem that such initiation was regarded as a preservation from danger. (Aristoph. Pax, 277, and Schol.) Samothrace appears also to have had the rights of asylum; for Persens took refage there, after be was defeated by the Romans in the battle of Pydna. (Liv. x|v. 6.) Germanicas sailed to the island with the view of being initiated: but he was prevented by an omen. (Tac. Amn. ii. 54.) St. Paul passed the night at anchor bere on his first voyage from Asia to Europe. (Acts, xvi. 11.) In Pliny's time Samothrace was a free state (l.c.). In the Synecdemns we find it, with Thasos, in the province of Illyricom. (Wess. p. 6f0.) In the later division described by Constant. Porphyrog. (De Them. p. 47, ed. Bonn) it is in the Thracian subdivision of the First European or Thracian Theme.
Samothrace uppears to have no modern history
anl no present importance．Pliny（xxxvii．67） makes mention of a gem which was found there；and in the Middle Ages its honey and goats wro said to have been celebrated．Nistraveller seems to have explored and described this istand．［J．S．H．］ SAMULOCFNAE，according to the Y＇eut．Tab．， or more correctly according to inscriptions found or the spot，Stulocrinse，was spparently a Roman colnny of some importance in the Agri Decumates of Germany．The Table erroneonsly places the tow： in Vimdelicia，whence some antiquarians have re－ ：tarded Samalucenae and Sun．locenne as two different Ils es．But there can be oo doubt that they are minly two forms of the same name belonging to one town，the site of which is occupied by the modern Sülchen，near Rottenburg on the Neckar；where many lioman retnains，such as coins，inscriptions， an！arms，bave been found．（Comp．Jammano， Colonia Sumlocenne，gc．，Stottgart，1840，8vo．； Leichtlen，Schwaben uiter den Rümern，p．107． toll ）
［L．S．］
SAMLS．［Samos．］
SAMUS，a river of Hispania Baetica．（Geog． Rav，iv．45．）Ancient Spanish coins indicate a town of the same name．（Florez，Med．iii．p． 142．）
［T．H．D．］
SAMMDACE（ $\leq a \mu \delta_{\text {dán }}$ ），a town on the coast of Carmania，noticed by Marciao（c．28，ed．Didut）and Ptoleniy（vi．8．今8 7）．It appears to bave been 1huced near the month of the river Samydacns． （Sue alu）Steph．B．s．r．）It is possible，as suggested hy Furbiger，that the river is the same as the present Sulji．
［V．］
SANAU＇S（इavals），a town of Phrygia，in the nughbourhool of Laodiceia．（Strab．sii．P． 576 ； Hierwel．p．666．）In the acts of the Council of Chatealin（ $p .674$ ），it is called $\Sigma a v a \bar{\omega} \nu \pi \dot{d} \lambda i s$ ，and is probably mentioned by Ptoleny（v．2．§ 26）nader the name of Sunis．
［L．S．］
SANCT1O，a place in the Agri Decumates，in the suntb－went of Germany，was sitnated on the banks of the Rline，but is mentioned only by Am－ mianas Marcellinns（xxi．3），and in such a manner that it is not easy to identify its site ；it is possibie， h－wever，that the modern Seckingen may currespood with it．
［L．S］
SANDA，a river on the N．coast of Hispania Tar－ raconersis（Plin．is．20．s．34．）Probably the Mira．
［T．H．D．］
SANDALIH＇M（ $\sum$ av $\delta d^{\prime} \lambda(o \nu)$ ，a mountain fortress of Pis lia，moutinoed only by Strabo（xii．p．169） and Stephanas B（s．r）．
［L．S．］
SANDANES（ミavóaves，Peripl．Mar．Erythr． 1．52）．There las been some question whether this is the name of a man or of a place．As the toxt stand in the Periplus，it would seem to be that of a ruler of the coast－district in the neighbourhood of Bumbay．On the other hand，Ptolemy speaks of the
 whence Elhfey（Ersch and Gribiber，Encycl．art． Indien）a＂zues，with strong probahility，that the readias in the Periplus is incorrect，and that P＇oleny is ri，hit is making the name that of a people rather than of a chief．
［1］
SANDALACA（さavסарќкク），a coast－twn of Bithynith，at a distance of 90 stadia to the east of the river Oxines．（Arrian，Peripl．P．E．，p．14； Anonyin．$I$ ，ripl．P．E．，p，4．）
［L．S．］
SANDOBANES：［Alumivia，Vol．I．p．89，b．］
SANDMEETES，according to some editions of Pliny（iii，28），the name of a tribe in Pannonia on
the river Drarus；but a more correct reading gives the name Aodizetes，which is no donbt the same as the Audizetii（＇Avōrş̆भtot）mentioned by Strabo（rii． p．314）amone the tribes of Pamonia．［L．S．］
 Herod，vii． 22 ；Thuc．iv． 109 ：Steph．B．z．c．）．a colony of Andros，sitnated upon the low，undulating ground，forming the istlumus which comnects the peninsula of Acte with Chalcidice，throogh which the canal of Xirxes passed．Masses of stone and mortar，with here and there a large and squared block，and fommatitions of Hellenic walls，which are found upuo this Próclaka or neck of land，mark the site of ancieat Sine，which was within Acte and turned $t$ wards the sea of Eisboea．（Leake，Northern Greece，vol．iii．p．143．）

2．It appears from Herodutus（vii．123；comp． Thuc．v． 18 ）and the Epitomiser of Strabo（vii．p． 330， Fr .27 ），that there was anuther town of this oame in Pallene．According to the position as－ signed to it io the Jist of Herodotus，the site must be sought for between C．Posidhi and the W．side of the istbmus of Porta．Mela（ii．3．§ 1）is opposed to this position of Nine，as be places it near Canastraeam Prom．（C．Paliuri）．［E．B．J．］

SANGALA（ $\tau \alpha \mathbf{~ \Sigma a ́ v \gamma a l a ) , ~ a ~ p l a c e ~ m e n t i o n e d ~ b y ~}$ Arrian to the NW．of the Malli（or Multin），appa－ reatly oear the junction of the Hydraotes and Ace－ sines（r．22）．There can be little donbt that it is the same place as that noticed by Ptolemy under the name इ́árala ì кaì Eù $\theta v \mu \eta o ̀ i a$（vi．1．§ 46）． The position，however，of the latter is assigoed with this difference，that it is placed below the junction of the Hydaspes and Acesines，whereas the former wonld seem to have been to the E．of the Hydraotes． Burnes has identified Sagala with the present Lahore， which is probatile eoongh（Trarels，vol iii．p．82）． It may be remarked，that the E $\dot{v} \theta v \mu \eta \delta / a$ of Ptoleany onght in all probability to be Eivovotuula，the name being derived from the well－known Bactrian king， Euthydemas．
［V．］
SANGARIUS（ ミaryápıs：Sakarye or Sakari； Turkish Ayala），one of the principal rivers of Avia Minor，is mentioned io the lliad（iii．187，xvi．719） and in Hesiod（Theog．344）．Its name appears in differeat forms as Sigrapbos（Schol．ad A pollon．Rhad． ii．724），Sangaris（Constant．Porphyr．i．5），or Ss－ garis（Uv．cx Pont．iv．10． 17 ；Plid，vi， 1 ；Sulin 43）． This river had its sonrces on Mount Adorens，near the town of Sangia in Plurygia，not far from the Galatian froatier（Strab．xii．p．543），sad flowed in a very tortnous conrse，first in ais eastern，then in a northern， then io a north－western，and lastly again in a Dorthern direction throngh Bithynia into the Euxine．In one part of its conrse it tormed the boondary between Phrygia and Bithynia；and in early times Bithynia was bonoded on the east by the Sangarius．［ Br － THY Sid．］

The Bithynian part of the river was nariga－ ble，and was celelirated from the abunoance of fisla found in it．Its priacipal tributaries were the Alander，Bathys，Thymbres，and Gallus．（Comp． Scylax，p． 34 ：Apollon．Rhod．ii． 724 ；Scymnns． 234，foll．；Strab．xii．pp．563，567；Dionys．Perieg． 811；Ptol．v．1．§ 6；Steph．B．s．v．；Liv．xxxriii． 18：Plin．v．43；Amm，Marc，xxii．9．）［L．S．］

SA＇NG1A（ $\mathrm{Z} \alpha \gamma^{\prime} i a$ ），a small place io the east of Phrygia，near Mount Adoreus and the sources of the Sangarins．（Strab，xii．p．543．）
［L．S．］
SANIA＇NA（£aviaya，Const．Porph．Them．i．p． 28 ，de Adm．Imp．c． 50 ，p．225，Boun．），a place in
the interior of Thrace，probably the modern Ezenga or Zingane．
［J．R ］
SANIGAE（ Zavi＇rai，Arrian，Peripl．Pont．Eux． p．12；ミávvi yat，Steph．B．s．v．；ミayiôat，Procop． B．G．iv，3），a tribe of Mt．Caucasus，who were found in the neighbonrhood of Droscurias or the Roman Sebastopolis．
［E．B．J．］
SANISERA，a city in the island Balearis 3linor （Plin，iii．5．s．11），the modern Alajor．（Cf．Wernsd． Ant．Bal．p． 57 ；Salmas．ad Solin．c． 34 ，p． 401．）
［T．H．D．］
SANITIUM（ Eav（ttov），is placed in the Alpes Dlaritimae by Ptolemy（iii．1．§ 43），and named as one of the towns of the Vesdiantii or Vediantii． Cemenelium is the other town which he names ［Cemenelium］．If Sanitiom is Senez，which is west of the IVar，part of this people were east of the I＇ar and part of them were west of it．［G．L．］
SANNI．［JicRoNes．］
SANTICUM（乏 $\alpha v \tau i \kappa \delta \nu$, Ptol．ii．14．§ 3），a town of Noricum，on the sonth－west of Virunum，on the road from this place to Aquileia（It．Ant．p．276）． The exact site of the place is ntterly uncertain，but conjecture has fised upon fonr or five different places that might be identified with Santicum with equal probability．
［L．S．］
 тovot，玉́ávoves），a people of Sonth－western Gallia， in the Celtogalatia Aquitania of Ptolemy（ii． 7. § 7），who names their capital Mediolaninm．［Me－ diolinumb．］They were in the Celtica of Caesar， being nurth of the Garnmna（Garonne）．The Ro－ man poets make the quantity of the word suit their verse，as Lucan does when he says（i．422）， ＂gandetque amoto Santonus hoste；＂and Jnrenal and Martial when they use the word Santonicus．

Caesar，who first mentions the Santones（B．G． i．10），says that when the Helvetii were preparing to leave their country with their families and move－ alles，their intention was to make their way to the territory of the Santones，＂who are not far distant from the borders of the Tolosates．＂He gives ns no means for conjectnring why the Helvetii proposed to cross the whole width of Gallia and settle them－ selves in a country on the coast of the Atlantic which was full of people．The position of the Santones is defined by Ptolemy，who places them between the Pictones and the Bitnriges Vivisci，one of whose towns was Burdigala（Bordeaux）．Strabo （iv．pp．190，208）fises the position of the Sautones still clearer when be says that the Garumna flows into the sea between the Bituriges Iosci（Vivisci）and the Santones，buth of which are Celtic nations．In another passage he places the Pictones and Santones on the shores of the Atlantic，and the Pictones north of the Santones；which completes the descrip－ tion of their position．

Caesar never made any campaign against the Santones，or，if he did，he has said nothing about it． He got ships from the Pictones and Santones for bis naval war with the Veneti（B．G．iii．11），from which we learn that the Santones and Pictones were a maritime people．When Vercingetorix（B．c．52） was stirring up the Gallic nations against Caesar， he secured the assistance of the Pictones and＂all the rest of the states that horder on the ocean，＂an ex－ pression which includes the Santones，though they are not mentioned．But the Santones sent 12,000 men to the siege of Alesia．（B．G．vii．75．）In Pliny＇s enumeration of the Gallic people（iv．33） the Santones are named Liberi．

The Santones gave name to that division of France before the revolution which was nausel Saintonge，the chief part of whicls is included in the French department of Charente Infirieure． The coast of the territory of the Suntones is low and marshy；the interior is generally level and fer－ tile．D＇Anville supposed that the territory of the Santones comprebended the diocese of Saintes，and the small province of Aunis on the north－west．

The wormwood of this country is spuken of ly various writers，Pliny（xxvii．38），and Martial （Ep．is．95）：－
＂Santonica medicata dedit mihi pocula virga．＂
Martial（xiv．128）and Juvenal（viii．145）men－ tion a＂cucullus＂with the name＂Santoniens．＂ It appears that some thick coarse woollen cloths were imported from Gallia into Italy．
Havercamp in his edition of Orosins（vi．7）gives a coin with the name＂Arivos，＂and on the other side the legend＂Santonos＂in Roman capitals with the figure of a horse in action．He gives abo another coin with the same legend；and a third with the ahbreviated name＂Sant＂and the name of＂Q．Doci＂on it．
［G．L．］
SA＇NTUNUM PORTUS（इavt $\delta \nu \omega \nu \lambda i \mu \eta \nu)$ ．Pto－ lemy in his description of the coast of Celtonalatia Aquitania（ii．7．§ 1）proceeds from south to nurth． Next to the outlets of the Garonne he places Santo－ num Portus，and next to it Santonom I＇rounontorium （ $\Sigma a \nu \tau \delta \nu \omega \nu$ b́kpov）．The outlet of the river Canen－ telns is placed north of the promontorium．The Ca－ rantonus of Ansonins is certainly the Charente［C．1－ rantonus］；and Ptolemy＇s Canentelus is a different river，or，if it is the same river，he bas placed it wrong．

It is impassible to determine what is the santomon Portus of Ptolemy．If it is Rochelle，as some geo－ graphers maintain，and if Ptolerny＇s Canentelns in the Charente，lie bas placed their positions in wrong order．It seems very onlikely that Ptolemy shonld mention a river between the Garonne aud Loire，and not mention the Charente．The only other large river between the Garonne and the Loire is the Sevre Nior－ taise，which is north of La Rochelle，and if Ptolemy＇s Caneutelas is the Sicre，the Santonum Portus might he La Rochiclle．D＇Anville supposes San－ tonum Portus to be the emboucbure of the Seudre， which opens into the sea opposite the southern ex－ tremity of the Isle doléron；but be does not na－ dertake to fix the position of the Santonum Promon－ torinm．The latitudes of Ptolemy cannot be trusted， and his geography of Gallia is fnll of errors．［G．L．］

SANTONUM PROMONTO＇RIUM．［SAnto－ num Portus．］

SAOCE．［SAMothrace．］
SAO＇CORAS（さaókopas，Ptol．v．I8．§ 3），a river of Mesopotamia，meationed by Ptolerny，which appears to have had its sonrce in the MI．Masins near Nisibis，and to have flowed to the SW．into the Euphrates．There bas been much dispute，as to what river Ptolemy intended by this natne，as at present there is no stream existing which corresponds with his description．Forbiger has conjectured with some reason that it is the same as the Mascas of Xenophon（Anub．i．5．§ 4），which flowed about 35 parasangs to the E．of the Chaboras（K＇luabir）， and surronnded the town of Corsote：Ptolemy wonhl seem to have confounded it with the Mygdonius． ［Myedonius．］
［V．］
SAPAE1（ Sanaîor or Éátaiot），a Thracian people，occupying the southern portion of the Pan－

SAPAICA.
garts, in the neighbourhood of Abdera. (Strab. xii. p. 549.) In this passage, however, Strabo calls them Sapae ( $\dot{\Sigma} \dot{a} \pi a t$ ), and :assumes their identity with the Sinti, which in another place (x. p. 457) he treats as a mere matter of conjecture. The Via Eenatia ran through their country, and especially throngh a narrow and difficult defile called by Appian (B. C.iv. 87, 106) the pass of the Sapaei, and stated by him to be 18 miles from Philippi; so that it must have been nearly midway between Neapolis and Abilera. The Sapaci are mentioned, and merely mentioned, by Herodotns (vii. 110) and by Pliny (iv. 11. s. 18). Their town is called Sapaica (之amaïrí) by Steph. B. (s.v.).
[J. R.]
sAPAICA. [sapaEt.]
SAl'ARNUS ( $\Sigma \alpha ́ \pi a \rho V o s)$, a small tributary of the Indus, in the apper Panjib, noticed hy Arrian (Indic. c. 4). It is probably the present Abbasin.
[V.]
SAPAUDIA. This name occurs in Ammianus Marcellinus (xv. 11), in his description of Gallia. He says of the Rbone that after flowing through the Lake of Geneva " per Sapaudiam fertur et Sequanos." In the Notit. Inp, we read: "in Gallia Ripense praefectus militum Barcariorum Ebruduni Sapaudiae," where Ebrudunum appears to be Yrerdun, which is at one end of the Lake of Neufchatel. In another passage of the Notit. there occurs: " tribunus cohortis primae Sapaudiae Flaviae Calarone," or "Cularone," which is Crenoble [Culano]. Thus Sapau. dia extended northward into the eountry of the Helvetii and southward inte the territory of the Allobroges. The name sapaudia is presersed in Saboia, or Savoy, but in a much more limited signilication ; and in the country now called Savoy there is said to be a canton which bears the particular name of Suroy. (D' Anville, Notice, fo.) [G. L.]

SAPHAR. [SAHPHAR.]
sAPHE [Bezabda.]
SAPHR1 ( ${ }^{2} \alpha \phi \rho \iota$ ), a small village of Parthyene mentioned by Isilurns (Stath. Parth. c. 12). It Day be the same place as that called by Ptoleny ¿ópea (vi. 9. §6), which be places in Hyrcania, close to the Astabeni. Forbiger identifies it with the modern Shoffri.
[V.]
SAPIRI'NE (Plin. vi. 29. s. 33.; इ $\propto \pi \pi \varepsilon \leftarrow \rho \eta \dot{\nu} \eta$ 分
 Steph. B. s. v.), an island in the Arabian gulf, NE. of Myos Hornos and S. of the promontory Pharan, from which sapplires were obtained according to Stephanus. Now Sheduan.

SAl'lS (¿ánis, Strab.: Savio), a small river of Cisalpine Gaul, not far from the frontiers of Uinbria. It rises in the Umbrian Apennines, a few miles above Sarsin:t, flows uuder the walls of that town, and afterwards, pursuing a course nearly due N., erosses the Aumilian Way close to the town of C:uscua (Cesena), and falls into the Adriatic about 10 miles S. of Ravemiz. (Strab. v. p. 217 ; Plim. ini. 15. в. 20- Lucau. ii. 406 ; Sil. Ital. viii. 448; Tab. I'eut.) It is called in the Tabula Sabis; and the nume is written lsapis in several editions of Luean and $\rightarrow$ rabin; but there seems little donbt that Supis is the true form of the name. It is still caliod the Savio. There can be little donbt that the SApinta Trunes, mentioned by Liry (sxxi. 2, xxxini. 37), as one of the tribes or divisions of the Umbrian nation, immediately aljoining the Gaulish tribe of the B Bi , derived its name from the Supis, and must have duelt on the banks of that river. [E. H B.]

SARACENI.
modis), placed by l'tolemy in long. $88^{\circ}$, lat. $14^{\circ}$ $30^{\circ}$; doubtless the capital of the Sappbaritae ( $\Sigma a \pi \phi \alpha-$ piral), whoin the same geographer places near the Homeritae (vi. 6. § 25), which Bochart identifies with the "Sephar" called by Moses "a mount of the East," and which was the limit of the children of Juktan. (Gen. x. 30.) This Furster further identifies with the Mount Clinax of Ptolemy, which Niebuhr judged to be the Sumara or Nakil Sumara of modern Arabia, the bigblands of Yemen, on the E. of which that same traveller found some ruins, half a day's journey SW. of Jerim, named Suphar, which he says is without donbt Aphar, or Dhan far. (Forster, Geogr. of Arabia, vol. i. pp. 94, 105, 127 notes, 175 , val. ii. pp. 154, 172.) Aphar was the metropolis of the Satueans according to the author of the Periplus ascribed to Arrian, and distant 12 days' journey eastward from Musa on the Arabian gulf; Mr. Forster remarks "that the direction and the distance correspond with the site of Dhafar" (vol. ii. p. 166, wate *). It is to be regretted that this inportant and well marked site lias not yet been visited and explored.
[G. W.]

## SAPPHARI'TAE. [SAPTHAR.]

SAPPIRE'NE. [SADIBINE.]
SAPRA PALUS. [Beces.]
SARACE'N1 ( $\Sigma$ apaк $\eta \nu o t$ ). This celebrated name, wbich became so renowned and dreaded in Europe, is given to a tribe of Arabia Felix by the classical geographers, who do not, however, very clearly define their position in the peninsula, and indeed the couatry of Saracene in Ptolemy seems scarcely reconcileable with the situation assigned to the Saraceni by the same geographer. Thus be, consistently with Pliny, who joios them to the Nabataei (vi. 28. s. 32), places the Saraceni sooth of the Scenitae, who were sitnated in the neighbourhood of the nortbern mountains of the Arabian peainsula (vi. $7 . \S 21$ ); but the region Saracene he places to the west of the black mountains ( $\mu \varepsilon \lambda a v a ̀ \quad$ óp $\eta$ ) by which name he is supposed to desigoate the range of Sinai, as he couples it with the gulf of Pharan - and on the confines of Egypt (r. 17. § 3). St. Jerome also calls this district the "mons et desertum Saracenorum, quod vocatur Pbaran" (Onomast. s. v. Xwpì6, Choreb), in agreement with which Eusebius also places Pharan near the Saraceni who inbabit the desert (s.v. фapáv). According to these writers their country corresponds witb what is in Scripture called Midian (Exad, ii.15, iii. I ; see Midian), which, however, they place incorrectly on the east of the Red Sea; and the people are identified with the Isbmaelites by St. Jerome (Onomast. L. c.), elsewhere with Kedar (Comment. in Ies. xlii. and in Loc. Heb, ad voc.), with the Midianites by St. Augustine (in Niumer.), with the Scenitae by Ammianus Marcellinus, who, however, uses the pame in a wider acceptation, and extends them from Assyria to the cataracts of the Nile (xiv, 4). Their situation is most clearly described by the author of the Periplus. "They who are called Saraceni inhabit the parts about the neck of Arabia Felix next to Petraca, and Arabid Deserta. They have many names, and occupy a large tract of desert land, bordering on Arabia Petraea and Deserta, on Palaestina and Persis, and consequently on the before-named Arabia Felix." (Marcian. apud Geog. Min. vel. i. p. 16, Hudson.) The fact seems to be tbat this name, like that of Scenitze (with whom, as we bave seen, the Saraceni are sometimes identified), was used cither in a laxer or more restricted sense for various
wandering tribes．As their nomadic and migratory habits were deveribed by the latter，so their preda－ tory propensities，according to the most probable interpretation of the name，was by the former，for the Arabic verb Sarakia，according to lexicographers， signifies＂to plunder．＂（Bochart，Geog．Sac．lib． iv．cap．2，pp．213，214．）The derivation of the name from Sarah las been rejected by nearly all critics as historically erroneous；and the fact that the name was is use many centuries before Moham－ med，at onee negatives the theory that it was adopted by him or his followers，in arder to remove the stigma of their servile origin from Hagar the bond－ woman．（Reland，Palaestina，p．87．）This author maintains that＂Saraceni nil nisi orientales popolos notat：：deriving the word from the Arabic sharaka ＝ortus fuit；ant as unhappily the Greek alphabet cannot discriminate between sin and shin，and the name does not occur in the native authors，there is nathing to determine the etgmology．Mr．Forster， in defiance of Bochart＇s severe sentence，＂Qui ad Saram referunt，nugas agunt＂（Geog．Sac．i．2，p． 213），argues for the matrongmic derivation from Sarab，and shows tbat the country of Edom，or the mountains and territory bordering on the Saracena of classic anthors，are called＂the country，mann－ tains．\＆c．of Sarals＂by the Jews；and he main－ tains that，as this tract derived its name of Edom and Idumaea from the patrianch Esau，so did it that of Sarah from Surah the wife of Abraham，the acknowledged mother of the race．（Geog．of A ro－ bia，vol．ii．pp．17－19．）His attempt to identify the Saraceni with the Amalekites is not so success－ ful：for however difficult jt may be to account for the appearance of the latter in the Rephidim （Exood xvii．1， 8 ；Rephidisi），which was the country of Saracena，yet their proper seat is fixed beyond doubt in the south of the promised land，in the bill－country immediately north of the wilderness of Paran，near to Kadesh（Numb．xiii． 29）：and it is impossible to understand＂the valley＂ in xiv．25，and＂the hill＂in siv．45，of Horeb，as Mr．Forster does，since the whole context implies a position far to the north of the district of Horeb， marked by the following stations：Taberah， 3 days journey from＂the Maunt of the Lord＂（x．33，si． 3）：Kibroth－hattaavah，Hazeroth，the wilderness of Paran（xi．34，35，xii．16，compare xsxiii．16－18）． It inust indeed be admitted that the mame of the Amalekites is occasionally used，in a much wider acceptation than its proper one，of all the Edomite tribes，througbont Northern Arabia，as e．g．in 1 Sam． xr．7；and similarly the name Saraceni is extended in Marcian＇s Periplus，already cited：but it seems mare natural to interpret the words ai калои́цєvai Eapa－ кचval，пतefovas हैXavres mpoanүapias of the general name of several specific tribes，markiog common habits or common position rather than common origin，according to the analogy of the Scenitae in old times and of Bedawin $=$＂deserti incolae，＂in modern times；particularly as it does not appear that the name was ever adapted by the Arabs themselves， who would not have been slow to appropriate an hotiourable appellation，which would identify them with the great patriarch．That their predatory cha－ racter had become early established is manifest from the desperate expedient resorted to by the emperor Decias in order to repress their encroachments．He is said to bave trought lions and lionesses from Africa and turned them loose on the borders of Arabia and Palestine，as far as the Circisium Castrum，
that they might breed and propacate againsf the Sara－ cens．（Chron．Alex．in A．M． 5760 ，Olymp．257，Ind． xiv．＝A．12．251．）This strong fortress，called by Procapius Circesium（Kıркíбьaע фpaúpıaע），the most remote of the Roman garrisons，which was fortified by Drocletian（Anm，Marc，sxiii，5），was situated on the angle formed by the confluence of the Abor－ rhas（Khabour）and the Euphrates（it is still called Karkisia），so that it is clear that，in the time of Procopius，the name of Saraceni was given to the Arab tribes from Egypt to the Euphrates．Con－ sistently with this view，he calls Zenubia＇s husband Odmathes，＂king of the Saracens in those parts＂ （Bell．Pers．ii．5，p．288）；and Belisarius＇s Arab contingent，under their king Aretas（＇Apé日as）be Jikewise calls Saracens（ii．16，p．308）．That Rom man general describes them（c．19，p．312）as in－ capable of buildiog fortifications，but adepts at plunter，which character again justifies the ety－ mology above preferred；while it is clear from these and cther passages that the use of the name had become established merely as a general name，and precisely equivalent to Arab（see Bell．Pers．i．19， p．261），and was accordingly adopted and applied indifferently to all the followers of Mohammed by the writers of the niddle ages，
［G．W．］
SARALA．［SARDIN1A．］
SARA＇LIUM or SARALUS（さ́́pados），a town of the Trommi in Galatia，on the east of the river Halys．（Tab．Peut．；Ptol，v．9．\＆4．）［L．S．］

SARAMENE（ $\Sigma \alpha \rho a \mu \hat{\jmath} \nu \eta)$ ，a district of Pontus， on the bay of Amisus．（Strab．sii．p． 547 ；camp． Pontus．）
［L．S．］
SAliANGA（т̀ 玉ápa $\gamma \gamma a$ ），a small place on the coast of Gedrosia between the Indus and the Arabis． It was visited by Nearchus in his coast royage to Persin（Arrian，Ind．c．22）．It has been conjectured by Mäller（Geogr．Graec．Min．l．c．，ed．Waris）that it is the same as the＇Pţáva of Ptolemy（vi． 21. § 2）．
［V．］
SARANGAE．［DRANGIANA．］
SARANGES（ $\Sigma^{2}$ apá $\gamma \eta \bar{\prime}$ ），a small tributary of the llydraotes（Irarati），mentioned by Arrian（Ind． c．4）in his list of Indian rivers．It is doubtless the Sinscrit Saramga，though it has not been determined to what stream this Indian name applies．
［ V.$]$
SARAPANA（ミaparavá，Strab．xi．p．500；ミa－ pamavis，Procop．B．G．jv．I4），a strung pusition in Jberia，upon the river Phasis，identified with Scha－ rapani in Imiretia，on the modern rad which leads fron Mingrelia into Georgia over Suran．（Comp． Journ．Geog．Soc．vol．iii．p．34．）［E．B．J．］

SARAPARAE（さaparápau，Strab．xi．p．531； Plin．vi．16．s．18），a Thracian people，dwelling be－ yond Armenia near the Guranii and Medi，according to Strabo，who describes them as a savage，lawless， and mountainous people，who scalped and cot off
 Jatter is said by Strabo to be the meaning of their name，which is confirmed by the fact that in the Persian sar means＂head＂and para＂division．＂ （Anquetil，Sur les anc．Langues de la Perse，in Mém．de l＇Acad．g＇c．vol．sxxi．p．419，quoted in Kramer＇s Strab．vol．ii．p．500；comp．Gruskurd＇s Strab，vol．ii．p．439．）

SARAPIONIS PORTUS．［Niconis Dtomus．］
SARAPIS 1NS．（ इapaimióas vท́oas），an island otf the South Coast of Arabia，mentioned ly the anthor of the Periplus ascribed to Arrian（Geog．Graec．Min． rol．i．p．19，Hudson）as situated 2000 stadia east
of the seven islands of Zenobia, which are identified with the islands of Kurian Murian. The island of Sarapis is therefore correctly placed by D'Anville at Mrozeira. It is described in the Periplus as about 120 stadia distant from the coast, and abont 200 stadia wide. It had three villages, and was inhabited by the sacred caste of the Iclathyophagi. They spoke Arabic, and wore girdles of cocon leaves. The island produced a variety and abondance of tortoises, and was a favourite station for the merchant vessels of Cane.
[G. W.]
SARAVUS, a river of Gallia, a branch of the Musella (Mosel). The Itins, place the Pons Saravi on the Saravns, on a road fron Divodurum (Metz) to Argenturatum (Strassburg). [Pons Saravi.]

The Saravus is mentioned in the poem of Ansonius on the Mosella (v. 367): -
" Naviger undisona dudun me mole Saravus Tota veste vocat, longum qui distulit amnem, Fessa sub Augnstis ut volveret ostia muris."
The Saravus is the Sarre, which joins the Mosel on the right bank a few miles above Angusta Trevirorum (Trier). In an inscription the river is named Sarra.
[G. L.]
SARBACUM (乏́人́bккоv, Ptol, iii. 5. §̧ 29), a town of Sarmatia, ppon an affluent of the Tanais, probably a Graecised form of the Slavonic Srbec. (Schafarik, Slav. Alt. voi. i. pp. 512, 514.) [E. B.J.]

SARDABALE. [Siga.]
SARDEMISUS, a southern branch of Muont Taurus on the frontiers of Pisidia and Pamphylia, extending as far as Phaselis; it is also conoected with Mount Climax on the frontiers between Milyas and Pisidia Proper. (Pomp. Mela, i. 14 : Plin. v. 26.)

SARDE'NE ( $\Sigma a p \delta e ́ v \eta$ ), a mountain of Alysia, on the northern bank of the Hermus, in the neighbourhood of Cyme; at its foot was the town of Neonteichos, (Hom. Ep. i. 3; Vit. Hom, 9.) [L. S.]
 the ancient capital of the kingdom of Lydia, was situated at the northern foot of Mount Tmolus, in a fertile plain between this mountain and the river llermos, from which it was about 20 stadia distant. (Arrian, Anab, i. 17.) The small river Pactolus, a tributary of the Hermus, flowed through the agora of Sardes. (Herod, v. 101.) This city was of more recent origin, as Strabo (siii. p. 625) remarks, than the Trojan times, but was nevertleless very ancient, and had a very strong acropolis on a precipitous height. The town is first mentioned by Aeschylus (Pers. 45); and Herodotus (i. 84) relates that it was fortified by a king Meles, who, according to the Chronicle of Eusebins, preceded Candaules. The city itself was, at least at first, built in a rude manner, and the honses were covered with dry reeds, in consequence of which it was repeatedly destroyed by fire; but the acropolis, which some of the ancient geographers identified with the Homeric Hyde (Sirnb. xiii. p. 626 ; comp. Plin. v. 30 ; Enatath. ad Diom. Per. 830), was built upon nn almost inaccessible rock, and surrounded with a triple wall. In the reign of Ardys, Sardes was taken by the Cimmerians, but they were unable to gain possession of the citadel. The city nttained its greatest prosperity in the reign of the last Lydian king, Croesus. After the orertlirow of the Lydian monarchy, Sirdes became the residence of the Persian satraps of W'cstern Asia. (1lerod. y 25 ; Paus. iii. 9. § 3.) On the revolt of the Ionians, excited by Aristagoras
and Histiaeus, the Ionians, assisted by an Athenian force, took Sardes, except the citadel, which was defended by Artaphernes and a numerons garrison. The city then was accidentally set on fire, and burnt to the ground, as the bnildings were constructed of easily combustible materials. After this event the Ionians and Athenians withdrew, but Sardes was rebuilt; and the indignation of the king of Persia, excited by this attack on one of his principal cities, determined him to wage war against Athens. Xerxes spent at Sardes the winter preceding his expedition against Greece, and it was there that Cyrus the yoonger assernhled his forces when about to march against his brother Artaserxcs. (Xenoph, Anab. i. 2. § 5.) When Alexander the Great arrived in Asia, and had gained the battle of the Granicus, Sardes surrendered to him withont resistance, for which he rewarded its inhabitants by restoring to them their freedom and their ancient laws and institutions. (Arrian, i. 17.) After the death of Alexander, Sardes came into the possession of Antigonus, and after his defeat at Ipsus into that of the Selencidae of Syria. But on the murder of Seleucus Ceraunus, Achaens set himself up as king of that portion of Asia Minor, and made Sardes his residence. (Polyb. iv. 48, 5. 57.) Aotiochus the Great besieged the usurper in his capital for a whole year, until at length Lagoras, a Cretan, scaled the ramparts at a point where they were not gnarded. On this occasion, again, a great part of the city was destroyed. (Polyb, vii. 15, \&c. viii. 23.) When Antiochus was defeated by the loornans in the battle of Magnesia, Sardes passed into the hands of the Romans. In the reign of Tiberius the city was reduced to a heap of roins by an earthquake; but the emperor ordered its restoration. (lac. Ann, ii. 47. Strab, siii. p. 627.) In the book of Revelation

COIS OF SARDES.
(iii. 1, \&c.), Sardes is named as one of the Seven Churches, whence it is clear that at that time its inhabitants had adopted Christianity. From Plioy (v. 30) we learn that Sardes was the capital of a conventus: during the first centaries of the Christian era we hear of more than one conncil held there; and it continued to be a wealthy city down to the end of the Byzantine empire. (Eunap. p. 154 ; Hierocl. p. 669.) The Turks took possession of it in the 11th century, and two centuries later it was almost entirely destroyed by Tamerlane. (Anna Comn. p. 3.3 ; M. Ducas, p. 39.) Sardes is now little more than a village, still bearing the name of Sart, which is situated in the midst of the ruins of the ancient city. These ruins, though extending over a large space, are not of any great consequence; they consist of the remains of a stadium, a theatre, and the triple walls of the acropolis, with lofty towers.

The fertile plain of Sardes bore the name of Sar-
 the celebrated tomb of Alyattes. Sardes was believed to be the native place of the Spartan poet Alcman, and it is well koown that the two rhetoricians Diodorus and the bistorian Eunapins were natives of Sardes. (Chandler, Travels in Asia Minor, p. 316, foll. ; Leake, Asia Minor, p. 342, foll. ; Richter, Wallf fohrten, p. 511, foll. ; Prokesch, Dentwuirdigk. vol. iii. p. 31, foll.]
[L. S.]
 Sordinia), one of the largest and most important islands in the Mediterranean sea, situated to the S . of Corsica (from which it was separated only by a narrow strait, now called the Strait of Bonifazio) and NW. of Sicily. Its most southern extremity, Cape Spartivento, was distant only 120 geng. miles from Cape Serrat in Africa.

## I. General Desceiption.

It was a dispnted point in ancient times whether Sicily or Sardinia was the largest. Herodotus calls Sardinia " the largest of islands " ( $\nu \dot{\eta} \sigma \omega \nu \dot{\alpha} \pi \alpha \sigma \epsilon \in \omega \nu$
 in passages where it is not certain that the expression is to be construed quite strictly. Scylax, however, distinctly calls Sardinia the largest of all the islands in the Nlediterranean, assigning to Sicily only the second rank (Scyl. p. 56. § 113); and Timaens seems to have adopted the same view (ap. Strab. xiv. p.654). But the general opinion was the other way: the comic poet Alcxius already enumerated the seven great islands, as they were called, placing Sicily first and Sardioia second (Alex. ap. Const. Porphyr. de Prov. ii. § 10): and this view is followed by Scymnus Chius, as well as by the later geographers. (Scymn. Ch. p. 223; Strab. ii. p. 123; Plin. iii. 7. s. 13,8 . s. 14 ; Diod. v. 17). Diodorus, however, justly remarks, that it is very nearly equal to Sicily in magnitude (Diod, v. J6): and this uproion, which was adopted by Clnverius (Sicil. Ant. p. 478), continued to prevail down to a very recent period. But modern researches have proved that Sardinia is actually the larger of the two, though the difference is but trifling. (Smyth's Sordinia, p. 66.) Its general form is that of an oblong parallelogram, above 140 geog. miles in its greatest length, by abont 60 in its average breadth, which, however, attains to as much as 77 in one part. The measurements given by Pliny, of 188 miles ( 1483 geog. miles) in length along the E. coast, and 175 on the W., are therefore very fair approsimations (Plin.
iii. 7. s. 13), while those of Strabn, who calls the island 220 miles in length by 98 in breadth, are considerably overstated. (Strab. v. p. 224.)

Sardinia is a mach more fertile and less mountainous island than Corsica. It is, however, trnversed throughont its whole length from N. to S. by a chain of mountains which commence at the headland called Capo Lungo Sardo, and extend along the eastern side of the island, as far as Capo Carbonara, which forms the SE. extremity of the island. This range, which is composed of granitic and other primary rocks, is nodoubtedly a continuation, in a geological sense, of the mountains of Corsica, and prodnces a rugged and difficult conatry forming much the wildest and most nacivilised part of Sardinia. The mountain summits, however, are far from attaining the same elevation as those of Corsica, the higbest poiot, called Monte Genargentu, rising only to 5276 feet, while the Monte di Sta I'ttoria, in the same neighbourhood, rises to 4040 feet, and the peak of Limbarra (the most northerly group of the chain) to 3686 feet : but the geoeral elevation of the range rarely exceeds 3000 feet. (Smyth, p. 67.) West of this monntain district, which may be considered on a rough estimate as comprising about one half of the whole island, are situated three detached gronps of mountains; the most considerable of which is that in the SW., which extends from Capo Spartivento to Capo della Frasca on the Gulf of Oristano, and the highest summits of which attain to an elevation of nearly 4000 feet. In the extreme NW, of the island is another isolated range of less extent, called the Monti della Nurra, extending from the Capo della Caccia to the Capo del Folcone. Both these groups are, like the monntains in the E. of the island, composed of primary rocks; bat N. of the river Tirso, and extending from thence to the N. coast of the island beyond Sassari, is an extensive volcauic tract, occupied in considerable part by a range of extinct volcanoes, one of which, the Monte Urticu, rises to an elevatimn of 3430 feet. There is no trace of any volcanic action having taken place within the historical period, but extensive tracts are still covered with hroad streams and fields of lava. Notwithstanding this abundance of mountains, Sardinia possesses several plains of considerable extent. The largest of these is that called the Campidano, which extends from the Gulf of Cagliari to that of Oristano, thas separating entirely the range of mountains in the SW. from those in the E. of the island; it is a tract of great fertility. A similar plain, though of less extent, stretches across from the neighbonrhood of Alghero to that of Porto Torres, thns isolating the chain of the Monti della Nurra; while several smaller ones are found in other parts of the island. The general character of Sardinia is therefore well snmmed ap by Strabo, when he says, " the greater part of it is a rugged and wild conatry, but a large part contains mach fertile land, rich in all kinds of prodnce, bat most especially in corn." (Strab. v. p. 224.)

The great disadyantage of Sardinis, in ancient as well as modern times, was the insalnbrity of its climate. This is repeatedly alluded to by ancient writers, and appears tn have ubtained among the Romans an almost proverbial notoriety. Dela calls it " soli quam coeli melioris, atque nt foeconda, ita pene pestilens." Strabo gives mnch the same account, and Martial allndes to it as the most deadly climate he can mention. (Strab. v. p. 225 ; Mel. ii. 7. § 19; Paus. x. 37. § 11 ; Martial, iv. 60. 6;

Cic. ad \& Fr, ii. 3; Tac. Hist. ii. 85; Sil. Ital. xii. 371.) There can be no doubt that this was mainly owing to the extensive marshes and lagunes on the coast, furmed at the months of the rivers; and as these naturally adjoined the more level tracts and plains, it was precisely the most fertile parts of the island that sufferel the most severely from naalaria. (Strab. l. c.) The more elevated and mountainous tracts in the interior were doubtless then, as now, free from this scourge; but they were inhabited only by wild tribes, and rarely visited by the more civilised inhabitants of the plains and cities. Hence the character of unhealthiness was naturally applied to the whole island.

## II. Histony.

The statements of ancient writers concerning the origin of the population of Sardinia are extremely various and conflieting, and agree only in representing it as of a very mixed kind, and proceeding from many different sources. Accurding to Pausanias, who has given these traditions in the greatest detail, its first inhabitants were Libyans, who erossed over noler the command of Sardus, the sun of a native hero or divinity, who was identified by the Greeks with Hercules. (Paus. x. 17.§ 2.) This Sardus was supposed to have given name to the island, which was previously called, or at least known to the Greeks, by that of Ichnusa ('i $\chi^{v o v i \sigma a), ~ f r o m ~ t h e ~}$ resemblatice of its general form to the print of a man's foot. (Paus. l. c. $\$ 1$; Sil. Ital. xii. 358360; Pseud. Arist. Mirab. 104.) Timaeus, according to Pliny, called it Sandaliotis from the same circurnstance (Plin. iii. 12. s. 17) ; but it is clear that aeither of these names was ever in general use. The fact that the earliest population came from Africa is intrinsically probable enugh, though little valuc can be attached to such traditions. Pausanias indeed expressly tells us (1. c. § 7) that the population of the mountain districts (the people whom he calls llienses) resembled the Libyans both in their physical characters and their liabits of life. The next settlers, according to Pausamias, were a tiseck colony under Aristaeus, to whum some writers ascribe the foundation of Caralis; and these were followed by a body of Jerians under a lealer named Norax, who fuunded the city called Nora is the SW. part of the island. Next to these came a body of Greeks fr m Thespiae and Attica, under the command of Iolans, who founded a colony at Olbia in the NE. conner of the island. After this came a budy of Trojans, a part of those who had escaped from the destruction of their city, and establisbed thenselves in the sonthern part of the island. It was not till long afterwards that they were expelled from thence by a fiesh body of Libyans, who drove thom up into the more rugged and inaccessible parts of the inland, where they retained down to a late period the name of Ilienses ('1Ateis, Pruus. x. 17. §§ 2-7; Sil. 1tal. xii. 360-368). The existence of a mountain tribe of this name is a well attested fact, as they are mentioned by Livy as well as by the geokraphers; and it is probable that the casual resemblanee of mame gave occasion to the fable of their Tiojan origin. [Ilievses.] The Iolai or lulacnses, on the other hand, had lost their vaine in the time of strabo, and were called, according to him, Diaghesbians ( $\Delta$ a $a \gamma^{2} \sigma 6$ eis, v. p. 225), a name which is, however, not found in any other ancient anthor. Another tribe, whose name is found in bistorical tines, is that of the Balari, who, according to Pau-
sanias, derived their origin from a body of mercenaries in the service of Carthage, that bad fled for refuge to the mountaias. (Paus. l.c. §9.) To these must be added the Corsi, whose origin is sufficiently indicated by their name. They dwelt in the mountains in the N. of the island (the Montagne dit Limbarra), and had evideatly crossed over from the adjacent island of Corsica, as they are described by Pausanias as having done. (Pans. l. c.)

It is idle to attempt to criticise such traditions as these; they are related with many variationa by other writers, some of whom term the Iolaenses, others the Ilienses, the most ancient inhabitants of the island (1)iod. iv. 29, v. 15; Mel. ii. 7. § 19; Strab. v. p. 225 ; Sil. Ital. l. c.); and it is clear that the different mountain tribes were often confounded with one another. Strabo alune has a statement that the carliest inhabitants of Sardinia (before the arrival of lolaus) were Tyrrhemians (v. p. 225), by which he must probably mean I'elasgians, rather than Etruscans. We have no account of any Greek colonies in Sardinia during the historical period; though the island was certainly well known to them, and seems to have been looked upon as affording a tempting field for colonisation. Thus we are told by Herodotus that when Phocaea and Teos were taken ly Harpagus (B, C. 545) the project was suggested that all the remaining lonians should proceed in a body to Surdinia, and extablish themselves in that island. (Herod. i. 170.) Agrain in E. c. 499, Histiaeus of Mliletus prmaised Darius to subduc the whole islad for him; and it appears that the project of emigrating there was seriously entertained. (1d. v. 106,124 .) Pausanias indeed represents the Messeniaus as thinking of emigrating there at a much earlier period, just after the close of the Second Messenian War, B. c. 668 (Paus. iv. 23. § 5); but none of these projects were realised, and it seems certain that there were no Greek settlements in the jsland at the time when it fell into the hands of the Carthaginians.

The Carthaginian conquest is indeed the first fact iu the history of Sardinia that can be considered as resting on any sure historical foundation; and even of this the date cannot be fixed with certainty. It is probable indeed that at a much earlier period the Phoenicians had not only visited the coasts of Sardinia for commercial purposes, but had established trading stations or factories there. Diodorus indeed expressly tells us that they planted colonies io Sardinia, as well as in Sicily, Spain, and Africa (Drod. v. 35); and there seems some reason to ascribe to them the first foundation of the impurtant cities of Caralis, Nora, and Sulci. (Movers, die Phönizier, vol. iii. pp. 558,573 .) But in this case, as in many others, it is impossible to separate distinctly what was done by the Phoenicians themselves and what by their descendants the Carthaginians. It is, however, certain that it was reserved for the latter to form extensive and permaneut settlements in the island, of which they reduced the greater part under their authority. According to Justin, the first Carthaginian expedition took place under a leader named Malchus, who was, however. dcfeated in a great battle ly the native barharians. (Justin, xviii. i.) The next invasion was conducted by Hasdrubal, the son of Mago, and the elder bruther (if we may trust to the accuracy of Justin) of Hamilcar, who was killed at Himera, B. c. 480. Ilasdrubal himself, after many successes, was slain in battle; but the Carthaginiane secm to have from this time maintained their footing
in the island. (Id. xix. 1.) The chronology of Justin does not claim much confidence; but it seems probable that in this instance it is not far from correct, and that we may place the Carthaginian conquest abont $500-480 \mathrm{~B} . \mathrm{C}$. It can hardly have taken place mnch earlier, as the lonian Greeks still looked upon the island as open to colonisation in the reign of Darins Hystaspis.

Of the details and circumstances of the Carthaginian conquest we have no account; but we are told in general terms that they made themselves masters of the whole island, with the exception of the rugged monotain districts which were held by the Ilienses and Corsi. (Paus, x. 17. §9; Pol. i. 10.) They founded many towns, and from their superior civilisation struck such deep root into the country, that even in the time of Cicero the manners, character, and institutions of the Sardinians were still essentially Punic. It even appears that a considerable part of the popplation was of Punic origin, though this was doubtless confined to the towns and the more settled districts in their immediate neighbourhood. (Cic. pro Scaur. §§ 15, 42, 45.) Bat notwithstanding these clear evidences of the extent of the Carthaginian iofnence, we have scarcely any acconnt of the long period of above two centuries aod a half, during which they continued masters of all the more important portions of the island. An isolated notice occars in B. c. 379 of a great revolt in Sardinia, the inhabitants of which twok advantage of a pestilence that had afflicted the Carthagioians, and made a vigorous effort to shake off their yoke, but without success. (Diod. xv. 24.) We learn also that already at this period Sardinia was able to export large quantities of corn, with which it sopplied the fleets and armies of Carthage. (Diod. xiv. 63, 77.) The story carrent among the Greeks, of the Carthaginians baving systematically discouraged agricultnre in the island (Pseud. Arist. de Mirab. 104), is therefore, in all probability, without forndation. During the First Puoic War (b. c. 259) L. Cornelins Scipio, after the conquest of Aleria in Corsica, directed his course to Sardinia, where he defeated the Carthaginian fleet near Oibia, but did not venture to attack that city. (Zonar. viii. 11.) Having, however, received reinforcements from Nome, he landed in the island, totally defeated the Carthaginian general Hanno, and took the city of Olbia, as well as several minor towns. The pext year C. Sulpicins followed up this advantage, and ravaged the greater part of the island, apparently with little opposition. (Zonar viii. 11, 12; Pol. i. 24; Oros. iv. 7, 8; Flor. ii. 2. § 16; Val. Max. v. 1.§ 2.)

No real footing was, however, gained by the Romans in Sardinia during the First Punic War; and the peace which put a close to that contest left the island subject to Carthage as before. But a few rears afterwards the Carthaginian mercenaries in Sardinia folluwed the example of their brethren in Africa, and raised the standard of revolt; they were indeed overpowered by the natives, and driven out of the island, but their canse was espoused by the Romans, who ondertook to restore them, and threatened the Carthaginians with war if they attempted the restoration of their own doninion in Sardinia. The latter were exhausted with the long and fierce contest with their mercenary troops in Africa, and were in no condition to resist. They consequently snbmitted to the demands of the Romans, and agreed by treaty to abandon all claims to Sardinia, s. c.
238. (Pol. i. 79, 88; Appian, Pun. 5; Liv. xxi. 1.) But the Carthaginians could cede no more than they possessed, and the whole island was at this time in the hands of the natives. Its subjugation was not effected by the Romans till after several campaigns; and though in B. C. 235 T. Manlius Torquatus trimmphed over the Sardinians, and is said to have reduced the whole island to suljection (Eutrop. iii. 3; Oros. iv. 12 ; Vell. Pat. ii. 38; Fast. Capit.), it is clear that this statement must be understood with considerable limitation, as the consuls of the two succeeding years, Sp . Carvilius and Pomponius Matho, were still able to earn the distinction of a triumph "de Sardis." (Fast. Copit.) The conquest of the island was now considered complete; and it was reduced to the condition of a province, to which a praetor was annoally sent. Corsica was soou after annexed to his jurisdiction. But it is certain that the wilder mountain tribes of the interior, though they may have tendered a nominal submission, were not really subdned, and continued long after to molest the settled parts of the island by their depredations, as well as to find employment for the arms of the praetor by occasional outbreaks of a more serious description.

Doring the Second Punic War, Sardinia was naturally watched with considerable jealousy, lest the Carthaginians shonld atternpt to regain possession of what they had so long held. But the war which broke out there in II. c. 215, under a native clief named Hampsicora, is attributed by the Roman writers themselves in great measure to the severity of taxation and the exactions of their governors. T. Manlius Torquatus, the same who as consul bad already triomphed over the Sardinians, was appointed to quell this insurrection. He defeated the Sardinians under Hiostos, the son of Hampsicora, in the neighbowrhood of Cornus: but the arrival of a Carthaginian force nader Hasdrubal gave fresh spirit to the insurgents, and the combined armies advanced to the very gates of Caralis. Here, however, they were met by Torquatus in a pitched battle and totally defeated. Hasdrubal was taken prisoner, Hinstus slain in the battle, and Hampsicora in despair put an end to his own life. The remains of the defeated army took refuge in the fortress of Cornus; but this was soon reduced by Danlius, ard the other towns of Sardinia one after the other made their submission. (Liv. xxiii. 32, 40, 41.)

From this time we hear no more of any general wars in Sardinia; and the large supplies of corn which the island began to furnish to Rome and to the armies in Italy (Liv. xxv. 22, xxx. 24) sufficiently prove that a considerable part of it at least was in the peaceable possession of the Roman authorities. The mountain tribes were, however, still unsubdued; and is B. C. 181 the Ilienses and Balari broke out into a fresh insurrection, which assumed so formidable a character that the consul Tib. Sempronius Gracchus was expressly sent to Sardinia to carry on the war. He defeated the insurgents with heavy loss, and followed up his victory with such vigour that he put to the sword or took prisoners not less than 80, 000 persons. (Liv. xl. 19, 34, xli. 6, 12, 17, 28.) The number of captives brought to Rome on this occasion was so great that it is ssid to have given rise to the proverb of "Sardi venales" for anything that was cheap and worthless. (Vict. Vir. Ill.65.) Anuther serious ontbreak occurred in Sardinia as late as n.f. 114, to repress which M. Caecilius Metellus wis

## SARDINIA.

sent as proconsul to the island, and after two years of continnous warfare he earned the distinction of a trimoph, a sufficient proof of the formidable character of the insarrection. (Eutrop. iv. 25 ; Ruf. Fest. 4.) $T$ is is the last time we bear of any war of importance in Sardinia; but even in the time of Strabo the mountuincers were in the habit of plandering the inhabitants of the more fertile districts, and the Roman prators in vain endeavoured to check their depredations. (Strah. v. p. 225.)

The administration of the province was entrusted throughout the period of the Republic to a praetor or proprator. Its general system was the same as that of the other provinces; but Sardinia was in some respects one of the least favoured of all. In the time of Cicero it did not contain a single free or allied city (cirites foederata) (Cic. pro Scaur. § 44): the whole province was regarded as conquered land, and hence the inhabitants in all cases paid the tenth part of their corn in kind, as well as a stipendium or annual contribation in money. (Cic. pro Bulb. 18; Liv. xxiii. 41.) From the great fertility of the island in corn, the former contribntion became one of the most inportant resources of the Roman state, and before the close of the Republic we fiod Sardinia, Sicily, and Africa alluded to as the "tria frumentaria subsidia reipnblicae." (Cic, pro Lg. Manil. 12; Varr. R. R. ii. Pr. § 3; Valerius Maximns also terms them "benignissimae urbis nestrae nutrices," vii. 6. § 1.) For this reason, as soon as Yompeins was appuinted to the command against the pirates, one of his first cares was to protect the caists of these three proviuces. (Cic. l. c.) Among the eminent persons who st different times filled the office of praetor or propraetor in Sardinia, may be mentioned the elder Cate in B. с 198 (Liv. xxxii. 8, 27): Q. Antonins Balbas, whe was appuisted by Marius to the gevernment of the island, but was defeated and killed by L. Philippns, the legate of Sulla, b. C. 82 (Liv. Epit. 1xesvi.); M. Atius Balbus, the grandfather of Angustus, who was praetor in B. c. 62, and struck a coin with the bead of Sardus Pater, which is remarkable as the only one helonging to, or connected with, the island [Biogr. Dict. Vol. I. p. 455] ; and M. Aemilins Scaurns, who was praetor in B.c. 53 , and was accosed by the Sardinians of oppressios and peculation in his government, but was defended by Cicero in an oration of which some fragments are still extant, which throw an important light on the condition and administration of the island. (Cic. pro Scaur. ed. Orell.; Ascon. in Scaur.)

In B. C. 46 the island was risited by Caesar on his return from Africa, and the Sulcitani severely punished for the support they had given to Nasidius, the admiral of Pompey. (Hirt. B. Afr. 98.) The citizens of Caralis, on the contrary, had shown their zeal in the canse of Cacsar by expelling M. Cotta, who had been left by Pompey in charge of the island. (Caes. B. C. i. 30.) Sardinia wats afterwards occupied by Munoderus, the lieutenant of Sextns Pompeins, and was one of the providces which was assigned to the latter by the treaty of Misenam, מ. C. 39 ; but it was subsequently betrayed by Menodorus limself into the hands of Octavian. (Dion Cass. alviii. 30, 36, 45; Appian, B. C. v. 56, 66, 72,80 .) It was probably for some services rendered on one or other of these occasions that the citizens of Caralis were rewarded by obtaining the rights of Roman citizeas, a privilege apparently conferred on them by Augustus. ("Caralitani civium Louna-
norum," Plin. iii. 7. e. 13.) This was in the days of Pliny the only privileged town in tbe island: but a Roman colony had been planted in the extreme N. at a place called Turris Libysonis, (Plin. l. c.) Two other colonies were established in the island at a later period (probably nuder Hadrian), one at Usellis, on the W. coast, the other at Cornus. (Ptol. iii. 3. § 2; Zumpt, de Col. p. 410.)

Under the Roman Empire we hear but little of Sardinia, which continned to be noted chiefly for its abundant supply of corn, and for the extreme unhealthiness of its climate. In addition to the last disadrantage, it suffered severely, as already mentioned, from the perpetnal incursions of the wild mountain tribes, whose depredations the Roman governers were unable to repress. (Strab. v. p. 225.) With the view of checking these marauders, it was determiaed in the reign of Tiberius to establish in the island a body of 4000 Jews and Egyptians, whe, it was observed, would be little loss if they should perish from the climate. (Tac. Ann. ii. 85.) Wo have no acconnt of the success of this experiment, but it would seem that all the inhabitants of the island were gradually brought under the Roman goveroment, as at the present day even the wildest monntaineers of the interior speak a dialect of purely Latin origio. (De la Marmora, loy. en Sard. vel. i. Pp. 198, 202.) It is clear also from the number of roads given in the Itineraries, as well as from the remains of them still existing, abd the ruins of aqueducts and other ancient buildings still extant, that the island must have enjoyed a considerable degree of prosperity under the Reman Empire, and that exertions were repeatedly male for its improvemeat. At the same time it was frequently chosen as a place of exile for political offenders, and Dobles who bad given mmbrage to the emperors. (Tac. Ann. xiv. 62, xvi. 9, 17 ; Dion Cass. lvi. 27 ; Martial, viii. 32.) Its great importance to Rome dows to the latest period of the Empire, as one of the principal sources from which the capital was aupplied with corn, is attested by many writers, se that when at leagtb it was occnpied by the Vandals, it seemed, says a contemporary writer, as if the life-blund of the city bad been cut off. (Prudent. adv. Symach. ii. 942; Sulviad. de Provid, vi.)

Daring the greater part of the Roman Empire Sardinia continned to be united with Corsica into one province: this was one of those nssigned to the senate io the division under Augustus (Diou Cass. liii. 12); it was therefore noder the government of fi magistrate styled proconsul; but occasionally a special governer was sent thither by the emperor for the repression of the plandering natives. ( $\mathrm{ld} . \mathrm{ls}$. 28; Orell. Inser. 74, 2377 .) After the time of Coustantine, Sardinia and Corsica formed two separate provinces, and bad each its owb gevernor, who bore the title of l'raeses, and was dependent on the Vicarius Urbis Jomae. (Not. Dign. ii. p. 64; Böcking, ad loc.; Ruf. Fest. 4.) It was not till A. D. 456 that Sardinia was wrested from the Roman Empire by Genseric, king of the liandals: and thongh recovered for a time by Darcellimus, it soon fell again into the bands of the barbarians, to whom it centinued subject till the fall of the Vandal monarchy in Africa, when Cyrillus recovered possession of the island for Justinian, A. D. 534. (1'rocop. B. I: i. 6, 10,11, ii. 5.) It was again cenquered by the Gothic king Totila in A. D. 551 (Id. B.G. iv. 24), bot was recovered by Narses after the death of that monarch, and scems from this period to have
remained a dependency of the Byzantine Empire dorn to a late period. But in the 8th century, after baving suffered severely from the incursions of the Saracens, it passed for the most part into the bands of that people, thongh the popes continued to assert a nominal sovereignty over the island.

## III. Topography.

The principal physical features of Sardinia have been already described. Of the numerous ranges, or rather groups, of monntains in the island, the only ancient name that bas been preserved to us is that of the Lssani Montes (Liv. xxx. 39; Claudian, B. G. 513; $\tau$ м̀ Maıv6ueva bpך, Ptol.), and even of these it is not easy to determine the position with any degree of accuracy: the name was apparently applied to the mountains in the N. and NE. of the island, which seem to have been regarded (tbough erroneoosly) as more elevated than those farther S ., so that the unhealthiness of the sonthern part of the island was popularly attributed to the sbutting out of the bracing north winds by this range of lufty mountains. (Clandian, l.c. 513-515.) From its extent and configuration, Sardinia conld not possess any very considerable rivers. The largest were, the Thyesus (®ípoas, Ptol.: Tirso), which rises in the moantains in the NE. of the island, and flows into the Gulf of Oristano on the W. coast; the Sacer Fluvies ('Iepds noтaubs, Ptol.), which falls iuto the same. gnlf near Neapolis, now called the $R . d i$ Pabillonis; the Temus or Tepmus (Téppos, Ptol.), still called the Temo, and falling into the sea near Bosc, to the N. of the Thyrsus; the Caedries (Kaispins, Ptol.), on the E. coast of the island, now the Fiume di Orosei; and the Saeprus (Eairposs. Ptol.), now the Flumendosa, in the SE. quarter of the islard. No ancient name has been preserred for the Rio Samassi, which flows into the Gulf of Cagliari, near the city of that name, though it is a more considerable stream than several of those named.
Ptoleny has preserved to us (iii. 3) the names of sereral of the more important promontories and headlands of the coast of Sardinia; and from its nature and configuration, most of these can be identified with little difficulty. The most Dorthern point of the island, opposite to Corsica, was the promontory of Errebantium ('EppeEdivtiov ăkpov, Ptol.), now called the Punta del Falcone, or Lungo Sardo. The NW. point, forming the western boundary of an extensive bay, now called the Golfo dell Asinara, is the Gorditanum Prom. ( $\mathrm{Fo} \mathrm{\rho}$ бítavov ăкрoov) of Ptolemy: immediately opposite to it lies the Isola dell' Asinara, the Herculis lisula ('Hpakiéous $\nu \hat{\eta}{ }^{\prime} \sigma$ os) of Ptolemy and Pliny, and one of the most considerable of the smaller islands which surround Sardinia. This headland forms the N. estremity of the ridge of mountains called Monti della Nurra : the S . end of the same range forms a bold beadland, now called Capo della Caccia, immediately adjoining which is a deep land-locked bay, the Nymphaeus Portns of Ptolemy ( $\mathbf{N} \dot{\prime} \mu \phi$ aios $\lambda i \mu \eta \nu$ ), now called Porto Conte. The Hermaeam Prom. ('Epuaiov axpoov) of the same author is eridently the Capo di Marragiu, about 12 miles N. of the river Temo:
 places between that river and Tharros, is probably The small bay that is found S. of Capo Mannu. The Prom, Crassum (Пахє̂̃a ăkpa) must be Capo Altamo, from whence the coast trends to the SE. as far as the Capo di Teulada, the extreme S. point of the whole island, which must be the one called Cher-
sonesus by Ptolemy; but his positiona for this part of the coast are very inaccurate. Opposite to this SW. corner of the island lay two small islands, one of them, called by l'toleny the Island of Ilawks ('Iepaikw ע $\hat{\eta} \sigma o s)$ ), is the Isola dì S. Pietro; the other, now known as the Isola di $S$. Antioco, is
 while it is named by Pliny Enosis. It was joined to the mainland by a narrows strip of sand, and was the site of the celebrated town of Sulci, from whence the adjoining bay (now known as the Golfo di Palmas) derived the name of Sulcitanus Portus. Twa other small ports mentioned by Ptolemy between Cape Teulada and the site of Nora (at Capo di Pula), Bitiae Portus and Herculis Portus, must be the small coves at Isola Rossa di Teulada and Porto Malfattano. The nest headland, named Cunicularium Prom. (Kovvikou入ápıo ăкpov, but the reading is doubtful), is the Punta della Savorra; and the promontory of Caralis must be the beadland immediately adjoining the city of that name, now called the Capo di S. Elia. Pliny, however, gives the name of Caralitanum Prum. to the SE. beadland of Sardinia, for which (singularly enough) Ptolemy furnishes ns with no name. The small island lying off it, called both by bim and Pliny Ficaria, is a mere rock, now known as the Isola dei Caroli. Proceeding along the E. coast of the island, we find the Sulpicius Portus (Eovarikios $\left.\lambda_{(\mu} \mu^{\prime} \nu\right)$, which cannot be identified with certainty, and the Portus Olbianus ('Oג6tayds $\left.\lambda_{i \mu} \mu \nu\right)$ ), which is certainly the Gulf of Terranova; while towards the NE. estremity of the island are two headlands called Columbarium and Arcti Promontorium. The latter is still called Capo dell Orso, from its fancied resemblance to the figure of a bear; the former cannot be clearly identified, though it is most probably the Capo di Ferro. Opposite this corner of Sardinia lie several small islaods, of which the Isola della Maddalena is the most considerable, and next to it the Isola di Caprera. These are probably the Phintonis and Iva of Ptolemy, while Pliny terms them Phintonis and Fossa. The Cunicularise $\mathrm{In}_{\mathrm{n}}$ sulae of Pliny are the small islets N . of these, now called the Isole dei Budelli.

The towns of Sardinia were not nomerons, and but few of thens attained to any importance, at least down to a late period. Hence they are very summarily dismissed by Strabo, who notices only Caralis and Sulci by name, while Pliny tells us the island contained eighteen " oppida," that is, towns of monicipal rank, but enumerates only sis, besides the colony of Turris Libysonis (Strab. v. p. 22; Plin. iii. 7. s. 13). The only towns which appear to bave ever really been places of importance are: Caralls, tbe capital of the whole island, in ancient as in modern times; Sulce, in the extreme SW. of the island, on the Isola di S. Antioco; Noka, on the coast between Caralis and Sulci at the Capo di Pula; Neapolis, on the W. coast, at the mouth of the Sacer Fluvius; Tharros, on a promontory at the N. extremity of the Gulf of Oristano ; Cornves, on the W. coast, about 16 miles further N.; Bosa (B $\hat{\omega} \sigma a$, Ptol. iii. 3. § 7; Itin. Ant. p. 83), also on the W. coast, at the mouth of the river Temus, still called Bosa; Tukeis Lebrsosis (Porto Torres), on the N. coast of the island; Tibuli, at Lungo Sardo, near the estreme N. point or Cape Errebautium ; and Oinia, on the Gilf of Terranova, in the NE. corver of the island. In the interior were: Forum Trajasi (Fordungianus), situated on the river Thyrsus
about 18 miles from its mooth; Uselilss, about 15 miles to the S . of the preceding; Valentia, to the SE. of Usellis: and Gurulas Vetus and Nova, both of which were situated between the rivers Thyrsus and Temus.

Of the minor tuwas mentimed by Itolemy or the Itineraries, the following may be noticed: 1. On the W. coast, were Tilium ( P tol.), which must have been near the Capo Negretto: Osaca or Hosaca (1d.) at Fluntentorgiu, a few miles W. of Neapolis; and Othoea (Itin. Ant.) apparently the modern Oristano, near the mouth of the river Thyrsus. 2. On the S . coast, Pupulum (Ptol.) may probably be placed at Massacara, a few miles N. of Sulei; Bitia (1tol.) at S. Isidoro di Teuluda; and Tegula (Itin. Ant.) at the Capo di Terlaila, the estreme S . point of the island. 3. On the E. coast, Ferunia (1'tol.) must have been at or near Posada, 25 miles S. of Olbia, and is apparently the same place called in the Itineraries Portus Lugudonis. The other small places mentioned in the same linerary were probably mere stations or villages. 4. On the N. coast, besides the two considerable towns of Tihula ad Turris Libysonis, Ptolenny places two towns, which he calls Juliola (probably the sime with the Viniola of the 1 tinerary, still called Torre I'ignola) and Plubium, which may probably be fixed at Castel Sardo. The small towns of the interior are for the most part very uncertain, the positions given by Ptolemy, as well as the distances in the ltineraries, varying so much as to afford us in reality but little assistance; and of the names given by Ptolemy, Erycinum, Heraeum, Macopsisa, Saralapis or Sarala, and Lesa, not one is mentioned in the ltineraries. The Aquae Lesitaane (Ptul.) are probably the Acqui di Benetutti in the upper valley of the Thyrsus: the Aquae Hypsitanae are those of Fordungianus, and the Aquae Neapolitanae the Bugni di Sardara. There remain considerable roins of a Roman town at a place called Castro on the road from Terranora (Olbia) to Oristano. These are supposed to mark the site of a place called in the Itioeraries Lugudonec, probably a corruption of Lugudo or Lugudonis. Io the SW. portion of the island, also, between Neapolis and Sulci, are considerable Roman remains at a place called $A$ ntas, probably the Netalla of the Itinerarips. (Itin. Aut. p. 84.).

The Itineraries give several lines of road through the island of Sardioia. (Itin. Ant. pp. 78-85.) One of these proceeded from Tibula, at the N. extremity of the island, which was the usual place of landing from Corsica, along the whole length of tbe E. coast to Caralis. It did not accurately follow the line of coast, though it seldom departed far from it, bat struck somewhat inland from Tibula to Olbia, and from thence with snmeexception followed the line of coast. A more circnitons, but probably more frequented, route was that which led from Tibula to Turris Libysonis, and thence along the $W$. coast of the island by Bosa, Cornas, and Tharros to Othoca (Oristano), from which on sbranch led direct across the island throngh the plain of the Campidano to Caralis, while another followed nearly the lime of the coast by Neapolis to Sulci, and from thence round the southern extremity of the inland by Tegula and Nora to Caralis. Besides these, two other cross lines of road through the interior are given: the one from Olbias to Caralis direct, through the mountain country of the interior, and the other crossing the sane wild tract from Olbia direct to Othoca. Very few of the statoms on these lines of rond can be identified, and the

## SARDINIA.

names themselves are otherwise wholly unknown. The reader will find them fully discussed and examined by De la Marmora (Voy. en Sardaigne, vol. ii. pp. 418-457), who has thrown much light on this obscure subject; but the results must ever remain in many cases uncertain.
